Out went the line, my rod bent double, and the reel still spinning gaily round. After that long day of waiting and watching this thing came upon me too suddenly, and I lost my head a bit. But Larry took command, and told me when to give my fish his own way, and when to compel him to take mine, meanwhile manœuvring his boat to suit. I could have done with less rowing about, but I bowed to Larry's better judgment. I had never hooked a really big fish before (in fact, have never), although I had read about such glories in the sporting papers, which is perhaps the next best thing. Now strange to say there dawned upon me—while with beating heart I did battle with this finny Goliath—a vague but palpable sensation that the sporting papers had somehow overdone the details of the combat. The mighty rushes, the gigantic leaps, the scream of the reel, and all the rest were surely overdrawn. Anyhow they did not seem to suit my case. My fish was more dignified than masterful in his rushes. He did not leap at all, and the reel was only moderately resonant. All the same, I was sadly disappointed when, after a brief engagement, my straining rod jerked back and my line came in with a sharp pluck.

Larry and Mac were sympathetic. But I would not be consoled. It was my last chance on Lough Sheelin, and I had stupidly thrown it away. I had lost the biggest fish of the season (Larry was positive it was the biggest) and my grief was great. Mac. saw that it was useless to reason with me, so he ordered Larry to put about and "pull for the shore," as the song says. Pat Brady watched our coming from afar, and by the time we landed the "shiltie" was in his harness, or in all that was left of it. I noticed it sloughing off a good many well-worn tag-ends on the morning jaunt.

As we took our seats, the sun, now low on the horizon, gleamed redly across the broad sheet of water and tinged the green groves on the farther shore with a fiery sheen. Big banks of crimson clouds began to creep up from the flaming horizon and spread over the hazy arc of blue. In the woods, the coos and caws of woodquest and rook mingled with the joyous gibberish of the tiny singers all warbling their joyful evensong. A country lad passed us, driving homeward half-a-dozen sleek milch cows that "mooed" contentedly, as with distended udders they passed on to the waiting milkmaids.

"All this sort of thing—this rustic delight—is pleasant enough," I remarked, as the 'shiltie' broke into a trot. "If I had not lost that big fish, I would have enjoyed the day immensely."

"You need not let that trouble you," Mac. said, somewhat shortly, I thought.

"But it does trouble me; it is too bad to lose the biggest fish ——"

"The biggest rubbish. That's only Larry's chaff."

"Well, on such a day it is too bad to lose the most microscopic minnow: to lose any fish at all."

"You lost no fish," Mac. said dryly, as he knocked a long white ash off his cigar.

"Lost no what? What do you call that fish I played for over five minutes."

"It wasn't you played it. It was Larry. You were too excited to notice that he was rowing the boat backwards and forwards all the time. You had had such a stupid day, I thought it a pity to spoil the only bit of sport you got. The thing wasn't a fish at all."

"Then what the devil was it?"

"A bunch of weeds; they are a nuisance in that part of the lake."

Then we smoked in silence for a time.

A FISH PREVIOUSLY UNKNOWN TO SCIENCE.

(DIPTYCHUS LANSDELLI.)

SOME little time back, in the course of conversation with the Rev. Dr. Henry Lansdell, the celebrated explorer, author of "Through Central Asia," &c., we found that he had discovered a fish previously unknown to science. We, by the kindness of Dr. Lansdell and Dr. Günther, of the British Museum, are able to give a beautiful engraving of the fish, which we had specially made from the specimen in the Museum, and the following account of it, from No. 16, vol. iii., of "Annals and Magazine of Natural History":—

NOTICE OF A NEW FISH FROM THE ISSIK KUL (DIPTYCHUS LANSDELLI).—BY DR. A. GUNTHER.

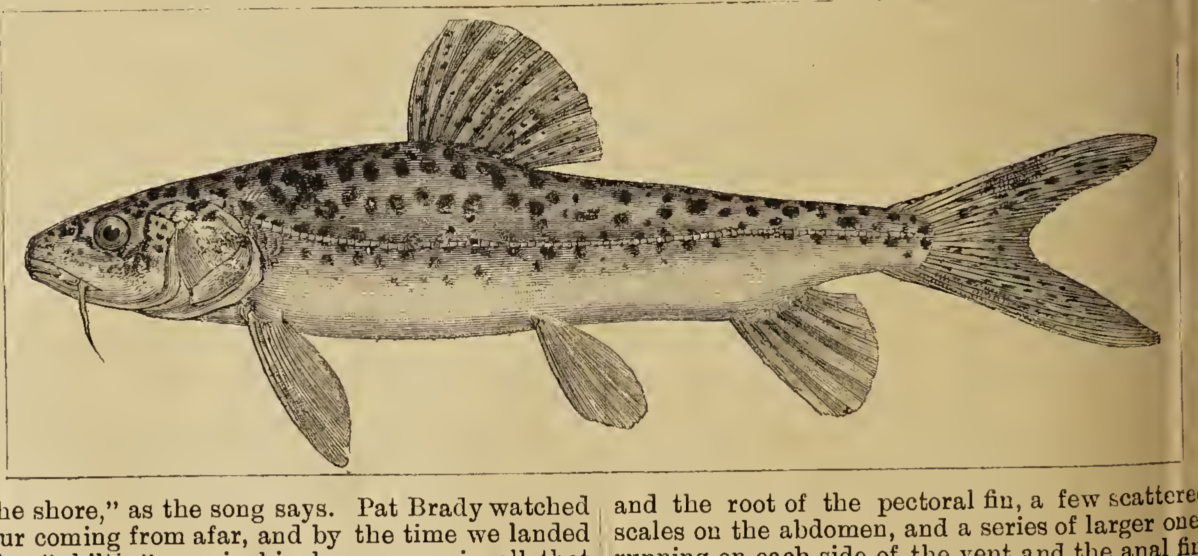
"The Rev. H. Lansdell has discovered during his recent travels in Central Asia a new species of the singular genus *Diptychus*, one of the most characteristic forms of the Central-Asiatic fauna, in the Issik Kul or one of its affluents. This is the fourth species known at present of this genus.

"*Diptychus Lansdelli.*

"D., 11. A., 7. P., 18. V., 10 L. lat , 80 90.

(Above refer to the Fin-rays.)

"Nearly the whole body is naked, the parts above the lateral line being quite scaleless; but there are a few scales between the lateral line and the root of the pectoral fin, a few scattered scales on the abdomen, and a series of larger ones running on each side of the vent and the anal fin The scales of the lateral line are distinct enoug in its anterior part, but rudimentary behind.



"The body is low, loach-like, its greatest dept being only one-sixth, or nearly one-sixth, of the total length (without caudal); the length of the head is contained four times and a-quarter in it and exceeds the length of the caudal peduncle Interorbital space very broad, its width being equal to the length of the snout. The diameter o

ye is one-sixth of the length of the head, and
er less than two-thirds of that of the snout.
h semicircular, quite at the lower side of the
t. Barbel about as long as the eye. The
l fin is as long as high, its origin being equi-
nt from the end of the snout and from the
of the caudal peduncle. Caudal fin deeply
d; pectoral fin reaching to the origin of the
l; ventral fin nearly to the vent. The outer
al ray is opposite to or a little behind the
dorsal ray.
The upper two-thirds of the body of this
es are covered with deep black spots, the
st of which are half the size of the eye.
The largest of the specimens is 12in. long; its
rays are covered with seasonal epidermoid
cles, arranged in a series along each ray."

Notes and Queries

is satisfactory to know that Mr. R. Rams-
m, of Manchester, has quite recovered from
evere illness, and is once more able to go
t in his usual genial manner.

E hope salmon anglers on the Earn will have
ter season than last. We hear from Crieff
there was a good spate on Wednesday, and
ets and cruives are now off.

E can recommend any of our readers who
to combine pleasant sea-side quarters with
ing air, and inland as well as sea fishing to
to the secretary of the Great Eastern
way, Liverpool-street, for their illustrated
phlets for tourists, with descriptions of holi-
resorts on the East Coast, the Broads, &c.

E publish a letter from Mr. F. G. Pattison,
secretary of the Bideford and District
ler's Society, in which he informs us that "a
leman, greatly interested in fishing, has pro-
d the prize money for a class for poultry at
annual show, on October 22 and 23, the
age of which is suitable for fly-tying."
her particulars can be had of Mr. Pattison.
wish the movement every success.

E following advertisement appeared in the
ness Courier, of August 21, 1891:—"In conse-
ce of the numerous applications which Sir
. Tollemache Sinclair, the proprietor, has
tly received for permission to angle for trout
e lower part of the Thurso river, he hereby
ates that until the close of the present year,
he will give leave to the public to fish with
nd line for trout from the Rivermouth up as
the South Boundary Wall of the Thurso
etery, opposite Juniper Bank.—By order.—
ter Estate Office, Thurso; August 18, 1891."
is a very liberal gift to the public, and one
h they will, no doubt, appreciate, as they
now fish with freedom, and without being
dicted for trespass.

OD SPORT AT STALHAM.—A. Nichols still con-
s to show good sport to his clients. Mr.
alli caught with him on Tuesday night
gust 18), in about six hours, two and a-half
of fish, including two perch, weighing
oz. and 1lb. 6oz.; three roach, 1lb. 2oz., 1lb.,
14oz.; and several bream about 2lb. On
rsday night they landed two stone of fish.
ngst them was a tench of 2½lb., and several
y rudd. Those who wish to fish the Broads
A. Nichols, or to engage rooms at his house,
ld write beforehand, to avoid disappointment.

E RIGHT OF FISHING FROM STAMFORD BRIDGE
UTTERCRAMBE, YORK.—To the Editor of the
shire Herald.—"Sir,—In to-day's issue of
Yorkshire Herald, I observe under the head-
of 'Angling Gossip' a paragraph stating I
stopped all fishing from Stamford Bridge to
ercrambe. I must ask you to correct this in
next issue, as such is not the case. It is not,
has never been, my intention to stop any-
fishing so long as they do not injure the
s, &c., and to prove this, everybody who has
d for permission to fish has been granted such
ission. It is in the interest of true anglers
no one is allowed to fish without such per-
ion, as then they can always be sure of good sport, which nobody is more pleased at than myself. The late tenant granted permission to anybody who asked for it, and I am willing to do the same. The writer of the article seems to be labouring under a misconception in stating the waters are free; if such were the case, how, then, should it be necessary for intending anglers to ask permission? Again, allow me to state that permission will readily and with pleasure be granted to any intending anglers between Stamford Bridge and Buttercrambe Church; the remaining waters I reserve for myself and friends.—Yours sincerely, FRED. B. LYSAGHT-KNIGHT.—Aldby Park, York, August 13, 1891."

A DAY'S BREAM FISHING AT OFFORD.—Starting from Host Faulkener's, at the Horse Shoe, about half-past nine o'clock on Saturday morning, August 22, we—*i.e.*, my wife and self—went over to our boat, lying in Abraham's meadow, and got fairly under weigh in about a quarter of an hour. We pulled up stream as far as Mr. Priestley's meadow, passing at the G. N. osier bed, the Rev. Turner who had been fishing since half-past five and had not caught a fish. Coming to land about half-way up at a good open space, where there was plenty of room to handle long rods, we disembarked and put together two long rods 20ft. and 18ft. respectively, and one short one, which my wife uses, and which lies close under the bank. We had taken our baiting, consisting of a pail of grains, with us, and I mixed about half of this up and throw it in. We then sat down and patiently waited for a bite. The "first express" went down (we were close to the railway) and not a touch; two or three more rattle by, and still all was silent, and our spirits began to droop, and we began to think we were in for a bad day. However, about a quarter to twelve there was a mighty tug which I attributed to an eel, at one of the long rods, but before I could rush to it to strike, it was gone, and all was again quiet. A few minutes after, my wife caught a 1lb. bream on her short rod, and this opened the ball, for immediately after there was another sheer walk off with one of my big floats (Thames quills) and a few minutes after a two and a-half pounder lay on the bank. The fun now became fast, and by one o'clock we had eight bream, three 2½lb. each, and the rest a little smaller. There now seemed a slight lull, and we improved the time by having lunch, and then I walked down the bank to speak to Mr. Margetson, who was fishing a swim on the towing-path about three hundred yards below us, which Collins, the keeper of the Offord Association, had been baiting for him for a few days previously. He was fishing with lobs and had not got a fish, so Collins came over the river to me, and I gave him a few brandlings with which Mr. M. subsequently got a few nice fish. Having returned to my own rods, and put the rest of the grains in, the bream soon began to feed again, and they kept right on through a severe storm which broke over us about six o'clock, with a result that we got in all twenty-eight bream, sixteen of them weighing from 2lb. to 3lb. each, and the rest were all over 1lb. each. I scarcely know what to attribute it to, unless it was that a lot of rain water had come during the previous night and the water was very discoloured. At any rate, I know it was one of the best day's sport we have ever had, and when the fish were spread out in the yard on our return to quarters, everybody said it was the finest show of fish they had ever seen at Offord. I ought to say that in addition we caught twenty-six roach, and could have caught an unlimited number.—ROVER.

LAKE VYRNWY, NORTH WALES.—A correspondent writes: "To the uninitiated, Lake Vyrnwy would convey to the minds of many a place where engineering and mechanical skill had spoilt natural beauty; but this is not so. Not only does it supply Liverpool with an ever-abundance of the best drinking water, but it furnishes delights for tourists of all classes—the artist, photographer, shootist, &c., and especially flyfishermen. This beautiful lake runs longitudinally for five miles, varying from a quarter of a mile upwards in width, and on either side are huge mountains of heather, fern, and gorse, intermingled with grass, and here and there stand out in bold relief rocks, larch, and oak plantation, &c. On the lake are to be seen wild fowl of various descriptions, and occasionally the solitary kingfisher, all tending to add to its general charms. There is a carriage drive of twelve miles round, which is cut away from the mountains, and at various distances there are sequestered bays into which many streams and rivulets pour their ever-living waters, descending from precipitous heights in varied course over boulders, rocks, and stones that make the scenery truly enchanting. From the dam overlooking southwards, the river Vyrnwy takes its winding course to the Severn through such a variety of sylvan beauty that no bard could describe. Facing the lake, at the south-west side, we have the Vyrnwy Hotel, standing some 100ft. above it. This hotel is replete with all comforts, and is managed by Miss Davis and Mr. Gibbings, and to both your correspondent must pay a tribute of respect for the very able manner in which it is conducted, at a moderate charge; the posting, boating, and boatmen, &c., coming under the supervision of the manager. Now, August is not considered a good month for fly-fishing; but the lake is so full of trout there is no wonder at the weekly record. I myself have caught the limit (fifteen) in a very few hours, and never had any difficulty in making up a good basket. The fish are brought to the hotel, weighed, and registered in a book under the strictest scrutiny of the manager, who is particular almost to a fault, for many were the trout I caught within a hair's-breadth of 10in. (the limit of size), and which had to be thrown back, under penalty of a fine, which in many rivers would have been considered a fine fish. I do not mean the latter a sa joke. The lake is fishable from the shore at any point, or from a boat, at the fisherman's option. There are some very large fish in mid-lake, but I caught none above 2lb., my average being a little over 1lb., and the strongest fighting fish it has been my lot to welcome. There will always be plenty of fish, as, apart from the natural breeding-ground, Mr. Ward (the enterprising lessee) has at a great cost completed some extensive artificial breeding ponds, from whence there were will be an everlasting supply; besides, no fishing is allowed between Sept. 15 and the following March. Anyone desirous of visiting this grandest of trout fishing lakes should write to the manager, and arrange for conveyance to meet the train at Llanfyllin station (pronounced Thlanfuthlin), or at Bala, truly a charming drive to the hotel, and one never to be forgotten."

CLOSE OF THE SALMON NET FISHING IN THE NORTH.—Wednesday last, at midnight, witnessed the enforcement of the closure on the netters' operations till the advent of a new year. On the Dee, Don, and district coast fishings, the season has been a good one, and particularly so on the coast south of the Dee, where the fishing has not been so prolific for many years back. The Harbour Commissioners stations have yielded a higher record than in any previous year, while the Bay of Nigg, Altens Cove, and other south stations are also above the average. In the in-river stations the results have not kept pace with the coast, yet the figures are much above last year, and on the whole a fair average. The Don all round is much better than last season. On the coast north of that fishing has not been nearly so successful, and the yield is under the average.

FISHING ON THE HAMPSHIRE STOUR.—A curious fishing case was recently heard at Christchurch Petty Sessions. A gentleman, a visitor to Bournemouth, was summoned for fishing in the river Stour in water over which a private right of fishing existed. The defendant pleaded guilty, and at the same time stated he was not aware that he was doing wrong. He was under the impression that a ticket could be obtained for the fishing at the New Inn, towards which he was making his way, intending to pay when he got there. The owner of the fishing did not wish to press the case, and probably no more would have been heard of the matter, if defendant, after having fished from the banks of the river, had not been found fishing from Ilford Bridge later in the day. The defendant said he thought he had a perfect right to fish from a bridge over a public highway. The magistrate's clerk said, although the bridge was public, the water was private. Defendant was fined 10s. and 17s. costs. But how about the 3s. 6d. ticket, which could have been obtained at the New Inn during the intervals of the two fishings?

THE LATE DONALD GUNN, GILLIE, FORSINARD.

ALAS! Poor Donald Gunn! He has joined the majority. This member of the warlike clan Gunn, the terror, in the "good old times" of reviving and reprisals, of the Sutherlands and the "men o' Strathnaver," was born sixty-four years ago, in Strathhalladale, close to the spot where the burn of Shallag-na-Coorach joins the Halladale river. Early in life, and when as yet scarce able to wield a stout willow wand, Donald showed his fondness for fishing, and it was always well known to his parents, when they failed to find him when wanted, that he had "stealt" quietly away to the burn of Coorach, with wand and worm to "pin" the yellow trout. Later on, and when strong enough to walk to the several hill lochs in the neighbourhood, he got hold of an "otter," and with this deadly engine, equipped with a line of his mother's making and flies of the roughest of his own tying, he sped gleefully over "moor and moss," to the field of his operations. With the "otter" he was wonderfully successful, bringing home on many occasions (as of late years he has told anglers) such a heavy lift o' troots that he had to rest "every few hundred yairds wi' th' wecht o't." Ah! those were the palmy days of sport, when Donald was young and the trout knew no guile! Such baskets as are never *now* heard of were *easy then.* In justice to Donald's memory—for he was a fair fisher—it has to be stated that, although in his young days he was a terrible and renowned "otterer," he never once, albeit he retained a hankering for it, declaring often that it "beat a' for catching troots," put the "otter" on a loch after ottering became illegal.

Donald, when examining the tiny flies of the present day, as he often did with great circumspection, was wont to make quaint reference to the large, rough, home-made flies of his youth. "Ah," he would say, "when I was a bit laddie, and the troots loupt like daft, I would never hae imagined that the day would come when a' this fine art in dressing would be required to beguile them. Trow, times are sair changed." Of a truth, "sair" changed indeed they are, for, flies aside, there was no such thing known in the Highland Strath during Donald's boyhood, as fine drawn gut and silk lines, not to speak of cane rods, "whip-lash," eyed hooks, dry-fly, and "strike from the winch." No, indeed! As to lines, Donald's consisted of horse-tail hair—two or three good long hairs for gut, and the nest, or reel line, of three ply, or plait, of two or three hairs, all twisted together with goosequills, which were found on the shores of the upland lochs.

Mr. Murray, of the hotel, Forsinard, where for eight seasons Donald has been head gillie and boatman, writes:—"About thirty-five years ago Donald went to America, where several of his uncles had some twenty years before emigrated, and after accumulating a little money he bought a piece of rough land in the neighbourhood of the place where one of his uncles lived. But Donald was no 'land man.' After spending some days felling trees, he took his hatchet, and giving it a few swings round his head, pitched it as far as he could into the forest, and straightway went and sold the piece of land to his uncle. Some time afterwards, and during the American war, he found himself as stoker on board a steamer, and while in this employment he ran the blockade twice. With all the war-fire of the Gunn in his eye he would tell how that the captain—who was also a Scotchman—said to his crew, 'Heaven, hell, or New York to-night, my boys.' The plan the captain fell upon was to make a raft of timber and tar and oil, and set fire to it. The wind being favourable, the raft was carried towards the enemy's line of ships, and thinking it was a ship on fire, an opening was made in their line, and the gallant Scottie, taking advantage of the opening and the darkness of the night, got safely through.

Finding that American money did not stick to his pockets, Donald returned to his native strath about twenty-four years ago, and married a Crofter's only daughter, and at the death of his father-in-law he succeeded to the Croft, where he has had his "ups and downs," like all other Crofters.

Donald got the credit of being able to give a name to every fly shown him. And he could highly entertain his employer when trout were not on the rise, or when walking over the moors to some distant loch. One of his amusing clever "buts" we must give. Once, when returning from fishing Loch Coorach with a party, Donald was asked what building was that, pointing to a rather primitive free church by the roadside, and he replied that that was the Free Church of Scotland. The querist gave a derisive laugh, which did not go down well with Donald. And walking a few yards farther, where stands a crofter's meal mill, he again asked what building was that. Donald replied that "that was the Church of England." "And what is the wheel for?" asked his questioner. "For driving the organ," said Donald. A glass of whisky was ordered for him on arriving at the hotel. If anything that Donald would say was doubted, he would reply, "that he never told a lie but when the truth would not suit."

DONALD GUNN.

Donald was a most accommodating gillie, and truly, as one gentleman to whom he had been gillie this season said on hearing of his death, he was a prince among gillies. He liked to beat all the others each day, and invariably did so, but when this did not happen he felt and looked ver disappointed. He knew all the shallows and bays frequented by the trout, and no doubt this accounted for his gentleman having the best baskets. Fly fishing was his favourite sport and he did not care for trolling, though the largest trout he knew well were got by the latter mode o fishing. There was always a great demand fo him by those who came to Forsinard, and he ha this summer finished his seventh season, lastin five weeks, with one angler who is an annua visitor. Three-fourths of the visitors wanted t have him and he was often bespoken a mont beforehand. Donald will be greatly missed b those gentlemen on their retur to Forsinard, and several of the to whom his death has been announced have replied expressin their deep sorrow. Letters continue to be received from partie nearly every other day asking t have Donald Gunn for their gillie but alas! alas! no more will hi advice guide, his skilful han handle the oar, or his light foo tread the heather.

Although in his sixty-fourt year, Donald was up till August quite fresh and vigorous, an would have passed for a man te years younger. From the 1st o May until the date mentioned, h was constantly at Forsinard. O the latter date he had finishe with a Mr. Durrant, and wen home as usual on Saturday nigh apparently in his ordinary healt For a week or two previous t this date he had complained o "rhumates," as he called it, in hi left arm, but nothing was thoug of it, until Monday, 3rd Augus when his arm became serious, an before medical aid could be got h was past recovery, and deat ensued at noon on Tuesday, 4t August. The "rhumatie" that h complained of turned out to b erysipelas. The funeral took plac on Thursday at noon, and was attended by upwards of one hundre people, nearly the whole mal population of the eighteen miles o Strathalladale. The coffin wa carried shoulder-high to Kirkto Churchyard, and so Donald Gun was buried within one mile o where he was born. Everybod seemed much moved at Donald' sudden death, and seemed to thin that a "land-mark had been removed."

Donald was very quick-witted and also very entertaining; hi hobby was angling, and he ofte declared that there was nothin under the heavens in the shap of sport to beat angling for trout And so anxious was he to mak a good basket that he woul scarcely give time to his gentleman for lunch Nay, he would be up and in the boat befor he was half finished with it, calling out, "Th trout are on the rise, Sir; let us be off, o we will not make a basket the day. No, indeed no, Sir!" To lady anglers he was all *gallantry* and would plump into the water in the mornin so as to transfer them, without wetting a pretty shoe, into the boat. One thing he had a grea aversion to, and that was *two* anglers in one boat He used to declare that such ought not to b allowed, as the one was always in the way of the other.

Mr. Murray, in a private letter to me, expresses himself as much cut up about Donald's death, which was so sudden and unexpected. For the bereaved family, a widow and three boys, he says much sympathy is felt, and he suggests that a "little something" to cheer them, and as a tangible expression of kindly remembrance of the "head of the household," might be done by those anglers to whom Donald was known. Mr. Murray thinks, as I do, that we shall not soon look upon his like again. In the season he had come to be regarded at Forsinard as one of the family, and an undoubted attraction to the place. I knew him, and can truly say that I found him a model gillie—active, obliging, attentive, beguiling with saying and story when required to relieve tedium, and ever anxious to please as he was to get sport. He was intelligent and a great reader, and his frequent quaint letters to Mr. Marston, Editor *F. G.*, were always replied to. He took a pride in making anglers aware of this, and when a present accompanying a letter was a book on angling, he read it over and over again with the greatest zest. Piscatorially, next to angling, his delight was to read about angling.

Waltoniana

IF there is one class of sportsmen who should not complain at the wet summer we are having, it is the anglers. The harvest is being spoiled and bread will be dear; but there is water in the rivers and fish do bite, and the gallant bearers of fly or bottom-fishing rod are for the most part having sport far above the average for the time of year. The barbel, which during many summers past have fed but poorly, have been taking well, and, needless to say, roach fishers have not done badly. Of course we grumble. We should not be anglers if we did not. But the few who are contented with moderate bags are thankful and satisfied.

NOT everywhere, however, has sport been first-rate. A friend writing from Gweedore says there are a lot of anglers there, but they are not doing much. Sarcastic-like, he adds, "I am sure their baskets will be heavy by the time they come to tell their friends at home of their doings." He is an angler himself, so knows I cannot, for the life of me, understand why anglers are supposed to magnify the contents of their baskets. I do not meet the men who do it. Certainly a few of my acquaintances have an unfortunate way of losing the largest fish they have ever hooked, but large fish are surely more likely to break away than small ones, and if now and again a forty-pound salmon goes off with a cast and a favourite fly, which said fly is recovered the next day sticking in the tail of a 3lb. sea trout, it only proves what strange things fish can do in the way of ridding themselves of flies and transferring them to other fish.

IN this connection, I remember a story told me by a fairly veracious Scotch gamekeeper. The tenant of a certain stream in the north was fishing a noted pool, and at the third cast was into a fine salmon (this always happens in stories about the third cast) which cut capers and behaved wildly. Above the pool were a couple of small falls, and just below the upper one was a small eddy, in which the keeper knew two salmon to be lying. In answer to a query I put him, he was unable to say whether or no the fish knew anyone was lying on the bank near them. Anyway, that was immaterial. Now, the salmon which was hooked and cut capers in the pool below as aforesaid was a large fish of about 20lb., while the two fish in the eddy were neither of them over 10lb. in weight. We now arrive at the marvellous part of the story. The big fish, having gone hither and thither in the pool, suddenly struck up-stream, with a rush ascended the lower fall, dashed into the eddy, and a second later the angler found he had on a smaller fish, which he ultimately landed. "Oh, it was easy to understand," said the keeper. "The small fish in the eddy just rushed at the fly in the large fish's mouth, and broke the fly away and became hooked. Oh, yes, it was easy to understand that." The wonder of it was that the fish which was landed was fairly hooked in the mouth. The same keeper also told me that that same angler, who was also a shooter, blazed away all through one shooting season at grouse, snipe, woodcock, pigeons, duck, and other wild-fowl without—hitting once? you suggest. No, my friend, without making one miss all through the season. Oh, yes, it was easy to understand that.

"I WANT you kindly to tell me where I can get really first-rate pike fishing in Ireland," wrote one of my too numerous correspondents the other day, and I was inclined to reply "nowhere," having hunted for that same first-rate pike fishing until I wearied and gave up the chase in disgust. Possibly there are some private waters where the pike are large and numerous. I know of one such place in the sister isle, but in the public waters I fear that the slaughter of pike in the breeding season, combined with the ever-increasing attention paid to these fine fish by anglers (an attention both complimentary and obnoxious to pike), have had the result of thinning out the fish in all the more comeatable waters, and also in the great majority of those more remote. Pat is never tired of telling one of the monsters, which have been killed; but how many of the thousands of anglers who have visited Ireland during, say, the last ten years, have had any monsters to show for their pains? There are certainly many Irish lakes where better pike fishing can be had than in most open English waters, but not what I can term "first-class pike fishing," by which I mean an average of ten fish a day of goodly size, and at least one fish over 20lb. in a fortnight. There are private waters in England where even better sport than that can be obtained. In a land where pike are looked upon as vermin, and are slaughtered at all times accordingly, it is absurd to expect really fine pike fishing. Still, it is expected, and many are the anglers who are disappointed.

I SHOULD be sorry to say anything to keep anglers away from Ireland, but I should be still more sorry to be the means of sending anyone there with the idea that they would obtain sport which would not be forthcoming. Ireland is a first-rate place for an angling holiday. I prefer it to Scotland myself. If the tourist angler's hopes are not raised too high, he will enjoy his holiday far more than if he goes over there expecting to have splendid fishing, only to be disappointed. A good all-round angler can have a most enjoyable time on some of the large lakes, provided he is not nervous on the water. There are a few large trout to be obtained by trolling (*Anglice*, trailling); probably the perch fishing will be first-rate. If there are bream in the lake, a likely spot should be baited and tried at night. Then there may be rudd to be caught with the fly on the shallows, and in numbers of small streams are numbers of small trout, which anyone is at liberty to catch. In September (I am speaking of the west and south), a little wild-fowl shooting can probably be obtained without difficulty, and altogether a very jolly holiday may be spent. I have in my mind some of the large Shannon lakes.

TEMPLAR.

A LARGE PIKE.—A noble pike was caught just at the close of the season by a gentleman on Stalham Broad. It was captured in splendid condition, and weighed 21lb.; it measures 3ft. 3in. in length, and is perfect in shape. It has been most artistically mounted by Mr. W. Lowne, of Fuller's Hill, Great Yarmouth, and has been much admired by all who have seen it.

A SHARK CAUGHT ON A "SPINNER."—Quite a stir was caused at Bridlington, on Thursday week, when Mr. Mills's yacht came in from a fishing cruise, having on board a large shark, which the crew had captured whilst out hand-lining. The circumstances connected with its capture were of a most exciting character. It seems that Mr. Mills was pulling in a small fish—a gurnet—which he had hooked on a "Spinner," when suddenly a shark appeared and attempted to swallow the gurnet, but the smaller fish had no inclination that way, and fought hard to escape from the jaws of the huge creature, now diving under the boat and now skimming on the top of the water. All the while the shark was making great rushes at it, and once or twice got it in its mouth. Whilst this exciting scene was going on, Mr. Phil Mills got the gaff, and stood ready for a chance at the monster, and presently the opportunity offered. By a dextrous stroke he then sent the gaff into the right place, and amidst great excitement the shark was hauled on board, where its frantic efforts to escape soon put all in confusion; but a few well-applied blows with a marline-spike by Mr. Frank Mills quickly placed the creature out of harm's way. A large crowd gathered round the yacht as it lay at its moorings near the south pier to see the monster.

Correspondence

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. PRITT.

WHOLESALE DESTRUCTION OF SALMON.

DEAR SIR,—I should feel very much obliged if you would publish in your next *Gazette* a letter that I take from the *Cork Constitution*, August 14, 1891, and signed "F. W. Jackson, *Ex* Hon. Sec. Old Anglers' Club." This appears in print just after a terrible destruction of salmon and trout at Innishannon, river Bandon, co. Cork. The water was low, and the fish had congregated in large numbers just above the tideway, in a reach of about three-quarters of a mile. The slaughter was awful, independent of those taken away by the poachers. It is said nearly a thousand fish were taken out of the river to prevent contamination of the water. The river Ilen, farther south, has been mercilessly poisoned this year also, and is similar to the Bandon at present, almost fishless. When it is reflected that this is destruction of splendid food and manly sport, there should be a long and lusty cry to the Lord-Lieutenant of Ireland for more stringent laws relative to the inland fisheries, and dismissal of the various conservators that have proved themselves unworthy of the trust placed in their hands, and care nothing that this great evil is extending year by year.—Yours, &c.,

NUNQUAM NON PARATUS.

[COPY.]

THE WHOLESALE DESTRUCTION OF SALMON.

TO THE EDITOR OF THE "CORK CONSTITUTION."

SIR,—I am informed that fully two weeks ago above Macroom salmon were poisoned by hundreds. At the weekly meeting of the Board of Conservators, on last Saturday, Mr. Barry stated that since then another poisoning had been effected in lower waters, whereby over fiv hundred salmon were taken out of the river. Strange to say, that in the very same paper in which this startling statement appears, a letter signed by Mr. George Haynes, conservator, takes prominent place, assuring all its readers that fully five hundred salmon more have passed from their only place of safety, to receive unquestionably the same sad fate.

Everyone interested in this question knows that the key of the river Lee is the Wellington Bridge hole, with its long reaches below, where fish may lie in comparative safety owing to sunken anchors and heavy hitching.

But since the new weir has been erected, in which a most efficient pass has been constructed, under the guidance of the chairman of the Waterworks Committee, the conservators appear not to be satisfied with the consciousness of its efficiency, but must insist on having "artificial" floods passed twice a week through it, with what object nobody knows, except to supply an irresistible temptation to the poisoner to practise his deadly art above.

Is it genuine work to induce the fish to leave the deep waters of safety in summer seasons to reach the shallows and pools of the upper waters, where a couple of bottles of condensed poison is certain to annihilate them? And yet it appears to be so from the statement of Mr. Haynes. The only reason assignable is that "there are poachers at Wellington Bridge hole." Now, to my certain knowledge, not more than a dozen licensed men fish from that bridge, two-thirds of whom are unquestionably not poachers, but would be willingly bailiffs if properly handled. Yet at this very point the greater part of the board's energy is directed, leaving thirty miles of water to two or three bailiffs, supplemented by the occasional visit of a police patrol. Can anyone wonder at the result? Until this present year this Wellington Bridge hole has been part of a "several" fishery, consequently netted throughout the entire season. I have seen one hundred and twenty salmon taken out of it in one draught of a net; this one draught of a net would represent more than all the poaching of one year at that bridge would be equal to, and yet to protect this one draught the conservators will insist on closing their eyes to the frightful poison slaughter in the upper waters.

The whole matter resolves itself into a simple question of expediency—viz., whether it be easier for the board to direct nearly all its attention to watching the questionable proceedings of four licensed anglers (who, by the way, are thoroughly watched by eight fair fishing anglers, besides the general public), or strive with every nerve to vanquish that the practice of which will render our lovely Lee in two brief years a "fishless river."

One thing is certain, the old wail of indignation draft and drift nets can be no longer indulged in, for thousands of salmon have passed this year these destructive engines to meet on the upper waters their inglorious doom.

Have the net men nothing to say to this?

What has the medical superintendent of health to say?

If the conservators cannot preserve the fish, surely it becomes the corporate duty to strive to preserve from contamination the water.—Yours truly,

F. W. JACKSON,
Ex Hon. Sec. Old Anglers' Club.

ARUNDEL PARK.

DEAR SIR,—In replying to your correspondent, "M. A.," saying the Duke has closed the gates of Arundel Park, I beg to contradict that statement, for it is entirely without foundation. We should like to know where "M. A." got the information. —Yours truly,

A. A. ELDRIDGE,
Rose and Crown, 21, Goswell-road.

WARWICKSHIRE AVON.—CART-LOADS OF FISH AND FEW FISHERMEN.

DEAR SIR,—Herewith I beg to hand you the envelopes which I have not used. I find it is not of any use trying to send a report all through the season, as there are so few fishermen who go out, and there is little or nothing worth reporting. There are cart-loads of fish in the river. Last Bank Holiday I saw—well, I can't say how many, but for two hundred yards the river was positively black with big bream; in fact, I don't think you could have put your hand down flat on the water without touching one. The strangest thing of all is that I can never get them out in any quantity. I've baited and baited, with the result of only three or four decent fish in the first hour of daylight. Directly the sun gets up, all of them come up to the top of the water, and won't look at a bait; at the same time they take no notice of the casting out of the tackle. What can they all find to feed upon, for those I catch are in splendid condition? The river here is always weedy, with clay or muddy bottom as a rule, and slow running. Below Warwick it runs over gravel chiefly, and is remarkably clear from weeds and vegetation, and flows tolerably fast. Down there the bream feed freely, and I have caught good quantities without previous baiting. I think the weeds hold some food or other which the bream thrive on, and prefer to any baits I can place before them. Some lucky beggar will get them "on" some day—I only hope I may be the favoured individual.—I am, Sir, yours faithfully,

Rugby. A. FROST.

MARKED FISH.

DEAR SIR,—I am glad to be able to assure "Templar" that the only point upon which he takes objection to my scheme for marking fish has been fully considered and provided against. The labels are only used by me in certain districts, and in each of these ample notice has been given that fish are being so marked—not only by letters in the local papers, but also by persons in communication with the keepers in charge of the rivers where they are in use; and a notice has also been given by the courtesy of the Editor of *The Field*, and yourself, as Editor of the *Fishing Gazette*, of the fact, and giving my address as that to which any labels which may be detached from fish may be sent. I am, yours, &c., HENRY G. GREEN.

Laverton House, Hill, Southampton.

A GOOD FISHING PLACE IN NORFOLK.

DEAR SIR,—In your issue of the 1st instant you published, under the above heading, a letter from Dr. Ladell, of London, recommending anglers wishing to fish the Broads to make Stalham their headquarters; and acting on the above, I at once decided to give the place a trial, with the following results.

I arrived on Monday evening, August 10, and began fishing next day, taking 30lb. of bream, one 3lb. and several over 2lb. The previous day Nichols had been out for two or three hours with Masters E. and F. Hudson, of Birmingham, their initial effort in angling, and they had taken 13½lb. of roach. On Wednesday my catch did not amount to very much; but Mr. Arthurs, Mill House, Stalham, out with Nichols, had a grand catch of fish, including twenty-five roach, weighing 22lb.—certainly the finest lot of roach I ever saw. Thursday I did not fish; but Masters E. and F. Hudson had 45lb., including some very fine rudd, about 2lb. each. On Friday I had (two rods) sixty-six fish, weighing 70lb.; roach up to 1½lb.; perch, 1¼lb.; rudd, 2½lb.; and some very fine bream. On Saturday, myself and the Masters Hudson had about 30lb., my best fish being a tench of 3lb., which I am having set up; and one of the Hudsons had a perch 1lb. 10oz. Nearly all the above fish were taken with lob-worms on Barton Broad.

As the *F. G.* was the means of my having such grand sport I shall be only too glad if this letter induces other anglers to give this place a trial. They are bound to catch plenty of fish, as they are there in tons. Nichols knows every yard of the broad and river, and his services are in great demand. I put up with him at Walton House, and was made thoroughly at home.—Yours truly,

Oldham. J. F. WILKINSON.

A NEW SEA FISHING BAIT.

DEAR SIR,—I herewith enclose two new baits that I am just bringing out for pollack, bass, and mackerel. You will see that it is a metal fish, cast on to a specially made long shank hook; it can be used by itself, or may have a worm or strip of fish put on the hook, and being cast solid does away with the lead to a certain degree, especially when drift lining for pollack. Should it get dull at any time a scrape with a sharp knife will make it glisten again. There is nothing to wear out in them, and the hook is solid right through the fish. I make them in two sizes—prices twopence and threepence; and I think they will prove very killing. I have had good reports of them, fishing for codling off piers, as they resemble the jigger used in the Newfoundland cod fishery.

I shall be glad to hear your opinion.—Yours truly, W. HEARDER.

Union-street, Plymouth.

[We do not see why this bait should not prove a useful addition to the tackle of the salt-water angler.—ED.]

THE BADGER.

DEAR SIR,—Permit me to thank "Liberia" and "Badger" for their replies to inquiries after badger-fly.

I find I have more dressings thereof now than there are days of the week; and the conclusion I have come to is, that any body and wing, with the hackle they term the badger hackle, answers for the badger fly; but the neatest I have received is one dressed by Ogden, of Cheltenham, from a private source.—I am, Sir, yours faithfully,

D. W. BREARLEY.

Sherrington, Newport Pagnel.

COTTON CAKE AS A GROUND-BAIT.

SIR,—Water was thick at East Peckham, Kent, last Friday and Saturday, but not too thick to catch fish (legering), bream, eels, and dace taking the worm. Aaron Saunders (or Sanders) is a noted character in this neighbourhood, and knows the water well—one reason, perhaps, why Aaron often catches bream when others cannot, and that with a rod that would fill an ordinary angler with wonder. His chief ground-bait is cotton cake—a remarkable production, with a very strong and most peculiar odour, not unlike a linseed poultice stuffed full of currants, only darker and greener—probably the husks of the seed from the cotton. Aaron believes in the efficacy of this odour; I certainly do not in a discoloured water, because I and a friend, after fishing for several hours in a noted swim (which Aaron had baited for a London angler who did not come), never took a bream; but trying for the last few hours of my stay at another quiet corner, in a lazy current much nearer the side, and throwing in chopped worms as ground-bait, we took three good bream and a few eels. How does Aaron account for this, as we fished the swim that he had baited exactly as he told us. He well ground-baits with the cake, and fishes with worms. An immense number of large pieces of foam or froth-like small patches of dirty snow were continually floating down the Medway, and gave it a singular appearance—nothing could have better marked out the river's course, or shown how the bream eddy was formed.—I am, &c., MARK.

THE FIRST EDITION OF RONALD'S "FLYFISHERS' ENTOMOLOGY."

DEAR SIR,—Being anxious to obtain a first edition of Ronald's "Flyfishers' Entomology" (1836, I believe), I am writing to ask if you will kindly tell me, through the *F. G.*, the most likely manner in which I could obtain the above, also what price I should give for it? An acquaintance got hold of a very good copy of the first edition for ten shillings and sixpence. Are there any later editions than somewhere in the fifties?—Yours faithfully, F.R.C.S.

[A first edition is worth from twenty shillings to forty shillings, according to condition. We advise "F.R.C.S." to advertise in *The Publishers' Circular and Booksellers' Record*, "Books Wanted" column, or get his bookseller to do it.—ED.]

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear. Best quality only.—EAST LONDON RUBBER Co, 8, Shoreditch, E

INTERESTING TO ARTIFICIAL FLY MAKERS.

SIR,—I beg to inform you that a gentleman here, greatly interested in fishing, has provided the prize money for a *class for poultry* at our annual show on October 22 and 23 next, the plumage of which is suitable for fly tying.

The class has been placed in the schedule, which can be had from, yours obediently,

F. G. PATTISON,
Hon. Sec. Bideford and District Fanciers' Society.

[We hope those interested in this question will communicate with Mr. Pattison.—ED.]

LARGE DACE.

DEAR SIR,—I should like to know what your correspondent "Giant" has to say respecting the large dace weighing 1¼lb. The fish in question is said to measure 11¾in. I have taken a great quantity of very fine dace (notably one take last season of forty fish, weighing 20lb.), and I have no hesitation in saying that a dace of the weight of 1¼lb. should measure considerably over a foot long. A friend of mine, a preserver of fish, now has in his possession two dace of 12oz. each, and they measure from tip to tip 11in. long. Now this fish has half-a-pound more flesh on him, and is only three-quarters of an inch longer. I think the above must be taken with a very large grain of salt.

Then, again, Mr. B. Abrahams draws attention to a very fine take of dace—viz., thirteen fish, weighing 10lb.—certainly a *most extraordinary* take; and I, like him, would like to know the measurements—it would considerably enlighten us on the above.—Yours truly, A. GEORGE,

Sec. Caledonian Angling Society.

THE 1LB. 4OZ. DACE, &c.

SIR,—Referring to Mr. Jardine's letter respecting the capture of a dace 1lb. 4oz., measuring 11¾in. extreme length, there is either some error in the measurement, or the fish must have been what a Thames professional (whose opinion I asked on the matter) described as a "precious thick 'un."

As a contrast to the above I quote the following: In *Fishing Gazette*, of about 29th November last, Mr. Edgar S. Shrubsole stated that in 1887 Mr. Hicks (Woolwich Brothers Angling Society) caught a dace in the Ravensbourne, Southend, Bromley—weight 1lb. 2½oz., length 16in.; and as a dace 2in. longer than the extreme depth of the *Fishing Gazette* was beyond my comprehension, I inquired whether the extraordinary measurement could be substantiated; and on the 20th December following a reply appeared from Mr. William Stevenson (secretary of the club referred to) to the effect that the statement was perfectly true.

In the *Fishing Gazette* of 4th April Mr. R. L. Atchinson gave the measurements of a 1lb. 1oz. dace (as weighed at the office of *Fishing* twenty-four hours after its capture) as extreme length 13⅛in., depth 3½in.

Mr. Jardine also refers to gudgeon *9in. in length*, which turned out to be small barbel. I have never heard of recent instances of gudgeon attaining this length, until, on the 1st August last, an article appeared in the *Field*, wherein the writer states "we have seen one gudgeon of 9in., and several of 8in.

In the *Fishing Gazette* of 8th August, in "Notes from Lancashire," the following passage occurs: "Some very good minnows have lately been taken in the Weaver and Dane; they were exceedingly fine, and in a few cases measured 6in. in length." I have never before heard of minnows exceeding 5in. in length. Have any of your readers?—Yours, &c., GIANT.

RE DACE.

SIR,—Mr. A. Jardine in his letter states that the *largest and finest dace* at the great International Fisheries Exhibition, 1883, was exhibited by Mr. Howlett, of Newmarket, weighing 17oz. He must have forgotten the one exhibited in the collection of the Hoxton Brothers, which was taken on a Sunday afternoon by Mr. E. Barr, and when taken to Mr. Cooper's on the next day (Monday) between twelve and one o'clock weighed *17½oz.* This fish took the *money prize, certificate, and diploma for dace* at the Fisheries Exhibition of that year, and is now in the club-room of the Hoxton Brothers Angling Society, the Swan, New Bethnal Green-road. It was taken in a small river that empties itself into the Lea. It is no uncommon occurrence to take dace from this stream from 12oz. to 15oz. I had the privilege of fishing it for many years.—Yours, &c., R. GHURNEY.

FISHING NEAR SOUTHAMPTON.

SIR,—Could you, or any of your readers, kindly supply me with the following information? I am going to Southampton for a few days, and whilst there would like to do a little fishing. Is the river Itchen free to fish in? Is there any hotel or inn close to the river where I could get accommodation? Can you give the name and address of any fishing-tackle man likely to give me information? Is there any good roach fishing?—Yours truly,

26, Albany-street, N.W. J. KELLY.

BABY ROACH FOR SALE.

DEAR SIR,—The other morning, in passing Billingsgate Market, I was very much disgusted to see a "trunk" full of roach, and apparently not a *sizeable fish amongst them*—in fact, those that I could see were from *two* to *three* inches long. Being an old angler, and a member of a well-known angling society, you may be sure I was not over and above pleased to see such a scandalous piece of vandalism, if I may so term it. Unfortunately I was in a hurry to catch a train, or I should certainly have made some enquiries into the matter, as I think it is a duty one owes to angling society at large to endeavour to prevent such baby fish being taken. Would to goodness the Mundella Act had gone a little further, and so enabled *someone* to take proceedings against the seller of such fish. I may add that on the top of the trunk there was a barbel of about 2lb., showing, I think, the lot had been taken from some river.—I remain, yours faithfully, C. DE NOVA ROSA.

THE DERBYSHIRE WYE.

SIR,—Although sorry that circumstances should make necessary the writing of such protests as those of "Old Otter" and "Saracen" in recent issues of the *Gazette*, still I am glad in the sense that others confirm what has been my experience for a long time past in respect of the fishing in this river, and I should be pleased if the dissatisfaction now being expressed were the means of bringing about a change in the desired direction.

"Old Otter" marvels that the chief owners of this historical trout stream appear to care so little for its destruction; and in this sentiment I am quite with him, and think the kernel of the matter lies somewhere here. But can the kernel be got at and interviewed on the subject? I have not any great hope that it can; for some time ago I addressed a letter (complaining on behalf of others as well as myself) on this subject of the never-ending interference with the river to the steward of the estate, and received a reply to the effect that the Wye, ever since he had known it, had been subject to what I complained of, and he did not know of any remedy! I might say here that a friend of mine, who also wrote a letter of complaint to the same gentleman, was referred to "higher powers" for a solution—whatever that may mean. So, evidently, it was not considered necessary to take any remedial steps.

If it is a fact that there is no remedy, the game very soon will not be worth the caudle—in other words, a day's fishing on this river will not be worth the charge made for it, and the time and trouble expended in preparing for it.

Referring again to the letter of "Saracen." If behind that *nom de plume* there is the personality I imagine, I feel sure that gentleman will have done all he possibly could from time to time to remove the present reproach from the character of the Wye; and if his efforts have been of no avail, this, added to the decision of the steward as above quoted, does not make it very hopeful that anglers are soon to see the Wye in anything like its former pristine beauty, which is much to be regretted, for the river ought to be—and no doubt would be were it not for the interference with it—one of the best in the northern district.—Yours truly, YELLOW DUN.

FISHING NEAR STOKE-ON-TRENT.

SIR,—Could any of your readers kindly inform me if there is any good coarse fishing to be obtained (pond or river) near Stoke-on-Trent, Staffordshire, as I intend spending my holidays there, and should like to know if it is worth while to take tackle?—Yours respectfully,

H. A. HOBBES.

RE CLARENCE DACE.

SIR,—In answer to Mr. Abraham's query as above, I wish to say the fish in question were taken from the river Kennet (private water), and their average length was 11¼in.—Yours, &c.,

THE PRESIDENT OF THE CLARENCE A.C.

A GOOD PLACE FOR BIG ONES WANTED.

DEAR SIR,—I should feel greatly obliged if you, or any of your readers, could give me some information as to where I could get some carp and tench fishing, or either where there is a chance of specimen fish. I have a good collection of Thames barbel, bream, and a trout, cased, averaging 8½lb. to 6¼lb., and wish to add different species to the same. I have heard of Ruislip. Can anyone give me public or private information? A letter to my address would be kept strictly confidential if desired.—Yours respectfully,

HENRY COOPER.

7, Edna-street, Battersea Park, S.W.

WHAT IS A PUBLIC NAVIGABLE RIVER?

SIR,—In a book published by David Douglas, Edinburgh, entitled "How to Catch Trout, by Three Anglers," there is an appendix on "The Law of Scotland as to Trout Fishing." In this appendix a public navigable river is defined as "one which is fit for the transportation of the country products." It is also stated that "in what are termed public navigable rivers, trout may be captured by everyone."

Can you or any of your readers give me any further enlightenment on this subject than I have been able to gather from the afore-mentioned appendix—viz., whether the Tweed comes under the category of a public navigable river up to any fixed point?—for it would scarcely be so considered over its whole course, else fishers would claim to fish for trout, notwithstanding any rights of holders and renters of land on the banks of the river, as indeed is claimed by some anglers on certain parts of the Tweed.—Yours, &c., RED ANT.

RE CAMM FUND.—APPEAL TO CLUB ANGLERS AND FRIENDS.

SIR,—Since my last appeal to all clubs for their grant towards the above case, I have received with thanks from "Fisherman" (per editor *Fishing Gazette*, £1 17s. 6d.; and five shillings from members of the Camden Angling Society.—Yours truly,

B. ABRAHAMS.

25, Silver-street, Notting Hill Gate, W.

Cheques and Postal Orders should be crossed "Alliance Bank and Co."

P.S.—As the above list closes on the 5th September, will all those societies who have promised, and those that have any subscriptions, send them on to me by Wednesday night at the latest, so that their names may appear with other societies in the *Fishing Gazette* on Sept. 5?

WELSH HARP FISHERY, HENDON, MIDDLESEX.

DEAR SIR,—Some very good takes of fish here during the past week. I enclose you list of some of the takes: Mr. Cameron, three dozen roach; Mr. Noble, two jack; Mr. Seal, seven dozen roach; Mr. Hunt, four dozen roach and eight bream; Mr. Rawlings, three dozen roach; Mr. Smith, ten dozen roach; Mr. Noble, four dozen roach; Mr. Winckworth, three dozen roach and four perch, 7½lb., and one jack; Mr. Altwood, seven dozen roach first day, and six dozen roach and six bream second day. These are the principal takes that have been weighed in by our keeper.

After trying everywhere for some good stock fish, I have at last managed to buy about seven thousand splendid roach, all large size, some of which my two men fetched yesterday, about one thousand seven hundred, and they were turned into the water here last night, in the presence of some well-known anglers, among others Mr. George Knott, of the Royal George Angling Society, Messrs. Vaughan, Smith, Broughton, Ealand, [illegible], &c. Some more fish will be fetched [illegible]day next and put in the water same night.—Yours faithfully, J. WARNER.

August 26.

"THERE is now in the windows of Messrs. T. Page Wood and Co., Castle-street, Cardiff, the finest specimen trout (*Salmo fario*) taken in the district with the fly. The fly, dressed by Mr. Wood, is shown inside the case. The weight of the fish is 4½lb.; length, 21in.; girth, 12in.; and it was taken by a member of the Cardiff Piscatorial Society, Mr. Richard Harris, who on Saturday also took two, one of which weighed 2lb. 3oz., with flies given him by General Meade."—*Cardiff Express.*

OTAGO ACCLIMATISATION SOCIETY.

EXTRACTS FROM THE TWENTY-FIFTH ANNUAL REPORT FOR THE YEAR ENDING MARCH 31, 1891.

THE Council of the Otago Acclimatisation Society begs now to represent its annual report for the year ending 31st March, 1891.

But before proceeding to review the past season, we have with feelings of deep regret, to record the loss of one of our number. Our late friend, Mr. James Wilkie, died on the 29th of April, after a few days' illness. The loss to this society is very great indeed. As is well known, Mr. Wilkie took a very great interest in all things pertaining to the society, besides acting as secretary from the year 1885 to 1890, with the exception of one year. From his very large amount of information and experience, he was continually consulted by the members and public, to whom he was always willing to impart all he knew, and it will be a long time before the memory of Mr. Wilkie fades from the minds of all those connected with acclimatisation matters.

During the past season our operations have been almost entirely confined to piscicultural matters. The Council, at several of its meetings, has discussed the introduction of winged game, but the surrounding circumstances are so adverse they cannot advise any steps being taken at present, or so long as poisoned grain is so largely distributed over the country.

The number of licences issued for the season was—trout licences (men's), 513; youths', 81. Perch licences, 31.

English Salmon.—Nothing has yet been seen of these fish after their return from the sea. The estuary of the Aparima has been netted several times within the last month, with the object of ascertaining if any grilse or smolts are there, but up to the present without success. Netting will be continued at intervals there, as well as in the pools of the river, and it is hoped some good results will be forthcoming.

The present stock of salmon in the ponds is doing well. They produced over 20,000 ova this season, 1,000 of which went to Wellington, 7,000 fry were liberated in the Waiwera, 7,000 in the Owake, 3,000 were sent to Lake Ada, at the head of the Arthur river, Milford Sound, and 800 were retained as stock fish. Mr. G. P. Clifford again kindly volunteered to take the fry round to the Sounds, which he accomplished with very little loss. The fry put into the Waiwera have done very well, and have been seen in large numbers up to 10in. long. They disappeared during a fresh in the river in the beginning of November, and it is hoped the most of them reached the salt water in safety, and will return again.

Rhine Salmon.—These fish, although four years old, and thriving well, have not, as yet, produced any ova, but it is very probable some may be obtained from them next season.

Rhine Trout.—From these fish we have got 300 or 400 bright and healthy fry, six months old.

Brown Trout.—Our supply of ova this season was obtained entirely from the rivers by our manager, Mr. Deans, and Ranger Burt, the latter being very fortunate in the Clinton district, the rivers being in splendid order just at the right time, and while prosecuting his labours several fish over 20lb. in weight passed through his hands.

Besides supplying other districts with ova and fry, we distributed 284,000 fry in our streams.

Mr. McConnochie, of St. Bathans, has hatched, reared, and distributed 8,000 fry in that district this season. This is a great assistance to the society, it being a very risky matter transferring fry such a distance from headquarters.

Loch Leven Trout.—These fish having been placed in the largest pond at the Clinton hatchery, are doing remarkably well. The ova procured from them this season was 60,000, and the number of fry distributed 56,000. Some good specimens of this fish are reported as being caught in the Waipahi and Pomahaka this season.

Scotch Burn Trout.—About 15,000 ova were obtained from these fish this season—13,000 fry were liberated and 1,000 kept for stock. The demand for this class is increasing, being very suitable, especially for small streams.

American Brook Trout.—This class produced 90,000 ova. 76,500 fry were liberated, but, notwithstanding the large quantity which have been put into our streams for the last few years, very few have been taken by our anglers, only an odd one being reported now and again.

Perch.—These fish are becoming very numerous in some of the lakes and lagoons. Kaitangata Lake and Lovell's Creek are simply swarming with them, affording capital sport. The society are now issuing licences to fish for perch at five shillings, the season opening on the 15th December.

Tench.—Having only a few parent fish on hand, we have placed them in better quarters, and expect a larger increase in future.

Golden Carp.—We have a few of these of a mixed character—dark and red—but have had no increase.

Shags.—Very few of these pests have been destroyed this season. Seeing the society gives one shilling a head for black shags destroyed inland, we trust our friends in the country will take more interest in their destruction. Any known breeding-place should be rooted out when the next breeding season comes in. The best time to visit them for this purpose is while they are rearing their young.

Eels.—During the season we distributed a number of eel-pots, and have had some very good reports as to captures. One report from the Waipahi states that from the part of the river where a great number of eels were taken out last season very few are to be got this season, and at that particular portion of the river the small trout are now to be seen in thousands, showing how destructive the eels are on the spawning beds of our rivers.

Fishing Season.—Notwithstanding the past dry season, our licence-holders have no reason to complain of the scarcity of fish. From reports received from all quarters we find that on all rivers free of diggers' "tailings" the takes have been above the average, and the fish found in capital condition. On the Pomahaka, many good baskets of splendid fish were taken. This is very gratifying, seeing that a few years ago the reverse was the case. The river has been heavily fished by our licence-holders and visitors from Victoria and elsewhere. Mr. Thomas E. Brown, of this city, fishing the lower waters, killed, in six hours, twelve fish, weighing 52lb., all in perfect condition. Mr. George Munro had twelve fish, weighing 34lb., one day's fishing. Messrs. Marshall and Chisholm spent three days in the same locality, and had very good sport, killing between them thirty-seven fish, weighing 138lb. The water of Leith and streams near town yielded good baskets to those anglers who fished them in the early part of the season; but, owing to the dry season, the takes were small after Christmas. The Waipahi, and streams in the neighbourhood of Clinton, have furnished capital sport to the southern residents, and we are pleased to observe so many boys taking out licences in the town and country districts, having issued eighty-one youths' licences this season.

The Clutha and its tributaries have afforded capital sport. The trout in the Clutha are increasing fast, and are very numerous a long way up the river, one rod killing as much as 90lb. weight of fish in one evening above Cromwell. The fish caught near the mouth of the river are pronounced as good as salmon. The upper reaches of the Mataura have also yielded good baskets. Many of our old visitors from the North Island again returned to their favourite haunts in this stream, and were very successful.

The Waikaia, a river not far from Switzers, although not much known to anglers, is a fine river for trout. Messrs. Marshall, Chisholm, and Brown visited it late in the season, and had very good sport, speaking very highly of this river and its tributaries, Gow's Creek and Dome Creek. Mr. Christie, a settler in the district, during the past season killed a large quantity of fine trout.

The Mimihau and Otaraia.—These streams have both been very heavily fished this season, and yielded their usual number of fine trout, baskets from 30lb. to 40lb. weight were of frequent occurrence. Mr. Matthew Lowrie, fishing the Mimihau principally, killed, this season, two hundred and forty-one fish, averaging 3lb.

Poaching.—We would earnestly urge on all anglers the necessity of keeping down poaching in our streams. We know that it is carried on to a great extent in many districts, but, unless the anglers and settlers themselves in their several districts take a stand against poaching, the society can do very little to prevent it.

Crabs and Lobsters.—The society are in communication with several parties with the view of procuring some from the Old Country. It is probable a trial shipment will be made shortly.

NEW PATENTS.

The following is a weekly list of New Piscatorial Patents, specially compiled for the *F. G.* by Messrs. Hughes, Eli, and Hughes, Patent Agents and Engineers, 76, Chancery-lane, London, W.C., authorised Attorneys for the procuration of English and Foreign Patents, Designs, and Trade Marks:—

13,110.– J. B. Barnes, of 24, Wingfield-road, St. Augustine's, Norwich, for "the Barnes incomparable float."

Seizure of Unseasonable Salmon.—On Friday afternoon, on the arrival of the 2.20 train from Limerick to Clonmel, Mr. Richard Bradford, Inspector of Fisheries, seeing a box, lying on the platform, which was about to be put into the van for transmission to Waterford, and suspecting that it contained salmon (this being the annual close season), he seized the box, which, on being opened, was found to contain eight salmon; and for the forfeiture of which he subsequently obtained a magistrate's order. The consignor, who is known, is to be prosecuted.

Holloway's Pills are admirably adapted for curing diseases incidental to females. At different periods of life women are subject to complaints which require a peculiar medicine; and it is now an indisputable fact that there is none so suitable for complaints of this nature as Holloway's Pills. For all the debilitating disorders incidental to the sex, and in every contingency perilous to the life and health of women—youthful or aged, married or single—this great regulator and renovator of the secretive organs and the nervous system is an immediate cure. Their purifying qualities render them invaluable to females at all ages. They are searching and cleansing, yet invigorating; a few doses will speedily remove every species of irregularity in the system, and thereby establish health on a sound and firm basis.

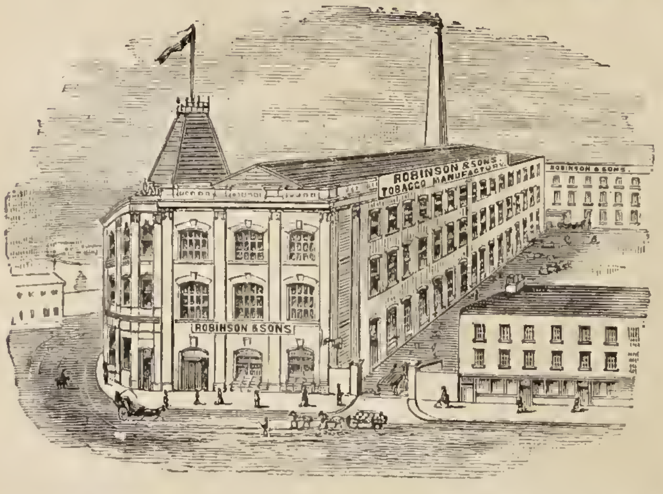
SMOKE "ORIEL" NAVY CUT.
THE HIGH CLASS TOBACCO,
MADE FROM PICKED LEAVES OF THE FINEST QUALITY.



Extract from the "FISHING GAZETTE" of February 21st, 1891:—

A GOOD SMOKE.

Dear Sir,—Knowing how much you enjoy your pipe when out a-fishing, may I ask if you, or any of your friends, have ever tried "The Oriel" navy cut, manufactured by Robinson's, of Stockport? If you have not, do so at once, and I venture to say that you will be well pleased with it, being very cool and lasting, with an exquisite flavour. I have no interest in the matter whatever, but simply recommend it as my *beau ideal* of what a fisherman's tobacco should be.—Yours truly, Smoker.

Sold at 5d. per ounce, in 1 and 2 oz. Packets, and 4oz. Tins. Any Smoker having difficulty in obtaining it from his usual Tobacconist can obtain it direct from the Manufactory
POST FREE. 2oz., 10d.; ¼lb., 1s. 8d.; ½lb., 3s. 4d.; 1lb., 6s. 8d. POST FREE.
Sole MANUFACTURERS: ROBINSON & SONS, TOBACCO & SNUFF MILLS, STOCKPORT.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, AUGUST 29, 1891.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association.—EASTERN DISTRICT No. 1.—The next return visit will be to the Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road, on Monday next, August 31, when I hope to see a good gathering of clubs on the above-named district.—G. MANNING.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—A return visit on the above list took place on Monday, the 24th inst., at the Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham, where a most enjoyable evening was spent. On the roll being called, the following seven clubs answered: Bermondsey Brothers, Peckham Brothers, Rodney, Second Surrey, St. George's, United Brothers, and Waggoners. The next visit will take place at the Rodney A.S., Rising Sun, Harper-street, New Kent-road. The date I will give next week.—G. W. ARMSTRONG, district officer.

NOTICE TO ANGLERS HOLDING THE ASSOCIATION PRIVILEGE TICKETS.—A competition will take place on the 13th of September from Langley Bridge to Iver Bridge, two rods (jack and eels barred). Entrance fee, sixpence, which can be paid to the appointed committee on the morning of the 13th only, at the North Star Hotel, Langley Station, G.W.R. The anglers will be started by signal from Langley Bridge, at ten a.m., and to prevent disputes, fishing will commence only by the given signal, so there will be all swims open to any angler who gets first after that time. D. Pithouse, Esq., has contributed largely towards this competition. For final information and names of the committee, list of prizes, &c., see *Fishing Gazette* of September 12. Referee, B. Abrahams, 25, Silver-street, Kensington, W.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting-hill Gate, W.—The members met on the 26th, when H. Skelt was unanimously elected to officiate on the committee of the forthcoming competition at Langley, on Sept. 13. Our roving match at Staines and various parts for three prizes takes place on the 30th inst.—B. ABRAHAMS, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our fourth outing this season will take place at Windsor on September 6, from Eton Bridge to Boveney Lock; tow-path only; to go over night. Several of our members were out through the week, and I am very proud to state that we had two specimen fish weighed in—Mr. Roberts, bream, the largest one a very nice specimen of 4lb. 10oz.; and Mr. Cooper, with a very fine specimen roach of 1lb. 12¼oz.; Mr. Barraclough had roach and dace: Mr. J. Bell, roach and dace; Mr. King, roach and dace; Mr. Bond, roach; Mr. Knowles, roach and dace, largest dace, 10½in. long.—J. RICH, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 23rd inst. our annual dinner took place at the Black Dog and Duck Inn, Bury, near Pulboro', the worthy host, Mr. Henley, providing us with a very good dinner, the members and friends numbering thirty-two in all. After the cloth was cleared a few of the members went and tried their skill with the roach with the following result: Mr. W. Embleton, roach; and Mr. Lowe, roach; also Mr. Ricks weighed in roach, thus saving the society from a blank. Mr. Walker and Mr. Green was duly elected as members of the society on the 20th inst. One of our members, Mr. Marsh, coming home from Hertford, on the 16th, fell asleep, and somebody in the carriage took a roach rod and jack rod belonging to him. If any brother anglers hear of them and will communicate to the above address, full particulars can be obtained of the lost articles.—E. R. EMBLETON.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The first sea fishing competition in connection with the above society will be held on the 30th inst., at Southend, for four prizes; roving; boat or land. Trains from Fenchurch-street Station at nine o'clock, 9.25, 9.55, 10.28. Messrs. Palmer and A. Davis saved us from a blank on the 23rd inst., with fish from Pulborough and the Cam.—A. G. SMITH, sec.

Battersea Friendly Angling Society, Queen's Hotel, Battersea.—The members of this club will fish a match on the 30th inst. for eight prizes (value seven guineas and a-half) at Pangbourne; pegged-down; one rod; jack barred; to cease fishing at seven o'clock. A brake will leave the club-house same morning at 7.30 for Paddington, and bring them back in the evening; return fare, one shilling. A punt competition will take place at Twickenham, on Sept. 13, for valuable prizes. On the 23rd, Mr. T. Denton brought in a nice bream taken at Kingston, weighing 4lb. 14oz., in splendid condition; Mr. J. Antcliffe, 6lb. bream and roach; Mr. Hopkins, a nice tray of roach; Mr. C. Wastell, roach. Our honorary members' competition will take place on the 30th inst. at Pangbourne, and rove; for prizes given by the club. No limit; jack barred.—G. MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road.—Our trays were fairly well filled with some nice roach on the 23rd inst., contributed by the following members: Messrs. H. Patman, James, Smith, and Pallum. There are several societies that have not given any account of the books of tickets sent them for the benefit of Mr. R. Smith. If they will kindly do so as soon as possible they will greatly oblige.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—On Wednesday, Mr. William White and Mr. Joseph Green were proposed as working members, also Mr. B. King, and they will be ballotted next week. The dinner will take place at Woking on Sept. 13, and not at Pulborough as previously announced. On the 23rd, we had a very fine show of fish, the following gentlemen weighing in: Messrs. Wheelhouse, roach and bream; Hacker, roach: J. Barker, carp and perch; Foster, carp, perch, and roach; Farmer, carp; and F. Barker, carp. —F. ROBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 23rd inst. we fished our quarterly match at Ware, when the prizes were taken in the order named: Mr. Newton, first, with perch and dace; Mr. Brown, second, roach; Mr. Warren, third, with roach. On the 26th inst., Mr. Rich had a very nice show of roach and dace. The dace were worth seeing, the two heaviest weighing 9½oz. and 9oz.—D. WARREN.

Bostonian Angling Society.—The following members have had fish during the past week: Messrs. Clark, roach; Hallsell, roach; Ward, roach and dace; Brown, roach and dace; West, roach and dace; Jennings, roach; Steggles, roach; Rundle, roach; Lawson, roach.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On the 23rd instant the following members weighed in: Mr. F. Briggs, roach and bream; Mr. E. Briggs, perch; Mr. Sewell, roach and dace; and Mr. G. W. Ducker, roach and bream.—H. ROACH.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—We had a very favourable day on the 23rd, all members taking fish, Messrs. Bissell and Whatcott taking the two prizes. Messrs. Bissell, Whatcott, Foster. Lee, J. Mearring, G. Mearring, Wilson, Tucker, bream; Whatcott, Lee, J. Mearring, G. Mearring, Wilson, T. Hawkes, roach; and Mr. Wilson a nice perch of 2¼lb., now being set up by Mr. Cooper. We shall hold a special meeting for very important business, on Tuesday next, also in connection with our great smoker. Will members please attend.—T. HAWKES, sec.

Burdett Angling Society, 118, Hackney-road.—We were saved a blank by two of our members going out on the 23rd. After so much rain one would have thought the waters were in good order. but their takes were small: Mr. D. Flint, 3lb. 6½oz. of bream and roach; Mr. Green, 1lb. 8½oz. of bream. We fish a pegged-down match on the 30th inst.; members to sign at the club-house on Saturday, August 29. —J. PETHER, sec.

Buxton Brothers' Angling Society, Walthamstow Liberal and Radical Club, 4 and 6, Buxton-road.—On the 22nd, Mr. M. Stephens was out, and caught a fine tray of roach; some of them were very fine specimens. On the 30th, we fish our next match for special prizes, when it is to be hoped all members will be present, so as to make it a success.—A. SHUKER, sec.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—Several of our members weighed in on the 23rd, but the takes were very small. On the 26th, Mr. J. Tanner weighed in barbel, chub, and roach. Members will please take notice that next Wednesday is quarter night, when all should be present (*vide* Rule 3). Our next outing will take place at Staines on Sept. 20, roving between Staines Bridge and Penton Hook Lock; two rods; jack barred. Members have the privilege of going down overnight. Those coming down in the morning must report themselves in the usual way.—E. W. WOOD, hon. sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—On Monday last, Mr. T. Crumplen (Old Izaak) occupied the chair. The announcement that Professor Chris. Green, of the Grange Angling Society, would read a paper on "Roach Fishing," proved to be good bait, and crowded the club-room. The Professor in his paper not only exhausted the subject of roach fishing, but gave in narrative form his past reminiscences as an angler, dating from 1858. "As sound as a roach," is an old proverb; and on Monday last, in order to mark the occasion, and to give a filip to Professor Green's paper, Mr. Tom Keeble and Mr. J. Deplidge went roach fishing with good result—viz., two trays of—almost every one a specimen—splendid fish, weighing upwards of 40lb. each tray. Mr. T. Crumplen, Mr. R. Ghurney, Mr. J. A. Wade, and Professor Green were unanimously elected honorary life members. With a hearty vote of thanks to the chairman and Professor Green the meeting terminated.—JOHN SMITH, hon. sec.

Central Association Visiting List, and Clerkenwell and District United Visiting List.—The next visit on these two lists will take place on Monday next, August 31, at the Seymour Brothers A.S., Coffee House Tavern, Chalton-street, Euston-road, at 8.30 sharp.

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—Only two of our members had fish on the 23rd—viz.: Mr. Macdonnell, bream from Amberley, and Mr. E. Garbrecht, roach from the association water Pouder's End.—CAS.

Clapham Junction Angling Society, the Clarence, Winstanley-road, Clapham Junction, S.W.—Since my last the following members have weighed in fish—viz.: Messrs. J. W. Jameson, jack, 2lb. 13½oz.; G. Jameson, roach, 8¼oz.; Chapman, bream, 5lb. 1oz., one fish, 3lb. 2oz.; W. May, bream, 1lb. 12½oz.; T. Jameson, one chub, 2lb. 8oz.; Mr. Edwards, 12lb. 8oz., and 13lb. 5oz., barbel; and Mr. E. Wilson, 25lb. 15½oz., barbel, one barbel, 3lb. 9oz., and one roach, 1lb. 2oz. The next visit on the South London Visiting List, will be to this society, on Tuesday next, September 1, when we hope to have a good muster.—A. TROWBRIDGE, sec.

Clapton Angling Society, Wayland Hotel, Dalston-lane.—At the meeting on Monday last another new member was nominated. There will be a club outing on Saturday, the 5th September, to our private water Rammey Marsh, Enfield Loch, of which due notice will be sent to all members. Our Host, Mr. J. P. Wheeldon, kindly offered a guinea rod for competition on that day for the finest specimen fish of any denomination. If desired members can have a plain dinner at the keeper's house, at two o'clock, but I should be glad to know by Wednesday next the names of those who will attend.—HENRY HOUSE, hon. secretary.

Clerkenwell and District United.—The return visit to the Eustonian Angling Society, on Monday evening, was a success, their large room being crowded with company. Mr. Neall in the chair. The following seventeen clubs were well represented, viz.:—Great Northern Bros., Lincoln, St. Andrew's, Barbican, Crown and Buckland, City of London, Independent Bros., Seymour Bros., Eustonian, Islington Bros., Bloomsbury Bros., Burton Piscatorials, North London, Camden, Midland, Anchor and Hope, and Mitre Bros. The next visit will be to the Seymour Bros., held at the Coffee House Tavern, Charlton-street, Euston-road, on Monday next, August 31; a visit on the Central Association list, is also due to the Seymour Bros., on the same evening, so the meeting will take the form of a combined visit.—F. CASTELL, hon. sec.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey.—Several members fished at Ware on the 19th, but were unsuccessful. At a meeting specially called for the 23rd instant, it was carried unanimously that our late secretary, Mr. W. Andrews, be expelled the society. We fish a match at Pulborough on September 6, and hope all members will compete. Important business will be brought before the members on Wednesday next, and it will be to their interest to attend. We intend to show up in full force at the Clapham Junction Angling Society.—LEGITIMATE.

Cobden Angling Society, Cobden Club, Kensal-road, W.—We had a splendid show of fish weighed in on the 21st, Mr. E. Baxter, with bream, tench, and jack, 51lb.; Mr. E. George, bream, tench, and jack, 20lb. On the 23rd, W. Hutchings, tench and roach; E. Baker, tench; F. Hannabus, tench and bream; W. Hill, jack. The match takes place at Denham Straights, on September 13.—A. SMITH, sec.

Corinthian Angling Club, Prince of Wales Hotel, Eastbourne-terrace, W.—Several of our members have been fishing the broads, Mr. C. Day getting, amongst others, some nice rudd. Mr. H. Stallibrass had a mixed bag, from our private water, of chub, roach, dace, one jack, and a nice perch over 1lb.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 23rd, several of our members were out, but the only gentlemen who were able to show fish were: Messrs. Cogswell, Killick, Wild, Kitson, W. Midson, and Parran, who had a nice show of roach, dace, perch, and bream. Mr. Flowers had a very fine jack. On Thursday, the 20th inst., Mr. Orange was again to the front with some fine perch, one scaling 1lb. 9oz. Members will book to Harlow, on the 30th, the train leaving Liverpool-street at 8.2. In my last report Mr. Grange should read Mr. Orange.—S. MALBY, sec.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—The members of the above society have decided to hold their next outing (roving) from Laleham Ferry to Staines Bridge, on Sept. 6; all fish to weigh. Members will kindly take this as a notice, as I am going away for a few days. Some of our members are having good sport. Mr. Bicknell has had a nice brace of barbel, 8¼lb., from the bank; Mr. Nager, perch and roach; Mr. E. Biederman, bream, largest 2¾lb., and several other members have had fish. We have made three new members since my last, but we still have room for a few more.—R. W. BIRD, hon. sec.

East London Piscatorial Society, London Hospital Tavern, Whitechapel-road, E.—On the 20th inst., our members fished for four prizes, at Nayland, but only one was taken—that for the largest of any kind taken during the day—and was won by Mr. W. F. Bull, with a perch of 12oz. Members are requested to attend on 3rd September, committee night, to arrange punt outing, and decide the prizes.—FRANK WOODS, sec.

Eustonian Angling Society, King's Head, Swinton-street, King's-cross.—On the 23rd, we fished Amberley for a prize given by the Midland Angling Society. Mr. Bailey first, with a nice show of bream and roach; Mr. Abbot, second, with bream and roach; Mr. Barrett, third, with bream and perch; Mr. Tavener, with bream and roach; Mr. Drako, with bream; Mr. Cougblan, bream. On Monday last, we had a return visit on the Clerkenwell V. L., which was a great success, seventeen clubs being present.—R. NEALL, sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On the 23rd, we had a nice show of fish by Messrs. Biggs, bream, roach, and dace, heaviest bream 2lb. 14¾oz.; S. Hill, roach and dace, heaviest roach 1lb. The next return visit on the No. 2 Eastern District will take place at the above on Monday, Sept. 7, when all brother anglers will receive a hearty welcome.—J. W. BIGGS, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We were saved a blank on the 23rd inst., by Mr. Baldham and Mr. Riggs, with a few fish. I beg to inform members that Monday next, August 31st, is a quarterly night, when I hope to see a good muster.—A. PAYNE, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road.—We had a very fine show of fish on the 23rd, Mr. Deperron being first with 27lb. of bream and roach; Mr. Ellins, a nice tray of roach and dace, 16lb.; Mr. Elton also a goodly show of dace and roach, and a nice dace of 8¾oz.; Mr. Green, bream and roach, from the Rother; Mr. Vinall, a nice little 12lb. of bream and dace (the first show of our new member not—bad); Mr. Roach, dace and roach; Mr. Bowring, bream and roach; Mr. Clark, roach; and a show by Mr. Brewer, of roach. We have elected another new member. On Tuesday next the balance-sheet for the quarter will be ready, and I hope members will not fail to put in an appearance.—A. STOKES.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—On the 23rd inst. the members of the club were out, when Mr. F. Bates was well to the front with 12lb. of roach and dace; W. Burling, 2lb. 15oz. bream; H. Caddon, 1lb. 4oz. bream; B. Edwards and T. Grande also weighed bream, roach and perch.—G. F. WEAVER, sec.

Greenwich Angling Society, Prince Albert, Royal hill, Greenwich.—On Wednesday last about thirty members and friends of this society had their annual weekday outing to Wateringbury, and a most enjoyable day was spent, the weather being fine for once in a way. The takes of fish were small, however, Messrs. Wood and Lawrance, being the most successful, the former taking the sweepstake prize. Dinner and tea were served in the saloon carriage which had been engaged for the occasion. Too much praise cannot be given to Mr. G. H. Young for the excellent manner in which he carried out his duties as caterer, everything being done in first-rate style. As a mark of appreciation a small presentation was made him by our vice-president, Mr. J. R. Orr.—G. J. TOYNBEE.

Gresham Angling Society.—The usual weekly meeting was held on Tuesday evening, with the Rev. E. Meyer in the chair. Some interesting reports on fishing were laid before the meeting. One of the members, Mr. E. Clements, had caught, at Hastings, a large sting ray, which was an unusual occurrence there, and the fish was on view at Messrs. Robertson's shop in the town. Mr. Bentley had caught roach in Sussex. Mr. F. R. Ohlson, a number of pollack, twenty-two codling, and a conger of 3lb. Mr. E. J. Powell, in four days, one hundred and eighty fish, weighing 170lb., chiefly pollack and mackarel; the whole of these fish were taken on one hook. Mr. Fletch, one trout, 2¾lb.; two, of ¾lb.; and two of ½lb. Mr. Young, sixteen dace. Mr. Fosbrook presented three books on "Fishing and Shooting in America," to the library, for which he was cordially thanked. A new member was proposed. On Tuesday, Sept. 1, the secretary will read a paper on "The Humane Angler." On Tuesday, the 15th instant, there will be a sea-fishing competiton for prizes, at Leigh, near Southend. Members intending to go are requested to send in their names to the secretary, that suitable arrangements as to boats, &c., may be made. The train leaves Liverpool-street Station at 8.17 a.m., and Fenchurch-street Station at 8.23. Some interesting "Angling Reminiscences" were communicated by members.—JAMES TAYLER, sec.

Hoxton Brothers Angling Society.—One member only weighed in on the 23rd inst., A. Hattemore, one jack, a little over 3lb., and two roach.—R. GHURNEY, sec.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—Several of our members were out on the 23rd, Mr. Davies saving us from a blank with roach, dace, and gudgeon. Mr. Pope also had fish, but was too late to weigh in.—A. W. Pain, secretary *pro tem.*

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—On the 23rd, Messrs. Lean and Key were out, but got up too late to weigh in. The smoker for Mr. C. Leach takes place on Monday, September 14, at 8.30. Tickets 6d. each.—J. H. Herbert, sec.

Izaak Walton Angling Society.—The members competed for two special prizes on the 23rd instant. Mr. T. W. Garrard was first with 8lb. 15oz. of bream and roach; Mr. W. Mecham, second, with one bream, 3lb. 8oz. Messrs. G. Rogers, G. Washington, and A. Furlong also weighed in on the same day. There are three special prizes to be fished for on September 13th. Competitors may choose their own fishing waters for these prizes. Mr. J. McDermott had a tray of grand dace and roach on Wednesday, 26th instant.

Jubilee Angling Society, Portobello, Kensal-road.—On the 23rd inst. we fished a roving match between Langley and Slough for five prizes, the result being as follows: First Mr. Wheeler, a nice show of roach, best fish, 1lb. 5¾oz.; second, Mr. E. Challen, roach and jack; third, Mr. Stringer, jack; fourth, Mr. Onree, tench; and fifth, Mr. Beales, with roach. We had a good meeting on the 25th inst., when we had the pleasure of enrolling two new members and another was proposed.—A. Ide, sec.

Junior Piscatorial Society, New Cross Inn, New Cross-road, S.E.—Notwithstanding the inclemency of the weather, several members have been out, with good results. Messrs. J. W. and J. R. Freeman had roach and perch from Paddock Wood, largest roach, 1lb.; perch, 1¼lb. Messrs. J. K. Orsman and A. J. Slatter, during last week, had excellent sport on the Norfolk Broads, bringing home a capital show of rudd and roach. Mr. Orsman's largest fish, 1lb. 9oz.; Mr. Slatter's, 1lb. 8oz. Both rudd.—W. W. C.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—At a committee meeting held on Friday evening the 21st inst., one new member was elected, bringing our number of members up to one hundred and thirteen. The following members have weighed in during the last week: Messrs. Tame, one barbel, 7lb. 10oz.; Masters, 3lb. 10oz., dace; Carter, 3lb. 6oz. bream; Prole, 3lb. 4½oz.; bream; A. B. Mason, 1lb. 14oz., roach and dace; Newcombe, 1lb. 11½oz., roach and dace; A. Evans, 2lb. 6½oz., bream; and Bartlett, 1lb. 10oz., dace. Messrs. Carter and Prole were successful in carrying off the first and second prizes respectively, in the punt competition which took place on the 23rd inst.—T. Salter, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville-road.—On the 23rd inst., the members of the above society fished at Pulborough for several prizes. Some good fish were taken, considering the very thick state of the water. Mr. More, first, with 5lb. 13½oz. bream; Mr. Holmes, second; Mr. Beesley, third; Mr. Ellingham, fourth. The following also weighed in: Messrs. Belton, White, Watling, and Bligh. This evening (Saturday) a smoking concert takes place at the above, for the benefit of Mr. Rach Nelson, one of our members. I shall be pleased to see any anglers who can make it convenient to attend.—W. Watling, sec.

Liverpool Angling Association.—We had a very good meeting last week. God-speed was given to Mr. Shaw, who is leaving for India. Mr. D. Wise presided, and Mr. J. Woods, hon. sec. of the St. Helen's Angling Association, attended for the purpose of settling conditions of a friendly contest. This is now fixed for Sept. 17, in our Knowsley water; and a dinner will come off the same evening at our club-house, Bee Hotel, at which we ought to have a big muster. One thing may be relied on that Mr. Bush will be equal to the occasion, be the number big or little. I attended a competition of the St. Helen's Association on Saturday afternoon, August 22, in Eccleston Mere, when close on forty members were pegged-down on the bank of this fine water. The result was most disappointing, and goodness only knows what has come over the fish this year—nowhere have they fed at all generously, and this occasion was no exception. But Mr. Woods will no doubt give particulars.—R. Woolfall.

Liverpool East End Friendly Angling Association, 150, West Derby-road, Liverpool.—We had a well-attended meeting on the 18th inst. I shall be pleased to see a good muster of members at the next meeting (September 1), as we have a match to propose for several prizes. Members who have been out have met with fair sport: Mr. Meighn, our treasurer, one roach, 1lb. 1oz., also a bream, which weighed 3lb. 3½oz.; Mr. J. Hitchcock, one roach, 1lb. 1½oz., weighed in for special prizes. Other members have also met with fair sport, taking into consideration tho weather thoy have had to contend with. Two new members were made on last meeting night.—T. C. Segar, sec.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—The members of the above club were out in full force on the 23rd inst., visiting various waters, and returning with some splendid catches of bream, tench, roach, and chub, the best show of the season, which kept our chairman busy. The most successful were Messrs. Penfold, Taylor, Smee, A. Clark, Sampson, W. Pearce, Milbourne, and Weller.—T. F. Penfold.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—Messrs. H. K. Applin, G. Fortescue, C. Oliver, Staines, and Garratt had a nice show of fish on the 22nd and 23rd inst. On the 25th, Mr. Gibson, of Ye Pluckie Perche Angling Society, showed a nice tray of fish. Secretaries of clubs, please note that the next return visit on the No. 1 Eastern List comes to the above address on Monday next, August 31, when the company of all friends who can make it convenient will be esteemed a favour.—J. Comber, sec.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—The competition at Twickenham, on Aug. 20, resulted as follows:—1st, Mr. Hearn; 2nd, Mr. Baldwin; 3rd, Mr. Shonfeld. To-night (Thursday, Aug. 27), Mr. Turnham weighed in 10lb. of jack and roach. Members are requested to be present on Thursday next, to arrange for the Sept. 10 match.—A. E. Baldwin, sec.

North London Angling Club, Tap Houso, Holloway-road.—Since my last report we have had a few fish weighed in by the following members: Mr. Howton, perch and roach; Mr. Stretch, roach; and Mr. Bennell, roach. On Wednesday, August 19, Mrs. Weston presented the club with a handsome cup as a prize for roach, Mr. Weston promising another cup as a prize. On September 13 we fish a roving match at Cheshunt for three prizes.—H. Stretch, hon. secretary.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland Park, N.W.—We had a fair show of fish on the 23rd inst., Mr. Harris, jack and roach, caught by the "Patent Automatic Angler," of which Mr. Harris is the inventor; Mr. Schultz, junior, roach; and Mr. Holman, jack. I wish to remind members of the match at St. Margarets, on the 30th inst. Start same morning, and fish to be weighed at club house same night.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—Several of our members were out on the 23rd, but met with very poor sport. Messrs. Forster, Bygrave, and Harrison were the only members weighing in.—J. Cuthbert, sec.

Original Alexandra Angling Society, Green Man, Cambridge-road, E.—A smoking concert is arranged to take place as above, on Monday, September 7, in aid of the Anglers' Benevolent Fund. Further particulars next week.—E. Brockett.

Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham.—On Monday last a visit of the clubs on the Anglers' Association Visiting List was held at the above, but only six clubs were represented. The deficiency, however, was made up by friends, and a very enjoyable evening was spent. Mr. Reed, our worthy host, occupied the chair, Mr. Raper supplying the musical portion of the programme. Some capital songs were sung by the following gentlemen: Messrs. Tozer, Reed, Smith, Bennett, Lang, Mitchell, Springthorpe, the Beaumont Brothers, and Dan Franklin. On the 23rd, a very good show of fish was weighed in by Mr. Steedman. Our next series of prizes will be fished on the 13th September at Pulborough; members to leave town same morning only.—A. G. Duke, sec.

Pontefract Piscatorial Society, Pontefract Castle, Chapel-street, Edgware-road, W.—The annual summer outing of the society took place on Wednesday last, when a party of about thirty proceeded to Goring by special saloon carriage. Mr. Gardiner, of the Bull Inn, Streatley, provided the members and friends with a first-class *menu*, and various sports were indulged in during the afternoon, fishing, of course, included. A goodly number went by steam launch to Shillingford—an excursion appreciated by all. The day's outing concluded at the club-house, when the host, Mr. Lipscomb, treasurer of the society, had the pleasing satisfaction of having universal congratulations for a highly successful and enjoyable day. Three new hon. members were elected.—A. Sutherland, sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Several members were out on the 23rd, but only Mr. Corney weighed in 12lb. 13oz. of roach and tench from Slough. We also had the honour of making two new members.—J. Harris, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—Some splendid shows of fish were seen on our trays on the 23rd inst., contributed by the following: Mr. Neal, chub, largest 4lb. 4½oz.; Clist, bream and tench; Wheeler, roach and perch; Hayden, roach and barbel; Brett, jack and tench; Robbins, roach; Davis, bream; Ivermee, jack and tench; Scott, roach; . Reed, roach; and others. Messrs. Peirson, C. King, and G. Brown, were duly elected working members of the society.—W. Bowyer, sec.

Queen's Angling Society, the Latimer Arms, Walmer-road, Notting-hill.—We had a good show of roach and tench on the 23rd, by Messrs. Hodges, Pratt, Drake, Messenger, jun., and Pearce. I hope members and friends will give in their names not later than September 3 for the annual outing to Harefield, on September 6, by vans. Fare half-a-crown. The first prize on that day will be a handsome cup, presented by Mrs. Singer. We leave club-house as near twelve o'clock as possible.—F. G. Pearce.

Rising Sun Angling Society, The George, Brook-street, Holborn.—On the 23rd, Mr. Sharpless saved the society from a blank with a show of roach and dace. Members who have not turned up lately are informed that there is a prize of ten shillings for the best day's show of fish during the month of September; also that a special meeting will be held on Monday next, when all absentees are earnestly requested to show up.—J. Skinner, sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—I beg to inform all members that our outing takes place at Wateringbury on the 30th inst,; train leaves London Bridge at 7.13. Also that the next visit on the Angling Association list falls to this club, and we have decided to receive samo on Tuesday, September 8, when all brother anglers and friends will be heartily welcomed. On the 23rd, Mr. Pine weighed in 6lb. 10½oz. of tench; also Mr. Wigley, barbel, 1lb. 5¾oz.—F. T. Lamberton, sec.

Royal George Angling Society, the Hope Tavern, Tottenham-street, Tottenham Court-road.—On the 23rd fished for the remaining prizes left over from our last outing, when they were all taken with the exception of one, Mr. Webber's prize. Mr. Webber weighed in a nice show of roach from the Upper Thames; Mr. Gibbons, roach and jack; Mr. Holder, roach. Our quarterly meeting took place on Wednesday last, Mr. Trotter in the chair, when the election of offices took placo with the following results: Mr. Trotter, chairman; Mr. Webber, vice-chairman; Mr. Webber, treasurer; Mr. Longland, secretary; Jerquet, Gibbons, Holder, extra committee; Gibbons and Jerquet, auditors; Webber and Holder, delegates.—F. C. Longland.

Royal Oak Angling Society, Royal Oak, Roman-road, North Bow, E.—We had a very fair show of fish on the 23rd, when the following members weighed in: Messrs. F. Barclay, F. Barrow, Parsley, Cox, Holden, Perry, Stanley, and Henson; total, 32lb. 4oz. Members please note Tuesday next is quarterly night.—A. Barclay, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—Result of fishing at Amberley for the three prizes left over from previous week: Mr. Forrester, sixth; Mr. Horace Howard, seventh; and Mr. T. Ovens, eighth. We had a grand show of fish, Mr. Wood, 28lb. 12½oz.; Mr. G. Ballinger, 25lb. 8½oz.; Mr. J. Wright, 6lb. 7½oz.; and Mr. Stone, 2lb. 8¼oz. Mr. G. H. Howard had fish, as did Messrs. Brocken and Walls; but would not weigh them in. Taking the fish as a whole, it was a very good show.—J. Wright, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 23rd inst., only a few members were out, with the following result: Messrs. E. Wright, bream, dace and roach; E. Bacon, dace; W. North, roach and dace, 11lb. 12¼oz.; J. Petrie, roach and dace, 4lb. 7¾oz. On Monday next, a return visit on the Central Visiting and the Clerkenwell District List together, will take place at the above, when the company of anglers and friends will bo welcome, when I hope to see our spacious club-room full. An outing will take place on Sept. 6, at Pulborough, when six prizes will be fished for; the Central waters only; two rods. All members going are requested to give their names in by Tuesday, Sept. 1. Members in arrears are requested to pay up at once.—S. E. Cane, sec.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent-garden.—On the 23rd inst. several of our members were out, but met with very poor sport, Mr. Smales being top weight with 12lb. of bream and roach, the largest bream, 3lb.; roach, 1lb, 2¾oz, Mr. O. Callaghan had bream, and Mr. Clark had perch from tho club waters. On the 25th inst., Mr. Williams had a perch of 1lb. Members are reminded that September 1 is quarterly night (election of officers, &c.), and also that our next outing will take place on September 6, at our club water. Pegged-down; fishing to commence on tho arrival of the first train from Waterloo (usual conditions). Three prizes. We have elected three new members lately.—Pelican.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—On the 23rd inst. we had a splendid show of fish: Mr. Hoopor, four bream, scaling 10lb., the largest weighing 3lb. 11oz.; Mr. Jones, with a fino show of bream and roach; Mr. Wells, with 12lb. of good roach; Mr. M. Marks, bream and roach; Mr. D. Marks, roach; and Mr. Polykett, roach and dace.—R. Spenceley, sec.

South London Angling Society, George and Dragon, 235, Camberwell-road.—Mr. Boorman has weighed in 7½lb. bream, and Mr. Merrick, barbel, roach, and dace. We havo had added to our prizes 10s. 6d. and 2s. 6d.—B. B., sec.

South London United Anglers' Visiting List.—Tho next visit on the above list will be paid to the Clapham Junction Angling Society, held at the Clarence Tavern, Winstanley-road, Clapham Junction Station, on Tuesday, September 1. As this society is always well represented at every visit on the list, I trust the other societies will return the compliment and give them a bumper.—A. Conn, hon. sec.

Stepney Angling Society, Beehive, Rhodeswell-road, Stepney.—On the 23rd inst., the following came home with catches—viz., Messrs. Nash, Jolly, and Woodford, with bream; Ruxton, roach and bream. Our competition, which should have taken place on the 23rd, was altered, at a special meeting, to the 30th, when we fish for eight prizes. Our brake will start at one o'clock for Dagenham.—E. N. P., hon. sec.

Stockton Angling Association, Regent Inn, Stockton-on-Tees.—Through the kind permission of Major Scrope, of Danby Hall, the members of the above association held their annual competition on the river Yore, on Thursday, August 20. Fifty-eight members arrived at Cover Bridge with the full intention of a good day's sport, but owing to the peaty colour of the water and the recent floods, the weight of fish caught was rather small. The weather was fine and the members thoroughly enjoyed their outing. Through the generosity of the tradesmen of the town in giving prizes, each member who caught any fish will obtain one. The first was captured by the secretary, R. Readman, with 3lb. 13¾oz.; the second, J. Willey, 3lb. 5¾oz.; the third, T. Day, 3lb. 3¾oz.; the fourth, L. Metcalf, 3lb. 0¾oz.; the fifth, G. Thompson, 2lb. 14¼oz.; the sixth, J. Patterson, 2lb. 8¾oz. The other forty-four who got any fish ranged from 2lb. 4¾oz. to ½oz.—R. Readman, sec.

Stoke Newington Angling Society, the Dun Horse Kingsland-road, E.—Members unable to attend on meeting nights are informed that a competition is arranged to take place at Hatfield Peveril, on September 6, for three prizes presented by Messrs. W. Ball, J. Reens, and T. Gretton. The usual conditions to be observed. Mr. E. Orrow had some nice roach on the 23rd inst.—T. Gretton.

St. Thomas's Angling Society, Waterman's Arms, Paris-street, Lambeth, S.E.—The members have decided to fish Harlow in Essex, on the 30th inst., for their remaining prizes. Mr. J. Dumbledon weighed in bream from Pulborough on the 23rd, and Mr. J. Booth, bream, roach and dace from Amberley.—G. Morton.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—The members of the above society fished a match on the 23rd inst., when the following were successful: Messrs. Lewis and Boreham (fishing with F. Collier, of the Wheatsheaf and Pigeons, Staines), came in first and second with 22lb. 10oz., and 11lb. 5½oz.; Mr. Carpenter, third, 9lb. 13½oz.; Mr. Neal, fourth, 6lb.; Mr. Fountain, junior, fifth, 3lb. 12½oz.; Mr. Comley, sixth, 2lb. 5½oz. Altogether upwards of 62lb. of fish were weighed in. Messrs. Lever, Brothers, of Sunlight Soap renown, have very kindly promised to give a case of soap to bo fished for. Tho outing is arranged to take place on September 6. Final arrangements to be made at tho meeting on Tuesday night next.——H. Reaves, sec.

Tadcaster Angling Association.—The annual match in connection with this association took place at Elvington on the Derwent (by kind pormission of Mr. R. Barker), on Thursday week. Eighteen members entered the competition, and they were conveyed to Elvington, in waggonettes, supplied by Mr. J. E. Scriven, of the Londesbro' Hotel. About £8 was given in prizes. The day was all that could be desired, and the water was in splendid condition. After the match the party sat down to a capital tea. The prize-winners were: First, Henry Barker, with 4lb. 4¾oz.; second, Boynton, 3lb. 5½oz.; third, Spink, 1lb. 13½oz.; R. Wright, 1lb. 8¾oz.; Holloway, 1lb. 5oz.; C. J. Ireland, 1lb. 4¾oz.; E. Calvert, 1lb. ½oz. The other competitors, whose catch was under a pound, were J. T. Hall, E. Payne, C. Varley, T. Poarson, W. Welsh, J. Cowap, E. Jackson, H. Fairborne, E. White, J. Leighton, and C. B. Dixon.

United Brothers, Deptford.—Several members of the above were out on the 23rd, with the following result: Messrs. G. Marshall, bream and perch; S. Cockerton, bream and roach; W. Windred, chub and roach; F. Beak, roach. The members can congratulate themselves on making eight good working members this year. Members will kindly oblige by being present on Saturday evening next, as some important business will be brought forward. It has been decided to fish for the given prizes on the 4th of October.—H. Tyler, sec.

Waggoners Angling Society, George and Dragon, Vauxhall-cross.—Several of our members were out on tho 23rd, Mr. Bird, sen., being the only member who weighed in; several others had fish, but did not arrive. Next Tuesday being quarterly night I hope to see a good muster so that we must get over the business quickly.—H. C., hon. sec.

Waltonian Angling Society, the Cape of Good Hope, Albany-street, Regent's Park.—On the 23rd we fished Shiplake and Henley for thirteen prizes, gross weight, twenty-three members competing. All the prizes were taken: Messrs. R. Dodgo, 7lb. 14½oz.; Wrather, 7lb. 11¼oz.: Good, 6lb. 6oz.; A. Putman, 3lb. 4½oz.; J. Dodge, 3lb. 1¼oz.; Marriott, 2lb. 4oz.; Waltham, 1lb. 14oz.; Morris, 1lb. 12oz.; Wright, 1lb. 11¼oz.; Jukes, 1lb. 8½oz.; W. Dodge, 1lb. 4¼oz.; Hedge, 1lb. 2oz.; H. Putnam, 13½oz. Messrs. Miller, W. Putnam, and Starr also weighed in. The pleasure of the day was greatly marred by heavy rain.—J. Packman, sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—On the 23rd instant, Mr. Hibble weighed in good show of roach, one fish 15oz. Tho result of tho competition on the 26th instant: Mr. Piolani, first, with roach; Mr. Craddock, second, with dace. The grand outing takes place on September 13. It will be necessary for the members to attend to voto how and where. The following prizes will be fished for: First prize, £2 12s. 6d.; second, £1 11s. 6d.; third, £1 1s.; fourth, 10s. 6d.; fifth, 10s. 6d. Mr. W. Ovendon was proposed as a member, and will be balloted for in due form. Mr. Hardy's specimen roach is finished, and on view at the club-house.—C. HIBBLE, sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 23rd inst., Mr. C. Newbury, honorary member, showed 43lb. of roach, dace, and barbel, largest barbel, 4lb. 4oz.; Mr. Cooper, one bream, 4lb. ¾oz., and 2lb. 9oz. roach; Mr. F. Hailey, 5lb. 12oz. roach; Mr. R. Dartnall, 4lb. 5oz. roach; Bryant, 3lb. 11oz.; Mr. A. G. Gemble, 2lb. 5oz.; Gordon, 2lb. 2oz.; G. Boyd and Enever, dace. Mr. A. D. Kidd was duly elected a member. Wednesday next, September 2, will be quarterly night, when all arrears should be paid; and there are two notices of motion regarding Rules XV. and XXI., for which a special general meeting is called at eight o'clock sharp. Also the place has to be selected for September competition and the election of officers for ensuing quarter.—R. J. DARTNALL.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—We had a good show of fish on the 23rd inst., contributed by the following members: Messrs. Frances, Casey, Smith, Whitby, Harden, Clark, Kertland, and Dessert. We have a daily outing on the 30th inst., at St. Margaret's, for four prizes; roving; all to go by first train.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford. — Our members were out on the 23rd, and the following weigbed in fish: Mr. F. Humfryes, 8lb. 3½oz., bream; Mr. W. Cox, 5lb. 6oz. of roach; Mr. R. Lowther, 4lb. 14oz. of roach; Mr. F. Horner, 2lb. 11½oz. of roach; Mr. Goodrich, 2lb. 5½oz. of roach; Mr. J. Newton, 13½oz. of dace.—R. LOWTHER, sec.

West London Angling Club, Dartmouth Castle, Hammersmith.—Next Thursday being our quarterly night, members are requested to attend early as we have to elect a new trustee in the place of Mr. Stock, who has resigned, and to make arrangements for the next club match. Other important business matters are to be discussed.—J. J. HUNTER, hon. sec.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min. for Chelsea.	Add	55 min. for Kew.
	40 ,, ,, Putney.		75 ,, ,, Richmond.
	45 ,, ,, Hammersmith.		80 ,, ,, Twickenham.
	50 ,, ,, Barnes.		85 ,, ,, Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

English and Welsh Reports.

The Lower Thames.—GENERAL REMARKS.—It is to be hoped the efforts of the New Albion Piscatorials to help the work of Thames Preservation, by means of a competition on behalf of the Thames Angling Preservation Society will not share the same fate that it did last year. The particulars of this competition appeared in the columns of the *Fishing Gazette* last week, and it will be seen that it is open to the members of the angling clubs in London and suburbs, upon a very liberal principle, and on very easy conditions. The prizes are of a very costly character, and if the movement is not supported as it ought to be it will be much regretted. It has been altogether prompted by a honest desire to assist in preserving the river for the benefit of all classes of anglers, and any failure in carrying it out will be the fault of the anglers and not the promoters of it. I would strongly urge upon those clubs especially, whose members fish the Thames, to support the New Albion Piscatorials, so as to make it a substantial and solid success. The death of Mr. W. D. Lewis, who for the last twelve years has been one of the auditors of the T.A.P.S., called forth expressions of deep regret from the committee, at their meeting on Tuesday afternoon last, and a vote of condolence with the family was entered on the minutes. Personally I had the highest respect for Mr. Lewis, and I deeply mourn his loss. It will be seen from the angling reports there has been some splendid sport in our Metropolitan river, and the barbel are plentiful in most parts of the river. I was very pleased to learn that Mr. Alfred Nuthall has been rewarded with the capture of a very handsome trout of 6lb., which he caught in the neighbourhood of Penton Hook, and the fish has been sent to Messrs. John Cooper and Sons for preservation. Another good trout of 7lb., has been taken by a gentleman at Sunbury, so that the trout catching season is not yet over. The river keepers of the T.A.P.S. have had a good deal of night work lately, to prevent the laying of night-lines. The services of the head river keeper, William Douglas, were highly commended and recognized by the committee at their meeting on Tuesday last, and in his assistant, John Davis, he has a useful coadjutor.—B.

RICHMOND.—Henry Howard, during the week has taken 45lb. of roach and dace; H. Mansell, in four days, 70lb., and five bream; Job Brain, in five days, 65lb.

TWICKENHAM.—S. Cole, in four days, 41lb. of roach and dace, and another day, three dozen of fine roach, and a bream of 4lb.; R. Coxen, with Messrs. Farrant and Sons, during the week, 70lb. of roach and dace, and three barbel; George Coxen, 51lb., and seven barbel; J. Coxen, in three days, 30lb.; J. Frost, in three and a-half days, 36lb., and three bream; A. Hammerton, in the week, 40lb., six bream, and one barbel; F. Wiggins. 85lb.; and John Spong, in four days, 75lb., five bream, and two barbel.

TEDDINGTON.—Joseph Baldwin, in three days, twelve dozen of roach and dace; B. Stevens, in two days, ten dozen of roach and dace, and five bream; W. McBride, in one day, eight dozen, and one jack.

KINGSTON.—John Johnson, during the week, thirty-two dozen of roach and dace, four barbel, one brace of jack, and three chub; N. Bolton, in four days, thirty-one dozen of roach and dace, four barbel, and one brace of perch; J. Knight, during the week, twenty dozen of roach and dace, fourteen barbel, ten chub, the largest 5¾lb., and a jack of 5½lb.

HAMPTON COURT. — John Smith, during the week, twenty barbel, and three fine perch; W. Milbourne, thirty dozen and eight barbel; Thomas Milbourne, in three days, eight dozen, six chub and four barbel; James Hedger, in one day, ten dozen. One of the anglers fishing for barbel, and using mutton for bait, caught four fish weighing respectively 6lb., 5½lb., 3¼lb., and 2lb. William Milbourne, says: "After the heavy rains the water is getting in good condition."

HAMPTON.—One of the anglers fishing on Tagg's Island, landed a fine barbel of 8½lb.

SUNBURY.—Three of the punts of Messrs. T. and A. Stroud, in one day, brought in thirty dozen of roach and dace, and ten barbel; Alfred Stroud is credited with a fine trout of 7lb. A gentleman fishing in one of Messrs, Stroud's punts during the week, has taken fifteen jack, ten dozen of roach and dace, two chub, the largest 4lb., and three barbel; Edward Clarke, during the week, forty-nine barbel, seventeen bream, and a few roach and dace.

WALTON.—Mr. Read fishing in the back-water, hooked a very fine pike, which he estimated at 15lb. at the least, but he did not manage to land it.

LALEHAM.—Mr. Alfred Nuthall J.P., chairman of the T.A.P.S. fishing with George Harris, in addition to other fish, caught a splendid trout of 6lb.

STAINES.—Charles Hone reports he has been doing well amongst the roach, several fish over a pound, one of 1lb. 3oz., and one of 1lb 4oz.; his best day with two rods was 22½lb. of good roach; he says, the water is in good order, and hopes to report some good takes next week. John Keene, jun., says, he has been out six days; one day with Mr. Wilson, eleven barbel and four dozen of roach; another day with Mr. Mencar and friend, ten barbel, and five dozen of roach and dace; another day with Mr. Westley, seven barbel, and five dozen of roach and dace; another day with Mr. Edwards and friend, nine barbel, and six dozen roach and dace; another day with Mr. and Mrs. Jarvis, twelve barbel, and six dozen of roach and dace; and another day with Mr. Newbury, of the New Albion Piscatorials, 50lb. weight of roach, dace, and barbel, the largest barbel, 5lb. All the above takes were on roach tackle.

Upper Thames.—Nothing but a deluge of rain every day up the Thames valley. Visitors, angling and otherwise, have fled in despair of ever having any fine weather, and the riverside resorts which at this time of the year should look bright and cheerful, are deserted, washed out and melancholy. The Thames at last is beginning to feel the effect of the continued influx of land water, has risen ragidly, and becoming highly coloured. Under all these deterrent circumstances it can hardly be wondered at that few fish have lately been taken. In the Temple waters Mr. Cox and party have been defying the elements, and got hold of really good baskets of roach. At Harleyford Sir E. Dashwood and party deserved success amid the barbel but could not command it. Mr. Ford, in these same waters, is credited with one tench, 4lb., one barbel 4lb., and a perch, 1¾lb. At Benson, on one occasion, a gentleman last week had five trout spinning, two being returned. THURSDAY NIGHT.—Rain has fallen the whole of the day, and in consequence a summer (?) flood is imminent. Little success can now be expected with barbel, but roach and perch should feed in the eddies and boughy swirl.—MARLOW BUZZ.

Thames (Datchet).—The river is in very fair condition; fair sport being had at times; unsettled weather makes it uncertain. I was out on the 17th inst., had very good sport—about 40lb. weight of barbel, chub, and dace. On the 19th, good sport with chub and dace, not a bite with a barbel. Going gudgeon fishing to-day, they are sure to bite.—G. LUMSDEN.

Thames (Windsor).—An extremely boisterous week rendered angling here very unpleasant, and consequently fewer anglers were out than is generally the case this time of year, August being *the* month, for all-round coarse fishing, more especially barbel, chub, dace, and gudgeon. The latter fish are having a very easy time of it this season, as very few punts have worried them; but as September, according to the Jenkin's chart (so far correct), is to be a dry month, doubtless their ranks will yet be considerably thinned by the fair sex, many of whom delight in catching the merry little gudgeon. Very meagre are the accounts to hand of sport during the past week. Bunce, of Windsor, had a few borbal from the well-known Windsor Bridge swim; Mr. Rowell, of Eton, four chub, 8½lb.; and a three days' basket, consisting of chub and dace, going 18lb., by a London angler too modest to give his name, is the sum total worthy of mention. Roach have been quite off feed, even the enthusiastic little Howlett, of Eton, could not coax them into taking the succulent gentle, however, skilfully presented, if one can judge from his basket, consisting of one roach, between half-past five and eight a.m. Water could not look better, and I can only attribute the non-success to the immense amount of food the storms have caused to get into the water, fish must be surfeited this summer, with creeping things innumerable.—B. R. BAMBRIDGE.

Ancholme District.—It has been very tempestuous during the greater part of the week, and little has been done on the trout becks. Your correspondent fished a little while yesterday, but only secured one brace of good fish. On the Ancholme, two or three matches have taken place with tolerable result. The Hull Universal Club in which thirty-two members competed came out as follows:—F. Brown, 11lb. 6oz.; F. Phillipson, 9lb. 4oz.; W. H. Barker, 5lb. 10oz. Several of the bream taken ran between 3lb. and 4lb. The Gainsborough Angling Association came out thus:—J. Fishburn, 9lb. 10oz.; E. Andrews, 7lb. 2oz.; G. Tuman, 5lb. 11oz.; Mr. W. Good, of Hull, had a nice basket, one day with fine fish up to 3lb. 8oz.—THOMAS FORD.

Ant (Stalham, Norfolk).—Like many other angling resorts in Norfolk, Stalham has been visited during the past fortnight with a considerable amount of rain and high winds. However, sport has been very good, experienced anglers making fine baskets. Mr. Nichols, the well known local piscator, has been out several times recently, and I am pleased to report has been well rewarded in the shape of pretty shows of roach, perch, bream, and rudd. Last Saturday I was in readiness to go over to Stalham from Great Yarmouth, but owing to the state of the elements, I put my visit off at the last moment, especially as I knew that the Yare was in flood, and that sport was not good. Last week Messrs. E. and F. Hudson, of Birmingham, captured in a short time 13½lb. of fine bream; Mr. J. Wilkinson, of Oldham, took 35lb. of bream, some of the fish weighing 3lb. each. This fine catch was beaten on the following day by a local gentleman, named Arthur, who killed 42lb. of coarse fish, including a magnificent tray of roach. Another angler was even more successful, placing 71lb. of bream, roach, and perch to his credit. A fine tench, weighing about 3lb. has also been caught here. Several members of London clubs have visited Stalham this season, notably Dr. Ladell and Mr. W. H. Ellsmore, who as I reported the other week, played great havoc amongst the bream on Bank Holiday. Anglers should not forget to give Stalham a turn.—GOOSEQUILL.

Arun (Pulborough).—During September and October three fishing matches amongst the London clubmen are to be contested here and at Amberley; and through the kindness of Mr. W. J. Wade, secretary of the Central Association, I am now enabled to give the exact dates of the events. The matches at Pulborough are to be held on September 6 and October 25. The Amberley match will come off on October 4. Mr. A. A. Eldridge is, I understand, organising the competitors, and arranging the prize list for the same. They will be big days if the weather is favourable. On the 23rd, several anglers had decent takes from the river, including bream, roach, and dace. Up to the present I have not heard of the capture of any of the grey mullet at Stopham, but I am assured they are there in hordes. They are extremely cunning gentlemen, but perhaps they might be deceived by a sea worm, or live shrimp, or a mussel. During one of my visits to the river at Pulborough I saw several nice perch dart out from the side, and I should imagine that an angler, supplied with some well-scoured brandlings, who devoted his time to a day's perch fishing, might be agreeably surprised at the result.—GOOSEQUILL.

Chichester Canal and Sussex Rivers.—There is but little to record as the proceedings of the week. The weather has placed a veto on this and all kindred sports. A few anglers have been out and wet jackets the general result. Monday was fine and from the Adur a few roach and dace were taken; from the Ouse a few good roach; and from Chichester Canal bream up to 2lb. 7oz. a few roach and a host of small fry. From other waters reports are nil. The weather continues stormy. As I write, Thursday, there has been a deluge of rain. It will be some days ere the waters are again in trim.—GEORGE F. SALTER.

Douglas (Isle of Man).—Detestable as the weather has been for the great crowds of tourists who have visited the island during the last fortnight, the anglers have nothing to grumble at, water and fish being both plentiful, and shoals of sea trout up almost all the rivers; in fact, there is every prospect of sport continuing until the end of the season. Mr. Rylance weighed in a good trout of 1lb. 8oz. last week. Sea fishing is still very good, mackerel especially being very plentiful. Messrs. C. and R. Brook's new sensitive shifting lead (ascribed in error to the Rev. F. W. Tracy), is an admirable invention; but a size or two smaller would be very handy. Brown's Inskip minnow is a step in the right direction. I killed some large pollack up to 8lb. weight with it, besides mackerel. There are plenty of codling and flat fish about, and take well.—STORMY PETREL.

Esk (Whitby, Yorkshire).—ANGLING.—The fishing on this river during the past week, has been exceedingly good and anglers are in high glee at the results of their expeditions on the banks of the Esk. The rains, which have flooded the river, have occasioned a good run of salmon and salmon trout, and below are given, as nearly as can be ascertained at the time of writing. The results: Mr. J. W. Wheldon, Pickering, one salmon, 6lb.; Mr. R. B. L. Johnston, one, 6lb.; Mr. F. Lloyd, Grosmount, two, 5lb. and 6lb.; Mr. C. J. Keighley, Whitby, six, 3½lb., 12½lb., 7½lb., 3½lb., 5lb., and 6lb.; Mr. Daniel Green, five, 3lb., 4lb., 8lb., 5lb., and 7lb.; Mr. E. Chapman, The Carrs, Ruswarp, one, 5lb.; Mr. J. W. Nicholson, Talbot Hotel, Whitby, seven, 11lb., 6lb., 6lb., 6lb., 6lb., 4lb., and 5lb.; Mr. J. H. Keighley one, 17lb.; Mr. Linton, East Row, four, 10lb., 8lb., 5lb., and 5lb.; Mr. John H. Levy, Whitby, five, 5½lb., 5½lb., 6lb., 5lb., and 5lb.; Mr. Rastall, junr., Turnergate Hall, Ruswarp, two, 4lb. and 5lb.; Mr. Rastall, senr., one, 4lb.; Mr. Bulmer, Hull, one, 2lb.; Mr. George Ward, two, 3½lb. and 4lb.; Mr. Robert Hay, four, 4lb., 5lb., 5lb., and 3lb.; Mr. Jackson, six, 6½lb., 3lb., 8lb., 2lb., 13lb., and 2lb.; Mr. Charles Proctor, Woodlands, one, 11lb.; Mr. Jefferson, Leamington, three, 15lb., 11lb., and 5lb.; Mrs. Keighley, Spring Hill House, Whitby, one 5lb.; and Mr. Nicholls, two, 9lb. and 5lb. Since the above was written Mr. J. W. Nicholson landed three more fish, weighing 6lb., 5½lb., and 5lb.; Mr. Andsell, Hull, one, 8½lb. The river is still ripe for fishing, the streams being splendidly stocked.—JOHN J. JACKSON.

Fen Waters (South Lincolnshire).—Prior to the rains this week the water in the Fen drains had become clear and fine, and roach fishing had again become difficult. but it is expected that as soon as the storm settles there will be good sort with even these fish. When the water is so very clear it requires very fine tackle and careful handling to get anything like a decent take. Perch fishing, however, has been good, and some excellent fish of this description have been captured. I hear, the other day, Mr. Butcher, of Billingborough, in a local water, captured a perch scaling over 1lb. Perch fishing has this season been very good, and has gone a long way to make up to make up for the shyness of the roach. Good accounts come to hand of the prospects of tench fishing, and among the different waters the stretch of the Forty-foot at the junction of Dunsby drain, is recommended. Little or no trolling is being done as yet, and the recent growing of the bottom weeds has been against it; trollers will therefore await the final cutting, but it is expected there will be plenty of pike when the season for them comes round.—LIMPET.

Idle (North Notts).—Despite the unfavourable conditions of wind and weather, angling in the Idle proceeds briskly. There are plenty of fish, but it is sometimes a little difficult to get hold of them. The trout in the upper waters are in fine condition, and well repays the angler for his trouble trying for them. Quite a number are now to be got in the water about Retford. The other day, H.S.H. Prince Francis of Teck and Lieut. Hardiman, officers of the 1st Dragoons, whilst passing through Retford, spent the evening fly-fishing below West Retford Bridge with good effect, the latter getting a specimen fish scaling 1½lb., and together making a good basket. Roach and chub are also to be got in goodly numbers about the same district. Gentles seem to be the favourite bottom bait just now. Roach, dace, and bream are to be got all down the Idle from this point, and some good bream have been got from the canal. A bream of 4¼lb. was caught the other day by a visitor at Gringley. A few tench and perch have come from the lower waters. Pike, also, of fair dimensions have been caught on the drains, and also from the Idle between Bollam and Mattersey.—L.

Lea.—During the past week the reports of takes have been poor; but it is not to be wondered at, considering the changeable uncertain weather we have experienced. Referring to barbel fishing which I mentioned last week, perhaps it may be as well I point out a few places where sport would be likely to be met with; I shall only speak of places where I have reason to believe, both from good authorities and my own personal knowledge they do exist; first, their is the Ordnance water at Sewardstone; then the side water by the Pike and Anchor at Ponder's End; here some few years ago some large catches were made, and there is no doubt that there are plenty of them still; Flanders Weir fishery undoubtedly holds them, although they are seldom taken; at Cook's Ferry plenty were seen during the late winter; at Gamese's, Higham Hill fishery, their presence is an undoubted fact as a good specimen has been taken during the last fortnight; I have not heard of any having been seen or taken at the Ferrie Boat lately, but formerly some good ones used to be taken, and there is no reason to doubt that some are still in existence. In fishing for them, there would be a good chance of getting hold of some of the monster carp and bream which are frequently to be seen. As an instance of what may be done, is that recorded in last week's *Fishing Gazette* where a gentleman in two days took a hundred and thirty-two roach and dace and three trout, this was in the waters at Hertford, and shows what can be done by thorough preservation.—Spliced Joint.

Leicester.—Fishing, forsooth! Why, sport with the rod and line lately has been entirely out of the question, and just at a period when anglers were hoping for a good time of it. Disappointing! Well, it couldn't be more so; and just as the roach were well on the feed, and in the best of condition. Saturday was the last day on which we had a glimpse of sunshine, but the 22nd will be remembered most, as the day on which the continuous downpour commenced, a sort of deluge, which has lasted up to time of writing, late on Thursday night, with only brief cessations. The harm done to anglers is infintismal to what the farmers are suffering, and if the rain continues much longer, incalculable damage will ensue.

Loddon (Earley).—Weather still continues very rough and unsettled. There has been some good takes of roach and chub this week: two gentlemen, thirty roach, scaling from ½lb. up to a 1lb.; a very handsome lot of fish. Mr. Valitine also had roach over a 1lb.; several others have had good takes. Jack have not been tried for much yet. Water in capital condition.—J. R. Gould.

Lugg and Arrow (Leominster).—Both these streams have now a good rush of water going down them since the rain at the beginning of the week. There is more water in them than there has been for months, and will do a great deal of good. It will clear the beds of the rivers out, and sport should improve when they clear again. Fishing is quiet, and but few anglers have been out. The Pinsley has rose. Fishing quiet in it.—Gwynne.

Lugg, Arrow, and Pinsley (Kingsland).—Heavy storms on Friday brought about 3in. of stained water. On Tuesday a day's constant rain flushed the rivers a foot or more of muddy water, which is now (Thursday) running down again, and will, with moderately fine weather, be in good order by Sept. 1. This flush will do an infinite amount of good—it will clear the bed of the streams, and freshen the fish. Flies the same as last week. Pinsley is clear, but very much choked with weeds—in many places quite unfishable.—R. T. Williams.

Nene (Northamptonshire).—The disgraceful state of the river between Peterborough and Guyhirn has again claimed attention. As a result of the agitation caused on the subject by the Local Town and County Council, the Local Goat Board, recently sent down an able inspector in the person of Major Marindin. This gentleman has submitted the river between Wisbech and Peterboro' to a very careful examination, and report says has expressed an opinion that the strong condemnation used with reference to the state of the river, has not been uncalled for. The result of this personal inspection will, undoubtedly, result in a full inquiry into the subject at the cathedral town. The weather has been too catchy for successful angling, and only a few baskets of roach have been obtained.—Nenebank.

Norfolk, Suffolk, and Cambridgeshire Waters.—Angling is going on well all through these three counties, and very excellent takes of roach, dace, perch, pike, &c., continue to be made. I saw one lot of roach, from the Lark, on Thursday last, that weighed 27lb. the lot of sixteen fish. Several of these splendid fellows are being preserved. A fine perch of over 4lb. was taken from near Mildenhall; on Monday a beautiful fish from Brandon. Good sport is being obtained. The water is high and coloured, but it soon runs off. The swims have been cut out, so that anglers can fish with some degree of comfort. At Lakrenheath some very good catches were made on Saturday and Monday. Brandon Creek is in fine order now for angling, and there are lots of good fish there, a drive of three miles from Littleport station. Roach are well on in the Waveney, at Beccles, and what bouncers they are. A roach of 1¾lb. or 2lb. is not a rarity there; and what splendid perch! You want, of course, to know the swims. The bailiff there is a very obliging fellow, and will tell you them from the Yare. I have seen during the last few days some very excellent roach, especially from Cantley and Buckenham. Creed wheat and red and white paste they take best. Very few baskets are being taken. I hear of a monster pike working near the branch swim; from the look of him he weighs considerably over 20lb. Bream have gone off a bit, and I question whether we shall get many more, unless the weather sets in warmer. It is now very wet and cold, and looks like lasting. A nice lot of perch were taken on the Swaffham Lock yesterday, and a brace of good chub. Anglers may with safety try any of our waters now. I advise warm clothing and thick boots; they will not find it hot.—William Howlett.

Ouse (Huntingdon).—The bream were feeding well at the beginning of the week, but the boisterous winds have put them to almost a standstill. Some have been out, but returned with a blank, not being able to keep a line in the water; but, rain following, will no doubt cause a flush of water, which will put a stop to sport for a short time, although at the time of writing the water is in very good condition.—H. Rout.

Ouse (Offord).—Bream have been on the feed well the last week. Mr. and Mrs. Abbott had a good take on Saturday of twenty-eight bream, and twenty-six roach; sixteen bream averaging 2½lb, and twelve 1½lb. each. They have angled this water for the last month, and have killed seven hundred and seventy-one fish; namely, roach, six hundred and fifty-five; bream, ninety-three; perch, thirteen; eels, nine; rudd, one. Several other anglers have also had good sport; small brandlings, the best killing bait for bream; boiled wheat for roach; water in good condition, prospects good. Anglers wishing for good bottom fishing should not miss the present opportunity, for bream are feeding well.—H. Collins.

Severn (Shrewsbury).—The weather, last week, though not by any means so fine as we expect in sultry (?) August, and the bettered condition of the water gave promise of sport, especially as the trout commence to feed again after their lethargy; but this week brings a daily downpour of rain and a discoloured and rising stream, so that angling will not be possible for some time. Last week, Mr. Maddox, took two trout by spinning, about 1¼lb. and ¾lb.; and Mr. Dixon, who has had a remarkably good spinning season, has taken another trout of 1½lb, also a number of chub and perch, about 1lb. each. The latter seems to be in the increase, judging by the numbers that have been recently taken while spinning for trout.—Piscator.

Severn and Lower Teme (Worcester).—The water was in beautiful order during the earlier part of the week, but the continuous downpour of rain has quite upset the anglers' calculations, causing a considerable rise in the water, the Teme at the present time being as red as marl, and fishing out of the question; but both streams will be the better for angling when the water clears again.—Wingfield.

Taw (North Devon).—Rivers very high, the large ones unfishable; too thick the small ones, only here and there, and at the heads of the brooks some nice peal have been taken.—Rusty Game.

Tees (Barnard Castle).—Since I last wrote you we have had very heavy rainfalls here and the rivers are much flooded. The salmon have been running up freely and much better sport has been obtained. The following are some of the takes which have come under my notice: Mr. George Bainbridge, one fish, about 12lb. and one 6lb.; Mr. Dent, one small fish; Mr. R. Wandlers, three fair salmon; Mr. Thomas Parkinson, one of 12lb. 5oz. and one of 5lb.; the writer one of 5¼lb. and one of 2½lb.; and Mr. Dobson a dish of trout weighing 3½lb. This morning (Wednesday), the river is a perfect torrent and fly-fishing until Saturday will be at a discount, some execution may, however, be done with the bait.—J. H. R.

Teme (Ludlow).—The Teme in this district is now running high and coloured, there is more water in the river at the present than has been for some months. The weather has been very rough and heavy rain has fallen, and angling has been quiet since Monday. Before the rain a good few anglers were out, and some good trout and greyling landed. The best baits at present are the Wasp Grub and Worm. Fly-fishing should be good by the end of the week. At the end of last week six good greyling were taken in the water below the New Bridge. Over Ludford Bridge several fine trout scaling over 1lb. each have been taken with the Wasp Grub. The Ony, Corve, Clum, and Ledwyche are all coloured and have rose. In the Corve five good trout were taken with the Wasp grub on Tuesday, and a large number of eels were caught in the traps at the Mills, and are sold at eightpence per pound.—J. Ludlow.

Teme (Tenbury).—The water in this part is now high and coloured, owing to the late heavy falls of rain. Fishing has been dull, and will be so until the water clears, when sport should be good, as this is the first flush of water that has been had for months. The Rea, Kyre, and Ledwyche are all rose and coloured. Fishing in them quiet.—Worcester.

Wharfe, Yore, Swale, Nidd, &c.—There has been a succession of floods since my last report, the heaviest being on Wednesday, when the adjacent land was under water. The bottom fishers have had some good baskets with worm and wasp grub, the latter chiefly. When the water does get into a settled condition, the following flies will kill: Brown Owl, Cinnamon Fly, Fog Black, and Poult Bloa. The weather remains very close and depressing. I should say that the salmon will run well up the Yore, that is if the abominations from the Aire and Calder have not deterred them.—Francis M. Walbran.

Witham, &c. (Mid-Lincoln).—Storms of rain and wind, more or less heavy. have been disturbing the angling of this district of late, but on favourable occasions the results have been satisfactory. If the weather would only settle down expert fishermen would give excellent accounts of themselves. Some places seem a bit over-fished, but there is no wonder, seeing the numbers attending. Still, now and again, even in club matches, when angling is done under difficulties, 5lb. or 6lb. have been made in the two to three hours allowed. The first prize in a match on the Kelsey drain, near Boston, was taken by 5lb. 1oz., and in another at Sibsey, by 5lb. 7oz. Independent anglers have done well at Kirkstead, Dog Dyke, Southrey, and Bardney. A party from Lancashire, at the latter place, got upwards of six stone of fish a few days ago, and the take included several tench upwards of 2lb. each. Some good roach were caught about Southrey, but the finest roach continue to come from the Fossdyke waters. Capital specimens have come from Saxilby and Pyewipe. Fish over 1lb. each have been weighed even in matches. Near Torksey, several pike have been captured, one weighed 9¼lb.—Luci.

Wye and Derwent (Derbyshire).—A great quantity of rain has fallen in this district since my last report, and the Derwent has been practically unfishable since Monday last. Very poor sport has been had on the Wye below Bakewell, but on the private water about Monsal Dale some very good baskets have been made. Mr. A. Clarke, of Matlock, killed a heavy basket of trout here on Wednesday with the Ash Dun. This gentleman had some grand sport on the Lathkill on Tuesday last, on the Marquis of Granby's water. On Saturday and Monday last some good sport was had on the Matlock Club water—Mr. Green and others killing two or three brace each. Best flies now are: Ash Dun, Whirling Blue, and Pale Blue Dun. Outlook to-night (Thursday) not encouraging, as weather remains unsettled.—Dotterel.

Yare (Norwich).—A great number of anglers have been out since my last report, but very few have had anything of a catch. A gale during the last few days have entirely spoilt the fishing. On Tuesday the Norwich Angling Club held their annual match at Cantley, and very poor luck they had, the splendid silver challenge cup being won by Mr. Bush with about 6lb. fish, and he also took first prize for greatest number (nineteen) yesterday (Wednesday). The East Anglican Piscatorial Society held their annual match at the same place, and they had better luck, the first rod yielding 14lb. 3oz., and the second (in the same boat) about 14lb.; the other takes in both matches were very match-like, as about twelve in the first and fourteen in the second never had a fish. Angling news has had a stopper put upon it by a very terrible accident close to Norwich, whereby three of a yachting party on our river have unfortunately lost the lives.—Robert Moll.

East and West Cleddau (Pembrokeshire).—We have had a heavy rainfall during the past few days, so that the rivers will doubtless be in grand fishing order next week. During the past ten days, some good catches of trout have been made, chiefly with worm. Another good run of sewin anticipated.—H.

Lake Coron (Bodorgan, Anglesey).—Owing to the exceptional rough weather there has been no fishing worth mentioning during the last fortnight. The wind suddenly changed on Friday, and six gentlemen from Lancashire came to the Bodorgan Arms, only to find that the wind had as suddenly veered to the south, and until Wednesday night it blew a terrific gale, so that no boat would venture out. It has also rained for forty-eight hours, and the lake is as high as ever it is in winter. With such a volume of fresh water, I hope to be able to record some capital sport in your next week's issue.—W. H.

Lake Vyrnwy (North Wales, via Oswestry).—Fishing during the past week has been carried on under rather trying circumstances, amid a succession of floods and gales. However, some very good baskets have been made. Mr. A. Busk, being the most successful with thirty-eight trout, 27¾lb.; followed by Captain Stevenson with twenty-one, weighing 15½lb. On Monday one angler brought in eight lovely fish; several others have also had very fair sport during the week. Heaviest fish, Mr. Boydell, 1½lb. Best flies Golden Dropper, Claret and Grouse, Heckbum Peckhum. Season close September 15.—Long Drift.

Scotch Reports.

Altnacealgach Hotel Waters (via Lairg, N.B.).—Monday was so boisterous that all the boats out were driven off the lochs, The only water which yielded any sport was Loch Cama, on which Mr. G. Clark, Bedford, got six trout, 3lb.; Dr. Saundby, Birmingham, six, 2½lb.; and Dr. Semon, London, two and a-half dozen, 9lb. On Tuesday, Mr. G. Clark, on Loch Cama, twenty-three trout, 6½lb.; Dr. Saundby, on Loch Veyatie, two and a-half dozen, 8lb.; Dr. Semon, on same loch, forty trout, 9lb.; Mr. Ogilvy, Dollar, on Loch Mheallain, forty-three trout, 10lb.; Mr. Cowper, Edinburgh, on Loch Urigill, twenty-six trout, 6lb.; and Dr. and Mrs. Rose, London, on Loch Cama, fifty-two trout, 18lb. On Wednesday, Mr. Clark, on Loch Veyatie, twenty-nine trout, 6lb.; Mr. Ogilvy, on same loch, two dozen, 5lb.; Messrs. Cook, on Loch Cama, thirteen trout, 4½lb.; Dr. and Mrs. Rose, on same loch, thirty-eight trout, 10lb.; Dr. Saundby, on Loch Urigill, forty-three trout, 10½lb.; and Dr. Semon, on same loch, forty-six trout, 10lb. On Thursday, Mr. Clark, on Loch Cama, forty-nine trout, 15lb.; Dr. Saundby, on Loch Mheallain, fifty trout, 12lb.; Messrs. Cook, on Loch Veyatie, twenty-four trout, 5lb.; Dr. and Mrs. Rose, on Loch Urigill, one hundred and ten trout, 25½lb.; Surgeon-General Smith, C.B., on same loch, twenty-five trout, 8lb.; and Mr. Barton, on Loch Boarlau (two hours only) eleven trout, 4lb. Weather most unfavourable.—McB.

Auchintaple Loch (Forfarshire).—On the 22nd inst. Mr. Osborne, from London, caught a fine trout, weighing 3lb. 9oz. On the 24th inst., Captain Campbell and Mr. Osborne landed twelve fish, scaling 13lb. 2oz.—D. G. Grewar,

Ayrshire Lochs and Streams.—All the district rivers have been in heavy floods this week and capital baskets of yellow trout have been secured with worm bait. Mr. James Crawford, of the High School, Glasgow, and Mr. Robert Crawford, Kilbinnie, have had some splendid baskets of native trout in the stream, chiefly in Glengarnock and Rye waters. Several local anglers did very well with the minnow bait. In Loch Doon some capital catches were reported to me this week with fly.—Heatherbell.

Border Esk.—Heavy rains have fallen since my last report and sport has now reached a high-water mark. The river was flooded on Saturday, and some good takes were made. Mr. William Ballanteno, Langholm, hooked a salmon with the worm in the Island Pool, and after an exciting run landed a new run fish of 11½lb.; in the Langholm water, Mr. T. Irving had two sea trout and five herling; Mr. T. Preston, two sea trout, 3lb. each, and five herling, with a small rod; Mr. Doughty, with a small rod, killed a salmon of 6½lb., two sea trout, and a number of herling; Mr. J. Murray had a grilse of 3½lb., three sea trout, and four herling; Mr. J. Harkness, two sea trout and six herling; Mr. J. Armstrong, two sea trout; Mr. A. McMillan, three sea trout and six herling. In the reserved water the Earl of Dalkeith and party have had good sport. In the Canonbie water, Mr. J. Graham, Hallows Hill Bank Gate, had one grilse, five sea trout, and twenty herling, with the fly. Mr. Hepburn, Carlesgill, had two sea trout in the Burfoot water. In the Cauldron Pool, Mr. Shand, Cross Keys, Canonbie, had a salmon of 17lb., with the fly; Mr. C. Johnstone, Birmingham, had a salmon of 18lb. from the same pool and one of 8lb. from the Willow Pool. Mr. D. Edger, Rowanburn. had five sea trout and a number of herling. Mr. J. Graham had twenty-four herling from the Cauldron and Willow Pools. Mr. W. Irving, Prior Hill, had a grilse of 6lb. in the Prior Pool. Mr. D. Edgar, had two small fish of 5lb. and 8lb. in the Cauldron and Long Pools. Mr. Walter Irving, of Canonbie, a grilse of 5lb.; Rev. E. Smith, Bradford, had five sea trout and a number of yellow trout; Mr. J. S. Goddard had a sea trout; Mr. Draper, Eskdale Temperance Hotel, had two sea trout and a dozen yellow trout; Mr. John Bell had 10lb. of herling and two sea trout; Mr. William Mars, Jedburgh, five sea trout and five herling; Rev. J. Bell, at a second fishing, six sea trout and six herling; Mr. Walter Park, a basket of 10lb. of herling in the double water; Dr. Moon, London, one salmon, one grilse, and a good basket of sea trout and herling; Mr. Walter Scott, Holmfoot, five sea trout, twenty herling, and a number of yellow trout; Mr. J. H. Park, of March Bank, had a large basket in the double water; Mr. W. Thornburn had five sea trout, fifteen herling, and some yellow trout; Mr. Craig, Cross Keys, a salmon and some smaller fish; Mr. John Waters, Carlisle, a salmon of 7lb. and some whiting. In the lower waters between the Metal Bridge and Longtown, Mr. Storey had six sea trout and thirty-five whiting; Mr. Mason, Rockliffe, had a grilse: Mr. S. Walton, one grilse, three sea trout, and thirty whiting; Mr. W. Walton, four sea trout and thirty-six whiting; Mr. A. Graham, forty-five whiting; Mr. Twedale, two sea trout and twenty whiting; Mr. James Bell, twenty whiting; Mr. Sawyer, twenty-four whiting, Mr. J. Scott, twenty-one whiting; Mr. Willis, Carlisle, thirty-one whiting; Mr. Lamb, two sea trout, twenty-three whiting, and a salmon of 17lb.; Mr. Borwick, a salmon. On Friday, Mr. Mason, Rockliffe, landed a salmon of 14lb.

and lost another one. Other takes are recorded, but the foregoing are the principal ones, Mr. George Goodfellow, of Canonbie, tells me there will be good fishing for a month yet. The river is full of salmon, sea trout, and whiting, and a great many visitors are staying at the Cross Keys.—GILNOCKIE.

Bunessan Hotel, Mull.—On Loch Asopol and Loch Pattee Bunessan Hotel waters, August the 18th, the Rev. Mr. W. Thompson had three sea trout, and ten brown trout. Mr. Penman and Mr. Prentice had six sea trout, the heaviest one 2lb, and twenty-one brown; Dr. John Dougall and Mr. Watson had six sea trout, the heaviest one 4½lb., and twenty-three brown trout. On the 19th, Dr. John Dougall and Mr. Watson, one grilse, 4½lb., caught by Mr. Watson; and three sea trout, and twelve brown trout, on Loch Asapol; Mr. Pinkerton and Mr. Oliver had six sea trout, and twenty-one brown trout; Mr. Penman had one sea trout, and twenty-four brown. On the 20th August, Mr. Penman had two sea trout, and twelve brown; Dr. John Dougall and Mr. Watson had four sea trout, the heaviest one, 2lb., and fourteen brown trout; Mr. Pinkerton and Mr. Oliver had three sea trout, and thirteen brown trout. On the 22nd, Mr. Ritchie and friend had three sea trout and seven brown. The weather has been very unsettled, with showers, and stormy for the past ten days, and very much against angling and fishing in general, but are more settled like to-day.—JOHN CAMPBELL.

Carron (Easter, Ross, Ardgay, N.B.).—Although this river is at present well stocked with fish, the high winds, heavy rains, and low temperature of the past week have rendered successful angling impossible. One fish was caught on the upper waters, but beyond that the week has been blank so far as can be ascertained.—McB.

Dee (Aberdeenshire).—The netting season in the Dee, Don, and coast closed on Wednesday. This will now give a fresh impetus to angling which has been passing through the dull season lately. On the Balmoral reaches an occasional fish has been got. On the Invercauld water at Ballater, the Messrs. Webster landed two on Thursday, scaling respectively 12lb. and 8lb. Owing to the superabundance of rain the river has continually in flood so that a good back end on the upper reaches has now been assured. Seldom has there been so much moisture in August, and its effects will bear rich fruit as regards the autumn run. On the Carlogie water on Monday, Captain George Campbell landed two nice fish, of 7lb. and 8lb., respectively. On the lower sections an occasional fish is being grassed in the Woodend, Blackhall, and Park reaches. Finnock fishing is promising better on the tidal reaches. The netters have had a good season.—DEESIDER.

Deveron (Banffshire).—The salmon fishings on the river and coast were exceedingly productive during this last week, both as regards salmon and grilse. The river was in fair flood for the net fishing, and the hauls were the largest for the season. As many as six boxes were taken from the water daily. There was a large run of salmon in the end and beginning of the week in the river, and a good many were also taken from the bag-nets on the coast. On Saturday no less than eighteen boxes were consigned to the London markets; on Monday, twenty-five; and on Tuesday, twenty-two. In all, for the week, up to the day of cessation, over seventy boxes, the heaviest catch for any week of the season, and far in excess of that of last year, when only a dozen boxes were sent south. Towards the close of the fishing, both salmon and grilse increased considerably in weight, and all along they have been of a superior quality, not a diseased fish having scarcely been landed by the nets. On the opening day, the catch on the river was large, some three hundred and fifty fish being caught. For the remainder of the month of February the catch was greatly on the decrease. It continued so until the middle of May, when the river began to rise, and since then it has continued in splendid condition for fish running. It is many years since the water has been for so long a time in spate. Grilse appeared on April 21 on the river, and on April 25 on the sea. They have been a splendid crop, the last time they were so abundant being in 1882. Without exception, all the stations on the coast have done remarkably well. Over one hundred grilse were got at one haul from one of the nets on the sea. For the months of July and August, the total catch from all the stations for the week were from thirty-four to seventy boxes, more than double that of the corresponding months last season. Rough weather was pretty frequent on the coast during the latter half of the season, and a large amount of nets were destroyed. Hatching operations were very successfully carried on this year. About one hundred thousand fry were hatched, and in the month of June were safely deposited in the river. The operations were conducted by Mr. Bisset, the lessee, and Mr. Kennedy, superintendent of the fishings. On the fishings to the east of the Deveron district (Gardenstown), fair takes were got, the number of boxes ranging from one to eight weekly up to the middle of July, when they increased in number to twelve, eighteen, and twenty. Altogether they have been above an average. The prospects for anglers are very encouraging. Fish are abundant in the pools, the only drawback being the discoloured state of the water, which is exceedingly heavy. Three salmon and two grilse were killed on the Mayne and Netherdale waters, and now that the nets are withdrawn from the river and the cruives opened, sport will be greatly on the increase.—H. W.

Helmsdale (Helmsdale).—Never in the memory of that notable being, the "oldest inhabitant," has autumn angling, so far, on this river been so unsuccessful, and, in the same way, never have fish been so numerous in the river. I had the other day an opportunity of interviewing the water-bailiffs on this water, and they declare—and they have been many years on the river—that never was so many fish on all the reaches. No matter where you go, there they are, leaping and tumbling about, but in vain does the angler ply his craft—ply he it ever so wisely—fish are not to be lured by any known fly or bait either. This, to many anglers, must appear almost incredible, but, for all that, it is the fact. The shooting tenants, who have also the fishings, have been trying to vary their sport by angling, but they soon tire of it, seeing the result to be *nil*. For weeks back flood followed flood, and, every time the water fell, anglers' hopes revived, only to be again disappointed. This is doleful news from such a noted salmon river as this, but one must give facts regardless of the consequences. The netsmen have now finished up their fishing, and have had, on the whole, a very successful season, but it is not too much to say, had there not been the succession of spates indicated, their catch would have been almost double what it was, and yet they have considerably beaten the record of last year. The lochs in this district have been considerably behind last season, both in quantity and quality, and now the season, being so far advanced, any further improvement is not to be looked for. The herring fishing industry is drawing to a close, but to-day (Wednesday) is the heaviest fishing of the past six weeks. One hundred and twenty boats landed no less than eighteen hundred barrels of herrings, some of them being of fine quality. Over Scotland this week the shortcoming of the earlier part of the season will be considerably lessened. A number of vessels are loading for the Continent, where the bulk of the catch annually goes.—S. C.

Lairg (N.B.).—Monday of last week was so stormy that very few anglers ventured out. Tuesday was also very unfavourable for sport. Mr. Wordsworth fished Loch Beannoch, and killed six very fine trout, the heaviest scaling 2lb. A local angler made a basket of twenty-three lovely trout on Loch An-Ullavie. On Wednesday, which was very boisterous, hotel anglers got a few trout on Loch Shin. Mr. Neill, Dornoch, fishing off the shore, caught half-a-dozen, and Sergeant Ray, in the evening, eight trout. On Thursday, Mr. Wright and party killed seventeen trout, 6lb., on Loch Shin; on the same loch, Rev. Mr. Anderson caught thirteen trout, 4¾lb. Messrs. Dalgleish and Eden fished Loch An-Ullavie, and landed twelve nice trout, averaging nearly ½lb. On Friday, Mr. Wright and party, fishing Loch Shin, killed twenty-seven trout, 13lb.; on the same loch, Rev. Mr. Anderson got fifteen trout, 4¾lb.; Mr. Allen caught one trout, 7½lb., on Loch Beannoch. On Saturday, Rev. Mr. Anderson killed two grilse, weighing respectively 6lb. and 5¾lb., on Sluice Pool, Lower Loch Shin. Sergeant Ray made a nice basket on Loch Shin in the evening.—J. Y.

Liddle.—This historic tributary of the Esk is fast rising into importance as a fishing resort. The river has been in capital order during the past week, and anglers have been busy. In the upper reaches—Newcastleton water—Mr. J. Elliot had a salmon, 13lb.; Mr. A. Nichol had twelve whiting and sea trout; Mr. W. Armstrong, nine whiting; Mr. A. Little, seven whiting; Mr. W. Tail, six whiting; and Mr. W. Hope, seven whiting; Mr. Harper, London, had also a number of sea trout and whiting; Rev. J. Bell, Eskdale Temperance Hotel, Langholm, had a grilse weighing 4lb., three sea trout, and eight herling, with the fly; and Messrs. St. George Tucker, staying at the same hotel, had four sea trout, six whiting, and three dozen yellow trout; Mr. R. Calvert, Rowauburn, had a salmon, 10lb.; Mr. Graham, Crookholm, a grilse, 8lb.; Mr. T. Cairns, Newton, a grilse, 5lb.; and Mr. May, Liverpool, a grilse, 5½lb. Mr. John Archibald, of Jedburgh, had a good basket of sea trout and whiting. There is now a good run of salmon in the Liddle, and anglers are expecting rare sport.—GILNOCKIE.

Loch Craggie (Lairg, N,B.).—The Achany Lodge party, in a couple of hours' fishing killed nine fine trout.—J. Y.

Loch Laro (Invershin N.B.).—Messrs. Walter, Scott, Brock and Arthur Brock, Achindwich House, were out on Saturday last, and made a fine basket of sixteen trout, aggregating 8lb.—McB.

Loch Leven (Kinross).—The weather during the past few days has proved the most favourable of the season, at least, so far as club competitions are concerned. A fine genial rain fell with a favourable wind, and trout rose very freely, but came rather short. The Bridge of Allan Club, on Friday, had the best sport of the season, the total capture of four rods forward, being fifty-one trout, 40lb. 2½oz. Prizetakers: First, Dr. Allum, twenty trout, 19lb.; second, Mr. R. T. Annan, eighteen trout, 10lb. 12oz.; third, Dr. Robertson, ten trout, 6lb. 10oz.; heaviest trout, Dr. Allum, 2lb. 2oz. The Amateur Club, from Edinburgh, also had capital sport on Monday, the total capture of seven rods being eighty-seven trout, 70lb. 3oz.; first prize, Mr. D. P. Aitken, sixteen trout, 13lb. 8oz.; second, Mr. Cargey, eleven trout, 12lb. 9oz.; third, Mr. Steell, nineteen trout, 10lb. 14oz.; heaviest trout, Mr. R. P. Wilson, 2lb. 8½oz. Private boats were not so successful as competing boats. A few of the most successful were: Mr. James, London, seventeen trout, 17lb. 1oz.; eighteen, 15lb.; and twelve, 10lb. 8oz., respectively. Mr. and Mrs. Laird, London, fifteen, 15lb. Mr. J. W. Cartwright, London, eighteen trout, 14oz.; this gentleman the previous evening had nine trout, six of them weighing 10lb. Mr. W. Koene, Madeira, sixteen trout, 15lb.—ROBT. B. LAING.

Loch Shiel (Salen Hotel, Ardgour, N.B.).—On Saturday last Mr. Swinton caught a 10lb. salmon, also sea trout 3lb. on Loch Shiel on Wednesday, twenty-six others got five salmon yesterday. Loch in good fishing ply.—CAMERON.

Overscaig Hotel Waters (via Lairg, N.B.).—This inland region which is at a considerable altitude above the sea suffered much from the recent storms, with the consequence that very little sport has been obtained. Rev. Mr. Ainslie and Mrs. Ainslie, London, and Mr. Ross, Glasgow, ventured out on Loch Shin and made a basket of from 5lb. to 7lb. of trout. At the beginning of this week the weather showed signs of improvement.—McB.

Rhiconich Hotel Waters (via Lairg, N.B.).—General Murray, Worthing, fished Loch Luxford, an Monday, and got ten sea trout, aggregating 12lb., and a salmon of 8lb.: Loch Garbetbeg, on Thursday, one salmon, 9lb.; and Loch-na-Caillich on Saturday, three sea trout, 3lb. Mr. Beale, Worthing, on Loch Luxford, on Monday, nine sea trout, 10lb.; and on Loch Garbetmore, on Wednesday, five sea trout, 5lb.; and on Loch Garbetbeg, on Thursday, three sea trout, 3lb. Mr. Manning and friend, London, fished Loch Inchard, on Wednesday, and caught four lythe, 43lb.; and Loch Garbetmore, on Friday, three sea trout, 3lb. Mr. Millis, London, tried Loch Inchard on Thursday, and got three lyth, 10lb. On Friday, Colonel Butler, London, on Loch Inchard, two sea trout, averaging 1lb. each; and Mrs. Butler, one of ¾lb. Mr. F. Maitland, Dover, caught twenty lyth, aggregating 122lb., on Loch Inchard on Friday; and on Saturday, on mountain streams, fifteen trout, 6lb. Mr. Maitland, Dover, was also out on Saturday on Loch Garbetbeg, and grassed a 6lb. salmon; and Mr. Dugdale, London; on Loch Inchard, seven lythe, 23lb. The successive spates along with the cold north-easterly winds of the past ten days have militated against successful angling, but now there are prospects of a change for the better.—McB.

Shin (Inveran Hotel Waters).—Owing to inclement weather and other causes, anglers have not been regularly out. Mr. L. D. Hall, Sutherland Arms Hotel, Inveran, fished the lower beats on Tuesday, and caught a 7lb., grilse on Cromarty Pool; and on Friday a salmon of 8lb. on the same pool. Saturday and Monday were blank. —McB.

South of Scotland.—There has been nothing but repeated floods in the South of Scotland rivors during the past ten days, and the rivers had not been in such big spates for many years in the month of August. Towards the end of last week Mr. Dirom, of Mount Aunan, killed with fly two sea trout, of 1¾lb. and 1½lb. each. Mr. A. Bell, Brydokirk, landed one sea trout, 1lb. 5oz., and Mr. Tweedie, Annan, had seven herling and one sea trout; Mr. Robert Irving, half-a-dozen herling; Mr. McGeverin, a very fine basket of sea trout and herling in Blacketlees water, with Stuart and Minnow, and Munrow had also a good catch in the same water; Mr. D. C. London killed a few herling on the same day with Quill Minnow. On Monday, Mr. Thomas, Manchester, landed five good-sized herling with Devon Minnow in the lower waters. On Tuesday morning the Annan was in another heavy flood. Mr. Thomas Tweedie, Moat House, killed thirty herling, and two sea trout; Mr. John Laurie, Annan, had eight herling and one sea trout; Mr. London, eight herling and two sea trout; Mr. John Iveson, Wigton, landed a catch of twelve herling and a sea trout of 1½lb.; Mr. James Dixon, High-street, Annan, had a good bag of fine fish; Mr. Currie, Sheffield, caught nine herling; Mr. Law, five herling; Mr. Bonner, fourteen herling and one sea trout; Mr. Thomas, Manchester, twelve herling; Mr. F. H. Wilson, Brydekirk, six herling and one sea trout; Mr. Richardson, one sea trout and a number of herling; Mr. Peter London, one dozen herling and two sea trout. Many others had fair catches in the lower waters. On Wednesday the flood had not subsided, and the catches exceeded that of the previous day. Mr. John Iveson landed thirty herling, four sea trout, and a yellow trout; Mr. Peet, Wigton, had twenty herling and a sea trout; Mr. J. Bonner, a good basket of herling and a sea trout; Mr. Thomas, in an hour, caught a sea trout of 2½lb., and six herling, at Annan Bridge; Mr. Atkins killed nine herling; Mr. Wallas, gunmaker, Wigton, had a basket of herling and sea trout, weighing 10lb.; Mr. Thomas Gibson, Bridge Place, killed twenty-two herling, two sea trout, and half-a-dozen yellow trout; Mr. Lawson, thirteen herling and one sea trout; Mr. James Dixon, baker, a basket, weighing 8lb., of herling and two sea trout; Mr. Robert Dixon, High-street, a creel of 10lb. of herling and three sea trout; Mr. Hall, ten herling; Mr. Laurie, Town Hall, a creel of herling, weighing 9lb., and two sea trout; Mr. James Mundell, clothier, eight herling; others from six to ten herling each. On Thursday, Mr. Peet, Wigton, landed during the forenoon, twenty-five herling and one sea trout; Mr. John Iveson, twenty herling and one sea trout; Mr. Thomas Gibson, Bridge Place, fifteen herling and one sea trout; Mr. Peter London, sixteen herling; Ex-Dean of Guild, London, about twenty herling; Mr. James, London, had fifteen herling and a sea trout; Mr. Currie, Sheffield, a nice catch of herling and yellow trout; Mr. Thomas, Manchester; Mr.; Laurie and Mr. Robert Dixon, Annan, all good catches; Mr. T. Tweedie had over a score of herling; Mr. W. Wright killed six herling and a trout in little over an hour in the early morning: Mr. Johnstone, five herling; Mr. G. J. Hope, London, a sea trout and a few herling; some good sport was had in the Esk last week with fly and bait. Mr. J. Graham, fishing with night fly after dark killed twenty herling and grilse, and five fine sea trout, in the Canonbie water. In Burnfoot water Mr. Hepburn landed two sea trout of 3lb. each. On Saturday the river was placed in heavy flood, and bait fishers were out in force on every available cast on the river. Mr. William Ballantyne, Langholm, killed a salmon in the island pool weighing 11½lb. Mr. Doughty caught a salmon of 6½lb., and two sea trout. Mr. T. Irving, two sea trout and five herling; Mr. Preston, to sea trout, and a few herling; Mr. J. Murray, a grilse of 3½lb. in the town water Mr. J. Harkness, two sea trout, and six herling; Mr. Shand, Cross Keys Hotel, Canonbie, a fine salmon of 17lb. with fly; and Mr. Walter Irving, a grilse of 5lb., in the Canonbie section; the Rev. Mr. Bell, out from the Temperance Hotel, Langholm, killed a grilse of 4lb., three sea trout, and eight herling, in the tributary—the Liddle, with fly; Messrs. St. George Tucker, had four sea trout, six herling, and three dozen yellow trout; the Rev. Mr. E. Smith, Bradford, had a very nice catch in the higher waters, killing five sea trout and herling; Mr. J. Bell, a basket of herling and sea trout of 10lb.; Mr. J. Elliot, Newcastleton, had a salmon of 13lb., in the Liddle; and Mr. J. Beattie, killed seven sea trout, and a number of herling. In the tidal and lower portions of the river near to Longtown, anglers have been having excellent sport. Mr. Waters, Carlisle, landed a salmon of 7lb.; Mr. Story, Carlisle, six sea trout and a good heavy basket of herling Mr. Walton, a grilse, three sea trout, and a fine creel of herling; Mr. Lamb landed a salmon of 17lb.; Colonel Wybergh killed a grilse, and, at another outing, he succeeded in killing a basket of twenty-four herling; Mr. R. Graham caught about forty herling; Mr. Lamonby, a salmon of 12lb.; Mr. Mason, a pretty grilse. The Dee, Kirkcudbrightshire, has been pretty much flooded of late. Among the best catches mention may be made of that of Dr. Reid, Mr. W. Milroy, and Mr. J. A. Osborne. The latter gentleman killed in the "Sheep Dub" the other day a fine grilse of 16lb. and six sea trout and herling. The net fishing is now closed, and fish will have a free run up the river. The weather is very unsettled, and rain is again falling at the despatch of my report.—HEATHER-BELL.

Thurso and Lochmore (Brawl Castle).—The river was again in high spate during the whole of last week, which was much against anglers. Still, one, two, and sometimes three fish were landed daily by the Brawl Castle anglers. Strathmore party have had fair sport with the salmon, and Mr. Baring, jun., one day had a basket of good trout, basket and fish weighing 17lb.; the heaviest fish weighed 2¼lb., another 1½lb., and a brace of 1lb. each—not bad for a boy of about twelve years, and all caught in the river. Mr. E. McKay, Post-office, Halkirk, who got a day on No. 1 beat, killed a fresh-run salmon, weighing 8lb., on the 24th. The general complaint is, that the fish (salmon) are not taking well. Pool after pool is often fished without a rise, although many are seen jumping. Your Helmsdale correspondent, in last week's *Fishing Gazette*, makes a similar complaint, and says, "Surely there is some lure hitherto untried that might be found to tempt them; f there is, it is yet undiscovered." He also asks the question, "Why salmon take better there in the spring than at this time of year, and that the party who solves this problem will gain everlasting praise." Now, I would fain be a candidate for this honour. Before offering my theory as a solution to the problem, I would ask another question, viz., Why do salmon take fly in September and October better than they do now? In most north-east rivers, in some of which they take as well as they do in the spring; perhaps the Helmsdale is no exception. I do not think there is any lure invented or in embryo that would tempt salmon to take well under the present conditions no more than it is likely that a solid combination of foods or otherwise will be invented that would tempt a man to eat who is in a burning fever. More of this by and by.—ARCHIBALD HARPER.

Tongue Hotel.—On August 19, Mr. Todd, on Loch Craggie, thirteen trout, 5½lb.; Mr. Elkington, on Loch Na-Hakel, fourteen trout, 7lb.; Mr. Pollock, on Lochs Craggie and Slamm, twelve trout, 6lb. 20th, Mr. Todd, on Loch Loyal, nine trout, 4½lb.; Mr. Elkington, on the kyle, one sea trout, 2lb., also one lythe. 21st, Mr. Elkington, on the Rigibill Burn, one sea trout, 2lb. 22nd, Mr. Todd, on Loch

Loyal, sixteen trout, 6½lb.; Mr. Elkington, on Loch Na-Hakel, 7lb. trout; Professor Rilian, on Loch Loyal, nine trout, 3lb.—A. CAMPBELL.

Whitadder (Ellemford).—The fishing last week improved very much towards the end. After several hours' rain the river rose quickly—the heaviest flood there has been in the Whitadder for the last twelve years. No fishing could be done on Saturday. However, on Monday everyone had splendid sport. Without going any distance many large trout were seen. Good fishing may be expected for September.—R. J. FENTON.

Irish Reports.

Ballinderry (East Tyrone).—The Ballinderry is slowly getting rid of its quota of flax-water, aided by the torrents of rain which have fallen continuous for the past three or four days. However, this year, it has escaped comparatively easy. I have seen no dead fish, but the pools contain many sick ones. The other streams of East Tyrone—Blackwater, Tenew, Kingsmill, &c.—are slowly recovering; but another instalment of flax-water may still be expected, as the supply is far from being exhausted yet.—EAST TYRONE.

Erne and Lough Melvin.—Sport on this river improved rapidly during the past week, and capital bags were made by the following gentlemen: Mr. F. T. Green—who got six in one day—had the biggest bag for the week; Mr. E. Green, Mr. S. V. Thomas, Captain Green, and Mr. H. Gair. Some good trout fishing has also been had, as the rivers in this neighbourhood are all very full, and good sport is likely to continue.—M. ROGAN AND SONS.

Lough Currane (Waterville, County Kerry).—Sport has been slack in consequence of unfavourable weather. On some days fishing has been impracticable. Thursday was the only day that could be called an angling day, and fair baskets were had. Ten white and ten brown trout, by Mr. Alfred J. Cobbold and Mr. E. Bishop, was the best basket. The other anglers out during the week included Rev. Mr. Fitch and brother, Mr. F. L. Gordon-Farrar and two sons, Major Cresswell, Mr. G. Eades, Messrs. Matthews (two), Mr. Merriweather, Mr. W. W. Pownall, Dr. Coats and Mrs. Coats, Mr. Brock and Mr. Baker, Major Wilson, Captain MacIntosh, Mr. Winter, and a few others. Sport on the Inny has been fair on a few days after the flood. The following gentlemen had a salmon each: Mr. Merriweather, Major Wilson, Mr. Cobbold, and Mr. Le Marchant. Donal Leary, fishing for Mr. Merriweather, had two on one day, weighing 7lb. each. White and brown trout fishing very good on preserved waters.—THOS. J. DENNEHY.

Lough Neagh.—The runs of salmon are increasing, and netters report fair takes. Trout netting is also good, and some nice fish have been taken with the rod by Mr. Dinaghey. Eel, perch, bream and pike fishing continue steady, and the takes of pollen show a slight improvement. Apparently, the Board of Conservators at Coleraine are awakening to the fact that there is such a thing as the Irish Fisheries Act, and that it contains a section prohibiting the taking of pollen under 8in. in extreme lenth. Placards containing this section, and the attached penalties for its infringement, have been posted up along the shores, and at the various police barracks in the district. The majority of the pollen for sale in the local markets are under the eight limit, while the good fish, as usual, go to the Scotch and English markets.

Moy and Lakes (Ballina).—This river is now in flood after the heavy rains of Monday and Tuesday, and will not be fishable with fly before Saturday. Plenty of fresh-run fish to be seen sporting about in the pools. Some nice baskets of sea trout, from six to a dozen averaging a pound, has been taken in the Bunree river (a tributary of the Moy) these last few days. Trout fishing in the loughs has improved since the recent heavy rains.—FRANK HEARNS.

Shannon and Lough Derg (Killaloe).—For better than a fortnight we have experienced on the Shannon most horrible weather. To agriculturists the result will, I greatly fear, prove most disastrous, corn of all sorts and hay lying rotting in the fields, and the rain falling heavy as ever. Potato gardens, which two or three weeks ago were as green as parsley, are to-day in many places as black as bog oak. In the midst of all this desolation it is difficult to feel cheerful; but if anything could bring joy to the angler, it is the fact that the rain-fall has brought the water up to a height never before known in August. But as floods in the Shannon mean salmon, grilse, and trout galore (*Anglice*, in plenty), here, at Killaloe, fishermen, at least, will have no reason to complain. The river is full of fish, which are coming up in tons from Limerick and Castleconnell. Next month (September) should fish splendidly—fish in abundance and any amount of water to stir them up; even October will, I predict, witness superb sport. Both these months are already fully engaged, and I expect to be able to send you many accounts of good sport and heavy bags before the end of the season. The Shannon, at Killaloe, has held its own against all the angling stations in Ireland this year. Were it not for the ferocious weather, my record this week would be something to remember. In the midst of all the storm and all the floods, Sir H. Meridyth, Bart., Carlton Club, managed to kill five grilse, 9lb., 8lb., 7lb., 7lb., and 7lb., besides several baskets of fine trout; Sir Henry's friend, Mr. Claud E. Levita, White's Club, London, has also had some really grand sport amongst the trout on Mr. Young's preserves. Major Traherne landed, on the 22nd inst., one salmon, 28lb., and two grilse, 8lb. and 6lb. The weather is more settled this evening. Hope it will remain so, and give us a chance of killing some of the huge salmon that we see rising all over the preserves. The quantity of trout alone in the river is simply marvellous; for about twenty minutes last evening they positively went mad down about the Isle rise and on the Clieve. Mr. J. W. Young, Brockley Park, Stradbally, Queen's County, fishing his father's preserves, killed twenty trout, "oil paintings," every one of them. Anyone who could stick to trouting all day might easily basket from 15lb. to 20lb. Pike fishing on Lough Derg is well worth a trial. Big fellows beyond counting are up there, but no one to catch them.—S. J. HURLEY.

Strule and Mourne (Newtown Stewart, Co. Tyrone).—The heavy rains here last week have brought the salmon, which your report of last week mentioned were so plentiful in Lough Foyle, up these rivers. The keepers at Iron Mills say that several thousand fish passed up last week, as the river was in flood the whole week. The river was in fishing order here on Monday, and the following gentlemen, among others, killed—viz.: Mr. Start, three salmon and some white trout; Mr. Vyse, two salmon; Mr. Sweeney, two salmon; Mr. Houston, two salmon; Mr. McCloy, one salmon; Rev. Mr. O'Dougherty, P.P., one salmon; Mr. Berry, one salmon; Mr. Girr, one salmon; Mr. Donnell, one salmon; Mr. Callaghan, of London, lost two fine fish. The rain came down again on Monday night and the river is in flood again, but as this is the flax-water season, it will do good by keeping the river clean. In a few more days we will have bid good-bye to it, and from the large numbers of fish up, we should have splendid sport till the end of the season.—JOHN J. MOORE.

Suir and its Tributaries (Clonmel).—The season for netting and with it the season proper for salmon, closed here on the 16th inst. Although the spring fishing was anything but good, and, indeed, the whole season on the upper waters more than indifferent, yet the summer fishing—up to the end of the season—on the tideway, both for salmon and peal, was the best we have had for the past fifteen or twenty years. Now that the nets are off the river, and that the rod fishing remains open until October 16, we ought to have some good sport for the rest of the season, especially as the present floods are bringing up crowds of fish, and every stand should be fully stocked. Trout fishing during the past fortnight was very successfully carried on, especially with artificial minnow, in the coloured waters. Many good trout were got up to and upwards of 1lb., one of the largest, taken near Clonmel, weighed 3¼lb.; another, over 2lb.—R. BRADFORD.

Westmeath Lakes (Mullingar).—We have had a most disagreeable week since furnishing my last report, as the weather has been almost continually wet, and accompanied with coldish atmosphere, and fishing has, as a matter of course, declined. The Green Drake still continues to rise on Lough Ennell, but in fewer numbers, while Harries (Daddy Long Legs) are in myriads. The trout now rising are small, and seldom average more than a pound, each boat getting daily from four to a dozen fish when weather permits.—W. T. THOMAS.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE Birmingham clubs are getting their contests over as speedily as possible, so as not to clash with the large contest promoted by the association. Three important contests have been decided since my last Notes. The West End Society fished their annual contest at Wyre, near Pershore, on the 23rd inst., and were favoured with beautiful weather. The club offered twenty-two prizes to be competed for, and twenty-eight members answered to their names at the draw for places. The contest was of the usual duration, two hours, at the end of which the weighing in of the fish took place, with the following result: First, Mr. C. Wainwright; second, W. H. Woodall; third, Mr. H. Coleman; fourth, Mr. A. Wainwright; fifth, Mr. Hulse; sixth, Mr. T. Jesson; seventh, Mr. H. Jesson; eighth, Mr. T. Gold, &c. The contest was fished under some little disadvantage, owing to the water being lowered for the repairing of the locks. The weights of fish were below the average on account of this great obstacle. The prizes were distributed on Tuesday evening last.

THE Birmingham Garrison Lane Society held their annual contest on Monday last, at Alveston, near Pershore, in the river Avon. There were forty-nine competitors for the valuable prizes, which numbered forty-one; the fish caught in the contest were a little above the average weights caught in these competitions, as the winner succeeded in capturing close upon 3lb. weight. The gentleman who had the honour of obtaining 1st prize was Mr. T. Swan; 2nd, Mr. W. Trever; 3rd, Mr. W. Bowen; 4th, Mr. W. Village; 5th, Mr. W. Monks; 6th, Mr, H. Slinn, &c. The arrangements for the contest were made by the energetic secretary, Mr. J. Waterhouse, who succeeded in giving satisfaction to the whole of the members, who were more than pleased with their visit to Pershore.

THE Birmingham Spring Hill Society held their annual contest, on the 23rd inst. Fazeley was the place selected, where the contest was fished in the canal, which is preserved for angling by the company; and a charge of one shilling per day is made for the privilege to fish. Only about half the strength of the club turned out to fish for a first-class lot of prizes, the chief winners of which are: Mr. T. Tyler, 1st; Mr. J. Strawford, 2nd; Mr. T. Cox, 3rd; Mr. F. Jones, 4th; Mr. R. Gibbons, 5th; Mr. R. Saunders, 6th, &c. The contest was witnessed by about one hundred of the Fazeley yokels, who considerably hampered the competitors; but, notwithstanding this drawback, the whole of the competitors with one exception succeeded in taking fish. The weather was all that could be desired, and the whole of the members thoroughly enjoyed the out. Mr. C. Green officiated as referee, and carried out his duties to the satisfaction of all.

THE Avon has received a fair amount of patronage from the members of the Redditch and Birmingham clubs. The river is reported to be rather low, but in all other respects it is in first-class condition. Some good takes of roach have been made, the chief and best bait being the stewed malt. This bait will be found to be more seductive than the wheat or paste, and, at the present time, will be found to excell all other baits on the Avon. The roach will be found in the deep water, and, with the use of the bait mentioned, and using firm tackle, the angler will be certain of good sport, as there is an abundance of fish in the river this season. Some of the anglers who are acquainted with the swims have secured as much as 25lb. to 30lb. of roach, nearly all the fish running large and the majority over a pound each. At Barford some grand sport has been had with the roach. The river in this part is very low on account of some repairs being done to locks and flood-gates, and the fish have made for the deep holes, where they fell an easy prey to the angler. Bream have been well on the feed, the best bait being stewed wheat The natives round Fladbury and Pershore have had some fine catches with this bait, the best fish being taken early in the morning or late in the evening. The perch have been going well at the worm, and some fair takes of 8lb. to 9lb. have been had, a good few of the fish running over a pound each. Anyone who wishes to have a bit of good perch fishing, I should advise to take a good supply of live minnows to Fladbury, and fish round the lock, where they will be sure to find some good fish that will give the angler some rare sport.

SOME fair sport has been had on the Severn, and the river seems to be getting back to its old form again, I am pleased to say; and those who have visited the river during the last week or so, have spoken more favourably of the fishing, as there seems to be more fish in the river this year than there has been for many seasons past. They also run larger, especially the roach, these fish have been taking the wasp grub very kindly. Mr. Brereton, the secretary of the Spring Hill Society, on one of the days last week succeeded in capturing seventeen roach with the bait just mentioned, in about an hour and a-half, the fish weighed close upon 8lb., and were taken from the Severn close to the river Salwarpe at Hawford; other good catches of roach have been had higher up the river, which is now in nice condition. The dace have been biting freely at the maggot, and a fair number of fish have been taken. The fly has done but very little execution of late. Some of the Kidderminster anglers have been doing well at Highley and Hampton Lode, some of them taking baskets of 10lb. to 12lb. of roach and dace.

ON the Trent good sport has been had by a few of the Birmingham anglers. The roach and dace have been on the feed and some good catches have been made by the aid of the maggot. At Yoxall a good catch of 26lb. of roach, dace, and perch, was had last week, nearly all the fish being of a good size. Some good perch have been taken with the maggot whilst roach fishing, and these fish seem to prefer the maggot—at present—to the worm. Very few members have visited the Birmingham club waters during the past week, but those who have been down have been rewarded with fair sport. The committee that have in hand the purchasing of the prizes for the great Birmingham and District contest have been busy purchasing a good collection of useful and ornamental articles. The first prize will far exceed the prize given last year, and will consist of a magnificent marble timepiece; which is surmounted by a large bronze figure, the other prizes purchased are far above those of any previous year. The prizes will be on view any Saturday evening at the Birmingham Arms, Smithfield, when the members and their friends are invited to inspect them.

NOTES FROM LANCASHIRE.

NOTWITHSTANDING the climatic difficulties of the past week or ten days, fishermen have been abroad in great numbers, and all things considered, sport has been obtained of a more than average character. Club matches are very prolific, and better results are to hand of the various contests than is experienced generally.

THE Royal Walton fished a contest on the 22nd at Blackley, eleven prizes were offered for competition, and were awarded as follows: First, W. Butterworth; second, J. Bertenshaw; third, J. Small sen.; fourth, J. Butterworth; fifth, J. Small jun.; sixth, J. Whalley; seventh, J. Etchells; eighth, T. Blease; nineth, J. Robinson; tenth, J. Kenyon; eleventh, W. Linker. A dinner was afterwards held, and the prizes were presented to the winners by Mr. A. Ferri. The evening was passed in a social manner, and good music provided by special friends of the club.

THE Openshaw Club competed on Saturday last for a valuable list of prizes at Whatcroft by permission of Mr. Millington, the following are the prize-winners: First, T. Jones; second, J, Crawther; third, E. Tudor; fourth, J. Jackson; fifth, H. Thompson; sixth, G. Yates; seventh, F. Brabner; eighth, J. H. Chadwick; nineth, R. Burgess; tenth, W. Webb; eleventh, H. Nuttall; twelfth, and thirteenth, J. Eyres and J. Evans; fourteenth, J. Jones; fifthteenth, S. Eyres; sixteenth, J. Edwards.

THE Salford Friendly Anglers fished the contest on Saturday last for an exceptionally attractive lot of prizes, the following is the complete list: First, W. Court; second, W. Kelsall; third, J. Hares; fourth, E. Harris; fifth, J. Barnes; sixth, John Royle; seventh, T. Price; eighth, J. Burgoyne; nineth, S. Delman; tenth, J. Hall; eleventh, C. Whitehead; twelfth, J. Delman; thirteenth, H. Baxter; fourteenth, T. Hannah; fifteenth, R. Hunt; sixteenth, J. Bates; seventeenth, A. W. Plapford; eighteenth, T. Harker; nineteenth, H. Holland; twentieth, J. Doving; twenty-first, P. Wove; twenty-second, R. Driver; twenty-third, R. Bates; twenty-fourth, W. Fletcher; twenty-fifth, G. Forester; twenty-sixth, James Royle; twenty-seventh, J. Thretford.

THE newly-formed Levenshulme Club are taking steps to fence round their acquired private waters, this step is forced upon them through the defiant trespass of a small body of men? Stocking will shortly be vigorously proceeded with.

MR. BROOKE is having a rare time amongst the trout and perch in the Lake District some very fine fish have fallen to his skill. Mr. R. Rigby, Oldham, has secured a nice pike of 7¼lb. and a perch of 1lb. 11oz. in the flashes at Northwich. Individual catches in the Dane are of daily occurrence, but it would be impossible to attempt any detailed account. Trout are in fine condition and plentiful, but the sport amongst the coarse fish, is the most satisfactory. Cheshire brooks are now in the best of condition and are receiving great attention. From the Dee reports are coming in of a more favourable nature for rod-fishing. The netting season being all but over, tends to this improved state of things.

THE Seedley Angling Society held a contest on the 22nd, with the following result, after a keen and interesting fight for the various prizes: First, J. Senior; second, V. Harrison, third, J. Baxter; fourth, C. Cropper; fifth, R. Higgins; sixth, S. Appleton; seventh, H. Lopper; eighth, D. Barlow. A social evening completed the day's programme.

NOTES FROM NOTTINGHAM.

IT is a gratification to be able to report an improvement in the character of sport on the Trent. Fish generally have fed more freely, and on some of the lengths the takes have been remarkably good. At Shardlow, on Saturday, Mr. M. Leek, of Lenton, and Mr. A. Sewell, of Radford, killed, with the worm, eight splendid chub, four barbel, and sundry eels, and in the canal at the back of the river here, Messrs. J. Bailey and H. Daykin, of Lenton, and Mr. F. Baker, of the Nottingham Wellington Society, have certainly excelled amongst the bream. In two outings Mr. Bailey killed something like 70lb., and amongst the fish taken by Mr. Baker, one of over 3½lb. was recorded on the books of the society named. Mr. T. Essex, one of the vice-presidents, has caught an enormous quantity of fish (bream) in the Sawley private waters, and numbers of roach have been met with at Trent Lock and Barton. Most of these fell to creed wheat, which continues to do good execution in the Wellington district. I hear that Mr. F. Ley, of Barrow-on-Trent, had a take of eight or nine very fine barbel from his waters above Swarkestone Bridge, on

Saturday, and having fished them with him, I can testify as to their general excellence. At King's Mills, Mr. S. Pogson, mine host of the Bowling Green Inn, Canal-street, Nottingham, Mr. J. Clayton, and Mr. Harry Spray (hon. sec. of the "Wellingtonians") caught something like 30lb. of chub, dace, perch, and roach, on the 19th, Mr. Pogson having, in addition, a barbel of 5lb. This he weighed in his own society. Friend John Theaker, the well-known professional, accompanied the party and performed in his usual talented manner. The river rose a few inches on Sunday, and the rise has been attended with satisfactory results. Recently moderate takes of white bream and small roach have come from the Grantham canal, a portion of which, at this end, is open to the public.

Two extraordinary fine barbel have recently been killed in the Trent in the boundaries of the borough, and their capture has created quite a flutter of excitement in local angling circles, especially in the various clubs. The heavier of the two, which weighed 9lb. 10½oz., was caught on Tuesday, August 18, by Mr. T. Davis, who lives within a stone's-throw of my own residence. Employing a bunch of caddis grub as bait, he hooked the fish from the bank immediately below the landing-stages of the pleasure steamers running between the New Trent Bridge and Colnick trees. The bank is awkwardly situated for landing any kind of heavy fish, and the one in question showed determined play for nearly twenty minutes. Then it began to show signs of distress, and a youth, who was with Mr. Davis, sought to get the landing-net under it. In doing so he in his excitement broke the tackle, and the much-coveted prize was about to disappear, when the angler himself sprang forward, and seizing the fish at some personal risk, succeeded in throwing it ashore. Subsequently he disposed of it, and there can be little doubt that it has been weighed in by unprincipled "splodgers" at a number of the local clubs. Shortly before the capture Mr. Davis tried the same spot, and, with the same description of bait, hooked and landed a fish of 7lb. 9oz.; and a second, supposed to be even larger, was hooked and lost from the landing stage by Mr. J. Taylor, of Arkwright-street. Years ago the late Mr. William Bailey killed a fish —of course I refer to barbel—from Cavendish Bridge, at Shardlow, of 11¾lb.; and at about the same period, Mr. William Trivett, of Mansfield—better known among his numerous piscatorial friends as "Marvellous"—caught a couple, weighing 17lb., in Mr. Wilson's field, immediately below Thrumpton weir. These fell to the caddis grub in the early part of the season, and I believe that Mr. George Bates, a prominent member of the Nottingham Wellington Society, once landed, within a few days of each other, two of 21lb., in the gully hole at the foot of Averham weir, now rented, with other portions of the fishery, by Mr. D. Slater, the well-known fishing-tackle manufacturer, of Newark. The late notorious and renowned William Thompson, alias "Bendigo," had the credit of killing several tremendous barbel from the niches of the old Trent Bridge, at Nottingham, and in Mole's Hole, at Wilford, with Chandler's greaves; and about four years ago, in the very depth of winter, Mr. Miles Leek, of Lenton, surprised himself and friends by taking one of 9lb. odd in the Shardlow length. Others, ranging from 8lb. to 13lb., have also occasionally been caught in the noted Fitchett's Hole, at Wellington. Reference to Wellington reminds me that this season the issue of day tickets has been dispensed with. The fishery is in the right of Sir Francis Burdett, of Foremark Hall, and is extensively stocked with all kinds of fish, including salmon, although in recent years very few of these lordly fellows have been killed. The yearly tickets are fixed at half-a-guinea and a guinea each, the latter including the salmon fishing. That the water is cheap enough in all conscience is proved by the fact that it extends for nearly nine miles. Mr. W. Newbould, of King's Newton, near Derby, is the agent to Sir Francis, and strangers anxious to try the water cannot do better than drop him a line, as he is a thorough all-round sportsman, and will willingly supply every information. Tickets may also be obtained from Messrs. Peach and Son, fishing-tackle makers of Derby, and from Mr. W. Collier, of the Green Man Inn, Wellington, who can put up any reasonable number of gentlemen. Dace and roach of great weight are frequently caught in the length, and having fished it for years with varying success, I can thoroughly recommend it.

WHILST on the "champion question," I cannot do better than mention the capture of an extraordinary roach in the King's Mills (Mr. T. Wood's) subscription water. This fish, which weighed 2lb. 6oz., fell to the rod of Mr. George Wood, on Thursday last. Mr. Wood was using the worm, and being a member of the Wellington Society, I hope he has weighed it in, and that he has taken the trouble to have it "set up." Roach of even 2lb. are very few and far between on the Trent, and Mr. Wood's fish is certainly the largest that I ever heard of in local waters. One of 2lb. 1oz. was caught two winters ago in the osier bed at Barton, and the late Mr. James Woodward, of Nottingham, once killed one of 2lb. odd from the footway of Wilford Bridge. This fish I sent to the *Field* office, in anticipation of securing a premium offered for a roach of 2lb. by the late Mr. Greville Fennel. The premium, however, never arrived for the deceased, the reason assigned being that fish of the specified weight had already been received from other parts of the country.

NOTES FROM SHROPSHIRE.

THE silvery (?) Severn is now a swollen and discoloured stream, and angling is almost useless; but should the weather change and the constant rainfalls cease, we may expect better sport.

IT is understood there is a probability of a conference being arranged between the Shropshire representatives on the Severn Board of Conservators and the Executive Committee of the Shropshire County Council, to discuss the vexed question of the decrease of Severn salmon in the upper waters. Should this desirable conference be brought about, a powerful combination might be formed and wise recommendations made to the Board of Conservators in regard to the questions of the impassable state of the weirs, river pollution, and such questious which are now being raised in connection with the problem. Up to the present time the county of Shropshire has taken, officially, a neutral and impartial view of the matter, and therefore any recommendations that may be made after a conference such as that suggested, would doubtless have due weight. In regard to the question of river pollution, which was dealt with in our columns last week, we have been reminded that, however desirable it may be to cleanse the river from pollution, there are difficulties in view which are well nigh insuperable. In the first place, there has yet to be discovered a really satisfactory method of dealing with sewerage, and until one is found, it is questionable whether the Local Government Board would attempt to force local bodies to cleanse the rivers. Again, if Shrewsbury was compelled to do so, all the small sanitary authorities would have to take similar steps, and the undertaking would be a gigantic one. If sewerage farms were to multiply to a great extent in the county, there might be considerable danger of spreading disease. However, it is highly desirable that something should be done to remove the worst pollution from the river, and it is hoped that the Board of Conservators and the County Councils of those counties through which the river runs, will take decisive steps in the matter.

THERE is a strong feeling among those interested in the salmon fishing of the upper waters of the Severn, that the navigation weirs, near the mouth of the river, are responsible in a very great measure for the decrease of salmon in the upper waters. It is argued by the lower water representatives that there are many weirs equally impassable in the higher waters; but admitting this for a moment to be the case, it is obvious that attentian must first be turned to these below, for it would be useless to better the condition of the weirs up-stream, before those below Gloucester are made passable. It is the belief of the upper water fishermen, that the navigation weirs downstream obstruct the passage of the fish, and that they are captured while waiting for a rise of water to enable them to run; and this being so, it is gently hinted that the lower water fishermen look upon them with favour, as it enables them to make better catches of fish. But if this be the case it is certain that they are defeating their own interests, as if the mature fish are not allowed to pass to the upper waters for spawning, the supply of fish must rapidly decrease, and the river be impoverished.

NOTES FROM WORCESTER AND DISTRICT.

RAIN, rain, nothing but rain lately, the result of which is a considerable rise in the Severn and the Teme, the water in the latter rolling down the colour of marl, and in considerable volume, and angling is out of the question at present; but sport should be considerably improved when the water settles down again, for the streams much wanted a clearing out. There had been some capital sport enjoyed in the early part of the week, and some capital baskets of fish were taken—Mr. Henry Tyers, of the Izaak Walton Club, 24lb. of coarse fish, and four brace of trout; C. Wall, a big lot of eels, the largest weighing 3lb. 8oz., and measuring 37in. long. There were also a lot of fine chub, taken with the maggot and wasp grub, one specimen taken by A. Bozward, weighing 2lb. 10oz.; several others over 2lb.

THE Malvern Club had their third contest on Thursday on the Teme, at Lulsley, the secretary, Mr. L. Higgs, winning first prize, 10s. 6d., with 4lb. 5oz. (including two and a-half brace of grayling), being the highest aggregate take; Mr. Warner, 10s. 6d., for the best catch of dace; Mr. W. Jones taking 10s. 6d., best average, with four fish (roach and dace); Mr. W. Gatfield taking 5s. 6d., for the second aggregate; and Mr. Tanner, 2s. 6d., for the third aggregate; Mr. Higgs won 5s., for the best catch of grayling—which was not taken, no competitor being allowed to take more than one prize. No fish under 3oz. being weighed. A good dinner finished up this very pleasant day's outing, and the health of the winners most enthusiastically drank.

THE Izaak Walton Club have their second club contest on Thursday next, and are expecting some good sport; but unless it takes place on the Severn, which is in excellent condition for bottom fishing, I fear they will be disappointed.

ANGLERS and the net fishermen are thinking and talking a great deal about the river pollution, but it is a curious thing that at the place where the two main sewers of this city empties into the Severn there is an abundance of fish, and anglers fishing for them; and the largest chub, roach, and dace that I have heard of being taken in the river this season has been caught there. Query: Does it affect one kind of fish and not another? Anyway, there is a prospect of it soon being removed from the river in this locality, which most persons will say will be a good thing done.

NOTES FROM YORK AND DISTRICT.

ANGLING matters have this week been so decidedly inanimate, that in writing my Notes I am almost reduced to the unthankful position of "making bricks without straw." Rain and wind have been the only features of the weather which will bear record.

SUCH a state of things is far from encouraging, and the misfortune is especially felt in York, in that it being the race week most of the large manufacturing places have been closed for three half-days, and the opportunities afforded to working-men fishers of having a short time with their beloved art, has been denied them. The week had, moreover, been looked forward to with considerable interest by many a local angler; and several of the clubs had arranged excursions and matches. The North-Eastern Angling Association had agreed to hold the second of their matches this season on Wednesday, but with the outlook the event might well have been abandoned. Look how the members of the Fulford Friendly Angling Society fared last week! Seventeen competitors entered to fish their third match, but the Derwent was in such a state, that the first prize, secured by Mr. J. E. Wilkinson, weighed in for under 2lb. of roach and dace. The second award was secured with a couple of eels. What next? But it all lies at the door of the weather.

THE Yorkshire salmon fisheries, I hear, have suffered considerably for the too great volume of water which has entered the rivers of late. The flood of filth from the Aire poured into the Ouse in such a degree as to destroy numbers of fish, and drive those which were ready to ascend the river back to the sea. The County Council is understood to have taken up this question; but they would show a little more sympathy with the grievance of the fishermen if they undertook the purification of the river with a little more despatch.

BAD as the river-angling has been, the sea fishing on the east coast has been maintained in every sense. Scarborough and Filey have afforded sport to the endless streams of visitors, while Bridlington has been patronised very largely by the sea-fisher.

THE York Angling Society held the second match of the season on Wednesday in the Derwent, at Kirkham Abbey, and, as at the opening competition which took place at Buttercrombe, the river was in flood, and, therefore, very unfavourable. Considering the circumstances, however, and the time to which the competition was limited, the catch was much beetter than might have been expected. There were seventeen competitors. The first prize was taken by Mr. Coop, with 3lb. 7¼oz.; second by Mr. Chapman, with 1lb. 1oz.; third by Mr. Gibson, with 11oz. Next to these in order came Mr. Broadley, Mr. Wood, Mr. Smith, Mr. Schumacher, Mr. Lund, and Mr. Foster.

NOTES FROM IRELAND.

[FROM OUR DUBLIN CORRESPONDENT.]

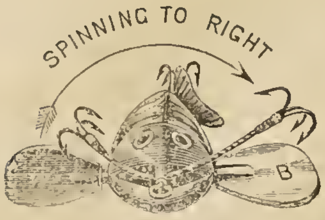
AS the present angling season all over Ireland is gradually drawing to a close, sport has, generally speaking, been pronounced to have proved in many respects, superior to last year; in fact, we have it on the authority of the Premier Inspector of Irish Fisheries (Sir Thomas Brady), that salmon, during the present season, in the prominent fishing grounds, have not only been in profusion, but the run has even exceeded expectation. Many districts of course yielded poorer encouragement than formerly, but on the whole, so far, judging from the weekly returns of capture by rod, anglers in Ireland have had little to complain of when it is remembered that we have been, and are at present, passing through a season most unsettled, and too frequently for sport, of extreme severity. Some of our foremost fisheries have, I regret to say, to be classed amongst the comparative failures throughout the season. The Westmeath Lakes for instance, those magnificent loughs which always formerly proved the acme of perfection for the angler, has suffered much from adverse weather, and that alone; yet, in spite of this, they continue to be fished, and the rise of trout may be said to have preserved itself remarkably. Loughs Ennell and Belvidere have, I am told, yielded the best baskets of the season, the fish scaling up to 6lb. each, whilst Lough Owel has suffered from otter fishing, but the latest reports to hand concerning Westmeath, states a marked improvement has taken place, and last week the attendance of anglers was better. I have no doubt that under favourable circumstances sport there will be excellent during the remainder of the season.

TURNING southward we have a more pleasant state of affairs existing even to the present. The Waterville Fisheries, Co. Kerry, have been wonderfully successful both in capture and patronage, and at the close of last week a report says: "The rush of anglers is unprecedented, and further hotel accommodation is required. Waterville, however, possesses many charms, and one great drawback for the angler. Sport there has always been amongst the foremost, and the spot is a great health resort, surrounded by scenery most picturesque, but it is twenty or thirty miles from a railway station. A railway is however in construction now, and when the district is opened up Waterville will be found an irresistible magnet to the angler.

IN the eastern Irish districts sport has latterly been of a mixed nature, good here and indifferent there. Trout fishing in Dublin district proper has been comgaratively speaking, abandoned, owing to the inclement weathes; whilst in Co. Wicklow fishing is better. Big Lough Dan, up in the Wicklow mountains, is always fishable, and is always being fished. Some fine trout up to 3lb, or 4lb. weight, were taken by Mr. Oscar May and Mr. Geo. Kennedy a few days ago, but for real good sport Woodenbridge and Anglerun "takes the cake." Plenty of worm fishing is going on daily just now. Col. Bayley's two sons and two friends are out every day, and on Tuesday (yesterday) they had baskets of from one dozen to three dozen each of plump small brown trout. Many others are on the river. White trout are turning up well on the Arklow stretch now. Major Walshe had a couple of good ones the other day. The water has kept very high for some time, and in consequence many white trout and salmon have got up, one latter weighing 15lb. was landed near Ballenglen on Friday, and another 17lb. on the "big river." Many others are seen; the water being constantly strong and fresh they are working well up. There is an enthusiastic old lady at Woodenbridge this week (whose name I have) fishing the district and my informant writes:—"You would die laughing to see her standing up to her middle in the river, rod in hand. The season in that district terminates on September 12.

⁂ Club and River Reporters will oblige by sending in their Reports early in the week.

MAZAWATTEE TEA



SPINS BOTH WAYS.

THE SUMMER FISHING IN SCOTLAND.—2.

By Mac.

As stated towards the conclusion of our previous week's paper, the real summer angling on the salmon rivers of the East Coast of Scotland proved of but trifling account, in consequence of the almost continual too low state of the water during the seasonable or natural time, which is between the beginning of June and the middle of July. The former month, it will be remembered, was cold and dry throughout, and albeit few fish ascended, or rather got past the netters (who found it an easy matter to sweep all in the low waters), to afford angling on the fairly lower and middle reaches, yet on the more inland sections of the larger long-run rivers, sport with the earlier ascended or spring fish, of which there was an unusually strong head, proved and kept exceptionally good until much farther into the summer than usual, owing, we doubt not, chiefly to the fact that these fish did not deteriorate and become "potted" nearly so soon as they would have done had the water been of seasonable warmth. This, however, by the way. A quite common experience in summer is to find, at one and the same time when the water is low, spring fish taking freely in the livelier water of the upper reaches, and steadily refusing everything in the slacker water of the middle and more seaward beats. True, they are vastly more numerous in the former waters; but why since they take freely in them should they not, in proportion to their number, take as freely in the other? In a large measure it is the temperature that has to do with it. Undoubtedly a high temperature for summer—and the higher the more marked the effect—keeps them from taking so well as in its absence they would do, and accounts (as borne out by the fact stated above concerning this year's summer angling) for the poverty of sport on all but the upper waters, when the fish of the summer migration do not seasonably early commence to ascend, or cannot manage it by reason of low waters and obstructions. When this is the case, these upper waters contain about all the stock and are not so heated up as the water of the nether reaches, which the fish have long since left behind them. Or to put it so that it will be better understood, the water after having run many miles exposed to the sun, through less elevated and better sheltered country, possesses a temperature very much higher than it registers in the uplands, where the feeders rush their cool water down from the mountain and hill sides, and where, by the beginning of summer, the bulk of the stock of spring fish have pushed and are congregating.

Even should a very fair head of quite fresh-run fish be "up," frequent showers or heavy falls of rain now and again are required to freshen the water before, on the more seaward reaches of long-run rivers, sport can be of much account during the summer months, when heat-produced matter and other filth having a most prejudicial effect accumulate rapidly. But towards the sources of the rivers and at high altitudes there is nothing like the same necessity for such frequently occurring pluvial descents. And why? Because there the water, less impaired in volume through drought, exposure to the sun, and other causes, fills the (in general) relatively narrower channels better, and, having a greater average fall, is sharper with, accordingly—as a prevailing characteristic—the much more frequent occurrence of those rocky holds, rushes, and streamy small casts which are the most certain "finds" for fish during low water in summer. Moreover, between having travelled but a short distance and the ordinary rough and rapid character of its flow, it possesses, to the enhancing still further of the angler's chances, a less high temperature and a more clean channel. But all this by the way.

For the larger fish—*i.e.*, salmon and grilse, the past summer angling season, spoken of generally and all along, cannot be said to have exceeded the average of recent years in results. For sea trout it has been a failure, a failure more complete all over than has been experienced for a great many years; and with the common *fario* on loch and river, reports from all quarters indicate that very gratifying sport for any length of time has, on most waters, been quite an exception to the rule. The abnormally cold weather of early summer, while it answered specially well for the angling on far inland stretches of river for spring-run fish, suited but ill for trouting. Unlike for salmon, it is required for trout, early in the season especially, that the weather should be of seasonable warmth, since otherwise the natural fly, upon which they feed, and at that time prefer to bottom food, will not come out in full strength to cause them to rise properly.

The angling on the East Coast and North East coast rivers—numerous though these rivers are, and collectively yielding for the year of fish native to them a far greater market supply than the whole of the rest of Scotch waters—is, nevertheless, but a mere patch of the whole real summer salmon, grilse, and sea-trout angling in Scotland. In greater or less strength, there are of each species—salmon (*Salmo salar*) with its adolescent, the grilse, and sea trout (*Salmo trutta*)—fish of a real summer migration, having the instinct to ascend if they could, belonging to the whole of the rivers, from the cruelly used and sadly degenerate Tweed in the south, to the Wester and abominally polluted, odoriferous (!) Water of Wick in the north. But what with low sun-heated water (not to mention other causes), existing as the usual state of things, in consequence of the prevalence of land winds, which are seldom accompanied with sufficient rain, the fishing at the best is precarious, and only on the off-chance of a spate during the flush of the season's short continuance, is it possible for anglers to do much for even the brief space of a few days on end, save on the more reliable and earlier grilse waters, which are but a small proportion of the number within the area indicated—to wit, Dee, Spey, Beauly, Conon and Blackwater, Carron, Oykel, and Shin. But with respect to the numerous rivers of the North, the North-West, the West Coast and the Isles, which are about two-thirds of the whole in Scotland, the state of matters as regards weather conditions is different, the greater and usually more constant humidity almost every year experienced giving a plentiful flow of water—sometimes rather much—during most of the real natural time for the strength of the summer head of fish—which in most districts, leaving out part of Sutherland, the Lochy-Spean and the Awe-Orchy, is the only pronounced migration of the year—coming to the coast and ascending.

Having, in the main, hitherto confined to ourselves to speaking of the summer angling in a general way, and indicating how physical characteristics and climatic conditions account for the habits and moods of the fish. it is our opinion that we have now led up to the point where for the sake of continuity of the review it is most fitting to link the particular to the general. This assumed, it is an easy task that we find before us; and first, then, because it is reckoned the "grandest" and most dignified sport, though not the most general, we decide to deal with the angling for the migratory *Salmonidæ*.

To take the "circuit"—working round from the Tweed to the district of the Solway compassing the isles of the West on the way is perhaps the best and most intelligible plan; and this leads us to commence with the "old border river." On this once famous summer angling stream sport was not a moiety of what it should be, and indeed would be were the netting less cruel, that is kept within such bounds as would be evidence of a due regard being had for the future yield of the fishings as a whole. This applies to the Forth with its angling tributary the Teith, to Tay with its salmon-affected feeders, and to all the other rivers to the northward whether dyke obstructed or not till the Dee is reached. For this river there was not water enough at the right time, and besides there was far short of the usual strength of fish seeking to ascend. Accordingly on the best, or middle and fairly upper sections, as also on the Feugh, a noted angling tributary, the season proved a disappointing one. Nothing need be said of Don and Deveron, as for reasons which are obvious to those who know them there cannot be summer fishing worth a doit. A very fair fishing for finnock with some sea trout amongst them was had on the tidal waters of the Ythan, which as usual have been tried by many anglers from the south. Since the rainy time (which does not yet seem to be past) commenced both the Ugie and water of Cruden have now and again done fairly—considering their reputation. Of the Spey the same has to be said: its true summer fishing, owing to low water, was a sort of failure, but since about a month back there has been such sport as has somewhat made up for the poor results in June and July. Already, which is considered very early, some finnocks have been got. There is not on Findhorn a chance for the rods in summer in consequence of the netting; and as regards the Nairn and the Ness, which are early autumn waters, nothing need be said further than that on the latter river some very fine grilse fishing has been had since the advent of August. There were a few fair days on the Beauly, but nothing very special that we have heard of was done by any of the rods.

The rivers of Ross and Sutherland-shires, whose waters flow into the Cromarty and Dornoch Firths, have yielded better salmon and grilse fishing than has been had on them for several years past, partly in consequence of having been in fuller volume, and partly through most of them not having been netted to the same extent as they were up to a few seasons ago. In the improved angling, and in the enhanced netting at the *fewer* stations, there is good proof of the wisdom of the policy of treating the nurseries of the fish well. From the hotels at Strathpeffer some anglers have done very fair on the Conon and its better fishing affluent the Blackwater; while on other reaches of the same waters lessees of fishing have in some cases had days of what must be called gratifying sport. Some years ago all the river netting was bought up and put a stop to by the rod fishers. For it, the Carron, Easter Ross, has fished very well, yielding both on the Balnagown Hotel water and most of the other beats a greater total of grilse than for several years. The sea trout fishing on the Kyle of Sutherland, patronised chiefly by anglers from Inveran, Invershin, and Bonar Bridge hotels, seems to have proved less gratifying than usual. The repeated floods drew the fish, of which there did not appear to be an average stock, away from the tideway to the higher reaches. For this reason, in respect of salmon and grilse, Shin, Oykel and Cassley fished well—better than for years past; but then it must not be omitted to mention that the praiseworthy action of the Duke of Sutherland in giving up his netting in the Kyle at Shin mouth is undoubtedly doing much to better both rod and net fishing since, before, the nets at the station mentioned effectually swept the Kyle, which here contains the united waters of Shin, Oykel, Cassley and Eanig on their way to the Dornoch Firth. The anglers, from Inveran Hotel, on the Shin below the Big Falls did famously for Shin *now-a-days*, and among the successful rods were several of the fair sex. The blasting of the falls, or the application of a salmon ladder, which is contemplated, is expected to do wonders for the Cassley, on which this summer some nice fish—both salmon and grilse—were got. On the Oykel, at Langwell, from Oykel Bridge, on the upper waters, and inland as far as Loch Ailsh sport exceptionally good for summer was the rule.

The Fleet, at the Mound, whose reputation for sea trout is great, although yielding a good deal of very fine sport, yet from, like most waters, having had an under-average head of fish, and the water latterly having been unsettled, seems not to have fished quite so well as usual. A little with sea trout was done on Lower Brora and Loch Brora, but no summer fishing for grilse or salmon worth speaking of is ever got on Brora, Helmsdale, and Thurso, although all these rivers afford, when conditions suit, remarkably fine spring fishing. The smaller streams between Brora and John o' Groats do not fish, as a rule, their best till about August, when scarcely can the sport be called summer fishing. With water enough, the Berriedale and Langwell, the Freswick and the Wester with Loch Wester are, however, good angling streams in the proper season for them. For grilse or salmon on the Halladale, which soon floods and soon runs out, a season rather good for it was experienced in consequence of the abundance of rain. The Borgie afforded a fair fishing, and so did the Naver. Both these, with everything favourable, do splendidly in spring. From Bettyhill Hotel some anglers out on the tideway of the latter river did well amongst the sea trout. Trolling with the sand-eel before the rainy time came on, anglers had more than average sport on the Kyle of Tongue, the most famous tideway in Scotland for large sea trout in early summer. A season reckoned not quite so good as usual was experienced on the Hope and Loch Hope. The Upper Hope, or Strathmore river, did very fair after a bit, but on the loch, which is the best inland water on the Northern seaboard for fly-fishing for sea trout (of a great size), sport on but very few days came up to expectation. A little fair sea trout fishing was got on the Polla, succeeding which are the Kyle of Durness and the Dionard river (or Grudie), near Cape Wrath, the last of the salmon affected waters (westward) on the North Coast. On the kyle the sea trout fishing by trolling the sand-eel has not been of its standard excellence. It is the best fishing of the kind in Scotland, but this year, in May and June, owing perhaps to the abnormally cold weather the fish did not come "in" in usual strength, and later on, which usually is a fine time for fishing, the frequent floods tempted them to leave the trolling waters and push up the river Dionard, on which, nevertheless, but a poor sea trout fishing was had, although with salmon and grilse the anglers at the Gualin did remarkably well both on the upper sections and Loch Dionard.

On the North-West Coast, from Cape Wrath to the Polly, a season marked by many vagaries has been experienced. The Rhiconich Hotel fishings have not yielded of salmon and grilse so well as last year; but of sea trout a greater number. The small waters, like Achriesgill and the Duartmore, which jump up and down with great quickness, have afforded beyond the average amount of sport in consequence of the exceptionally great rainfall. But on the Laxford, which naturally is the best salmon, grilse, and sea trout river in the dukedom in summer, a season much less prolific than last has been the result of the fluctuations and frequent thunder-pelts. Loch Stack yielded of salmon and grilse a gratifying head through these fish by the frequent freshenings being drawn up from the Laxford; but of sea trout it gave a poor fishing, considering, of course, the reputation it possesses of being the best sea trout loch in Scotland. On the Inver, Kirkaig, Polly, and all the rivers through Cromarty, and Ross (on the west) southward to the Carron of Loch Carron, the fishing generally, albeit it was not up to satisfaction, was better than during the few years before, which were particularly dry. On Loch Maree and several other lochs very fair sea trout fishing was got. It is reported that, with an exception or two, the small rivers of the West Coast of Inverness-shire did tolerably well, the Guiseran, as usual, being to the front for sea trout. In this district, and in Argyleshire, the lochs, owing to the later frequent freshets, had the fish pushing up to them and so, for their merit, did better on the whole than the streams. There is evidence that Loch Shiel in a few years will have its rod fishing improved considerably through the taking off of nets which took place the other year. Lord Abinger's fine river, the Lochy-Spean, has yielded well, but better in respect of salmon than of grilse and sea trout. Of both the latter there seemed rather a poor show; but it was noted that grilse came up early and were *early* large, while all the season through they averaged above the usual weight. For the Awe a good season was had both by anglers on the Taynult Hotel water and the upper beats. On the numerous streams and lochs in the Western Isles it would seem that the angling for sea trout up to date has been below the usual standard mostly everywhere, and even for small salmon and grilse the marvellous sport of last year and some recent years has in but few cases been repeated on the splendid—because particularly well cared for—waters of the Lews and the Uists. The rivers of the Ayrshire coast as is their wont, yielded but little sport; but on the rivers of the Solway a late summer angling season has been had, such as has not for years been approached in point of excellence. Of sea trout and herling on the Annan and Esk, in particular, the run has been the feature of the year, and considering that nearly everywhere else these fish have been very scarce it may well be called phenomenal.

Since the Tweed has been "done for" no streams of good size in Scotland can now equal Don, Deveron, and Findhorn for early trouting, having regard both to the size and quality of the fish. The prime season is late spring and early summer, and, despite the damage resulting from poachers and pollutions, many fine baskets are made when conditions are propitious. But this year, taking it all round, the sport has been inferior, and since all through the seasonable time for the fish taking best the weather was abnormally cold and dry what else was to have been expected? For the same reason the angling on the early lochs was unsatisfactory; whilst later on too much rain, stirring up the peaty sediment and making the water flush with the heather, fairly played up with the anglers' chances on the later summer fishing lochs of the Northern Highlands and the Isles. On the whole the best loch fishing was got in July before the rainy weather had long set in. Later summer fishing on hill brooks and upland burns proved almost the only exception to the rule in a season of poverty of sport with trout. The much rain colouring the water so often enabled the votaries of the worm to do more damage than has been done in any one season for a good many years by-gone. But this sort of sport is scarcely an art, and is not to be mentioned alongside clear water worm fishing, of which, as can be understood by the initiated, there was little or none worth mentioning.

THE YARMOUTH UNITED LAMBS have just given an impromptu concert on the sands, and as a result have sent a cheque for £7 10s. to Mr. Woodrow, the honorary secretary of the Norfolk Broads Protection Society, as a contribution towards the defence of the public rights. A meeting on the subject took place at Yarmouth Town Hall yesterday.

Notes

WE would again warn our advertising friends that many fishing tackle makers and others have been robbed by persons who have obtained goods under some specious pretext, and under various names, and decamped without paying for them. Messrs. W. H. Foster and Co. ask if we know the whereabouts of a Mr. L. M. Haigh, who had £9 worth of goods from them in the spring, when he was staying at Addingham, near Leeds. They can only learn now that he "left for Scotland" last March, and that many people want his address. For many years past this man has wandered about the country seeking whom he may devour in this way, and seems to thrive on it.

TROUT fishing on Loch Leven closes for the season on the 5th instant (to-day).

EVERYWHERE in Scotch waters, except Tweed, Ythan, and a few of the unimportant later districts, the net fishing for the migratory *Salmonidæ* is now ended for the year. A remarkably productive season has been experienced. For July—usually the month of the heaviest fishing—the aggregate result was under that of last year; but since the closing week of that month, or, during what is called the "tail-end" of the season, the head of fish caught nearly everywhere was found to be almost unprecedentedly great. Not for many years has so abundant a crop of salmon been secured, and taking this into account, as also the fact that the grilse fishing was a good average nearly all round, it is remarkably strange, unaccountable, that a great scarcity of sea trout should have proved a widely prevailing circumstance for the season throughout.

AT one of the netting stations on Tweed an extraordinary haul of fish, numbering one hundred and eight, recently obtained with one sweep of the net, was extraordinary in another sense, in that of the whole batch only one or two were grilse. Usually—and holding good about everywhere—between the advent of July and the middle of August the grilse far outnumber the salmon of the net catches.

NOW is the time for anglers, who can take a prolonged holiday, to go to Shetland for the sea sea trout fishing. From friends come reports that "big fellows are biting well." In *Ultima Thule* the sport, whatever its quality, can be depended on to prove best in September unless something very crowning in the nature of unseasonable weather be experienced. When fresh "come in" the sea trout take best, and with a sufficiency of rain early, they early run in strength. Accordingly a part of August may be very good for sport some years on the earlier voes.

DURING the week before the netting closed, over a score of fish between 30lb. and 40lb. weight apiece were caught on the Aberdeenshire and Kincardineshire coasts.

QUITE recently some very fine grilse and salmon fishing was got by several rods on the Ness, which, of the principal rivers of Scotland, is the latest in affording its best angling for true summer season fish.

LAST month an angler on the Spean caught an eel with the fly; and on the same river a better though not so remarkable a capture was a 36½lb. salmon, which fell to another rod.

AN *over* sanguine angler on a well-known autumn salmon river writes: "The autumn angling is insured: it will be capital; there is plenty of water, and already, which is much earlier than for common, lots of fish have ascended and are ascending." How, friend—how can this *insure* the autumn season being a good one? About two months' time of it is still to go, and who knows but that nearly all along the weather may be as dry as a hielanman!

ONE day last week two Reading gentlemen had each a good salmon on the Inveroran Hotel water of the Orchy, Argyllshire.

Considering that the nets are but newly off, the autumn rod-fishing on the North Esk has begun auspiciously. With the spating, as a consequence of the heavy rains, the smaller fish seem to be pushing rapidly forward. On the Panmure Arms Hotel water, Edzell, on Saturday, a Mr. McKenzie had two grilse, two trout (1lb. each), and several smaller fish.

Lady M. Grosvenor landed a fine salmon on the Laxford last week.

Dee, Don, Deveron, and Spey, all have had a good many salmon ascending since the netting ended, and on each a little sport has been had with good-sized fish—the pioneers of the great autumn migration.

It is reported from most of the East Coast rivers, from Findhorn and Spey southward that in the tidal and lower reaches the autumn run of finnocks which commenced with the spates sometime ago is very well forward for so early in the season. Accordingly there is encouraging indication of a good season to anglers, who no doubt will fervently wish for the sport-conducing adjuncts of suitable weather and "right" waters.

Since the season is quite past, anglers from the south need not now visit Scotland in the expectation of good sport on loch and river with the common trout.

It is for sea trout and finnock with the chance of a salmon or grilse that they should look, and when on this quest—as many will be—the later waters of the West Coast, those of Shetland, the Uists, &c., the rivers of the Solway, and the many East Coast rivers having an autumn migration, are recommended to their notice.

A little time ago, "a great haul" of the Scotch netsmen of the Solway, had to appear for alleged infringement of the weekly slap, and but last week another batch were "up" charged with having fished on the English side.

Recently there has been some splendid sport on Loch Stack, the most productive sea trout loch in Scotland. The trout are now coming to prefer the "Zulu" to any other fly. This pattern did far the most execution last year, fairly putting into the shade the "Claret and Mallard," which had for many years previously been the prime favourite.

How it does rain! Scores of Scotch rivers are this day (Tuesday) in roaring flood.

Since the weather is cold and breezy—a favouring circumstance—the heavy waters may draw up a good few of the larger autumn fish.

ANGLING WITH WORM FOR EELS.

Every part of the tackle should be strong, in fishing for eels, to bear the strain of a really hard pull should the eel take the bait into the weed, &c. The gut should be strong, for the eel, in endeavouring to rid itself of the hook, uses its body as a pulley, and will break, in this way, even the strongest gut. Fine-wired trout-hooks cannot be used—a strong pull will destroy the bend of hook. Do not be content with a portion of gut fixed to the reel line; the eel is apparently wary, like most fish, and better sport will be had with more cunning tackle. When the bait is put into the water, the rod should be left (unless the water is really thick, when standing near can do no harm). But the rod must not be left too long; the disengagement of the eel from the hook, when he finds himself fast, is usually only a matter of time. It is, however, a curious thing that, whereas almost all eels of an ordinary size make every effort to get loose, the very largest may remain still on the line. A keeper told me he had observed this in lake fishing with night lines.

Having baited the hook, there may be some difficulty in throwing the line far enough (especially with a short rod). It may be thrown behind and forwards, in the usual way, or the weighted bait may be "lobbed" out the hand, holding the rest of the line loose. As soon as it has sank, more line should be drawn from the reel, and shaken through the top ring, in placing the rod down on the bank, so as to give the longest line possible, and not drag the thrown bait any closer to the bank. The rod may be placed on some elevation, so as to throw the top up, and sideways, so that a bite may be seen easily from a distance.

Another method of fishing is dispensing with the rod, to use a heavy weight at the end of a stout line, and a mounted hook secured above a knot some way from the weight; the whole thrown out far, especially if it be a loch, or if some special place has to be reached. In loch fishing it is very desirable to find a place where it is a simple mud bottom without weeds. If in a river, look out for a place where there is a dark shade of trees opposite, roots, &c. This is not always enough. The suggestion of rush, water-weed, &c., indicates mud—the likeliest chance for the eel's home. The objection to the hand-thrown line is, of course, that you get no play in pulling the fish in, whereas with a rod, the play of a good-sized eel is good sport. One also gets more chance of success with a rod and finer tackle, though the advantage again with the hand-line is that, if fast in the weed, the stronger tackle allows of the strongest pull for extrication. The grand point, of course, is to know when to strike.

But, first, a word about baiting, as this is intimately connected with the hooking. The more worm there is for the fish to swallow (*before* getting the hook in his mouth) the more chance against the hooking: therefore, not too large a worm, and sometimes two small joined head and tail together is attractive. This should be tried if all the larger worms are used up. Leave just enough only of tail to wrigggle. All is prepared. Now to strike quickly. But the eel is hardly ready to strike directly on the first pull. Moreover, a sudden premature pull frightens him away. But to wait for the second try and then half strike, or, rather, twitch the line, or give it a gentle trail; his generally acts as a stimulus to Mr. Eel, who attacks and runs with the bait with greater energy. A strike then is pretty sure to hold him.

If the rod has been left, and the line is found drawn out fast, the probability is the worm is gorged and the eel in the weed; but it is best as a rule to strike and draw suddenly, if you can, as this may take the eel by surprise, if it has not already fastened itself up in the weed. Keep up a steady very strong pull on the line if he is fast, and after a time, still keeping up the strain, draw the line in another direction. As a premature strike puts an end for some time often to the eel's biting, it may be that either the eel is wary, like other fish, or that the line strikes its back, &c. When you have an eel on, drag it up the bank as quickly as possible; it is not uncommon for an eel to be only in a general way entangled in the line, and not hooked in the mouth. Set your foot hard below the neck, pull the line on the head, transfix just below the head fin, and cut outwards through spine with a sharp knife.

A. C. H.

Notes and Queries

Metal Bridge.—Miss Cartner, the courteous landlady of the Metal Bridge Hotel, says that the fishing in the Esk this season is the best she has known during her twenty years' residence at that famous angling resort, and that she has *unco guid* accommodation for baith man and beast, and a hearty Cumberland welcome for all who enter her hostelry. I have certainly much pleasure in endorsing Miss Cartner's statement, and cannot do better than repeat what I said anent the Metal Bridge Hotel and the worthy hostess a little over two years ago: "It is an old-fashioned farmhouse-looking place, one of a class now fast disappearing in the north; indeed, it is both a hotel and a farmhouse, where the guests are supplied with the produce of the landlady's own ground. Situated within fifty yards of the Esk, seven miles from Carlisle, and three from Longtown, it is handy for all parts and close to one of the best stretches of water for angling purposes in Cumberland." The best casts between the hotel and Longtown are the following—viz., Iron Rail Flat, the Roost, Lyne Foot Flat, the Sheep's Wash, Birrel's Weir, Burnfoot Flat, and Wilkin's Pool. The river is easy of access, and fishing from the banks can be indulged in without interruption by rock, bush, or promontory. With the exception of the Cauldron and Willow Pools, there is no portion of the Esk to be compared to this three-mile stretch of water. I therefore give the Metal Bridge water my heartiest recommendation. Besides, it is not over fished, like some portions of the river.—G.

Old "Boatie" Stephen says that there have only been three really good autumn seasons on the upper reaches of the Dee within his long experience. The present season just begun he thinks promises to be the fourth. He is quite confident of a glorious back end, and his beloved old master, Sir William C. Brooks, Bart., M.P., the worthy proprietor of Glen-Tana, fully shares in this belief too.

Arrival of a Whaler at Lerwick.—The steam whaler Active, of Dundee (Captain Robertson), arrived at Lerwick on Saturday afternoon, from the Greenland seal and whale fishing, after a fairly successful voyage. She has secured about thirty-five tuns of oil, and about a ton and a half of whalebone. The latter alone at present price will yield nearly £3,500. This is the last vessel to arrive from the whale fishing this season. The Active proceeded after landing her Shetland crew.

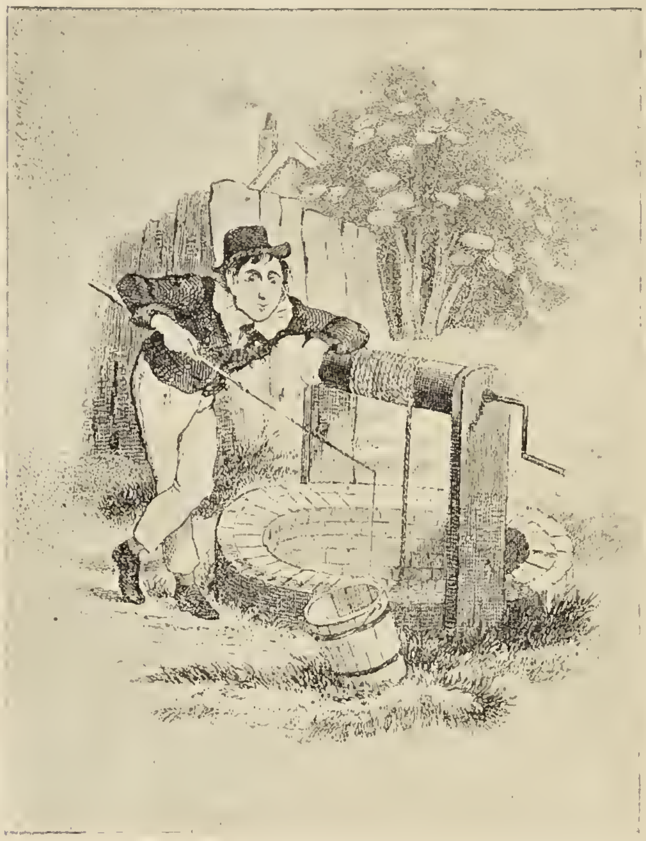
Capture of a Large Salmon on the Solway.—One of the Whammet net boats, belonging to Annan, took a large salmon, 50½lb. on Saturday. Length from snout to tail 4ft. 6in., girth round the shoulders, 2ft. 1½in. There were good runs of salmon in the Solway last week. Many of the drift nets had great hauls of autumn salmon, and hundreds were captured by the boats, the Scottish boats having the heaviest catches. All the salmon were in prime condition.

A Good Thames Roach.—Fishing close to the floating bath at Surbiton, on August 30, Mr. J. R. Richardson, the fishing tackle maker, 67, High-street, caught a splendid roach, weighing 2lb., in grand condition. He also caught several nice bream.

Minnesota Bass.—"Duluth, Minn., August 4.—I returned a few days ago from my second fishing trip of the season, and a short note may not come amiss to future fishers. On the first trip I could only stay one day, and decided to try a small lake three miles south of Aitkin, on the N. P. R. R., and hunting up a former companion we reached the lake about noon and at three o'clock commenced fishing. Black bass and rock bass took the bait as fast as it reached the water, and at eight o'clock we went ashore and counted our string and found we had one hundred and fifteen fish, nearly all black bass. The bass are very gamey and make a good fight, but this country is not a good one for flyfishers. The fish will not rise to the fly but take frogs, minnows, and worms, at any hour of the day until late in the evening. The country here is full of small lakes, and there is, undoubtedly, finer bass fishing here than at any other point in the country east of the Mississippi. Our catch was considerably over the average, but it is nothing out of the common to take twenty or more bass, weighing from 2½lb. to 5lb. apiece, at this lake any morning or evening. A party of nine of us were out last month at a lake twenty miles north of Aitkin and enjoyed a week of the finest kind of sport. The bass were all very large, from 3lb. to 5lb. each, and fought nobly against coming in out of the wet. I must not write any more at present, and will save the account of our happenings for some future time.—*Edward J. Luther, in "Forest and Stream."*

Holloway's Pills and Ointment effect wonderful cures of bad legs and wounds. If these medicines be used according to the directions which are wrapped round each pot and box, there is no wound, bad leg, or ulcerous sore, however obstinate, but will yield to their curative properties. Numbers of persons who had been patients in the large hospitals, and under the care of eminent surgeons, without deriving the least benefit, have been cured by Holloway's Ointment and Pills, when other remedies had signally failed. For glandular swellings, tumours, scurvy, and diseases of the skin there is no medicine that can be used with so good an effect. Though potent for good, it is powerless for harm; and though the cure it effects is rapid, it is also complete and permanent.

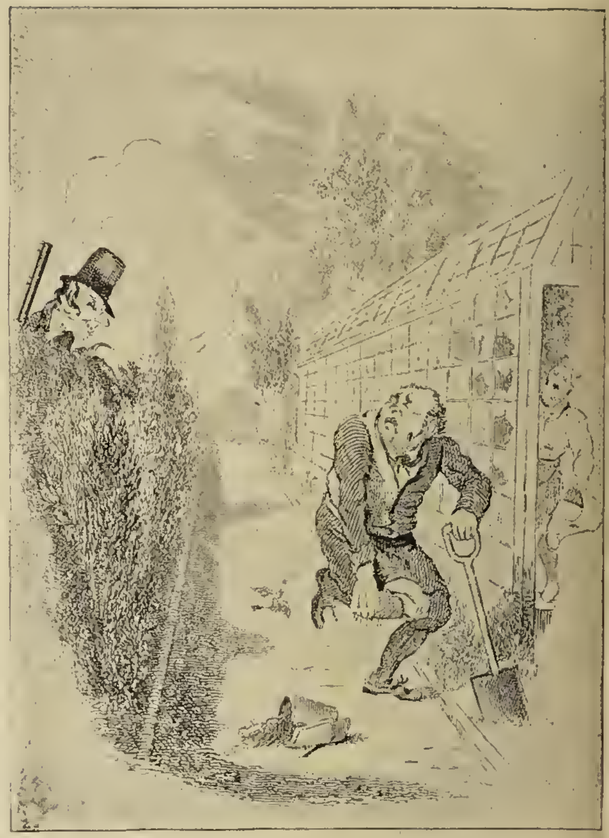
SKETCHES BY SEYMOUR.—III.



No. 9.—"Mother says fishes comes from hard roes; so I chucked in the roe of a red herring last week, but I doesn't catch any fish yet!"

"WHATEVER was the cause of Mr. Seymour's melancholy end, whether the old vexations of *Figaro*, the new ones of Pickwick, a profitless law-suit, the constant pressure on his brain for fresh invention, losses in Spanish bonds, in which he had invested his all, or anxieties which have not transpired, it would be fruitless to inquire; but we think it very likely that all these causes tended in one and the same direction. Though full of humour and geniality, a lively and agreeable companion, fond of the drama, races, and sports of every kind, he was nervous and highly sensitive, and one moody moment to a man of such temperament may easily prove fatal; and so it was with Seymour. He died by his own hand on the 20th April, 1836." So writes Mr. Bohn, in his biographical notice of Seymour. A paper of the day, in recording his death, adds :—

"Poor Seymour, the caricaturist, with all his relish for fun and quick perception of the humorous, was subject to dreadful fits of melancholy and despondency, in one of which he committed suicide. The contrast is strange, but not inexplicable, nor indeed so strange as it may appear, since literary biography affords abundant proof of such conditions. He was undoubtedly a man of considerable talent, and his premature loss is greatly to be deplored."



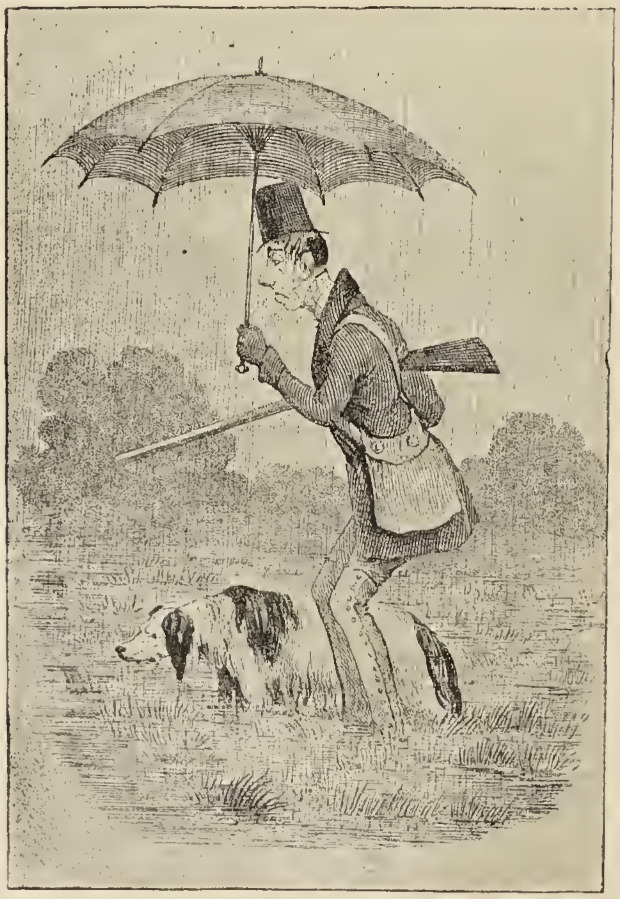
No. 12.—"Will you have the goodness to hand me that little bird I've just shot off your hedge?"

Mr. Charles Dickens' feeling tribute to the memory of Seymour—which appeared with the second number of the Pickwick Papers—may well be produced here :—" Some time must elapse before the void the deceased gentleman has left in his profession can be filled up; the blank his death has occasioned in the society which his amiable nature won, and his talents adorned, we hardly hope to see supplied. We do not allude to this distressing event in the vain hope of adding, by any eulogium of ours, to the respect in which the late Mr. Seymour's memory is held by all who ever knew him."

Probably the unhappy feud which existed between Seymour and the proprietor and editor of *Figaro in London* (Gilbert A'Beckett), preyed most on his mind, and eventually proved fatal. Seymour constantly contributed drawings and engravings to *Figaro* from its commencement—in fact Bohn asserts he did all the drawing and engraving for that popular predecessor of *Punch*. Things ran smoothly enough until Mr. A'Beckett got into difficulties through theatrical speculations, when Seymour, failing to obtain payment of Mr. Beckett's note of hand for a debt of some forty pounds, refused to proceed further without cash payments.

"This," says Bohn, "must have occurred just before August 16, 1834, as that number has no woodcut, which is an exception to all the others. Mr. Beckett thereupon, although he had constantly and lavishly praised Seymour's sketches in the previous numbers of *Figaro*, calling him 'the justly celebrated comic artist,' and 'our illustrious artist,' suddenly turned round upon him and attacked his artistic reputation with intense virulence, telling his readers, among other things, that he 'must procure first-rate talent,' &c., thereby implying that Seymour's talent was only second-rate."

We quote from No. 154 (Nov. 15, 1834) of *Figaro* an unwarrantable attack upon Seymour, published among the "Notes to Correspondents" :—"It is not true that Seymour has gone out of his mind, because he never had any to go out of. That he has lost his senses, as our correspondent states, we can believe, though if he should have let them fall anywhere, they have doubtless been removed as a nuisance by the scavenger.—Another correspondent wants to know 'how it is Seymour can't write his own name?' We reply: Upon the same principle that a donkey can't quote *Metastasio*—ignorance, *gross and beastly* ignorance! We are told that *in* the year 1815 a subscription was raised among a few friends of civilisation, and enemies of idiotcy, to teach Seymour to spell; but his hard and obstinate bit of brain rebounded from the process in its infancy, and the result was he never got beyond words of one syllable. Poor man! now that he is deprived of our benevolent and condescending patronage, we understand he is obliged to speculate on his own account in miserable caricatures, which don't sell, and which of course are not worth purchasing. The fact is, Seymour never had an *idea* of *his* own, though he was sometimes happy in the execution. But it is a well-known fact that the *ideas* for the caricatures in *Figaro* were always supplied to him by the editor, Seymour being a perfect *dolt*, except in the mechanical use of his pencil."

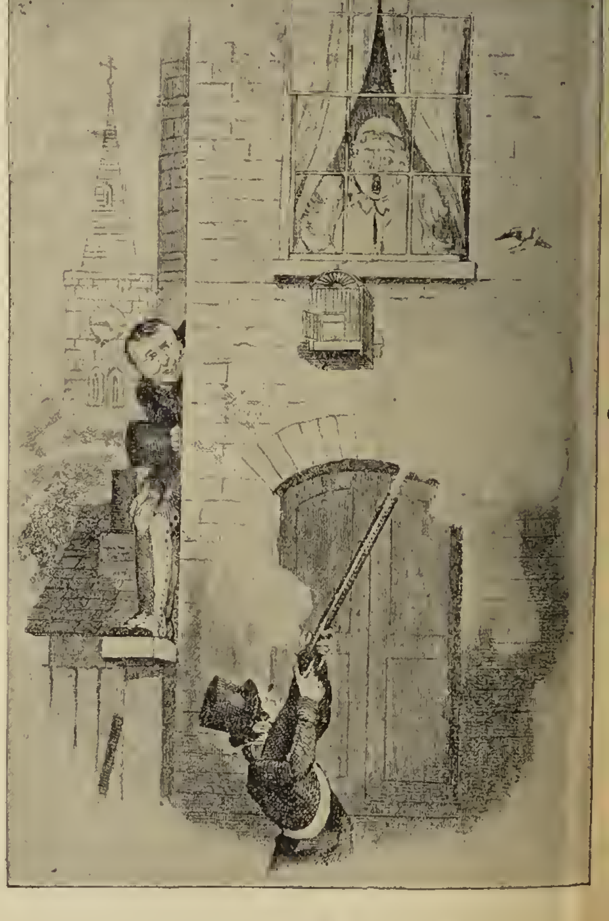


No. 10.—An Only Opportunity.
"I begin to think I may as well go back."

The public, however, so much resented this scurrilous and disgraceful treatment of Seymour by A'Beckett, that he ultimately had to retire from the editorship of the journal. Within little more than a month of the attack we have quoted, Mr. H. Mayhew became sole editor, and immediately restored Mr. Seymour with all courtesy, printing his name in conspicuous letters on the title-page, where it had never been placed before. Notwithstanding his reinstatement, there is no doubt this feud told very severely upon Seymour's sensitive nature.

In our impression of July 11 we promised to give our readers four more of Seymour's humorous sketches, and this week we redeem that promise. We also give Mr. Alfred Crowquill's illustration in prose and verse to Nos. 9 and 10. Nos. 11 and 12 tell their own tale, and Crowquill includes them in his description of "A Day's Sport," and "Every-day Scenes," which is too lengthy for reproduction here.

No. 9.—"Mother says fishes comes from hard roes, so I chuck'd in the roe of a red herring last week, but I doesn't catch any fish yet!" How beautiful is the simplicity of unsophisticated youth! Behold with what patience this innocent awaits a bite,



No. 11.—A Lark—Early in the Morning.

trusting with perfect faith in the truth of his affectionate mother's ichthyological knowledge. Wishing to behold a live fish dangling at the end of his line, he has with admirable foresight, drawn up the *bucket*, that in the ascent the fish may not *kick it!* It must be a hard roe indeed that is not softened by his attentions; but, alas! he is doomed never to draw up a vulgar herring, or a well-bred fish.

Folks who are a little deeper *read* than the boy —(or the herring!)—may smile at his fruitless attempt, but how many are there who act through life upon the same principle, casting their lines and fishing for—compliments, who never obtain even a nibble—for why? Their attempts at applause are like his red-herring—smoked. He does not know that herrings are salt-water fish—and, in fact, that the well-water is not the *roes-water*!

But after all, is not such ignorance bliss?—for he enjoys the anticipated pleasure; and if anticipation be really greater than reality—what an interminable length will that pleasure be to him! Ever and anon he draws up his *line*, like a militia captain for a review—puts fresh bait on the crooked pin, and lets it slowly down, and peeps in, wondering what the fish can be at!—and is quite as much in the dark as his float. But he may at last, perhaps, discover he is not so deep as a well—and wisely resolve to let well—alone; two points which may probably be of infinite importance to him through life, and enable him to turn the laugh against those who now mock his ignorance and simplicity.

No. 10.—Sept. 1st: An only opportunity.—"I begin to think I may as well go back."

"My vig! vat a pelter this is—
  Enough all my *hardour* to tame;
In veather like this there's no sport,
  It's too much in earnest for game!

A ladle I might as well be
  Chain'd fast to a *hold* parish pump,
For, by goles! it comes tumbling down
  Like vinking—and all of a lump.

The birds to their nestes is gone,
  I can't see no woodcock nor snipe;
My dog he looks dogged and dull,
  My leggins is flabby as tripe!

The moors is all slipp'ry slush,
  I'm up to the neck in the mire;
I don't see no chance of a shot,
  And I long—how I long for a fire!

For my clothes is all soaked, and they stick
  As close as a bailiff to me;
Oh! I vish I vas out o' this here
  And at home vith my mother at tea!

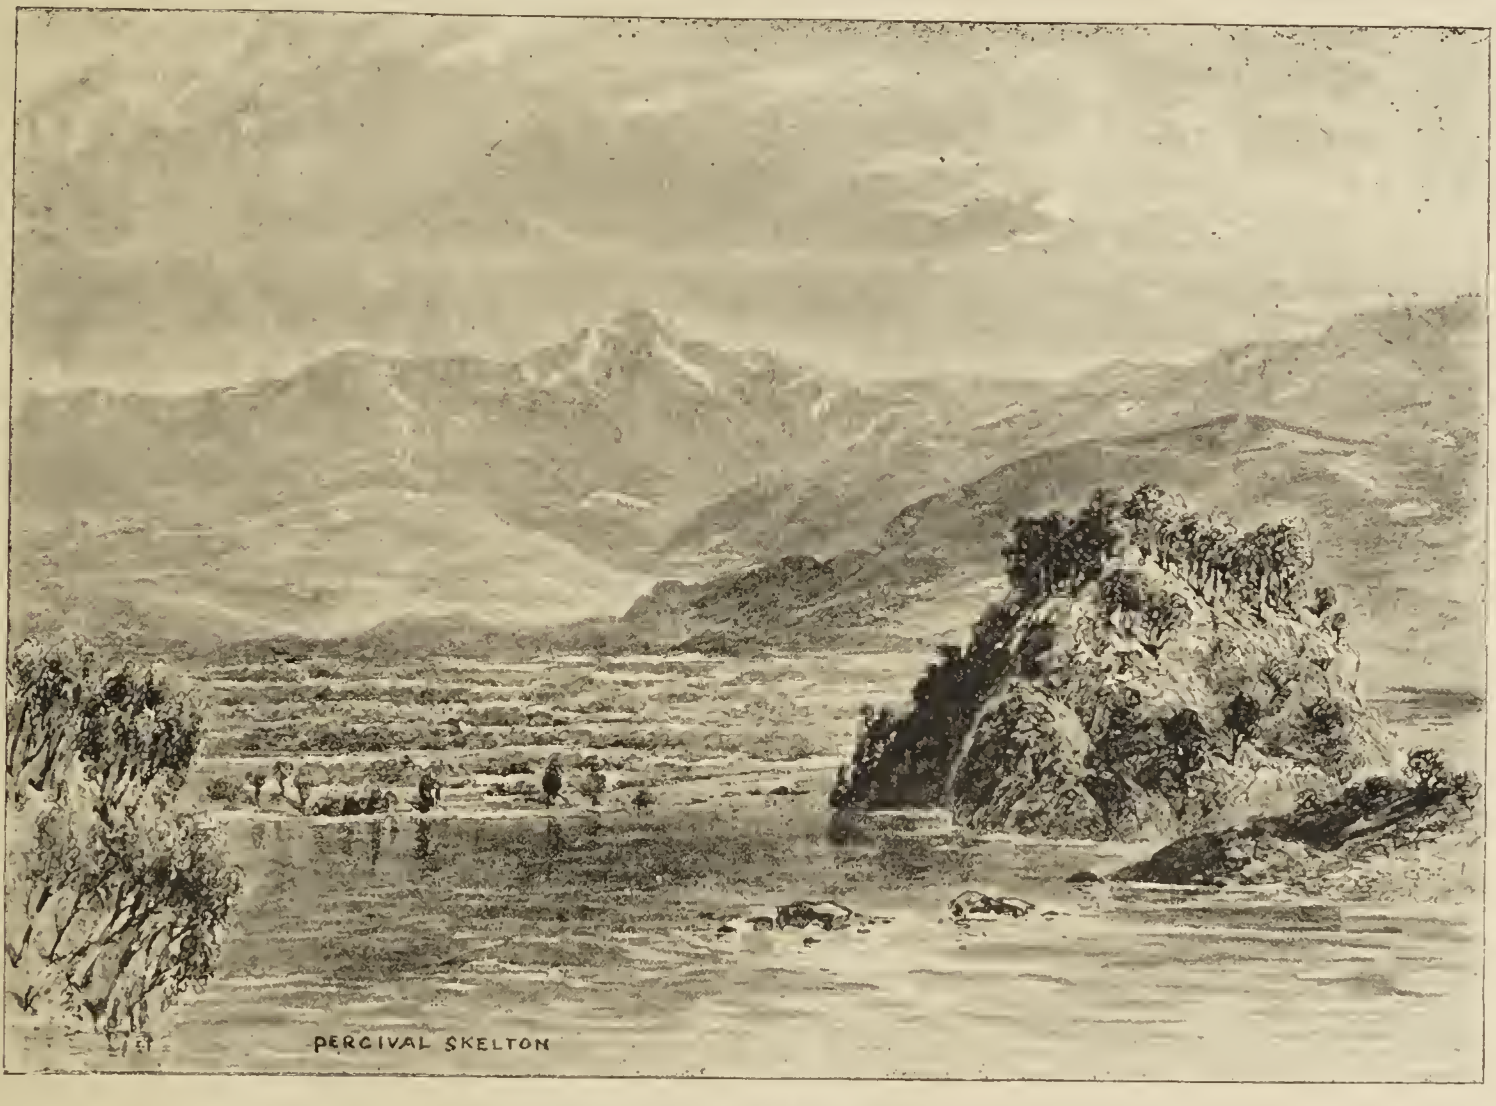
This is the fust as I've got
  Permission from uncle to shoot;
He hadn't no peace till he give
  This piece and the powder to boot.

And vat's it all come to at last?
  There isn't no chance of a hit;
I feel the rain's all down my back;
  In my mouth tho' I haven't a bit.

Oh! it's werry wexatious indeed,
  For I shan't have another day soon;
But I'm blow'd if I don't have a pop
  ——My eye! I've shot Dash—vot a spoon!

Oh! here's a partic'lar mess—
  Vot vill mother say to me now?
For he vas her lap-dog and pet,
  Oh! I've slaughtered her darling bow-wow!"

THE SPEY.



THE SPEY NEAR AVIEMORE.

Among the great rivers of Scotland, none can lay claim to greater diversity and charm of wood and landscape than the Spey. Rising in the bare hills of Inverness-shire, it flows, gradually growing in volume, over the table-land of the Grampian Hills, passing in its earlier course through Loch Spey and Loch Insh, and skirting the base of the lofty Cairngorm, till, with a headlong plunge, it starts on a wild race through Morayshire and Banffshire to the German Ocean. The Tay stands first among the northern rivers in point of magnitude as regards volume of water; but there can be little doubt in the mind of anyone who is familiar with the Spey that the latter discharges more water into the sea. A casual observer is apt to be misled by the fact that at many points the stream, after leaving some mighty pool formed by its contact with an outstanding rock, or where by a sudden turn it is thrown against a precipitous "craig," appears to be almost inferior in size to some of its larger tributaries. At not a few such points a deft angler might even with a single-handed rod throw a line from bank to bank. But the rate at which the water rushes along, with no great apparent depth, in these narrow declivities—for they are no more—supplies the explanation of a seeming contradiction. To put the matter as one of statistics, it may be stated that throughout its whole course—which has been computed, with its many windings, at one hundred and twenty miles—the average fall per mile has been estimated at ten feet. Between Loch Spey and the sea the fall is upwards of twelve hundred feet, and this on a direct course of ninety miles indicates a fall of over thirteen feet. Again, from Ballindalloch to Fochabers—a distance, roughly speaking, of some five-and-twenty miles—the average probably exceeds twenty feet to the mile; so that it is when the principal tributaries have swelled its bulk that the stream runs at its swiftest.

Looking to the fact that the Spey drains considerably over a thousand square miles of mountains, the bases of which are more than 1,000ft. above sea level, it is small wonder that it has been described as "not only the most rapid, but also the wildest and most capricious of the large rivers of Scotland." And yet, strange to say, there is nothing approaching a waterfall in all its windings from the wilds of Badenoch to the foot of Ben Aigen; or anything that can be dignified by the name of rapids, such as are to be found in other large rivers on the Scottish side of the Border. It is when the stream is swollen by one of those mighty "spates" that come at times "on the shortest notice," that it most fully bears out this character. Much might be written, or quoted, about memorable floods in bygone days —for have they not practically a literature of their own?—at the head of which stands Sir Robert Dick Lauder's "History of the Moray Floods," those great inundations of the year 1829. Readers of that famous work will remember the graphic descriptions of the havoc caused by the sudden rising of the river, and the extraordinary effects produced by the flooding of even the smaller tributary streams—such as, for instance, the immense gully of some sixty feet deep, and twice that width at top, scooped out in a single night by the burn of Alderdar.

But it is time to say something of the Spey as an angling river, though circumstances preclude anything but the merest generalisation in dealing with it as a field for the sportsman. Salmon angling on the Spey is an undoubted luxury, as its various stretches are, as a rule, let in conjunction with the shootings by the riparian proprietors. There are no hotels with fishings attached, such as are to be found on other large Scotch rivers. It is not within the scope of these notes to enter into the controversy which has of recent years been raging over the deterioration of the rod fishing in this magnificent stream. Various have been the causes assigned for the falling-off, and as various the cures put forward. Even the distilleries have been blamed by one indignant scribe, who must have been sadly at his wit's-end for a theory. But though the distilleries have within the last decade or so nearly doubled their number, the cause must be sought elsewhere. The refuse from these manufactories of potent spirit may—indeed, do—sadly pollute the small tributaries on which, as a rule, they are built, but to contend that it injures to any extent the inhabitants of the greater stream into which they flow is the merest of moonshine. All the same, the distillers should, and that speedily, be brought to book for what they are now doing at their own sweet will. Curiously enough, as if to "gravel" all these disputants, the present season opened with better prospects and actual sport than have been experienced, according to the local *cognoscenti*, for thirty years; and the later fishing foreshadows an autumn's record which should equal that of the spring. Be the reason what it may, the Spey has of late years been as "capricious" in its yield of salmon as in its floods; but it has been rare that good sport has been wanting at some part of the angling season. With the last Christmas number of the *Fishing Gazette* was given a plate, illustrating a famous "bit" on the lower part of the Spey, under the title of "The Laird's Pool." The present illustration represents a view near Aviemore, with the Grampian Hills in the distance, where the river is comparatively placid in character.

(To be continued.)

WITH THE DABS AND FLOUNDERS.

By Goosequill.

A short time ago an old piscatorial friend of mine suggested that we should have a day's sea fishing together. On the plea that variety is charming, I at once fell in with the idea, and as I had lately read in the *Fishing Gazette* of the successful exploits of some of the members of a well-known London angling society at Southend and Leigh, I thought we might do worse than pay a visit to the town noted for its famous pier. So the day was arranged, and upon arriving at Fenchurch-street Station early one morning last month, I found friend B. had preceded me, and was signalling me with a bundle of rods some half-way down the platform. Punctual to her time the train steamed out of the station, and it was not long before we pulled up at Dagenham, which I may here mention is, or rather used to be, a famous resort of the London angler. Sometimes on Sundays the well-known lake was almost besieged with the knights of the rod and pack, and, if I am not mistaken, as recently as last year an enterprising publican ran a brake there, starting from the Metropolis on the stroke of midnight. The occupants were generally a merry party, and the journey is, I understand, quite an "experience." Some fine takes of bream have been made in the lake, and many specimen roach have been landed, likewise some goodly-looking jack. As I heard of this from friend B., I had a kind of longing to alight at this pretty Essex spot, and try if there were any of the big bream about still. However, it was not to be, and on we rushed to Benfleet and Leigh, past the purple-coloured clover fields, and through the railway cuttings, where the yellow crowfoot and the wild geranium delight the eye. When we arrived at Benfleet—a funny little place—the tide was out, and many barges, shrimpers, and other craft were heeled over on their sides. The dykes and creek were dry, and the place might not inappropriately be styled "Little Holland." At Leigh there was more mud, and I should imagine that some capital wild-fowl shooting is obtainable both here and at Benfleet during the winter months. Arrived at Southend, we made for the pier, and very enjoyable indeed was our mile and a quarter walk along its course. I ascertained that many persons fish off it during the angling season with hand-lines, and no doubt they are able to do pretty good execution amongst the whiting. By the way, these sportive gentlemen arrive here about August, and as many as eight dozen have been taken to a single rod during the day. Great Yarmouth also affords some good whiting fishing from the pier, and I have witnessed some excellent catches there.

The sea was calm, and there was hardly enough breeze to fill the sails of the shrimper which had been waiting for us off the pier-head as we steered for the fishing grounds. The skipper was an old salt, as brown as a berry—a most courteous, civil, and obliging man. He steered for Leigh Swashwey and past the oyster beds, near which, stranded on the mud, was a peculiar-looking vessel, belonging, so the skipper said, to the owner of the beds. It put me in mind of Noah's Ark with masts up.

"I think we'll try here, gentlemen," said the skipper, at the same time letting go the anchor and vouchsafing the encouraging information that we should get hold of some dabs and flounders. Now for our tackle; and this having been put up, we drank success to our sea-fishing excursion, not forgetting the skipper, of course. What sort of tackle was it, you say? Well, I had no use for the goosequill this time, neither had I any need of the family clothes-line and the local butcher's spare meat-hooks. Our tackle was much the same. Friend B. used his jack-rod, and I fell back on a punt rod with a leger top-piece. Each had a good pike line, and our hooks consisted of No. 6's on stout gut. My friend paternostered, and I used a flat leger lead. The bait was composed of sea-worms and shrimps. The sea-worms are most obnoxious things to handle, and to a delicate, effeminate kind of young man would mean serious consequences. The tide had just commenced to flow as we threw in, in about 8ft. of water. "Here's something," said B., and sure enough there was his rod bobbing away at the top. It proved to be a dab, the advent on deck of which was the excuse for "just a wee drap" more each. I heard my friend strike again, and then I felt a jerk, and struck to——miss! I quickly put in again, two hooks being baited with worm and the third with shrimps. Another vibration of the line, another sharp, quick strike, but still no fish. Just as I was about to bait again I heard a splash, and there was B. with a fine flounder on. One, two, three! Not one, but three flounders! Greatly excited at the sight, I sent my leger to the bottom again, but it had not been there very long before there was another vicious tug. "Gently, my boy," I said, as, instead of striking as if about to "hit" a roach, I made a quiet, deliberate side strike with the rod and up came a plaice. In again, a bite, and other plaice. It was friend B.'s turn now, and a nice eel was pretty soon in the toils of the angler. We were among them, and the sport was certainly very fascinating. On the flats I landed three dabs at once, and B. also performed the "dab trick." As for crabs they did their best to hang on to the shrimps whenever they could, and it was not always in "language pure and sweet," that they was dragged to the surface, perhaps one on every hook. After fishing the flats, we proceeded to that part of the Swashwey called, I believe, Whitestone Bay. At this spot a monument marks the place, where the mouth of the Thames begins, and here years ago, according to the skipper, the Lord Mayor of London "used to come down and scramble threepenny pieces," amongst the children of the neighbourhood. We did well here, too, and when it was time for us to get under weigh for Leigh sea fishing was loud in our praise. It was my first, but I hope it will not be my last fishing excursion to Southend and Leigh. And my friend is decidedly of the same opinion.

When rivers are out of condition and fresh-water fish off feed, a day by the briny should be tried by the London club anglers. Cheap excursions are now running to Southend, fare there and back 2s. 6d.; and if a party was made up, I am sure the London, Tilbury, and Southend Railway Company would only be too pleased to assign them a special carriage to themselves. A good train to catch is the one leaving Fenchurch-street at half-past six a.m. I have no doubt that our skipper would do his best for the Londoners, and should any club entertain the idea of a sea-angling trip into Essex, I will guarantee to put them in communication with him. I should add that the New Albion Piscatorials recently fished a match with rod and line at Southend, which resulted in the capture of between 30lb. and 40lb. of eels, plaice, dabs, and flounders.

Waltoniana

Switzerland is to have a fishery exhibition, the first of the kind in that country. A feature of the show is to be a restaurant, where native fish are to be cooked in various ways. It is to be hoped that one result of the exhibition will be to rouse an interest in trout preservation in the land of mountains.

One of the results of this wet weather is an enormous run of fish on that most excellent river, the Usk. Many good salmon have been caught, and local people say they are having a record season. Better salmon fishing is often obtained on the Usk than on some of the Scotch rivers which are let at extravagant rents, and friends of mine who fish the water are loud in its praise. The charge for fishing is very moderate all things considered.

The Henley Fishery Preservation Association has decided to give up offering rewards for information of offences against the bye-laws, and intends paying a water bailiff a *small* annual sum to look after the river. It would be a pleasant post for any one with a small independence who might wish to add to his income, and to spend most of his time on the water, and I mention it in case any reader of the *Gazette* might feel inclined to go in for it. Applications should be made to one of the honorary secretaries, Mr. C. H. Cook, of South Stoke, Wallingford, or to Dr. Jeston, Bell-street, Henley-on-Thames.

Trout are so very rarely taken in the reach between Streatley, or rather Cleve Lock and Wallingford, that the capture of one last week is worthy of record. It was taken on fine Nottingham roach tackle, and weighed 4½lb. I would commend to the notice of those persons who sneer at the results obtained by fish culture, the fact that where no associations exist on the Thames for the purpose of protecting and stocking the river, there is practically no trout fishing, while in the neighbourhood of Reading, Henley, Marlow, and Maidenhead, a number of fine trout are taken every season. From Streatley upwards, where there are no associations, the trout is a very rare fish indeed.

I was talking the other day to the honorary secretary of the Reading Angling Association, whose opportunities for fishing do not come very frequently. He assured me that during the present year he had hooked twenty-seven trout, of which he had retained five, the largest weighing 6lb. I have not the least hesitation in saying that before the Reading Angling Association stocked the Thames, no such fishing was to be obtained in that district. Marlow is another place where the fishing was very distinctly improved by the local association, and it is the greatest pity in the world that there is no one with sufficient public spirit in the place to revive the association which came to grief not very long ago. Anglers who fished in the district did not support it as they should have done, and as for the local tradespeople, who financially speaking benefit most by these societies, they gave very little indeed. Every angler who spends a week or two on the Thames ought really to give at least a trifle towards the cost of protecting and stocking the river. But not one man in fifty does so, and the result is that those who carry on gratuitously the work of Thames fishery preservation get discouraged, and, as was the case at Marlow, throw up the sponge. An association which in particular is worthy the consideration of London anglers is the one at Henley. It has just been reorganised, and if only anglers who fish the district will support it, is likely to do valuable work in the future. Its members have the privilege of fishing the lower portions of the Loddon and the whole of St. Patrick's stream. A very cheap guinea's worth. Since the death of the old keeper certain persons have been making rather free with the water, but a new man has now been appointed to the post, Mr. Giles, of London-road, Twyford, and persons trespassing are likely to have a bad time of it.

I would remind bottom-fishers that in this period of floods the most likely spots to find fish are the eddies and quiet water close to the bank, and that in most cases the worm will be found to be the best bait. There is considerable art in fishing an eddy with a worm—I mean a small eddy, perhaps not more than a couple of yards in length. In the first place many anglers commence by scaring all the fish out of it by walking too near it, for not everybody understands how very close the fish are to the sedge. The poacher knows it, however, catching many fish by placing a flue-net a yard or less from the bank, and beating the sedge with a stick. A long rod should be used for angling—not for poaching—and a very light leger may be dropped in close to the bank. Another plan which is, I think, better than the leger when one has some idea of the depth, is to use light float tackle and humour it round and round the eddy. I remember seeing a cunning old fellow fishing in that manner below Streatley some years ago, and saw him catch out of a small swirl close to the bank—where one would hardly expect to find a fish—a 2lb. perch. Perch and roach are the fish most likely to be taken in this way, but an occasional chub will take the worm, and, more rarely, a barbel. Barbel, like most other coarse fish, shift into shallow water when the river gets at all muddy. I suppose it is too dark or too stifling for them at such times in the deep water. A flood in a river is to the fish, so far as breathing is concerned, very much as a London fog is to us. In other respects the simile is not a good one, for London fogs certainly do not bring with them an abundance of food.

TEMPLAR.

ANSWERS TO CORRESPONDENTS.

T. S. G.: If you use live minnow you must let it swim about, and not work it like a spinning bait, as that would soon kill it; a light quill float is necessary. Any of the London fishing tackle makers will supply a good general rod for coarse fishing at prices varying from 10s. 6d to 30s. or more.

W. M.: Thirty-seven pounds is Mr. Jardine's largest pike.

J. G. PARKER: A 1784 edition of "Walton," in good condition, is worth about 12s. 6d. or 15s.

ANGLERS (SO-CALLED) DESTROYING FISH.

SIR,—I read in a contemporary, "Cannot something be done to stop this kind of thing?" "this kind of thing," meaning the utter destruction of small fish. Unfortunately, "this kind of thing" is going on on probably more rivers than I should care to mention, but for the past three or, say, four years I have not seen a solitary angler return a single fish in the Witham, Trent, Bedford Ouse, Yare, Wiltshire Avon, Welland, and all the Lincolnshire drains.

All the anglers I saw operating on the latter waters never took the trouble to return a solitary fish, and it appeared to me that they would *rather* leave them on the bank than return them; and, mark you! many of these fishermen were club anglers, and when I suggested the return of these very small roach, I perceived that, if I pressed it, I should probably hear something that would not add to my comfort.

In this respect nine out of ten of the London anglers appear to great advantage. When one considers the *totally useless* destruction of exceedingly small fish by so-called anglers, the only wonder to me is that there are any fish left. I may just mention, in passing, that, when fishing in the Bedford Ouse, a local angler stared in astonishment on seeing me pitch back some small perch.—I am, &c.,

YNOTNAKRAM.

A DACE OVER A POUND.

DEAR SIR,—A friend of mine took a dace last month from the Lea, weighing 1lb. and *one penny*. This is authentic. It is now at Cooper's, to be set up.—Yours, &c.,

J. T. P. PECHEY.

59, Mark-lane, London, E.C.

WEIGHT OF DACE.—BLUE QUILL.

SIR,—It would seem that some one claims for the dace a greater weight per inch than the trout. Surely this is a bold claim. A twelve-inch Hampshire trout does not weigh a pound.

Blue Quill.—I have long been under the impression that the Quill was an invention of the Seventies. I remember the "Quill Gnat" being spoken of as something new in (I think) 1874. But turning over the pages of the *Sportsman*, of July, 1841, p. 13, I find, in an article on "Angling on the Borders of Devon and Cornwall," the following sentence: "If the water is fine, a small fly with the body of the peacock haro, striped with two whisks at the tail, and a small smoky hackle as like a cobweb in colour as possible, is a rare killer." Can anyone take the history of the Quill back farther than that?—Yours, &c.,

VAL CONSON.

SHORT QUANTITY IN FISHING LINES.

SIR,—I visited a tackle-maker's shop in Nottingham the other day, and purchased for a juvenile angler a line, which was computed by the maker to be 28yds. long. Now I have never before measured a line in my life, nor perhaps should I ever have done had it not been for a hint thrown out by one of your correspondents. I took the line home and measured it, and found it to be two good yards short—not much to shout about, certainly, but sufficient to indicate that the mistake was not made by miscalculation, but was the result of pure and unadulterated roguery. And the manner in which the tackle-maker received the intimation of my discovery led me strongly to the belief that the system of selling lines shorter than the length actually marked on them is far more widespread than nine-tenths of the anglers of the present day suspect; and it behoves them to keep a sharp look-out ahead.—Yours truly,

Nottingham. E. BURROWS.

ANGLING IN SOUTH UIST.

SIR,—By advices from South Uist, I hear that the outer Hebridean season has up to this point been a complete failure so far as sea trout are concerned. *Not a drop of rain has fallen for three months—hinc illæ lachrymæ.* This morning, however, I received the following wire: "Very stormy and wet; *not a single sea trout been got in Lower Kildonan* and in *Bharp only six* this season." "Season" refers only to the late summer and early autumn angling, for plenty of fish were killed in spring. It seems incredible that no sea trout should have been killed, but communication with the sea has actually been cut off owing to the long drought. Now that the rain has come, later visitors to the outer islands should have good sport. The above is such a unique occurrence, both in the angling and weather annals of the island of South Uist, that I deem it well worth recording. By this time last year between six hundred and seven hundred sea trout had been killed.

In 1889 the lochs at the south end of the island were too low for fishing, while I found those at the north, if anything, too full. In that year when the rain did come the sport was first-rate, so there is time yet for the leeway to be made up.—Yours truly,

DUINE MÔR.

ARUNDEL PARK.

SIR,—Does Mr. Eldridge think that I go about with my ears shut? It was a common topic of conversation amongst the natives the last time I was at Amberley. A very intelligent native—and one, as far as I could judge, who ought to know—told me that the gates to *certain portions* of the park were closed, are closed, and are likely to remain closed for some time; and the same individual also told me that there were other portions over which even the duke had no power to keep the public from entering. I do not refer to these portions; and several other natives told me most distinctly that the former portion was closed to *London anglers.* "The duke has shut his gates—at least, so I hear."

I do not suppose *London anglers* care two straws whether they are closed or not; but with reference to the edict to the cottagers, and which I have *seen*, I received a letter from a London angler, on whose word I *can* rely, and he says: "I have seen more than one female, to say nothing of men, walking about *all night* unable to find accommodation"; and as this sort of thing may occur again, I think that notices informing anglers and the public generally of the new regulations might have been posted at London Bridge and the chief stations down the line to Littlehampton.

The real sufferers will be the cottagers; and if one compares the position of many of these people now to what it was *before* these excursions commenced, I think even Mr. Eldridge will agree with me that further comment is unnecessary—duke or no duke, County Council or no County Council.—I am, &c.,

M. A.

P.S.—I did not intend to refer to this unpleasant subject again, but I find further comment is absolutely necessary. The following conversation took place on Houghton Bridge between a native and a London angler *re* the cottagers taking in London anglers and the closing of the park. "*He*" is employed by a C.C., and therefore, one would think, ought to know for certain about the former subject, at all events.

He: "This is a bad thing for the Londoners, sir."

L. A. (taken completely by surprise): "What is a bad thing?"

He: "The duke won't allow any of the cottagers on his estate to give lodging to a London angler."

L. A.: "Oh! won't he? Well, all I can say is, there are plenty of places besides this where London anglers can go; and I should say it will be a bad thing for the cottagers, and not the Londoners, my friend."

He: "But they say the duke intends to close the park" (*i.e.*, the private portions: see remarks mentioned above).

L. A.: "Yes, but he can't close up the road."

This, I imagine, is that portion over which the duke has no control, as previously stated. Several natives told *me* the park *was* closed, but if "*He*" would come forward and say who "they" were, this gentleman would greatly oblige.

Can Mr. Eldridge tell me why the duke does not reply?

PULBOROUGH (AND TWELVE MILES RADIUS) FLOWER, FRUIT AND VEGETABLE SHOW.

DEAR SIR,—In connection with the above show I have suggested that three prizes should be given for "best sack of wheat" grown in the radius, namely—First prize, £2 10s.; second, £1 10s.; third, £1; also 10s. for "oldest farm labourer," and that this sum should be provided by the *London Anglers*. Although the Central Association rent a portion of land, there are a number of smaller farmers who have land joining the river Arun, who allow fishing gratuitously; and this small sum amongst so many would be a nice way of appreciating their kindness. I am told that 2s. 6d. from each of the clubs whose members fish the Arun would be amply sufficient. By inserting this letter and starting the subscription with a small sum you will be *doing good.* Subscriptions will be received by Mr. Metcalf, and Mr. Wade (Central Association), Mr. Eldridge, and, yours, &c.,

G. H. NUTT, hon. sec.

P.S. — (Pulborough, Tuesday, 7.45 p.m.)—Water gone down considerably, and if no more rain, will be in splendid condition by the 6th inst. for Mr. Eldridge's contest.

RE CAMM FUND.—APPEAL TO CLUB ANGLERS AND FRIENDS.

DEAR SIR,—In thanking all those clubs who have so kindly responded to this deserving case, I may state that due notice will appear in the *Fishing Gazette*, when our committee will attend the Cobden Club to hand over the money.—I am, yours truly,

B. ABRAHAMS.

25, Silver-street, Notting Hill Gate, W.

[Mr. Abrahams has sent us a complete list, from which it appears his appeal in our columns has produced for the widow £21 13s. 3d. less 6s. postages. We have not space to give the list in detail again.—ED.]

A SALMON FIGHT IN THE DARK.

SIR,—I think the following account of a two hours and a-half's fight with a salmon may interest your readers. I left my son one night standing in the river, at about half-past six, spinning for trout, the water being too low for salmon. His rod was a light one of about nine feet; his line, two pieces tied together with—(Oh! lesson to all young fishermen)—"a common knot," only some thirty yards in all, and on a very small reel; the minnow, a small Devon. It is my son's first year at salmon fishing, and he shall tell his own tale.

"Shortly after you left me," he said, "a salmon moved, making a tremendous boil in the water—so close to me, the ripples broke against my legs. I never even thought of his having taken my minnow, and believed, when my rod straightened, I had caught a weed; but when the reel began slowly turning I lifted my rod, and off he went—with such a rush! My head went too, and how I got to the bank I cannot remember. When I came to myself I was racing down the river-side, dimly conscious of my short frayed line and 'the knot,' which, however, had passed through the rings in some miraculous manner. As my eye fell on the reel, I gasped; there were but seven or eight turns left. Just in time he turned. I followed wildly, reeling up as best I could—now in the water up to my waist; now running at top speed, my rod held high above my head to clear the low fringe of bushes; whilst a faint memory of stakes on the opposite side made me use all the power I dared to keep him to my bank, forgetting altogether that there was a perfect *chevaux de frise* almost across the river at this point (on my own side also), with only a clear run of a few yards in the centre. How the salmon ran through so many times without the line catching remains a mystery. Light was failing, and the rain pouring down, but for an hour the salmon never quailed; then he began to grow a little quieter, and I could guide him to some extent, and made him follow me up and down; but any attempt to get him to the bank always resulted in fresh mad rushes. I had no gaff, and knew my only chance of landing him was to kill him in the water. I began reeling up, when, with twenty yards of line out, "the knot" stuck in the top-most ring, and the salmon himself, as if conscious of this last chance, seemed to wake up, and try to get across the river. My only course was to make frantic runs away from the bank; and in this fight another hour passed, until I felt so done, I feared, unless help came, the salmon would yet win. But at last he went down into a deepish pool, and sulked. Breathlessly I waited. He remained still. I passed my hand to the middle of the rod with trembling fingers; I reached the knot, and passed it through ring after ring; then I raised the rod, and for a moment thought he was gone—the weight felt so dead, I dreaded he had rubbed out the hooks, and fixed me in a log. But a sudden fresh rush showed he had been resting, and I now exerted more power. I dared not let that knot pass again. At last I saw his side; but he was still game, and made a last rush, then sailed slowly round in a circle, which became smaller and smaller, until he allowed me to draw him in to the bank. Slowly I passed my hand down his back, seized him by the tail, and heaved on to the bank a fourteen-pounder. I looked at my watch by the light of a match (half-past nine)—a long two hours and a-half from start to finish!"—Yours, &c., TREFOIL.

ANGLING CLUB COLLECTING BOXES.

Sir,—Will you kindly allow me to acknowledge and thank the members of the Seymour Brothers Angling Society, for the receipt, through our good friend, Mr. W. J. Wade, of 12s. 6d. from their collecting box, in aid of the funds of the Thames Angling Preservation Society.

I am anxiously waiting for other clubs fishing the Thames and who are constantly having competitions in it to make application for a collecting box.—Yours, &c., W. H. Brougham, Sec.

62 Charing Cross, S.W.

PIKE FISHING IN IRELAND.

Dear Sir,—"I have in my mind some of the large Shannon lakes," are the concluding words of "Templar" in his interesting notes in "Waltoniana," on the above subject, in last week's *Fishing Gazette*, meaning, no doubt, that in the vast expansions of the mighty river good pike fishing may be had. I quite agree with our sport-loving friend, and as Lough Derg is the largest of the lovely lakes which are strung like pearls on the silver threads of the Shannon, I will tell my angling readers something about the big pike which abound up there. "Abound" is the correct word, for the lake is teeming with the fish of all sizes from 1lb. up to, I firmly believe, 40lb. and upwards. I can speak with authority on the matter, for I have myself seen a giant pike of 90lb., which was taken in a net at the Killaloe end of the lake, some forty-seven years ago. Monsters of 84lb., 60lb., 50lb., 40lb., 37lb., and 32lb. have likewise been captured from time to time on the lake.

Not later than September or October last year two English gentlemen who stayed with me for the pike fishing, had some excellent sport. On some days they killed as many as eight or ten fish from 4lb. to 13lb., besides losing several up to 25lb. or 30lb. One day, when the wind was high they lost ever so many huge pike. See *Fishing Gazette* for the period mentioned.

Spoons, phantoms, and other artificial baits answer very well on Lough Derg, but natural baits, trout for choice, work miracles. These must be caught fresh every morning before going up the lake, but it is not everyone who knows the right size to get, or where to get them.

Perch of splendid proportions are also very plentiful on Lough Derg. Brown and gillaroo trout ditto.—Yours faithfully, S. J. Hurley.

Abbey View, Killaloe.

SALMON AND SEWIN FISHING.

Dear Sir,—"Silver Tinsel" can obtain salmon and sewin fishing on the Dovey in Wales, at the Buckley Arms Hotel, Dinas Mawddwy, on the main line to Aberystwith, changing at Cemmes Road. The charges are very moderate, and gentlemen staying in the hotel have the fishing free. A Mr. Gray, there, on August 24, took two salmon, before ten a.m.—one of 15½lb., and the other 13¾lb. Further particulars can also be obtained at Nutting and Co., of Birmingham, or from the hotel.—Yours truly,

Alfred S. Tyler.

58, Summer-row, Birmingham.

E'elish.—It is said that he who first swallowed an oyster must have been a brave man. I once knew a butcher who got so "off" from cutting and handling of meat that he had no appetite for anything except a red herring. Cooks have said that if epicures could only see the preparation and "mixture" of the materials for a "mess," or prized dish, they would quail ere gloating over the *entrée*. Half-rotten roast pheasant, wild-fowl, with the eyes sunk deep in the birds' heads out of sight; a haunch of venison black from "hanging," and with a lot to be trimmed off ere the dainty "cuts" could be got—these things are for the most part seldom seen by modern disciples of Lucullus. But where is the Scotchman who has got the moral courage to eat eel? Hampshire golden-bellied eels are good and prolific. The Kennet silver eel is an e'elish sight nicer than the conger eel, or those small things sent from Holland, and perhaps from some of the lochs of Scotland and Ireland. Few men tire of a young "roast 'bird';" some never tasted woodcock or even snipe; hare is the tenderest of all, and wild rabbit good. But where is the Englishman who knows what is good for himself, who ever turned up his nose at stewed Thames, or Kennet, or Itchen, or Colne eel, or fried, or in a pie? To calmly or otherwise chuck a 5lb. eel back into the water, only shows that where the prejudice is strong, the judgment is sadly at fault.—Savour.

Bitten by a Pike in Esthwaite Lake.—Numerous pikes have been caught in the above lake recently. Last week Mr. James Postlethwaite and a party of friends were following the sport, when a monster specimen was hooked, and after some difficulty safely hauled into the boat. Mr. Postlethwaite was in the act of taking the hook from the pike's mouth, when the fish snapped savagely at his hand and succeeded in fastening well on to it. Notwithstanding all efforts to force it to loose its grip, it held on tenaciously for a considerable time, Mr. Postlethwaite suffering acute pain, until at length his hand was released, badly wounded.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear. Best quality only.—East London Rubber Co., 8, Shoreditch, E.

ALLCOCK'S CHAMPION SPINNER.

This novelty, introduced by Messrs. Allcock and Co., of the Standard Works, is designed with the view to holding the bait securely, without damaging its form. It consists of the usual flight of triple hooks (no lip-hook is necessary), and a straight needle, having the usual projecting metallic fins. The head of the needle is bifurcated, and pivoted between the two flattened sides are the two hooks for securing the bait in position. A milled screw in the fore extremity of the needle, when screwed down towards the fins, causes these hooks to lie wholly within the needle (Fig. 1) and the bait is then drawn on; when in proper position, the screw is turned a few times, according to the size of the bait, and the hooks opening, as in Fig. 2, it becomes impossible for the bait to move until the hooks are again compressed by turning the screw. The speed and ease with which the baiting is effected, and more particularly the secure fixing of the bait in position, will make this spinner a favourite with all who use natural bait. Its advantages appear to be such that it may justly claim a good trial from anglers who spin with natural bait. It is well made, of neat appearance, and attractive finish. The usual sizes for salmon, trout, and pike are now being supplied, and a card addressed to any good fishing tackle maker will procure prices and particulars of same.

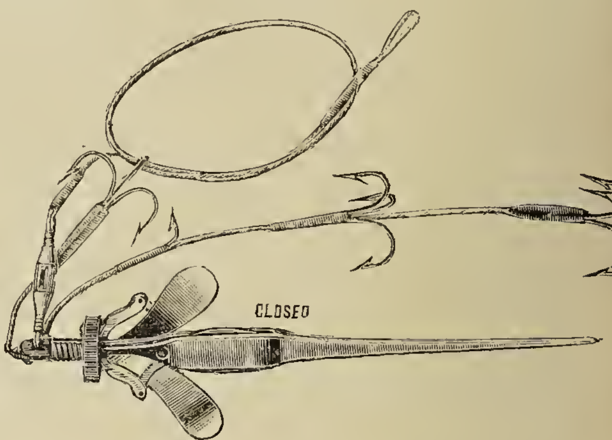

Fig. 1.

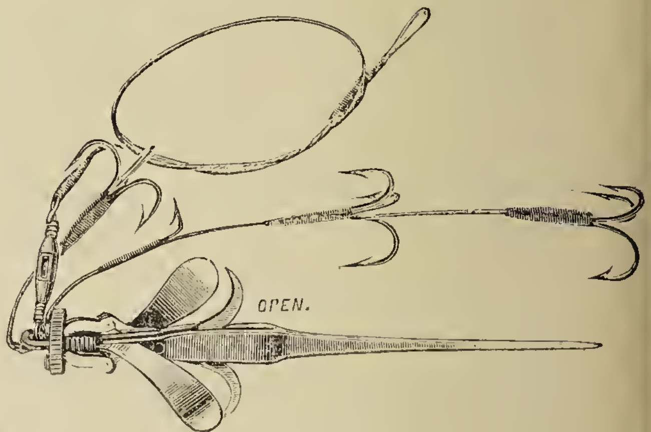

Fig. 2.

Carlisle Otterhounds.—The Carlisle otterhounds had a merry run last week on the Lowther. The meet was at Askham Bridge, near Lowther Castle, at an early hour, and a large field turned out, including Lord Churchill and several of Lord Lonsdale's party. Almost immediately a drag was hit on, and followed rapidly along through Lowther Deer Park. On reaching Butterwick Green the foil was very strong, and the hounds were hunting keenly. Passing Bampton Grange, where the river Lowther divides, it was decided to first try that branch which runs out of Haweswater, but this part was dragged up to the lake without success. Returning to Bampton Grange, the hounds were cast off in the other part of the Lowther which sometimes is called Swindle Beck. The trail was again taken up, and, after hunting about a mile farther, the game was marked in a large tree root. On being bolted by the terrier Dash, the otter at once made downstream, taking refuge in a stone wall. The varmint was repeatedly viewed as it made its way downstream until it retreated into another old stone wall. Soon it received notice to quit, and was viewed by Lord Churchill crossing the river, but before it could get over it was caught by Ringwood and Maxim, and worried in mid-stream. It was a fine bitch otter weighing 15lb.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, SEPTEMBER 5, 1891.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly meeting of the General Committee will take place on Monday evening next, Sept. 7th, at 8.30.—R. GHURNEY, sec.

Anglers' Association.—EASTERN DISTRICT NO. 2.—The next return visit on the above list will take place at the Funny Folks Angling Society, on Monday, September 7. A cordial invitation is extended to all, and I hope to see a good muster.—F. THORLING.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—A return visit on the above list will take place on Tuesday next, the 8th inst., at the Rodney Angling Society, Rising Sun, Harper-street, New Kent-road. As this club is always represented at every visit, I hope all clubs will rally round and give them a bumper.—G. W. ARMSTRONG, district officer.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks the receipt of 13s. 6d. from the Seymour Brothers Angling Society Donation Box. The next meeting of the committee will take place on Friday evening, September 11, at 8.30.—R. GHURNEY, secretary.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting-hill Gate, W.—Notice to anglers enrolled on the Anglers' Association *re* the competition at Langley, which takes place on September 13, as previously announced.—The prizes will be on view at the Allason Arms, from Friday, the 4th, till Saturday, the 5th inst.; on the 6th inst. they will be removed to the North Star, Langley, and remain there till the competition on the 15th inst.—B. ABRAHAMS, sec.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—Our trays were well filled on the 30th ult., and the competition at Taplow was a great success. The seven prizes fished for were won by the following members: H. Seymour, J. Windsor, H. Wilson, J. Pailes, J. Scott, G. Marriott, and J. Whiston. The following also weighed in: J. Fairbairn, W. Steward, and J. Drew, who weighed in bream, carp, perch, roach, and dace, the largest bream being 2¾lb. On Tuesday we had a good muster of members present, when it was decided that our brake outing should take place on the 20th to Cobham, Surrey. We also elected three new members. I wish to remind secretaries of societies that the next return visit on the Central Association takes place to the above-named society (date to follow), —J. PAILES, sec,

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—I wish to remind members that we fish a roaming match at Fiddleworth on the 13th September, for a series of prizes. On the 30th ult. Messrs. Moir and Potter weighed roach and bream. I trust those members who are going to compete for the above prizes will show up on Wednesday next and make themselves eligible. We had a good muster of members on Wednesday last, when some important business was done.—W. H. POTTER, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 30th ult., our members were out in good force and a very fine show of fish was put on the trays by the following members: Mr. J. Nunn, sen., having a very fine show of bream and roach, the largest bream weighing 2lb. 7oz.; Mr. W. Hake, some good roach; Mr. Loosely, roach; Mr. Lambarth, jun., roach and bream; Mr. G. Merry, roach and bream; and Mr. Whitebread, a nice show of bream, winning the monthly prize for the gross weight.—E. R. EMBLETON, secretary

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—On August 30, the members of the above society fished their first sea fishing competition in splendid weather, with the result that Mr. Watkins took the first prize, with 7lb. ¼oz.; Mr. Wade, second prize, with 5lb. 9oz.; Mr. T. Bowling, third prize; Mr. F. Davis, fourth prize. Mr. Simpkins had a show of dace, from the Ravensbourne. Members are requested to attend next week to make arrangements for the September outing, and I hope they will turn up early. The second grand annual fishing contest, in connection with Mr. Eldridge, will take place at Pulboro', on September 6, when I hope to see our members to the front.—A. G. SMITH, sec.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—Several members had good shows on the 30th ult., Messrs. Scott and Tucker having had a nice take of roach. Messrs. Brown and Clark were duly elected working members of this society. I hope members will give a call on Wednesday for important business.—J. TUCKER, hon. sec.

Battersea Friendly Angling Society, Queen's Hotel, Battersea.—Twenty-three members of this club fished a pegged-down match for eight prizes at Pangbourne, on August 30, with the following result: Mr. W. Himes, first; J. W. Hopkins, second; R. Wellman, third; F. Anstiss, fourth; C. Starsmere, fifth; H. Martin, sixth; G. Searle, seventh; T. Gloster, eighth. The honorary members, prize was won by Mr. C. Crimmins. The punt competition will take place at Twickenham, on Sept. 13, for three prizes. Members are requested to attend on Tuesday next to arrange another outing and to give names for punt match.—GEORGE MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road.—We had a fair show of roach and bream on the 30th ult., contributed by the following members: Messrs. James Smith, H. Patman, D. Dodson, R. Smith, and J. Warman. Total weight, 28½lb. On the 25th ult., Mr. W. Streeton had a capital take of bream, 42½lb., all of them good fish.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—On Wednesday the election of Messrs. White, King, and Green, was confirmed. Gentlemen are reminded that the dinner will take place at Woking, on the 13th inst.; honorary members are invited. I should like to have the names of all gentlemen who are going, by next Wednesday. On August 30, the following gentlemen weighed in: Mr. F. Barker, Mr. Hacker, roach and dace; Mr. Wheelhouse, bream; and Mr, J, Barker, carp,—F, ROBERTS, hon, sec,

Bostonian Angling Society.—The following members have had fish since my last report. Mr. Rundle, roach; Mr. Jamieson, dace, heaviest dace, 9¼oz. Annual general meeting next Wednesday, the 9th, all members will oblige by attending for important business.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On August 30, Mr. J. Hall saved us a blank with a show of roach and dace. On Wednesday evening, Mr. Goodger brought up a very nice take of chub, roach, and dace, one of the dace turning the scales at 10¾oz. —H. ROACH, sec.

Burdett Angling Society, 118, Hackney-road.—Our members fished for six prizes at Burnt Mill, which were all won. The takes were small on account of the water being low. The following members were the successful competitors: Mr. J. Pethee, first, 1lb. 3oz. of perch; Mr. A. Burton, second, 11oz. of perch; Mr. T. Carter, third, 10oz. perch; Mr. Pert, fourth, 8½oz. perch; Mr. Millor, fifth, one roach, 6¾oz.; Mr. Pope, sixth, 3¾oz. perch; Mr. Andrews, 2½oz. perch; Mr. Gurney, 8oz. roach, 4oz. dace, 7¼oz. perch. —J. PETHER, sec.

Buxton Brothers' Angling Society, Walthamstow, Liberal and Radical Club, 4, Buxton-road.—On the 29th ult. some of our members were out, when Mr. M. Stephens had a good show of roach. On the 30th ult., there was a good muster for a match for prizes, when Messrs. W. Bellingham and G. Gager had some good specimens of bream. The result of the judging, which took place directly they reached the club-house, were Mr. W. Bellingham, first prize; Mr. G. Gager, second prize; Mr. C. Goulbee, third prize. Members are requested to be present on the next meeting-night, on Wednesday, September 9, at nine o'clock sharp, as we have some important business to transact.—A. SHUKER, sec.

Caledonian Angling Society.—On Thursday, August 27, a few members and friends of this society journeyed to Burnt Mill for the annual dinner and tea, and although the elements at the latter part of the day were unfavourable, an enjoyable time was spent. Mr. Rooke, our photographic member, took a most excellent group outside the Lock House immediately after our arrival in the morning and then the majority went angling; but the water was then very low and bright, consequently only a few fish were taken, with the exception of Mr. Rooke, who had a few nice perch. Since then Mr. A. Knock has weighed in one take of 19lb. 14oz. roach and dace, and included in the day's fishing was twenty-four dace weighing 13lb. 7oz., one roach of 1lb. 8oz. and another 1lb. 6½oz.—A. GEORGE, sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On the 23rd ult. the following members weighed in: Messrs. A. Chapman, perch; King, roach; Langton, roach; Marshall, roach and bream; and W. White, bream. On the 30th ult., Messrs. Boxall, jack; C. Chapman, jack; Leslie, roach and dace; C. White, roach and dace; and Mr. King, roach. On September 6 we go to Weybridge by brakes from the above house. To start at 6.30 sharp.—E. T. WHITE, sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—A general meeting is convened for Monday next, September 7, to decide where the competition arranged for September 20 shall take place. Mr. Harry Dunn was unanimously elected chairman for the ensuing month, and a hearty vote of thanks was awarded to Mr. J. Depledge, as chairman for the past two months. The shows of fish during the past week have been more than satisfactory, especially those of Mr. Harry Dunn and Mr. Tom Keeble. Mr. Dunn has in active preparation a paper on "Barbel Fishing," which he will shortly read before this society.—JOHN SMITH, hon. sec.

Central Association.—The usual monthly delegate meeting will be held at the Bedford Head Hotel, Maiden-lane, Covent-garden, on Monday next, at 8.30.

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—Mr. MacDonnell, on the 26th ult., 5lb. roach and bream from Edenbridge; on the 27th, 7lb. of roach, from the barge cut at Tottenham; and on the 31st ult., 6lb. 10oz. of bream and roach from Amberley; Mr. Castell, roach from Woking, on the 31st.—CAS.

Clapham Junction Angling Society, the Clarence, Winstanley-road, Clapham Junction, S.W.—On the 1st inst. the return visit on the South London Visiting List took place at this society, and I am pleased to say it was a grand success, fifteen clubs being well represented. On August 30 the following members weighed in fish: Messrs. G. Jameson, 5lb. 3oz. bream; A. Painter, 15½oz. roach; A. Bowater, 5lb. 3oz. roach (winning 1lb. gross weight prize, Pangbourne); A. Turner, 3lb. roach (second); and H. Collis, roach. Our next match takes place at Cookham on the 6th inst. All members to be at Battersea station by 8 a.m.—A. TROWBRIDGE.

Clarence Angling Club, Red Lion Hotel, Harrow-road, Paddington, W.—A large number of members were present on Wednesday night, when the secretary announced that the club had secured a seven years' lease of a splendid stretch of the river Colne and other water about four and a-half miles in all, for the exclusive right of fishing. Several members have been out, Mr. T. Nelson having big takes from the Broads, of rudd, roach, dace and pike, Mr. J. F. Dawson taking roach and dace. A new member was elected by ballot, the name of another one being placed on the books for election on Wednesday next.—ALF. E. EVANS, sec.

Clerkenwell and District United—A combined visit on the Clerkenwell and Central Lists was paid to the Seymour Brothers on the 31st ult. The following twenty-four societies were well represented—viz., Great Northern Brothers, Lincoln, Crown and Buckland, City of London, Independent Brothers, Seymour Brothers, Eustonian, Amicable Waltonian, Funny Folks, Islington Brothers, Bloomsbury Brothers, Alma, Burton Piscatorials, North London, Camden, Anchor and Hope, Cliftonville, Mitre Brothers, Patriotic, Royal George, Phœnix, Bostonians, Midland, and Waltonians. The next visit on the C. and D. list will be to the Amicable Waltonians, held at the Sun Tavern, Great Sutton-street, Goswell-road.—F. CASTELL, hon. sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—Only one member weighed in fish on August 30—namely, Mr. A. Duncan, with roach. The match takes place on the 13th instant.—A. SMITH, sec.

Crown and Buckland United Piscatorial Society, Middlesex Arms, Clerkenwell-green, E.C.—A pegged-down match will take place at Harefield Fisheries, on Sept. 13, by the members of the above, for the following prizes: Mr. J. Penn, a handsome time-piece under glass shade; Mr. Horrox, a pair of oil paintings in gilt frames; Mr. Kirby, 10s. 6d.; and Mr. Plaistead, the owner of the Fisheries, a handsome prize. All to start by first train in the morning. The following members weighed in fish on August 30: Mr. H. Long, 11lb. 9½oz. of roach; Mr. C Walters, 10lb. 5oz. roach and bream; Mr. W. J. Long, 6lb. 10oz. roach; Mr. Penn and Glover weighed in roach.—E. ROGERS, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On August 30, we fished a pegged-down match at Harlow, for seven prizes. Result as follows: Mr. Webber, first; Mr. Slade, second; Mr. Eagles, third; Mr. Towndrow, fourth; Mr. Baldwin, fifth; Mr. Wild, sixth; and Mr. Killick, seventh, Messrs. Spong, T. Midson, J. Edwards, Cogswell, Mott, Legge, Rodwell, Barson, Venour, and W. Midson, also had fish. On September 13, a match will be fished at Cheshunt; full particulars to be had at the club house.—S. MALBY, sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On August 30, Mr. F. Vanhegan saved us a blank with a few nice bream, winning the monthly prize. The next return visit on No. 2 Eastern District will take place on Monday, Sept. 7, when I shall be glad to have the company of as many as possible. Any secretary not receiving a notice, kindly accept this as one. A few friends met at the above on Wednesday last to organise a benefit for Mr. G. Watling. The meeting was adjourned till Monday, Sept. 14, when we shall be pleased to see any gentleman who would like to join the committee.—J. W. BIGGS, sec.

Glasgow District Angling Clubs Association.—This association, which was formed three years ago in Glasgow, was promoted for the purpose of holding an annual competition amongst the various clubs within a radius of ten miles of the Glasgow exchange, for an association trophy, to be held during the year by the most successful club at the annual competition, each club being represented by four members, one of whom is appointed captain over each team. The annual competition of the above association took place on Loch Leven on August 31, when eight clubs were represented by thirty-two competitors. The weather was pretty favourable during the forenoon, being overcast, with occasional sunshine. The wind, which was very light when the boats started, veered several times and came up very strong and blustering in the afternoon, while rain fell in torrents, and very little sport was got after two p.m. On weighing at six p.m., their total capture was found to be two hundred and nineteen trout, 143¾lb., the most successful club team being that of the Rowbank, from Paisley, to whom the association trophy was awarded. The heaviest basket was got by Mr. Wallace, of that club, with ten trout, 9lb. 9½oz., while the heaviest trout was got by Mr. Watson, of the Coatbridge Club, with 2lb. 6oz. The names of the successful club team to whom gold badges were awarded being Messrs. Wallace, McKenzie, R. Cochrane, and A. Cochrane. The total captures of each club arranged in their order of merit were as under: Rowbank, thirty-one trout, 23lb. 15½oz.; Wanderers, forty-four trout, 23lb. ½oz.; Pollokshields, twenty-nine trout, 21lb. 8oz.; Bothwell and Blantyre, thirty trout, 18lb. 14½oz.; Uddington Waltonians, twenty-five trout, 17lb. 1½oz.; Dodgers, twenty-five trout, 16lb. 4½oz.; St. Mungo, twenty-five trout, 14lb. 6½oz.; and Coatbridge, ten trout, 8lb. 8oz. Two sweepstakes were also awarded for the most successful boats, as under: First, Rowbank C., Wallace and McKenzie, twenty trout, 18lb. 8½oz.; second, Wanderers C., Robertson and Miller, twenty-seven trout, 14lb. 11½oz.—R. B. LAING.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had a moderate show of fish on August 30—10lb. 2¼oz. of roach and bream and one chub, taken by Messrs. Caborn, W. Lawrence, Slade, Stebbings, and Riggs.—A. PAYNE, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road.—We had another fine display of fish on August 30. Mr. Bouring, a very fine show of bream, roach and perch; Mr. Bailey, a handsome show of roach; Mr. Ellins, a capital show of trout and roach; Mr. Elton, a fine show of trout, roach and chub; Mr. Clark, dace; Mr. Monk, roach and dace. On Tuesday a sweepstake was arranged to come off on September 27, to take place at Goring, from Streakley Bridge to the Church at Malsford. Members can obtain all necessary information on our next meeting night. I hope members will turn up in good force, as several good prizes are already given.—A. STOKES.

Good Intent Angling Society.—There was a grand show of fish at our club on August 30, brought in by Messrs. Philpott, Lyte, F. Grey, Whitmore, Huggett, Maybury, and many others. On the 1st inst. there was a good attendance of members, when it was decided to fish for ten prizes at Shiplake on the 13th inst. All start from Paddington by the nine o'clock train. Mr. Manning opened our benevolent box; there was £2 16s. 5d. in it.—R. MURPHY.

Grange Angling Society.—During the last week the following members have weighed in: Messrs. Sandilands, bream and roach, 9lb. 6½oz.; Gibbons, roach, 8lb. 8oz.; Wood, roach and dace, 6lb. 8¼oz.; W. Rich, roach, 2lb. 14½oz.; and Green, roach, 1lb. 2¾oz. On Tuesday, Mr. Jones sent up from Wroxham a very fine perch, scaling 2lb. 11oz. Mr. Jones has kindly given this fish to the society, who are having it preserved.—W. K.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville, N.—On the 23rd ult., the following members weighed in some good bream, dace, and roach, from Pulborough: H. Watling, 5lb. 6oz.; C. Large, 5lb. 5oz.; C. Watling, 12lb. 1oz., one bream 3lb. 2oz.; J. A. Fitch, 2lb. 1oz. From other waters, A. Hambridge, 4lb. bream; W. Barnes, 1lb. 13oz. roach; J. Birch, 6lb. 15oz., roach; J. Hewitt, and H. Proehl, roach. On the 30th ult., we had a very poor show; very few members were out: Messrs. H. Proehl, jack, 2lb. 15oz.; C. Watling, two bream, 6lb. 15oz.; W. Parkins, roach, 2lb. 9oz., all from Pulborough.—J. A. FITCH, sec.

Gresham Angling Society.—The usual weekly meeting was held on Tuesday, with Mr. G. H. Field in the chair. Mr. Bentley reported having been to Kelvedon, and inquired into certain matters affecting the society's waters there, which were tolerably satisfactory; but it was thought desirable to make some better arrangements as to the tenure of the waters, and the better preservation of the fish in them; and the secretary was deputed to go to Kelvedon for that purpose. Mr. Bentley was thanked for the trouble he had taken. A letter was read from the Thames Angling Preservation Society, stating that action had been taken with regard to the recent poisoning of fish in the Thames. On the motion of Mr. Parker, seconded by Mr. Bentley, it was resolved that a subscription of a guinea be sent to the Thames Angling Preservation Society. Some further arrangements for the sea fishing competion, to be held at Leigh on the 16th inst., were made. First prize, tackle, worth a guinea; second and third prizes, tackle, each worth half-a-guinea. Members can introduce a friend or two to fish, but not to compete. It was resolved that a fishing competition be shortly held from punts on the Thames, and a committee was appointed to make the arrangements. Mr. Young exhibited the trout taken by him in the Thames, weighing 5lb. 5½oz., which he had had set up. Mr. Bramley reported having caught 47lb. of fish, chiefly roach, in Fritton Decoy, in two days. Mr. Turpin had been netting for eels two nights on the Stour, and taken 25st.; Mr. Parker, eel pouts, flounders, and plaice from Southend; and Dr. Brunton, four trout from the Lea, weighing 7½lb. The secretary read a paper entitled "The Humane Angler," in which he advocated the abolition of live-baiting fishing, more particularly the live-gorge, and strongly recommended the greater use of dead baits, and also of artificial baits that should resemble the natural, not only to the sight, as at present, but also to the taste, touch, and smell. Considerable discussion took place on the subject, and the opinion in favour of abandoning the live-gorge was almost unanimous. On the motion of Dr. Brunton, seconded by Mr. Fletcher, a vote of thanks was accorded to the secretary for his paper.—James Tayler, sec.

Havelock Angling Society, General Havelock, West-street, London Fields, Hackney.—The fourth annual dinner of this society took place on August 30, at the Old Highway Tavern, Hoddesdon, when twenty-four members and friends sat down to an ample repast provided by the worthy host, Mr. Haywood, who had the dinner served in a spacious marquee, erected in a very pleasant garden attached to the house. We were fortunate in having a fine day, which added greatly to the enjoyment of the company; returning to London by road, which was reached about ten o'clock, having spent a most enjoyable day, long to be remembered by the members of the Havelock.—G. Manning.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On August 30 many of our members were again out, being the last day to fish for two of our prizes—viz., one for the heaviest gross weight on any one outing during August, jack and eels barred; the other for gross weight of dace only, under the same conditions. Mr. A. Fish was the successful one in the former, and Mr. Braham, jun., in the latter. Messrs. Geeves, jun., Russell, and Calcut brought roach and dace; Saalfield and Rider, perch; A. Fish and Bagshaw, jun., chub; and Braham, jun., dace.—W. Fenner, sec.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—We have had some excellent shows of fish this last week. Messrs. J. E. W. and Monte, in one day having five to six dozen fine dace and chub; Messrs. Shaw, Gill, and Burton, some fine roach. I wish to call all members and friends attention to the annual dinner, which is fixed to take place on Sept. 17, at the club-house, the Hornsey Wood Tavern, at eight o'clock sharp, when our worthy host will provide an excellent repast. Tickets, 3s. 6d. each.—J. T. Griffiths.

Hoxton Brothers Angling Society.—On the 30th ult., Mr. T. Huntley weighed in some nice bream, and T. Gardner roach.—R. Ghurney, sec.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—Several of our members were out on Aug. 30, the following weighing in: Messrs. W. Davies, barbel, roach, dace, and gudgeon; A. Pain, roach; and A. Pope, roach, dace, and gudgeon. The brothers Fletcher were elected honorary members of this society.—A. Pain, sec. *pro tem.*

Islington Angling Society, Jubilee House, Hornsey Rise, N.—At the meeting on Monday evening last, a new member was duly proposed and seconded, the ballot to take place on September 21. In the absence of special business, discussions of several subjects of piscatorial interest occupied the rest of the evening. The next meeting will take place on Monday, the 7th inst.—X.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—One new member was elected on August 27. We fished a roving match at Cookham on August 30, for six prizes. The following had fish: Mr. Holder, first; Mr. Key, second; Mr. Leach, third; W. Stretch, fourth; H. Herbert, fifth, and winning a specimen roach prize. We have room for a few more members.—J. H. Herbert, sec.

Izaak Walton Angling Society.—There are three special prizes to be competed for on Wednesday next, 9th inst., and four ditto on the 13th inst. Competitors may choose their own fishing waters for these prizes. No competitor to leave London before five a.m. on either days. Mr. Chas. Layton saved us from a blank on Aug. 30 with a nice chub weighing 2lb. 3oz. Mr. F. Savage, a member of the North Eastern Angling Society, exhibited four barbel he had succeeded in taking from the Thames, on Wednesday, 2nd inst.—H. B.

Jolly Anglers, Cambridge.—The above club fished a pegged-down match at Upware on Sept. 1. This being the annual match, sixty-six members entered. The total amount, which was in money prizes, the committee offered with specials, was £9 14s. All the prizes were won except 22s. 6d.—viz., for fly-fishing. Logan's boat, *Victoria*, conveyed the members to the spot where the swims were pegged out, twenty yards each, some twelve miles down, stream. When we started it was raining, wind blowing to a western gale. On our arrival rain ceased, but the wind was so strong that hats were blown into the river, floats driven out of the water, lines curling round like a half-moon, in fact it was with great difficulty the rod was managed. One angler was blown down stepping back to land a fish, 6oz. weight, so strong was the wind. However, over twenty members weighed in. Heaviest take was 4lb. 1oz. to one angler, and the total weight weighed in was 30lb. 2oz.; good for so bad a fishing day. Every praise is due to the secretary, W. Cornwall, and the committee for the arrangement of the match. The boat, which was a covered one, was very acceptable for so long a journey. The company were enlivened by a string band; singing and other pleasures were indulged in.—John O. George, auditor.

Jubilee Angling Society, Portobello, Kensal-road.—On August 30 the following members weighed in: Messrs. Mathews, Croxford, Warner, Wheeler, H. Challen, roach and tench, and Mr. E. Challen, perch. We had the pleasure of enrolling another new member on Tuesday last.—A. Ide, sec.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—At a committee meeting held on Friday, the 28th ult., one new member was elected, bringing our total number up to one hundred and fourteen. Two competitions were arranged for September. First—for the heaviest and second heaviest take of fish on any one single day, punt fishing (Thames) during September: First prize, £1 1s.; second, 10s. 6d. Second—for the heaviest and second heaviest take of fish on any one single day, bank fishing (Thames) during September; first prize, £1 1s.; second, 10s. 6d. During the past week the following members have weighed in: Messrs. Hollyman, junior, 10lb. 8oz. roach and dace; Master, 8lb. 13oz., roach and dace; Wilmot, 7lb. 1oz., roach and dace; J. Hollyman, 5lb. 12oz., roach and dace; Cotton, 14lb. 3½oz., roach and dace; Harvey, 1lb. 9½oz., barbel; Edwards, 2lb. 12oz., rudd; H. Salter, 1lb. 11oz., roach; Newcombe, 2lb. 14oz., barbel; Carter, 4lb. 12oz., roach; and Mason, 1lb. 14oz., dace. Messrs. Hollyman, junior, and Master were the successful winners of the first and second prizes in the punt competition, which took place on the 27th ult.—T. Salter, hon. secretary.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville-road.—On August 30 the following members weighed in some good fish: Messrs. Ellingham, Porter, Watling, Webster, and Belton, roach and dace; More, bream; Beesley, a nice show of roach and dace on Sept. 2. I hope to see a good muster of members on Wednesday next (quarterly night). Mr. Clark and Mr. Findley were proposed working members of the above, and will be balloted for in the usual way at our next meeting. —W. Watling, sec.

Liverpool Angling Association.—Our last weeks meeting was a good one. The outing on the 27th turned out fairly successful though the weather was unsettled and uncomfortable. Most of the competitors had more or less fish, the weighing in giving Mr. Haughton first, Mr. Woolfall second, and Mr. Bennett third. We have arranged for a day's fishing in the river Vyrney on the 10th inst., going over night (Wednesday), from Lime-street at 6.15. This will be a very nice out indeed, and if the weather settles at all (it is very fine this Wednesday afternoon) there are almost sure to be some big takes both of trout and grayling and coarse fish. The Chairman's Challenge Clock for trout and grayling, and Mr. Mason's ditto for chub and roach can be won on this occasion.—R. Woolfall.

Liverpool East End Friendly Angling Association, 150, West Derby-road, Liverpool.—We had a fair attendance on September 1, when it was proposed that the match take place at Mollington Canal on September 13 between the Iron Bridge and Stoke Bridge to be the standpoint, for three prizes—viz., Bottom-rod from club funds; a handsome dulcimer, kindly presented by one of the members; also bottom tackle case, presented by a member. The heaviest to have the first choice, the second heaviest having the second choice. All competitors to meet by the 8.35 train at Woodside Station on morning of match. Any member not abiding by these rules will be disqualified. 2oz. fish to weigh in. pike and eels barred. Several members have been out and have had fair takes of roach, &c.—T. C. Segar, sec.

London United Anglers' Societies.—Fourth Annual Angling Competition, in aid of the Funds of the Anglers' Benevolent Society.—At a meeting of representatives of several angling societies, held at the Foresters' Hall, Clerkenwell, E.C., on August 14, a committee was formed (with power to add to their number) to carry out the arrangements for an angling competition, to take place at the Rye House on November 15, in aid of the funds of the Anglers' Benevolent Society. Resolved that it be a roving competition; the boundary to be named according to the number of entries on the morning of the competition. Several valuable prizes were offered, which will no doubt be considerably increased, lists of which will be published in the fishing and other journals weekly. Competitors to meet at the Rye House on arrival of the train that leaves Liverpool-street Station at 9.8 a.m., to start fishing by signal, and to weigh fish in the gardens at five o'clock. Any competitor failing to attend to weigh his fish at that time to be disqualified. One rod only to be used. All fish to weigh (according to Lea measurement), with the exception of jack, eels, bleak, gudgeon, and minnows. No live-baiting or raking allowed. Tickets, one shilling each, to be had of any member of the committee, and at the various angling clubs. Competitors must be members holding privilege tickets from the Anglers' or Central Associations, or cards of membership of the Anglers' Benevolent Society. Tickets will be shortly supplied to all angling societies. Due notice will be given as to distribution of prizes. The committee meetings will be held at the Foresters' Hall, E.C., on the second and fourth Fridays, in the month at 9.30. The following gentlemen form the present committee: Messrs. C. A. Medcalf (Amicable Brothers), chairman; S. Malby (Dalston), secretary; R. Ghurney (Hoxton Brothers), treasurer; R. Murphy and W. H. Beckett (Good Intent), A. Conn (Bermondsey Brothers), S. Cane (Seymour Brothers), G. H. Field (South London), E. Clark (Marylebone), G. Watling (Funny Folks), H. Patman (Bermondsey Brothers), G. Manning and H. Butt (Izaak Walton), G. Franklin, G. Norris, and C. Glover (Crown and Buckland), W. Baildham (Globe), B. Abrahams (Allason United Brothers), J. W. Harris (Prince Arthur Piscatorials), J. Edwards and F. Legge (Dalston), W. Wade (Anchor and Hope), J. Comber (Mildmay), and E. Brockett (Original Alexandra).—S. Malby, sec.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—Our trays were again well filled with bream, roach, chub, perch, dace, and jack, contributed by the following gentlemen: Messrs. Penfold, Melbourn, Butler, W. Pearce, Tilley, Mellish, Gray, and A. Clarke.—T. F. Penfold.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—Several of our members were out on August 30, but were very unsuccessful, not one of them bringing home a fish, thus making this the first blank of the season. We had our return club visit on Monday, and was well attended, considering the wet evening, thirteen clubs answering the roll call. Mr. Tibbatts, of the Citizen, Houndsditch, took the chair for the evening, faced by Mr. S. Malby, of the Dalston Angling Society, and after some good songs had been sung, the evening wound up, having been most enjoyable.—John Comber, sec.

North Lambeth Angling Society, 108, Westminster Bridge-road, S.E.—Several of our members were out on September 30, but met with very indifferent success. Members are reminded that several competitions are on hand.—F. Wallis, sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland Park, N.W.—We had a fair muster of members on the 27th ult. Mr. Schultz, jun., weighed in roach. On the 30th we fished our match at St. Margaret's, when a most enjoyable day was spent; but sport was very tame, only two prizes being won, Mr. Lambert winning the first prize, and Mr. Billings the second; Messrs. Harris and Grindley also had jack and roach respectively from other waters.—G. S.

Original Alexandra Angling Society, Green Man, Cambridge-road, E.—We had a capital show of fish on August 30, the best takes coming from Dagenham Lake. Mr. H. Gable had a nice lot of bream and roach, weighing 9¼lb., largest bream, 2lb.; Mr. Poore, a fine perch, 2lb. 6oz., and some good bream and roach; Mr. Preston, three jack from the Lea, 9lb. 3oz.; Mr. Aarons, a barbel from the Lea, 3lb. 8oz., on a tight line, and other takes too numerous to mention. Our trays were full. I wish to remind our angling friends that on Monday next, September 7, a smoking concert will take place at the above house in aid of the Anglers' Benevolent Fund. Many well-known angling friends have promised to attend.—E. Brockett.

Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham.—Mr. Steedman had a fine show of roach on August 30, some of the fish weighing over a pound. Mr. Daniels also weighed in some nice roach. Our next series of prizes will be fished for at Pulborough, on September 13. Members to leave town on the morning of the competition. Mr. Mayes was elected an honorary member of this society.—A. G. Duke, sec.

Phœnix Angling Society, the Crown, Old St. Pancras-road, N.W.—On August 30th three prizes were angled for at Windsor, the first being won by Mr. Keen, Mr. Mares second, Mr. Heelas third. Messrs. Raymond, C. and F. Dove, Homnan, Elbourne, Brown, and Carr having a few fish each. On September 13th three more prizes will be angled for at Bourne End.—W. Elbourn, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—The following members of the above weighed in on August 30: Messrs. Ivermee, jack and tench; Scott, roach; Wheeler, roach; Buckland, jack; Axworthy, chub; French, jack and roach; Hayden, roach; and Davis, roach.—Wm. Bowyer, sec.

Rising Sun Angling Society, The George, Brook-street, Holborn.—On the 30th ult., Messrs. Comely and Sharpless had a nice show of roach and dace. A special meeting is called for the 7th inst. Members please attend, as some important business was postponed in consequence of the small attendance on Monday last.—F. Bradley, hon. sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The next visit on the Anglers' Association Visiting List takes place on Tuesday, September 8, when I hope to see a room full. Thirteen members of the above society fished for four prizes on August 30, at Wateringbury. Only one member succeeded in getting fish—Mr. P. Martin, bream, 2lb. 1½oz. Members to go where they like; all to go on the morning of September 6, for the remaining prizes.—F. T. Lamberton, sec.

Royal George Angling Society, the Hope Tavern, Tottenham-street, Tottenham Court-road.—On the 30th August we had the best show of large fish on our trays since the commencement of the season, being weighed in by the following members: Messrs. Webber, jack and roach; Gibbons, barbel and roach; Longland, bream; and Trotter, chub. The prizes won at the last outing on August 16 were distributed to the successful members, Messrs. Webber, Holder, Bacon, Harris, jun., and Gibbons. —F. C. Longland.

Royal Oak Angling Society, Royal Oak, Roman-road, North Bow, E.—On August 30 we had a fair show of fish, consisting of perch, roach, and dace, from the Lea, by the following members: Messrs. F. Barclay, Parsley, J. Yeo, Henson, A. Barclay, W. Wells, W. Smith, E. Perry, J. Holden, J. Stanley, and Cox. Total, 32lb. 1oz., being only 1oz. more than the previous week. On Tuesday, September 1, Mr. G. Barclay weighed in three jack from the lower Lea, averaging 3lb. each, which were in fair condition.—A. Barclay, sec.

School Board of London Angling Association, Victoria Enbankment, W.C.—The secretary and a member of this association have returned from Denver Sluice, Norfolk, having had excellent catches of roach and bream, Roach 1lb. 14oz., 1lb. 12oz., 1lb. 8oz., &c.; bream 2lb. and upwards were taken. Some trout can also be seen at times during the day.—A. A. H. Millam.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—On August 30 we had a very good show of fish from various waters by Messrs. J. Wright, Stone, Wood and Forrester. Other members had fish, but when they arrived home were too tired to bring them up to the club-house.—J. Wright, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On August 30 a good many members were out, with the following result: A very nice tray of roach and dace weighed in by Mr. W. North, 17lb. ½oz. (six dace. 8¼oz. each). The above member also had a very fine specimen bleak, 3¼oz., which is going to be put up. The following also had fish: Messrs. G. Giles, jack; E. Wright, bream and roach; J. Petrie, roach and dace, 5lb.; J. Barnes, roach and dace, 4lb. On Monday last we had a very successful visit paid to us by the members of the various angling societies. Twenty-four clubs were represented—Alma, Amicable Brothers, Amicable Waltonians, Anchor and Hope, Barbican, Burton, Camden, Cliftonville, Clerkenwell Piscatorials, Convivial, Crown and Buckland, Funny Folks, Great Northern, Lincoln, Phœnix, Independent Brothers, Islington Brothers, Mitre, North London; Patriotic, Royal George, Seymour Brothers, Waltonians, City of London, and Bloomsbury Brothers. I wish to thank those gentlemen who so kindly attended. On September 6 we fish a match at Pulborough for six valuable prizes; Central waters only; two rods; all to go same morning only. Those members who have not shown up lately are requested to at once.—S. E. Cane, sec.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent-garden.—On the 30th ult. we had another good show of fish, about 40lb., Mr Phillips just on 20lb. of tench; Messrs. Clark, Geale, Curtis, Cherry, O'Callaghan, and Smales, bream, roach, tench, perch, and dace. September 1 being quarterly night the election of officers, &c., took place. Mr. Frank Griffin was elected president, and Mr. O'Callaghan, vice, for the ensuing quarter. Members are reminded that our next outing will take place on September 6, at our society water, fishing to commence on the arrival of the first train from Waterloo, main line. Usual conditions, pegged down. To leave off fishing at seven p.m. A special general meeting will be held to consider the question of life members, on Tuesday, September 15, at 8.30. All members interested are particularly requested to attend.—Pelican.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—A silver watch to be fished for during September for the best specimen roach. The members weighing in on August 30 were Mr. T. Jones, a nice show of bream and roach; A. McQuinn, roach and dace; M. Marks, bream; D. Marks, bream; R. Spenceley, roach; H. Spenceley, roach; Mr. Dean, rudd; J. Brown, rudd.—R. S.

South Belgravia Angling Society, Duke of Clarence, Horseferry-road, Westminster, S.W.—Our members fished a match at Chelmsford, on August 30. Mr. Wheeler took first prize with a good show of bream, roach, perch, and dace. Our worthy host, Mr. J. Evans, weighed in some nice perch from the same place.—F. Taylor.

South London United Anglers' Visiting List.—A return visit of the clubs enrolled on the above list was paid to the Clapham Junction A.S., on the 1st inst., and I am pleased to say was a fair success. Although there were only fourteen clubs represented, most of them turned up in strong force, making up for the absence of others. On the roll being called at eleven o'clock sharp, the following clubs responded: Bermondsey Bros., Second Surrey, Rodney, South London, Wellington, Anglers' Pride, Grange, St. George's, St. Thomas's, Amicable Excelsior, Cliftonville, Causton, and Clapham Junction. After calling the roll, Mr. J. Wright, vice-president of the list, presented the half-guinea given by Mr. George George, for the largest roach taken in the late competition at Amberley, to the successful competitor, Mr. Gordon, of the Wellington A.S. The next visit will be to the St. Thomas's Angling Society, held at the Waterman's Arms, Paris-street, Lambeth, on Tuesday, the 15th inst., when I hope to see every society on the list present.—A. Conn, hon. sec.

St. Andrew's Piscatorial Society, Turk's Head, East-street, W.C.—The members of the above club held their annual dinner and tea at Mr. Henly's, Black Dog and Duck Inn, Bury, near Pulborough, Sussex, on August 30. Mr. Chevalier officiated at the head of the swim, faced by Mr. Roberts, sen. This proved the best outing the above club have had, great credit being due to Mr. Henly for his admirable catering.—B. Chevalier, sec.

St. George's Angling Society, Prince of Wales, St. George's-road, Peckham.—We fished our third series of prizes on August 30, when only two out of the four were taken. Mr. Etherington, first; Mr. J. Beard, second. Members can go where they please for the other two prizes. I wish members would turn up stronger on meeting night, as we have special business on.—G. Etherington, sec.

St. Thomas's Angling Society, Waterman's Arms, Paris-street, Lambeth, S.E.—The members of above club visited Harlow, Essex, on August 30, when Messrs. C. Fisher and J. White were successful in taking prizes, with some very fine roach; others not so successful had also some fine roach. The next visit on the South London Anglers' Visiting List comes to us, and will take place at the above club on Tuesday, September 15, when we hope the clubs enrolled on the list will give us a bumper. —G. Morton, sec.

Stepney Angling Society, Beehive, Rhodeswell-road, Stepney.—On the 30th inst., our competition at Dagenham took place; and although the day was fine, and wind and water all right, only five out of the eight prizes were taken by the following, as placed, viz.—Willsher, Gerrard, West, Chambers and Nash. The remaining three prizes will be fished for by the unsuccessful divisions.—E. N. P., hon. sec.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Several members of the above were out on the 30th August, of whom the following weighed in: Messrs. Harwood, Reaves, and Taylor (roach and dace); Mr. Carpenter, specimen bream, Mr. G. Boreham, specimen roach; and Mr. Lewis, specimen dace, each having a fair show of other fish, and Mr. C. Boreham a show of roach. Our "Sunlight Soap" competition is arranged to be fished on Sept. 6, at Staines, members to start first train same morning. The first prize is a case of "Sunlight Soap," kindly presented by Messrs. Lever Bros. —H. Reaves, sec.

United Brothers, Deptford.—Several members of the above were out on August 30, with the following result: Mr. W. Wood, bream; G. Marshall, bream; S. Cockerton, bream and perch; W. Windred, club and roach; F. Beak, roach; B. Champion, roach; D. Hayden, dace. Several other members were out, but did not show up.—H. Tyler, secretary.

Waggoners Angling Society, George and Dragon, Vauxhall-cross.—We had some fine shows on the 30th by the following gentlemen: Mr. Bird, senior, Mr. Clegg, and Mr. Ilsley. We had a fair attendance on Sept. 1, Mr. Philips in the chair, faced by Mr. Smith, *pro tem.* Mr. Philips was elected chairman in place of Mr. Moring; Mr. Pethy was elected vice-chairman in place of Mr. Smith, for the ensuing quarter.—H. C., hon. sec.

Walham Green and Fulham Angling Society, Stansford Arms.—At the usual weekly meeting Mr. Cobble and E. Smith were proposed to become members. Since my last several of our members have been out, with the following result: Messrs. Callow and Templeman, at Richmond, roach and dace; Mr. Allder and Warner, Bourne End, roach; Mr. G. Smith, on Wednesday, a brace of rudd, from Potter Heigham weighing 2lb. 1oz. I have to remind members that a pegged-down match takes place on Sept. 6, at Kingston, when all members are requested to attend.—E. Sutchall, sec.

Waltonian Angling Society, the Cape of Good Hope, Albany-street, Regent's Park.—On August 30, most of our members were out, but the weather as usual was anything but what we should have liked; it was quite cold, and the fish were not very plentiful. Messrs. Morris, roach and dace, 6lb., one dace 9¼oz.; H. Putnam, roach 1lb. 1oz.; Waltham, roach, 2lb. 5oz.; Miller, roach, 2lb.; R. Dodge, W. Dodge, Dodge, senr., and Marriott also weighed in.—J. Packman, sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 30th ult., Mr. C. Newbery showed 25lb. of roach and dace; Mr. A. Cooper, roach and dace; Mr. Dartnall, bream and roach; Mr. Bryant, bream and roach; Mr. Enover, roach and dace; Mr. Gordon, roach and dace. The September competition will take place on September 6, at Sunbury, from the Cherry Orchard to Sunbury-lane; all to go down by eight o'clock (Waterloo); cease fishing at six o'clock; show fish at bridge, and return by seven o'clock train from Sunbury. There are two slight alterations to Rule 15.—R. J. Dartnall, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—We had an outing at St. Margaret's on August 30, the prizes being taken by the following members: Messrs. Parslow, first, with roach, largest fish 1lb. 6oz.; Blyth, second, roach; Hertland, third, roach; Dessert, fourth, roach; Maples, roach; Mercer, roach; and Francis, a nice show of bream, largest fish 3lb. 1oz. I hope all members will attend so as to get the books clear by quarterly night.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford. — Our members were out on the 30th, and the following weighed in fish: Mr. C. Beckett, 1lb. 13oz. of rudd; Mr. T. Smart, 1lb. 3½oz. of rudd; Mr. R. Lowther, 1lb. 1½oz. of roach; Mr. F. Horner, bream. I wish to remind our members that it has been decided to have a photo group of the members taken, and we hope all that wish to be in the group will attend on the evening of the 6th inst. to arrange the day and place.—R. Lowther, sec.

West London Angling Club, Dartmouth Castle, Hammersmith.—The members of this club held their quarterly meeting on the 27th ult. Mr. M. S. H. Digby was elected a member, Mr. S. W. Digby was elected chairman, and Mr. Leaf, vice-chairman, for the ensuing quarter. Messrs. R. Mallinson and H. Lidgard volunteered to act as delegates to the Central Association. Mr. R. Dean, our host, was unanimously elected co-trustee of the club with Mr. J. B. Holloway. The second match of the season will take place on September 24 or 27, bank or punt, in any public or daily subscription water, for three prizes, weights, 5lb., 3lb., and 1lb. Members are allowed to start the day before, but not to fish or ground-bait previous to the day of match, and all fish to be weighed in on the day of capture. Members fishing on the 24th inst. must give notice at the club house.—J. J. Hunter.

Ye Pluckie Perche Piscatorial Society, Earl Derby, King Edward-road, South Hackney.—The usual weekly meeting was held on Wednesday last, Mr. Hesse in the chair, when routine business was transacted. Messrs. Monro, Hesse, and Burne, fishing on August 30, had fair sport with the roach.—H. Richardson, hon. sec.

CLUB UNION ANGLING CONTEST.

Prizes: 1st, Value £2; 2nd, Value £1 5s.; 3rd, Value £1; 4th, Value 15s.

The entrance fees will be divided into consolation prizes of 7s. 6d. each.

Conditions.

1.—Each competitor must have been a member of some club in the Union for at least three months immediately preceding the date of entry.

2.—Intending competitors must send their names and addresses to the secretary of the Union not later than Sept. 14, 1891, and a fee of 6d., together with a certificate from the secretary of their club that they are qualified under Condition 1.

3.— The contest will take place on Sept. 20, from Burnt Mill Lock to Harlow Lock.

4.—Each competitor entering will receive a numbered ticket, which must be produced to the judges on the morning of Sept. 20.

5.—Fishing will commence by signal, and all fish must be weighed in by 5.30 at the Lock House, Burnt Mill.

6.—The contest will be a roving match.

7.—One rod only to be used. Jack, eels, and bleak not to weigh.

8.—The judges will be—R. Gaston (Borough of Hackney), W. Anderson (Clapton Park), W. Starr (Paddington), F. W. Theobalds (N.-E. Bethnal Green). They will search all bags and boxes, give the necessary signals, weigh the fish, check tickets, and act generally as referees. In case of dispute, their decision to be final. The judges shall not be competitors.

Live bait prohibited. Fishing must take place from the towing-path, and the contest be under the Lea Conservancy rules.

Note.—All entries must be received at the Union office on Sept. 14.

AFTER A DAY'S FISHING,
Call on TIBBATTS,
AT "THE CITIZEN," 70, HOUNDSDITCH
(opposite Bishopsgate Church),
Two minutes walk from Liverpool-street and Broad-street Stations.

REPORTS FROM RIVERS, LOCHS, &c.

☞ *River Reporters who want forms and envelopes should send a post card to the Manager of the* Fishing Gazette, *St. Dunstan's House, Fetter-lane, London.*

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add { 30 min. for Chelsea.
40 ,, ,, Putney.
45 ,, ,, Hammersmith.
50 ,, ,, Barnes.

Add { 55 min. for Kew.
75 ,, ,, Richmond.
80 ,, ,, Twickenham.
85 ,, ,, Teddington.

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

Time of High Water at London Bridge.

English and Welsh Reports.

The Lower Thames.—General Remarks.—It will be well to remind the anglers, that Thursday next, the tenth of September, is the last day of the trout fishing season, and that whether those fish are caught afterwards either in barbel or jack fishing, they cannot legally be retained, as they after that time become unseasonable fish; and if found in the possession of an angler he renders himself amenable to the law. At the last meeting of the committee of the T.A.P.S. Mr. W. H. Jackson, one of the members of that body, whose business premises are at Brentford, and who had previously offered his services as a honorary river keeper for that important district was duly appointed; and complaints having been made of some illegal practices going on in the neighbourhood of Staines. Mr. John Keene, jun., who had expressed a willingness to serve in the same capacity, it was unanimously agreed to accept of his services, and instructions were given to apply to the Conservators for a deputation for each. Such assistance in various points of the river, in conjunction with the wholly paid keepers must be of undoubted value in the work of Thames Preservation. In visiting different portions of the Thames in our own district, I find many of our anglers are gone to the rivers and broads of Norfolk and Suffolk; and some who have returned speak in the highest terms of their sport, and of the facilities afforded by the Great Eastern Railway, with the unerring punctuality of their trains. I heard one angler, last week say, he had been down six times, and in no instance was the train five minutes late; and this has been my own experience. I am constantly receiving letters asking for information as to the fishing in the broads, and it is always a pleasure for me to give it. There is at the present time plenty of sport in the Thames, but anglers like other people want a change, and if they can get some good fresh water fishing, and enjoy the briny ocean as well, all I can say is let them have it. It is much to be regretted the old Surbiton sewer still gives great anxiety to the river keepers; and although it is to a certain extent filled up, the sandy matter still oozes through—and discolours the water, attracts the fish, and snatching continues to be practised when there is a chance, but the keepers hope soon to make an example.—B.

Richmond.—H. Heward, in four days, 30lb. of roach and dace. Job Brain in five days, 40lb., and H. Mansell during the week a similar quantity.

Twickenham.—C. Brown, in four days, 35lb. of roach and dace, and eight bream. S. Cole, in four days, eighteen dozen, and two bream. George Coxen, in three days, 42lb. and three bream. R. Coxen, in four days with Mr. Tarrant, 70lb., and two barbel. J. Coxen, jun., during the week, 34lb. J. Coxen, sen., in two days, 20lb. J. Dunn, in two days, 45lb., and one bream. J. Frost, in two and a-half days, 38lb., four barbel, two bream and one jack. A. Hammerton, in two days, 35lb., and five bream. A. Hennesy, in three days, 30lb. J. Jackson, in two days, five dozen, two bream and one barbel. Richard Moffat, in five days, 75lb., and seven bream. John Spong in six days, 70lb., six bream, and seven barbel; and F. Wiggins during the week 75lb., one barbel and a couple of bream.

Teddington.—Joseph Baldwin, in two days, four jack, the largest 8lb., two barbel and seven dozen of roach and dace. Benjamin Stevens, twelve bream, and W. McBride, in three days, twelve bream, and twenty dozen of roach and dace.

Kingston.—J. Wright, fishing from the bank during the week, fifteen bream; the largest 4lb.—and fourteen dozen of roach and dace; another bank angler in one day, four bream, and three dozen of roach and dace. N. Belton, in four days, twenty-five dozen of roach and dace, two barbel; the largest 5¼lb., four bream and one jack. John Johnson in four days, twenty-three dozen and nine bream; and J. Knight in two days, ten dozen, four bream, and one barbel.

Sunbury.—Messrs. T. and A. Stroud during the week, eighty-four dozen of roach and dace, fifty barbel, and seventeen jack. Mr. Butt with Snowball, eight dozen of roach and dace; Mr. Edward Clarke during the week, forty dozen of roach and dace, and twenty barbel. A gentleman caught a barbel of 3lb. with a live dace.

Chertsey.—John Poulter, one day, with Mr. C. Nastell, six dozen of roach; another day with Mr. Arthur Hebburn, of the Cricketer's Hotel, in four hours, four dozen of roach; another day with Mr. A. E. Armstrong and Mr. Cartwright in two hours, four dozen; and another day with a gentleman, seven dozen. L. Hackett, in one day, six dozen of roach and three barbel; another day, eight dozen; and another day, five and a-half dozen; H. Purss has been getting some good roach and dace.

Staines.—John Keene, jun., says he has been out the whole week, and done well amongst the roach taking from six to twelve dozen per day, but has only caught nineteen barbel during the week.

Upper Thames.—The continued rain storms have at last had the effect of bringing on a miniature summer flood, but this will last but a short time, for the management at the now workable weirs is so excellent, that superfluous land water is passed away as fast as it gets into the river. The water although high and somwhat coloured is in grand fishing trim, jack especially being well on the feed, and good roach rewarding those who use tail of lobworm or a bunch of gentles for bait. As the river drops and fines grand all-round sport will accrue to those who are lucky enough to be spending a late holiday at the Thames side. In the Temple waters lately Mr. J. Cox and friends have done well with roach, on one occasion when it was pouring with rain getting 16lb. of beauties in some two hours. Mr. Burling of Stratford, also amid much "heavy wet" greatly surprised himself and the roach. Thursday night—rain falling fast.—Marlow Buzz.

Thames (Datchet).—River is in the best of order. The barbel feed first-rate.—G. Lumsden.

Thames (Windsor).—Most extraordinary weather fot time of year prevailed during the past week throughour the Thames Valley. That it must have been equally rough in other parts, especially on the coast, is proved by the numbers of gulls which have been seen, as many as eighteen in one flock being noticed on the 31st ult. hovering over Clewer Point, which is about a mile from Windsor Bridge. Several anglers, in spite of the elements, succeeded in getting good baskets of roach and dace, also a few barbel and jack. The best basket was eighty-two roach and dace and one barbel by Mr. Vesey, of Windsor, and a friend out with James Gray. Mr. A. E. Harbard had six roach in a short time weighing 3lb. 2oz., largest 14½oz., but the handsomest roach during the week which I weighed was one of 1lb. 7oz., caught by Mr. C. H. Harbard, of Eton, a member of the local angling club. Rough rider Corporal Major Roberts, 2nd Life Guards, and Mr. Howard, of Windsor, in a short time (31st ult.) had a good basket, comprising roach and dace, forty-two fish in all. Mr. Howard, of the Friendly Anglers, London, and a friend (31st ult.—the roughest day so far this *winter*) had a handsome tray of roach and dace—forty-seven fish. Mr. Groves, of Chalvey, has had a nice brace of barbel, 6½lb. and 2lb., also a chub of 2lb.; and Mr. H. Sargeant, of Slough, a basket of roach, 4½lb. Another Slough expert, on a No. 10 fine-drawn "sneck" bend roach had on one occasion a pretty barbel of 4lb., besides fifteen roach—a handsome lot. I weighed a chub on the 2nd inst. 2¾lb. But few large ones have been caught; in fact, they could not be fished for. A few jack have been caught, best basket being four largest 3½lb. Water little discoloured, in favour of all-round angling.—B. R. Bambridge.

Ancholme District.—In one or two becks hereabouts, where new hatcheries of trout have been introduced, the same are getting very forward with spawn, in fact, the abdomens are quite distended with ova. This marks the approaching end of the season. The native trout are, as usual, backward, and are in splendid condition. One of the best flies for September is the Orange Dun, made as follows: body, light orange wool or silk; legs, amber red hackle; wings, dark starling's quill. The Needle Brown is also a good killer at the end of the season, as it is then in the very best condition. The week has been too tempestuous one for the Ancholme, but a few good bream and other fish have been taken. Sport should be good with finer weather, as the water is in fair colour.—Thomas Ford.

Barle (Dulverton).—Heavy baskets are being, and have been killed with the worm. Salmon running up to the higher waters. Colder, cloudy, with steadily falling glass. River still very full; if it runs off, the fly and minnow should prove killing.—Iron Blue.

Chichester and Sussex Rivers.—After several stormy days the weather as I write (Thursday) has materially improved. Those who have braved the elements by the water side have been fairly successful. Some bream up to 3lb., and roach to 1lb. have been taken from the Arun above the town. Mullet have been seen in quantities but are not feeding. Rag-worms in the lower portion of the river is the leading bait, and I think would tempt the fish in the higher water. Roach and dace afforded sport in the tidal portion of the Aden on the 30th. A basket of 10½lb. was taken by a visitor, several fine roach among them. The Rother is high and a shade discoloured. A few good roach, perch, and a trout of 1½lb., are notified, and gudgeon to those who are fond of this delicacy—are numerous near Selham. A few small pike have been taken with gudgeon as bait. From the Ouse, roach and chub, and a pike of 6¾lb. The Canal at Chichester is in excellent trim. The basin near the station is the best spot at present; the recent stormy weather has driven the larger fish into this deeper water. A few small pike, bream up to 2¾lb., and roach weighing ¾lb. have been landed. Mr. Paul Bedford, on the 29th, with live bait captured a perch weighing 3lb., which was sent to Mr. George Moore, the well-known naturalist, of Chichester. Anglers should take advantage of the change in the weather, as fish are plentiful in all districts and are now well on.—George F. Salter.

Douglas (Isle of Man).—With plenty of water, plenty of fish, and a decided improvement all round in the weather, neither anglers or tourists have anything to grumble at. During the past week most of the streams have been too heavy for fly, but are now in excellent order, as are the fish. Any fly with a bit of tinsel will kill sea trout now. Sea fishing is exceptionally good. The mackerel, though small, are plentiful professionals getting from ten to twenty dozen in one tide's fishing; amateurs from four to five dozen, but the pros are up and off before daybreak, and go about five miles off, whilst the amateurs do not care for more than a mile or so, where they get much larger fish but not so numerous. There are plenty of splendid haddock, up to 12lb., in Laxey bay. Best bait, mussel; whilst all other sorts of fish are numerous and hungry.—Stormy Petrel.

Dove and Tributaries.—The water has been coloured nicely for days' but, as rain has fallen incessantly, almost few if any fishermen have been out. We hear of some good fish being taken from Bently Brook with the spinning bait. If the weather proves dry during the next two days or so, the water will be in condition for the fly. At the rate the rain is and has been descending all to-day (Thursday) the river and streams hereabouts will get bankful by to-morrow.—D. and W. H. Foster, Ashbourne.

Eden (Armathwaite).—River running very high. Prospects seem very good in a few days. Weather seems settled. Netting went out on the 31st. Some good baskets of trout have been made off the bank with the worm. Mr. Higgin, Armathwaite Castle, twenty-six trout; Miss Dixon, Armathwaite Hall, sixteen splendid trout.—Armathwaite.

Eden (Carlisle).—After last week's flood fell about 3ft., anglers had rather a good innings with the worm among the herlings. Baskets from 10lb. to 16lb. were made by Messrs. R. Strong, Joseph Fox, Thomas Little, William Routledge, and others, and the fish were remarkably fine. The river was again in flood yesterday, and is to-day (Friday) the right height, but too clear for bait-fishing. Net-fishing in the river closed on Monday, and on the whole the season been a good one. There was another heavy run of fish last week, of which the Solway fishermen got the lion's share, the river nets being kept out for many hours by the flooded state of the river. A great number of salmon have run through to the higher reaches above Armathwaite. Mr. Raine, the Edenhall headkeeper, has already killed five with the rod, and another gentleman the same number. Given good fishing weather, the rods should have more sport than is usual in September. By October the fish already up will be getting rather stale.—Silver Grey.

Esk (Whitby, Yorkshire).—During the past week the Esk has been in capital order for fishing, for there has been plenty of water, and with the improvements that have been made in the passes—the design of Mr. John Dickson, Glaisdale—fish have got up readily. The upper streams are now well furnished with salmon and salmon trout, and the next week or two should afford plenty of sport for anglers; indeed, no ordinarily good hand with the rod need fear returning home without some result of his enterprise, for, given a fair day, he is bound to be successful in a more or less degree. The river was never so full of fish as it is now. Mr. C. J. Keighley, son of Mr. Keighley, Spring Hill House, tops the record this week with eleven salmon, the weights being respectively 2lb., 4½lb., 5½lb., 5½lb., 5lb., 5½lb., 3½lb., 5lb., 2¼lb., 2½lb., and 5lb. Mr. J. W. Nicholson, Talbot Hotel, nine salmon, of 5lb., 5lb., 7lb., 4lb., 8½lb., 6½lb., 6lb., 4lb., and 6lb.; Mr. D. Green, Grosmont, five, of 13lb., 9½lb., 5lb., 7lb., and 5lb.; Mr. J. H. Keighley one of 10½lb.; Mrs. Keighley, one of 8lb.; Mr. Jeaffreson, Leamington, one of 16½lb.; Mr. Ward, one of 11lb.; Mr. J. R. Ansdell, Hull, two, of 12lb. and 6lb.; Mr. J. R. Bulmer, Hull, three, of 17lb., 3lb., and 12lb.; Mr. R. Linton, nine salmon, one of 13lb., six averaging about 5lb. each, and two, of 6lb. and 4lb. respectively; Mr. John H. Leng, five, of 11lb., 5lb., 6lb., 7lb., and 4lb.; Mr. J. Dickson, one of 5lb.; Mr. F. Lloyd, one of 4lb.; Mr. Robert Hay, Grosmont, four, of 3lb., 4lb., 4lb., and 3lb.; Mr. R. B. L. Johnston, one of 8lb.; Mr. E. Chapman, one of 13lb.; Mr. J. W. Wheldon, Pickering, three, of 7lb., 6lb., and 4½lb.—Jno. J. Jackson.

Idle (North Notts).—There have lately been complaints that the water of the Idle has been too fine for successful fishing, but the unsettled weather, prior to the last day or two, has been more responsible for the poor takes. It has been altogether too windy this week for trout fishing; but as a change has come over the weather, we may expect better things. In the lower waters weed-cutting is interfering with the chance of sport. Up to the time of writing very little sport is reported. A few small roach are the lot of the bottom fishers mainly, but several nice pike have been taken by the trollers. One, a nice fish of 10lb., was caught a few days ago near to the Carr bridge at Retford. I hear the canal has now been cleared of weeds in the favourite places, so probably there will be better reports in that direction. Eels are again running, and good hauls may be made.—L.

Lake District.—The rain that has proved so disastrous to agriculturists has in one sense been a boon to fishermen. The floods have rendered otherwise impassable obstructions easy to surmount, and a fair number of sea fish are now in the rivers. Mr. R. B. Lee, of the *Field*, fishing on his reserved water at Low Levens, has had some heavy baskets, including a 9lb. salmon. Mr. R. Chorley, Mr. J. Whitehead, and Mr. R. Garnett, each have taken a number of mort on the lower reaches of the Kent; the former gentleman landing five at one fishing, two of which scaled 2½lb. each, and the other three 2lb. each. With more settled weather the prospects are bright indeed.—Westmeria.

Lea.—There is not much to report in the way of angling successes this week, with one or two exceptions—Waltham Abbey being the prominent one. Here angling has been very good. One day Mr. Jim Finley had four jack, weighing about 20lb.; Mr. Webber, member of the local club, had two jack, and amongst others a London angler had some nice roach, some of them weighing from ½lb. to 1lb. each. The Waltham Brothers Angling Club brought off their contest on the 30th ult., the winners being Mr. Appleton, first; Mr. Beach (secretary), second; and Mr. Dean, third. The match was for roach only. Last week an amusing obstacle race was brought off here. The conditions were that the competitors had not only to surmount the ordinary obstacles incident to a fisherman's cross-country race (to catch a train, we will say), but had to swim across two rivers as well. Mr. A. G. Beach, the energetic secretary of the Waltham Brothers Angling Society, was the winner. The race was promoted by Mr. H. Avis, of the King's Arms' fishery, who acted as starter and referee. The affair was a decided success, as such fishermen's races should be. From the waters above I have not been able to get much information, for an unreasonable reason, which is, that anglers will not let the innkeepers on the spot know what sport they have had. This I call a "dog-in-the-manger" sort of style of doing business, to those who cater so well for them. Presumably, an innkeeper, whether lessee of a fishery or not, should have the chance given to him to advertise and make public what sport has been had in his immediate vicinity. For successful anglers to give particulars as to the baits used or the swims is not necessary or expected, but still there ought to be a sort of Freemasonary amongst the brotherhood, and let the gentle precepts of dear old father Izaak Walton prevail. In the lower reaches there has been little doing. At Sewardstone, in some of the pools I saw plenty of good roach. Ponder's End: Some good roach have been taken bottom fishing, and a few nice dace with the fly. Cook's Ferry, Games's, and Ferry Boat, Tottenham, only a few roach and perch, with a small jack or two.—Spliced Joint.

Leicester.—Owing to the suddenness of the storms, almost daily, anglers have not ventured far away from Leicester, the resorts at Narborough, Blaby, the Wreake Valley, and other places, not receiving anything like the amount of patronage usual at this part of the season. Pike fishing has been extensively pursued lately, but mostly at the private lakes, the *locale* of which anglers reserve strictly to themselves. Good lots were shown at the clubs. At the Leicester town waters the fishing has been very successful for a week or more. From the north end of the town up to Aylestone, the waters have yielded large quantities of roach, and in several instances fine specimens of chub; and at the Twelve Bridges lots of baskets averaged from 6lb. to 9lb. per rod. A few of the more successful were Messrs. H. Prime, A. Bacchus, W. Tyler, and W. Manship. Eels—owing to the flushing of the waters—were biting well, and several of the silver-bellied samples shown were capital fish. From the higher reaches at Aylestone splendid results are obtained, and although fished continually, the sport among the roach, perch, chub, and dace has been of a superior kind.

Lugg and Arrow (Leominster).—Both these streams have now gone down and cleared again, and are in order for either fly or bottom fishing. The weather has been rough and very windy, and angling has been slow. The rush of water has improved the fishing, and the fish have been moving well at the fly. The flies used are the Willow, August Dun, and Pale Dun. In the Lugg a few good fish were taken on Tuesday. The Pinsley is clear, no fishing in it at present.—Gwynne.

Lugg, Arrow, and Pinsley (Kingsland).—Strong gales and heavy storms of rain have for the past fortnight caused these rivers to run high and muddy, completely out of order for grayling fishing. Yesterday and to-day (Thursday) it has been much finer, and if the present weather continues, by Monday the waters should be fit for the fly. Flies, August Dun, Red Tag, Green Insect, Silver Dun, Mid Blue, and Pale September Dun.—R. T. Williams.

Medway (Tonbridge).—The recent rains have made the water as thick as possible, but the heavy run of water will soon clear it if we have a few days find weather, and then there will doubtless be plenty of sport. The stock of of fish is plentiful, but anglers cannot expect to do much till the water clears.—Ye Medway Water Rat.

Norfolk, Suffolk, and Cambridgeshire Waters.—Wind, gales, rain, and hurricanes have been the order of the day here for nearly a fortnight; still, for all that, anglers have been out in good numbers, and a lot of good fish taken. I certainly never remember such weather. River-banks and lands near the river have been flooded, and run off and flooded again time after time, and it's only by dodging at the corners of rivers and broads you can get a line in at all, and it is only the hard and determined angler that has any chance of sport. I counted nearly twenty members out on Wednesday last. Some of them had beautiful lots of bream and roach from the Ouse, at Littleport, and Queen Adelaide swims. One gent took a lot of fine dace at the Branch Bridge—real good ones. I had a try myself with Mr. T. Clark. We took 13lb. between us. This water is now in good condition. I had a run down to the Brandon river on Monday. There were several anglers out, but the rain came down in such blinding sheets you could not fish. Three fortunate anglers I sent down to the cross waters at Burnt Fen had rare good takes of perch, baiting with gudgeon. Several good trays of roach were shown me on Saturday, taken from the Lark, at Mildenhall, and West Row. Dace are in fine condition now from this stream; red worms and gentles are the best baits. Near Barton Mills, one mile from Mildenhall Station (G.E.R.), there are some beautiful swims, full of very large roach, dace, and chub from Buckenham, Reedham, and Cantley. On the Yare fish are well on; the water very high and coloured. I must request my angling friends to use a good deal of discretion before taking a long journey in the present unsettled state of the weather. Some good quiet swims can be found at Brandon, and friend Ralph will see you are taken care of. Weather at time of writing very windy, wet, and dull; not at all tempting to go on. Wind is certainly a curse on all angling. Great damage has been done all through the districts here by the gales.—William Howlett.

Ouse (Brandon, Norfolk).—I never knew a more uncomfortable time for anglers as the last two months have been for the summer. Host Ralph's expectations have been, as far as the angling is concerned, with his every attention and care, most discouraging and disappointing. Now St. Swithin has gone, thank goodness, and a new moon has set in, I hope and trust it will bring anglers' much lost pleasure with it. There is no mistake the fish are here, and swims have been cut out for the anglers' comfort. Since my last report, and during the week up to Wednesday, not much done. I am happy to state for the information of new anglers, especially the juniors, this is a free river, and as one of the most practical anglers remarked to me at the fishing match of the Cambridge Jolly Anglers, who fished himself in various waters, there are no roach to beat Brandon for gameness and quality. So we are looking for a good autumn season for all coarse fishing, viz., roach, perch, dace, and pike. Boats at the Ram Hotel. Railway service excellent for a long day's fishing.—John O'George.

Ouse (Huntingdon).—The weather has been unsettled and put fishing almost at an end. Nothing important has been done, although the water is in primo condition. At the time of writing the weather has changed, which will bring fish on the feed, and it is to be hoped that sport will be good with the bream. Jacking has commenced, but only a few small ones have been taken and returned again. Prospects very good.—H. Rout.

Plymouth.—The rivers are in first-rate condition, and the salmon are well up the rivers. Several good baskets of trout have been taken, and they are above the average in size. The sea fishing has been interfered with on account of the boisterous weather, but when a fine day could be got, pollack and bass were well on the feed; Penlee and the Rame Head seem the favourite haunts for them. Blowing hard now from west; weather fine.—William Hearder.

Pulborough.—Two fine days; water gone down considerably. One catch on the 3rd inst., fourteen bream and two roach, weight, 6lb. 4oz. Water now in splendid condition. Glass gradually rising.—G. H. Nutt.

Scarborough.—(Sea Fishing).—Boat anglers have been having excellent sport with mackerel (which run unusually large this season). One angler caught about thirty during one afternoon last week, and besides whiting, and flat fish. Gurnard are very abundant in the bay just now.—H.

Severn and Lower Teme (Worcester).—Both streams very high, and during the past week all but unfishable. The water is running down fast now, and will be fit for sport in a few days. Some few baskets of roach and eels have been taken during the week, but nothing of importance. All are anxiously looking for the bright beams of the sun to shine on us again.—Wingfield.

Severn (Shrewsbury).—The recent heavy rains have risen the river very considerably, and the water is much discoloured; until it clears fishing will be useless. Before the rise, one or two good fish were taken. Mr. Humphreys took a 5lb. pike near the town, and some of his companions were also successful. Mr. Goodman fishing at Tern mouth, last week, took a small pike, and a few chub and perch have also been captured, but angling on the whole is dull.—Piscator.

Teme (Ludlow).—The water in this district has now run down and cleared, and is in order for either fly or bottom fishing. The weather has been very windy and rain has fallen. The fish are now moving better and are taking the Whirling Blue, Willow, Red Ant, Green Insect, Pale Dun, and August Dun. For bottom fishing, worm and Wasp Grub are the best baits. Minnow fishing has been dull. In the Burway water, at the end of last week, a gentleman took three good grayling, one scaled 1½lb. and the other two 1lb. each, with the Wasp Grub. With the fly, five nice trout were landed. Below Burway House, a gentleman landed eleven eels with the worm. Under Whitcliffe, some nice trout have been taken with the worm. The Ony, Corve, Clun, and Ledwyche are all clear and in order for fishing. There has been a few anglers on the banks. In the Ledwyche, ten brace of trout were caught with the Wasp Grub. In the Corve, sport has been good. —S. Ludlow.

Teme (Tenbury).—The Teme in this district is now lowered, cleared, and in a day or so will be in capital order for angling. The weather has been very rough and rain has fallen. The fish have moved better since the rain and take the fly and wasp grub well, and some very nice fish have been taken this week. The Rea, Kyre, and Ledwyche, are all in order, fishing quiet in them at present.—Worcester.

Torridge (Torrington).—We have had two big floods since last week's report. Many salmon have been taken in the Mid Torridge. G. Parton took four salmon, four peal, and five large trout, all with the salmon fly in one day's fishing, and he has taken eight salmon before this season, making twelve. Trout have been sporting well in the small streams, both with fly and minnow. R. Skemp took thirteen trout with the fly on Thursday.—Practical Angler.

Wharfe, Yore, Swale, Nidd, &c.—It is very many years since these there have been such heavy floods in the Yorkshire districts as during the past fortnight; the roads between Middleham and Legburn were impassable one day last week, and the damage done to the crops is enormous; no sooner does one flood subside than another comes, rendering any kind of angling an impossibility. As soon as the weather does settle, however, we may look forward to the best sport of the season.—Francis M. Walbran.

Witham (Dogdyke, Lincolnshire).—Anglers wishing for good bottom fishing should not miss the present opportunity. Some good takes have been had during the last week. Mr. W. H. Robinson, of Sheffield, caught about 4lb. of very fine roach; Mr. Ashton, of Manchester, Mr. Bibby, and several gentlemen from Leeds have had capital sport. All the fish were caught with creed wheat on very fine gut. A gentleman from Leeds caught several pike, the largest weighing 14lb.; Mr. W. J. Sinclair, of New York, caught 2st. 9lb. of roach, averaging 12oz. each. I may add, the water is in splendid condition. All the above were caught in the water opposite the Packet Hotel from a punt. Anglers cannot do better than try this place, as it is not over-fished. Excellent accommodation can be obtained at the hotel mentioned above, kept by mine host, Mr. Ben Watson.—H. T.

Witham, &c. (Mid-Lincoln).—Those who had arranged to visit this locality, on Monday, were sorely disappointed, owing to the heavy and continuous rains. Some who dropped down on the Saturday were even worse off, and nearly all returned on Monday night. A few who braved the elements did well, and I hear a club from Echington, Derbyshire, had the opportunity of fishing in the Boston end of the south Forty foot, one of the Back Sluice Drainage Commissioners' preserved drains, and among them bagged upwards of 200lb. of fish, chiefly roach. In all seventy-five fished, and all but four caught something. H. Webster had 6lb. 8oz. for first prize; G. Green, 5lb. 10oz., second, J. Green, 5lb. 4½oz., third, and so on downwards. Of independent fishing there was little done. Prospects, however, are much improved. I hear that a match under the auspicies of the Sheffield Angling Association, is being arranged for at Sarilby, on the Fossdyke, in about a fortnight. It is anticipated if the day is favourable there may be six hundred or seven hundred engaged in it.—LUCI.

Wye and Derwent (Derbyshire).—These rivers are in too high a state to afford much sport for fly fishermen, consequently little has been done. The Wye will not be in a fit condition before Saturday. Some good sport has been had at Darley and Matlock by the bottom fishermen, from four to six brace, Messrs. Else, Clay, Whyman, and Farnsworth, being the most successful. Should the present fine weather continue, we may look for good sport to the end of the season. Killing flies are Ash Dun, Claret Bumbles, Pale Evening Dun, and Little Blacks.—DOTTEREL.

Yare (Cantley).—Anglers have been doing very badly here in consequence of the rough weather, but on Wednesday sporting prospects looked more promising. Roach up to 1lb. have been taken with the boiled-wheat bait, but in no number, and very few bream have been secured. Jack between 5lb. and 6lb. have been weighed in at the Red House, and these much-sort-after fish are now beginning to leave the dykes for the open river. Spinning seems most popular.—GOOSEQUILL.

Yare (Norwich).—Some fair catches, I believe, have been had at Brundale and Buckenham, but lower down sport seems to have been at a standstill. On the Bure, better luck has been experienced, and in one case a take of 7st. of bream was had on a small Broad. Myself and a friend tried on Saturday last, but were only rewarded with about fifty or sixty small roach and bream, and some eels. The keeper at this place says sport had been very poor this past fortnight. I must confess I do not understand the cause, as fish are plentiful, and the weather has not, on the whole, been unfavourable. Perhaps September may see better luck.—R. MOLL.

East and West Cleddau (Pembrokeshire).—The rivers are now in splendid order, and good sport is anticipated for next week, with possibly a few chance salmon, as well as sewin.—H.

Lake Coron (Bodorgan, Anglesey).—Four anglers from Bolton in two and a-half days' bottom fishing took over forty trout. This time includes a blank day when nothing but eels were taken. The Rev. W. W. Thomas Pentrevoelas in worming the brook in a high flood had a very heavy basket of good sized trout. Fishing on the shore in very thick water one evening I took three trout about a pound each with a bluebottle. On Saturday evening in a boat with Mr. Coles I had three half-pounders with a sedge. The wind suddenly dropped as soon as we pulled to the end of the lake. On Sunday there came a sudden change, terrific wind, rain and hail. It has been blowing a hurricane ever since, and fishing is out of the question. I cannot advise anyone to come fishing this neighbourhood till these boisterous winds take their final flight. Men repairing the banks of the Cefui river, which flows into Malltraeth Bay, tell me that a large number of salmon were seen ascending. A license is required on this river which can be obtained, I believe, at the Bull Hotel, Llangefni, or from the secretary, Board of Conservators, Carnarvon.—W. H.

Lake Vyrnwy (North Wales, via Oswestry).—Although anglers have experienced another week of gales and floods in which boats could scarcely live, yet good sport has been obtained, yesterday and Thursday being the best days. On the whole Mr. J. B. Davison has been the most successful taking twenty-nine trout, 23½lb., closely followed by a keen angler from Norfolk with twenty-seven, weighing 19lb. Captain Stevenson has again done very well with twenty-four trout, 16lb. 2oz.; Mr. G. Ward, who has been on the lake very little this week got twenty-one, weighing 17lb., his basket of yesterday containing eleven lovely fish 9½lb., being the best individual day's catch for the week. Mr. Davison also had a very even lot of nine, weighing 7lb. Heaviest fish, Mr. Ward 1lb. 11oz., and 1lb. 10oz., the former was a unique specimen from this water being to all appearance a gillaroo with the exception of the so-called gizzard development. Mrs. Hollins and Mr. Davison two, 1lb. 9oz. each. Best flies, Alder, Claret and Grouse, Golden Dropper. The water is now in capital order, and anglers report fish rising plentifully, though coming short at times. Season close 15th September.—LONG DRIFT.

Teifi (Lampeter, Cardiganshire).—After a considerable amount of flood water during the past week or two, and, we may add, a good run of salmon, the water settled down on Saturday last into splendid fishing order, and several good fish were taken, viz., two by Mr. Peel (13½lb. and 8lb.); Mr. Evans, one (9lb.); and Mr. Davies, one (12lb.). Several good catches of trout were made a few days previously with the running worm, one basket slightly exceeding 8lb., and others from 4lb. to 7lb. each. We have again had a heavy fall of rain, quite enough to keep the river in good ply for another week or more.—H.

Towy (Llandilo, Carmarthenshire).—We only had some two or three days last week, on which fishing was worth attempting, when Miss May and Miss Maud Hughes, Trigib, took small baskets of trout. Our local anglers, Mr. Edwards, and Mr. Savill, each landed a few sewin (heaviest 2½lb.), and the former a salmon of 14lb., besides sundry baskets of trout, with the running worm. The net season closed on the Towy, on the 30th August, so we shall probably have a further run of salmon, and, let us hope some good sport to follow.—H.

Usk (Abergavenny).—In consequence of the late heavy fall of rain the river has been bank high for some time. It is now beginning to fall and getting a good colour. Anglers are consequently expecting some fine sport with the salmon. The river is now well stocked with fresh-run fish. Some very fine trout have been taken during the past week with the wasp grub. On the 2nd inst., three salmon weighing 15lb., 11lb., and 9lb., were caught in the association water by Mr. Wm. Davis.—JOHN CLARE.

Usk (at Usk).—Excellent sport is being had in the Usk during the past couple of days. Mr. F. H. Browne, on Wednesday, landed nine salmon besides losing eleven others; Mr. H. G. Cole caught three; Colonel Rocke, five; General Mignon, three; and Sir C. L. Barnard, three. To-day (Thursday), Mr. H. Humphreys caught five; Mr. Brown, four; Mr. Seymore, three; Mr. Harper, one, Mr. H. E. Cole, three; and many others have succeeded in capturing from two to six. The water will remain in order for at least a fortnight.—T.

Scotch Reports.

Altnacealgach Hotel Waters (via Lairg, N.B.).—Angling has been much retarded by the inclement weather which has prevailed more or less for the past two months. Since last reported the following baskets have been made—viz.: On Friday week, Surgeon-General Smith fished Loch Cama, and got twenty trout, aggregating 7lb.; Dr. Saundby, Birmingham, on same loch, landed one dozen fine trout, which averaged ½lb. each; and Messrs. Cook, on Loch Urigill, fifty-two trout, weighing 12½lb. in all. On Saturday, August 22, the only anglers out were Dr. and Mrs. Rose, London, who fished Loch Cama, and made a basket of thirty-one trout, weighing 12½lb. On Monday, Mr. Braggins fished Loch Urigill, and caught two and a-half dozen trout, 9lb. in all; and Mr. Clark, Bedford, on Loch Cama, three and three-quarters dozen, 12½lb. On Tuesday, Loch Cama was fished by Mr. Braggins, who landed one dozen trout, 4lb.; and by Mr. Clark, who made a basket of one and a-quarter dozen trout, averaging over ½lb. each, and a *Salmo ferox* of 2lb. On Wednesday, Dr. Rose, London, was out on Loch Urigill, and got over four dozen trout, weighing 15lb. in all. On Thursday, Mr. Braggins, on Loch Urigill, two and a-quarter dozen trout, 6lb.; Dr. Rose, on Loch Boarlan, two and a-half dozen, 10lb.; and Mr. Clark, Bedford, on Loch Cama, twenty-three trout, 8½lb. On Friday, Mr. Squarey fished Loch Boarlan, and made a nice basket of fourteen trout; Mr. Braggins, on Loch Veyatie, fifteen trout, 6lb.; Dr. Rose, on Loch Cama, two and three-quarter dozen trout, weighing on the average over ½lb. each, and a *Salmo ferox* weighing 3½lb.; Mr. Clark was on Loch Urigil, for half the day only, and landed three and a-half dozen trout, aggregating 12½lb.—McB.

Ayrshire Lochs and Streams.—The weather generally has been too stormy and wet for successful angling on the lochs of this district during the past week. In some of the hill streams capital sport has been had with worm bait.—HEATHERBELL.

Border Esk.—This river still continues high, and bait fishing is still continued. Some good kills have been made with the minnow in the Broomholm water, one basket of thirteen sea trout being the best haul, and Mr. E. Connell several sea trout, some herling, and a number of yellow trout. In the Canonbie water Mr. W. Byers, Thorniewhat, had four sea trout and ten herling. Mr. D. Armstrong, Byreburn, six sea trout and a creel full of herling; Mr. Doughty, seven sea trout; Mr. Walter Park, Brooklyn, a basket, 19lb., of sea trout herling, and yellow trout, in the Double water; Mr. J. H. Park, March Bank, a basket 16lb.; and Mr. Walter Scott, Holmfoot, 15lb. in the same water; Mr. J. Morrison, Langholm, several sea trout of 3½lb. After the great flood of last week a large number of herling were found in a field in Canonbie when the water fell in. Fair sport is being had in the Metal Bridge water by Colonel Whyburgh, Mr. Bradshaw, Mr. Campbell, Liverpool, Mr. Hall, Sheffield, and Mr. Yates, Liverpool, the latter gentleman landed a salmon 20lb, two grilse, 12lb. and 8lb., and a sea trout 2½lb. Water a little too high for successful angling in the lower reaches. In the Langholm water Mr. J. Archibald Jedburgh landed a salmon 13lb., With the worm in the Wash Pool, Mr. Brown, London, a sea trout, 4lb., and several smaller fish; Mr. C. Glendenning a basket, 8lb.; Mr. Walter Scott, Ashley Park, three sea trout; Mr. Thomas Bealler, four sea trout and a number of herling; Mr. Joseph Anderson, three sea trout and six herling; C. B. Scott, a good basket of herling; Mr. James Telford, four sea trout, one about 3lb., and six herling; Mr. W. Sanders, a dozen herling and several sea trout; Mr. W. McLellan, two sea trout; Mr. J. Telford, seven sea trout and two herling; Mr. J. Charlton, a number of herling; Mr. H. Dodds, Langholm, two sea trout; Mr. J. Harkness, two sea trout, one of 3lb.; Mr. T. Hounam, a good basket of sea trout below Langholm, and in the Bush Burn Mr. D. Elliot had thirteen dozen yellow trout; Mr. St. George Tucker, Eskdale Temperance Hotel, a number of sea and yellow trout, the sea trout averaging 2½lb.; Mr. J. Fleming, Eskdale Temperance Hotel, a sea trout 3½lb.; and Rev. J. Bed and Rev. E. Smith, staying at the same hotel, have made good catches of sea trout and herling.—GILNOCKIE.

Breadalbane Arms (Aberfeldy).—On Tuesday, Mr. Christie fished Loch-na-Craig, and got eleven trout, 3lb., and on Thursday, nineteen, weighing 5lb. 3oz., and on Saturday, Mr. Cornillon, got twelve trout.—A. N.

Braemore (Duke of Portland's).—The duke's guests have had excellent sport on the Berriedale and Braemore rivers. On Friday of last week, Lady Gore captured seven fine salmon.—J. Y.

Carron (Easter, Ross, Ardgay, N.B.).—So far as can be ascertained not a single salmon or grilse has been landed during the past week. Fish are plentiful in most of the pools, and a number of anglers have been out, but owing to some cause or other, inscrutable to all but the fish themselves, they will not take. Mr. Mervyn King, Clifton, Bristol, while fishing the Balnagown Arms Hotel water on Tuesday, this week, got a beautiful sea trout, weighing 2lb.; Miss King, Clifton, Bristol, has been having good sport in trout angling on the Kincardine mountain streams. On Saturday last she landed two dozen, and on Monday, this week she made a basket of thirty-five trout. Up to Wednesday evening the weather was still unfavourable.—McB.

Dee (Aberdeenshire). — The autumn prospects have seldom been so bright. In the experience of the oldest fishermen on the Dee, this is only the fourth season within their memory when there was so lively a look out for the middle and upper reaches during the "back-end." Just in the nick of time the floods came away last week and fish have been running freely, and as this is only the advent of September, two months good angling is in store for the lower and middle reaches at least. On the Balmoral and Birkhall waters, the officers of Her Majesty's Guard of Honour and others, have been fairly successful. The Queen has graciously caused the spot where the late Lieutenant Barret was last seen alive, and who it may be remembered was drowned whilst angling on the royal waters in early summer, to be marked with an obelisk stone, with a suitable engraving. On the Ballater water, Messrs. Webster Glenmick are having fair successes; while Mr. Frank Gaskell, on Friday last, landed a magnificent fish of 26lb., and another of 8lb. On the Glentana Water, a few red fish are being had, but no autumn fish. On the Aboyne water, on Saturday last, Mr. Upcher landed a salmon of 28lb. On the other sections of the Dee, Admiral Fane and others have lost one or more after most exciting runs. On the Drum water, Mr. Francis Irvin landed one of 8lb. on Monday, and another of 16lb. on Tuesday; while Mr. Hugh McDonald had two of 11lb. and 12lb. respectively, on the Park water. On the tidal reaches splendid finnock fishing is now being had.—DEESIDER.

Deveron (Banffshire).—The close of the salmon net fishings on the river Deveron and coast district, last week, was the heaviest during the last three days experienced for many years. At all the stations the hauls were exceedingly heavy, and no less than a total of ninety boxes that week were consigned to the English markets, the largest quantity for any week since the opening of the fishings. The fish, both grilse and salmon were of heavy weight. The salmon fishings on the coast westward from that of the Deveron we hear, have been the opposite way, and have been the most unproductive of any season since 1883. The volume of water was so strong on the Deveron by the continued rains, that it was the beginning of this week before the cruives were removed. Numbers of fish were observed sporting themselves in close proximity to the dykes impatient to get through. Although the water is not yet in too good fishing order, a grilse of 7lb. was killed on Monday, on the lower water, and last week several salmon and grilse of 4lb. to 12lb. were killed on the upper waters. The weather is not at all settled. Barometer continually falling, and on Wednesday it was rough and wet.—H. W.

Dunbeath.—The Lower Dunbeath party made some very fine baskets of yellow trout and sea trout last week. Lady William Call killed several fine trout. A local angler caught a dozen nice trout on the Achorn Burn, a feeder of the Dunbeath water. Weather unsettled.—J. Y.

Forsinard Hotel (Sutherland).—There is a possibility of anglers having too much water even for trout or salmon fishing. The uniniated would have thought that such could not be the case that the more rain the better for trout and salmon fishing. But such is not the case, as the experience of the past month will prove. During the last two weeks Mr. Ratcliff and Mr. Dun, and Mr. Kirwan having been trying the lochs but could only make baskets of thirteen dozen, up to two dozen trout, but good sport was got in the brooks and upper reaches of the Halladale with worm. Several sea trout were caught and the latter gentleman while fishing for trout with stewart tackle caught two grilse of 4lb. each. On the Halladale river nothing is done with fly as salmon wont rise, though the river is swarming with them.

Glencoe (King's House Hotel).—Mr. Myers fished Lochnastang, from King's House: Wednesday, 4doz., 10lb.; Thursday, 10doz., 20lb.; Friday, 7doz., 25lb.; Saturday, 8doz., 30lb. The lochs are in good order for anglers.—DUNCAN MACKENZIE.

Inveran Hotel Waters (Invershin, N.B.)—The past week's sport in salmon and grilse angling has but a poor record to show. Mr. Hall, from the Sutherland Arms Hotel, fished the lower reaches on Thursday, and caught a grilse, weighing 6½lb. on Angus Pool. On Friday, the same angler grassed a salmon of 8½lb. on Poll Clarag, and Mr. Farmantle, one of 7½lb., on Angus Pool. On Saturday Mr. Lewis Hall was out and landed two fish. Monday was blank.—McB.

Kenmure Arms Hotel (New-Galloway).—The fishing has been better in this district this week. The rivers and burns have been in flood. Several salmon have been caught in the Ken and the Dee during the week. Dr. W. H. Fenton, of London, fishing from the Kenmure Arms Hotel, on Monday, had good prospects of sport, killing over a dozen in the course of an hour, but the water came down in flood, and he was compelled to give it up for the day. Wednesday, Dr. Fenton had a basket of about a score of brown trout, the heaviest weighing 1½lb. I hear of other good fish having been got this week, one weighing 2½lb., caught by Mr. Grierson, jun.

Lairg (N.B.).—Monday of last week was wet and unfavourable for sport. On Loch Beannoch, Messrs. Allen killed four fine trout, heaviest 2¼lb. On Shinness Bay, Mr. J. Gray, Newcastle, caught fifty lovely trout. On Tuesday, Mr. C. Shaw-Lovell, London, fishing the lower end of Loch Shin, landed a grilse of 6¼lb.; Mr. Macleod, on Loch Shin, caught forty-five trout. On Thursday forenoon almost continuous rain fell. Mr. C. Shaw-Lovell, London, fished Loch Shin, and caught seven trout, 4¾lb. Thursday was fair and bright. Mr. Lovell killed five trout, scaling 5lb., on Loch Beannoch. On Friday rain fell in torrents; Mr. Lovell made a basket of nine trout, 4lb., on Loch Shin.—J. Y.

Liddle.—This river has been affording good sport during the recent floods. Mr. May, Liverpool, had a grilse, 5½lb.; Mr. Tom Cairns, Newtown, one, 5lb; Mr. J. Graham, Crookholm, one, 8lb.; Mr. Harper, London, a basket of sea trout and herling; Mr. C. Byers, Langholm, one grilse, three sea trout, and several herling; Mr. J. Elliot, one salmon, 13lb.; Mr. A. Nicol, a dozen herling and sea trout; Mr. W. Armstrong, nine sea trout; Messrs. A. Little and W. Hope, seven each; and Mr. W. Tait, six sea trout. Mr. J. B. Balfour, Mr. G. Cumming have had good baskets of trout, and Messrs. Green, Sunderland, have had good takes of herling and sea trout; and Mr. T. Armstrong, Wetheral, a creel of herling weighing 15lb., in the Kershope Foot water.—GILNOCKIE.

Loch Carr (Rielonie, N.B.)—This loch has of late been yielding capital sport to Mr. and Mrs. R. T. Coupland, Station Hotel, Invershin. A great proportion of the trout caught weigh over 1lb. each.—McB.

Loch Leven (Kinross).—The angling season closes to the public to-day (Saturday), and but little sport has been got during the past few days, owing to the weather, which has been the stormiest we have had this season. On Tuesday the wind blew with such violence that none of the boats could go out, and occasioned great disappointment amongst the numerous anglers forward, who were unable to book for the following day, owing to all the boats being previously engaged. Wednesday, although scarcely so boisterous, was, nevertheless, most unfavourable, although anglers, rather than lose the only day on which they could procure a boat this season, were glad to try their deftness for the last time this season, but with little success. The final club competition took place on Monday, by the Glasgow District Angling Clubs' Association, a report of which will be seen in another column. The usual competitions for the patron's prize and the championship will take place here on Monday and Tuesday, first after the loch is closed to the public.—ROBERT B. LAING.

Loch Rannch (Kinloch Rannoch).—Subjoined is the angling report and list of takes by parties resident at the Dunalastair Hotel during the past few days:—On the 24th ult., Captain Budd, of London, succeeded in capturing ten pretty good fish, on the loch; Dr. Banks, secured a basket of 5lb., on the same water; Mr. Marriage, of London, captured six trout; and Mr. Taylor and Mr. Kyd, of Edinburgh, had a take of 7½lb. On the following day, Mr. and Miss Kingsford, of London, secured a basket of 3½lb.; Mr. and Miss Marriage both obtained pretty heavy baskets; Captain Budd killed thirteen; Messrs. Taylor and Kyd, on the river, captured sixteen fish (all heavy trout); Dr. Holden and son, of Kensington, on the same water, obtained a basket of fully 7lb. On the 26th ult., Captain Budd, captured twenty-four very good fish, on the loch; and Mr. Fleming, of Greenock, secured a take of 7½lb.; on the river, Mr. Taylor and Mr. Kyd killed fifteen fish (all good trout, and in sound, healthy condition). On the following day, Messrs Taylor and Crockheart, captured eleven fish, on the lake; and Dr. Banks killed eight. At present the weather is anything but favourable, and light baskets are the result; and of late, owing to its unsettled condition, the most persevering disciples of Izaak Walton have encounted but varied success.—J. K.

Naver (via Thurso, N.B.—In common with most of the northern rivers sport has been at a low ebb since last last reported. This is in a great measure accounted for by the cold, wet, and boisterous weather of the past weeks. In the course of the past week an angler from Dalvina Lodge grassed a salmon of 11lb. Among the other fish caught was an eleven pounder, landed by Mrs. Stubbord Lyre Lodge, and two fish by another angler from the same lodge. Excellent baskets of sea trout on the tidal waters are still occasionally made by Mr. John Stewart, Bettyhill Hotel.—McB.

Ness (Inverness).—Excellent sport continues to be had on all the reaches. Water in splendid condition, and fish very plentiful. On Ness Castle water Mr. F. Walker landed twenty-seven grilse and salmon. On Holm water Mr. Godman killed thirty-one grilse and salmon; on lower waters General Grant killed nine grilse, Captain Conliffe five grilse, Mr. Scott, three grilse. Reports from the upper Dockfour water did not reach me in time to send this week.—D. WATSON.

Overscaig Hotel Waters (via Lairg, N.B.).—The weather has been so unpropitious that angling on the mountain lochs has been carried on with difficulty. On Thursday last week Mr. Stuart fished the Merkland river, and landed a fine salmon weighing 10lb.; and Messrs. Ainslie, London, on Loch More, nine sea trout, averaging about 1lb. each; Mrs. Hutchison fished the Garvie river, and hooked a grilse, which unfortunately got off after considerable play. On Friday, Mr. Stuart was out on Loch More for a few hours, and got three sea trout, 2¾lb.; Messrs. Ainslie, on Loch Shin, twenty trout, 7lb.; and Mr. Hutchison, on River Merkland, one salmon weighing 9½lb. On Monday, this week, Loch More was fished by Mr. and Mrs. Hutchison, who made a first-rate basket of one and a-half dozen trout, aggregating 19lb., the heaviest weighed 4lb., and was landed by Mrs. Hutchison; General Murray and Colonel Butler fished Loch Griam, and landed between them twenty-three trout, weighing 11lb.; Mr. Kirkbride and Mr. Hind, Nottingham, tried Loch Shin, and got ten trout, averaging ½lb. each,—McB.

Rhiconich Hotel Waters (via Lairg, N.B.).—Owing to the continuation of wet weather, the lochs are still too high and fish "dour." The baskets made during the past week have been as follows: On Monday, Mr. Hutchison, Glasgow, caught a 2lb. sea trout on Loch-na-Caillich; Col. Butler fished Loch Inchard, and got nine lythe, aggregating 51lb.; and Mr. Dugdale, London, on same loch, seven lythe, 41lb.; General Murray, Worthing, fished Loch Garbetbeg on Tuesday, and got three sea trout, weighing 3lb., and another which weighed 2lb. On Wednesday, Messrs. Milles and Dugdale, London, on Loch Inchard, seven lythe, 44lb.; and Colonel Butler, London, on Loch Sandwood, had a 6lb. grilse and a sea trout weighing 3lb. General Murray fished Loch Garbetbeg on Thursday, and landed a 7lb. salmon, besides eight sea trout, which averaged close on 1lb. each. On Friday, Mr. F. Maitland, Dover, on Loch No. 1, one dozen trout, averaging ½lb. each; General Murray, on Loch Garbetbeg, four sea trout, 3lb.; and Col. Butler, on Loch Inchard, ten lythe, 58lb. On Saturday, Mr. Miller, London, tried Loch Bervie, and got one and a-half dozen trout, 6lb. in all, and a sea trout of 2lb.; while Mr. Maitland, Dover, on Loch Garbetbeg, grassed a salmon weighing 7lb.—McB.

Shin.—On the upper reaches, on Monday, Mr. Eden killed a grilse of 7lb. The Tressady Lodge party got a grilse of 8lb. on Tuesday. River in flood on Saturday. Weather unsettled.—J. Y.

South of Scotland.—In the South of Scotland the rainfall during the past fortnight has been quite phenomenal. The Annan has overflowed its banks on two occasions during the past week, and the heavy floods have wrought considerable devastation on low-lying grounds. It is noteworthy to remark that during the heavy spates a large number of salmon appear to have been carried back from the rivers to the Solway, as many salmon were captured by the nets in a condition that showed that they had been in the fresh water for a considerable time. Splendid sport has been obtained in the Annan. Mr. Johnstone, Ecclefechan, caught about twenty herling; Mr. Wilson, twenty-five herling, and a number of sea trout. Other anglers had baskets ranging from 20lb. each of herling and sea trout. Indeed one angler was credited as having killed in a single day over 50lb. of sea trout and herling in this water. Mr. D. Tweedie, Ecclefechan, landed twenty-six herling; Mr. Stewart, Ecclefechan, twenty herling; Mr. Shannon, twelve herling. Sir Robert Jardine's water, Castle Milk, sport has been had. Mr. Rae, The Firs, Ecclefechan, about a dozen herling; Mr. David Tweedie, one sea trout, six herling, and a number of yellow trout. In the higher reaches, Mr. Richard Rolfe caught, on Tuesday, a fine basket of burn trout, the largest of which weighed 3lb., an unusually heavy trout for these waters. Angling in the Johnstone part of the river on Tuesday, Mr. Thomas Jardine, Lockerbie, killed one of the finest yellow trout caught in this part of the Annan for years. The trout weighed 1oz. under 6lb. Mr. Jardine had several other large burn trout and a few herling. In the Wamphray section, Mr. Gilmore, Irvine, Ayrshire, caught a grilse weighing 4½lb., three sea trout, about 2lb. each, and a number of yellow trout. In the Jardine Hall water, near Millhouse Bridge, Messrs. W. and D. Wightman had a combined basket of 14lb. of yellow trout. Near Dormont Bridge, Mr. Gardiner, Lockerbie, caught two sea trout and two herling, and Mr. Borthwick, Lockerbie, had a good catch of sea trout and herling. Mr. William Carruthers landed one sea trout and several yellow trout near Johnstone Bridge. In the Duke of Buccleuch's water, Mr. McLean killed a sea trout of 3lb. In the tributaries of the Annan some capital baskets have been secured this week. Fishing in the Milk, Mr. Byers, Shawhead, had a heavy basket of sea trout and herling; Mr. A. Wilson, two sea trout and four herling; Mr. Cowan, two sea trout of about 2lb. each and a basket of yellow trout; Mr. Haugh, a couple of herling and a few large burn trout. In the Dryfe water, Mr. Little landed two sea trout and a herling; and in Æ water, Mr. P. Graham caught seventeen yellow trout and a few herling. On Monday, Mr. James Dixon, Annan, had nine herling, and two sea trout, in a very short time; Mr. Robert Bonner, Hare's Den, had six herling and a few yellow trout; Mr. John Lauri, four herling, and a sea trout; Mr. Thomas Tweedie, Moat House, ten herling; Mr. John Iveson, Wigton, four herling; Mr. Gibson, Bridgend, two yellow trout, and four herling; these fish were all caught in the first of the flood. On Tuesday morning, the Annan was placed in an unprecedented flood for the time of the season, the like of which has not been experienced for over twenty years. Generally all the best casts were unfishable on account of the height of the water. Mr. James Thomson, Port-street, killed a large yellow trout of 2½lb., one sea trout of 1½lb., six herling, and a number of yellow trout weighing from ¾lb. to ½lb. each; Mr. John Laurie, two sea trout, a yellow trout of 2lb., and several herling; Mr. James Dixon, a sea trout, and a basket of herling and yellow trout; Mr. Robert Irving, five herling; Mr. Tweedie, Moat House, sixteen herling and a sea trout, weighing 1½lb.; Mr. Rae, a dozen herling; Mr. Hall, a good basket in Galabank and Northfield waters; the Rev. Mr. Kennedy, Newington Lodge, had a nice catch in the Warmanbie water in the fore part of the week. Many other anglers had catches varying in weight, and counting srom six to a dozen herling each; Mr. James Steel, had a fine basket of herling and two sea trout; In the Warmanbie water, Mr. McGiverin, postmaster, Annan killed on the 2nd inst. two large sea trout and a basket of herling, weighing 14lb. Mr. John Laurie, Bank-street, had one sea trout, twelve herling, and a number of yellow trout, one of which weighed 1½lb. Mr. Thomas Gibson, Bridge-place, two sea trout and twelve herling. Messrs. Peter and James, London, had on the 2nd inst., a combined basket of eight sea trout and over 20lb. of herling and yellow trout. Mr. James, London, hooked a large salmon in the pool above Annan Bridge, but lost it. Mr. John Iveson, Wigton, killed nine herling; Mr. Wallas, a few nice ones and a sea trout; Mr. Thomas Tweedie landed twenty herling and two sea trout; Mr. James Dixon, three sea trout and over twenty herling; Mr. David Dinwoodie, The Cemetery, one sea trout and nineteen herling and yellow trout; Mr. James Thomson, ten herling and one sea trout; Mr. Robert Dixon, baker, eight herling; Mr. Robert Bonner, nine herling, and a couple of native trout; Mr. Carr, a good basket of herling and sea trout; Mr. John McLean, Johnstone-street, Annan, one sea trout, 1½lb., and half-a-dozen herling; Mr. R. Graham, twenty-four herling, three sea trout, and six yellow trout. Among a very few of those who have caught baskets within the past few days, mention may be made of Mr. James Morrison, Langholm, who has had several heavy catches of sea trout and herling, some of his sea trout weighing up to 3½lb. In the reserved water of Broomholm a basket of thirteen sea trout was caught, and in the same water Mr. E. Connell had several sea trout, a number of herling and yellow trout. Mr. Telford had a basket of seven sea trout and two herling in the Langholm portion. Mr. J. Fleming, Eskdale Temperance Hotel, had a nice basket, one of his sea trout weighing 3½lb. The Rev. Messrs. Bell and Smith out from the same hotel have also had good sport. Mr. St. George Tucker had several sea trout of 2½lb., and good herling and yellow trout. Mr. W. Dodds, two sea trout, one of 2lb. Mr. J. Harkness, a fine basket of trout and herling, one of which scaled 3lb. In Longtown, the sport was also excellent, and many hundreds of herling and sea trout have been killed here since last week's report. All the tributaries have yielded the finest of sport. In the Liddle, Mr. T. Armstrong Wetheral, Carlisle, had a basket of herling and sea trout weighing 15lb. In Bush Burn Mr. D. Elliot caught thirteen dozen yellow trout. Fair angling has been had in the Nith and its tributaries. Capital catches were made on Tuesday and Wednesday in the Duke's portion of the Nith at Thornhill. From the Dee sport has everywhere been very good, and from the Fleet and Urr the reports that reach me to-day show that good baskets of herling and sea trout have been killed since Monday. In Mount Annan, on Thursday, Mr. Dirom, of Mount Annan, killed a beautiful and fresh run salmon of 7½lb. In the Back of the Wood pool, the fish rose at a medium sized Brown Turkey Fly with a white tip. In Haddon Castle water, the following additional catches are reported: Mr. Geo. Wardrope, Ecclefechan, had one dozen herling; Mr. David Tweedie, Ecclefechan, a beautiful basket of five sea trout, and twelve herling; Mr. J. Tweedie, Ecclefechan, two sea trout, and ten herling; Mr. Robt. Beattie, caught over a dozen herling, and one sea trout; Mr. Wm. Steel, Shortrigg, had a capital basket of herling. In the Upper Mount Annan water, Mr. Charles Inglis, Commercial Hotel, Ecclefechan, had a heavy creel of sea trout and herling; all these fish were caught with worm bait.—HEATHERBELL.

South Uist.—Out from Lochboisdale on Monday, Dr. Tuckett, Maidstone, had three sea trout, weighing 4½lb., heaviest 2¼lb., on Loch Bharp; Messrs. Milne and Paterson, Edinburgh had fifteen brown trout, on Loch Bornish, scaling 8¾lb.; Mr. Poole, Annaud, had twenty-five brown trout, on Stulibhal. Dr. Shields, London, eight trout, 5lb., on Loch Crogovat; Mr. Preston, Chester, one sea trout, and six brown trout, on Squaith; while on Tuesday, Messrs. Preston and Mill, on Loch Bharp, landed three sea trout, 7½lb.; Dr. Reid, Glasgow, thirteen trout, two of which scaled 2lb. and 3lb. each respectively, on Lower Kildonaw; and Dr. Shields had fifteen trout, on Bornish; another gentleman having a basket of eleven trout the same day.—W. S.

Spey (Elgin).—Owing to the rain of last week the Spey is now in good condition for angling. Lord Algernon Gordon Lennox had two grilse of 6lb., on the river at Fochabees. On the same water, on Friday, he had a salmon of 16lb.; and one grilse, on Saturday. On the Carron waters, on the 27th ult, Mr. D. Calder, keeper, had a fine salmon of 22lb. On the 28th ult., Mr. T. H. Jervis, had a fish of 13½lb. On the 25th ult., the Earl of Elgin, had three grilse, of 6lb., 5lb., and 5lb. respectively; next day, he had one of 6lb.; and on the 29th ult., Mr. D. Calder, keeper, had a grilse of 5½lb. On the Aberlour water, Mr. M'Kenzie, fisherman, had a salmon of 8lb., and a grilse of 4lb. Owing to the stormy weather, it is a remarkable fact that salmon have gone further up the river this year than they have been known to do for many years back. As a rule salmon have scarcely been got on the Spey as far up as Cromdale, but this season they have been plentiful miles above that point, and even as far up as Kingussie some seventy miles from the mouth of the river. The Duke of Richmond and Gordon has arrived at Gordon Castle, from Glenfiddich Lodge, where he will commence rod fishing on the Spey.—H. LOGIE.

Tay (Perth).—A heavy flood in the river has put a stop to angling during the past few days, but the river will now be well stocked with fish. On the Stanley water, Mr. Charles Holland killed eight last week, 19lb., 18lb., 13½lb., and 12½lb.,, the rest being grilse. On the Stobhall water, on Monday, Mr. B. Field and party, killed nine on the upper beat and fourteen on the lower. On the Barchill water, Sir John Millais killed 4lb., 19lb., 9lb., 9lb., 6lb., and 7lb.; and on the Langcarty, Dr. Fife, one, 20lb. On the Fen water, Mr. Ireland killed a grilse: Mr. Hunter, one, 9lb.; Sergeant Morris, two; Mr. Wardrope, two; Mr. Pierri, one grilse, one sea trout, and eight whiting. Earn.—On the Trinity Sack water, Mr. H. Kelsall killed three, 17lb., 12lb., and 10lb. On the Drummond Castle water, Mr. Bell killed one, 8lb.

Terry.—A local angler hooked a fine fish on one of the pools a short way from Loch Shin. Mr. Macleod landed a fine fish of 10lb. one day last week.—J. Y.

Thurso and Lochmore (Caithness, N.B.).—There is always as much rain falling daily as keeps the river in fair fishing height, but comparatively few fish are taken. The water is very brown and peaty coloured, and its temperature at three p.m., is generally from 60deg. to 65deg. F. Salmon never take well in such a high temperature in this river, the water being dark coloured leaves it more susceptible to the heating effects of the sun than clear water. This, in my opinion, is the reason they don't take, and I have given the matter a good deal of attention. On Brawl Castle water on August 19, Mr. Part got two salmon, 6lb. and 7lb.; on the 21st, Mr. Nevett got two, 8½lb. and 9lb.; on the 22nd, the same gentleman got one, 7½lb.; Mr. Haygate, one, 12lb.; the keeper, one, 8lb.; and a gillie, one, 9lb.; on the 24th, Major Nicholson got one, 6½lb.; Mr. Haygate, two, 7lb. each; Mr. Cunningham, two, 8lb. and 7½lb.; and Mr. Nevett, one, 7½lb. Beats one and three have given most fish.—A. H.

Tongue Hotel.—The following is angling record for the week: On August 24, Messrs. Elkington and Nevill, on the Kyle, nine sea trout, 18lb. On August 25, Mr. Todd, on the Kyle, three sea trout, 6lb.; Mr. Pollock, on the Kyle, one sea trout, 2lb.; Mr. Elkington, on the Kyle, two sea trout, 3lb. On August 26, Mr. Nevill on Loch Loyal, four trout, 2lb.; Mr. Todd, on Loch Craggie, three trout, 2lb.; Mr. Elkington, on Loch Na, Hakel, six trout, 3lb. On August 27, Mr. Elkington, on the Kyle, four sea trout, 7lb.; Mr. Nevill, on the Kinloch river, one salmon, 6lb. On August 28, Mr. Nevill, on the Kyle, five sea trout, 16lb.; Mr. Elkington, on Loch Loyal, six trout, 5lb. On August 29, Mr. Nevill, on the Kinloch river, one salmon, 5lb.—A. CAMPBELL.

Ythan (Tidal, Aberdeenshire).—Splendid sport continues to be got on this famous sea trout reach. Mr. Ritchie's accommodation has all been taken up till the end of September. Good weather is the only requisite necessary to secure good sport.—G.N.

Irish Reports.

Ballinderry (East Tyrone).—Flood after flood has put the Ballinderry out of fishable order; but no angler will regret this, as the tremendous downpours of rain have swept away the flax-water, so that when the river fines down a little, angling can be renewed after a long delay, provided that the pest does not occur again. There is a good head of salmon in the lower reaches at present. On Monday evening, at Coagh Corrie, I counted eighteen going over inside a very short time. Keepers are on the look out for gaffers at these corries. The river is almost two feet above the usual September level at present, but, at the height of the flood, it was more than six feet above the level, consequently it got a good cleansing.—J. A. B.

Erne and Lough Melvin.—The weather during the past week, was very wet and stormy, in fact it has rained almost incessently for the past month, and in consequence the river is overflowing its banks, still the following anglers had very good sport. Mr. F. T. Green, Mr. Gamble, Mr. E. Green, Mr. S. O. Thomas, Captain Greer, 1st Bt. H.L.I., and Mr. M. Alexander. The weather still continues very wet and stormy, and no appearance of change for the better. —M. ROGAN AND SONS.

Lough Currane (Waterville, County Kerry).—The weather has been wild and wet, and sport poor in consequence. On a few favourable days, however, baskets of from four to nine white trout were got. On Saturday, in addition to a nice dish of white trout, Mr. Merryweather and Dr. Coates had a fine grilse. Sport continues good on preserved waters. On Coppal lake (free), white and brown trout have afforded good sport, on odd days to a few gentleman.—T. J. DENNEBY.

Lough Neagh.—The heavy rains have raised the Lough about 4ft. The runs of salmon up the Bann are splendid, and the netters are making good takes. I hear that trout netting on the Antrim shores is improving. Bream, perch, and pike fishing continues steady, so that the local markets are glutted with these fish. The pollen latterly taken are improving in size, and in prime condition. In the many little burns that enter the Lough on the western shores, such as the Clonol, Duckinstool, Buck, and Holy, all of which are very high at present. Brown trout are taking very well on the red worm, but this is a sport chiefly confined to country yokels.—J. A. B.

Moy and Lakes (Ballina).—On Friday, last week, the river cleared off a little, and the only one out, Mr. Willie Vincent Heley, killed two nice salmon, 11½lb. and 9½lb. On Saturday the water was better. Dr. Carpenter had a nice fish of 8½lb.; Mr. Boyle, one grilse, 7½lb., one salmon, 10lb., two sea trout, 2½lb.; Mr. Willie Vincent Heley, one grilse, 7½lb. one sea trout, 2½lb.; Mr. Attenborough, one sea trout, 2½lb. On Monday, Mr. Parker, one grilse, 7lb., two sea trout, 3½lb.; Mr. Willie Vincent Heley, one grilse, 6½lb., two sea trout, 1¼lb.; Mr. Boyle, two grilse, 6½lb., 7lb., three sea trout, 4¾lb. It rained all the afternoon of Monday, and now the river is in flood again. The boisterous weather of the past week has greatly interfered with trout fishing in the loughs. The few days that boats could reach the fishing grounds some nice baskets were brought ashore. On August 29, Mr. Frank Morris and Mr. Teetham had nineteen fish, weighing 18lb.; the Rev. Mr. Pearson and Dr. Patterson (of Oldham), in three days killed fifty-eight trout, averaging over ¾lb., the largest trout, 1¾lb. Some grand sport would now be had on river and lakes if we only hae some fine weather.—FRANK HEARNS.

NOTES FROM BIRMINGHAM AND DISTRICT.

A GENERAL meeting of the Birmingham Anglers Benevolent Society, was held at the headquarters of the Association on Friday evening last. The meeting was not so well attended as it should have been, considering the important business down on the agenda for discussion. Mr. T. Coles presided, and Mr. C. White occupied the vice-chair. The president, in formally opening the meeting, strongly commented upon the absence of the representatives of the various societies, and at the same time welcomed those who had attended to assist in the transaction of the important business before them. The minutes of the last general meeting, held February 27, were read and confirmed, when the whole of the minutes passed by the committee upon April 23, May 1, May 29, June 26, and July 31, were received and adopted in their entirety, These minutes were chiefly connected with the forthcoming contest in aid of the funds of the society. The next important item was the balance-sheet of the financial year ending June 30. The total income amounted to £45 10s. 10d. and the expenditure £13 11s. 11½d., leaving a balance in hand to be placed to the credit of the society of £31 18s. 10½d. The auditors, Messrs. Titter and White, gave in their report, which was satisfactory, when it was formally resolved that the balance-sheet, together with the auditor's report, be adopted. The important question of fixing a salary for the secretary, was next discussed at some length, when it was finally resolved that the question remain over until the next general meeting, which will be held in the immediate future, when it will be hoped that a larger number of delegates will be present, so that the matter may be decided upon. This concluded the chief of the business, when the president thanked the delegates for their attendance, and the meeting terminated.

SINCE my last Notes, we have had a lot of rain, which to a great extent benefited the fishing around Birmingham, and some very decent catches have been on view at the majority of the club-houses. At the Tenby Club, on Friday evening last, a first-class show of fish were on view, which were taken from the Avon near to Warwick. Five of the club members had been out to this water and succeeded in having some rare sport. The largest catch weighed 25lb., and the smallest 12½lb. The fish consisted of bream and perch, and were all taken chiefly with the gentle. At the time the fish were taken the river was on the rise, and is bank high at the present time of writing, and slightly discoloured. The roach in the Avon have also been well on the feed, and during the short spell of fine weather the anglers have made the best use of their time and have had some decent sport. These fish are taking the stewed wheat; the perch are well on the feed, and when the river begins to fall some first-class sport will be had with these sporting fish. The Severn has been bank high owing to the heavy rains, but a few days' fine weather will put it all right again. The pools around Birmingham have been well patronised of late, and have afforded some first-class sport. Some of the anglers fishing the Earlswood reservoir have had some very large takes of bream. I also saw some splendid roach, on Monday last, taken from a private pool at Harbourne, about ten of the fish over 1¼lb. each.

BIRMINGHAM CLUB CONTESTS.

THE Leopold Society held their annual contest at Bidford, on Monday last; the contest was fished on the left-hand side of the river in Gardner's water. The prizes contested for were not very numerous, but the value made up for the quantity. The first prize was a valuable English timepiece, there was also a mahogany loo table, electro-plated tea service, China tea service, and a pair of pictures, &c. A novel prize—if I may be privileged to term it a prize—was given by a neighbouring hairdresser, and consisted of a free shave and hair cut for twelve months; this fell to the lot of Mr. Horne, senr. The contest was of three hours' duration, at the end of which Mr. W. Green was declared the winner of the first prize with 3lb. 10¼oz. of fish all roach; Mr. J. Pee was second; Mr. E. Mayfield third, &c. Mr. West acted as referee. At the close of the contest the members adjourned to the Mason's Arms Inn, where a good substantial dinner was done justice to, the whole of the expenses being defrayed by Mr. J. Hopkins, the host and treasurer to the society.

THE Vine Unity held their first annual contest at Brearley, near Stratford-on-Avon, on Saturday last. Thirty-one members competed, twenty-nine of whom caught fish. The contest was of the usual two hours, duration. The result of the contest was as follows: First, Mr. F. Addicott; second, Mr. A. Burgess; third, Mr. C. Marklew; fourth, Mr. A. Goode; fifth, Mr. H. Dodd: sixth, Mr. W. Shellis, &c. Mr. F. Starsmore acted as referee. The prizes, which were of a valuable kind, were distributed on Wednesday evening last, Sept. 2nd.

THE Bird-in-Hand Society fished their annual contest at Croxall, on August 30. The prizes fished for were of a first-class description, the first prize being a splendid cup specially made by one of the members for the occasion. The other prizes consisted of a small silver cup, table lamp, tea service, toilet service a pair of oil paintings, and twenty other valuable prizes. The result of the contest was as follows: Mr. Mark Bollason, first; Mr. Robinson, second; Mr. Cattermole, third; Mr. A. Berkin, fourth; Mr. Wittin, fifth; Mr. F. Dudley, sixth; &c. After this contest had been decided, another contest was held for a silver medal, given as a special prize; this was won by Mr. C. Fitter. The prizes will be distributed on Sept. 11 next. Mr. Jays, of the Old Green Man Society, gave great satisfaction as referee.

THE St. George's held their annual contest at Wyre, earn Pershore, on Monday last, under the supervision of Mr. A. Keeling. The contest was of three hours' duration, during the whole of which time it rained, and the wind blew great guns. About twenty-five took part in the contest for prizes that numbered about forty, and were of the value of £20, independent of the club challenge cup. Owing to the bad weather, only thirteen of the members succeeded in taking fish above the standard. Mr. C. Wainwright secured first honours; he will be entitled to the first prize, and will hold the challenge cup for the ensuing twelve months, when, should he win it again, it will become his property; Mr. Randford was second; Mr. C. Cottrell, third; Mr. Rose, fifth; Mr. Callaway and Mr. Avers a tie for sixth prize, &c. The prizes will be distributed at the annual dinner, which will take place shortly. Another contest will be held in the immediate future for the remainder of the prizes left from this contest.

THE Oak Piscatorials held their annual contest at Croxall on August 29 last, in splendid weather. A first-class selection of prizes were set up to be contested for, and the members of this little club turned out in full force. Mr. Cox, the referee, lost no time upon the arrival of the train to get the members to work, and soon had the ground marked out for the thirty competitors. The contest was, as usual, of two hours' duration, at the end of which time the weighing in took place, when Mr. F. Jesson was declared the winner; Mr. C. Wainwright, second; Mr. W. Watten, third; Mr. A. Wainwright, fourth; Mr. S. Forrest, fifth; Mr. T. James, sixth. The prizes will be distributed at the next meeting of the society.

THE Anglers' Pride Society held their first annual contest on Monday last, at Fernhill Heath. This society is the latest acquisition to the Birmingham Association, and considering the small time that it has been in existence, great credit is due to the officers and members in getting so many good prizes together in so short a time. The contest was fished under very unfavourable circumstances, as the wind and rain made matters very uncomfortable. Twenty-one took part in the contest, but only seven members succeeded in taking fish for weighing in. Mr. T. Bates proved the winner, when the weighing in terminated; Mr. G. Swain, jun., second; Mr. C. Bevan, third; Mr. J. Bird, fourth, &c. Mr. Tom Kimberley, of the Brothers Well Met, acted the part of referee to the satisfaction of all. The prizes will be distributed at a special meeting, when it will be decided when and where the consolation contest will be held.

THE Plume Society held their annual contest on Monday last, in the club water at Bidford, but owing to the weather only a small number of the members turned out to fish for the fourteen prizes given by the members. Eight prizes only were won, the chief winners being Mr. Dormant, first; Mr. Tallas, second; and Mr. Cook, third. Mr. Tallas also takes a special prize for the best specimen fish. Mr. T. Gordon acted as referee. The prizes will be distributed at the annual dinner, which takes place towards the latter end of the present month.

NOTES FROM LANCASHIRE.

THE rain has descended, and the floods have come to such an extent that many local waters have overflown, and in consequence angling is very much "off side" just at present. Bottom fishing has been possible at intervals of the deluge, but fly fishing has been out of the question.

THE Isle of Man is still gaining in popularity, and Ireland has received attention from several parties of anglers, who have been stimulated by the glowing accounts of Mr. Allsop and friend. Mr. F. Bibby, and another member of the Buckland, have been to the Witham for a week, and when the fish are spoken of by the stone weight, and the familiar brace discarded, some idea of the sport falling to their lot can be formed. While speaking of the Witham, it may interest Lancashire anglers to learn that the pike, which has been so eagerly tried for by many of our local rods, has at last fallen to the skill of a clergyman in the immediate neighbourhood, its weight being 18lb. How many will now retract their former statements of its immense size? Mr. W. F. Scott, Longsight, has taken a fine pike of 13lb. in the Flashes this particular water at Northwich is at present affording good sport with this kind of fish.

A NEW club recently formed at Gorton, in connection with the M. S. and L. Railway Locomotive Department, will be known as the Gorton Lank Angling Society. Mr. W. Hathway is the first president. Evidently business is meant, for already a contest has been fished. Mr. W. Ashley took the first prize; Mr. G. Gray the second; and Mr. J. Leadbeater the third.

THE Buckland have just concluded their season's engagements with a very successful contest, in which twenty-three members competed. The prizes were awarded in the following order of merit: (1) J. Coates, (2) F. Bibby, (3) J. Craven, (4) B. Allen (5), A. Craddock, (6) G. Oliver.

THE Palatine Club has recently fished a contest in private waters. Mr. Sam Brooks won the special prize presented by D. Murray, Esq., in a brilliant manner, all anglers would do well to emulate the style of this ideal fisherman, who in addition to all the worry and excitement of acting as captain and referee, could give such an excellent exhibition of our favourite sport. The other prizes were won by Mr. Gartside (first); second not yet awarded; and the third Mr. J. S. Richardson.

THE Hulme Crown fished a contest at Lostock Graham, on the 22nd Aug., for a splendid lot of prizes, and the following is a complete list of winners: (1) W. Maxwell, (2) J. Atherton, (3) J. Hill, (4) J. Brickley, (5) J. Pickering, (6) G. Yates, (7) A. Atherton, (8) J. Hampson, (9) P. Leonard, (10) J. Lloyd, (11) J. Miller. As many prizes were unawarded from the last contest, the following members secured them in this contest: Messrs. J. Atherton, A. Atherton, J. Hampson, J. Lloyd, J. Miller, J. Hill and J. Pickering. The greatest praise is due to the officials of the club, headed by the jovial host for the excellent arrangements of the contest, and the varied and valuable prizes.

NOTES FROM NOTTINGHAM.

THE weather generally has been extremely boisterous since my last Notes, and fewer anglers than previously have ventured out. The Trent, through heavy rains, has almost daily fluctuated in height, and on Saturday the rise amounted to 3ft. 9in. above the normal standard of summer. But the influx caused a plentiful run of eels, and at Wilford nearly every subscriber returned with a substantial bag; whilst in the free waters of the borough a fair number of perch were killed by tight floating underneath the bank opposite the Gravel House. At Willington, Mr. J. Theaker and Mr. W. Dupe, of our town, got well amongst the dace, and on the following day Mr. G. Sollory, of Derby, bagged several remarkably fine roach, including one of 1lb. 3¼oz. Willington has always been noted for its specimen fish, particularly roach, dace, and barbel. Mr. Baker, of the Nottingham Wellington Society, has recently weighed in a roach of nearly 20oz., and other members have showed up with leviathan bream. Many bream of fair dimensions continue to be caught in the Cotgrave section of the Grantham Canal, and not long ago a privileged fisherman took four chub with cheese, of about 2½lb. apiece. Whilst bream have afforded sport in the still water named, some scores have come from the Canal at Shardlow, the principal exponents with the rod being Mr. J. Bailey and Mr. H. Dakin, of Lenton, and Mr. F. Baker, of the Wellingtonians. On Monday, Mr. Pogson, Mr. P. Wilson, and Astronomer Joseph, of the Nottingham Bowling Green Society, killed, with the assistance of friend Theaker, a variety of perch, roach, dace, and eels, in the river above Cavendish Bridge; and, on the same day, Mr. J. Boyd, Nottingham, landed a barbel of 5lb. 2oz. from Mole's Hole, at Wilford. All these fish were secured with the tail end of the female lob worm. During Tuesday a further influx to the extent of 2ft. 4in. was experienced, but happily there was very little colour associated with it. High winds, however, prevailed, and what few anglers were out soon wished themselves at home again. Bread paste accounted for sundry roach in the Wilford length, and an eel of 2lb. 11oz. was caught in Mr. H. Green's fishery, at Holme, Pierrepont. Numerous lots of eels have come from Mr. W. Parr's reach, on the opposite bank, and I hear that he is now issuing day tickets at the rate of 1s. 6d. per rod. How the ordinary subscribers will appreciate the innovation remains to be seen. Some people have an idea that any private fishery in our neighbourhood is worth a fabulous sum. Without weighing the *pros* and *cons*, they make a rush for it, and find ultimately how grossly they have been taken in.

A SPECIAL meeting of the Nottingham Bowling Green Inn Society was held at Host Pogson's, on Tuesday night, for the purpose of making arrangements for the holding of the annual pegged-down match. Mr. P. Wilson presided, and, after discussion, it was decided to bring off the match in the Shardlow waters above Cavendish Bridge on Monday next, Sept. 7. The society, I might add, is in a most flourishing condition, and is well looked after by Mr. Pogson himself. He takes great delight in angling pursuits, and will be a "hard nut" to crack in any future throwing competition from the reel. Of course I refer to the Nottingham style.

THE recently-formed "Shoulder of Mutton" Anglers' Association, at Host Higginson's, on Smithy-row, Nottingham, continues to make satisfactory progress. At the last meeting, a number of new members were admitted, and very shortly the executive hope to secure the private water of the Hon. E. N. Curzon, M.P., at Trent Lock, on the Trent. Communications have passed between the hon. gentleman's agent, or son, and the committee, and should they bear fruit, the members will be able to congratulate themselves on possessing one of the best winter waters to be found in the neighbourhood. Potter's field alone is a treasure of the highest order, and, higher up the stream, plenty of heavy chub are frequently met with.

COMPLAINTS are rife as to the abuse of the Shardlow subscription length by numbers of working men anglers from Long Eaton and Castle Donington. Many, it is alleged, have no tickets at all, and on a Saturday they take good care to appropriate the choicest swims. Representations on the subject ought at once to be made to Mr. T. Wood, of Chapel Bar, Nottingham, who leases the water, with the fisheries of King's Mills, and Weston, from Lord Donington, of Donington Park. Mr. Wood stations a really excellent keeper (Holmes) at Weston, but he cannot be expected to be everywhere at once, especially on a Saturday. On that day many gentlemen visit King's Mills and Weston for the purpose of angling, and it would scarcely be the correct thing for "George" to be out of the way. But there is no doubt that something must be done to supply greater protection to the *bonâ fide* subscribers at Shardlow.

FOR a quiet day's fishing the Barton water will be found difficult to beat. It is only a fourpenny-halfpenny ride by Midland train from Nottingham, and day-tickets are issued at a most reasonable rate by Mr. Roadley, who resides at the ferry house on the actual banks of the Erewash, which enters the main stream immediately below the ferry itself. The fishing includes barbel, chub, dace, roach, perch, and bream, and is well looked after by the lessee and his son. Boats for fishing the "parlour"—the bream slack—may be obtained on application.

NOTES FROM SHROPSHIRE.

ANGLERS with one accord have raised their voices in one long grumble at the wretched weather we have been experiencing, and the constant run of ill success which is characterising the close of an unfavourable angling season. Week after week have they waited throughout the summer for a few weeks of good angling weather, but their hopes have ever been disappointed, for no sooner had a few sunny days allowed the water to become clear after a heavy storm than another heavy downpour would discolour the stream again, and make it unfit for piscatorial pursuits. This has been the state of things almost the whole of the season, and the river has scarcely been in good condition for a fortnight together. At the present time the water is high and discoloured, and has been so since the heavy rain of a week ago destroyed the good prospects which were before us. If the water should perchance clear, and we were by accident to be favoured with a few days of nice weather during the coming week sport should be good.

A COMMITTEE meeting of the Shrewsbury Severn Angling Society was held at Messrs. Jones's Restaurant, on Tuesday, when there was present: Mr. J. H. Morris, Mr. G. Groves, Mr. R. Ellis, Mr. Jones, Mr. Nescall, Mr. J. Williams (hon. sec.,) &c. There was some discussion initiated by Mr. Geo. Groves, in regard to the devastations of pike in the river in the neighbourhood of the town; and the requisite permission from the Severn Board of Conservators having been received, it was decided to net the river within the limits of the borough, with a view to exterminating as many as possible of these destructive fish. That "they never will be missed" there is no possible doubt whatever, for there are more in the many large lakes in the neighbourhood than will provide sport for "pikists" for many years to come. The questions when and where the next outing of the society should take place was discussed, and it was eventually decided that the place this time should be Hawkestone pool, in which water, by the generous permission of Lord Hill, the members of the society, it will be remembered, held a very successful and enjoyable outing last year. This excursion will take place on Thursday next.

THE Shrewsbury Severn Angling Society might take a useful hint from the interesting correspondence which has been recently occupying a place in the columns of the *F. G.*, in regard to marking fish. Some thousands of trout fry have been turned into the river by the society for the last ten years or more, and although many heavy fish of undoubted Loch Leven and other imported breeds have been annually captured, the return still nothing like represents the expenditure; and it would be well, if possible, to ascertain whether the fish travel or are destroyed by pollution, by the ravages of pike and other rapacious fish, or other causes. If a few hundred fish were marked and turned in, it might be ascertained whether the members of the society really derive the benefit of their labours, or whether the fish, instead of making their home with their legitimate owners, travel up-stream to fill the creels of anglers around Welshpool, Llanymynech, and the upper districts of the Severn.

"RED ANT," in a letter to the *Fishing Gazette* last week, asks for a definition of a navigable river and the privileges it affords to anglers. There seems to be a general want of information among anglers with regard to these questions in England, as well as in the land of the "bonnie Scot," and in Shropshire there are but few who thoroughly understand the law on the subject. The Severn, as I take it, is a navigable river as far as the point to which the old barges used to travel, and unless the ancient tow-path rights have been allowed to lapse for want of vigilance on the part of anglers and the general public, there should be a direct right of way, not only up the river by boat, but also along its bank. Around Shrewsbury, however, this path has unfortunately been stopped at many parts, without interference on the part of the public. "Red Ant," referring to the Scotch rivers, asked whether the Tweed would come under the category of a public river up to any fixed point, and adds that it would scarcely be considered so over its whole course, else fishers would claim to fish for trout, notwithstanding any rights of holders and renters of land on the banks of the river. This being so, I presume the Scotch law differs from the English very materially, for, as I understand it, no angler has a legal right to fish the Severn, even from a boat, in this locality, without the consent of the landowners. The main principle in which the recently-formed Shropshire Severn Angling Association (about which, by-the-bye, we have heard so little of late) was inaugurated, was that the riparian owners might combine to assert their powers for the protection of the river, allowing no one to fish for trout and grayling from a boat without a ticket from the Association. Shropshire anglers would be grateful for authorised information as to the legal rights they possess.

MR. GEO. KEMPSTER, who has taken a prominent part in the movement set on foot in the upper districts of the Severn to obtain a better supply of salmon in those waters, writes an interesting letter this week to the Shropshire papers upon the matter. His words bear out our recently-expressed opinion that Mr. Jeffrey Poole, in bringing the question before the notice of the Shropshire County Council in the manner he did was scarcely discreet, if justified, and says: "I am of opinion that Mr. J. Poole certainly cannot wish to deprive the conservators of their duties: on the other hand, I fancy he desires that the council should support them with all the power they can command in procuring for these counties what measures seem necessary to improve the fisheries in the said counties. 'Union is strength,' and we may rest assured that if the Shropshire and Montgomeryshire County Councils will back up the conservators of these counties in their efforts to procure what is necessary, their exertions are more likely to succeed than if the conservators acted alone." Proceeding, he says: "The Montgomeryshire County Council on Friday last unanimously appointed a committee for the purpose of assisting the conservators, and also to report to the council any pollution that may be taking place in this county, which is essentially necessary, for it does not matter what efforts we may make in improving the fisheries if the fish are all to be poisoned after we succeed in getting them into the rivers. I think the public will agree with me that the time has arrived when measures must be taken to prevent mill and mine proprietors emptying their poisonous fluids direct into the river, without any means being used to prevent thereby the unnecessary destruction of an incalculable amount of one of the cheapest and most nutritious of human food. I trust at the next quarterly meeting of the Shropshire County Council the executive committee, to which the matter was referred, will see their way to recommend the council to appoint a committee to work with the Montgomeryshire committee in supporting the action of the conservators, and also to put a stop to pollution in their county. It is very advisable that the Shropshire Conservators should take example by the Montgomeryshire Conservators, and appoint from amongst themselves a secretary to act, in case of need, in calling them together, and bringing before them any business requiring their attention. Would it not be possible for the conservators of Salop and Montgomeryshire to meet, say at Shrewsbury, in the course of next month, to take into consideration the necessity of having a better staff and better supervision over the upper and middle reaches of the river, taking into consideration the amount of money paid in these two counties for rod licences. I think the conservators must be of opinion that we are deserving of better treatment in this respect from the board than we get. Once more I would impress upon the Shropshire Conservators the necessity, if we are to succeed in improving these rivers, to use their utmost endeavours in prevailing upon every proprietor upon the river, having the necessary qualification, to qualify before November, so that we may secure their vote for next year."

THE Ironbridge Severn and District Angling and Protection Society held its second prize outing of the season on Saturday, Cressage being chosen as the rendezvous. Only about twelve members took part in the competition owing to the unfavourable state of the weather. Rain fell incessantly throughout the day, and completely spoilt the outing. Mr. W. Waghorn landed a splendid roach, weighing 1¼lb. The following are the prize-takers in order of weight of fish caught: Messrs. J. Norry, T. B. Rowley, W. Waghorn, W. Bennett, A. Nicholas, W. Wilson, H. Aldred, and E. Jarratt.

NOTES FROM WORCESTER AND DISTRICT.

HIGH wind, much rain, and swollen streams, have kept most anglers in this district at home during the week. A few have been out and had respectable catches of roach and eels, and a few large trout; and a favoured few who have had access to private water have brought home large baskets of fish. Both Severn and Teme are fining down nicely, still there is a large volume of water in each river, and it will take another week to put it in good order for angling.

THE Izaak Walton second club competition was to have taken place at Lulsley on the Teme, but was postponed on account of the swollen state of the river. The event came off at the same place on Thursday, the 3rd inst.

THE competition among the Worcester Angling Societies for the fifteen guinea challenge cup, presented by the president, E. H. Bowen, Esq., has been arranged to take place on Tuesday, September 8, on the water of the Tenbury Angling Association, and is looked forward to with much interest. The cup has to be won three separate times, or twice in succession by one club before it becomes their property. No fish under 4oz. to be weighable; no wading or trolling to be allowed; and as only five of the most expert from each club are selected to compete, if the water is in order and the fish on the feed, there should be an exhibition of good angling and some good takes of fish registered.

SALMON fishing by nets closed on the 31st of August in this river (Severn), and has been, on the whole, a better season than has been had for years. Still, there is much room for improvement in respect to numbers, for as long as the fishermen are allowed the means of sweeping the fish out of the river wholesale, in the manner they at present do from Tewkesbury downwards, there is no possibility of many fish getting farther up the river, and the take of salmon in this district will never be large, and will be less in the future than in the past. The Severn Board of Conservators have added another month to the annual close-time in the early part of the season, when the best early clean-run fish are in the river, and will do no good, but harm, by increasing the price of Severn salmon and keeping the poor fishermen idle another month.

NOTES FROM YORK AND DISTRICT.

ALL the streams are swollen to considerably above their summer level, but at the time of writing they appear to be settling down to the normal condition. It goes without saying that the floods at this time of the year will do an amount of good to the fish. They may cause no little inconvenience to the fisher for the time being, but in the end there is no doubt he will profit by the more than usual supply of water. Assisted by the floods, the fish have been enabled to make their way up to the higher reaches of the streams. Salmon, I know, have been seen in large numbers coming up the Ouse; and the fact of their having passed the confluence of the Aire argues well for the future. The prospects for salmon fishing are, in consequence, very good; and if the rain should hold off next week there will no doubt be a good catch.

THE Aire having had a wash out, is in capital condition, or at least it will be when the waters subside a little, and the Nidd both at Pateley Bridge and Knaresborough presents excellent prospects. The river Ure is suitable for bottom-fishing, and the Swale is still very full. Prospects all round, however, are very good; and should the weather but take up, there will be plenty of sport for both rod and gun. Fly-fishing of course has been practically suspended. What little has been done is with the Dark Snipe and Purple; though the Light Snipe, Plout Bloa, and the Orange Partridge have proved serviceable, and the Cinnamon and Fog Black had been recommended. During the short time last week when the Foss had lowered, many anglers were out, and some fairly good fish were caught. In the Ouse the paternoster has been used to excellent advantage, and several capital specimens of perch have been captured; and grayling have been caught with the maggot. The season for this fish is just about coming on, and local anglers may anticipate a good time. With a good supply of ground-bait, barbel may be caught in the neighbouring streams, and this favourite pastime is taken advantage of by many York piscators.

I HAVE received particulars of numerous angling competitions in the district, but owing to the bad conditions under which they were fished, they do not present much interesting matter. Perhaps the most interesting competition which has taken place recently was that of the City of York Angling Society, which took place at Cottingham-with-Ings, through the kindness of Mr. J. J. Dunnington-Jefferson, J.P. The water was in very bad condition, nearly overflowing the banks, but despite this, fair catches were made. The premier prize-taker was Mr. R. Broadley, with 2lb. 11¾oz., he being followed in order by Messrs. W. Bell, J. Neale, R. Jackson, W. Brown, T. Bellerby, and W. Foster. There were twenty-two competitors in all. Mr. Broadley secured the award for the largest fish, which weighed 8¾oz., and he was also the "victim" of a facetious sportsman's prize for catching the smallest fish. This specimen turned the scale for a quarter of an ounce. Comment is needless.

THE George the Fourth Angling Association, by the kind permission of Mr. Lysaght-Knight, fished their second match of the season the other day in the Derwent, between Stamford Bridge and Battercrombe. Considerably over £6 was offered in money prizes, whilst several in kind were also forthcoming. A goodly number of competitors turned out, but the old tale in the account of the match reads far from encouraging: "The weather was most unfavourable, and the water in shocking condition, consequently the catches were only light." Mr. T. Horsley, of the noted fishing tackle depôt in Coney-street, had offered a substantial prize, and this, together with a guinea, was secured by Mr. T. Rawdon, for 2lb. 1oz. of fish. The other prize-winners and their catches were as follows: Mr. Harrison, 2lb.; Mr. T. Benson, 1lb. 3oz.; Mr. W. Alderson, 13½oz.; Mr. T. Badger (secretary), and Mr. E. Walker, tie, 12¾oz.; Mr. H. Baker and Mr. J. Hill, tie, 12oz. The Navigation Angling Association have also held their second match. This came off at Tadcaster, on Saturday, but owing to the flooded state of the river Wharfe, the catch was small. The first prize was secured by Mr. T. Conner. The members were afterwards entertained to dinner by the president of the association, Samuel Smith, Esq., of the Brewery, and a pleasant day was spent.

ILLEGAL FISHING AT CHERTSEY.—At the instance of the Chertsey Angling Association, a summons was heard at the Chertsey Petty Sessions, on Wednesday, against Alfred Cooper and Alfred Butt for attempting to take fish from the Abbey river on August 12. The private right of fishing belonged to Messrs. James and William Webb, who made over the right to the Chertsey Angling Association, and Mr. James Webb proved the offence. Mr. A. E. Armstrong, hon. sec. of the Chertsey Angling Association and honorary keeper for the Thames Angling Preservation Society, said he had cautioned Cooper twice by letter and Butt once verbally. Each defendant was fined ten shillings, including costs, and one of the magistrates told defendants that they had no right to fish even from the bridge on the public footpath.

⁂ **Club and River Reporters will oblige by sending in their Reports early in the week.**

THE "STANDARD" MEAT BISCUIT COMPANY.

"STANDARD" MEAT BISCUIT FOR PETS AND PUPPIES

TESTIMONIALS.

ST. BERNARD KENNELS, GORGIE, EDINBURGH.

SIRS,

I have pleasure in testifying to the excellence of your Puppy Dog Biscuits. They seem to be made of the best materials. Puppies, soon as weaned, eat them with avidity, improve rapidly in size and strength, and are maintained in perfect health.

I think the "Standard" Puppy Biscuits supplies a want, and only requires a trial to be appreciated by breeders,

W. R. REID.

SCOTLAND'S PREMIER KENNEL OF PUGS.

I have pleasure in certifying that the Puppy Biscuits manufactured by the "Standard" Meat Biscuit Company are of a very superior quality, and are far the best and cheapest I have ever used; they are eaten readily by puppies as soon as they leave the dam.

I think the "Standard" Meat Biscuit Company have no equal as to their Puppy Biscuits. They seem as near perfect as need be. R. TAIT LINTON,
Pharmaceutical Chemist, Edinburgh.

The above Biscuits are specially adapted for House Dogs and Pets, and may also be given to Puppies immediately after weaning.

PRICES—24s. per cwt., 13s. per ½ cwt., 3s. 6d. per 14 lbs., not carriage paid. Or, paid to any part of the United Kingdom, 26s. per cwt., 14s. 6d. per ½ cwt., 4s. 6d. per 14 lbs.

THE "STANDARD" MEAT BISCUIT COMPANY, EDINBURGH.

AUTUMN ANGLING ON NORTH-EASTERN RIVERS.

By MAC.

SUMMER, with the yellow trout in their primest idition gaily sporting in the waters, is past, l autumn, with the migratory *Salmonidæ* push- inland to their winter abode, is speeding on. ese words I would have anglers take note of; y indicate the actual facts, and ought to be the ans of preventing disappointment. Every sort fresh-water fish should be sought for in the son best for it in the waters which it affects, l, accordingly, since the common trout is no ger an edible and sporting fish of any merit, it nly with salmon, grilse, or sea trout that the gler need now have any hopes of doing much d on the waters to which it is my wish to draw ention.

Rivers of the North East of Scotland, from rfar to Moray-shires, have two sorts of sport cially good for Scotch waters *nowadays*—early uting for common trout, and back-end angling salmon and sea trout. The former kind of rt in the best waters, which are those that tain the largest trout, is usually had in atest perfection from a fortnight to three eks prior to the commencement of the great y-fly carnival in England; but on the more and waters, at high altitudes, and bordering on mountains, it is not generally obtained until late about concurrent with the latter event. yhow, wherever or whenever got, it does not g continue very fine. The period for the ural fly being out in great abundance is short, l for this reason the season is but short- ed. At its finish the trout are in their most fect condition, and then it is that in clear water they take worm, and at night minnow and parr tail, with avidity. But very soon after on Don, Deveron, Findhorn, Dean, and fine tributary trouting streams of the two former rivers they fall off in condition, and the advent of August sees them a thin, flabby, insipid lot, not taking well, nor indeed worth taking, affording only wriggling play like an eel—such play, forsooth, as those accustomed to fish for them when, in their primest condition, they are as gamesome and active as fresh-run sea trout, cannot but despise. Being facts, the above ought to make it evident that it would be misleading to hold out inducements of really good sport with good-sized yellow trout after this time of the year. Since, therefore, this sort of angling is now unseasonable, I dismiss its consideration for the present as uninteresting, and proceed straightway to speak of the other sort—namely, salmon and sea trout angling.

The streams I have decided to commence with are the North and South Esks in Forfarshire, which fall into the sea at Montrose. In both there is a strong seasonal migration of true, bright-coloured, autumn fish. The North Esk is undoubtedly the superior of the two for salmon angling, and on it there is fishing on a good seaward stretch to be had by arrangement with Messrs. James Johnston and Son, fish merchants, Montrose. On this section a good deal of very fine sport is had some years. When the water is high, Phantoms and other spinning baits work best, but when in fair volume it is seldom that anything beats fly, of which the most approved local patterns are Dalhousie, Member, Carnegie, &c. On all Messrs. Johnston's waters in the neighbourhood of Montrose, a ticket for salmon carries with it the right for finnock and sea trout. After this season, however, it is very unlikely that a right to fish for the latter *only* would be granted. Mr. David Murray is the great fishing tackle artificer for the Esks, West-water, and Bervie, and from him all suitable gear can be obtained at his place in the small town of Brechin. Mr. M., who has all the information about the fishings at his finger-ends, is frequently able to put anglers in the way of something good. At Edzell, on the North Esk—"Northie," or "North Water," by which names locally it is known—there is a fine stretch of water rented by Mr. Keith Knowles, of the Panmure Arms Hotel, whereon hotel visitors have the privilege of fishing free of charge. This is about twelve miles from the sea, and so is a sufficient distance up for fish resting well, apart from the consideration of dykes or other obstructions blocking their way. In this respect it must be known that the North Esk is rather an unfortunate river, but this year, with the heavy spates which already have been frequent, the river has been in volume sufficient to enable strong-swimming active fish to quite readily surmount the barriers, which when the water is in certain states effectually check their upward progress. Already, and in proof of my statement, a good few nice fresh-run fish have been got on the Edzell water. In connection with the hotel there is shooting, which those inclined that way can avail themselves of when the angling is not encouraging. On the West-water, one of the North Esk's tributaries which is no great distance away, a grilse or a few sea trout may be got any day between the present time and the end of the season, when the water is biggish. In the back end the fish of smaller size show a marked disposition for pushing up this feeder in preference to holding on along the main stream. The Bervie has fallen off greatly, but on it, as also on the Carron and Cowie, near Stonehaven (northward) there is still a little fairish finnock and sea trout fishing now and again to be had when the water (to use a localism) is in "ripping" order. This has no allusion to the practice, which I have heard of, of "sniggling" or "ripping" the fish.

By the often and heavy spates of late Dee and Don have been thoroughly scoured out, and already in both a strong run of the migratory *Salmonidæ* has taken place. Not for a number of years has a run of such good strength been known to come on so early in the back-end. Accordingly there is great jubilation amongst the local lower sections and tideway anglers, as there is decidedly at present the prospect of a much longer season with sea trout and finnock than "for common." On the tideways and nether reaches of both rivers "finnocking" usually is best between this date and the middle of October. Later on the fish move up river and spread over a greater extent of water, and besides are not so keen on the bite. On Don for a couple of miles from the sea, and on Dee for about five miles up, there is fishing for all sorts of fish which the angler can catch at prices, varying for the season, and according to the beat selected, from 2s. 6d. up to £4, which latter figure is for Nether Don—the best of the lot for salmon—a ticket or two for which I have reason to believe, can still be obtained. Both on the Heathcot Hydro. Water, and on part of the tideway close to Aberdeen, there is free fishing, and not amiss it is sometimes: as for instance last week, when, with the "tailing-off" of a strong spate, anglers were out in force and getting (some of them) as many as fifteen to twenty good finnocks and sea trout in a few hours. But, as the initiated well know, be the water what like it may, finnock may be madly "on" or entirely "off" the feed in a moment's time according to their caprice: they are fickle beyond fickle! On the lower sections of the river indicated the best sport with salmon and backlying grilse is had when the water is low and the weather rather cold, as then the inclination of the fish is more for lying in than holding on upward. In their order the sections (by name) on which the chances of sport are best are Nether Don; Heathcot, Inchgarth and Waterside (in Dee). Above the footbridge at Cults there is a rattling good pool which already this back-end has yielded a number of fine fish. Everybody fishes it, and they say, like Robinson Crusoe, "*their* right there is none to dispute." The last fortnight of the back-end—from 16th of October—is not on the whole so good a time for these lower fishings as the earlier portion, more especially if previously a low state of the water has been of prolonged continuance for the fish when the flood comes push through to the upper waters very quickly, seldom resting till they are many miles inland.

There is salmon fishing on the good one-mile length of Don at Kintore. Day tickets cost two-and-sixpence, and season ones £1. The hotels at Alford (also on Don) have connected with them stretches of river which guests can fish free of charge. The fishing on the Invercauld Hotel water at Ballater is good as a rule during the last fortnight of October. Mr. Lamont, of the New Inn, Ellon, has the fishing (which is free to his guests) for salmon, back-lying grilse, and sea trout, on the Auchterellou beat of the Ythan, which contains several good fair pools for salmon towards the end of September and during most of October. When conditions are wholly right for angling the sport with finnock and sea trout is grand on the Ythan, at Newburgh, from the 10th of September (when the nets go off) till the end of the month. The water of Cruden, when moderately spated or running down after a heavy spate, gives good sport with sea trout in the back-end. Here also (connected with the Kilmarnock Arms Inn, Port Erroll, near Slains Castle, the family seat of the Earl of Erroll) good shooting can be had. When the water is fining down two tributaries of the Ythan—the Ebrie and Brorie—frequently are good for weighty baskets of sea trout and finnock in October. Another, but much more "out-o'-way" tributary—the Water o' Gight—is good likewise, and in addition one or two of its pools yield a number of salmon and grilse every autumn.

For next week my intention is to give fuller particulars concerning several of the fishings named; speak of those not already mentioned, but which come within the scope of this paper's heading; describe some local lures of acknowledged merit on the several fishings; and from personal experience, and what I have gleaned from others, put the uninitiated stranger angler up to a few wrinkles that should stand him in good stead.

ON SOME USEFUL FLIES FOR NORTH COUNTRY TROUT FISHING.

By E. M. TOD.

So far as my experience goes there is no fixed law whereby a north country fisherman can, with any degree of accuracy and certainty, define what are the best flies to use. With the floating-fly school the imitation must necessarily present itself very much as it appears to ourselves in form and colour, and, therefore, a close imitation of Nature would seem to be desirable; although at times, I dare say, as in wet-fly fishing, a fly wholly unlike the natural fly on the water will kill better than the closest imitation thereof.

I suppose that even trout can have too much of a good thing occasionally, and that even the best of flies may be too long "on," and your epicurean trout may say, when he sees a strange fly—"I have grown tired of partridge" (*toujours perdrix*); "welcome this mutton chop!" as he chops down your Wickham, or whatever else it may be. But in wet-fly fishing conditions are different. Sometimes, indeed, the fly is taken floating, but very rarely; generally say ¼in. under water. At times it is nearly half-a-foot under. Now it is in the hurly-burly of a strong stream, now in the swirls of an eddy, and again tumbling about in the waves of some pool, where the wind and stream are contrary; or it may be that a mere zephyr is blowing across a thin pool, and the trout feeding gently at the far side, under the trees, or by the edges of some bushes lining the banks.

It will thus be seen that the fly must be viewed by the trout under a variety of conditions, which render it most unlikely that the form of the fly is retained, or even the colour seen as when fished floating. But even the natural fly must appear a sorry object when tumbled about by the waves; and one can understand, when thus viewed, the trout taking our flies even when unlike the natural fly. And it is instructive in this connection to see how "doctors differ," and how no two men hold quite the same views.

Mark Aitken—a man only known on the Teviot and Tweed, but, for all that, the best fisherman I have ever seen handle a rod, and who taught me the little I know—very seldom or never had a pattern fly in his book, even a March Brown. His flies were not, perhaps, quite works of art, but they were so good that I always preferred to fish with his flies to all the flies I could purchase. To begin with, he used fine light wires (Hutchinson's round-bend), and as fine gut as he could procure. Moreover, his wings—or rather wing, for he used but one—were not heavy, his bodies thin, and hackles light. He made his flies somewhat near the colour of the natural fly—that was all he needed, and he could fill a creel when rivers were low and clear in the most masterly way. Wherever he went, he became famous, and he seldom used more than two flies, well apart; and when trout were unusually hard to take, he at times fished only with one, holding that the dropper only "gliffed"—*i.e.*, scared—the shy trout. He laughed when he paid a visit to the upper waters of the Tweed, where the locals used what they were pleased to call "a shooer o' flees" (six or eight), and he became to them a regular eye-opener when they compared his baskets with their own.

Again, the question of wing or no wing has had, and always will have, its supporters. I confess to like winged flies on the whole; but I like the wings to be light, not bulky; and I declare that, where trout are hard fished, however beautiful the fly, it is only second-rate as a killer on our northern rivers if possessing too much wing hackle; indeed, I frequently use my scissors before I use a fly at all, unless the water is dark, or the day boisterous.

Stewart always preferred the Spider to the winged fly; but it must be borne in mind that Stewart generally fished tributary streams ("waters," as we Scotch call them) more frequently than rivers. For instance, he would seldom fish the Tweed, save in its higher reaches, and nearly all his large takes were from the Gala, the Leader, the Whitadder, the Blackadder, &c. Also, he fished up-stream; and this is an essential to success when using Spiders or hackled flies, as they open out, and the delicate, tiny legs give an appearance of real life when floating towards the fisherman who is wading below. In large rivers one usually wades down and throws across, or across and up, and sometimes, in a low state of the river, one fishes entirely up; but in a full water—say, in the Tweed at St. Boswells, Maxton, or Rutherford—it is not unusual to allow the flies to float downwards before repeating the throw, and in this way, when trout are not hovering near the surface, but a foot or so beneath it, the fisherman may be doing well till the "birth" of flies brings the fish on the surface, and then this sinking of the flies is exchanged for something approaching to floating the fly. For such rivers, therefore, I hold that a winged fly is generally to be preferred. Still it is very remarkable to find men like the late famous Dickie Routledge, of Carlisle, using almost nothing else but wingless flies, even on the Eden, which has a considerable body of water, and yet he was a splendid performer!

I fished the Eden for some years, and was often told that winged flies were of little or no use on that famous Cumberland river. I believed it at first; but as I began to know the river better I gradually introduced some old favourites of mine, such as Greenwell's Glory (and I did very well with that), the winged March Browns (so well dressed by Mr. Forest, of Kelso renown), the Cow-dung, &c. Not that I wholly discarded the Spider flies, but I found that the winged flies were also very deadly, if properly placed before the trout.

Again, throughout Yorkshire, I believe hackled flies are very largely, if not universally used; but many of the flies in that beautifully illustrated and admirable book, "North Country Flies," by T. E. Pritt, the genial and able secretary of the Yorkshire Angling Association, &c.—I say many of the flies portrayed in his book are utterly unknown over the border, and yet, in good hands, would tell a tale—even on the very water Stewart liked to fish so well. Some fishermen have only two or three pattern flies, and use them all the year round, varying the size only. Others have imitations of every known fly that ever floated down the surface of a trout stream, and many a fly besides, which has no counterpart in nature, but which have had their lucky days, and are therefore enshrined in parchment. The longer I live, the more do I like to possess a variety of flies when at the river, and if I find trout unwilling to take the fly or flies I begin with, I change and change until I have hit upon the fly wanted.

The same fly must appear somewhat different when viewed against a black lowering mass of clouds; against a clear, blue cloudless sky; and against a sky filled with dazzlingly white clouds; and so, even when I know that the March Brown is the fly, or the Olive Dun, or the Iron Blue, if I find the trout which took it freely yesterday, flash and splash at it to-day, I know that *that* fly is contra-indicated for this particular sky, or wind, and off it goes, and I try a smaller one. If they refuse this altogether, I try an equally large size as before; but I cut off much of the wings and hackle, making what is called a very "naked" fly, and this often succeeds. But sometimes I receive the straight tip from having, as a dropper, a fly unlike the daily birth of flies, and I never neglect the hint.

We may keep our theories for discussion with brother anglers; but when we face the foe, and he is "on the hop," we must cease to be scientific and be practical.

It is utter folly to go on fishing with a fly which appears to be the exact imitation of the fly on the water—if another fly fills your basket more quickly. Of course I need hardly say that the general rule is to do our best to imitate nature; but not always, for an angler would only be eternally walking in the footsteps of some revered author; whereas I hold that a man must very often get out of the beaten track, and boldly think for himself; and so, whilst I honour the scientific angler, I also hold the practical angler in high esteem.

I was once told a very amusing medical story of a worthy doctor practising in Dumfriesshire, and the story was told me by a medical brother of his, who said that, for all his quaintness, he knew few men whose opinion he thought more valuable. He had been called in to a puzzling case, and the symptoms not having yet fully developed, he had to treat the ones which presented themselves meanwhile—feverishness, &c. The girl was handed a prescription, and looking at its dog Latin without finding its meaning, she suddenly exclaimed, "Doctor, what will be wrang wi' me?" and he answered with his quaint smile, "I dinna ken; but if he tak that, it will dae ye good." Now I have often been in the position of the worthy doctor, and could hardly have explained to a tyro why I changed to a certain fly when bothered by the refusal of the trout to take the very medicine which I knew was the proper one, in the form of a Blue Dun or Cow-dung fly.

Mr. Walbran, of Leeds, possesses many of my pattern flies, and some of them, I think he will own, are an improvement on those he has had previously. I allude to the Cow-dung fly as an instance, which he dressed, I thought, from a pattern with too bright a yellow wool body. The pattern which I sent him he at once took a liking to. Any practical angler wishing to see the difference cannot do better than send to Mr. Walbran for a sample dozen of each, and I will be surety for the dressing, if he dresses all his flies as well as those he recently tied for me.

It seems a small matter this difference, but to me it is so great that I consider my pattern (for my own fishing) far the better of the two. In the same way Greenwell's Glory is frequently spoiled by what, at first sight, appears to be a small fault—namely, the body made of yellow floss silk, or even yellow tying silk unwaxed.

Again, some dressers wax the tying silk so heavily with cobbler's wax that it gives the idea of a black body. Now I hold that the body of a fly is most important, and that ordinary yellow tying silk moderately waxed with cobbler's (not pale) wax, and ribbed over with the finest gold wire, is the only and the true Greenwell's body; and then blackbird's wing for wings, and coch y-bonddhu hackles, complete the very best fly I know for general use, go where you will, on northern streams. The body and hackle are so thoroughly, so undeniably good, that, dressed with the inside of the woodcock's wing, or ditto the starling, it makes a most admirable fly: but it must not be called "Greenwell's Glory"; and I—who had a letter from Canon Greenwell on the subject—know. Indeed, Mr. Walbran, in his very practical work, "The British Angler," has fallen into an error as to the proper dressing of my pet fly, Greenwell's Glory; but when another edition is brought out he will put that right. The fly he describes (page 26) as Greenwell's Glory is, I have no doubt, a grand killer, but it recalls to mind the words of that lovely Scotch song, "Mary Morrison"—

> "Though this was fair and that was braw,
> And yon' the boast o' a' the toon,
> I sighed, and said, amang them a'
> Ye are na Mary Morrison."

It is even so with a pattern fly. It may be the fisher's boast, but it must not be named, unless it is the Mary Morrison, or Greenwell's Glory, since this kind of thing leads to endless confusion. I am a sinner myself, I admit, but when I alter the well-known pattern of a fly, I am careful to remark on it. For instance, last year I found that a long and rather lean March Brown hackle, with a ribbed quill body, did so well, that I have had some winged flies for next year dressed with quill bodies, and I am certain they will kill grandly; but, mark you, there are quill bodies nearly jet black, and, though these are simply splendid in their proper place, they would ruin my ideal of a March Brown fly. I have never tied a quill body in my life, though I have, in younger days, tied hundreds of flies; but the sort of quill I like gives an alternate light and dark rib, which is peculiarly attractive to trout, resembling, as it does, the ribbed-like bodies of several of the ephemeræ. Indeed, I think, it should be more largely used than it is for both winged and hackle flies.

I know no man who dresses the March Brown, Greenwell's Glory, Cow-dung, &c., better than my old friend, Mr. Forrest aforesaid.

In that admirable little book which every angler who has a shilling to spare should purchase, and he who has not should borrow from someone else, "How to Catch Trout," by Three Anglers. Edinburgh: David Douglas, 1890, you will find that this triumvirate of anglers gives the following:—

"March Brown, male and female.
"Blue Dun, and Iron Blue Dun.
"Greenwell's Glory.
"Woodcock Wing, with (*a*) hare lug body; (*b*) quill body, and red or black hackle; (*c*) yellow or orange silk body, and red hackle; (*d*) black silk body and black hackle."

And the writers add these words: "In one or other of these shapes, this is, in our experience, the most reliable of all winged flies." So much for the Woodcock Wing.

It indeed makes a very good fly, but I do not use it so very often, after all.

I may also add that I always prefer yellow silk to orange; for the body of a river trout fly.

"The Three Fishers" then enumerate a goodly t of killing flies, but as all fishers can, and ought have this shillingsworth, I shall not do more an refer them to the work itself.

I generally like to possess an assortment of es, which the experience of nearly forty years hirty-five anyhow) has taught me are luable:—

(1) March Brown, male and female (tied by orrest).
(2) March Brown hackle, with ribbed-quill dy.
(3) Greenwell's Glory, in all its glory.
(4) Ditto. but with wings from the inside ather of water-hen, or starling wing.
(5) Ditto, with inside of woodcock's wing.
(6) The Cow-dung Fly.
(7) The Olive Dun Fly.
(8) The Blue Duns, dark and pale.
(9) The Iron Blue Dun (and which *I* seldom use heu I have Greenwell's Glory).
(10) Starling Wing and hackle, body of yellow, ing silk *waxed* (cobblers' wax).
(11) Red Spinner.
(12) Here I should like to introduce a fly of my n invention, which has occasionally done very ell for me on the Deveron and elsewhere. The ck feather of the Himalayan pheasant, with splendid metallic lustre of changing green, akes a fine spider fly. Some feathers are of a autiful rosy bronze, but I much prefer the green. r. Walbran was much taken with some flies I nt him, and which, I think, were dressed with y old friends — inside of starling wing for ings, and well-waxed yellow silk body; but as a ckle fly it is well worth a trial. I got the athers out of a ladies' hat, and they are lmirably shaped hackles for the purpose of fly aking.
(13) A buff-coloured wing with a cinnamon ackle has its place, but I think that it only leads confusion to have too many patterns.

Besides these, the black and red, the plover, artridge, grouse, and dun hackles are all valuable, pecially on small rivers or riverlets; but it ould take up too much space to do more than add at no greater or better variety of hackle flies n be found than in Mr. Pritt's "North Country lies"; whilst those who consult Mr. Stewart's Practical Angler," and "How to Catch Trout," ill find all that are needed on the Scottish side the border to fill a good-sized creel, if only e fisher himself is "far ben" in the art.

One's memory is apt to fail at times, and I may ossibly have forgotten some good old killers; but e who has the flies I have already named, not in rder of merit, be it clearly understood, but as hey came to mind, will have enough and to spare r the next campaign to the North of England, nd more especially to our Scotch rivers, rivulets, nd even hill-burns.

The sizes of flies I generally find most useful re Nos. 2 and 3 (Hutchinson's, of Kendal) scale, lue steel and round bend; March Browns up to o. 4 now and then; but even March Brown flies ill well down to No. 2 at times. For particular ases (this in secret), I commend to the notice f brother anglers, who fish in June, or even in nd of May, some of the really lovely "double" lidge flies dressed on the smallest wires, Greenwell's Glory, dark wing and dyed yellow hackle, nd some buff wing and pale cinnamon hackle. hey have filled creels for me when other anglers ore sitting down in very despair smoking the eed; and they are tied perfectly by Mr. Forrest. know no other to whom I would entrust with qual confidence an order for these delicate, yet illing little fellows, "the doubles." Over and ver again have I been in utter despair — trout plucking" at my very finest flies—when suddenly I would remember the old whist rule, When in doubt lead trumps," and this trumpard I always have "up my sleeve." You can use whenever trout come short and shy at your ies; and when the natural fly on the water is of mall size, the water fine and "clear as gin," and he breeze light, then put one of these on as the nd fly, open out the two tiny hooks with your nger-nails, but not too much; single out a good rout, put the fly about a foot above him, and give he line a gentle motion, and if you have the roper colour you will feel a pull, and then strike ery gently, and let him have his head. He cannot asily get rid of the "little double" once well ome.

As a proof that my flies CAN do execution, I went as a perfect stranger to a certain northern river four years ago, and fishing short days—from 10.30 to 4.30 (or five at latest), and sometimes not beginning till eleven and twelve—I had, in thirteen days' fishing, basketted with the artificial fly alone 220lb. nett of good trout.

Notes

Mr. H. S. Foster, Sheriff-Elect of London, Mr. H. C. Richards, Barrister-at-Law, Mr. T. J. Woodrow, of the London Corporation, and others, are announced to speak at a meeting at Lowestoft, on Thursday next, on the question of the public right on the Norfolk Broads. The movement against closing these delightful resorts is increasing in strength.

We beg to call the attention of our readers to the advertisement of "Zeno," appearing in our columns this week. This is a rare opportunity for acquiring a complete salmon outfit, at a very moderate cost.

An excellent early autumn angling season being experienced by the rods pretty nearly all along the Ness, is reported by our correspondent, Mr. Donald Watson, tackle maker, 19, Inglis-street, Inverness. It would appear that, as usual, grilse bulk largely in the catches. The Ness's best angling time for salmon and grilse is considered to be between the beginning of August and the middle of September.

On the east coast of Scotland there was a great scarcity of sea trout in summer; but in the rivers, to judge from the strength of the run already, it seems very likely that there will be a more than average head of finnock or whitling, the adolescent sea trout, during the autumn.

For the gamesome, silvery little fishes alluded to, rarely does the "back-end" angling commence so early or so well as it has done this year. The angler's "cry-out" of "no water, no fish," so common about this date, is presently nowhere heard, as there is ample volume of water for once; but who knows?—the unexpected may happen ere long, and the cry be revived in all its piteousness.

Reports from the more northerly of the north-east coast rivers, whose best season is "on" about this time, indicate that of late sport has been good. On the Berriedale with salmon, grilse, and sea trout, and on the Dunbeath, Freswick, and Wester, principally with sea trout, anglers have had some gratifying days. At his place in Caithness, the Duke of Portland has been entertaining a large shooting and fishing party, and among his guests who have gone out on the Berriedale river is Lady Gore, to whose skill quite a number of salmon and grilse have succumbed.

His Grace the Duke of Richmond and Gordon, and a strong party of fishers, have arrived at Gordon Castle, Fochabers, for the salmon fishing on his grace's water of the Spey, which fairly beats every other fishery in Scotland for productiveness during the "back-end."

"Touring" anglers on the look-out for a bit of salmon fishing, might do worse than put up at the Traquair Arms, Innerleithen, for a short while before the Tweed's season for rod fishing ends.

This year the sea trout angling in the Kyle o' Tongue has kept up wonderfully until much later on than usual. Even yet it is moderately good.

Salmon angling bids fair to soon become quite a fashionable recreation for the fair sex, since it is mainly ladies of title that are leading and showing how it can be done. Within the fortnight we have heard of no fewer than six of them having fished on Scotch rivers with considerable success.

This is now the time to go to the Uists for the angling (often excellent) for sea trout of the late migration—the best sea trout of the year—numerous in these parts.

On the free water of the Tay, at Perth, several anglers have lately been getting some good fish. To farther inland stretches of the same river, whereon already the rods have done well, a great strength of fish is reported to have pushed up with the flood of last week. Off and on about the same time all the other rivers of consequence on the East Coast were in spate, and, to infer from the "leaping" and show of "back fins" and "tails," had numbers of good large fish ascending them. Since the netting season closed, some prime autumn salmon of a large size have been caught on North Esk, Dee, Don, Deveron, and Spey, which is proof of their having pushed up. In Dee, several autumn "runners" have already been seen beyond Aboyne—over thirty miles up-river.

In struggling with a 36½lb. fish, which he had gaffed, a fisherman had a very narrow "shave" in the Spean river some time ago. The gaff was sent "home" when the fish was in swift rough water some distance out from the bank, and in the tussle ensuing the fisherman was knocked over and the cast snapped. Fortunately in the *nick* of time he regained his footing, otherwise, instead of banking the fish, both he and the fish would most certainly have gone down into the deep dangerous pool immediately below.

The Earn seems to be doing "not bad at all." A couple of rods had each five salmon in one day towards the end of last week. It is years since the season has opened so early with such a good beginning.

Of late nice baskets of good-sized autumn-run sea trout have been secured on the Eden, Fifeshire.

This year, the season's fishing of one rod on the Brora, reaches the creditable total of one hundred and fifty fish—nearly all salmon.

For the season, the gross amount drawn by the Aberdeen Commissioners for salmon caught at their netting stations on Nether Dee and at Dee mouth appears to have reached the extraordinary sum of £8,964 12s. 1d.

From the Tweed Commissioners' report for year up to 30th June last, it appears that watching and protection expenses amounted to £2,568 9s. 5d.; that during the close time, consequent on the presence of a tug-boat to assist the bailiffs and seize nets, illegal fishing by fishermen on the coast at the mouth of the river decreased comparatively; that of criminal cases there was an increase in the number taken up throughout all the districts, the whole numbering one hundred and ninety-four; that, by a decision given in the High Court of Justiciary, "sniggling" was shown to be illegal; and that of the number of fish affected with the disease, which first appeared in October and continued until June, there was an increase, which was accounted for by the unusually strong head of migratory trout in the river between the dates stated, when altogether, of various kinds, six thousand four hundred and twenty-nine fish were taken out and buried.

Merrily the fishing goes on, on the rivers of the Solway, and a striking sight it must be to see the "forest" of rods sometimes out. Writes a friend: "Should the water be in ply, go down to the Willow pool on the Esk, and take the camera with you. This pool I have fished when there were nineteen rods, all "leathering away at it."

One boat's party fishing for a fortnight on Loch Stack, last month, got one salmon, three hundred and six sea trout, one hundred and twenty brown trout, and three char.

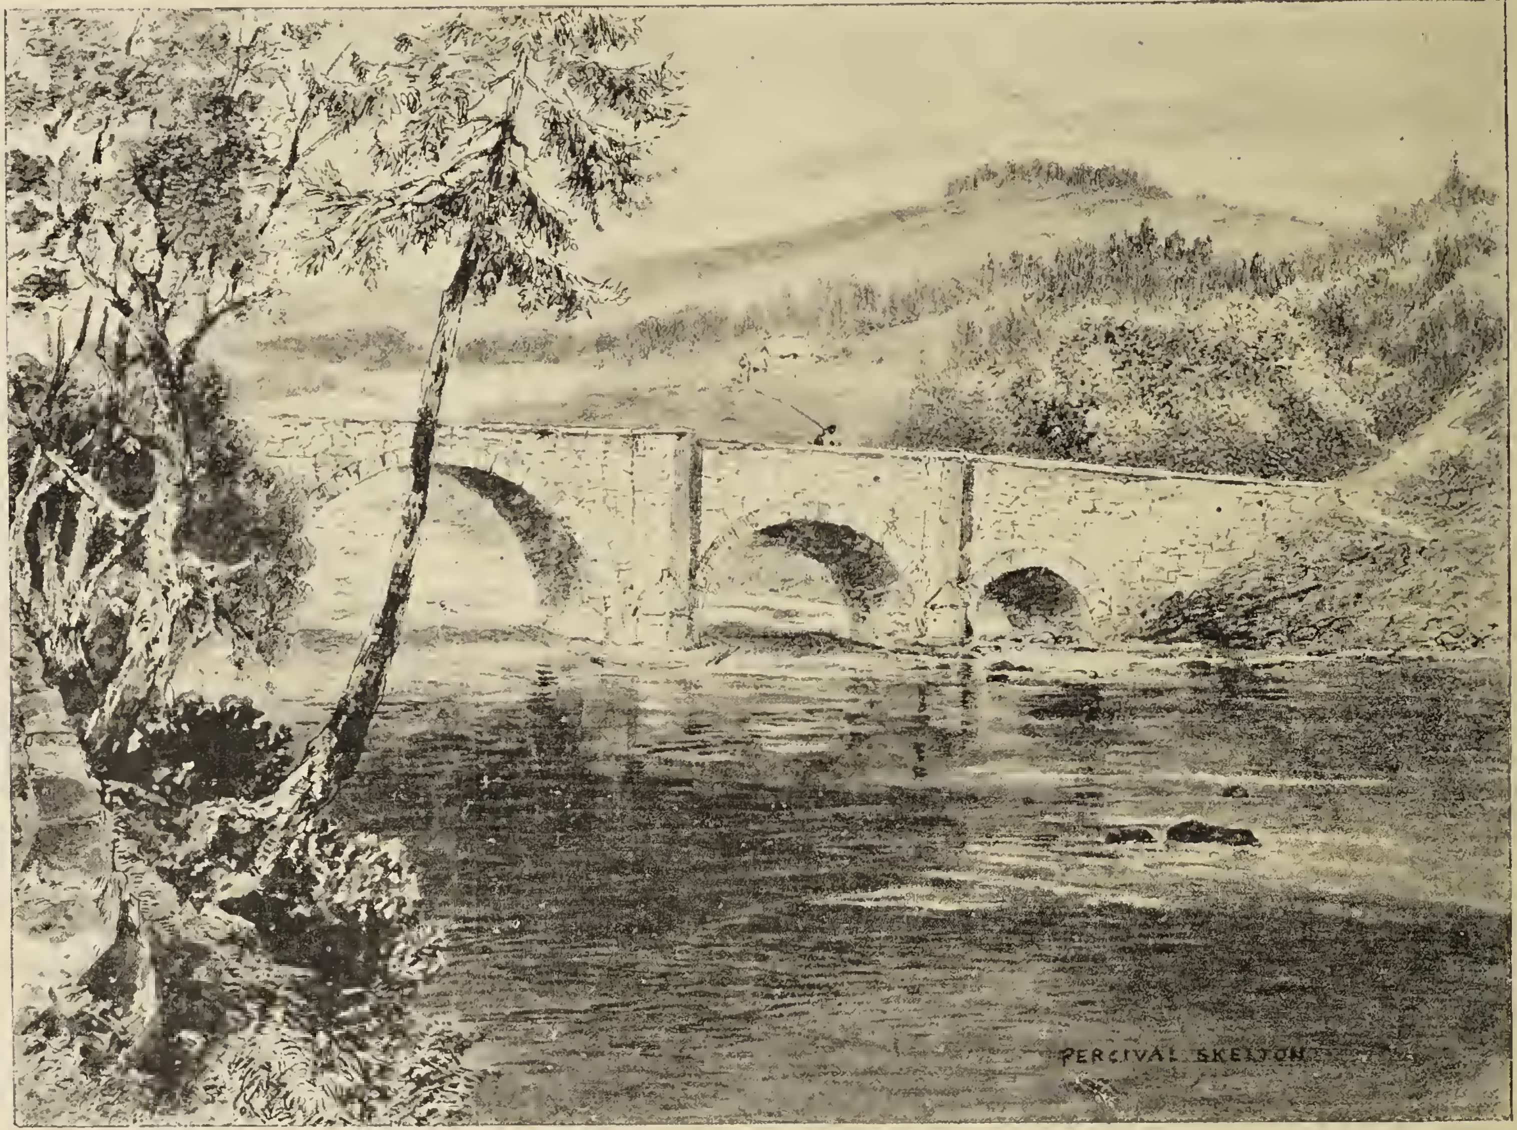
Mr. George Sim, A.L.S., naturalist and taxidermist, King-street, Aberdeen, reports a fine female specimen of the Scops-eared Owl (*Scops Androvandi*), as having been picked up dead on the Great North of Scotland Railway line, near Kintore, 2nd Sept. This is the second occurrence of this species in Scotland. The stomach was crammed with ear-wigs and beetles.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear. Best quality only.—East London Rubber Co., 8, Shoreditch, E.

THE SPEY.

(Continued from page 152.)

Trout fishing on the Spey is, on the whole, disappointing, or, at all events, only to be prosecuted with success by the dwellers on its banks who can choose their times and seasons. A good basket can frequently, however, be made by the flyfisher in the "March Brown" season, or later, when there is a full water; or, again, on those rare occasions when, as in other rivers, the trout will rise at anything without "rhyme or reason." Big trout there are indeed, though not very numerous, but they rarely rise to the fly, and only fall a prey to the more deadly minnow, or a bunch of worms presented in orthodox manner to them during a flood, or when "the water is growing." The right of "free fishing" for trout is another vexed question which may be discreetly passed by, save to mention that the claimants appear to have enjoyed a "wont and use" for many years beyond the term which is popularly supposed to give a prescriptive right.



POOL BELOW SPEY BRIDGE, NEAR GRANTOWN.

The subject of the illustration given this week is the old bridge at Grantown, locally known as Spey Bridge, where the river may be said to have just begun its wild race to the ocean. The bridge was built by the military road-makers in the reign of George II., soon after the battle of Culloden. It is constructed of the primitive rock, on which it is founded, and the three arches span respectively 86ft., 40ft., and 20ft. The village of Grantown is some three-quarters of a mile off, in a sheltered and salubrious situation—being, in fact, frequently recommended by the medical faculty as a retreat for consumptives. The trout fishing in the neighbourhood is as good as any on the river, and the right of fishing, even on the part of tourists, who frequent it in considerable numbers, has never been questioned here. The surrounding country belongs to the Grants, who were ennobled in the sixteenth century as Earls of Seafield and Barons of Strathspey; and Castle Grant, one of the family seats, is in the immediate neighbourhood. At the castle is held annually one of those northern "gatherings," at which the stalwart, if humble, members of the clan compete in such light sports as throwing the hammer and putting the stone; while the men of less weight show their emulation in the lightsome Gillie Callum and highland fling to the strains of the "great hieland bagpipe," played by a race of champion pipers.

Strathspey, though boasting of some of the finest scenery in all Scotland, is yet but little frequented by the tourist or holiday angler. If the Spey itself cannot be always depended upon for a basket, except by those to the manner born, some of its tributaries would repay a visit, as much for their beautiful surroundings as for the sport to be enjoyed. The principal of these are the Truim, the Trommie, the Feshie, and the Dulnain, on the upper part, and the Avon and Fiddoch on the lower. The Avon, the largest of them all, has its source in the perpetual snows of Ben Macdhui, so that it springs from the same fountain-head as the Dee. The scenery of the latter river is as well known as it is grand; but that of the Avon, where it flows in a rocky bed before reaching Glenlivet, through a glen overshadowed by mountains 4,000ft. in height, is more wild and magnificent still. The lower part runs over a limestone bed, and is as clear as a Hampshire stream when at its normal size. The trout fishing is preserved, but permission to fish is not difficult to obtain, and anglers are made very comfortable at the little inn of Delnashaugh, which is not far from the station at Ballindalloch.

The Fiddoch flows through the glen of that name, which, with its gently-rising hills, covered on their lower slopes with fruitful corn fields, has been classed as one of the most beautiful glens of Scotland. The fishing on the lower part of the stream where it runs in an immense gorge with a wonderful variety of rock and woodland scenery, is free, and anglers make Craigellachie their headquarters. The bed of the Fiddoch is also of the nature of limestone, and its trout are beautifully marked and quite distinct from those of the Spey.

Since the opening of the Forth Bridge, the Spey is easiest reached by the Great Northern and Great North of Scotland Railways, *viâ* Aberdeen; and an angler leaving King's Cross at eight p.m. might be "fast in a fish" by noon of the following day. The branch of the latter railway, which runs from Craigellachie, crossing and re-crossing the Spey to Grantown, and from thence on to its junction with the Highland line at Boat of Garten, follows the route of the river through its finest scenery; and anyone making a journey over this romantic country of the clans could scarcely refrain from at least a wish to make its closer acquaintance.

SOME NOTES ON THE BEDFORDSHIRE OUSE.

By an Old Hand.

Upon my word, I scarcely know how or where to begin. An angling friend, who is particularly sweet on Swavesey, or as it is called in the vernacular, "Swasey," gave me to understand some time ago that this village was admirably situated for fishing either up or down this peculiar, calmly-flowing, serene, rushy, and singularly unromantic, yet interesting river, and so to Swavesey I went. A river, as Cowper says (and says in his happiest mood)—

Here, Ouse, slow-winding through a level plain,
Of spacious meads with cattle sprinkled o'er,
Conducts the eye along the sinuous course
Delighted. While far beyond and overthwart the stream,
That as with molten glass inlays the vale,
The sloping land recedes into the clouds,
Displaying on its varied side the grace
Of hedge-row beauties numberless, square tower.
Tall spire, from which the sound of cheerful bells
Just undulates upon the listening ear;
Groves, heaths, and smoking villages remote."

I say peculiar, because in some portions the bowing and swaying bulrushes are so thick that viewed in the distance, they seem literally to block up the course of the stream; but a short space either up or down, one may come to a grand stretch or reach of deep, clear, quiet, sluggish, pondy, pikey-looking water (say from 5ft. to 8ft. in depth) within easy fishing distance from the side; and, in several instances, just opposite these deep runs are shallows in which both dace and chub are taken with the artificial fly; but more of this anon.

In some cases, again, the shallows reach across the river. Just such a deep run as that mentioned above is in the second field from the picturesque village of Holywell down stream, and called Ducker's Hole, and hugs the bank for some distance; in short, a stranger coming suddenly upon one of these exceedingly rushy portions of this unique river for the first time would scarcely believe that it contained either such pike haunts, or bream, perch, and roach swims; and with respect to fish, I firmly believe that it contains nearly every sort of fresh-water fish that swims, with perhaps barbel excepted. Salmon trout (one was caught at Brown's Hill, or Over staunch, last July, with a small gudgeon, that weighed 7lb.), pike, perch, chub, roach, bream, carp, tench, rudd, dace, burbot, bleak, minnow, miller's thumb, pope, stoneloach, sticklebacks, flounders, eels and lamprey (in season), and the first angler I came across informed me that only the previous week he had caught a rudd close to where I was fishing nearly 2½lb. in weight—a fish, as he observed, that "is not seen every day."

But I am afraid that I am digressing.

Starting-points: Either from St. Pancras or Liverpool-street Stations. In my case the latter was most convenient, so I caught the 11.55 train, a capital train, stopping at (first) Bishops Stortford, (second) Cambridge; distance fifty-five and a-half miles; fare, third-class, 4s. 7½d. Change here for Swavesey, eleven-and-a-half miles distant. River about fifteen minutes from the village. N.B. —A grand chop can be obtained at the Commercial Hotel, just opposite Cambridge Station, and Cambridgeshire bread, beer, and butter are splendid. Cross the line by the railway gatehouse, near Swavesey village, situated a little to the left of the old dock, and keep along the bank of the disused and choked-up drain which leads to the river at a point where a mill formerly stood, and the ruins of which still remain in the shape of a heap of bricks, &c. Then cross the flood-gate, and a short distance up the river are two swims much affected by the natives, and which they chiefly fish from the bank, using lines of immense thickness, and floats like young turnips, by the aid of which they not only get out good distances, but attach sufficient weight to "anchor her," and so prevent "her" from coming to the side. Such a proceeding is perfectly necessary, because if "she" was not anchored, the stream would gradually draw "her" (the float) and tackle so close to the side that one might just as well fish on the bank, more especially in a clear water; but keeping out a good-sized *quill* float placed deep enough and shotted heavily enough to keep its nose well out of the water, can be accomplished as effectually by drawing down a couple of lengths of *fine* line from between the rings, and casting in the Nottingham style, taking care that the *upper* length is allowed to go from the forefinger first; but there is one great drawback to this method—the bait is always lying up-stream, and the tackle and float hanging behind, not to mention loose line between rod top and float; the exact reverse of the method known as stret-pegging.

In my opinion, with very few exceptions, there is only one way to fish this river properly, and that is by the aid of a boat or punt. Then one can choose a swim, and light leger (with or without a float) or stret-peg; or swim a worm, caddis, &c., in places tolerably clear from weeds and other aquatic *débris*. The native with the clothes-line, &c., told me that he seldom legered without a float on account of the weeds.

I did not get down to the river until past five o'clock, and I fished on until I could no longer see my float. I waited patiently, expecting the native to pack up. The wind was crisp and cold; my feet wore damp; sport bad; I was hungry; and, in spite of myself, I could not help shivering. It was getting dark, and in sheer desperation I said, "Are you not going to pack up?" "Pack up! This is just the time bream begin to bite. I generally stay until half-past ten or eleven, for bream are seldom caught in this river in the day-time." And so without more ado I bade him good-night.

This was the cry from one and all—"Night is the best time for bream fishing"; but, as a counterblast, allow me to say that either last July or August I noticed that your reporter, Mr. Rout, told a very different tale, and why bream should not be caught in this river in the daytime is one of those things I do not quite understand; and if these fish can be caught in the neighbourhood of Huntingdon, and I think I may include St. Ives, I see no reason why they should not be taken at Swavesey, although I must confess that I did not see a bream taken with rod and line during my stay; but, to my surprise, I did see two boys fishing for bream by the aid of a lantern in a clear place in the drain previously mentioned.

Excellent takes of bream are obtained in the Trent, Yare, Medway, Thames, &c., in the daytime; then why should this river be an exception? But from all I can gather it is very *seldom* that any bream worth mentioning are taken, except at the time mentioned, and many anglers only angle for bream from dark until daybreak, or an hour or two later. I think that it is quite as well to mention this fact, because two or three anglers might go down, go to no end of trouble and considerable expense in baiting this, that, or the other swim, fish *only* in the daytime, fail to take a single bream, become utterly disgusted, and say all manner of unkind things about the river. All I know is, I soon came to the conclusion that if anyone had good cause to be disgusted it was myself, for the weather was simply detestable. Three days out of four I came home sopping wet, and perished with the cold. On one or two occasions I was nearly blown into the river. The wind blew with such force that the tops of some Lombardy poplars in the distance lashed the sky like whips, and the leaves were ripped off and driven along like unto a storm in autumn. I saw the sun at rather long intervals. Within the space of a few hours I saw every conceivable cloud in shape and colour—well, from driven snow to ink—changing, ever changing. On several days we had spring, summer and autumn, with thunder, lightning, and hail; and winter (*i.e.* frosts) in the evening. But having since that time had another fearful dose of this extraordinary, charming, singularly pleasant and balmy weather, I have come to the conclusion that it is only a waste of time to even think of being disgusted in matters appertaining to angling; and you can believe me or not, but I am just as eager to be off as ever.

This is one of the many peculiar charms of angling, that only your true out-and-out disciple of dear Old Izaak can possibly understand. A charm that is becoming more subduing, more powerful, and more irresistible every day; and this is the unfortunate result of mentioning a more unfortunate fact.

At the time of writing it is blowing and raining as hard as ever, and although I should like to get hold of some of those Ouse bream, I see no chance of fishing either in the day or night-time at present. *(To be continued.)*

CARP AND TENCH: AND ANGLING FOR THEM.

By Alfred Jardine.

(Continued from page 119.)

Cyprinus-carpio is one of the most widely-distributed of all British fish, and the remains of old carp ponds or stews are discernible all over the kingdom wherever a monastery formerly existed. In the days of the monks, sea fish could not be conveyed from the coast to remote inland places in an edible condition, no better means of transmission existing than pack-horses; and although it is probable the monks were in the habit of eating salted herrings, it was a matter of necessity to cultivate the carp and other fresh-water fish to provide for feasts and fasts. Referring to their longevity, there were carp existing at Fontainbleau up to a few years ago (previous to the lake being netted) known to be over a century old, grey with extreme age, and veritable monsters, some weighing as much 25lb. and 30lb. each.

The late Frank Buckland wrote about certain carp a hundred years old in a stew-pond at Windsor Park; and he instances one, weighing 21½lb., from which he made a plaster cast—to be seen, I believe, in his museum at South Kensington. The roe of this fish was estimated to contain no less than 1,310,750 eggs, and a smaller fish (weighing 16½lb.) contained roe of 5½lb.: giving the total of 2,059,750 eggs.

Among the specimens exhibited at the International Fisheries, 1883, was a carp, caught in the Thames, of 14lb. 10oz., and a fine one from the Lea, weighing 14¾lb. There were others also approaching these in size. In 1879 a monster carp of nearly 20lb. weight, netted in the lake at Burton Park, Sussex, was conveyed to Hendon, and placed alive in the waters of the Welsh Harp Fishery.

Mr. J. P. Wheeldon has given me the following interesting account of a splendid fish caught in July last by Mr. Robert Hazlewood, a member of the Eagle Angling Society, who, angling in the Lea at Day's Fishery, Tottenham, with a small live frog hooked through the skin of its back, and a lob worm with head nipped off, the frog brought down on to the worm—thus baited, legering for eels, Mr. Hazlewood captured and landed a fine carp of 13lb. 13oz. The following day two others of 7½lb. and 5½lb. were taken from the same waters, where, I am informed, are plenty of 10lb. to 12lb. remaining to tempt the angler, and test his tackle; but carp of 12lb. are seldom taken by rod and line, and a six-pounder would be considered a prize of which any angler might indeed feel proud. Mr. Cholmondeley Pennell gives instances of carp weighing 18lb. and 19lb.; also of a brace —netted in the lake at Gatton Park, Surrey—of 38lb. together, sent by Mr. Ladbroke as "challenge specimens" to Lord Egremont, to compare with the carp of Sussex. Mr. Pennell also speaks of one netted in the Mere, at Penn's Hill, Surrey, in 1836, of 22lb. weight,[*] as the largest ever taken in this country; but a larger one was taken in 1858 from Harting Great Pond, near Petersfield (the extreme length of this fish, including the tail, was over 36in.; its weight 24½lb.; and this grand carp ones was supposed to "top the record" of all large captured in English waters).[†] A 19½lb. carp was taken in "White Sitch Lake," near Weston Hall, Staffordshire, the seat of the Earl of Bradford.

From these data it will be seen that carp under favourable circumstances of location and food attain large dimensions and weight. Frank Buckland draws a comparison between carp and other fish. The salmon is built for speed, to live in very rapid waters, and in shape may be said to be like a racing yacht. The carp, formed like a Dutch eel-scoot, lives in quiet, oftentimes in stagnant waters, and swims slowly, but with ponderous momentum; so that it becomes necessary, when fishing for them, to use fine, though strong tackle, for, with "steam got up" and well "under weigh," if they gain a bed of water-lilies (their favourite haunt), then is likely to occur great discomfiture to the angler's gear.

Because of its extreme cunning, the carp has been called "the fresh-water fox."

> "Of all the fish that swim the watery mead,
> Not one in cunning can the carp exceed."

It is wily and crafty, with a brain weighing 1 in 500. The pike's is 1 in 1,300; and the *average* proportionate weight of brains in fresh-water fish to their bodies is as 1 in 3,000. Hearing, seeing, tasting, and smelling are faculties (to speak generally) showing higher developments in carp than in almost any other fish. Thus we may expect carp to be intellectual and subtle, and the older they get the more, of course, are their mental faculties expanded.[‡] But, nevertheless, they are capable of being tamed, and in some measure domesticated, so as to congregate at some specific corner or other place in a lake or pond to be fed—*i.e.*, to assemble together at the sound of a whistle, or I might say "the dinner bell," or the call of a human voice.

The late General Goodlake, of Denham, near Uxbridge, where I often fished—had some large carp quite tame, which fed from his hand. The large and ancient carp, inhabitants of the lake at Fontainbleau, already alluded to, many visitors there—(previous to twenty years ago)—will remember; and how a loaf of bread, baked hard (say the size of a penny roll), when cast into the water, would be immediately surrounded by many of these fish, who would push it to the nearest part of the wall surrounding the lake, and there "nozzle" and pound it, until, by repeated blows and the soaking, the loaf broke to pieces. But just as it was fit to be eaten, some of the patriarchs—grey with age—who had been watching these proceedings, would swim up, drive the lesser fish away, and appropriate the broken bread reduced to sizes small enough for deglutition.

To mention one other instance, from the many I know, of the way in which carp can be tamed, I borrow an extract from Mr. C. Fennell's work:[‖] "In a garden belonging to Mr. Eden, at Rotterdam, I saw some carp fed, which were kept in a moat of considerable size. The object was chiefly to satisfy me that they were capable of hearing. My friend, having filled his pocket with *spinach seed*, conducted me to the side of the water. We remained quiet for some time, the better to convince me that the fish would not come till he called them. At length, after calling in his usual way, the carp immediately swarmed from all parts of the moat, in such numbers that there was hardly room for them to lie one by another."

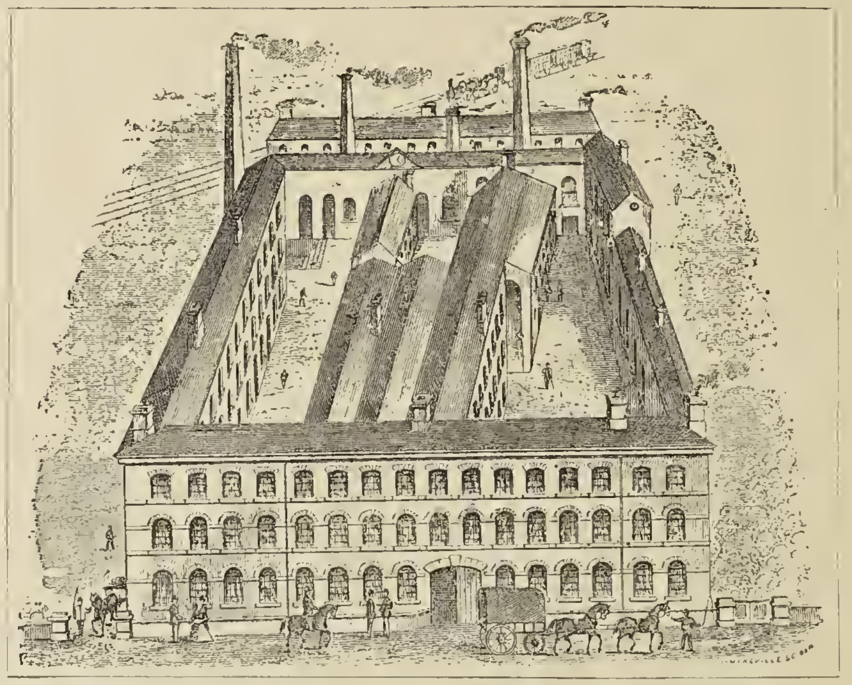
Carp are vegetarians, feeding on the delicate subaqueous sprouts of water-lilies and other freshwater growths. A small new potato, *semi-boiled;* broad beans, or large green peas, partly cooked, so as to be tough enough to keep on the hook, are excellent baits. Worms, gentles, wasp-grubs and fat caterpillars are at times greedily taken. Paste, sweetened with honey; or a piece of ripe old cheese, mixed with crumbs of bread into a stiff paste; the soft roe of a herring with the fibres of cotton wool well mixed in it; ripe cherries and mulberries may be used successfully as carp baits.

For "ground-bait," chopped worms, carrion gentles, or boiled potatoes and bran. Some anglers recommend the addition of coagulated blood, which can be got at slaughterhouses, but the compounding of this mess must be a filthy job. The way to "ground-bait" is to throw a little, for three or four days, into the place, or places, you intend to fish, but *not too much* bait; then wait a day without baiting, and fish the next. The carp will have congregated; and while you are fishing throw in *sparingly* a little bait, to keep the fish together and on the look-out for more food.



MESSRS, ALLCOCK AND CO.'S STANDARD WORKS, REDDITCH.

You cannot very well keep too far away from the float, and if possible manage to have the sun in front of you, so as to let no shadows of yourself, or rod, fall on the water.

Don't move about, and keep very quiet. Some old anglers I have known, when fishing from a punt, always put list slippers over their boots, so as to prevent any noise or concussion as they moved about in the punt; for water is a great conductor of sound, and carp, tench and bream are easily frightened by noises, and driven away from the swim. Therefore keep quiet, and pursue (as it were) the tactics of a burglar intent on robbing a house; for a carp is a shy fish, and a sly fish, and therefore has earned the name of the "water-fox."

There are two ways of fishing for carp—viz., float fishing and legering. The former is the best in quietly-flowing rivers, lakes and ponds; and as it does equally well for tench I will describe that method first.

The rod should be about 11ft. long, strong and flexible, but not too springy; those with butt and middle joint of solid cane and a lancewood top are excellent—much better, I think, than all lancewood or hickory. A "check-winch" (Nottingham pattern) large enough to hold eighty yards of *fine* (*though strong*) plaited silk line, which if waterproofed is an advantage, as that, in a great measure, prevents kinking; a small cork float, about two yards of gut, selected fine and *round*, thus ensuring strength (it is better stained a pale olive or green); a No. 8 round-bend hook for worms, but one size smaller for paste; the gut "shotted" twelve inches above the hook, and the depth of water accurately plumbed, so that *with the shot resting on the bottom* the float half cocks; then, when a bite is perceived, and the float begins to move away, do not strike until it goes under water. A tightening of the line is sufficient to imbed the hook over the barb into the carp's leathery mouth. Keep the fish away from weeds, play him in the open water, and get him to the landing-net as quick as possible, without risking a smash of the tackle.

Carp and tench are generally congeners in the same waters; and there are very few moats about old manor-houses, or ponds near country farms, but what hold good store of both kinds of fish. Twenty years ago, at an ancient farm in the Midlands, where I remained a few days, was a deep pond covered with duck-weed. No fish were suspected there; but during my stay I caught many brace of tench—some of them fine ones, between three and four pounds weight.

Among the best carp waters of the Thames, where good catches may be confidently expected by the persistent and painstaking angler, are the quiet reaches below Wallingford, and from Moulsford on to Cleve Lock. In these parts water-lilies—(favourite haunts of carp)—grow in profusion; and just before reaching Cleve, at Runsford deeps, is a splendid back-water, where, in the spawning time, I have "ladled out" tench with my landing-net, to return them again, however, to the water. When spawning, carp and tench will allow themselves to be almost handled, and seem oblivious to everything else than that they are engaged in. Mr. C. Pennell relates, in one of his works, how, at the great lake of Wimbledon Park, he once lifted from the water and captured with his net a carp of 19½lb. No doubt this fish was intent on spawning. In the deep portions of the stream near Mapledurham and the bend a little distance above the landing place for the Roebuck Inn, both carp and tench may be caught; but from Sonning on to Wargrave is without doubt the primest part of the Thames for these fish. At the large pool, by the five pollards, is a capital tench hole; and a half-mile farther down-stream, where some dwarf bushes grow on the north bank, a short way above where the Patrick stream flows from the river, is a quiet eddy; it was here Mr. Woodmass, fishing with Bailey, of Nottingham, one morning caught a brace of carp weighing 16lb.

Below the "eel-bucks" is an island. The channel on the right of it is much overgrown with weeds. The punt or boat must be pushed through the rushes, then a couple of open spaces of deep water will be found, and these, judiciously ground-baited and *quietly* fished, should yield a carp or two and a few brace of tench.

While mentioning Sonning, and remembering the successful angling I have had there, and the pleasant days passed in my punt with William Hull, late landlord of the *old* French Horn Inn, as my "Fidus Achates," I am very pleased to know that a great change for the better has taken place at the *new* French Horn. This hotel has recently again changed hands, and under its new proprietorship visitors now find every comfort, and receive attention from the waiters. The sitting and bed rooms are clean and nicely furnished; the *cuisine* is excellent, and charges are the *reverse of extortionate*—in fact, very moderate. These advantages, added to civility, make it worthy of the patronage of anglers intending to fish the Sonning waters.—(*To be continued.*)

THE MANUFACTURE OF FISHING TACKLE.

—— THE REDDITCH HOUSES. ——

BY EDGAR S. SHRUBSOLE.

(Continued from page 384.)

POSSESSED of indomitable energy and a large amount of commercial aptitude himself; assisted by skilful, steady, and industrious managers and foremen; backed up by able and satisfied workmen—Mr. Samuel Allcock has built up at the Standard Works, Redditch, not only by far the largest manufactory of fishing tackle in the world, but also one of the most remarkable and interesting industries of the present reign. One has to turn to the manufacture of needles, carried on in the same town; to the lace manufactories of Nottingham; the screw works of Birmingham; the numerous factories for the production of cutlery, &c., in Sheffield, and like industries, to find a parallel to the innumerable devices, deft fingers, and intricate machinery utilised in the production of fishing tackle at the admirably arranged and conducted Standard Works.

Not the least remarkable feature of this extensive business is its rapid growth; since that time in the far distant past, when worthy Joseph Tolly, of Sambourne, near Redditch, commenced to make fish hooks on a small—a very small scale—down to our own day, when this industry gives employment to many thousands of hands, no business has made greater or more rapid progress than that of Messrs. Samuel Allcock and Co. The name is known wherever votaries of the gentle art are to be found. Not only do they do an enormous home trade, but their goods are exported to every part of Europe, to all the Colonies, to India, and to the United States, in quantities calculated to make the uninitiated open their eyes very widely indeed. Large as the business is, however, it is like the giant at the fair, "still growing," and I noticed as I recently entered Standard Works the erection of new shops, capable of accommodating fifty or sixty hands in addition to the six hundred already employed in the various departments of the works.

To describe the Standard Works with any degree of minuteness in the space at my disposal would be an absolute impossibility. The numerous departments, the variety of goods made, the multifarious processes through which all the different articles have to pass, would, if adequately described, occupy a volume of no small bulk. Within the limits of this article it will only be possible to draw attention to the various branches of the trade in which Messrs. Allcock and Company are engaged, to convey some slight idea of the magnitude and extent of the business carried on at Standard Works, and to mention a few new or improved appliances designed for the destruction of fish that attracted my attention upon the occasion of my visit.

In the hook department they make hooks from 1lb. weight each to fifty thousand to the ounce! One hundred and eighty different kinds of hooks, each having from twenty to thirty sizes, are manufactured. I was struck with some fine large crystal-shaped hooks that, mounted upon reliable gut and baited with a lob-worm, would prove creditable to the firm, and a boon to the angler should a big barbel be fighting furiously for its life. How often have I gone into shops — shops supplied by Messrs. Allcock—and hunted through the hook books and boxes in vain hope of finding such hooks; and yet here they were in hundreds of thousands, just the very thing, not too thin in the wire, but just thin enough, tempered so beautifully that they sprung to a severe test like a sword of Damascus steel. I also noticed some very neatly brazed and finished treble hooks. In small-eyed hooks the firm have made great advances towards perfection, and the proportion of malformed hooks in a packet is considerably less than it was a few years back. I was also very pleased to notice that great care and good material was used in attaching the hooks to gut; each hook tested and the gut examined before being tied on. There is not the slightest doubt that immense strides have been made in the important matter of fish-hooks and their attachment to gut or gimp during the past few years, and Messrs. Allcock in this, as in other matters, have kept in the front rank.

The rod department is one of the largest departments in the factory, and employs some of the best rod-makers in the world, both in greenheart and split-cane. Messrs. Allcock's list of rods includes patterns suitable for any and every style of fishing in all parts of the world. I was permitted to peep inside the special pattern room, and was not at all surprised at what I saw there. Hung upon the walls—each duly labelled and noted—were patterns of rods from which many well-known firms in this country and abroad are supplied; and the names I saw there prove very conclusively that Messrs. Allcock are entrusted with the manufacture of fishing-rods for some of the very best firms and most fastidious anglers throughout the world. When I was there they had a magnificent stock of well-seasoned wood and canes, which unfortunately was partly destroyed by fire shortly after, together with the spacious wood-sheds in which it was stored. The expense and bother Messrs. Allcock have been put to consequently is incalculable; but I am pleased to hear from the firm that they have not only rebuilt the cane and wood sheds, but have been able to replace the stock by some very large purchases of old greenheart and other woods.

The fishing reel department is also a very large one and includes the manufacture of reels made of gun-metal, ebonite, brass, wood, &c. This is another department in the manufacture of fishing tackle that Messrs. Allcock have made many great improvements in during the past few years. Quite a new thing is the winch made of aluminium, marvellously light and strong. The old idea was to build rods and make winches to suit them, with the result that if the winch used with them did not suit—as was often the case—the action of the rod varied with the suitability of the winch. The modern idea is to make a rod perfect in action in itself, and then get the winch of almost imperceptible weight. Many anglers will say, "Oh, I like weight in my reel; it gives swing, action and power to the rod." And I must admit I have a sneaking regard for a winch whose weight makes an appreciable difference to the rod it is attached to. But fancy, ye of little faith—just fancy a 4in. metal winch of less than 10oz. weight! There will be more love and less labour about salmon and sea trout fishing if these reels prove a success, and there is no reason they should not. In this connection I would remark that my experience teaches me that a line of suitable weight is of far more importance in the perfect action of the rod than a winch of a certain weight is. It is wonderful how these modern double taper lines find out the weak part of a rod—if it has one—especially if the line is in the slightest too heavy. Given a line suitable to the rod, and *weight* in the winch is of minor importance; in fact, although as I have said I like to know it is there, probably the lighter it is the better. At any rate, it is less tiring. I should not be surprised to find these aluminium winches rapidly come into favour.

Another great improvement, in my way of thinking, is the new celluloid float. Innumerable materials have been requisitioned at different times in the manufacture of the necessary tell-tale used by the bottom and mid-water fisherman. The legion of shapes, makes, and materials used in the extensive float department at Messrs. Allcock were all familiar to me with this exception, and I must admit I at first looked "out of the corner of my eye," at the delicate working samples of the celluloid float submitted to my inspection. But, to my surprise, they proved quite unbreakable. The material, notwithstanding its extreme lightness, is wonderfully tough, so much so, in fact, that children's rattles and bouncing-balls, humming-tops, &c., are made from it! Celluloid floats can be made in any shape or size, and they are sure to become immensely popular.

Messrs. Allcock have for years been to the front, and still continue to rank among the largest manufacturers of silkworm gut. Mr. Samuel Allcock's practical and thorough knowledge of the breeding and rearing of silkworms, and detailed experience of the manufacture of silkworm gut has been of immense use to the firm. He is one of the best judges of silkworm gut living, and as he personally superintends the handling and making up of the superior and very valuable gut, it is needless for me to say that it is done as it should be.

I shall deal fully with the manufacture of artificial flies in another article, but I may say here that Messrs. Allcock in this, as in every other branch, have shown what industry, skill, and perseverance will do. Six large shops at the Standard Works are taken up by those engaged in fly-making, and those who are principally occupied in this task belong, as is often the case when deft fingers and artistic touch are necessary, to the gentler sex. I am a staunch supporter of feather, and silk as materials for flies, but a word of praise is certainly due to the latest production of Messrs. Allcock in the artificial fly department. It takes the form and name of the "Inimitable," and the firm are to be congratulated, and the dressers deserve all praise for the ingenuity and skill exercised in its production. The wings are of delicate silk gauze, supported by silk threads, small quills, and remarkably resemble the wings of natural flies. They are well waterproofed, and lately the wing has been strengthened by the addition of a strip of quill, and covered with a preparation that will not stick on the hottest day. Certainly the "Inimitable" is the nearest approach to nature I have seen, and even a wary old trout might be forgiven for sucking in such an artistic production, and becoming in his turn "sucked in"! In the form of an "Inimitable Stone-fly," it looks perfectly irresistible.

Geen's Spiral Minnow, the Ring Mounted Devon, Col. Clark's Landing Handle, Jardine's Plugless Float, the Imperceptible Spinning Tackle, Platt's Fishing Basket, the *Fishing Gazette* floats, the new patent Champion Spinner, and many other improvements, have already been noticed in these columns. It only remains for me to say that Messrs. Allcock are now busy with an improved Chapman Spinner, the idea of that ingenious angler, Mr. Emery, of Richmond, who will be known to many of my readers as the secretary of the last bait casting tournament at Twickenham.

It would ill become me to conclude this condensed notice of Standard Works, without referring to the courteous manner in which the principal and his partners showed me all there was to see, and told me all that was needful for me to know.

Thus have I passed in brief review the internal economy of the largest fishing tackle manufactory in the world. Everywhere in this great hive of industry are to be found evidences of the prosperity which enterprise and tact always secure; and as one emerges from the factory into the pleasant country road in which it stands, it is impossible to avoid expressing the hope embodied in the word familiar to all schoolboys—*Floreat!*

Waltoniana

ANGLERS should bear in mind that letters concerning the fishing to be obtained in various places, more often than not, do not come from entirely disinterested persons. Thanks to the enterprise of the angling Press, good waters are from time to time discovered and made known to anglers generally; but quite half the letters which appear, cracking up angling resorts are from persons who let lodgings or who are otherwise interested pecuniarily in anglers. It is next to impossible for anyone, whether reader or editor, to always distinguish between the sham and the real thing, so never act on such letters without making inquiries of really disinterested persons.

IN the *Gazette* of August 29, I commented on the difficulty of getting first-class pike fishing in Ireland, doubting if it was to be obtained at all, but recommended the larger lakes, particularly those on the Shannon, as good places for all-round sport. "Pat," said I, "is never tired of telling one of the monsters which have been killed; but how many of the thousands of anglers who have visited Ireland during, say, the last ten years, have any monsters to show for their pains?" To my great amusement, "Pat" himself, in the person of Mr. Hurley, of Killaloe, on the strength of the aforesaid remarks, rushes into print with the remarkable inference that I recommended the Shannon lakes for good pike fishing. I did nothing of the kind, but that charming lake, Lough Derg, on which I have spent many happy days, is certainly one of these spots. I would recommend for all-round sport such as I described on the 29th. Mr. Hurley speaks of monsters which have been captured in the lake from time to time, and no doubt he believes in them. I do not, and I know, moreover, exactly the sort of sport the angler is likely to expect, from having passed many months fishing the lake. I had the good fortune to catch one fish of 25lb., and I am almost certain that not another anywhere approaching that size was caught in the lake that year. My next largest fish was only 15lb. That was in about a year's fishing altogether on all parts of the lake, and in company with boatmen who knew the water thoroughly. "Pat," not Mr. Hurley, deluded me in going to Ireland in search of monster pike, and I, like many more, was bitterly disappointed so far as the pike were concerned, though in other respects I had no reason to regret my visit. No doubt there are a few very large pike in the large lakes, but they are very rarely caught. Having written with the express object of warning the readers of the *Gazette* against placing too implicit a belief in "Pat's" monster pike, it is somewhat comical to have to return to the subject under the circumstances.

AN attempt is being made to form a club to take over the water vacated this month by the Hungerford Flyfishers' Club. I understand that the commoners of Hungerford have received a very good offer for the water from a person living in the neighbourhood, but I have not yet heard that the offer has been accepted. The commoners are mostly men in business in the town, and it may very well be that they would prefer to let to a club, as the more people come to fish the water the more the trade of the town is benefited. The members of the Hungerford Flyfishers' Club paid a high subscription for the water, bearing in mind that the commoners reserved to themselves the right of fishing several days a week, and that the fly-fishing is rarely really good except in the May-fly season.

MR. HERBERT KEILY, who is endeavouring to form the new club, and whose address is The Acorns, Great Marlow, Bucks, proposes that the subscription should be very small—two or three guineas only—and at that rate the club would be well worth joining, for the late club systematically stocked the water for years. If he receives a sufficient number of applications for membership he will then be in a position to approach the commoners on the subject. Anyone who requires a little good fly-fishing for large trout once a year, I mean in the May-fly season—with fair sport during the rest of the summer—could not do better than communicate with Mr. Keily, for at three, or even four guineas, there would be no cheaper club water in England.

I RECOMMEND the following to professional fishermen and gillies. It is a method of making the "gentleman" hook a really good fish which is bound to break away with some of the tackle in its mouth. *On a very windy day* take the boat over fairly deep water, but where either a rock or two comes within about four feet of the surface or where there are some tough weeds. See that the trace is heavily leaded, on the plea that you are going to take the "gentleman" over deep water where there are some large fish. When you get to the locality mentioned, say that you would not be surprised to see a monster take the bait at any moment. With good luck, and a little dexterous management of the boat, the bait will soon catch in something, and you will at once exclaim excitedly, "Bravo, sir; you've got him." Turn the boat broadside to the wind, and she will begin to drift rapidly, and line will run off the reel. The angler, all attention on the fish, will not notice this manœuvre. When ten yards or thereabouts have run off the reel, say "You had better hold him, sir, or he will get in the weeds." If the angler does not take your advice, repeat it. Then check the boat a little by turning it stem on to the wind, and then let it drift again by turning it broadside. This will cause the fish to take out line in a very natural manner. Again exhort your gentleman to hold the fish as hard as he dare, then give a sly stroke with the sculls and snap will go the tackle, and on the face of your gentleman you will perceive a look of blank despair, which you must manage to reflect in your own. You may safely abuse the tackle, unless you made it; and you may hazard a guess at the weight of the fish, which you should continue to talk about at intervals during the day. By eventide your gentleman will be perfectly satisfied that he has hooked and lost the largest pike in the water. Not only will he fish repeatedly for that fish, but the story will get abroad and others will come and do likewise. This will be a source of income to you. You must live, you know.

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. PRITT.

FISHING IN SOUTH AFRICA.

DEAR SIR,—I may be going to King William's Town, South Africa, soon, and should be extremely obliged if any of your readers could give me any information regarding the fishing, if any, out there.—Sincerely yours, S. A. BISHOP.

Honor Oak Park, Brockley.

"HARLING" FOR SALMON.

SIR,—Will anyone of your readers explain the method of "harling" for salmon? Is it some local name for trailing? Just at present, I have only two angling books with me—Bickerdyke's and Walbran's—and neither of them mention "harling."—Yours, &c., CHARALAH.

FISHING AT SWANAGE.

SIR,—Will any of your readers kindly inform me what fish are to be caught in Swanage bay during the month of October, and what baits should be used?—I am, sir, yours faithfully, E. C.

THE RIVER WYE.

SIR,—I should feel very grateful if any of the readers of your paper, living in Hereford or its neighbourhood, would kindly give me any information as to how I could obtain good trout and grayling fishing in the river Wye. Do not so much object to club water, providing it is not over fished.—Yours truly, W. WOODWARD.

Ashdown Cottage, Tenbury.

SHOW FOR FOWLS USED FOR FLY-TYING.

SIR,—Will you allow me to ask for subscriptions towards a class or two for the above, at either the Crystal Palace or Birmingham coming shows?

I have the following kindly assisting me: Capt. Lambert, £1; Messrs. Allcock, 10s.; J. Henderson, Esq., 10s.; Rowe, Barnstaple, 10s.; and many others.

I would propose, if the amount is high enough, three classes—blues, greys, and honey duns. You will no doubt kindly assist us yourself, and these shows will be to many fishermen very attractive.—Yours faithfully, HACKLE.

ANGLERS (SO-CALLED) DESTROYING FISH.

DEAR SIR,—Having read the article under the above heading, I understand that our friend "Ynotnakram" means to say that nine out of every ten London anglers (which are mostly clubmen), do not return undersize fish. I will not say that at the river which he mentions it is not so, but I will say this, that, taking the whole of London anglers, they are not what I understand him to say they are—pot-hunters. They are mostly sportsmen, and scorn the idea of filling their bags with such miserable specimens. If I do not understand him rightly, I shall be pleased with an explanation, but I must defend the London sportsman (angler or otherwise).—Yours truly,

G. S.

SALMON RIVERS IN NORWAY.

THE following extract from a private letter gives some useful general information about salmon fishing in Norway:—

"I have just returned from Norway. I enjoyed my trip, although I had not much sport in the way of fishing; the weather was too fine, and as the river I went to was dependent on rain water, and there was no rain, it got gradually smaller, till at last there was hardly a pool that would hold a fish. When first our river failed us, we went off to another belonging to two friends of mine, and found that river unfishable, because it had too much water. Like most of the Norway rivers, it depended on snow-water, and the intense heat, thermometer at 80 deg., had melted too fast. The rivers in Norway may be divided into four classes. First, the big rivers, mostly in the North, such as the Alten, Tana, and Namsen, where very big fish are got, but where the fishing is done by rowing about and dragging flies or minnows after you from two or three rods stuck out over the stern of the boat, a very doubtful amusement, generally known as harling. Secondly, big rivers fed by glaciers and snow, such as the Rauna, Romsdal, Lierdal. Thirdly, big rivers also dependent on snow for their water supply, where the sport is chiefly from sea trout, of which you get about a dozen to one salmon. The sea trout, however, run very large, even up to 30lb., and 15lb. and 18lb. fish are not uncommon, and are more sporting fish than the salmon. Fourthly, the smaller rivers dependent, and which produce about one salmon to twenty sea trout. The river I went to was of the latter kind; the sea trout average about 3lb. or 4lb., but eight-pounders are not uncommon, and the salmon average was just 11lb. I start the day after to-morrow for the Spey, of which I hear a good account at present, so I hope to have some fair sport, but we never can tell. It depends of course on the rainfall, and the weather appears now to have settled down to fine."

AN ALL-ROUND ENGLISH SPORTSMAN.—It isn't every man who can afford to rent a moor at present prices. The all-round sportsman of the south of England can whip a trout stream, play cricket on the common or the village green, and can get up early to see the huntsman with his pack bustle up the fox cubs in spinney, gorse, and woodland. The harvest is a very late one this year; and yet the more ardent among sportsmen must needs kill a few brace of birds just "to keep up the charter," on September 1. Thousands probably go partridge shooting who never fired at grouse, unless it be in the west of England where an occasional covey of muirfowl are found on Dartmoor, and soon got killed. The reduction in the price of the shooting certificate is a boon, especially the pound licence for fourteen days. But this hardly affects your all-round, well to do sportsman in the south. As each branch of sport comes round, the sportsman who is not detained by Parliamentary duties, who lives the greater part of the year in the country, and is consequently always in good fettle. Athleticism has done wonders for the middle and lower middle class of young men and so has angling. We never hear the taunt "counter-jumper"; it is your fairly successful citizen "something in the city," who fancies he can fish, and "shoot of course!" He it is who more often than not fires at dabchick, or dog, or donkey, or any mortal thing, and helps to contract the rational pleasures of the real sportsman. But our all-round sportsman in the provinces thoroughly enjoys himself; he almost pities an acquaintance who had got himself elected to a seat in Parliament, "spending so much good time in the House, away from sport and fresh air." His friend tells him "to think of the ladies, position improved, &c., by having 'M.P.' tagged to one's name." The late Charles Kingsley, parson, novelist, and lover of natural history, would mark the subdued "'scape of passing snipe to their feeding ground in river, valley, or to the gulley on a neighbouring common." Perhaps the genial observer took his gun in the morning, and killed a couple or so. Many another country clergyman fishes and kills a few brace of "birds," either on his own glebe land, or by invitation of the lord or the squire. Educated Englishmen, lay or clerical, love sport as a favourite form of strong exercise, and let us hope no Puritan will say that a man is less a Christian minister, and fully alive to the needs of all his parishioners, because he "whips" the local trout stream, or shoots a little game.—RUSTICUS.

Holloway's Pills.—For the cure of debility, bile, liver, and stomach complaints this inappreciable medicine is so well known in every part of the world, and the cures performed by its use are so wonderful, that it now stands pre-eminent above all other remedies, more particularly for the cure of bilious and liver complaints, disorders of the stomach, dropsy, and debilitated constitution. In these diseases the beneficial effects of the Pills are so permanent that the whole system is renewed, the organs of digestion strengthened, and a free respiration promoted. They expel from the secretive organs and the circulation the morbid matter which produces inflammation, pain, fever, debility, and physical decay—thus annihilating, by their purifying properties, the virulence of the most painful and devastating diseases.

THE GREAT FISHING CONTEST AT PULBOROUGH.

THERE were no less than 232 entries on the Open Roving Fishing Contest, and prizes to be competed for in the Arun, at Pulborough, on the 6th inst., promoted by Mr. A. A. Eldridge (late Clout's), of the Rose and Crown, Goswell-road. Altogether there were twenty-seven money prizes, ranging from two guineas down to five shillings, and every piscator who had entered, punctually put in an appearance. Two special trains steamed out of London Bridge Station, early in the morning, containing between seven hundred and eight hundred anglers and their friends. On the arrival of the second train at its destination all the anglers had their tickets properly and authoritatively stamped, and a signal was given by one of the stewards for the start. It was a very pretty sight to see them all so eager and full of expectation, strutting down the river side merrily and loquaciously with their rods, and their panniers and fishing boxes on their backs. The weather, too, was magnificent and all that could be desired by the most fastidious person, and the water was in nice condition, but there was a north-west wind. During the day each one tried his utmost, in other words his level best with all sorts of baits and allurements to capture the fish.

At four p.m. the competitors began to arrive at Mr. Nutt's, the Swan Hotel, to weigh in their fish, and it was found there had been some splendid takes. The first prize of two guineas was won by Mr. W. Biggs, of the Funny Folks Angling Club, who had a total weight of 8lb. 5oz., composed principally of roach and bream; second, Mr. Webber, 5lb. 8oz.; third, Mr. Shakel, 5lb. 2¼oz.; fourth, Mr. Warman, 4lb. 8½oz.; fifth, Mr. Longe, 4lb. 7½oz.: sixth, Mr. Robinson, 3lb. 12¾oz.; seventh, Mr. Macdonald, 3lb. 11½oz.; eighth, Mr. Smith, 3lb. 3¾oz., these being the principal prizes. The other minor prizes of 10s. and 5s. went as follows: Messrs. Patman, Dockree, J. Smith, G. Watling, F. Guntrip, H. Watling, J. Newton, La Hunore, Vernett, Harding, and Messrs. Parkin, Forester, Shorey, Fellowes, Jarrard, Nelson, Fletcher, Fitch, and Hayes. The prize money was paid over immediately after the contest by Mr. Eldridge himself, and every competitor seemed highly delighted and satisfied with their sport and outing and the success they had met with or achieved. Before the anglers left Pulboro' a hearty vote of thanks was accorded Mr. Eldridge, Mr. Nutt, Mr. Reynolds, and Mr. Wade for the efficient manner in which the arrangements had been carried out. The next competition at Amberley on the 4th prox.

THE SALMON-LADDERS ON THE BALLISODARE RIVER IN IRELAND.

THERE are at this moment in Scotland five hundred miles of rivers and at least fifty thousand acres of lochs barred against the ascent of salmon by impassable obstructions, in the shape of waterfalls, the greater part of which might easily and profitably be opened up but for the claims of the Crown to all new salmon fisheries; the claims of certain proprietors, founding on old charters conferring upon them the salmon fisheries in a whole district of country, to follow salmon, in the event of certain obstructions being opened up, on to rivers where the riparian ownership and the *solum* of the rivers belongs to other proprietors; and, lastly, to the objections of proprietors of falls to have them made passable for salmon, on the ground of loss of amenity.

In Ireland, where these objections do not apply as in Scotland, some notable and successful attempts have been made to open up rivers naturally barred against the ascent of salmon, the most notable and successful of these being the Ballisodare river, which presented apparently insurmountable obstructions to the passage of salmon.

We understand that the Fishery Board for Scotland lately instructed the Inspector of Salmon Fisheries to visit and report on the remarkable salmon-ladders that have made the great fall on the Ballisodare easily passable for salmon, and that an arrangement has been made by Mr. Young, after carefully inspecting the ladders, to have working drawings of them sent from Ireland to the Fishery Board.

The Ballisodare river falls into Ballisodare Bay, a southerly branch of Sligo Bay, on the west coast of Ireland. It is about the size of the Earn or the Isla of Scotland, and is formed by the junction of two streams—the Arrow and Owell—the former of which flows into and out of Loch Arrow, a fine lake five miles long and nearly a mile wide.

The obstructions on the river are three in number, and are of the most formidable character—the least of them being more difficult to overcome than the Falls of Tummel. Previous to the erection of the ladders the Ballisodare river never contained a single salmon; since the erection of the ladders, it has produced from 8,000 to 10,000 salmon annually.

The obstructions consist of a perpendicular rock, 22ft. in height, stretching across the whole breadth of the mouth of the river, just where it falls into the sea. When the river is in flood, it dashes over the rock in a splendid cascade, which tourists come from a great distance to see. The ladder is on the right bank of the river. Its mouth enters the chief pool below the falls, where the principal lie of the fish is. It is on the pool-and-jump system, the stops, formed of stone, each crossing the whole breadth of the ladder, with the exception of about a foot, where there is a free opening down to the foot of the ladder. The gradient is so easy—about 1 in 10 or 11—that the salmon never jump from pool to pool, but swim up through the openings left at the end of the stops. As many as sixty-seven salmon have been counted going up this ladder in the course of an hour. The ladder is in two parts, which form an angle with each other. The pools in the lower part are very spacious—about 9ft. square.

A short distance above the first fall is the second, a perpendicular rock, twelve feet high, termed the "Pothole." Here there is a second ladder, on the same principle of construction as the first with this exception, that for a short distance above where it enters the pool below the fall it passes through a tunnel cut in the rock.

The third and last obstruction occurs at Collooney, about a mile above the "Pothole." Here there is a perpendicular rock, 22ft. 6in. in height, and a ladder of the same description as those on the two lower falls, with this addition, that at the junction of the two branches of the ladder there is a spacious resting pool about fifteen feet square. At the top of each of the ladders above described there are sluices regulating the flow of water.—*Scotsman.*

⁂ **Club and River Reporters will oblige by sending in their Reports early in the week.**

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, SEPTEMBER 12, 1891.

NOTES FROM BIRMINGHAM AND DISTRICT.

A MEETING of the committee of the Birmingham Association was held at the headquarters on Thursday evening, September 3. Mr. T. Coles presided. The meeting was well attended. The following gentlemen were appointed to sell tickets at the various railway stations on the morning of the forthcoming great association excursion and contest. Bordesley Station—Messrs. Gumbley, Willock, Jones, and J. Holding; Snow-hill Station—Messrs. White, Hall, Attwood, and A. Mender; Hockley Station—Messrs. Allen, Goode, Eccles, and Keeling. These gentlemen will also be supplied with contest tickets, which will be one shilling each. The whole of the committee will be distinguished by the association badge. It was arranged that the signal to commence and cease fishing should be given by the aid of a quantity of police whistles, which will be distributed to the committee on the morning of the contest. The weighing of the fish will be done by two pairs of scales which the secretary was ordered to purchase, together with suitable cases for carrying the same. The final arrangements were left in the hands of Messrs. Coles, Dance, Gumbley, and White, who visited Pershore for the purpose of carrying into effect the resolutions passed by the committee. The gentlemen made a minute inspection, and were agreeably surprised to find that the contest can be fished on one side of the river, and the contest ground will be from the Anchor Inn, up the river towards Fladbury, the banks of the river in this direction being suitable to peg-down one thousand anglers without any obstacle whatever. The stiles will be removed along the banks of the river, so that the contestants will be able to get to their places with as little difficulty as possible. Two boats will be chartered to convey the fishing bags and umpires from the far end of the line to the Anchor Inn, where the weighing-in will take place. This will save the umpire the trouble of carrying the fish, as upon former occasions, and it will also facilitate the weighing-in of the fish. A large marquee and refreshment tents will be erected in a field near to the road, past the George Inn, and it is in this field that the Victoria brass band will discourse sweet music for dancing after the contest.

OUR Midland rivers are now in the best possible condition. On the Avon some good sport has been had with the bream, and some fine catches have been made in the neighbourhood of Eckington and Defford. These fish have been mostly taken in the morning and evening, very few being taken during the middle day. Stewed wheat has been the most killing bait. Very little fishing has been indulged in in the Stratford district, as the water has been drawn off for the purpose of repairing the locks. This drawback to the fishing has been going on between Tewkesbury and Stratford for this last two months; but I am informed that when the repairs are finished at Stratford, the whole of the locks will have been repaired, and the water will not be drawn off again for a long time to come. Let us hope that such may be the case. The Severn has been patronised to a great extent during the last four or five days, and some excellent sport has been had near to Hampton Lode and Highley. The chub, roach, and dace, have been feeding well, and the gentle has been the means of making some decent catches. The late rains have to a great extent refreshed the river, and I hope anglers will not be slow to take advantage of its present grand state.

NOTWITHSTANDING the increased entrance fee to the Birmingham Association, which now stands at four guineas, I have received information of two societies being formed, one, at the Turners' Arms, and the other at the Junction Inn, Sparkbrook, who are willing to comply with the new rule of the association, and pay all demands should they be accepted by the association. The two clubs just mentioned are within the half-mile radius of one club already affiliated; but should this club offer no objection, there is no doubt but that the two societies, which are composed of very respectable members, will be accepted.

THE Camden Society held their consolation contest on Saturday afternoon last at Kingswood, and were favoured with splendid weather. Twenty-eight members who were unsuccessful in the last annual contest took part, twenty-four of whom succeeded in taking fish and securing a prize. The chief honours fell to Mr. G. Padgett, first; Mr. Clarke, second; and Mr. T. Smith, third. Mr. W. Perry, the president of the Brookfields Society, acted as referee. The prizes will be distributed at the next meeting of the Society.

I BEG to inform the members of the Birmingham Angling Association that the whole of the prizes to be contested for on Monday next, are to be seen on view in the large meeting room at the Birmingham Arms Hotel, Smithfield. The prizes are of a costly description, and number thirty-six, and are far superior to the collections of former years. The General Secretary will attend this (Saturday) evening, to issue railway and contest tickets, when he hopes the members and their friends will turn up in full force.

CAPTURE OF ALLEGED SALMON POACHERS IN THE SOLWAY.—On Sunday last an exciting capture of salmon poachers took place in the Solway by the Annan water bailiffs. It appears that the bailiffs learned that one of the salmon boats belonging to Annan, and containing two Whammellers, were seen to proceed down the firth with a long hang-net on board. As it was suspected they were bent on salmon poaching, the water bailiffs manned their own boat and went off in pursuit of the supposed poachers. The sea was exceedingly rough at the time, and the bailiffs experienced considerable difficulty in making headway after the poachers. After a chase lasting eight hours, the bailiffs got alongside of the poachers, and charged them with fishing for salmon during the weekly close. It is said that the poachers had concealed on board their boat over sixty large salmon. These did not fall into the hands of the water-bailiffs, but were subsequently brought to Annan and sold to the fishmongers. The poachers "lift" must have amounted to over £50, and as they will probably be fined a few pounds for the offence in the Justice of Peace Court, they can well afford to pay any small fine inflicted by the Justices. Until we have a more stringent law in Scotland for salmon poaching, these offences will continue to grow in magnitude year by year, and the law will be broken with impunity.—HEATHERBELL.

NOTES FROM NOTTINGHAM.

BARBEL anglers in our district were, at the close of last week, buoyed up with hope of doing something out of the common amongst their favourite sporting fish. Weather and water conditions were all in their favour, and on the 6th inst. numerous well-known swims in the lower reaches were substantially baited, not only with worms, but with chandlers' greaves or scratchings. A party of Nottingham working-men fishermen attempted operations on a swim with the running float, but a strong wind suddenly sprang up, and they were compelled to fall back on the use of the leger-line. By employing a very light "plumb," they soon found the fish on the feed, and at the close of their labours in the evening, they counted over the contents of their basket, and found it contained no fewer than nineteen. On Monday they tried the same swim again, but, singularly enough, failed to get so much as a nibble from a barbel. They caught a few chub and dace, and something like sixteen eels, one of which weighed 2½lb. The reason of the falling-off amongst the barbel was not far to seek. During the early part of the day, the river began to rise rapidly, and before night there were fully ten inches of extra water coming down. Where the influx came from was a puzzle to a considerable number of anglers on various lengths of the river, but there is little doubt the Dove was the sole cause of the rise. Rain, it seems, had fallen heavily in Derbyshire and Staffordshire on Sunday, and the tributary named was quickly running at a great height. It is surprising how soon the Dove is up and down. Only last week I fished Sir Henry Every's private water at Egginton, and early had to beat a retreat through the heavy nature of the current. The river flows into the Trent between Willington and Burton-on-Trent, and, until the water settles down, barbel fishermen using the reaches below its out-flow stand very poor chance of enjoying sport. On Monday, Mr. Phillip Wilson and Mr. J. Theaker, Nottingham, visited the Shardlow subscription section, and although they resorted to every move on the board to induce the barbel to accept a bait, they failed to stir a single fish. Fortunately they were possessed of an ample supply of maggots, and by a liberal use of these as ground-bait they succeeded in bagging something like 20lb. of roach and dace. At King's Mills, Mr. T. Wood, the lessee, killed a rare lot of magnificent chub and perch with the worm, and a little higher up the river, or at Weston Cliff, Mr. G. Beeton, of Radford, caught, I understand, a perch of nearly 2lb., besides sundry bream and perch. On Friday, Mr. J. Greaves, of the Nottingham Wellington Society, excelled amongst eels at the celebrated Wenham Hole below King's Mills Ferry. By the aid of the leger-line he managed to bring to bank over 15lb., including an extraordinary specimen of 3lb. 14oz. In the same fishery, on Saturday, two other gentlemen gave creed wheat a trial, and were rewarded with a take of nearly 30lb. of splendid roach. Lower down the river, or at Barton, the roach contingent have of late fared remarkably well, using in turn such lures as bread, bread-paste, creed wheat, and maggots. The majority of the fish were caught at the mouth of the Erewash, and in mentioning names of the principal takes, I must not overlook those of Mr. West, of Radford, Mr. J. Taylor, and Mr. George Hall, of Nottingham, and Mr. W. Auslebrook, of West Bridgford. Dr. Higginbottom, Nottingham, was out in the Thrumpton private length on Monday with his trusted professional, A. Bull, but the two only succeeded in bagging a few perch, roach, and dace. Barbel was their object, and they were, like others, much disappointed at the sudden turn the river had taken. At Wilford, on Monday and Tuesday, the veteran Mr. John Boyd, Nottingham, caught a variety of roach, dace, and chub with the maggot, and the same description of bait answered its purpose fairly well in the deeps below the New Trent Bridge. During Monday night the river dropped six or seven inches, but even when my Notes were posted on Wednesday evening there was a peculiar tinge of colour associated with it. It is to be hoped, however, that barbelling may become general during the ensuing week. Given an open month, there is none like September for all-round fishing, and, what is better, the fish one kills are in the pink of condition.

INFORMATION reaches me that at daybreak, on Sunday, a gang of poachers hailing from the Radford district attempted to net the famous barbel and bream hole opposite the farm of Wm. Brewill, at the bottom of Lenton Lane. The hole last summer was pretty freely blown up with dynamite, and was also subjected to the vicious practices of the "skull dragging" or snatching fraternity. This season there has been an absence of the snatching business, and it is believed that the gang who sought to use their nets on Sunday retired from their unlawful work wofully disappointed. Various awkward stakes are driven into the bed of the stream on the lower side of the hole, and in these the nets, by all account, became entangled, and were only recovered with considerable difficulty. A great pity, indeed, they were not torn to ribbons, and the operators themselves washed away. A few of our so-called Trent otters would not be missed, I assure you.

A RARE bit of perch fishing has fallen to the lot of Mr. A. Whaley, of West Bridgford, near the new Trent Bridge. Mr. Whaley visited the "Forty-foot" in Lincolnshire, and returned with nearly thirty fish. Seventeen averaged a pound each, and two weighed within a fraction of 2lb. each.

ON Tuesday the members of the Nottingham Shoulder of Mutton Association fished a pegged-down match in the waters leased by Mr. T. W. Openshaw, of Newark, at Winthorpe, when the prize-takers were: First, Mr. G. Boales; second, Mr. J. Truman; third, Mr. T. Lee; fourth, Mr. Hustwayte; fifth, Mr. G. Roomo; sixth, Mr. T. Leak: seventh, Mr. J. Bell; eighth, Mr. F. Walker; ninth, Mr. J. Derrick; and tenth, Mr. Brotherton. Following the competition an excellent repast was partaken of at Host R. Higginson's, the Shoulder of Mutton Inn, Smithy-row, Nottingham, when, on the motion of Mr. C. Heald (secretary), a hearty vote of thanks was accorded to Mr. Openshaw for the free use of his fishery.

ACCIDENTAL CATCH OF A HUGE TROUT.—Three Ipswich lads named H. B. Haskell, S. J. Haskell, and A. R. Matcham, had a novel experience on the Orwell on Tuesday morning. They were rowing about opposite the bathing place when a huge salmon trout jumped into the boat. They immediately attacked it with the first weapons that came to hand, and after a struggle, succeeded in killing and taking it ashore. On examination it was discovered to weigh 8½lb., and to measure 2ft. 6in. in length, and 13in. round the thickest part of its body.

NOTES FROM SHROPSHIRE.

MORE heavy rains, and consequently more discoloured water and bad sport, have not tended to improve the patience and temper of anglers; but we are at length promised fine weather and a clear stream, so that angling should be a more profitable pursuit during the coming week if the weather continues fine.

THE voracity of pike and the unveracity of angling, correspondents are proverbial, and often form food for reflection in the columns of the *Fishing Gazette*, and under this double heading I have this week to recount an incident which cannot pretend to assume to take the matrimonial biscuit, except in regard to its strict truthfulness. While in company with a literary colleague, the other day, I chanced to meet a jovial friend—an Exciseman—of my acquaintance, and an ardent angler. In response to my anxious inquiry for angling news, he at once acquainted me with his recent exploits in the pike fishing line, and this led him to recount the story of how, *twelve months or so ago*, a local angler named Craddock, while sounding the depth with a large leaden plummet in the Severn near the Cherry Orchard ferry-boat at Shrewsbury preparatory to pike fishing, suddenly had the aforesaid plummet and the hooks on his lines seized by a 5lb. pike, and succeeded after a struggle in landing it. These particulars I carefully stored in my memory for future reproduction in my Notes, but to my surprise I found, on the evening following, in *The Midland Evening News*, with which my zealous friend and colleague is connected, a smartly written paragraph under a catching headline, the details of this extraordinary capture which, however, to insure the insertion of the item, he was careful to announce took place *recently*. This is not all. Glancing at the river reports from Shrewsbury, in the columns of the *Birmingham Daily Post* of the Friday following, my astonished gaze alighted on the following:—"An angler trying the depth of water one day this week had his lead seized by a pike, which he managed to get safely into his basket." This story has no moral, but if this is how the angling correspondents of the present day provide for the entertainment of their readers, I shall not despair of seeing some of the angling adventures of my forefathers gravely recounted in the same popular angling columns.

SINCE writing the above, I have been informed that Dutton, another well-known Shrewsbury fisherman, has had a similar experience to that of Craddock, in a pike taking his plummet, and this would lead me to suppose that such an occurrence is not uncommon.

IT is satisfactory to note that perch seem to be slightly on the increase in the Severn around Shrewsbury, for many fine fish have been taken with the minnow this summer. A few years ago there were many excellent perch fishing stations, notably at Emstrey, Uffington, Shrawardine, Monkmoor, and many other places within easy distance of the town, but latterly these excellent sporting fish have decreased to an alarming extent. More than usual, however, have been captured this year, and it is hoped that we shall not have any cause to fear their extermination in the future.

I AM informed that the Chief Inspector of Fisheries will, at the request of the Severn Board of Conservators, visit the weirs in the Severn Fishery District during the week beginning September 14, with a view to reporting upon the condition of the salmon passes and causing to be remedied any that are inefficient and prevent the passage of fish. Subject to any change that may be made in his arrangements, he will, I understand, visit Llanidloes, Clywedog, and Severn weirs to Newtown, on Monday, the 14th inst.; the Vyrnwy weirs, Llanfair, Pont Robert, Pontyscowrhydd and Llansaintffraid on Tuesday; the Tanat weirs on Wednesday; the Shrewsbury weirs, including those on the Rea, and, if time permits, the upper navigation weirs on Thursday; and the navigation weirs on Friday. Thus a very complete week's work is mapped out for the inspector, and it is hoped that as the result of his inquiry, many alterations will be ordered in these fish passes which, beyond a doubt, have much to answer for in causing the diminution of salmon in the river. Members of the Board of Conservators in the various districts are invited to accompany the inspector on his visits of inspection, so as to be able to point out to him any matter that they may desire to bring under his notice.

CLOSE OF THE SOLWAY SALMON FISHINGS.—The Solway salmon net fishing season closed last Wednesday night. Taken over all, the season has proved to be one above the average of recent years, while the great hauls of autumn salmon captured during the last four weeks in the firth by the drift-nets has been the best ever known in the history of salmon fishing in the Solway. In the early spring months, the Whammel drift-nets secured good catches of "grey" salmon—all heavy fish, running in the average over 20lb. These salmon, however, were decidedly poor in quality, and quite unlike the regular spring salmon that came on in the end of March and April. The April salmon were beautiful little fish, in very fine condition, weighing 8½lb. The stake-nets did not fare well at all in the spring fishing, as the drift-net boats picked up the fish in the deeper water before they made the rivers. Sea trout were pretty much of a failure, and there was only one good run, extending over a fortnight, in which sea trout made a good appearance in the nets. The trout were much smaller this year, and ran on an average of little over 1¼lb. A fine specimen, however, was caught weighing 12lb. The grilse season which followed was of a fair average character. These fish were in very prime condition, and weighed 5½lb. Prices for grilse ruled low this season in the local markets, falling during the season to sixpence, while the average price was eightpence-halfpenny per pound. The heavy floods in the Solway rivers during the last four weeks told seriously against the stake-nets. Many of the nets were considerably damaged in the Annan district and rendered useless and unfishable during the best run of the autumn salmon. While the lessees of the stake-nets had losses, the Whammel nets were reaping immense takes of fine salmon, and as the quotations in the south markets rose from tenpence to one shilling and twopence per pound in a week, the fishermen pocketed a mint of money during the last three weeks. The average weight of the autumn salmon ran about 15½lb. The season was notable for the capture of a few large salmon, the heaviest of which was 50½lb., caught by an Annan drift-net boat some ten days ago.—HEATHERBELL.

NOTES FROM YORK AND DISTRICT.

WEATHER and water are both in grand condition. Owing to the cessation of rain for the last three or four days, the rivers have now sunk to their normal summer level, and fish are rising in almost all waters. In the trout streams, sport is proving capital, and anglers are anxious to avail themselves of the remaining days before the close season sets in. I learn from a correspondent that the waters in the Wensleydale district were last week in glorious condition; but this happy report has been amplified this week—for I hear that most of the streams in the North and East Ridings are yielding first-rate sport, and the West Riding rivers are even better. The Ovic, having been well stocked with the favourite Loch Levens, is producing "good fruit," and the Stockbridge and Eastburn Angling Club are to be congratulated upon the state of affairs. The Nidd, at Pateley Bridge and at Knaresborough, is in splendid form; the Rye and the Riccall have been eagerly fished, and the Derwent affords admirable sport, so that it is evident the recent heavy rains have done some good—"It's an ill wind that blows nobody any good."

ANGLERS may be counted by the scores on the banks of the Ouse, where they are in the generality of cases rewarded amply for the time spent there; and the Foss has received its contingents of piscators. The latter river is somewhat of a favourite resort for many Minster city anglers, and several weighty fish have been killed of late in its waters.

A QUARTERLY meeting of the Council of the Northern Anglers' Association was held on Saturday, at the George Hotel, Huddersfield, when, in the absence of the president (Mr. T. E. Pritt), of Leeds), the chair was occupied by Mr. J. Walter Sykes, the Huddersfield representative of the game-fishing clubs. The fact of the meeting falling in the holiday season militated against a large attendance; but amongst those present were Mr. Robert Burn, of Manchester, hon. secretary; Mr. W. P. Hellawell, Huddersfield; Mr. George Paley, Preston; Mr. J. E. Schumacher, York; Mr. T. W. Redford, Bolton; Mr. T. F. Wallwork, Bolton; Mr. J. W. Mason, Knaresborough, and others, to whom the business of the meeting might with safety be left. The report of the sub-committee of the council—who were appointed to inquire into the subject of railway concessions—was presented, and contained, *in extenso*, the three schemes which have already appeared in the columns of the *Fishing Gazette*. It was resolved unanimously to submit each of the schemes to the consideration of the railway companies, and to adopt the one which falls most in agreement with the wishes of the companies concerned. There are several companies who, up to the present, do not grant concessions to anglers, and it was agreed by the council that the N. A. A. should memorialised the companies, with a view of obtaining such reductions in fares. The petitions will be drawn up by the Central Council, and printed, and copies will be circulated to the local councils for signature by individual and club members. Such strong argument can hardly be gainsaid by the railway companies, and if the petitions are successful—as it is hoped they will be—it will be but additional evidence of the usefulness of the association.

ANGLING COMPETITIONS.

THE Old Ebor Angling Club held their second match of the season in the river Derwent at Scorehy, by the kind permission of Mr. S. Young. Ten money prizes were given, for which there were nineteen competitors. The water was in bad condition for anything like good fishing, consequently the catches ruled small. The following were the prize-takers: F. Young, first; W. Howe, second; W. Mitchell, third; E. Buckley, fourth; E. Suter, fifth; A. Simms, sixth; W. Thornhill, seventh; T. Clayton, eighth; R. Parkinson, ninth; F. Monkhouse, tenth.

A SWEEPSTAKE promoted by Mr. Hewson, of the King William the Fourth Hotel, York, who subscribed £1 5s. and three special prizes of the value of ten shillings, towards which the entrance money of one shilling each, was added, was fished on Saturday at Middlethorpe Ings, by kind permission of the Hon. E. Lascelles. There were fifty-nine competitors, the following being the principal prize-takers: T. Walton, first, 1lb. 15¼oz.; R, Broadly, second, 1lb. 12½oz.; G. Thompson, third, 12¾oz.; C. Darley, fourth; T. Simpson, fifth; T. Payne, sixth; J. Mennell and Green, seventh and eighth (divided); W. Smith, ninth; J. Cartwright and R. W. Thompson, tenth and eleventh (divided); Alderson, twelfth; G. Kay, thirteenth; Ridsdale, fourteenth; C. Rhind, fifteenth; C. Garnett, sixteenth; J. Lee, H. Martin, G. W. Henderson, and C. Judson, seventeenth, eighteenth, nineteenth, twentieth (divided). The special prizes were won by T. Walton, for the largest roach, 5½oz.; R. Broadley, for the largest dace, 4¾oz.; and C. Slee, for the largest eel, 4½oz.

A MOST successful angling competition, promoted by Mr. George Goldie, Blue Bell Inn, Yarm, took place in the Tees, on Saturday afternoon. There were seventy-five competitors. The water was in every way favourable for sport, and a very large percentage of the competitors weighed in with good results. Messrs. T. Dawson, Yarm; S. Kendall, North Stockton; E. Veal, South Stockton; and J. Moore, Middleton-St.-George; each caught an equal amount and divided amongst them the first four prizes, amounting to £3 5s., and a fourteen-shilling rod. The rod was subsequently won by Mr. Moore, in a draw. The remaining fishers were counted off as follows: Messrs. W. Jones, South Stockton; L. Davidson, North Stockton; D. Dunn, South Stockton; W. Fisher, North Stockton.

NOTES FROM IRELAND.

[FROM OUR DUBLIN CORRESPONDENT.]

THE present week being the closing one of the season for rod fishing on the Aughrim (Co. Wicklow) has been signalled as a marked success—a perfect rush of rods kept coming since last Saturday and the takes of brown trout abundantly satisfied the patience of the anglers. Mr. and Mrs. Baker, who have taken up quarters at the Woodenbridge Hotel for the past three weeks, have been out every day. The water is now running rather strong for fly-fishing. Dr. Allan works the Wicklock rivers well and as a fly-fisher is remarkably successful; white trout are coming up freely, but only a few captures have been effected this week. The season on the Aughrim being now over, I am glad to learn it is to have protection more extensive than formerly. This is as it should be; I advocated it last year, for I feel convinced that with proper looking after, the Aughrim, with all its beautiful natural surrounding, will become one of the most popular and fashionable angling resorts in the eastern districts of Ireland.

SPORT in the Dublin district, although it has received an impetus this week, is far from the mark of perfection. The weather was altogether against it, but an improvement in this respect has happily arrived, and during the week members of clubs and others have been out: the takes are, however, not numerous. One particular incident is worthy of record; Mr. J. L. Long, a Dublin angler, who is very fond of trout fishing, was on last Firday evening up the Tolka river, and was fortunate enough to hook a "pound" trout with a green-bodied grouse fly; after playing it for some time his line got entangled in a bramble and he lost him. On Monday he again went to the same spot, and after catching two trout he hooked a third; in this one he found a fly similar to the one he hooked him on stuck fast inside his mouth, which on closer examination proved to be the same one he had lost with the trout on Friday in exactly the same part of the river.

As the season for angling for white or sea trout is now coming on, anglers should bear in mind the order issued by the Inspectors of Irish Fisheries, dated 26th November, 1890, which states that it having come to their knowledge that there is an impression prevalent that angling for white or sea trout does not require a licence, they give notice that in the Act, the word "*salmon*" includes sea trout and all other fish of the salmon species. Any person angling for white or sea trout without having first paid the licence duty payable on rods for salmon is liable to a penalty of not less than £2 and not more than £3. The Act also provides that every licence to fish with single rod and line shall have the name and address of the holder written thereon, and that such licence shall not be transferable to any other person; the penalty for such breach being the same as above. Rods used singly for trout, perch, pike, or other fish save and except salmon (which include trout) are not subject to the licence duty.

BAD weather prevailed all last week in most of the western districts; at Westmeath Lakes it was so severe as to deter many from seeking sport. A splendid rise of fish is reported from Lough Ennell.

THE Shannon too in most parts fared badly, chiefly owing to the weather, but several good takes of salmon and peal are recorded. Castleconnell keeps well to the front in this respect.

THE Watervill Lake is giving fair sport, brown and white trout occupying the principal attention of anglers. I have a long list of last week's captures, which include some very heavy white ones. Sea trout are running up in numbers, and during the remainder of the season, with favourable weather, sport there promises to be excellent.

NOTES FROM TYRONE.

THAT the past month, and the commencement of the present one, has been the wettest period of the year, goes without saying. Out of the thirty-one days of August rain fell in less or more quantities on twenty-six of them. This extraordinary state of affairs, after all, has been productive of good, and in this way. In the period mentioned the annual pest of flax water comes on, and if there be no floods in the affected rivers, it kills or sickens the fish at least salmon and trout—in them. Just at this critical period this season the rivers were foaming torrents, and flood after flood swept away the deleterious fluids with a minimum of damage to aquatic life, but the sweeping away of the fluid itself by no means insures a return of sport. Unless the bed of the stream is thoroughly cleansed of a certain sediment, which is precipitated from the flax water, the effects are felt for weeks after the flax water has disappeared. I am very happy to record that the beds of the rivers in this district (East Tyrone) have been thoroughly cleansed.

REPORTS to hand show that between the floods salmon fishing in the Strule, Mourne, Lunn, and Castlederg waters in North Tyrone was very good, and that there is a prime head of fish in all those rivers.

COMING nearer home, the Blackwater is in splendid order, and an odd brace of trout have been killed. The Ballinderry is rather high just now, but by the latter end of the week will be fined down sufficiently. Salmon are numerous in the lower reaches, and are commencing to run up-stream.

THE present season has been the best one for coarse fishing in my experience. The lakes of Eskeragh, Roan, Farlough, Stewartstoun, &c., have yielded phenomenal baskets of pike and perch to the multitudes of anglers who tried their luck. Bream is only to be found in the lower reaches of the Ballinderry and in the Blackwater. Of course, in Lough Neagh, their name is legion.

THE IRISH FISHERIES.—With regard to the inquiries held in Clonmel, Carrick, Waterford, and the different towns on the Nore and Barrow, the Inspectors of the Irish Fisheries have issued notices of by-laws, which they purpose submitting to the Lord Lieutenant for his approval, and which will become law unless valid objections are lodged with the Inspectors before the 20th of the present month. The petitions of the Conservators, as far as related to the estuary and tidal portions of the Suir, are being granted; the drift nets above the Spit of Passage, are to be limited to 210 yards in length (heretofore there was no limit); netting of any kind is to be entirely prohibited in the navigation canal or basin at Carrick, and 50 yards below: while draft or seine nets are not to be allowed to fish farther up than the Lingaun—the boundary stream between the counties of Kilkenny and Tipperary. This, so far, is all that the Conservators sought for. We learn that some changes are also to be made in the Barrow, but as they do not concern the Suir we need not deal with them. But there is one by-law (the first) which concerns seriously the anglers of all three rivers—Suir, Nore, and Barrow, and their tributaries—viz., to close the rod fishing at the same time as the netting (the 15th August). If not strenuously objected to by the anglers themselves, and at once—either as a body or individually—this proposed restriction will become law, and when once passed will have to remain so for at least three years. If, therefore, the rod fishers object to the proposed by-law, and intend to stir in the matter, there is no time to lose. We may remark *en passant* that there was no evidence given in favour of this change at any of the inquiries—on the Suir at any rate—either at Clonmel, Carrick, or Waterford.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association.—The general committee met on the 7th inst. at Foresters' Hall. Mr. W. H. Beckett, vice-president, occupied the chair. After the minutes of the last general committee, held on the 7th August, had been read and confirmed, an application by Mr. M. A. Mackie, the secretary of the Rippling Stream Angling Society, of 3, Upper Baker-street, W., for the enrolment of his society, was considered. The sizes of fish that might be taken being in accordance with the association's rules, and all other matters appearing satisfactory, the committee unanimously agreed to the enrolment. The society was complimented on its well-chosen name, which appears to be a departure from those ordinarily chosen by angling societies. Its members are limited to twenty-five. The Sons of the Sea, another new angling society, meeting at the Duke of Cambridge, Hackney-road, was next enrolled, after which several matters of importance to the association were considered. The meeting closed at the comparatively early hour of 9.45 p.m., with a vote of thanks to the Chairman.—HON. REPORTER.

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly meeting of the Renting and Preservation Committee will take place on Monday evening next, Sept. 14, at 8.30.—R. GHURNEY, sec.

Anglers' Association.—EASTERN DISTRICT NO. 1.—The next return visit will be to the North Eastern, City Arms, Bloomfield-street, London Wall, on Thursday next, September 17. Any friends who can make it convenient to attend will oblige.—G. MANNING.

Anglers' Association.—EASTERN DISTRICT NO. 2.—A return visit on this list was paid to the Funny Folks Angling Society on Monday last, when seventeen societies were represented, and a pleasant evening spent. The next visit will take place at the Islington Brothers Angling Society. I will give date next week.—F. THORLING.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—A return visit on the above list took place on the 8th inst. at the Rodney A.S., Rising Sun, Harper-street, New Kent-road, where a most enjoyable evening was spent. On the roll being called, the following fourteen clubs answered: Anglers' Pride, Battersea Friendly, Bermondsey Brothers, Blackfriars, Clapham Junction, Causton, Peckham Brothers, Rodney, St. Albans, Excelsior, St. George's, South London, Burton Piscatorials, Funny Folks, and Eustonians. The next visit will take place at the St. Albans and Excelsior; the date I will give next week.—G. W. ARMSTRONG, district officer.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks, the receipt of £2 17s. 6d. from the donation box, of the Good Intent Angling Society.—R. GHURNEY, sec.

SPECIAL NOTICE TO CLUB ANGLERS ENROLLED ON ANGLERS' ASSOCIATION.—The following fourteen prizes will be given to be fished for, entrance fee sixpence, to be paid to the committee on the morning of competition, at the North Star; two rods; jack and eels barred. First prize, a magnificent meerschaum pipe and plush tobacco pouch; second, drinking flask and shoulder strap; third, cardigan jacket; fourth, a biscuit box (silver plated); fifth, a smoker's companion for cigars and tobacco; sixth, ebony stick (hall-marked, silver mounted); seventh, a handsome album; eighth, cardigan jacket; ninth, silver-plated cruet; tenth, clock; eleventh, carving knife and fork; twelfth, silver-plated sugar basin; thirteenth, leather tackle case, to hold a four-winder; fourteenth, a box of one hundred cigarettes. Any angler who goes down over-night will be disqualified. Anglers to start by the given signal from Langley Bridge, and cease fishing at six p.m. By the kind permission of Alfred Higgins, Esq., divisional superintendent Great Western Railway, a special train will be at Langley at nine p.m. to convey anglers to London. Messrs. E. Clark and T. Harris, Marylebone Angling Society, E. Wood and E. T. Lake, Campbell United Angling Society, B. Abrahams and H. S. Kelt, Allason United Angling Society, and J. Harris, Prince Arthur Angling Society, will officiate as the committee and stewards; B. Abrahams, secretary, who will be pleased to furnish all particulars of competition on the 13th. D. Pithouse, Esq., has contributed largely towards the prize list, and a further advance has been expended from the entrance fees, and all the surplus money left will be laid out in prizes, and given to Anglers' Benevolent Competition, which takes place at Rye House, in November.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting-hill Gate, W.—Our esteemed member, H. Davis, has presented the above club with a magnificent picture, framed, entitled "Very Fishy Behaviour," to be fished for on the 20th Sept., largest take of roach from Thames only. We also fish for three money prizes on the same date; Thames only; two rods; roving. I beg to inform members that the second prize, left from last match can be continued in any water till won. Hope members will show up on Wednesday next 9.15 p.m., for important business to get through. The Langley competition takes place on behalf of the Anglers' Benevolent Society, 13th September. A special train is arranged to convey anglers back at nine p.m., from Langley.—B. ABRAHAMS, sec.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—On the 6th inst. several of our members fished in the competition at Pulborough, but not one of them was successful in taking a prize. The following members weighed in from other waters: Messrs. J. Fairbairn, T. Fairbairn, Sid. Cutbush, J. Scott, W. Hopping, W. Steward, H. Seymour, H. Wilson, W. Hasted, and J. Windsor. I wish to remind members that are not clear on the books that this week is quarterly night, and those members that have not booked their seats for the brake outing at Cobham, and wish to go, to do so at once. Our return visit on the Central Association takes place on Tuesday, Sept. 22.—J. PAILES, sec.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—On the 6th inst., Messrs. Harding and Moir weighed in roach, bream, and dace. On the 13th we fish a roving match at Fittleworth for a series of prizes; all to go by the first train to Pulborough, and then proceed to Fittleworth by train. Next Wednesday being quarterly night, I trust all members will show up and clear the books. I must remind the members that we fish the tow-path only for the above prizes, and each member competing must only carry one rod.—W. H. Potter, secretary.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our fourth outing came off at Windsor on the 6th inst., when the prizes were all taken as follows: Mr. J. Jones, first, with 1lb. 10½oz. of roach and dace; Mr. G. Rich, second, with 1lb. 8oz. of roach and dace; Mr. J. Bell, third, with 1lb. 7oz. of roach; and the following weighed in: Mr. Band, roach; Mr. King, roach; Mr. Knowles, roach and dace; Mr. S. Lawrence, roach; Mr. Lovett, roach; Mr. Blyth, roach and gudgeon. Members are requested to attend next Wednesday to arrange another outing.—G. Rich, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—Our members were out in good force on the 6th inst., several of them fishing in the competition at Pulborough, with the following result: Mr. W. Embleton, jun., having bream; Mr. Lattimore, bream (both members winning a prize); Mr. Loosly, roach; Mr. Hazell, roach; and Mr. Munday, dace, bream, and perch. We have decided the return visit to the above, will take place the first Monday in October, of which due notice will be sent to our brother anglers.—E. R. Embleton, secretary.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—On the 6th inst., at Pulborough, fishing in the competition, Mr. A. Shakel took third prize, with 5lb. 2¼oz. bream, and I had the pleasure of receiving the eighth, with roach and bream, 3lb. 4¾oz. Messrs. F. Davis and H. Neve weighed in, but not enough to take a prize. I am very glad the association water still supplies some of the winners, as I know several of the prizes came from there. Mr. H. Palmer had 4lb. of fish from Pulborough. The match for the September series of prizes, will take place at Chertsey on the 13th inst.; members to go down by the 8.45 from Waterloo, A donation of five shillings was voted to be sent to Mrs. Nutt, Swan Hotel, Pulborough, to help to swell the funds which that gentleman is collecting for the farmer's prizes, and for which he has our good wishes.—A. G. Smith, sec.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—Several members went out on the 6th inst., and had some good takes of roach and dace. Members please note quarterly night next Wednesday, and all books to be cleared or be fined. Election of officers, and place to be settled for next outing for prizes. Mr. Gargrave was proposed a working member of this society.—J. Tucker, sec.

Battersea Friendly Angling Society, Queen's Hotel, Battersea.—The members of this club will fish a match at Amberley on the 13th inst.; roving; three prizes. Competitors to start by 8.37 from Clapham Junction. The punt competition at Twickenham is postponed until September 27. On the 6th, Mr. J. W. Hopkins weighed in a nice show of roach; Mr. C. Wastell, dace.—George Mumford, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road.—Several of our members took part in the competition at Pulborough on the 16th inst., three of them being successful, namely—Mr. J. Warman, fourth; Mr. James Smith, tenth; and Mr. H. Patman, eleventh. On the 13th inst., the members will fish a competition for the September series of prizes, place and conditions to be decided at the meeting on the 11th.—A. Conn, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—Those gentlemen who are going to the dinner on the 13th inst., will meet on Waterloo Station, and go by the 8.30 train. Honorary members are invited. There are two prizes to compete for. On the 6th inst. there was a very good show of fish, contributed to by the following gentlemen: Mr. F. Barker, carp and perch; Mr. Smith, carp; and Mr. Hacker, roach and perch.—F. Roberts, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 6th inst. several of our members were out, and Mr. Rich weighed in roach and dace; Mr. J. Newton, bream, roach, and dace—he being one of the successful ones in the Pulborough competition on the 9th. Mr. Hodkinson was elected an honorary member of the above society.—D. Warren.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—Several of our members were out on the 9th inst., but with very little success. On the 6th inst. Mr. J. Hall weighed in roach, chub, and dace; and Mr. Aitchison, roach and dace. We shall be very pleased to see some of those members who have not attended the club lately, as it is proposed to arrange a competition for this month.—H. Roach, sec.

Burton Piscatorials, Globe, Derby-street, King's-cross.—Very little doing during the past fortnight. On the 2nd inst., Mr. W. Hill, weighed in roach and dace; 6lb. 2½oz.; and Mr. C. Roberts, ditto, 6lb. 1½oz. On the 6th inst., Messrs. Brierly, Biggs, Jones, Richards, and Ashton, were credited with shows of roach, dace, and gudgeon. We have made two new members, and several important alterations have taken place beneficial in every way to our members. Anglers' Benevolent List now ready for enrolment. We should like to see a better attendance of those members who render themselves so conspicuous by their continued absence.—C. Roberts, hon. sec.

Buxton Brothers' Angling Society, Walthamstow Liberal and Radical Club, 4 and 6, Buxton-road.—On the 6th inst. some of our members were out and met with fair success, Mr. J. Stephens having some very nice roach. On the 9th there was a large muster of members at the meeting, when we transacted some very important business.—A. Shuker, sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On the 6th inst., we had our brake outing to Weybridge, about forty members and friends going with us. The following weighed in on our return: R. Watling, roach and dace; Mr. Brothers, roach; Mr. Webster, roach; Mr. Leslie, dace. From other waters Mr. Baxall, jack; Mr. King, roach and perch; Mr. Elton, roach and dace.—E. T. White.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—Monday last, Mr. A. Sowerbutts in the chair, Mr. Burkitt, of the Earlsfield Angling Society, opened up an interesting discussion on the river Wandle in general, and at Earlsfield in particular, with regard to roach fishing. Messrs. J. S. Pulsford, Tom Keeble, C. E. Williams, and H. Guest, related some angling incidents. Since last report Mr. Tom Keeble and Mr. J. Deplidge have had a handsome show of perch from the Upper Thames. Mr. Harry Dunn will read his paper on barbel fishing, on Monday, the 28th inst.—John Smith, hon. sec.

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—Three of our members took part in the competition promoted by Mr. Eldridge, on September 6, Mr. MacDonnell weighing in bream from Amberley, the best fish 2lb. 12oz., and winning the seventh prize.—Cas.

Clapham Junction Angling Society, the Clarence, Winstanley-road, Clapham Junction, S.W.—On the 6th inst., we fished a match at Cookham, with the following result: Mr. Turner, first, 4lb. 14½oz. roach, one fish, 1lb. 1¼oz.; Mr. T. Jameson, second, 2lb. 9¼oz., roach; Mr. Collis, third, 13oz., roach; Mr. Wellgoss, fourth, 8¾oz., roach. The next match will take place at Staines, pegged-down, in punts, on the 27th inst.; same conditions as last punt match. The following members have weighed in fish—viz.: Mr. Wilson, 6lb. 14½oz. roach; Mr. Painter, 2lb. 15¼oz., roach; G. Jameson, 2lb. 6¾oz. roach; and Mr. Wakeford, roach.—A. Trowbridge, sec.

Clapton Angling Society, Wayland Hotel, Dalston-lane.—The ordinary weekly meeting was held at the club-house on Monday last, Mr. J. P. Connellan in the chair. One new member was elected, and another nominated. Several letters for particulars of our society were read. The outing on Saturday last to our private fishery, Rammey Marsh, Enfield Lock, was a very pleasant one; the perch were on the feed, and numbers were taken, none, however, of a size to comment upon; several small jack were also landed and returned to the water. Mr. Connellan at dusk had a stiff tussle with a fine jack, but owing to his landing-net not lying handy he was broken away. Many fine chub were feeding on the surface, but not one of the members present was armed with the needed tackle, so they remain there for future operations. We had a plain but bountiful dinner at the keeper's lodge, to which the members did ample justice. Our day was so thoroughly enjoyable that it is contemplated to make a fortnightly meeting for angling at Rammey Marsh, to take place on alternate Saturdays, a plain dinner to be provided during the remainder of the summer season, mid-day; when the days grow shorter, to have same after fishing. To those members who have not yet tried our fishery, I strongly urge them to pay a visit; if they require a ticket for a friend I shall be pleased to send them one; it is an excellent stretch of water (the old river Lea), and in the opinion of first-rate anglers full of fine fish of all sorts. I was pleased to have a chat with a gentleman on Saturday at the waters who had fished it for twenty-five years. What he said quite corroborated my preceding statement.—Henry Howse, hon. sec.

Clarence Angling Club, Red Lion Hotel, Harrow-road, Paddington, W.—A few members have been plying the rod, but with little success, Mr. J. Nelson having some nice fish from our private water. The member proposed on the 2nd inst. was duly elected on Wednesday last.—Alf. E. Evans, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—I have to report a blank on the 6th inst. We fish a match on the 13th inst., for twelve private prizes, at Denham Straits. Members to proceed how they like, start fishing at eleven a.m., leave off at seven p.m.; draw for swims at Swan and Bottle; fish to be registered at side of water; weigh in at club-house by 10.30 p.m. A pegged-down match; one rod only; jack barred; no raking.—A. Smith, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 6th inst. several members were out; but the only gentlemen who had any sport were Messrs. Webber, Wild, J. Edwards, Thornton, Cogswell, Killick, Parram, T. Midson, and Legge, who had a fine show of roach, bream, chub, perch, and dace. Messrs. Webber and Robinson competed at Pulboro', running in first and fifth. On the 13th inst. we fish a boundary match at Cheshunt; members to go down by the 9.10 from Liverpool-street.—S. Malby, sec.

Eastern Piscatorial Society, Spread Eagle, Gill street, Limehouse, E.—Our show of fish on the 6th inst. was by Messrs. Jones and Bartlett—bream, roach, and dace. We fish a match on the 20th for prizes, value two guineas. We have made two new members, and have one more proposed for election next meeting. We have still a vacancy for a few more.—J. Bartlett, hon. sec.

East London Piscatorial Society, London Hospital Tavern, Whitechapel-road, E.—At the committee meeting held on the 3rd inst., it was arranged that the next outing take place on the 17th inst. at Hampton Court; punt. First prize, £1 11s. 6d., 3lb. fish; second prize, £1 1s., 2lb. fish; third prize, 10s. 6d., 1lb. fish; special prize, 10s. 6d., 5lb. fish, Thames size. Train leaves Waterloo at 7.45.—F. Wood, secretary.

Eclipse Angling Society, Ledbury Arms, 40, Ledbury-road, Notting Hill.—Our second annual fishing outing will take place at Uxbridge, on Sept. 20. The match will be pegged-down, between Swan and Bottle and Denham Locks.—F. Reynolds.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—Five of our members fished in the competition at Pulborough, on the 6th instant, two winning prizes, Messrs. J. W. Briggs, roach, bream and dace, first; and G. Watling, roach and bream. On Monday last, our return visit on the No. 2 Eastern District took place, and was fairly well attended, seventeen clubs answering to the roll-call. The next visit goes to the Islington Brothers Angling Society. Members are requested not to forget Mr. White and Mr. Ball's prizes this month.—J. W. Briggs, secretary.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We were saved a blank on the 6th instant by Mr. Riggs and Mr. Ballard with a few roach and dace. Other members were out, but not successful.—A. Payne, sec.

Golden Barbel Angling Society, 49a, Castle-street, Oxford-street.—I am pleased to report our members are getting in excellent trim, as we are getting some really fine trays of fish. On the 6th instant, Mr. Bailey, a nice show of roach: Mr. Roach, bream, perch and roach; Mr. Dodd, dace and roach; Mr. Porter, rudd and roach; Mr. Chapman, bream and roach; Mr. Clark, rudd; W. Bowring, bream; Mr. Monk, rudd; Mr. C. Bowring, bream and perch. On Tuesday a fine show of bream and roach by Mr. Bishop. We elected another new member on Tuesday, which now makes our muster pretty strong.—A. Stokes.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—On August 30 our trays were well filled with fish; F. Bates weighing 23lb. 5oz. of roach, and Mr. B. Edwards, 6lb. On the 6th inst., Messrs. F. Bates, W. Carr, and J. Grande, weighed roach, perch, dace and bream.—G. Weaver, sec.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville, N.—The following members entered Mr. Eldridge's competition at Pulborough on the 6th inst., and weighed in small shows of roach and bream: Messrs. W. Parkin, C. Large, H. Prœhl, J. V. and J. A. Fitch, J. Cooper, C. Watling, and H. Watling, who had a nice roach 1lb. 5¼oz. Messrs. C. Large, W. Parkin, H. Watling, and J. V. Fitch won prizes in the above competition.—J. A. Fitch, sec.

Gresham Angling Society.—The usual weekly meeting took place on Tuesday, with Mr. E. H. Bramley in the chair. The secretary reported that he had been to Kelvedon, and made certain arrangements respecting the tenancy of the society's two waters there for cutting the weeds, and also the better preservation of the fish. A letter was read from a friend, whose name did not transpire, offering a consolation prize of some article worth a guinea for the member who shall catch the fewest fish at the sea-fishing competition on the 15th inst. It was arranged that the member who should catch the five best fish should take the first prize, the next best five the second, and the next best five the third, and the lowest number the consolation prize. The members will leave Fenchurch-street Station at 8.23 a.m., on Tuesday, the 15th (not 16th, as stated in the *Fishing Gazette* last week), and return from Southend at 7.15 p.m. Not more than one rod or hand-line, and two hooks to be used by each competitor. Mr. C. S. Bentley presented the library with two books, "The Highland Sportsman," and a Latin book on fishing, printed in 1731. A hearty vote of thanks was accorded to Mr. Bentley for his valuable present. Mr. J. W. Hearn reported that he had taken first prize in a competition on the Thames. Dr. Brunton reported having taken nine trout from the Test, each weighing over 1lb. A new member was elected, and other business transacted.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On the 6th inst., several of our members went to Cheshunt for a roving match for six prizes, and in spite of the high wind, the whole of them were taken, the following being the winners:—1st, A Fish, with bream; 2nd, Levoir, with bream and perch; 3rd, Wells, with perch; 4th, Dinsdale, with roach; 5th, Brink, with pepch; 6th, Hunter, with perch. Messrs. Saalfield also brought roach, dace, and perch; Geever, roach; and Bagshaw, jun., chub.—W. Fenner, sec.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—We had an excellent show of rudd by a friend—twenty-five fish weighing 28lb. I wish to call all members' and friends' attention to the supper at the Hornsey Wood Tavern; it is fixed for the 24th instant, instead of the 17th as in last week's *F. G.* The day's outing is to be arranged the same evening.—I. F. G., secretary.

Hoxton Brothers Angling Society.—On the 6th inst., C. H. Wood weighed in jack and perch, one handsome fish 2lb. 10oz.; J. Row, roach and perch; A. Hattemore, roach.—B. Ghurney, sec.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—Several of our members were at Pulborough on the 6th inst., one being successful in obtaining a prize. Other members were out; Messrs. Norris and Hayes weighing in roach and dace.—A. Pain, sec. *pro tem.*

Islington Angling Society, Jubilee House, Hornsey Rise, N.—The meeting on Monday evening last was presided over by Mr. James Tayler, when it was reported that many of the members were out of town, most of them with the intention of fishing. At the next meeting we shall doubtless hear what the results have been. Members will also please note that a ballot for membership takes place on the 21st inst.—X.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—We met on the 3rd inst., when it was arranged to fish for our worthy host's prize for gross weight on the 6th inst, when the following weighed in: Mr. Croker, first, 3lb. 2½oz., roach and dace; Mr. Wilsher, 1lb. 6½oz., roach; Mr. Key, 1lb. 10¾oz., roach, dace, perch and gudgeon. Mr. Stretch had a very nice perch from Pulborough match, but was not successful, weight 14½oz. The next return visit on No. 2 District go to the above society; date will shortly be announced.—J. H. Herbert, secretary.

Izaak Walton Angling Society.—The members competed for three special prizes on Wednesday, the 9th inst., only two were taken; Mr. T. W. Garrard was first, Mr. G. Rogers second. There are four special prizes to be fished for on the 13th inst. Competitors may choose their own fishing waters, but must not leave London before five a.m on the day of the competition. Mr. G. Rogers weighed in jack and dace on the 6th inst.; Mr. G. Washington had perch, and Mr. C. Layton had roach on the same day. There was a good display on Wednesday, 9th inst., Mr. C. Hayward had 8lb. 13¾oz. of roach, dace, and perch; Mr. H. C. Wheatley had 13lb. 15¾oz. of roach (heaviest one scaled 1lb. 5oz.); Mr. W. Wilsher had 15lb. 10oz. of roach and dace.—H. B.

Jubilee Angling Society, Portobello, Kensal-road.—On the 6th instant we had a fair show of roach, tench and perch, by Messrs. Wheeler, Beals, Tomkins, E. Challen, Sadgrove, and Ide. On the 8th inst., Mr. Hinton weighed in roach. We had a good meeting on Tuesday last, when Mr. Larter was elected a member of our society, and Mr. W. Wheeler was proposed. Several of our members intend taking part in the Langley competition, on the 13th instant.—A. Ide, sec.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—At a committee meeting held on Friday, the 4th inst. one new working member was elected, and three honorary members became angling members. During the past week many members have been out, the most successful being Messrs. Master, Carter, Prote, and Newcombe. The latter caught a very fine conditioned barbel, with a live dace while jack fishing.—T. Salter, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 6th inst. several members fished in the Pulborough competition, Mr. Nelson winning a prize. The following also had fish: Messrs. Ellingham, Watling, More, and Holmes. On Wednesday last, Mr. Morgan weighed a very handsome perch, 2lb. 1oz. Mr. Clark and Findley were unanimously elected working members of the above. Mr. Richardson and Mr. Wallis were also proposed as working members, and will be balloted in the usual way at next meeting.—W. Watling, sec.

Liverpool Angling Association.—A large meeting was held last week. The president—Mr. Leaman—put in an appearance after an absence of several weeks, caused by severe indisposition, and was warmly welcomed. Arrangements were completed for the outing to the Vyrnwy on the 10th, for the dinner to take place at the club-house on the evening of the 17th, and for the friendly contest with a picked team of ten members of the St. Helen's Angling Association in the Knowsley water on the same day (17th). Many of our members have been away fishing up and down the country, and have done fairly well, but it cannot be said that our success this year has been very pronounced; but in this we don't, from what I can read and hear, appear to be singular—in fact, it has been the worst season on record, so far.—Rd. Woolfall.

London United Anglers' Societies.—Fourth annual competition in aid of the funds of the Anglers' Benevolent

Society. A competition will take place at Rye House on November 15. Several prizes have been offered, which no doubt will be considerably increased, lists of which will be published in the various papers. The committee meet on the second and fourth Fridays in the month at the Forrester's Hall, E.C., at 9.30. Gentlemen who wish to serve on the committee will kindly let me know.—S. MALBY, sec.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 6th inst., our members were at various waters, when we had some good shows of barbel, roach, dace, perch, and bream by Messrs. Milburn, Penfold, W. Pearce, A. Clark, Mellish, Bartlett, and Gray. W. F. PEARCE.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—Our usual meeting took place on Tuesday, with a good show of members. Mr. C. Oliver and Mr. H. K. Applin were out on Saturday, and had a nice take of fish. Mr. J. Feakes and W. F. Dyer have been to the disputed Hickling Broad, and did good business among the perch, on the 6th inst. Mr. A. Carse had a nice roach, scaling 2lb., and two tench, 3lb. and 2¾lb., which have all gone to Cooper's for preservation. Members please take notice that a special meeting will take place on Tuesday next.—McCOMBES, sec.

North Eastern Angling Society, City Arms, 9, Blomfield-street, London-wall, E.C. — The next return visit, No. 1 Eastern District, will be held at the above on Thursday, the 17th inst. Secretaries and members of other clubs not receiving an official notice, will please take this as such. All will be made heartily welcome.—G. T. FLETCHER, sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland Park, N.W. — On the 3rd instant, Mr. Schultz, jun., had roach; and on the 6th inst., Messrs. Harris, roach and jack; and W. Ward, jack and some nice roach. One of our members has had the misfortune to lose his privilege ticket, club cards, &c. Should any gentlemen have found the same, will he kindly return them to above address? A brake outing is in contemplation, to take place this month.—G. S.

Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham.—The next series of prizes will be fished at Pulborough on the 13th inst., members to leave town same morning only. Next Wednesday being quarterly night members are requested to attend, as we have important business to settle.—A. G. DUKE, sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Our members turned out in good style on the 6th inst. to fish for six prizes at Uxbridge, when the following gentlemen were the winners: Messrs. Wortham, first; T. Corney, second; J. Isaacs, third; J. Morris, fourth. The two remaining prizes stand over till next Wednesday. I hope anglers in general will not forget the competition at Langley on the 13th inst., when I hope to see a good muster.—J. W. HARRIS, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—Among the shows of fish weighed in on the 6th inst. special mention must be made of a fine bream, weighed in by Mr. Davis, which turned the scale at 5lb. There will be a special meeting on Sept. 23 to consider an outing. Mr. Slater was proposed as a member.—W. B.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The following members weighed in Sept. 6th, for three prizes left over from August outing: Messrs. J. Wigley: 2nd, J. Davis, 3rd; the 4th prize was not taken. Messrs. H. Mitchell, P. Martin also had fish. Mr. Naylor proposed a new member on Wednesday. Our return visit on A.A. took place on Tuesday evening, when fourteen clubs answered the roll-call—viz., Anglers' Pride, Battersea Friendly, Bermondsey Brothers, Blackfriars, Clapham Junction, Causton, Peckham Prothers, Rodney's, St. Alban's, Excelsior, South London, St. George's, Burton Piscatorials, Eustonians, Funney Folks.—F. T. LAMBERTON, sec.

Royal George Angling Society, the Hope Tavern, Tottenham-street, Tottenham Court-road. — On the 6th inst., our trays were filled with fish from the upper and lower Thames, but not so good a show as the week previous; but we thank the following members for doing their best: Messrs. Webber, Holder, Longland, Gibbons, Harris, Trotter, and Bacon. I should like to see some of our old members commence weighing in, as our prize list is pretty wealthy and strong. We have room for a few more gentlemen to join a good and old-established club on application to—F. C. LONGLAND.

Royal Oak Angling Society, Royal Oak, Roman-road, North Bow, E.—On the 6th inst. several of our members were out but owing to the strong wind our takes were much below the average. The following members weighed in fish in their respective order: Messrs. A. Barclay, roach and chub; J. Stanley, roach; G. Barclay, jack; F. Barclay, roach; J. Yeo, roach and dace; Parsley, roach and chub; Perry, roach and perch; Henson, roach; Cox, roach. On Tuesday, Sept. 8, G. Barclay showed jack from the Lea.—A. BARCLAY.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 6th inst. several members fished for six prizes at Pulborough, in the Central waters, when all the prizes were won by the following members: Messrs. C. Holmes, 10s. 6d. and bait-can, first; G. Sanders, 10s. 6d., second; E. Wright, 10s. 6d., third; H. Docker, 5s., fourth; G. Giles, 5s., fifth; H. Raine, 5s., sixth; Mr. T. Lovibond, jun., also weighed in, but did not win a prize. Messrs. J. Petrie and W. North weighed from other waters, the former having roach, 5lb. 8¼oz., the latter roach, 3lb. 12½oz. In last week's report a fine specimen bleak was said to weigh 5¼oz.; it should have been 3¾oz. On Tuesday we had a very poor show of members present, but hope we will have a full muster on Tuesday next. If this should meet the eye of Mr. John White, he will greatly oblige by coming or sending to the club-house as soon as possible.—S. E. CANE, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—On Monday last Mr. C. J. Benwell had a grand show of eighteen roach and rudd, weighing 23lb. 7oz. The three largest roach went 1lb. 12oz., 1lb. 10oz., and 1lb. 3oz., and the two largest rudd, scaled 1lb. 8¾oz., and 1lb. 8oz. The heaviest roach is being set up by Messrs. Cooper and Son. Mr. Fountaine has secured a well conditioned barbel of 4lb. 4oz.—MULTUM IN PARVO.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent-garden.—Our pegged-down match took place on the 6th instant; but, in consequence of the rough wind and thick water, was not so successful as our previous competitions this season. Messrs. Frank Griffin and O'Callaghan, who did not take part in the match, weighed in about 12lb. of bream, perch and roach between them. All members interested in our next outing are requested to attend next Tuesday to make arrangements. —PELICAN.

South London Angling Society, George and Dragon, 235, Camberwell-road.—The match on the 6th inst. resulted in a blank. It will be fished off on the 13th inst. when there are seven prizes down for competition. On Wednesday next three prizes are to be fished off. Members have been out in all directions lately, but the shows have been very meagre.—J. J. F., sec.

South London United Anglers' Visiting List.—The next visit on the above list will be to the St. Thomas's Angling Society, held at the Waterman's Arms, Paris-street, Lambeth, on Tuesday, the 15th inst., when I hope they will receive a bumper, as on the occasion of the last visit to this society. I am sorry to say very few societies were represented.—A. CONN, hon. sec.

Stepney Angling Society, Beehive, Rhodeswell-road, Stepney.—We finished our competition at Dagenham on the 6th inst., for the remaining three prizes, Messrs. Marrows, Woodford, and Jolly, being sixth, seventh, and eighth, all with roach and bream. The following also had a good show of roach and bream—viz., Messrs. Ruston, Nash, Gerrard, and West. We have vacancies for a few more approved anglers. Apply early.—E. N. P., hon. sec.

Stoke Newington Angling Society, the Dun Horse, Kingsland-road, E.—The competition at Hatfield Peveril, on the 8th inst., resulted as follows: Messrs. S. Orrow (1lb. 4½oz.), first; T. Gretton (1lb. 4oz.), second; and H. Nayler (8oz.), third. The next competition will take place in October.—T. GRETTON.

St. Thomas's Angling Society, Waterman's Arms, Paris-street, Lambeth, S.E.—The members of the above club visited Pulborough on the 6th inst. to fish for the remaining prizes, but returned with blank. It has been agreed that we fish Cookham on the 13th for same. The visit on the South London United Anglers' Visiting List is held at the above club on Tuesday, Sept. 15, when the members hope to receive the attendance of the clubs enrolled on the list.—G. MORTON, sec.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—The members of the above society fished their "Sunlight Soap" competition on the 6th inst., Mr. H. Reaves taking first prize—a case of Sunlight Soap, presented by Messrs. Lever Brothers. He also took first prize in a sweepstake, and a prize of a case of cigars very kindly presented by the worthy chairman, Mr. J. Harwood, for the largest roach. Mr. Parker was successful in taking second; Mr. Hare, third; and Mr. G. Boreham, fourth.—H. REAVES, sec.

United Brothers, Deptford. — Several members were out on the 6th inst., but the takes were rather small. Messrs. W. Bennett and Windred, bream and perch; Messrs. Richards, Marshall, Millidge, W. Tyler, H. Freame, R. Champion, and F. Beak, weighed in some roach. The members will fish their next match on October 4.—H. TYLER, sec.

Waggoners Angling Society, George and Dragon, Vauxhall-cross.—Several members were out on the 6th instant, and had fish, but did not arrive. We had a fair attendance on the 8th, Mr. Philips in the chair, faced by Mr. Petty. I wish to remind members not to forget the 13th instant, as there is a prize on for the largest roach. A friend of mine, whilst visiting Richmond, saw a gentleman (Mr. Aledan, of Montpelier-street, Brompton), catch a winkle. This winkle had three gentles and a hook inside him, which can be seen at any time at our headquarters, the George and Dragon.—H. C., hon. sec.

Walham Green and Fulham Augling Society, Stansford Arms.—The members of the above held their usual weekly meeting at their club house. Mr. A. Glass in the chair. Mr. G. Cobble and Mr. E. Smith were duly elected members. On the 6th inst. several of our members were out at Kingston, fishing a pegged-down match, when Mr. A. Glass, being the only member taking fish, took both prizes. Mr. H. Templeman weighed in a nice show of roach and dace, from Richmond. Our open competition will take place on the 27th instant, for the prizes subscribed by Messrs. A. and T. Alder, and all members are requested to take part.—E. SUTEHALL, sec.

Waltonian Angling Society, the Cape of Good Hope, Albany-street, Regent's Park.—We had two nice takes of fish on the 2nd inst., Mr. Waltham, roach, &c., 8lb. 7oz.; Mr. Marriott, roach, 2lb. 9oz. This is better sport than we have had for some time. On the 6th we had a grand show, the best of the season, Messrs. Waltham, roach, 5lb. 4oz.; W. Dodge, tench, &c., 3lb. 7oz.; Wright, roach, 3lb. 6oz.; R. Dodge, roach, 8lb. 12½oz.; Miller, roach, 12lb. 4¾oz.; H. Putnam, roach, 5lb. 2oz.; Jukes, roach, 4lb. 13½oz.—J. PACKMAN, sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—On Wednesday, September 9, the final arrangements for the outing on September 13 were made, all the members to meet at Liverpool-street Great Eastern Railway Station, main line departure, at nine o'clock prompt, when a reserved carriage will be attached to the excursion train to Colchester and Clacton-on-Sea. Mr. Hardy weighed in nice show of barbel from the Thames. It is with deep regret that I have to announce the death of our old and esteemed member and friend, Mr. Fred Allard, a good angler and respected by all. Mr. H. Charek has kindly presented the club with £1 1s. prize to be fished for on Wednesday, September 23, making five prizes for that date. I beg to remind members that September 2 was quarter night.—C. HIBBLE, sec.

Wellington Angling Society, Harper-street.—This society held their second contest on Saturday last, the 5th inst., at Jack Hill, Blackley (by kind permission of Mr. C. Thorpe and the Co-operative Society), the sport being unusually bad, as only two members caught fish out of thirty anglers, the successful members being W. Tinker, first, and E. Hibbert, second. After the contest, the members and friends sat down to a dinner provided by the host and hostess of the club-house. A very enjoyable evening was spent. There being fourteen prizes, we shall have a continuation for the other twelve on Saturday, the 19th, when we hope to bring it to a close.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 6th inst. there were only two prizes taken—viz.: Mr. F. Barnes, first, with roach, 1lb. 9½oz.; W. Gordon, second, also weighed in; R. J. Dartnall, roach, 8lb. 4oz.; and W. H. Bryant, bream and roach. The remaining prizes will be fished for (go where you like); members can leave on Saturday night next. Mr. James Diwell was proposed as a member, ballot to take place on Wednesday next, September 16.—R. J. DARTNALL, sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Since my last report the following members weighed in fish. Mr. Goodrich, 3lb. 15oz. of roach and dace; largest dace 9oz.; Mr. R. Lowther, dace. I wish to remind our members that it is quarterly night on Wednesday next, Sept. 16th. Hoping to have a good attendance; also, that it is decided to fish for five private prizes, at Hatfield Peveril, on Sept. 20th, and at the same time to have a photo of a group of the members taken; hoping they will attend in good numbers on that day.—R. LOWTHER, sec.

Woolwich Brothers Angling Society, Green Man, High-street, Plumstead.—On the 2nd inst. our members voted 10s. 6d. towards the Maidstone Anglers' Preservation of the Medway Fund. The following weighed in fish on the 5th inst.: Messrs. W. Brinton, roach; J. Howcroft, jack and roach; F. Cresswell, perch; J. Hicks, bream. A summoned meeting takes place next Wednesday at nine p.m. for the purpose of arranging another general outing.—J. R. HOWCROFT, sec.

AFTER A DAY'S FISHING,
Call on TIBBATTS,
AT "THE CITIZEN," 70, HOUNDSDITCH
(OPPOSITE BISHOPSGATE CHURCH),
Two minutes walk from Liverpool-street and Broad-street Stations.

REPORTS FROM RIVERS, LOCHS, &c.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min. for Chelsea. 40 ,, ,, Putney. 45 ,, ,, Hammersmith. 50 ,, ,, Barnes.	Add	55 min. for Kew. 75 ,, ,, Richmond. 80 ,, ,, Twickenham. 85 ,, ,, Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

English and Welsh Reports.

The Lower Thames. — GENERAL REMARKS. — The favourable change in the weather has caused the migration of mere anglers of the Thames into other places for their holidays, and the news is rather scanty, except in the matter of fish catching, which is of a satisfactory character. The youngsters on the banks are giving the river keepers a great deal of trouble, and being so young nothing can be done with them except taking their gauze nets away, and telling them, if they are found doing it again, they will be taken before the magistrates. The head river keeper reports this week he has taken a quantity of dead lines away from boys under fifteen years of age, but they did not know they were doing wrong, and he cautioned them against a repetition. There is a case of snatching at the Surbiton sewer coming before the county bench on Thursday next, and Mr. Armstrong, our active honorary river keeper at Chertsey, in addition to the conviction reported last week of illegal fishing in the Abbey river through his exertions, has got another against some bank fishers in the Thames, which I have now on hand. I simply refer to the latter case because the anglers put up the old plea of ignorance, and to express my astonishment in these days when so much publication is given of the sizes of fish, that such an excuse can be admitted or given. I do not for one moment suppose the delinquents are club men, and certainly the tackle used bore the appearance of constant usage, as against the plea of ignorance. From the reports it would appear the good old days of barbel fishing at Sunbury have come back again. One of the old anglers writes: "I had given up all idea of ever catching any more barbel at Sunbury, but from your reports I am inclined to have another try, and see if I can have some of my old sport." There are not only plenty of barbel but a fair quantity of jack found in the Sunbury waters, and as regards the latter fish for winter fishing, it is hoped the season, as regards the weather, will be more favourable than it was last year for jack fishing.—B.

RICHMOND.—Job Brain, in four days, 40lb. of roach and dace; Henry Mansell, in three days, 30lb.; and Henry Howard, in the same time, twenty dozen.

TWICKENHAM.—A. Annesey, in three days, 30lb. of roach and dace; C. Brown, in four days, 35lb. and eight bream; Samuel Cole, in four days, thirteen dozen and a couple of bream; George Coxen, in four days, 28lb. and nineteen barbel; Richard Coxen, during the week, with Mr. Tarrant and sons, 56lb. and a couple of barbel; John Coxen, in the week, 25lb. and four barbel; John Frost, in three-and-a-half days, 38lb., four barbel, two bream, and one jack; A. Hammerton, in two days, 35lb. and five bream; R. Moffatt, in five days, 57lb. and seven bream; J. Spong, in six days, 70lb., six bream, and seven barbel.

TEDDINGTON.—Joseph Baldwin, in two days, eight dozen of roach and dace; W. McBride, in four days, twenty dozen and eleven bream.

KINGSTON.—John Johnson, during the week, twenty-three dozen of roach and dace, eleven bream, the largest 5lb., four jack, and a perch of 1½lb.; N. Bolton, in three-and-a-half days, seventeen dozen of roach and dace, one barbel, five bream, and a jack of 4lb.: J. Wilkes, in five days, twenty-five dozen, six chub, four bream, six dozen of gudgeon, and a jack of 5½lb.

SUNBURY.—Messrs. T. and A. Stroud, during the week, thirty-two barbel, twenty-six dozen of roach and dace, and seven jack, the largest 6lb.; Mr. Edward Clarke, in the same time, eighty-three dozen of roach and dace, twenty-six barbel, and three jack.

WEYBRIDGE. — Herbert Carr, in one day, with Mr. Roland, twelve dozen of fine roach.

CHERTSEY.—John Poulter, one day, with Mr. Hebburn, twenty-five dozen of roach and dace; another day, with Captain Grey, six dozen of roach; another day, with Mr. C. Wastell and Mr. Bedford, seven dozen of roach and one jack; Mr. Ryan and Mr. Allen, in one day, twenty-seven dozen of roach and dace.

STAINES.—John Keene, junior, one day, with Mr. Wilson and friend, 23lb. of good roach; another day, with Mr. Clarke, five dozen of roach and dace, and eight barbel; another day, with Mr. Menear, five dozen of fine roach. the largest 1lb. 2oz.; another day, with Mr. Foster and friend, eight dozen of roach and two barbel; and another day, with Mr. Mackerell, five dozen of roach and dace and four barbel, two of the largest roach weighing 2¼lb.

Upper Thames.—The river could not possibly be in better angling condition than it is in at the present moment. The late cleansing out has done much good, and I am pleased to report that roach, chub, perch, and jack, are all well on the feed. From all stations, from Staines to Oxford, come reports of fair sport, even the usually unproductive districts of Benson and Wallingford, contributing a quota of 25lb. and 30lb. of miscellaneous fish on two occasions. The weather with the new moon has turned over a fresh page, and the river surroundings just now are most enjoyable, and as fish are to be had for the asking, lucky are the anglers who have yet to spend their Thames-side holiday.—MARLOW BUZZ.

Thames (Windsor).—The glorious weather of the past few days will soon tell on the river, and cause it to get low and bright, when the very finest tackle will have to be used. Some very good baskets of roach and dace have been caught recently, but no extraordinary specimens, Mr. Harrison, of Eton, having the best roach I have weighed during the week; it went 15oz. In addition he had thirteen very good fish, all taken near Windsor Bridge, in one and a-quarter hours. Barbel have been shy, and positively refused worms, of which they have doubtless this season had plenty. Lumsden, of Datchet, on one occasion sat three hours taking one with worm; on using greaves, he quickly secured nineteen others, largest about 4lb. The Thames trout season being now closed, I am able to congratulate Mr. H. Sturton, of the Royal Windsor and District Piscatorial Society, on having won the first prize for Thames trout, with a nice specimen which, if I remember rightly, weighed over 4lb. Mr. Harvard, of Eton, takes second prize with a smaller fish. March 14 will close the coarse fishing competitions for specimen fish, of which a good number have been weighed in, and the contest promises to be very keen. Water at present in nice order, and gudgeon should feed madly if tried. Mr. Siddall Wright, of Windsor, in a short time to-day had just over eight dozen.—B. R. BAMBRIDGE.

Ancholme District.—We have real summer weather at last, and the water is in most excellent condition. The Hull Universal Angling Association fished a match in the most stormy weather before the change came. J. Wardle was first with 6lb. 7oz.; E. Earle, second, with 6lb. 5oz.; and T. Turner, third, with 3lb. 12oz. The total weights taken was 4st. 4lb. 12oz. On Friday Messrs. Summerson and Clark had three pike and thirty or forty roach. Mr. Broadhurst, Sheffield, two pike, and Mr. Teal, one pike. Since the change in the weather evening fishing has much improved.—THOMAS FORD.

Arun (Pulborough).—Some grand specimens of roach have been caught here recently, many being over a pound, and one I was shown weighing 1lb. 7¾oz. Anglers have landed bream up to 3lb., and this week one or two decent perch—largest a pound—have been obtained. This river contains good jack, and not so long ago one estimated to weigh 20lb. was observed in the fishery rented by the Central Association of London Anglers, and close to the spot where a fish of 18lb. was caught last season. Regarding the competition held here on the 6th inst. there were two hundred and thirty-two entries, and a very fair amount of sport was obtained considering the clouded water and the high wind. First honours was obtained by Mr. W. Biggs, who weighed in 8lb. 5oz. of bream and roach. In addition to the competitors in the match about four hundred other anglers were out on the river.—GOOSEQUILL.

Barle (Dulverton).—The river has been very high, but good baskets have been killed with fly and minnow. A friend last week killed six clean-run salmon with the fly on the Carnarvon Arms water. Killing flies, red, winged, hackled, Blue Upright, also rough hare's flex. Warmer, rising glass, and water finer and falling rapidly.—IRON BLUE.

Brighton.—SEA FISHING.—Boat anglers are having an exceptionally fine time of it just now. Favoured by summer weather and a calm sea, from twenty to thirty boats are off daily. Plaice have come in and are now fairly abundant close in shore. Pout are also plentiful, with a sprinkling of large silver whiting and small conger. The only difficulty is in the matter of bait. There has been quite a run on the fish shops for mussel, which, although abundant on the rocks below Black Rock Coastguard Station, are so small that three or four are required wherewith to bait a single hook. Lug worms are *the* bait, but rather difficult to procure here, the small supply coming from Shoreham, and sold at one shilling per pint, but have just been told that a small supply may be purchased of a vendor on the Old Chain Pier.—H.

Chichester and Sussex Rivers.—The hope of a fine September has been realised, and with the exception of a bad start on the 1st, the weather has improved and we are now grumbling at the intense heat. Angling has greatly improved, and the rivers are in grand condition. At Chichester Canal a number of anglers have met with good sport among the bream and roach, but bream are not so heavy as a few seasons since. Carp have been feeding well at the Decoy Ponds, Amberley. Mr. H. Howard has landed some excellent specimens, wheat corns and malt corns have accounted for good baskets. Dace and roach have afforded good sport on the Adur and from the Arun during the week several bream up to 3½lb., and roach exceeding 1lb. The weather has been too hot, and in many private waters too weedy and low for pike fishing, but several good eels some weighing 2½lb. have been taken with dead bait.—GEORGE F. SALTER.

Douglas (Isle of Man).—Both ashore and afloat the sport is excellent, and to add to the comfort of anglers, the clerk of the weather has turned over a new leaf. It seems quite possible we may have an "Indian summer" yet. One of the nicest and gamest brown trout that I have heard of for several years was killed by Mr. Johnson, of Cooilbane, in the "Sulby river," not far from the site of the views published in the summer number of last year's *F. G.* It measured 18in., girth, 5¾in., and weighed when caught a trifle over 2lb. 8oz. It is just possible that a "Wandle" trout, caught by our excellent Editor, might have weighed less, although I know he has done better. Sea fishing is pleasant, profitable, and productive of pastime and pleasure, but angler's ought not to trust the boatmen's gear, but rather put their trust in the men who have made a life study of what is requisite to that particular branch of angling, and who all advertise in the *F. G.*—STORMY PETREL.

Dove and Tributaries.—Sport has been pretty fair this last week. A dish of five brace, including a large grayling well over 1½lb., was taken by Mr. F. Wilson on Tuesday from the Birdsgrove length with the Needler fly and Apple Green; Mr. W. Bullock took a large trout, weighing 4½lb., from the same water with the minnow on Friday last; on Wednesday, Messrs. B. and L. Coxon took eight brace of grayling from the Uttoxeter Association water; Mr. R. Ward has been killing a few brace daily in the course of an odd hour or two's fishing (Birdsgrove). There are several other fishermen out, whose takes will be given in our next. Weather warm and genial.—D. AND W. H. FOSTER, Ashbourne.

Eden (Carlisle).—Very little is being done by anglers just now. It is generally a slack time. Two salmon were killed in the Rickerby water last week, one by Mr. John MacInver, and one by his keeper. Tom Bone landed a grilse below Carlisle yesterday, and two or three salmon have been caught in the Edenhall water. The netting season throughout the Eden district is now at an end, the Solway fishing having closed on the 9th last week, and showed a good instance of the value of the "Playground" lately instituted by the Board of Conservators. There was a fine run of fish on Friday and Saturday. They would get into the "Playground" during the weekly close time. As matters stood before, a fleet of nets would have massacred them there on Monday morning, but under the present restrictions they were safe, as the river nets were all out on Aug. 31, the fish would have a clear run for the spawning beds.—SILVER GREY.

Esk (Whitby, Yorkshire).—Again it is pleasing to report that there have been gratifying results on this river, for during the past week some excellent sport has been obtained. Anglers have been out each day, and though a few have been disappointed, others have done exceedingly well. The fish are, generally speaking, in fine condition, and afford first-class sport. As far as we are able to ascertain, the following takes have been made: Mr. L. Sutcliffe, two salmon, each weighing 6lb.; Mr. T. Mitchelson, Pickering, one of 6lb.; Mrs. Keighley, Whitby, one of 7lb., Mr. J. Mitchelson, Pickering, two, of 4lb. and 5lb.; Mr. W. Harland, Egton Bridge, seven; Mr. C. J. Keighley, Whitby, ten; Mr. J. H. Keighley, two; Mr. John W. Nicholson, Talbot Hotel, Whitby, six; Mr. Herbert Jackson, one; Mr. J. R. Bulmer, Hull, one, 7lb.; Mr. J. W. Wheldon, Pickering, seven. At the time of writing the river is getting rather low for first class sport, but a little downfall would soon put it in right fishing trim again. The river, so far as the present season is concerned, has never been so full of fish as it is now, and day by day it affords everything necessary for legitimate sport.—JNO. J. JACKSON.

Lake District.—Fly-fishing has been almost *nil*, owing to the swollen and discoloured state of our streams, and I have not heard of many takes worth recording, though there are one or two exceptions to this rule. Large numbers of salmon are now in the estuaries of the Kent and Bela, and some notable and illegal captures have been made. Large tracts of land in South Westmoreland have been covered with water, particularly the low-lying portions at the extreme head of Morecambe Bay: and, on the subsidence of the flood, many salmon were found in pools on the cultivated land, and fell easy prey to the farmers and their labourers. This was mild poaching indeed compared with the tactics of a gang who, by the use of nitro-glycerine in certain quiet pools, have caused death and destruction to fish innumerable. I have information of one man who took five salmon in a single day by this means; and it will be impossible to stop the practice so long as dealers afford such easy means to poachers for the disposal of their plunder. The stormy weather has caused a general exodus of visitors from the Lake District, and most of the waters have been too high for fishing. Windermere was last week the highest it has been for fifty years, the ferry-boats and steamers in some cases being unable to ply. On the Kent, the best basket I have heard of was eighteen fish, most probably averaging a pound each, taken by Mr. J. Shaw in Levens Park.—WESTMERIA.

Lea.—Angling generally has improved and will continue to do so if the present weather continues. I noticed to-day (Thursday), the weed cutters busily at work, they were employed on the length between Ponders' End and Enfield Lock, where the weeds are more prolific than in the other portions of the Lea where the water was drawn down; of course, floating weeds are an angler's nuisance, but at the same time it must be remembered that their removal has cleared swims that otherwise would be unfishable. Ponders' End—Mr. Geo. Hollingbery, of the Railway Hotel, has had good sport during the week; he tells me that chub have been feeding well, and that he had two very good specimens dibbing with caterpillars and natural flies; he also took a jack of about 3½lb., which was full of spawn, a most extraordinary occurrence at this season. Games's Fishery, Higham Hill—Some very good catches of perch and jack have been made lately, two of the latter fish weighing between 6lb. and 7lb.; the pike fishing here is two shillings for daily tickets; Mr. Games has about the longest rake I ever saw for clearing the weeds from swims. Waltham Abbey Fishery—Fishing here has been good; Mr. Finley has again been to the fore with a pike of about 11½lb.; a few smaller jack and roach have been taken. The Navigation Canal is in the best possible condition at the time of writing.—SPLICED JOINT.

Leicester.—The last few days has apparently launched us into tropical weather, and anglers have every reason to be satisfied--the late rains having put the waters in splendid condition. The town waters have received rather less patronage this week; but results have been quite up to the average, some capital baskets of roach being taken each day. Among the most prominent were Messrs. Dewick, Pinnock, Bacchus, and Prime, with baskets of roach and dace. Pike fishing has been quiet; owing to the extreme heat in the daytime fish would not feed. Late in the evening anglers have been obtaining some nice chub. and eels have again afforded plenty of sport. Messrs. C. Watson and A. Freer showed specimens up to 1¾lb. Away from the town matters have been quiet, although the fraternity continue to patronize the waters at Narborough, Bluby, and the Wreake Stations pretty freely. On Thursday the thermometer, during portion of the day, showed over one hundred deg. Fahr. A fair sprinkling of anglers were about the waters, and a delightful breeze getting up during the evening the fish bit well.

Loddon (Earley).—The water here is in capital condition for angling, and good sport has been had, the last few days. Some very fine takes of roach which are well on the feed, also chub; some nice pike have been got in good condition, going from 3½lb. to 7lb.—J. R. GOULD.

Lugg and Arrow (Leominster).—Both these streams have run down and cleared, and are in order for angling. The weather has greatly improved, and is now quite warm, and the fish is rising freely at the fly. The best flies are the Red Tag, August Dun, Green Insect, Mid Blue, and Pale Dun. Bottom fishing has been quiet. Some good grayling have been taken with the Willow. The Pinsley is in good fishing order. Sport in it quiet.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are now in capital order. The weather this week has been glorious for the harvest, but too bright for the angler. Flies are plentiful; the most successful have been the Late Brown, Silver Dun, Red Tag, and Pale September Dun. Other good flies are Blue Gnat, Female Willow, Green Insect, Mid Blue and Whirling. Prospects for sport in the coming week are good. Mr. Shaw Phillips' otter hounds have been hunting this district. On Saturday they killed, above the mill, at Kingsland, a fine otter, weighing 25lb., measuring 4ft. 2in.—R. T. WILLIAMS.

Medway (Maidstone).—The river for the past three weeks has been in a most undesirable condition for the angler. A succession of rain has kept the water in a dirty state, and anglers have been much disappointed. I think the past month has been the worst August for sport in the Medway that I have known for some years, and nothing like the average of sport has been obtained. The weather now seems to show more signs of being settled and making a better state of things for all-round angling. I trust it may continue and give the anglers some chance of sport, to compensate them for the unpleasant start of the season.—W. SHRUBSOLE.

Nene (Northamptonshire).—The incessant rains of the last month, although the source of much grumbling at the time, have at last had a very beneficial effect upon the roach, dace, pike, and other course fish of the locality. At the present time, the river is literally swarmed with shoals of useful fish. On Saturday, Mr. Rowell obtained a useful basket of roach, about thirty, the best approaching half-a-pound. Master W. Rowell has also had good sport among the roach and dace. Some eels of a substantial size and dace, largest 7oz., have been obtained near Peterborough, by one of the most regular anglers of the district. Shall expect to hear of fine sport among the Nene pike shortly, as I have seen some fine specimens while enjoying a quiet walk along the river side. The annual competition of the Peterborough Angling Club was to have been held near the Town Bridge, on Saturday last, but was postponed on account of the swollen condition of the water. The entry is a large one, and the prizes valuable. Elements are favourable, but water is at present unusually clear.—NENEBANK.

Norfolk, Suffolk, and Cambridgeshire Waters.—There is a marked improvement in the weather since my last week's report, and a great improvement in angling generally. I never knew fish feed much worse than they did all last week. It mattered not whether you tried the shallows or deeps—it was all the same. I saw on Saturday a lot of good anglers had been down to the Ouse, and the gross weight of fish they took did not amount to 10lb. the lot. The best takes I saw were made at Brandon, in the Little Ouse, and at Barton Mills, in the river Lark. There were swarms of good fishermen along the Yare at Buckenham, Cantly, and Reedham, but no good did they do: fish would not feed. Several good London men were down for the week and had no sport. I advise my angling friends to try the shallows more than the deeps, especially in the Ouse, at and below Ely. If fishing at Brandon, have some good strong clay and bran balls, not large, and try white paste and gentles—the same in the Lark. I know in any of these rivers there are tons of fish. A great deal of controversy has been going on lately in the columns of the *F. G.* respecting the weight of dace. I have frequently taken them over a pound, and I hope before next week to be able to send some grand specimens to one or two of the London clubs for their inspection. Anglers cannot do better than try at Brand Creek, Lakenheath cross-waters, Brandon, or Mildenhall this week. If they go to the Yare or Bure, both good rivers, but I think too early for them, they must try and find the shallow swims, and there they will get fish.—WILLIAM HOWLETT.

Ouse (Brandon, Norfolk).—During the week a splendid change in the weaber has set in, and with a continuance good sport must be had amongst the roach and dace. I have just received letters from two gentlemen fishing here for the week. One, E. Perry, Esq., of London, he is quite satisfied with his sport. The other gentleman states that host Rolph's prepared swims are in the pink of condition, and there plenty of roach about, "big 'uns." Good hooks are much required here, I mean strong in the neck and medium gut well leaded. The best sport has been had from five to seven p.m. as a rule, or early morning. Gentles for this week decidedly the best bait. The pike have been fairly on the move. Live bait at the Ram Hotel, also boats. It is well worth a visit to this place to take a row through that lovely vale up to the Downham Staunch where some good all round fishing can be obtained, especially if the services of H. Wolsey could be had. Letter to host Rolph will secure him on Fen water. Railway service, splendid for the angler. Just received another letter—Prospects good all round. Time writing, wind south, warm and bright.—JOHN O'GEORGE.

Ouse (Huntingdon).—The hot and bright weather has put the bream off the feed, but roach are feeding well. Evening is the best time for bream, they feeeding very fair on brandlings, and some good ones are being taken. The local anglers are having good sport late in the evening, but jacking is at a stand-still. I don't hear of anything being done during the week. Perch are to be seen feeding in many parts, but not anyone tries for them. Prospects very fair.—H. ROUT.

Ouse, &c. (York).—The river Ouse is gradually recovering its normal condition from the heavy floods we have been having for the past month or five weeks, but is yet far from a good angling water, owing to the thick muddy colour yet running. It is long since the fly-fisher has had such a rest at this time of the year in the Ouse, and many have gone farther away to the Upper Derwent and Rye streams, where the waters more quickly recover themselves. On the latter, and the Pickering and Driffield Becks, some good sport has been had chiefly with fly, and I hear of some of those heavy trout coming to the creel near Wansbeck. One good result of the floods is the large number of salmon that it has enabled to get into the higher reaches, and good fish have already been seen in places where least expected by the oldest fishermen. Grayling fishing in the Derwent is being followed with success with wasp grub and maggot. The most fish are taken with these baits just now, and of course with very fine tackle; but they will not take the fly so freely until the water is free of flood-colour. As is usual after a long volume of fresh, pike are very ravenous, and last Saturday, in the Derwent, I saw him playing havoc amongst the coarse-fry—several of my fish bearing teeth-marks, and a roach of over 1lb. was taken with its sides torn and bleeding as if fresh from the jaws of a large pike. Query:—How is it the fish whilst suffering such great pain, should take my bait?—RONALD.

Plymouth.—SEA-FISHING.—There are plenty of fish to be caught in the Sound. Pollack are taken with the india-rubber sand eel, on a running tide near the Shoal Rocks, and at the back of Drakes Island the fish seem to bite more freely early in the morning or after sunset. A friend of mine was out for half-an-hour, and he had four nice fish, weighing about 2lb. each. By using the rag-worm, bass and smelt can be caught off the various piers and rocks. Mackerel are now fast going to the bottom, which is the usual thing for them to do at this time of the year; you may see one hundred or more boats in the Sound, fishing for them with a twenty-fathom line, 1lb. boat shaped lead at the end, with a snood about one yard long having a double-ended snood with one end longer than the other, at their ends are attached two hooks No. 1 or 0, on single or double gut according to the liking of the fisherman; the bait generally used is either a strip of squid or pilchard, having a little bit of the shining part of the skin if possible; by this method you can obtain baskets ranging from one dozen to twenty dozen. The early part of the season, mackerel have been taken whiffing in great numbers, early in the morning, using a Silver Spinner. The season for them has been very good indeed.—WILLIAM HEARDER.

Scarborough.—(SEA FISHING).—Boat anglers continue to have splendid sport with mackerel; indeed, a Scarborough man, who has watched the fishing off the piers for years, remarked the other day, that he had never seen so many mackerel caught by rod and line so near to the east pier end. Ten or fifteen large mackerel is now an ordinary catch before breakfast. Silver whiting are also plentiful in the bay, and are of large size. Gurnard and flat fish also continue abundant, and with the calm sea we are having, coupled with the light breeze off land, sea anglers are having a grand time of it.—H.

Severn (Shrewsbury).—We have had a glorious and thrice welcome change in the weather this week, and the river is now clearing nicely after a long period of high and discoloured water. The river has been, up to the present, unfit for angling, but prospects are now rosy, and anglers are hoping that a bad season will end well.—PISCATOR.

Taw (North Devon).—Many peal and salmon were killed during the week; one salmon at Newbridge, Saturday. Mr. Sheffield killed six peal and some trout, Monday. The "Raker" has bagged some nice peal, working early and late. Rev. Wilson has taken some good fish lately, all with the minnow. I heard of some nice trout taken during the week, one weighing over 1lb. Water is in very good condition.—RUSTY GAME.

Tees (Barnard Castle).—Since my last report, this river has been in good fishing order, and now that the net fishing in the estuary is finished, salmon are more plentiful in the higher reaches. The following are amongst the catches which have come under my notice: Mr. George Bainbridge, one fishing weighing 12½lb.; Mr. Thomas Parkinson, three fish, 14lb., 12lb., and 7lb., respectively; Mr. Cooper, one, 4½lb.; Mr. Dent, one, weight not known; Mr. Robert Wandless, two, 15½lb. and 10½lb.; and Mr. Ramsay, of Gainford, two, 16½lb. and 15½lb. In trout, Mr. John Lax and Mr. T. Dobson, have each had fair dishes, and Master J. Percy Robinson also had one small dish of fish on Friday last. The Durham Ranger, in salmon flies, and Greenwell's Glory in trout, are being freely taken.—J. H. R.

Teme (Ludlow).—The Teme in this district is now running in capital order for fishing, having run down and cleared. The weather which has been very rough has now cleared and the fish are sporting well at the fly. The flies used are the Willow, Mid Blue, August Dun, Red Ant, Green Insect, and Silver Twist. Bottom fishing has been tried with the wasp grub, and some good fish have been landed. Minnow fishing in the morning has been good. In the water above the town a gentleman landed ten brace of good trout and grayling with the fly. Near the new bridge some good trout and grayling have been taken with the Willow and Green Insect. With the wasp grub trout over 1lb. weight have been landed. The Ony, Corve, Clun, and Ledwyche, are all in good order. In the Corve good trout have been landed with the wasp grub and minnow. Sport in the Ony good.—S. LUDLOW.

Teme (Tenbury).—The water in this part is now greatly improved, and is running a nice level and clear. The warm weather of the last few days has brought the fish more on the feed, and the grayling and trout are rising well at the fly. Bottom fishing has been successful, and some good fish have been landed. The Red Kyre and Ledwyche are all in order for fishing. Sport in them quiet. —WORCESTER.

Trent (Newark).—From present appearances barbel fishermen on the Trent will have a glorious opportunity of successfully winding up the season, the brilliant weather of the past few days toning the water into something like condition, after the repeated fluctuations of the past three weeks. From the Colne length, on Monday, Mr. R. Chatterton and a friend secured a nice mixed bag, comprising sixteen barbel, a brace of perch, and several chub and dace; and from the top length of the Rolleston Fishery, on the same day, a couple of Nottingham subscribers bagged a few, but these gentlemen are so chary of giving information that an accurate report is scarcely obtainable. From the same water, on Wednesday, Mr. T. Lees secured an out-of-condition fish, measuring 29in., and only scaling 6lb. 7oz. Dace and roach fishermen have been to the fore, Mr. D. Slater and Mr. C. Woodhouse showing some excellent specimens at the club-room on two or three occasions; and Mr. Robert Dale hooked a veritable champion dace, weighing 11¾oz. Worms and gentles are the popular baits, and evening the best time for securing fish. Wind south; and weather after a Trent barbel fisherman's own heart, but just a shade too bright during the middle of the day.—TRENTSIDER.

Wharfe, Yore, Swale, Nidd, &c.—The weather has apparently now settled down a good deal, and sport has improved considerably. I was out on Tuesday, with a friend, on the Wharfe. The fish rose freely but very "short," and I lost five out of every six that I hooked. Stone Midge, Brown Owl, and a very minute black fly were the favourites. My friend killed ten nice fish. Grayling are now getting into capital condition.—FRANCIS M. WALBRAN.

Wimbledon Lake (Wimbledon).—Jack well on the feed. Mr. Wood, of Putney, has taken four fish live-bait fishing, the largest of which was 7lb.; Mr. Burt, of the Earlsfield, took a fish weighing 6lb.; Mr. Spittle took a fish of 9lb.; Mr. Rawlings, of Hammersmith, took a fish weighing 11lb. The roach and bream have just commenced to feed. I have put into the lake over two thousand roach during the last two months in the presence of the anglers. —JOHN GARLICK.

Wye and Derwent (Derbyshire).—The heavy rain on Sunday caused both these rivers to rise considerably, and quite spoiled fly fishing. Since Tuesday the weather has settled and good sport may be looked for. Some very heavy barbel have been taken during the last few days. At Rowsley, I saw one gentleman, with upwards of 35lb., on Friday last—these of course were killed with the worm. Some good baskets of both trout and grayling are being killed to-day (Thursday), and fish are rising very freely. Whirling Dun, Apple Green Dun, Red Quill, Sand Fly, and Ash Duns are the best flies to use at present.—DOTTEREL.

Yare (Norwich).—The charming summer weather has not brought the sport which might have been expected. All along the river complaints reach me of the want of good catches; the only part that seems favoured has been the upper reaches, near Norwich, where some good bream have been caught. Several more clubs have held their matches, but ill luck has followed. I believe on the Bure they have been more favoured, but the class of fish of such a different order that those who go for a day's angling prefer the Yare, those who only want a few hours on the water affect the Bure, and the next day hold high jinks with their wives, &c. This month promises to be the best of the year, and there is still time for some good reports. The sun is overpowering, and bream should bite.—ROBERT MOLL.

East and West Cleddau (Pembrokeshire).—A good many trout and a few sewin have been taken during the past week, chiefly by worm fishing, the water being too discoloured for the fly. We shall probably have a fresh run of salmon up the East Cleddau, with the next flood or two, but it is getting late for any further runs of sewin.—H.

Lake Coron (Bodorgan, Anglesey).—Mr. Coles, Bodorgan Arms, bottom-fishing from two to seven one afternoon, had thirteen trout, weighing 8lb. The lake has overflowed its banks, and in fishing from the shore I took several trout during the week over 1lb. weight, the flies being Blue-bottle and Cinnamon. Last night (Wednesday) it became a dead calm, the Red Ant appeared on the water, and some fine fish were seen taking it. The weather is settled and the lake will be closed Oct. 1.—W. H.

Lake Vyrnwy (North Wales, via Oswestry).—A succession of gales and floods has been followed by bright sunshine and calm. However there has been a good show of fish on the weighing table nearly every day during the week. Mr. J. B. Davison's basket of nine, on Thursday last, brought the total, since opening (March 26), to over four thousand. In two short days, Messrs. Fletcher got twenty-five trout, 19¾lb.; Mr. Tindall, twenty-two, 13lb. 1oz.; and Captain Stevenson, eighteen, 11½lb. Yesterday, Dr. Kenrick-Jones and Dr. Roger Edwards, brought in a very pretty basket of eleven, weighing 8lb. 10oz., which were much admired. Heaviest fish, Mr. A. P. Fletcher, 1½lb. Best flies, Golden Dropper, Lee's Favourite; Small Alder.—Season closes on Tuesday next.—LONG DRIFT.

Teifi (Lampeter, Cardiganshire). — A number of splendid fresh-run salmon have been caught here during the past week, thanks to the close time for nets and the fine condition of the water. The following have been the takes up to time of writing: Mr. Harford, two, 9lb. and 16lb.; Mr. Evans and a brother angler, four, two over 7lb., and two over 16lb.; one, by a visitor, 19lb.; also a number of other good fish by our local fishermen, weights not given, but hear they ran from about 6lb. to 15lb. each. The trout season is nearly over and well that it is so, for they are now falling off in condition.—H.

Towy (Llandilo, Carmarthenshire).—Sport has been fairly good during the past week, for although the water has been rather thick, the main body of the flood water has passed away. The following have been the chief takes: Mr. Edwards, two sewin, 2lb. and 2½lb., and a basket of trout. On the same day the Misses Hughes, of Cibe, caught thirty trout between them; Mr. Lockyer, 10lb. of sewin; Mr. Lewis, a sewin of 2lb.; Mr. Edwards, a sewin, 2lb., and a trout, 1½lb.: Mr. Davies and Mr. Richards, each from 3lb. to 4½lb. of trout; Mr. David Edwards, two sewin, 1½lb. and 2½lb. Miss Croxen, our premier lady fly fisher, is over in Ireland, and we hear she caught during one day last week, twelve trout, over 1lb. in weight each. Poaching still goes on to a considerable extent in this neighbourhood, and quantities of trout are offered for sale, many of them bearing unmistakeable marks of the net, indeed, it is well known that the trammel net is much used at night, in addition to salmon spearing, &c., but the river watchers fail to convict, and so our river is being ruined for the want of more stringent measures.—H.

Usk (Abergavenny).—The river is now in first-rate condition. In the Association water, salmon as follows have been caught by Mr. William Davis, on the 3rd, four, weight of each 17lb., 13lb., 10lb. and 7lb., and two on the 9th, 14th, and 11lb. each. One on the 4th, by Mr. J. Clare, 10lb., and another the same date, by Mr. R. W. Bigg, weight, 10lb. On the 6th, the Rev. F. do vic Blamish, three, 17lb., 10lb. and 7lb. each. And Mr. H. Clare, one on the 9th, weight, 6½lb. Prospects for the next few days good. The sport above and below Abergavenny since my last report has been excellent as I predicted.—J. CLARE.

Scotch Reports.

Altnacealgach Hotel Waters (via Lairg, N.B.).—Last Thursday Loch Cama was fished by Mr. Lush and Dr. Houghton, London, who landed between them fourteen trout, aggregating 4lb., and by Mr. and the Misses Squarey, Birkenhead, who made a basket of one and a-half dozen trout, 6lb. in all. On Friday, Mr. Squarey and Mr. Lush, fishing together on Loch Urigill, made a basket of thirty-eight trout; and Dr. Houghton, with the Misses Squarey, on same loch, forty-eight trout, aggregating 10lb. The weather has been very severe, and the lochs have been too flooded for successful angling, but better sport is anticipated for this week. On Wednesday evening the weather had every appearance of a change for the better.—McB.

Border Esk.—The Esk is now falling rapidly and has been running clear for some days past. In the Langholm water, Mr. Thomas Hounam had nine sea trout, a dozen herling, and some yellow trout; the sea trout about 2½lb. each. Mr. Swan, Bolton, had four sea trout and some smaller fry, below Skipper's Bridge. Mr. Young, Lanark, two sea trout, in the same water. Mr. T. McLellan had five sea trout; Mr. William Urquhart had seven sea trout, in Souies Pot. Mr. William Anderson, several sea trout, of 2lb. each, also some herling and yellow trout; Mr. W. H. Dodds had a mixed basket; Mr. William Morrison had nine sea trout and some herling, between Glenfiria and the Wash; and another good basket at a second fishing. At the Wash and Todholes, Mr. James Telford had a fine basket of sea trout and herling, three of the trout averaging 3lb. each. Messrs John and M. Laidlaw had ten sea trout and five herling. In the Stennis water, Mr. J. Jardine had four dozen yellow trout; and Mr. Jackson three and a-half dozen. Messrs. Mackie, Eskdale Temperance Hotel, had four dozen yellow trout, in the Tarras. In the Canonbie water, Mr. D. Little, Byreburn had a salmon of 18lb.; Mr. James Park, March Bank, a basket of sea trout and herling, 16lb.; Mr. Duncan, Edinburgh, had five good salmon in the Willow and Cauldron pools, 17lb., 12lb., 12lb., 6lb., and 5lb.; Mr. Duncan has a capital gillie in the person of Rob Neilson. From the Byreburn water Mr. A. Jardine had three small fish; Mr. Shand, Cross Keys Hotel, had a 13lb. salmon from the Long Pool, and one of 10lb. from Red Lynn Pool; Mr. D. Edgar two fish 6lb. and 9lb; in the Longtown water Mr. Yates, Metal Bridge Hotel, had a nice salmon; Mr. Brooks, three sea trout and eight herling; Mr. Mason, Rockliffe, one salmon, 9lb.; Mr. H. Sawyer, one salmon, 12lb.; Mr. Joseph Bell, Longtown, had a long run with a salmon about 20lb., and had it nearly killed, but lost it in the gaffing. Mr. W. G. Stubbs had one grilse, and Colonel Whybergh, staying at Metal Bridge Hotel, had twenty-one herling and one salmon.—GILNOCKIE.

Carron (Easter Ross, Ardgay, N.B.).—Very little angling has been done since last reported. Fish, though numerous, are very "dour" in taking. Mr. Mervyn King, Clifton, Bristol, was out on the Balnagown Arms Hotel water on Friday, and grassed a salmon weighing 9lb.; Miss King, Clifton, Bristol, and Master Charles King, have been making good baskets of trout on the Kincardine mountain streams. On Wednesday the former landed twenty-six, and the latter nineteen trout. On Monday, this week, Mr. King fished the hotel water on the Carron, and caught three salmon, weighing 7lb., 9lb., and 11lb. respectively, and a sea trout of 1lb. The weather still continues cold, wet, and boisterous.—McB.

Dee (Aberdeenshire).—As anticipated, an early and most successful start has been made with the salmon autumn angling, which promises all that has been held out for it. As yet the flush of the migration have only been met with on the middle reaches, those got on the upper waters having been in the river for some time, but those of the latest run are models of beauty and colour, as well as quality for autumn fish. On the Cambus O'May water, Captain Montague had one of 9lb.; and Mr. F. Gaskell one of 8lb.; while several have been got on the Invercauld Birthall and Balmoral reaches. On the Aboyne section, Mr. Upcher landed one of 9lb. On the Kincardine O'Neil and lower sections splendid sport is being got. On the Kincardine Lodge section, Mr. Lamond landed one fine fish of 18lb.; Admiral Fane, one of 20lb. on the Upper Borrowstone; while Messrs. Hudson and Chalmers, London, had two of 10lb. and 6lb. On the Slwie water, Mr. James Harper landed two of 7lb. and 8lb.; and Mr. Chalmers one of 9lb. On the Woodend water, Mr. Farnell Watson had several last week, one a beauty of 39lb. on Saturday. This is the heaviest fish killed this autumn as yet. On the Blackhall Castle water, Mr. J. T. Hay landed several fish on Friday and Saturday, of which accounts are not yet to hand On the Drum water, Mr. Francis Irvine had four fish, scaling from 9lb. to 20½lb.; while several were also had on the lower sections of the water. Finnock fishing is doing well. The Aberdeen Harbour returns from the netting stations have broken all previous records for the last twenty years as to the money returns. The gross annual returns, as reported by Mr. Adam, manager to the Lord Provost of Aberdeen, for past season, is £8,934 12s. 1d., being £1,668 0s. 9d. above last year, and the highest receipts yet received. The taking lures have been small double fancies of Nos. 2 and 3 bend, dressed to patterns similar to and including Jock Scott, Silver Doctor, Blacklaws Druggist, while the Phantom has also been strongly in evidence, especially with the heavier fish. The prospects are of the brightest.—DEESIDER.

Deveron (Banffshire).—There was a great improvement in the weather during the past week as regards the fall of rain, which was exceptionally light as compared with previous weeks. Slight frosts were experienced in the beginning of the week, and no doubt they will have a detrimental effect on the fishing. The water in the river is now in capital order. There are a good number of fish on all the waters, but anglers complain that they are very difficult to hook. On the Netherdale section, Keith Martland, Esq., had a fine fish of 9lb., and Mr. John Fraser, the keeper, another of 7½lb. On the Meagyn water Mr. Sandison, had two, of 7lb. and 9lb. and on the free water of Huntley a few fell to the rod.—H. W.

Don and Ythan.—Since the removal of the nets and with the advantage of a timeous flood large numbers of salmon have been running, and on the Muggremoss, Grandholm, and at the Conives of Don good sport has been got considering the earliness of the season. Finnock and sea trout fishing on the tidal reaches of the Ythan is getting more and more brisk every day. The water has been of a dark and if anything too flooded a colour for the best of work; but a splendid autumn is now fairly well assured.—G. M.

Helmsdale (Helmsdale).—Last week I gave no report, for the simple reason that there was literally nothing to say. To make bricks without straw has always been considered a hard task, and I am sorry to say there is even now little or no improvement to report of angling on this river. Anglers have been out almost daily, but in almost every case without success. I have only heard of the capture of six fish in the whole fortnight past, and this is really unprecedented in the history of angling on this water. The other day, to test matters, I went up the river a distance of ten miles and had a try, but only to return disappointed like others. The Kildonan shooting party have been out angling often, but all complain of want of sport, while all the time plenty of fish are to be seen. The grouse shooting has, up to date, done much better than was expected, the Helmsdale shooting taken this year by Mr. Nutting, having for the last two weeks, even with very wet weather, yielded one hundred and twenty-eight brace. The other shootings have also done well. The river is still high and rain falling almost daily.—S. C.

Lairg (N.B.).—Very few anglers are staying at this centre now, the cold, wet unseasonable weather rendering angling almost impossible. On Monday Messrs. White and P. Woodgate, made a nice basket on Loch Shin; Mr. Neill has also had fair success.—J. Y.

Liddle.—Some fair takes are still being made in the Liddle. Mr. James Graham, Crookholm, had a salmon 14lb., and some sea trout and herling; Mr. Nap two salmon, 12lb. and 10lb.; Mr. J. B. Balfour, of Langholm, ten herling; Mr. Kellie, Eskdale Temperance Hotel, three herling and some yellow trout; and Mr. St. George Tucker had some good hauls in the lower water.—G.

Loch Cracail (Sutherland, N.B.).—This excellent loch has been yielding good baskets of late. On Wednesday last, Mr. J. Masson, Kirkliston; Mr. T. Moseman, London; and Mr. W. Scott Brock, Achinduich House, Invershin, made a basket of thirty-one trout, aggregating 15lb.—McB.

Loch Craggie (Lairg, N.B.).—The Achany Lodge party have made some fine baskets on this excellent trouting loch during the past week.—J. Y.

Loch Dhu and Loch Breae (Caithness).—The Lower Dunheath party fished these lochs on Monday of last week, and made excellent baskets of yellow trout. On Saturday Sir William and Lady Call, Balcraggie Lodge, on Loch Dhu, caught a number of large well-fed yellow trout. On Wednesday, on the Dunbeath water, three local anglers caught over sixty nice trout.—J. Y.

Naver (Strathnaver, Sutherland).—Rain has been falling almost continually for some time, and as a result the river has not been fishable. Angling has, in consequence, been almost at a complete standstill. In the course of the week, Major Burnett, Dalvina Lodge, caught a salmon, weighing 13lb., and a grilse of 5½lb.; Mr. Davis, Skilpick Lodge, grassed one, of 8½lb.; and one salmon was landed by Mr. Stubbard, Syre Lodge.—McB.

Ness (Inverness).—This water, during three days of the past week has been in high flood, and consequently the angling has not been so good. The following are the takes for tho week on the Dockfour water: General Godman landed eight grilse on the Ness Castle water; Mr. F. Walker landed sixteen grilse and four salmon, 29lb., 24½lb., 12lb., and 13lb. each; on the Holm water, Mr. Godman landed fifteen grilse; on the Lower water, General Grant killed seven grilse; Captain Cunliffe, four grilse. On the free day (the 4th), the water was so high that the locals had poor sport, only five grilse being killed.—D. WATSON.

North Uist.—The fishing got on the hotel waters has been very good of late. On Monday of last week, Mr. List got twenty fish, weighing 18lb.; the Rev. Messrs. Sharmer, Walley, and Diggaither, 11lb.; Mr. List, 5lb. On Wednesday, Colonel Freeman, and Rev. Mr. Biggwither, got 15lb.; Mr. Storey, and Mr. Farmer, 11lb. On Thursday, Mr. List, 5lb.; Judge Collier, 10lb.; while the others already mentioned had 11lb. Similar baskets are being made every favourable day.—W. S.

Overscaig Hotel Waters (via Lairg, N.B.).—The past week has been a very poor one, so far as sport with the rod is concerned. The weather has been so wet, cold, and stormy that suceessful angling was out of the question.—McB.

Rhiconich Hotel Waters (via Lairg, N.B.).—Salmon and sea trout are now in good taking, and excellent sport anticipated as the weather settles. On Wednesday, Mr. Milles, London, fished Loch Sandwood, and caught threo sea trout, averaging 3½lb. each (heaviest 5lb.), and a salmon weighing 9½lb. On Thursday, Mr. Dugdale, London, fished Loch Garbet Beg, and caught three sea trout, 3½lb. in all, and a salmon of 7½lb.; Dr. Saundby, Birmingham, and Mr. Clark, Bedford, fishing together on Loch Inchard, had 40lb. lythe; Mr. Stobart, Durham, on Loch Sgeir-a-Chath, nine sea trout, 7lb.; and Mr. Doubavend, London, on Loch Inchard, shot three wild ducks and landed 25lb. lythe. On Friday, Mr. Dugdale, London, had capital sport on river Laxford viz., five sea trout, weighing 5lb., and threo salmon, weighing 13½lb., 13lb., and 7lb.; Mr. Milles, on Loch Sandwood, caught three sea trout, which aggregated 9lb.; Mr. Doubavend, on Loch Sgeir-a-Chath, ten sea trout, 9lb.; and Mr. and Mrs. Stobart, Durham, on Loch Inchard, 60lb. lythe. On Saturday, Mr. Milles, on Loch Sgeir-a-Chath, two sea trout, 2lb.; Mr. Clark, Bedford, on Loch Garbet, three sea trout, 3½lb.; and Mr. Doubavend, on Loch Inchard, two lythe, 9lb., and three coal fish, weighing 10lb., 10½lb., and 13lb.—McB.

Shin.—The lower beats have been giving excellent sport in salmon and grilse angling. Mr. L. D. Hull and party, Sutherland Arms Hotel, Inveran, were out on Saturday, and landed a salmon weighing 31lb. On Monday, two grilse, weighing 6lb. and 4lb., and a salmon of 8lb. was landed.—McB.

South of Scotland.—We have fairly entered on the back-end salmon fishing in the South of Scotland rivers. Already good fly fishing has commenced. On the Annan, a few fine salmon have been killed since my last report. In the lower waters, Mr. Arthur Nicholson, had a nice fish the other day; Mr. Dirom, of Mount Annan, killed one, and his fisherman, Mr. Andrew Bell, landed one beautiful fish of 18lb., out of the Towerpool, above Brydekirk Bridge on Friday. In Hoddom Castle water, on Tuesday, Mr. A. Roddick, Dukes Mill, Hoddom, killed two salmon, one beautiful fish weighed 23lb., and another of 18lb. In Castlemilk water, belonging to Sir Robert Jardine, Bart, M.P., Mr. Wilson, the Cairn, had a fish of 7½lb., on Wednesday (yesterday); Mr. D. Tweedie, Ecclefechan, and Mr. J. Rae, Ecclefechan, both hooked big fish, and after having them on for some time lost them. In the Murraythwaite section, a Dumfries angler landed a nice little fish of 9lb., with small trout fly. In the Duke of Buccleugh's water, Mr. Thomas Jardine, Lockerbie, grassed a fine fish of 14lb. Mr. Jardine, jun., of Dryfeholm, fishing tho Jardine Hall water, on Saturday, landed a sea trout of nearly 2lb., and a few yellow trout; Mr. T. J. Bell, Lockerbie, had a heavy salmon in the middle waters; Mr. Varrie, a fine basket of yellow trout; Mr. Laidlaw, caught five sea trout; and the Rev. James Glendinning, four trout of nearly 2lb. each. In Milk water, trout fishing has been fairly good, Mr. Wm. McDougall, Edinburgh, secured two dozen yellow trout; Mr. Varrie, Lockerbie, four herling, and a few yellow trout; Mr. A. Wilson, four sea trout and six herling. In Dryfe water, Mr. John Little, two sea trout and several good yellow trout. In the higher reaches, Mr. George Thomson, landed fifty-one yellow trout and two herling; Mr. John Hardie, caught three sea trout, two herling, and a few yellows. Mr. William Johnston, succeeded in killing a sea trout of 3½lb. Near Millhouse Bridge, of Jardine Hall, Mr. Sharp caught a very fine yellow trout of 5½lb. A great many other catches have been made in different waters. The Nith is now in splendid ply, and a capital show of salmon have been noticed in the pools. Authentic reports have not come to hand to-day, but I hear of some good trout fishing in the higher reaches with fly. The Dee, Kirkcudbrightshire, gives promise of some capital salmon angling shortly, as the fish are reported to be pouring into the pools. All these catches in the different rivers have been had with fly. The Fleet and Urr are affording fairly good sport. Local anglers report hopefully of the season now that the waters are coming into good order.—HEATHERBELL.

Spey (Elgin).—The Spey is in good condition, and fairly good sport has been got. On Thursday last Mrs. Stewart-Menzies had two salmon on the Aikenway water, weighing 7lb. and 8lb. respectively. On the same day Mr. Stewart-Menzies, Culdarse, landed a fish of 13lb.; and Mr. Austin Mackenzie had one of 8lb. On Friday Mr. Stewart-Menzies had two salmon of 8lb. and 11lb.; and Mr. Austin Mackenzie had one of 12lb. On the Wester Elchies water on Thursday Sir A. L. Smith, had a fish of 9lb., and his son, Mr. Geoffrey Smith, had a grilse of 7½lb. On the Crayellachie water on Friday Mr. Jan Grant, of Ballindalloch, landed a fine salmon of 16lb.; and Mr. Pegg, from Glengrant, landed one of 8lb.; Major Grant, of Glengrant, had a splendid grilse on the first of last week, and on Saturday Mr. Pegg had a fish of 11lb. There is a good run of both salmon and grilse in the river at present, and good sport is expected. On the Aikenway water, on Tuesday, Mrs. Stewart-Menzies, of Culdares, had a splendid salmon of 16lb.; and Mr. John Shiach had two beauties of 17lb. and 18lb. respectively. On the Sourden stretch, on Tuesday, Colonel Edis had three salmon weighing 21lb., 18lb., and 9lb. respectively.—H. LOGIE.

Tay (Perth).—Splendid sport is being got at present. The river is in capital ply, and the upper and lower reaches are well stocked with fish. There are no signs of disease. On Wednesday last, Mr. Foster had three on the Stanley Water, 20lb., 17lb., and a grilse. On Almondmouth Water, on Friday, Dr. Wyman, London, had eight fish and a grilse, and on the Luncarty Water, Dr. Tyfe, London, had two fish, 18lb. and 14lb. On the Upper Redgorton Water, Mr. M'Lean had three, and thirteen fish and a grilse on the lower. On the Almondmouth Water, Captain Livingstone had eight, and on Stanley Water, Mr. C. Holland had seven. On the Meikleour Water, thirteen fish were got; on Taymount water, Sir R. D. Moncrieffe killed twelve. On the Delvine Lower water, Mr. Lucas killed a fish of 18lb.; Colonel Hornsby Drake, two, 17lb. and 15lb.; Mrr. Hornsby Drake, a grilse of 9lb. and a sea trout. On the Taymount water, Mr. Murray had excellent sport on Tuesday, killing ten fish and eight grilse to his own rod, while his guest, fishing the same water killed ten. On the Free Water, Mr. Mason had a grilse; Messrs. Ireland and Brady, one each; Captain Artrechan, one fish, 12lb.; Mr. Pierrie, a grilse. On Friday, Mr. Wardrope, Dundee, had four; Mr. Davison, one; Mr. Wotherspoon, one; Mr. Lowe, Liverpool, one. On Saturday, Mr. Wardrope had three; Mr. Scott, Dundee, one fish and a grilse. On Tuesday, Mr. Wardrope, two; Mr. McIntyre, one; Mr. McLagan, one; Mr. Cosgrove, one; Mr. McDougall, one; Major Dundas, three; Mr. Forbes, two; and Mr. Imrie, one.

EARN.—On tho Drummond Castle water, on Wednesday, Mr. G. J. Comrie had a fish of 15lb.; Mr. Curr, two 15lb. and 10lb.; Mr. McNee, one 6lb. On the Trinity Gask water, Mr. H. Kelsall had two, 14lb. and 12lb. On Friday, Mr. Bell had one Mr. Morrison, Edinburgh, one, and Mr. Cowan, one On Invermay water, Mr. McLaren killed two, 14lb. and 12lb. On the Dupplin water, Mr. Brydges Willyams had two. On the Drummond Castle water, ou Saturday, Mr. P. White killed five, ranging from 6lb. to 18lb.; Mr. Don, one. On Ochterlyre water, Mr. R. Murray killed two salmon, and the keeper ono of 12lb. On the Drummond Castle water, Mr. McLeod, two, 20½lb. and 8½lb. On the club water, Mr. Jack, one, 6½lb.; G. S. Comrie, one, 8lb.; Mr. McKie, one, 8lb. On the Dupplin lower water, Mr. W. Robertson killed two, 15lb. and 9lb.; and on the Dupplin castle water, Mr. Willyams killed six.

Thurso and Lochmore (Strathmore Lodge).—Windham Baring, a boy of ten and a-half years, is one of the best anglers of his age; his baskets of trout often beats older hands. He has had the courage to go for the salmon lately, and on Monday he landed a fine salmon of 15lb.; on Tuesday he landed one small salmon, another on Wednesday, and one on Thursday. All the other gentlemen are having good sport. No. 7 bait is tho most productive.—A. H.

Thurso (Brawl Castle).—The river is still keeping too high from the daily heavy rainfall, but the fish have been taking better within the last few days. On the 2nd. Mr. Cunningham got a nice fish on No. 6 beat, and one on No. 3 beat; on the 4th, Mr. Part had one salmon on No. 4 beat, 10lb., and on the lower section he had three of average weight; on the 5th Mr. Parry got two on No. 4 beat; and Mr. Part got seven on the lower section in a deluge of rain and the river rising rapidly in the afternoon. The river is now failing, and the prospects are good, as the river is full of salmon and grilse. It is proposed to get the river opened for salmon angling from 14th Sept. (which is the present close time) till 1st October, but no definite answer has yet been obtained.—A. H.

Tongue Hotel.—The following is angling record for the week: September 2, Colonel Tracey, on the Kyle, three sea trout, 3lb.; 3rd, Mr. Slibbard, on the Kyle, two sea trout, 2lb.; 4th, Colonel Tracey, on the Kyle, 5½lb. sea trout; Mr. Slibbard, on the Kyle, seven sea trout, 6½lb.; Mr. Sharp, on the Kyle, 7lb. sea trout.

Tweed.—The prospects of the salmon angler at the present time on this river are, certainly, very good. No cause for grumbling can be made by proprietors and lessee as to the want of floods for bringing up fish from the sea, as during the past month the rises in the river have been continuous, and some of them have occurred at every opportune moments—in many cases just when the nets wero off for the usual weekly close time, and thus fish had a great chance of getting up to all the angling waters on the river. If ever the Tweed and Teviot had a chance of being well stocked with salmon, and other kinds of fish, it has been during tho present season, and if the back end fishing season in the middle d strict does not turn out a successful one, the cause cannot be ascribed to any lack of water, or the scarcity of fish, as very large numbers have been in the bay at Berwick, and also in tho lower parts of the river, as is evidenced by the takes three weeks' ago, at the netting stations at the river mouth and elsewhere. One station, at one haul, had over one hundred fish, whilo many of tho stations had one hundred fish during a tide. Owing to the flooded state of the rivers last week, Waltonians could not get on till Friday, when a few fish were killed on some of the shallower casts, and the next day, a few moro fish were killed. Heavy rain in the higher districts during the latter day, again brought us a flood of 6ft., on the 6th inst., and angling was not practicable until Tuesday. To-day (Wednesday), the river is in excellent ply, and anglers are expectant of good takes. The following are the kills since last report: on the Makestoun water, leased by the Right Hon. D. H. Madden, M.P., Solicitor Genoral for Ireland, for the present month, that gentleman has had very good sport, On Friday, he killed four grilse, averaging about 6lb., while he had one salmon of 14lb. as well; on the succeeding day, he was successful in killing five salmon, 13lb., 13½lb., 14lb., 14lb. and 23½lb.; he had also one grilse of 7½lb. On the Hendersyde water, on Saturday, Mr. William Robson, of Oaklands, Kelso, had one very fine salmon of 16lb., with live lice on it, and he lost another good fish. On the "Wheel" cast on the Ednam House water, Mr. John Drummond, had a salmon of 12lb. ou Saturday. On the Rutherford and Boldside waters, and also on the Pavilion and Mertoun salmon casts fair sport has been got, a good few fish having been killed since the middle of last week, but particulars are not yet to hand. During the last week of August, Mr. James Vokins, on the Carham water, had one sea trout of 8lb., and 8lb. of yellow trout on the 27th; on the 28th. One sea trout of 18lb., and 12lb. of yellow trout; on the 29th, two grilse of 7lb. and 6½lb., and on the 31st, one salmon of 16lb. On both Tweed and Teviot trout anglers havo had good sport lately, but the trout are now getting out of condition.—MAXWHEEL.

Upper Shin.—The Lairg Lodge party (Lord Fitzharding's) killed two salmon, weighing 7lb. each on tho upper reaches on Monday. The Tressady Lodge party fished the higher waters on Tuesday and Friday and wero fairly successful.—J. Y.

Irish Reports.

Ballinderry (East Tyrone).—Trouting is slowly reviving. On Monday, Mr. Irwin, on the Coagh reaches, had four trout; Mr. B. Threw, six; and myself, seven. Following day I hooked but lost a 10lb. salmon, and all I had was four small trout. On tho Cadfred reaches a few light baskets have been had. On the preserved waters of Tullyleggan, (Mr. Kinley's), Desertcreight (Mr. Hassard's), Loughrey (Mr. Lennon's), and Killymoon (Mr. Mowbray's), very little has been done. There is a good rise of salmon below Coagh, but a good many have been poached. At the Barmouth, Mr. Maneely had seven pike, fourteen bream, and two dozen perch during the week.—J. A. B.

Lough Currane (Waterville, County Kerry).—Sport on the whole has been poor owing to adverse weather. Three salmon have been got. Mr. Greame had one, 8½lb.; Mr. Eades, one, 7lb.; and Mr. Batesman, one, 8½lb. The white trout fishing has been far below the average, five or six white trout being the best basket each day. Brown trout also have afforded but little sport. The gentlemen out for the week included, among others, the following: Mr. W. A. S. Riversdale, Rev. Mr. Fitch, Captain MacIntosh, Mr. J. A. Batesman and brother, Dr. Sharkey and friend, Mr. Sharkey, Mr. Merryweather, Mr. Eades, Miss Hartopp and Mrs. Hartopp, of Dalby Hall, Melton Mowbray, Mr. Butler, and Mr. Herbert. Since then other anglers have arrived, principally for sea angling.—THOS. J. DENNEHY.

Lough Neagh.—Mr. Donaghy, during the past week, rod fishing, had two dozen of lake trout, running from 1lb. to 3lb. each. Salmon netting is not so good and trout netting shows a falling-off. The latter fishing, at present, is the more remunerative, as the fishers get one shilling per pound for the trout and only sixpence per pound for the salmon. Eel fishing is prime, the takes on the night-lines being exceptionally heavy. Some of the fishers engaged can make from thirty to fifty shillings a night at this industry. Better sized pollen have been taken this past fortnight. Bream, pike and perch fishing is about the average. Some damage was caused to the fishing gear by the storm of the 31st ult. A slight frost this last few nights has put the lake trout from rising freely.

Moy and Lakes (Ballina).—Since last report this river has been in high flood and only cleared on the 9th inst., when there were only two rods out. Mr. John Grigby and Mr. Helley killed threo fish, 10½lb., 11½lb., 7½lb., and four sea trout, 5½lb. During the week trout fishers on the lough experienced rough and rainy weather, consequently on most days their baskets were not well filled. On tho 4th inst. Mr. W. Slater had one dozen trout, weighing 9lb. Same day Mr. F. Warren had four trout, weighing 6lb., besides a few smaller ones. All we want is fine weather to ensure grand sport.—FRANK HEARN.

Shannon and Lough Derg (Killaloe).—Scarcely any perceptible fall in the water, the wind has not abated one bit. It is as wild and wet to-day as it was a month ago; for which reason the river is swollen to a pitch which renders fishing almost impracticable, for the present at least. Quite a quantity of salmon and grilse have passed up to the Upper Shannon this week, but others aro taking their place every hour, so we may reasonably expect good sport by and bye. A few grilse have been taken this week, largest 9½lb. Sir Henry Meridyth, Bart., and his friend Mr. C. E. Levita have returned to London; and Mr. Sidney Mitchell and Mrs. Mitchell, and his friend, Mr. J. H. Gillott, Birmingham, who have taken Mr. Young's preserves for September, arrived here on Monday for the salmon and trout fishing. The first try Mr. Mitchell had was on Tuesday, when he killed two grilse, 7lb. and 4lb., on Major Traherne's side of the river. By the way, Major Traherne, Mrs. Traherne, and the Misses Hope-Johnstone (two) have returned to England, where the Major's hands will be kept as busy after the partridges and pheasants for the next couple of months, as they have been among the salmon, grilse and trout since March here at Killaloe.—S. J. HURLEY.

Strule and Mourne (Newtown Stewart, Co. Tyrone).—The above rivers has remained in a flood all the week, but some nice fish have been killed; Mr. Ramsbottom, from Liverpool, killed several, as also did Mr. Fletcher and Mr. McKinnell, who also hail from Liverpool. Mr. Johnstone, of Lord-street, Liverpool, killed five beauties one day last week, but was not successful since. Tho weather appears improving.—JOHN J. MOORE.

Suir and Tributaries (Clonmel).—The river is fining down to proper angling level, and a few more days of fine weather will make it fit for the rod on every stand. In some parts it has been successfully fished already, notably on a few of the Knocklofty reaches, at Roxborough, &c., where Hon. G. W. Hely-Hutchinson had some good sport, getting, on Friday, the 28th ult., a salmon of 6lb.; on Monday, 31st, another weighing 16¾lb.; and on Wednesday, 2nd inst., a beautiful fish of 18lb. In addition to these he killed five peal—viz., one of 6½lb. on Thursday; two, 5lb. and 4lb., on Friday; and two, 5lb. and 6lb., on Saturday. Several others were also successful during the week on the upper waters, but the river below Clonmel is too high yet for salmon, and anglers have to content themselves with trout, of which some good baskets were had on the Suir, and also on the Anner and other of its tributaries.

Westmeath Lakes (Mullingar).—Angling upon the Westmeath lakes and rivers, although it will not close until the first day of October, may be looked upon as practically over for the present season. The same wretched weather which ushered in last month still prevails, and it is very rare to find one day in seven suitable for fishing. Even then the trout won't take a fly, but simply rise to the surface lazily, turn under it in a tantalising sort of way, and go down again. The season closed in the Drogheda district on the 5th of August (curious arrangement), but no notice appears to be taken of the matter, as parties fish away or rather try to (as there are very few trout in the Boyne tributaries), just the same as if there were no close time.—T. J. W.

LOCH LEVEN, PAST AND PRESENT.

Now that the angling season on Loch Leven has been closed, anglers no doubt, may be interested if we here give a brief review of the sport obtained since this fine lake—which was reduced by drainage in the year 1830, from 4,312 acres to 3,543 acres—became generally recognised as an angling resort. In the period embraced between the years 1840 and 1855, there were only two or three boats on the loch and was visited annually by a number of tourists, and at very rare intervals by anglers who seldom made good baskets. During that period, the loch which belongs to Sir Graham Montgomery, Bart., was leased by Mr. Marshall, whose chief source of income was derived from the sale of trout captured with nets. The quantity of marketable trout taken averaged about 11,000lb. annually, and notwithstanding their acknowledged excellence, the want of a rapid conveyance for parcels of them, and a limited demand operated very prejudicially until 1845, when a regular market was found for them in London. In 1856, in consequence of the loch being brought within grasp of the railway system there was a greater demand for boats for rod fishing, and it is from that year that Loch Leven may be said to have attracted the notice of the angling world. It would appear, however, that trout netting and angling were carried on simultaneously from 1856 to 1862 inclusive, when it became apparent that too great a strain was being put upon its resources, and net fishing was consequently very much modified until in 1873 when the fishings which had been gradually improving showed a tendency to decline and netting was given up, and the loch afterwards leased in 1875 by the Loch Leven Angling Association (Limited), who are still the lessees, and who set it apart exclusively for rod fishing, Boats are also supplied to parties desirous of visiting the castle in which Mary Queen of Scots was imprisoned, and also the Island of St. Serf, on which are the ruins of an ancient priory, where Andrew, of Wynton, wrote his well-known "Cronykil." In the years 1872 and 1873, the first reliable statistics of the fishings seem to have been kept, which shows that during these two seasons 30,625 trout were captured with the rod, and forty-eight club competitions held, when the best prize basket contained thirty trout, 22lb. 13oz., and was got by Mr. R. Gow, of the Dundee club. The best result obtained by private anglers was that of Captain Bremner, Cupar, who captured fifty-eight trout, 39lb., and the heaviest trout scaled 7lb. 4oz. From 1875 to 1884 inclusive, 123,309 trout, weighing 110,533lb., were killed with the rod, or an average of 11,053lb. each year; while the best basket got during that time was that of Mr. Townsend, Glasgow, who had sixty trout, 52lb.; and the most successful competitor was Mr. Steel, of the Kinross Club, who had twenty-two trout, 21lb. 2oz. From 1885 to 1890 inclusive, 96,328 trout, weighing 86,303lb. were captured, or an average of 14,384lb. each year. During these six years, Mr. Law, Littleborough, headed the list of private anglers with a basket of fifty-nine trout, 53lb.; while Mr. P. D. Malloch, of the Perth Club, who is one of the most successful fishers who frequents the loch, stands unrivalled with a prize basket, secured in 1888, of sixty-two trout, 44lb. 3oz., heaviest trout, 4lb. 4oz.

Having given in a very succinct form a general idea of the fishings up to last season, we now come to the past season of 1891, which we will treat of more fully.

The season now closed has been a very bad one as regards weather, which proved bitterly cold and dry, up to the end of May, and very dry and bright from then to the close. Good sport however was obtained, and the total capture of the season excluding the Boatmen's Competition, on Wednesday last, was 15,816 trout, weighing 12,642lb. 8oz.; while last year only 10,933 trout, weighing 9,201lb. were killed. The heaviest basket was got by Messrs. J. and M. Ridley, Northumberland, in May, when they captured fifty-five trout, 40lb.; these gentlemen in ten days had 442 trout, 334lb. 4oz. Mr. Nisbet, London, out four days, had 156 trout, 121lb. 8oz. Few heavy trout were captured, the largest being only 2lb. 12½oz.

Ninety-nine club competitions took place, in which 1,322 competitors engaged and captured a combined total of 5,807 trout, 4,238lb. 4¾oz, or an average of 3lb. 3¼oz. per rod. Last year the average weight per rod obtained by clubs was 2lb. 6oz. The most successful competition was held by the Bridge of Allan Club, in August, when four competitors captured fifty-one trout, 40lb. 2½oz., being an average of 10lb. ½oz. per rod. Dr. Allum, of the Bridge of Allan Club, had the best prize basket of the season on 21st August, with twenty trout, 19lb., while the previous year the top basket contained twenty trout, 16lb. 7oz. The heaviest pike got with the rod weighed 14lb., while the heaviest landed with the net weighed upwards of 29lb.

Perch were more numerous than formerly, and some large captures were got with the rod.

LITTLE JOCK ELLIOT'S LETTER TO GILNOCKIE.

"My name is Little Jock Elliot. Wha daur meddle wi' me?"

DEAR GILNOCKIE,—A' kind o' sports, nae maitter o' what sort they be, frae cricket, which is yin o' the best, to cock feichtin', which is aiblins yin o' the worst in some folks's een; "but let that flea stick to the wa'." I say a' kind o' sports are bein' continually sat on an' run doon, an' that maistly, too, by the verra clotheids who ken the least aboot them. The mair a man kens, the less he says anent things he kens little or nocht aboot; that's a bit mixed, mebbe, but it's clear as daylicht to me. Plenty o' waisters, who nivver threw a leg owre a guid huntin' naig's back, an' durstna face a dyke or a five-barred yett, not if they were tied on wi' cairt-reapes, will threep doon ye're throot that fox huntin's nowther guid for man nor beast. Lots o' feckless folk, too—folk that nivver saw an otter atween the een, owther in the watter or oot on't—that knock-kneed section o' humanity, that nivver yet saw the sun rise oot ahint a hill, will tell you otter huntin's stark madness, an' as for fishin', ma conscience, fishin', to folk wha' can see nae guid in nocht ava, to that kind o' shuffle-breecked ones wha crawl oot o' bed at ten o'clock in the day and hobble aboot in slippers maist o' their time, fishins's, I say, to them nocht but a gran' plan for catchin' rheumatism an' influenza, an' a new way o' bringin' forret the *auld man* afore he's due—in fac' accordin' to cripples and wrecks o' a' kinds, fishin's the act o' a big idiot.

Maist men—and women, too, bless them—hev a kind o' hankerin' efter some sort o' recreation or other; but the clotheid wha nowther hunts, shoots, nor fishes, I canna staun him at nae price. I've yin poor wretched crater in my ee the noo wha hasna the ghost o' ony kind o' hobby that he can enjoy, not on the face of God's fair earth.

"Look here," says I to him, yin day, "did ye ivver, ma canny mon, spend a week or aiblins a day by the river side, surrounded by the finest o' mountain scenery? Did ye ivver, ma guid freen, listen to the bubblin' brook on a fine summer's mornin'? Did ye ivver look upon the fragrant flower, the feathery fens, the gracefu' wully-wans, the glidin' mummerin' an' whiles roarin' rivers, sparklin' in the mornin' sun? Did ye ivver cross the green fields, the purple hills, and enjoy a thochtfu' pipe on the mossy carpet o' the hillside, inhalin' the fresh balmy air, studyin' the endless beauty o' nature, or sit on a muckle crag by the water-side while gettin' ye're tackle ready for a guid day's fishin'? Did ye ivver huik a twenty-punner, a new run yin, wi' plenty o' life in him, and yirds o' line runnin' through the pirn? Did ye ivver skip doon the san'-bed, or clammer owre big rocks, wade owre the tops o' ye're fishin buits, then haul ye're fish high and dry on the bank? Or did ye ivver hev a big ficht wi' a three-pun' troot for three mortal hours, an' creel him at last? There's a triumph! Foolish is't? Not half sae foolish as to sit nicht efter nicht, in a stuffy room half fu' o' 'bacca reek, talkin' endless nonsense. An' then look how the exercise tightens up the sinews, just as a fiddler screws up the strings o' his violin. I admit that anglin', like a' human pleasures, has a wheen drawbacks. For instance, ye may fish a' day and catch nocht but the influenza, mebbe, or ye may get drookit as a craw, or ye may break ye're lines an' lose a' ye're huiks, or by accident ye may be guilty o' trespassin', an' hev to appear afore the Sherra. Ye've a' these to contend wi' at times. Now, when I was a lad, I was yince fishin' in the Eden, up Armathwater way: I was getting a trout about ivery five minutes, an' the creel was nigh fu', when I noticed a farmer-lookin' body watchin' ma success. Seein' the man starin' verra hard, says I, 'Fine day, Mr. Turmets.' 'Aye, an' thou's gitten' some fine fish oot o' ma watter; just thee drop them into this tatie-bag ah hev in ma haun.' O' course I hesitated. 'Drop them in, thou young lurcher, or aw'll ring thy wunle-strae of a neck an' thraw thee owre t' craigs into t' water.' Weel, I was sae awfu' flait, as I was nobbet a bit callant, I just did as he telt me, an' clam owre the yelt an' gat ov the safe side o' the dyke, then I let him hev it: 'Weel,' says I, 'I've met mean men in ma time, but for a grabbin', cleek-em-in, double-jointed, squintin', grinnin', gruesome auld skinflint, thou licks the hale caboosh.' That's yin kin' o' the drawbacks," says I to the feckless, sackless crater, him wi' nowther a hobby nor a pleasure to bliss himsel' wi'.

Weel, Mr. Gilnockie, he listened to a' just as if he enjoyed my lecture, but when I hed finished what d'ye think the puir hauflin said? Says he, "Little Jock Elliot, ye're a bigger fuil than I tuik ye for," and scuttled away into the house.

But, Mr. G., whenever are ye comin'. Baith Esk and Liddle are swarmin' wi' fish, frae baggies and burn troot to salmon. Never sae mony whiten' afore, an' last week we gat shoals o' them. The watters laigh a bit the noo, but there's plenty o' rain comin' owre the Solway Flow; an, the otter huntin', aye, best season ivver I recollect.'

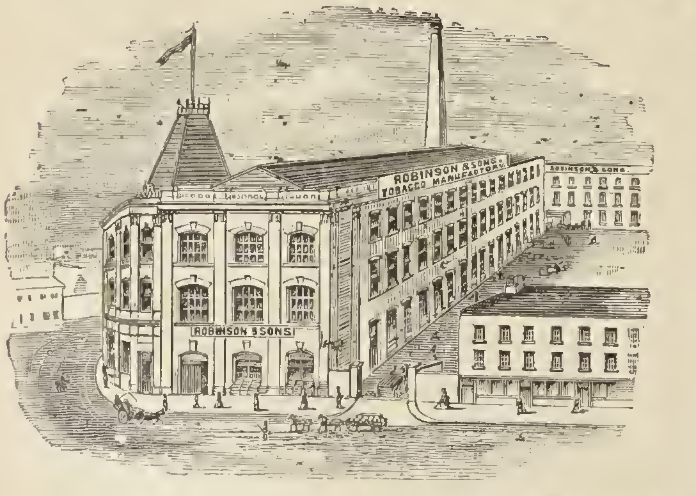
THE NEGRO AND THE PILLS.—A BIG DOSE.—At the Liverpool Police Court, the other day, before Mr. Kinghorn, deputy stipendiary magistrate, it came out in the course of cross-examination of a witness in a trivial case of theft, that one of them, a young negro, had been some time ago charged with stealing a lady's satchel, in which was a box of Beecham's Pills. On looking at the box, and seeing on it that they were "worth a guinea a box," he proceeded to take them, and notwithstanding that several of his friends implored him to let them have one or two, he swallowed the contents of the box. The fine healthy appearance of the witness showed that the pills most certainly must have agreed with him.

PROVINCIAL ANGLERS.—Mr. C. E. Fosbrooke, a member of the Gresham Angling Society, having recently made a statement in that society as to the number of anglers taking part in some of the Sheffield and Lincolnshire competitions, which was questioned, has taken the trouble to obtain, from authentic sources, a return of the numbers competing and the value of the prizes taken. The first return is for 1857, when two hundred competed for a silver cup, of the value of £8 8s., and the number and value went on increasing till 1864, when the former was 531; prizes £100. Under the management of the Sheffield Anglers' Association, the numbers still increased until 1889, when there were sweepstakes for £50, for which 1,295 competed. The association in 1880 consisted of 8,000 members belonging to twenty-eight clubs, and in 1890 the sum of £3,222 19s. 6d. was received by it, and £3,052 6s. 7d. disbursed. No wonder fresh water fish are scarce.—J. T.

SMOKE "ORIEL" NAVY CUT.

THE HIGH CLASS TOBACCO,

MADE FROM PICKED LEAVES OF THE FINEST QUALITY.



Extract from the "FISHING GAZETTE" of February 21st, 1891:—

A GOOD SMOKE.

DEAR SIR,—Knowing how much you enjoy your pipe when out a-fishing, may I ask if you, or any of your friends, have ever tried "The Oriel" navy cut, manufactured by Robinson's, of Stockport? If you have not, do so at once, and I venture to say that you will be well pleased with it, being very cool and lasting, with an exquisite flavour. I have no interest in the matter whatever, but simply recommend it as my *beau ideal* of what a fisherman's tobacco should be.—Yours truly, SMOKER.

Sold at 5d. per ounce, in 1 and 2 oz. Packets, and 4oz. Tins. Any Smoker having difficulty in obtaining it from his usual Tobacconist can obtain it direct from the Manufactory POST FREE. 2oz., 10d.; ¼lb., 1s. 8d.; ½lb., 3s. 4d.; 1lb., 6s. 8d. POST FREE.

Sole MANUFACTURERS: ROBINSON & SONS, TOBACCO & SNUFF MILLS, STOCKPORT

MAZAWATTEE TEA

— NOTICE. —

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to R. B. MARSTON, the Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter Lane, London, E.C.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston, and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free, to any part of Great Britain and Ireland			10s. 6d.

AUTUMN RESORTS FOR TOURING ANGLERS.—II.

By MAC.

To the more inland of the waters with which I am dealing, the later over that the angler can leave his visit the more likely is his chance of obtaining the best sport. This remark is meant to have special reference to salmon angling. Beats or fishings near the sea fish on tho whole best at all times of the back-end when the water is below fair angling volume, for the reason that a smallish water remaining steady does not unsettle the fish and keep them on the run—moving forward to the places in which eventually they finally settle down until the time arrives when they go on to the "redds" in the vicinity. But of course, as will be well understood, they are not all of "one mind," and so it is that we find they do not all push equally fast and far up. In the longer-run rivers there is dispersion over a vast length of water. The stronger swimming or less gravid fish—mostly those that come in from tho sea earliest—are those we havo roasou to boliovo that in greatest numbers longest continue their journeying and reach the highest up waters to which back-end fish in good numbers ascend. In their progress they rest more or less and afford the anglers on the middle and fairly upper sections a chance of sport; and it is of such fish that some captures have already boon made by rods on the Panmure Arms wator of the North Esk at Edzell; the Burgh water of the Don, at Kintoro; Lord Aberdeen's Ythan Fishery; and tho long stretch of the Deveron at Huntly, thrown open to fair fishers—(would that they were all fair!)—by his Grace the Duke of Richmond and Gordon.

In sport having been got on the waters alluded to there is proof that the late season's run has commenced, and at any rate, some of the fish have ascended a good bit, but that the weather will for any length of time prove favourable to its continuance there is no saying. Naturally this run is not of short duration—since the whole of September and October is the time for it—but its steadiness or variableness all depends upon the state of the water. With the volume ample, fish the whole season throughout enter from the sea and push forward to the angling reaches, and having once got past barriers (where such exist) and a fair distance inland, it is their inclination when resting somewhere or other to come at fly, worm, or spinning bait, probably once at least in every twenty-four hours.

One thing I remark, and then I shall come to deal directly with the several fishings which as yet I have said but little about. Provided there is nothing to prevent free ascent to them, those sectious of the larger rivers, from ten to twenty-five or thirty miles inland have the longest season of good angling in respect of their individual merit. Unlike quite near-the-sea reaches, they are at "resting" distance inland, and so all the fish that have got the distance rest in them for a longer or shorter period. Practically, passing through or coming to remain in them, they have a visit from the whole of the season's fish except a few—and that few those very brood and late in ascending fish that stay in the lower waters, where, after a while, they take to the redds. Reaches still highor up give their very best fishing towards the close of the season—say from October 10 to 12 onward—and the anglers' chances ought to be enhanced should spates to draw and keep the fish moving up be frequent beforehand. The inclination of a great many fish is to nowhere finally settle down till they have got from forty to fifty miles inland. They take a weok, a fortnight, or perhaps even longer, to run up in September, when usually the waters are but small in volume; but in October, with a good volume and a head-wind—especially about the middle of the month—many perform the long journey in a couple or three days, as is proved beyond a doubt by the unimpaired silvery sheen of those frequently caught at that time. This, then, gives the explanation to what I stated at the outset, that the angler would do well to defer his visit to the more inland or upper waters till pretty near to the close of the season (Oct. 31), when, in the event of conditions being propitious, the best of the late-season sport which these waters admit of is certain to be had.

The lowermost reaches of the Dee cannot be called salmon angling water of any account, although on some of them a few salmon are every year captured in autumn. From the lower end, about half-way up the tideway, they extend to the top of the Heathcot Hydro' Fishery, a distance of nearly five miles. Up to within a year or two of its being acquired by Dr. Stewart, for the purpose of affording his guests fishing, this latter fishery used almost every year to give good sport with salmon during most of the back-end, but it is now four or five years since any very encouraging salmon angling has boen obtained on it. Certainly, at any rate, the best pool of all has not fished nearly so well as it used to do. On the other hand, the streams above have, if anything, improved. A rather low water from the middle of September till a week or ten days into October is specially in favour of the angler in search of salmon and grilse on this fishery at the best time. There are several capital streams and shallows for finnock. When these fish refuse worm, fly, and "dandy" all day long, a basket of them may be made in tho shallows aftor daylight has gone by using nice lively red-worms. But the water must be quite cloar and the night not too oold, and tho angler should fish not very far out in water running over a pebbly or shingly bed (be the current not too swift). This sort of water the fish affect in great numbers, and at night they come quite close in to the side to "grub." A perfect length of a fishing run for them—and where they are always abundant—is tho north side of the Ardoo Pool (Hydro' fishery). When a fair size of water having little of the peat stain in it is running, daytime fishing is got in most perfection by using fly, the sizes of which run about the same as the two or three sizes most generally used for Scotoh loch trout fishing. Often, and under various conditions, dandies of different colours and sizes prove nailers. Between the Heathcot Fishery, and the sea are the following sections: Cults Water (which contains the famous salmon pool referred to last week), Inchgarth Water, Waterside, Garthdee, Poll-down, Baker Incorporation, and Pot and Fords. Where not free, the fishing, with a right to fish for all sorts of fish that came to the hook, can be had for a trifle in the case of any of the seven fisheries mentioned. On the Heathcot Hydro' Fishery—whereon *bona fide* visitors at the Hydro' have permission to fish free of charge—outsiders have no right to fish save by special arrangement with Dr. Stewart, the superintendent. The usually best time for these lower Dee fishings having been stated previously, I need say no more about them. Anglers from a distance can visit them if they care, and be the fishing conditions good or bad they have to take their chance of them.

At Ballater, well up Deesido, there is one of those "more inland" fisheries, whioh, as I havo indicated, can be depended on as a rule to give its best fishing towards the close of the season. It is the Invercauld Arms Hotel Fishery whereon of recent years very fine late back-end salmon angling has been had. What the charge is for a rod, or whether any for the present autumn still remain unlet, I am not certain; but such is the quality of the fishing of which I am personally aware that I think I can make no mistake in bringing it under the notice of anglers. The whole extent of water is little under seven miles, and carrying three rods, it is divided into three beats, each of which is fished by a fresh rod daily. Generally the lower beat is much the best one in the back-end. In spring, only fly-fishing is allowed; but in autumn there is no stop to the using of any lawful lure. The autumn salmon—of whioh I have seen five killed in one day on the lower beat alone—average from 16lb. to 17lb.; and after the middle of October, when, with good round waters, they travel fast, resting but seldom on the way, many of them arrive quite bright coloured. Not for four seasons in succession prior to the present one has the last fortnight of the fishing been poor. Fly works, and worm, when conditions suit, sometimes does moderately well; but spinning is without doubt the deadly method of effecting captures. A good spinner never fails, and with an unloaded brown Phantom of the right size (which varies with the state of the water) his chances are best of all. Fly, as I have said, works, but for one fish got with it four are got with Phantom. Those who are adepts at slow spinning might look after this fishery; and if they fail at first, they will soon see how the fish can be caught by the method recommended, if the gentleman who has had grand success during the past four seasons is again on the water, this coming late back-end time. His constant remark to me a year or two past (when to my rod, with fly, only one fish fell to four to his with Phantom) was: "Show me a fish that makes what you think a taking rise, and I'll take him out." And sure enough in three out of four cases he did it. If the fishing can be got, competent fishermon, who know all about the water, can easily be secured to act as gillies.

Having, as I judgo, referred at sufficient length to the Dee, I now come to speak of the ticket and free fishings of the sister river the Don. Nether Don, quite handily fished from Aberdeen, is undoubtedly the best sea trout and finnock water in the district. In the upper or non-tidal portion of it salmon lie and take well, and the best time to fish for them is from the present date to the end of the season. With the spinning of Phantom, Devon, or natural bait many heavy fish are got. The finnock and sea trout affect, and when good fishing conditions exist tako readily in the tidal or lower length all through tho season till within ten days or so of the end. For their capturo this, that, or the other thing—Devon, fly, worm, creeper, dandy, tube—is the best according to circumstances. The Nether Don fishing is let by ticket.

The Kintore Burgh water—a fine "holding" section, in which fish lie all the back-end through—ought this autumn to fish very much better than it has done for a long time. In the main it is a style of water decidedly better for spinning and worm than fly-fishing; and now it is effectually protected by stakes and anchors against the depredations of the net poacher. Besides, the fish in most states of the water can get forward to it, whereas till late last autumn this was well-nigh impossible. The hotels' sections higher up the river at Alford, like the Dee fishery at Ballater, are best late in the season, as till *then* it is quite rare for a very great stock of fish to get so far inland. With water all right tolerably encouraging sport may be expected during the last fortnight.

Personally, I am averse to, and have not for long been guilty of, asking permits, preferring to have my fishing by paying for it, or on invitation; but as I am aware that Lord Aberdeen, for sections of his extensive Ythan fishery, and Sir Arthur Grant, of Monymusk, for his splendid water of the Don, have been very liberal in granting permission for short periods, I mention the circumstance.

CARP AND TENCH: AND ANGLING FOR THEM.

BY ALFRED JARDINE.

(*Continued from page 168*)

FARTHER on, down-stream, about half-a-mile beyond the eel-bucks, on the left or tow-path side of the river, is a plank bridge, crossing a wide ditch, close by a chalk-pit, the pathway leading up through the wood to Shiplake Church. Here the Thames widens and is called Shiplake pool or deeps. Opposite this plank bridge the water gradually deepens from eight to twelve or fourteen feet, as the next island known as "Phillimore's" is approached. The pool can be fished from either the tow-path or the meadow on other side the river (*i.e.*, Burrough Marsh); though it is much more convenient to do so from a punt, especially, if legering between the weeds, for in these kind of places, on a muddy bottom, carp and tench are likely to be found. In October, 1874, a tench of 5lb., was caught in the Sonning waters. As the stream flows very gently through Shiplake deeps, a light leger can be used, a flattened bullet of half-an-ounce weight, or even less, will do. A trace of selected gut, *round* and perfect, but not too fine, stained a dull green or olive, with a swan-shot pinched on the trace two feet above the hook, to keep the perforated bullet that distance from the bait. A ten-foot rod is long enough if in a punt, but twelve, when legering from the bank; the reel and waterproofed line, the same as for float-fishing, will do excellently well.

The leger, baited with either of those baits already mentioned, should be cast quietly, with little or no splash, into that part of the water desirable to be fished, the rod held parallel to the surface at an angle to the line, and a few inches drawn off the winch, held between thumb and fingers of left hand—thus, a tight line being kept, the gentlest bite or suck will be instantly felt; then give a few inches of line, or move the rod-top towards the leger, and on the next bite or the fish moving off with the bait, a turn of the wrist is sufficient to drive in the hook; much, however, must be left to the discretion of the angler, and the manner in which fish are feeding.

In both channels round Phillimore's Island is excellent perch fishing. That on the left, or north side, can be easily legered from the tow-path. On the opposite side, at the end of this island, the water is deep, and close by is Borough ditch. In the winter months this part, and indeed the whole of Shiplake Pool, affords some of the best pike fishing to be met with between Wallingford and Henley.

The water under Quarry Woods, near Great Marlow, is not often tried for carp and tench, yet I believe it holds plenty; but the necessary preparation of ground-baitings deter many from angling for them. Anglers do not make up their minds to fish deliberately for carp and tench. Twelve or fourteen years ago I assisted in turning into the Thames, sixty or sixty-five (I forget exactly which quantity at this lapse of time) of the finest sample of tench I ever saw or heard of; they were netted from Colonel Fane's water in the Hampshire Avon, and presented by him to the Thames Angling Preservation Society, their excellent and indefatigable president at that time, being Mr. Thomas Spreckley, who, at considerable personal outlay and expenditure of his valuable time, did so much to increase the stock of fish in the Thames. Mr. Spreckley went to Ringwood, where he saw the tench caught; then he forwarded them, in three large tanks filled with water, to me, at Woking, where they arrived alive and in splendid condition. I conveyed them thence to Weybridge, where a steam launch and barge, lent by the Thames Conservancy, was ready, waiting to carry the tanks and fish up the river.

Next morning, steaming slowly up-stream, with Mr. Brougham, the secretary of the T.A.P.S., and one or two "river-keepers," we placed in the river at all suitable lay-byes and back-waters, a few brace of these splendid tench, where they were likely to make permanent homes. The highest part of the Thames reached was Staines, where in the deep water just below the City-stone, I released eight of the finest fish—the smallest of Colonel Fane's tench, weighed over 4lb., the bulk of them were five pounders, and several exceeded 6lb. each. No doubt since then these fish have bred and increased largely in quantity; occasionally some are caught by barbel and bream anglers. That they are now plentiful in this section of the river, I am certain of; also that they would well repay persistent fishing for.

Although tench do not reach the size of carp, their extreme weight seldom exceeding 7lb., yet one of 11¼lb. is recorded, and a fine illustration given of it, in Daniel's "Rural Sports." This large fish was captured in a pond, made many years previously by digging clay for bricks.

The water was full of weeds and rubbish, and the men employed to clear it expected little else than a few eels, yet nearly two hundred brace of tench of all sizes, and as many perch were found.

After the pond was thought to be cleansed, this large tench was discovered in a cavity under some submerged roots. Its length, from eye to tail, was 23in.; circumference, 27in.; and weight—11lb. 9½oz. The belly was coloured like a char's—*i.e.*, vermillion.

There are two kinds of tench—*Tinca vulgaris*, the common variety, and the Golden, which was, I believe, introduced and acclimatised to this country at Aldermaston Park, the seat of Higford Burr, Esq., in 1863, by the late Frank Buckland. Some fine specimens of golden tench, 5lb. or 6lb. in weight, were on exhibition at the South Kensington Aquarium in 1884. Tench are very tenacious of life. Their gills are so wonderfully constructed, that they can exist "when the oxygen is reduced to the five-thousandth part of the bulk of water," and, packed in wet grass or sedges, they have been conveyed long distances, occupying several hours in transit, without loss of life or injury. Among other qualifications, tench are—or, rather, were—said to possess medicinal properties ("The tench, physician of the brook,"*) and that their thick slime was a natural balsam for the cure of themselves and other fish, especially the pike; for

> "Howsoe'er, by raging famine pined,
> The tench he spares—a medicinal kind;
> For when by wounds distrest, or sore desease,
> He courts this salutory fish for ease;
> Close to his scales the kind physician glides,
> And sweats a healing balsam from his sides."

Dr. Badham—author (I believe) of "The Haven of Health"—says: "The tench is as medicinable to fishes as he is wholesome to man's body;" and "that a tench applied alive to the temples would cure nervous headache; and laid over the liver in jaundice, would draw all the saffron hue out of the patient, and expire of jaundice itself. Cut in pieces, and placed to the soles of the feet, it would overcome fevers, also the dreaded plague."

The English historian and antiquary, William Camden, who was born in London, May 2, 1551, in his celebrated work, "Britannia" (written in Latin),† relates how, at the "stew-ponds" of Southwark, which existed in his days, he had seen "pike's paunches opened with a knife to show their fatness; and presently the wide gashes and wounds came together again, *by touch of tenches*, and with their glutinous slime perfectly healed up."

Pike are said by Izaak Walton, and other anglers, never to feed on or molest tench; but I examined the pouches of three 20lb. pike—caught at Kings Fleet, Suffolk, and the autopsy revealed partly-digested tench, some of which, to judge from their vertebræ and tails, must have been 3lb. fish when alive.

My own opinion is, that when pressed with hunger, pike will capture tench, or in fact anything else, almost. I have found half-grown ducks, moorhens, dabchicks, water-rats, and frogs, inside them. Toads they won't have anything to do with. I know an instance of six greyhounds being swallowed by a big pike, but they were puppies, a few hours old, cast in the river to drown. From a gastronomic point of view, carp and tench are *fair* eating, with certain rich adjuncts, made from beef-gravy and port wine. An old countryman once told me, "that a hare and elevenpenn'orth of sauce was worth a shilling," and this may also be said of *C. carpio* and *C. tinca.* The flesh of tench "is rich and delicate," says a modern writer, but with this saving clause, "although somewhat muddy in flavour." To get rid of this flavour, place them for some days in the well of a punt, moored athwart a sharp stream; or in large wicker hampers, sunk in a river. In either case give them plenty of coarse gravel on which to scour themselves.

(*To be continued.*)

FANCY TROUT FLIES.

BY IBIS TAG.

THEIR name is legion, yet each and everyone has at some time gladdened the heart of an angler as the whir-r-r of the winch and the steady strain upon rod and line has unmistakably made known the fact that a lusty trout has succumbed to the wiles of a new and hitherto untried "dressing." With what reluctance do we discard for a short time our favourite dun, grouse hackle, or partridge hackle, and mount the fly that has been handed to us by a friend, with the assurance, "It's a sure killer; I had so many brace with it on such a date, and the fish would not look at any other fly." We say the fly is reluctantly mounted, and so it is nine times out of ten, and yet our experience has taught us that any out-of-the-way pattern is worth trying *under certain circumstances*.

No angler would dream of using any other fly than an exact imitation of the *ephemera* on the water when the fish are feeding during a grand rise of the Yellow, Blue, or Olive Dun, Quill Gnat, &c. But how often does it happen that we fish a whole day and not a single "rise" of fly occurs? Then, when each fish has to be picked out and fished for with the patience and perseverance that only good anglers possess, then is the usefulness of fancy flies clearly demonstrated.

The man who attempts to classify or enumerate the different patterns of fancy trout flies will—we unhesitatingly assert—end his days in a lunatic asylum; and as we have no wish to rush to such a fate, we will satisfy ourselves with a few remarks upon those we have used and killed fish with, and at the same time endeavour to show why we have accepted the systematic use of fancy flies as an important branch of our education in the art of catching trout with the artificial fly.

It is a day when there is no "rise" on, only a few duns hatching out here and there, and even those few are ignored by the trout unless one happens to float immediately over the nose of a fish, when he lazily moves towards it and sucks it down in a "don't-care-whether-I-have-it-or-not" manner. Still it is a rise, and we carefully place an exact imitation of the fly he has taken a yard in front of him. It floats down as it should do, but the trout merely looks at it out of the corner of his eye, as much as to say, "I've seen some of your sort before!" and it passes him untouched. A rest, and he is tried again with the same result. Yet another unsuccessful trial, and then we determine to put a different fly over him, for undoubtedly he will succumb to a tit-bit if we can only please his palate. The fly we have been trying is very light in hue, so we mount one dressed with same wings, hackle, and tail, but *with silver tinsel body* (had the first fly been darker we should have chosen one with a *gold* tinsel body), and this we carefully place in front of the fish. As it reaches him he shifts uneasily; it passes him and we are just about to pick it from the water, when he turns round—there is a rush, the line tightens, and we realise that the fancy fly has done what the exact imitation of the natural fly could not do—it has lured that trout to his death. We care not to inquire *why* he has taken it, we are satisfied with the fact that he has, and the plunge of the fish as we carefully but determinedly lead him towards the net, and the sight of his handsomely-spotted side, as we gently place him in our creel, makes us forget that we doubted if we were doing right when we attached that silver-bodied lure to our cast in place of the artistically-dressed imitation of the fly that same trout had sucked in only such a short time since. It is wonderful what a bit of silver—tinsel, will do towards filling a creel at times.

---

* Ode to Walton.

† Camden's "Britannia," published 1586.

But it may happen very frequently that the trout will utterly ignore the bit of silver or gold, and then a small red tag should be attached to the exact imitation of the natural fly, and presented to the fish, and that will probably have the desired effect. It is truly marvellous the attraction a bit of red has for a trout *sometimes*—they "go" for it like a bull at a red cloth. So firmly convinced are we of the value of a bit of red attached to *any* fly that we have adopted the practice of carrying very small pieces of kid, dyed a vermillion colour, and when a fish repeatedly refuses the dun, gnat, spinner, or other fly we may be using, we simply stick one of the small pieces of kid on the hook, and have frequently killed fish that we are convinced we should otherwise have been compelled to leave in their native element.

Should the fish refuse both the silver or gold and the red tag, try them combined, and if that is ineffectual, mount a large sedge or Palmer, and fairly "smack" it at the fish, same as you would at a chub. This may seem absurd advice to give to an angler who has just been using the finest gut, smallest flies, and greatest amount of skill and patience over a lazy fish, but it is given in all seriousness, and we emphatically say, "Try it." We would also repeat here that any pattern fly is worth a trial under such circumstances, merely adding that the above *should* prove effectual.

It will probably be noticed that we particularly emphasise the fact that in all cases the exact imitation of the fly on the water should first be tried, and tried thoroughly, before the fancy fly is used. We go farther than that, and confidently advise our readers, after they have taken or tried to take a fish with a fancy fly, to resume the use of the exact imitation over the next, as we consider it nearly always has the best chance; and we say this with a perfect knowledge that our friend who advised us to use a new pattern because "It's a sure killer; I had so many brace with it on such a date, and the fish would not look at any other fly," is not necessarily drawing upon his imagination. We have upon more than one occasion succeeded in taking several fish with the same fancy fly, and under such circumstances we have decided to continue using it, and have filled our creel with good fish; but these cases are few and far between, and we have noticed that we have never done much afterwards with that same fancy fly upon the same stream. We may have killed a fish or two with it, but we should have gone home with a poor catch had we used it and it only throughout another day. Our experience may be exceptional—we fancy not—but such as it is we give it. In this connection we would remark that we do not refer to such fancy flies as the Wickham, Coachman, Greenwell's Glory, &c. Yet another suggestion: when we have first tried the exact imitation, and then the silver, red tag, &c., and *not* tried the large sedge or Palmer "smacked" at the fish (which, of course, if it does not capture, invariably scares), we have frequently once more mounted the exact imitation, and with it been successful.

The popularity of the Coachman as an evening fly is beyond doubt; but those of our readers who have not tried it with the addition of a red tag should do so; its killing powers are doubled when the little bit of red is attached.

The Wickham is a grand fancy fly, especially upon a wet, blustering day, and with a red tag attached is at times irresistible. We well remember fishing a private lake in the South of England, well stocked with bonnie trout, upon a day when it was with great difficulty a line could be kept on the water at all. We had previously found that a Dark Professor, Pink Wickham, or large Golden Sedge were the successful flies on this water during the day, and we generally finished up in the evening with a few casts with the Coachman as our lure. The genial proprietor of the water had asserted that we had little chance of filling our creel upon this particular day, and really we were of much the same opinion. However, the Professor, Sedge, and Wickham were each in their turn presented to the fish—all to no purpose; and then we thought of the magic bit of red. It was immediately attached to a Wickham, and with it we killed a very decent basket of fish, much to the surprise of the proprietor, and greatly to our own satisfaction.

We may be accused of too highly praising the use of a red tag, but we speak from experience. We have tried yellow, white, and green in addition, but have invariably found the red the most successful. When in the early part of the season the trout are feeding upon the March Brown, just try the addition of the bit of red, and see if the result does not bear out our statement.

Another grand fancy fly is Greenwell's Glory. When the trout have been madly rising at the Iron Blue or any dark dun, and then suddenly stop rising, a few fish may be killed with the Greenwell that we unhesitatingly assert would not succumb to the exact imitation of the fly they have been feeding upon. We have killed fish with the Greenwell after they have been fairly gorged with a grand rise of May-fly, and, as our readers must know, it is a very difficult matter to tempt them under such circumstances.

Who has not picked up a few fish with the Governor when they are "shrimping" on the shallow edges of the river or stream? Who has not killed fish with Hofland's Fancy? In fact, how often do we have to resort to fancy flies if we wish to fill our creel? Although, as stated above, we invariably give the exact imitation of the natural fly the preference, we are not one of those who are so stupid as to rather go home fishless than use any other lure than the orthodox dun. After all, we go fishing to catch fish.

The great fault of fancy flies, as sold by most tackle dealers, is that they are far too big and coarse. The same fly dresser that will dress a dun to perfection seems to think (in many cases) that a fancy fly does not need the same skill and care. This is a great mistake; anything that is worth doing at all is worth doing well. Fancy flies at times are very useful to the trout fisherman, and should be dressed as carefully and correctly as the most delicate dun.

Notes

Loch Leven angling ended for the year last week, when a Dundee club representative carried off the championship. Notwithstanding the often unfavourable weather experienced, the season's record is better than that of last year, and indicates unmistakeably that the stock of trout is being well kept up. The total take, excluding the captures in the boatmen's competition, runs up to the gratifying number of 15,816 trout, 12,642lb. 8oz., which is better by over 1,000 than the average of the preceding six years.

Already the autumn anglers "harling" on the Tay have had splendid success. For true autumn salmon of a large size, the Tay affords better sport early in autumn than any other Scotch river. Not a single one of its best beats, however, yields so many fish for the back-end as the Duke of Richmond's fishery of the Spey. In 1886, between August 27 and October 15, his Grace's fishery yielded one thousand and forty-one fish, all fairly and squarely caught by means of rod and line. Where can its "marrow" be met with?

It is reported that the Scotch Fishery Board have been petitioned to extend the Thurso river rod season farther into the autumn. Be the application acceded to or not, it matters little, since the Thurso has no migration of true autumn salmon, nor is it likely that it could be made to have it.

The Ythan and Ugie salmon net fishing season ended last week. In general, it would seem that not a good fishing was obtained, taking the season all through. Towards the finish it was best, when some fine large fish were caught. At the nettings of the Ugie, which is but an insignificant river, one of the salmon caught weighed a little over 60lb. Both rivers have now a good show of finnock and late-running sea trout in their nether reaches. The Ugie sea trout are large—larger than those of any other river in the north-east of Scotland.

As yet the largest fish caught by rod in the Dee this autumn is one of 39lb. No weights over 45½lb. have been recorded for several years.

September early brought with it lovely but not salmon angling weather to nearly the whole of the eastern sea-board of Scotland. Over the country, from the Esks to the Spey, extreme drought, with great heat and glaring sunshine, having been experienced for about a week without interruption, the rivers had fallen away in volume to almost summer level. But with a "local splash," which has come this week, several of them, to the angler's delight, have now *grown* a bit.

From Loch More Lodge the Duke of Westminster, out on the Laxford river on 7th Sept., had two salmon, heaviest fish, 20¼lb.; Lord H. Grosvenor, three, heaviest 22lb.; Lady M. Gore, two, heaviest 17½lb. This is good fishing for a few pools on a small river to yield in one day.

North of Aberdeen the principally free and nominally free fishings, wherein the late ascending migratory *Salmonidæ* are got are: Ythan's tideway, Ebrie, Bronie, and Water O'Gight, tributaries of Ythan; Water of Cruden, the Ugie, Water of Philorth, Deveron's nether waters at Banff, Deveron and Bogie (Duke of Richmond's open water) at Huntly; Deveron in the Crabrach above Beldorney, Fiddich, tributary of Spey, from Craigellochie or Dufftown; Spey, at Abelour village; Spey, close to the sea (with the permission of Mr. Aitken, the Duke of Richmond's factor at Fochabers); and a stretch of river Findhorn, by ticket from the secretary of the Forres angling clubs.

We learn that this week, Mr. Lamont, New Inn, Ellon, lost the right for his guests longer continuing this autumn to fish the Auchterellon Water of the Ythan.

Loch Eck, on which the angling is free, has lately been doing well in salmon and sea trout. Loch Brora also has fished well, especially for the latter.

An angler fishing at river Teith on Friday last took seven salmon and a sea trout out of one pool.

It has been suggested that Scotch angling clubs, besides having a rule forbidding the killing by numbers of trout under a certain size, should start a stocking or maintenance fund to meet the expense of stocking with imported trout, which, in the case of well-threshed waters, is certainly very desirable considering the ever-decreasing number of the native fish.

In Shetland the sea trout fishing has been hard-pushed during the present month, and, as usual, in the Walls district it has done best on the whole.

For a season, angling for common trout in the counties of Sutherland, Ross, Cromarty, and Caithness is practically over, but here and there with salmon and sea trout sport still continues fairly good.

An effort is very soon to be made to form a fresh water fisheries reform, improvement and protection association for the North of Scotland, with headquarters in Aberdeen.

Last week one of the angling party out from Dunrobin Castle caught a 40lb. salmon on the Brora below the loch. This fish is amongst the heaviest ever landed by the rod on the Brora.

A "noble army" of anglers meantime ply hard the rod on the sea trout waters of the Uists and Harris. Much luck to them!

One boat's fishing for three days on Loch Stack a short time ago was (exclusive of brown trout) ninety-seven sea trout running between a pound and a pound and a half apiece.

SOME KENNET ROACH.

IT is always the unexpected that happens, and when one morning about eleven I put some ancient bottom fishing tackle into my basket, saying that if there were no trout rising we might get a few roach, I little thought that I should bring home a nice basket of fish. If we had made the most elaborate preparations and been provided with a variety of baits, a goodly store of new tackle, and if we had got up at four in the morning, the chances are our sport would have been indifferent.

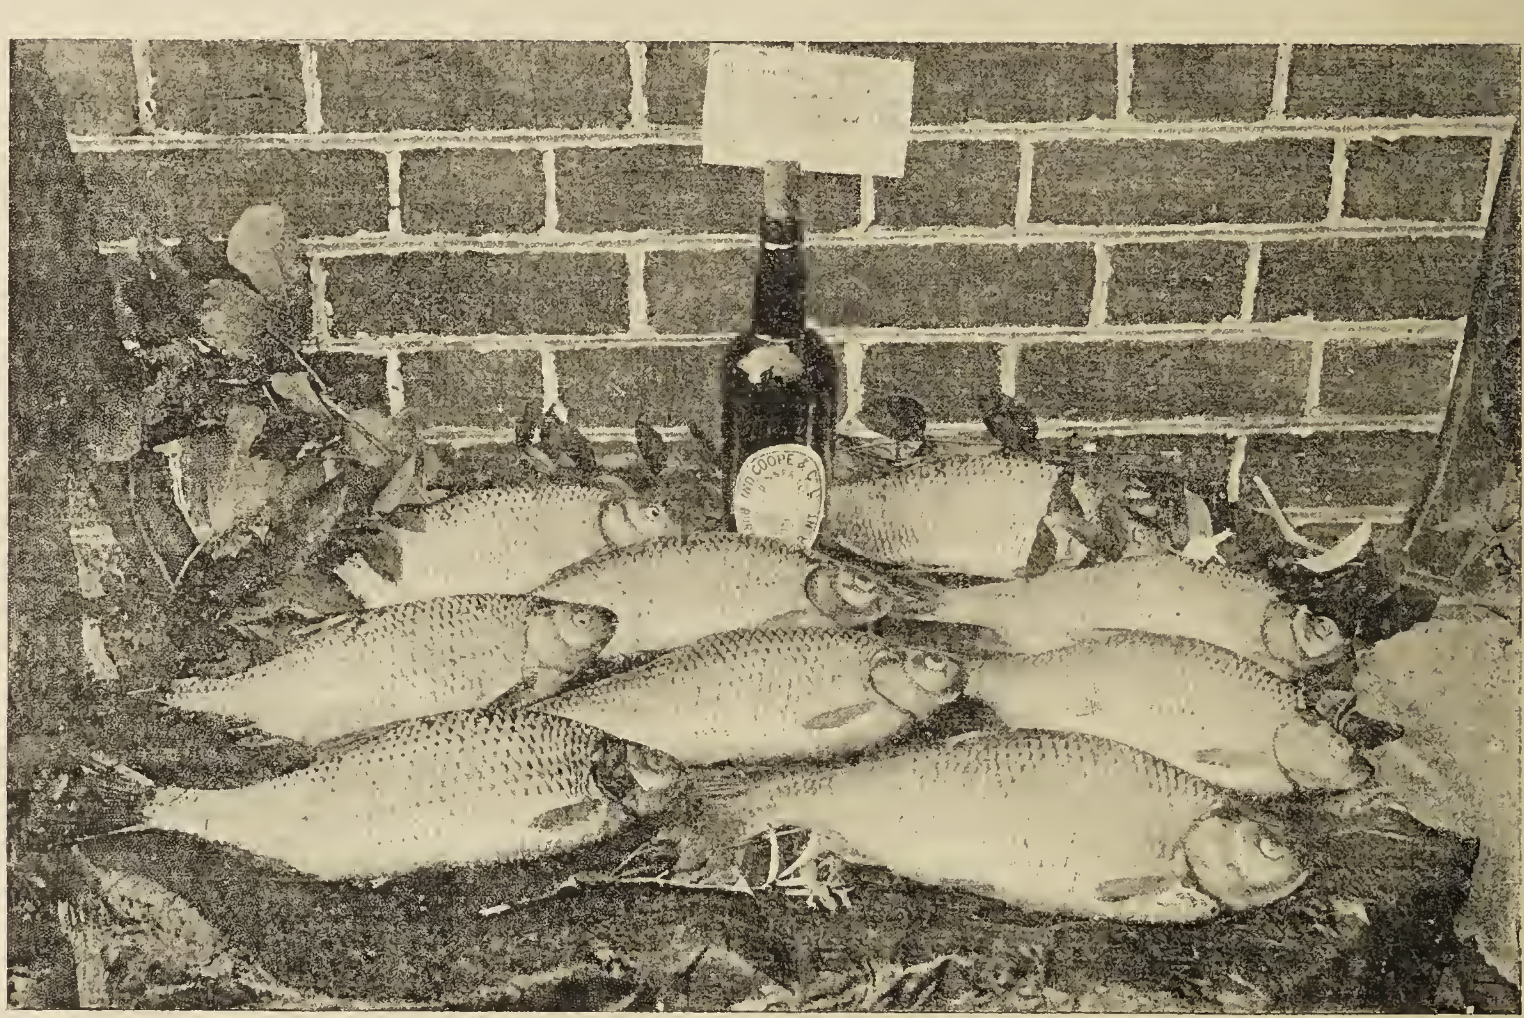
We—that is, Redspinner and myself, were taking a lazy holiday, so, as I have hinted, we started late in the day, and fished somewhat casually, more intent, perhaps, on breathing in the balmy air which blew up the Kennet valley, and in admiring the beauties of the landscape, than in catching fish. The spot was below Newbury, not far from the junction of the Lambourne with the Kennet.

Leaving Redspinner a clear field to whip for trout and dace (three times in succession he landed three dace at once), I took a few swims under an old wooden bridge, where the fish could be seen swimming about. As is usual in such places, the fish were shy, and I only secured a brace of chub and three good roach. Then Redspinner, coming down the bank, said that he had seen a shoal of large roach higher up the river, and that some of them followed his fly; so I went up-stream. There was only one roach swim thereabouts—I mean orthodox roach swim—and at that I stuck for an hour without the semblance of a bite. Below the swim the weeds came to within about two feet of the surface, and strolling down the river to find out why lunch was so long in coming, I saw a few dark shadows moving about in and out the weeds. Clearly the fish were some distance below my swim, and not feeding on the bottom at all.

I always use a Nottingham winch and line when roach fishing, converting it into a tight line occasionally, and at other times fishing Nottingham fashion, acting according to circumstances. So I was able to run my bait, a large lump of bread and bran, down-stream some twenty yards or so. My float, I need hardly say, I had placed within eighteen yards of the bait, so that the latter might clear the weeds. At the first swim my float went under, and on striking I found I had hooked a good fish, which fought strongly in the strong stream. It was almost an impossibility to pull the fish up-stream to where I was sitting, and to do so would have been most unwise; so I got up off my basket, and keeping well away from the bank, walked down-stream to below the fish, playing him as I went. I soon had him out, and found him to be a roach of well over a pound. This operation I repeated several times. It was somewhat a laborious way of catching roach, but when one is landing pounders labour goes for little. I only caught ten fish, but the first nine of these weighed 11¼lb. when weighed an hour or two later by Mrs. Baxter at the pleasant anglers' hostelry, known as the Swan. The fish were so fat and fine that I took their *carte de visite*, and sent a copy to Mr. Marston, who, thinking it might please the roach fishing readers of the *Gazette*, has reproduced my photo, and asked me to tell the story of catching the fish.

To the anglers who catch the two-pounders of the Avon this may seem nothing of a catch, but it is above the average for most rivers. The beer-bottle is not introduced for the sake of adding to the charm of the picture, but as a means of enabling the size of the fish to be estimated, imperial pint bottles being all about the same size. The fish are rather longer than the bottle.

TEMPLAR.



KENNET ROACH.

A NOTABLE IRISH ANGLER.

FRANK HEARNS, OF BALLINA.

HORDES of anglers, native and foreign, have been indebted for sport to one or other member of the Hearns family. The father of the present chief anglers of the breed, "Ould Pat," threw the longest and cleanest line of his time, and Moyside still rings with the story of his prowess. To him succeeded the brothers, Mick, Jim, and the subject of the sketch, taken at lake side by "Hi Regan." Mick, alas! is dead, but Jim and Frank are still the personalities most interesting to anglers who think of making Ballina their headquarters when bent on forays on the fish of North Mayo. Frank is a brawny man, as tough as whipcord, and a refined artist in fly dressing and the angle-craft which he follows. For over forty of the fifty odd years which sit so lightly on him he has been killing salmon, and he tells with glee of his first fish, killed when he "was but a chap," single-handed, and "without any help to gaff him." That was a twenty-seven pounder, but the Moy fish of to day seldom touch that weight, and if they do not it is due to things quite beyond the control of this honest angler, who is a sportsman from "pate to pastern," and not alone in matters piscatorial, for as a breaker of setters and guide in mixed shooting trips in winter, Frank Hearns is almost as useful and reliable as he is on the pleasant river Moy and glorious broad-breasted Lough Conn.

INLAND SEAS.

AN ANGLER'S RAMBLES BY THE BALTIC AND MEDITERRANEAN.

By F. G. AFLALO.

SUCH wide differences do the fisheries of these so-termed "inland seas" present both to those of our own waters and to each other, that a brief comparison may be of some interest to those who intend visiting either, for sporting purposes, as well as to those who, without any such intention, confine their operations to the English coast.

One of the great secrets of successful fishing is the imitation of anything worth imitating. If the German and Italian sportsmen were to take advantage of the many Englishmen, who, from time to time, angle among them, to the extent of adopting some of their methods of fishing, they would remove much of that ridicule which unfortunately still attaches to their angling. Therefore, oh, brother sportsman! equipped with all the latest improvements in English tackle, do not, though you should find such things in a very backward state on the Continent, be content with bestowing a pitying laugh on their crude tackle and droll procedure—learn from them; there is much to be learnt even from fools, and we may return from a summer on these seas to meet with greater success than heretofore in our own channel. It is, therefore, partly for the sake of those sea fishermen at home whom circumstances have not sent to these parts that I have collected these few notes.

The leading characteristics of the Baltic are comparative absence of tide and currents and low percentage of salt. Moreover, its bed is, towards the German coast, uniformly sandy, there being no rocks of any account along the entire coast line between Rostock and Arkona.

These features, added to a very low average annual temperature, render this sea remarkably poor in the variety of its fish, which may, as far as the amateur is concerned, be reduced to half-a-dozen species, including a kind of haddock (Dorsch), two kinds of flat fish, weevers, perch, and bream (fresh water), while salmon, gar fish, and herrings, help to afford livelihood and employment to the population of Warnemünde and many other towns along the coast, which are generally supported by capital furnished from some larger inland town (as Warnemünde by Rostock, &c.). The innovation of classing river perch and bream with the salt-water species is in this case justified by their being caught in the same spots and with the same baits.

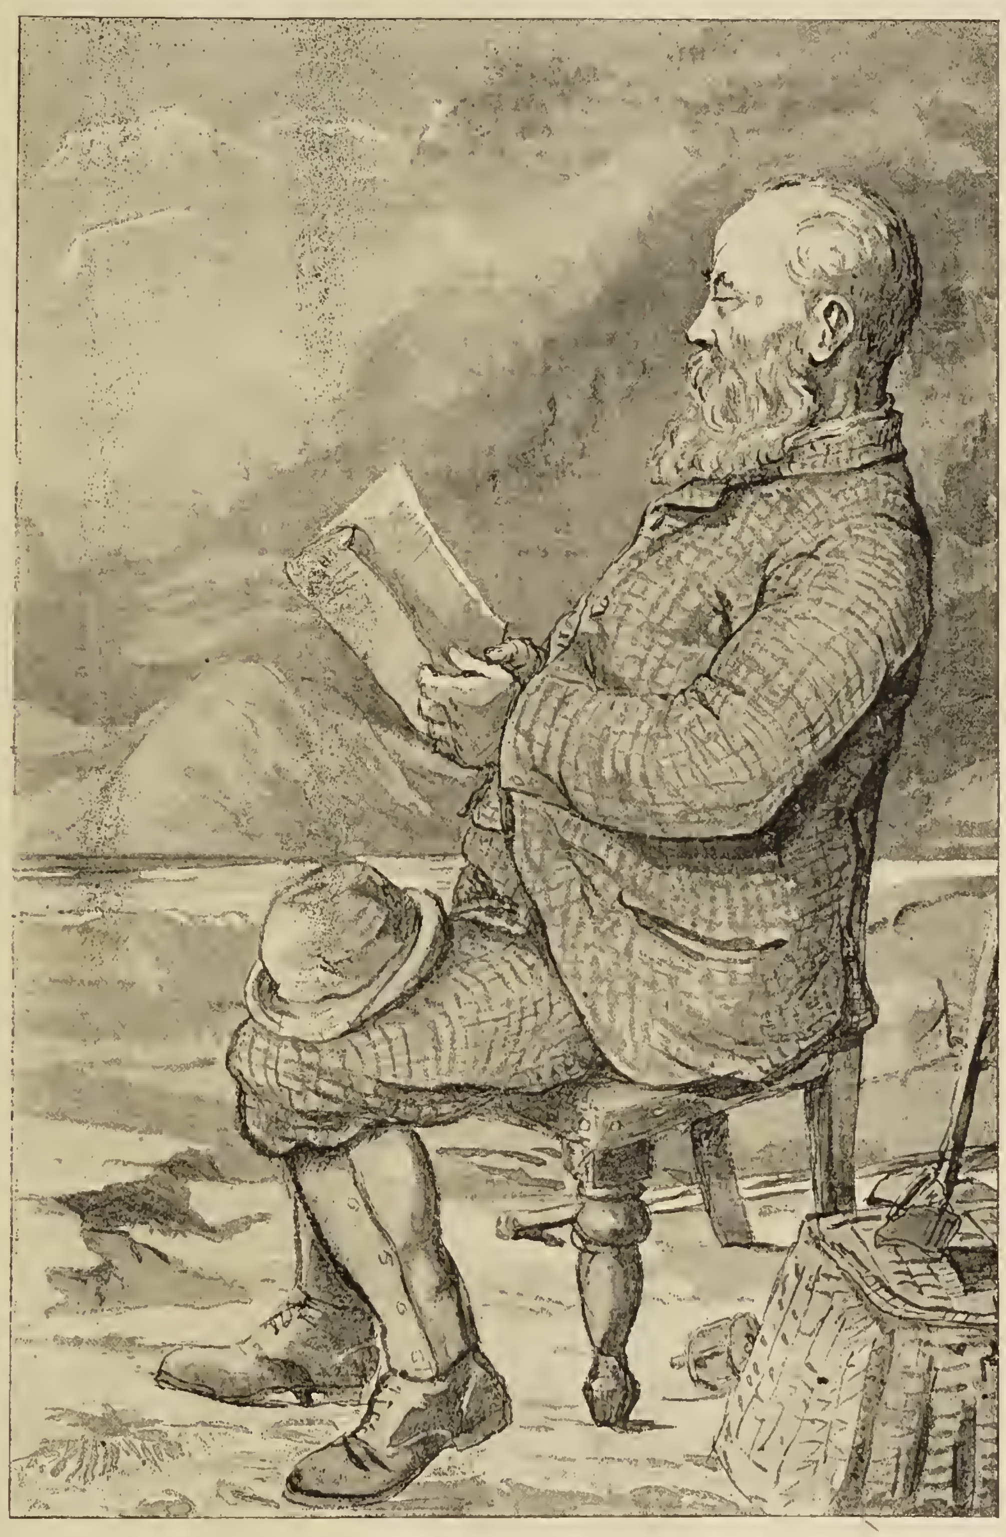
Fine pike, and occasionally a few mackerel, are taken in the herring nets.

The plaice and flounders abound off Warnemünde throughout the early spring, and I have taken in the month of March over sixty (some of which scaled over 2lb.) in a couple of hours, the best spot being inside the end of the West Pier.

Fishing is only practicable when the river Warnow is running out—otherwise the water is far too clear; one can see hundreds of flat fish scudding over the sand at the bottom, but they will not take any bait when the water is in this condition. One should use a rod with light gut tackle—for hooks I always preferred the square-shaped (Sneck Nos. 6-8)—as they seemed easier to disgorge; and these flat fish somehow digest them in a surprisingly short time. The weevers are a great nuisance here, and reach over two pounds' weight. Much of the abundance of flat fish may be due to utter absence of reckless trawling, and to those praiseworthy economies of the German professionals for which our own men are unfortunately scarcely remarkable. The nets are used for the most part at anchor; besides which, their mesh is considerably larger than that used on our coasts—the more praiseworthy that, as far as I am aware, this is a measure dictated by innate prudence rather than enforced by law. The thousands and hundreds of thousands of small dabs taken, for example, on our own south coast are exposed to the alternative of being first churned up into a glutinous mass (as I have seen them in the nets of steam trawlers) and then thrown away, or else dried in the sun as food—fish of 2oz.! Not so those caught in the Baltic—they are carefully removed to large perforated fish-boxes tethered in the river, where they grow in captivity until fit for the market, and fetch particularly good prices on days when the sea is too rough for the boats to put out. It is not saying too much, when one states that all the fish taken at Warnemünde find their way to a purchaser, while one errs on the side of leniency if one reckons ten fish wasted by our trawlers for every one consumed. The Rostock river-professionals are, however, a race apart, by no means deserving the same praise for economy as I am sure all would bestow on those who go to sea.

With conveniently crude ideas of the principles of "conservation," they have framed a code of tyrannical laws, peculiarly adapted to reserve to themselves the sole right of destroying their own fisheries. The Warnow is unscrupulously netted without regard to close time or minimum size of fish, and not merely are amateurs forbidden to fish from a boat in any part of the river, but, incredible though it may seem, this prohibition likewise applies to the professional fishermen of Warnemünde, even in the lower reaches of the river where it enters the sea at their very door, and over nine miles below Rostock!

The species of the Warnow include the huge "wels," pike, perch, roach, bream, bleak, and eels; there are neither dace, tench, nor gudgeon. Besides the systematic decimating of fish in the Warnow itself and in the "Breitling"—a broad just above its mouth—every ditch on either side the road between Rostock and Warnemünde is laid under similar contribution, and yields the draw-nets laid there over-night a good supply of pike and eels. It must be remembered, however, that both in Germany and Italy fresh-water fish are very much more highly appreciated as an article of food than in England, and in Germany especially, towns comparatively near the sea coast have no more idea of sea fish beyond that furnished by "Stockfisch" (dried cod), and pickled or smoked herrings. The smoked herrings are called "Bücklinge," the history of which word is to be found in one of Heine's works.



FRANK HEARNS, OF BALLINA. (See page 182.)

To return to the amateurs. The German's notions of angling are very different to our own. The subtle implements on which he presents lifeless worms to the fortunately unsuspecting fish consist of a 20ft. bamboo, to the top of which are attached half a-dozen yards of stout line, a pierced bullet, a clumsy float (attached by one end only to the main line), and a hook. Any hook will do.

Worms ("matteu") are their infallible lure for every size and species, and of these they only know small lobs. I could never persuade even the longliners to use lug worms, which abound along the shore, as an alternative to fresh herring, and my own experiments were cut short by protracted rough weather. The process of baiting is summary, little regard being paid to either concealing the hook or keeping the worm alive, the main idea being to prevent the worm wriggling off the hook, of which contingency, considering it dies almost instantaneously, there need be but little fear. Having adjusted the float at a guess—such operations as plumbing, &c., are despised—they fling everything, save their rod, majestically into the water, and wait long and patiently for a bite. As several feet of slack line generally intervene between the float and the top of the rod, one concludes that the few victims are either foul-hooked or else have gorged the bait. German angling is, as might be expected, prosecuted on the most rigid principles of conservatism. They will watch Englishmen catching ten fish to their one, without the least attempt at adjusting either float or bait in the proper manner; though it would be well worth their while to do so. A basket of 36lb. of perch and bream in under two hours may be called really good sport in its way.

Besides bottom fishing, the natives have a crude form of spinning. A thick leaden "fish" (?) armed on either side of its head with a large hook, is worked rise and sink fashion, from a boat, until —— No; I have carefully watched this celebration during a period of over six months, and the only fish I ever saw brought to the surface in this manner were leaden ones. They say they are fishing for large perch. But in the midst of all the primitive clumsiness of their tackle, their equivalent for our creel (on the same principle as the excellent fish boxes to which I have already alluded) is well worthy of imitation. It consists of a deep (3ft.) purse net, weighted with a stone, and attached to any convenient hook by a long cord. The wire frame of the net is so arranged that it closes automatically with the weight of its contents, which are thus kept alive till the angler leaves the water, and arrive home in a very much fresher state than the dry stiff fish we often produce from our creel as the result of a hot day's sport.

The use of artificial baits is confined to the above-mentioned leaden fish; nor would others be more effectual, as there are no bass, and the few mackerel occasionally taken with the herrings would not be worth whiffing for.

This must conclude my remarks on the Baltic, and I now turn to the *Mediterranean*, a sea differing in almost every respect from it, the only common features being the same comparative absence of tide and similar inland position.

Its extent, the nature and variety of its coasts and bed, its temperature and general geographical position (in direct communication with two oceans and two seas), all contribute to place it far above the Baltic in the variety of its fish. Whereas the German coast of the Baltic is flat and sandy, like our own East Coast, that of the Mediterranean resembles rather our Devon and Cornwall, being bold and rocky, very varied in its inlets, and rich in islands. The immediate neighbourhood of Leghorn is rather remarkable for extensive and unproductive shallows, but in the Bay of Naples anglers using a 20ft. rod from the road ("Chiatamono") can command a depth of 18ft. The best fishing is generally to be had off the islands.

The average annual temperature of this vast sea is very much above that of the Baltic: I bathed for the first time in either on April 28 in two consecutive years—the Baltic temperature was about 46 deg., that of the Mediterranean over 65 deg. The Mediterranean is, on the average, much the rougher, especially in the spring, and the prevailing currents are very much stronger than those of the Baltic. The percentage of salt is also greater, and its bed—almost all rock—is marked by great variations in depth.

It will not, therefore, surprise the reader to learn that of the six hundred and fifty species (approximately) of fish occurring in the seas of Europe, near four hundred and fifty are to be found in this sea. Tunny, formerly supposed to migrate *via* Gibraltar, occur nowhere else.

Sharks, as a rule, keep out in the offing, but they told me that Naples Bay was full of them the week before I arrived there. Somehow, anything worth seeing generally *does* happen the "week before" one arrives!

An octopus is rather an unusual catch close in shore; but a somewhat powerful one, about 6lb., was my first catch here. It took several minutes killing, after which my boatman put it by for dinner. A visit to the pretty aquarium at Naples (Villa Nazionale) gives a fair idea of the amateur's fish. The finest tank, in an otherwise not remarkable collection, is tenanted by a beautiful exhibit of corals.

The other species include gurnard, mullet, octopus, lobsters, dory, bream, conger, and wrasse, besides a number of species without equivalent in either our dictionary or our seas, as Boga, Dentice, Lupomarino, Orata (gilthead ?), Parago, Sarago, &c.

Italian want of enterprise has as yet succeeded in omitting a tunny, but one can generally see fine specimens at the provision shops in the "Toledo," one I saw there being about 5ft. long and over 40in. circumference. From the upper slopes of Vesuvius one gets a very pretty view of the tunny fleet at work off Sorrento. The flesh of the tunny is red and tastes like meat (which it also much resembles in appearance). The favourite table fish, after tunny, are mullet, sardines (fresh), anchovies, and gudgeon. Italians do not understand how to cook fish, or anything else, for that matter.

The favourite bait of the long-liners are fresh anchovies. The Neapolitan fishermen are the most renowned, being found as far west as Bona and Algiers.

I shall now give a brief *resumé* of the tackle and methods in vogue among the amateurs.

One is struck from the first by the superiority and neatness of some of their tackle, the more so as the sport is, unlike in Germany, followed only by the poorer classes—those more active "lazaroni" (a class by no means confined to Naples) on whom palls the endless "dolce far niente" of lying in the sun and swearing. In Germany the disciples of Berners and Walton include all classes, professors and students, officers and merchants, &c., in Italy, only the very poorest and dirtiest are ever seen with rods, with, of course, a few exceptions. But, with all his neat tackle and splendid opportunities, the Italian is devoid of any sporting principle. As an example of this, three pages of what I believe to be the only Italian book on fishing are devoted to the "exciting amusement" of entrapping all kinds of small fish in a glass bottle!

They have no mercy on small fry. The Livournese enjoy a morning's sport by driving out to Calambrone, and using the large nets there at a cost of one franc per hour. They bring them up so frequently as only to take small fry, which are all eaten—often alive! An hour at these nets, however, gives one a good idea of some of the local species. The net is large, probably 20ft. across, and is worked by capstan and pulleys. In an hour here I have taken several large mullet (2lb. and 2½lb.) and 6lb. of small fry, including mullet, gurnard, soles, sea-bream, dory, gudgeon, eels and anchovies.

The anchovy is recognisable by the beauty of its colouring, and the extraordinary size of its mouth. Its snout resembles that of the shark family.

I need hardly say that all the fry were returned to the water.

The smaller ditches contain some very fine mullet and eels, which may be caught in a "bilancia" net, worked from a boat. In one of these I took one morning fifteen mullet and nine eels, 7½lb.

One still less sportsmanlike method of catching fish in vogue among the amateurs is the use of dynamite bombs, the possession of which is strictly forbidden. A gentleman kindly sent me a couple which I sketched and then dropped overboard, without lighting them.

The fuse, one end of which is embedded in the cylinder of red paste, is ignited, and the whole immediately thrown into the water far from the boat. The explosion kills all the fish within a considerable space, and their dead bodies soon appear at the surface. The cost of these "infernal machines" is fortunately considerable, being about 10f. per kilo (3lb.), or near 3f. apiece. They are, of course, strictly contraband. It is often advisable to bind them round tightly with string, otherwise the fuse may be shaken out on striking the surface.

But among the more principled sportsmen one finds certain practical ideas unknown to the German. Such, for example, are the use of ground-bait and the landing-net—the universal adoption of black horsehair (twisted in six strands) as material for the main line, and accurate knowledge of the differences between day and night fishing, &c. The use of the float is but little known: tight-line fishing being far more usual. Nor are the rods any improvement on those used in Germany, winches being similarly dispensed with. But the lines show undoubted superiority, whether in material or in general mounting and neatness.

For mullet they are used unleaded, terminating in a yard of gut and a single hook (No. 4 Pennell-Limerick, or No. 1 Sneck), which is attached to the gut by a very reliable loop.

The ball of paste, in which the hook is imbedded, gives sufficient impetus to the whole line for a long throw, and also serves as a sinker.

In using several of these lines from the pier or shore, they rest two small pieces of white stone on the line, just below the winder, by the displacement of which they either hear or see whenever the line is disturbed.

For other fish they use three or four hooks, paternoster fashion, and a piece of sheet lead.

So much for their tackle. It is, however, in the department of baits that the Italians particularly excel. Instead of limiting their *repertoire*, like the Germans, to the worm, they are well acquainted with the use of live shrimps, squid, mussel, weed, pastes, &c., also of ground-baits and moving baits.

The worm most in use is a kind of rag-worm, abounding in the mud of the "fosses" or salt-water canals. It can generally be purchased at Leghorn, under the Colonnades, near the Ponte Nuovo, where they also sell mussels from La Spezia. At Naples they use live shrimps during the day for wrasse and sea scorpions; but at Leghorn their use is confined to night angling from the Molo nuovo.

As an equivalent for our use of weed in mullet fishing, the Italians have discovered in "pincio"—a white stringy substance found under water on old barges and piles—an excellent lure for the 'sarago," a very game fish, reaching over 12lb.

They never use bread paste plain, but flavour it either with pounded anchovies or sardines, in which case it assumes a reddish colour, and will last for days; or else with white cheese from Sardinia, which makes it very white and firm. In the latter case it has to be made fresh each day. The long-liners know the advantages of scalding their mussels, but are unacquainted with the very necessary process of softening squid with a hammer previous to use.

Their ground-bait for mullet, composed of pounded sardines and bran, does not seem particularly effective.

Large numbers of moderate-sized "occhiate" may be taken in the evening by trailing a white feather, mounted on a large hook, over the rocks. It is worked at the surface, a lamp being hung over the stern as an additional attraction for the fish.

The grey mullet, of which there are several species, are very migratory and capricious, but are generally to be found at Leghorn in the private canal passing through the yard of the "Ingenio Civile," and also at Calambrone.

And this must conclude my paper, of which the aim will have been more than attained if it have aroused at home any slight interest in the fisheries of these important seas, or have afforded any useful information to the sea fisherman.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear. Best quality only.—EAST LONDON RUBBER Co., 8, Shoreditch, E.

Waltoniana

"CAUGHT nine salmon in one day, which went up to 18lb. in weight, and in the last four days killed twenty-seven salmon, which weighed 311lb." This is the news I have from one of the best reaches of the Usk, and though the number of fish killed may be rather above the average of sport obtained on most salmon rivers, it is indicative of the excellence of the season.

WITH reference to my remarks concerning the Hungerford Water last week, I note that the commoners of Hungerford are advertising for tenders for the fishing, which, to my way of thinking, is an objectionable way of letting a fishery or anything else. Why not put it up to auction at once? The commoners reserve to themselves the right to fish three days a week with any bait they please.

THERE have been some singular fishy incidents of late recorded in the *Field:* A salmon jumped on to an angler's knees; a sea trout swallowed or tried to swallow a discharged twelve-bore cartridge; an osprey's claw was found in a salmon steak; and a trout of 1½lb., after being hooked on Stewart tackle and breaking away, returned to the charge half-a-minute later, and took another angler's worm.

THERE are numbers of perch in Loch Leven. They appear to be increasing, and the managers of the lake have ceased to have them netted out, believing that their "spawn" affords good feeding for trout. Do trout eat perch spawn? I should say that the perch fry, when a few months old, are capital food for trout; but it is surely open to question whether the perch do not consume so much food themselves and so many young trout that their demerits more than counteract the good they may do.

THE average weight of fish in Loch Leven appears to be decreasing. Those caught by anglers during the past season averaged only 12¾oz. But the total number of fish killed was very satisfactory, bearing in mind the long spell of cold weather experienced at the commencement of the season. The figures are fifteen thousand eight hundred and sixteen trout, weighing 12,642lb. 8oz. Anglers complain at the small size of the fish, and it has been suggested that stocking has been overdone; but it is perfectly obvious that without re-stocking on a large scale, no lake of that size could possibly continue to give good fishing to such a large number of anglers as visit Loch Leven. Doubtless the managers of the water would be wise to increase the natural food supply of the lake; but how? That's the rub. Hardly anything is known concerning the best methods of feeding trout in lakes, and there is always a risk when introducing a new food supply that the trout may become bottom-feeders in consequence.

THE new artificial bait, the fans of which can be reversed so that the bait can be made to spin either one way or the other, is an application of a principle well-known to spinners on the Thames. It was shown to me years ago by Davidson, of Pangbourne, when trout fishing together in the then famous Whitchurch pools. As soon as the line showed the least inclination to kink, Davidson reversed the spin of my bleak by altering the position of its tail. In pike fishing, if a proper trace is used, kinking is unknown, and the new baits are no advantage; but when fishing without lead, as it is desirable to do sometimes for lake trout, I can well understand that the means provided of reversing the spin of the bait is most useful. Without lead on the line, however many swivels are used, the line often kinks.

To say that on a spinning trace the lead should always be slung below the line, must read like ancient history to many anglers; but from personal observation I know that there are many anglers who are still more or less in darkness on this subject, and in their interests the old but valuable maxim may be repeated. For ages sea fishermen have known the right way to attach a lead to a whiffing line; but curiously enough freshwater anglers, who in other respects have such superior tackle to sea fishermen, were long in the most benighted condition respecting spinning traces. Francis Francis, I think it was, who first introduced a lead of a shape which would reduce kinking, and the thoroughly practical remarks on the subject by Mr. Cholmondeley Pennell, in the "Book of the Pike," in which he described about as good a trace as is ever likely to be made, effected a small revolution in pike spinning tackle. But even now there are tackle makers to be found who, if asked for a trace, produce a thick piece of gimp on which is strung a pipe lead, the whole being divided up into short lengths by huge swivels. When the next Criminal Law Amendment Bill is drafted, it is to be hoped that the manufacture of such traces will be made a penal offence. At the same time imprisonment for life might be made the penalty for selling old gut for new, and cotton lines for silk ones; while fines might be imposed for making badly-tempered hooks, bindings held only by varnish, artificially-stained toppings for real ones, and—but, bless me, I might fill this column with the misdeeds of a certain class of tackle makers, and those gentry would only smile and do just as before, well knowing that the young, green, and unwary are ever with us, and will be until the end of all things. Heaven be thanked that there are plenty of honest tackle makers, and such may be known by their having and retaining as customers anglers of experience.

Templar.

DAPPING WITH THE GREEN DRAKE IN IRELAND.

By Quill Gnat.

Such lots of angling yarns appear every week in that charming little record of "fishy" doings, the *Fishing Gazette*, that I feel another chronicle of trouting adventures may be considered almost *de trop*. The excuse must be that the subject of dapping is rarely touched upon, and I have had such glorious sport in this fascinating method of fishing, that I am anxious to let the uninitiated know something of the *modus operandi*.

Why do we all fly off to Scotland for our fishing? Granted, there is some of the finest salmon fishing in the world to be had there; but the trout fisher who is fortunate enough to get away for three weeks or a month in the summer should read the reports of the lake fishing in Scotland and compare them with what we know about lake fishing in Ireland (for in Ireland the takes are not generally chronicled). We read in the *Fishing Gazette* week after week such reports as these; "Mr. and Mrs. So-and-So, fishing Loch ——, sixty trout, 12½lb.; Dr. —— and the Rev. ——, in one day, on Loch ——, eighty-seven trout, 19½lb.; Master ——, on Loch ——, in a few hours, fourteen trout, 3½lb., and one *ferox* 3lb." I was in Sutherlandshire myself last year, and spent a most delightful month on the lakes and streams in that locality, but the sport was not to be compared with that which is to be had on the Irish lakes *in the May-fly season;* on these lakes a two-pound fish is looked upon as hardly worthy of notice, and trout up to 10lb. are not uncommon. Perhaps a description of two days' fishing will be the best way of showing how very fascinating this dapping is, and what exceptional sport may be enjoyed by this means.

I was yarning with a friend of mine, who has served Her Majesty faithfully and well for many years, and the conversation (which is a very common thing with me) turned upon fishing. The Captain heard of my exploits with great patience, how I had taken mighty salmon in the Orchy, big *ferox* in Loch Shin, monster sea trout on the Kyle of Sutherland, &c.; then in a quiet and subdued tone he said, "Have you ever dapped with the May-fly in Ireland"? I was obliged to confess my ignorance of dapping, whereupon he rejoined, "Then you have missed the finest sport in the world." I was mad keen to hear all about it, as my previous notions of dapping were of a hazy nature, and I had visions of a yokel winding his line round the top of a hazel twig, poking it through the overhanging boughs of a bush, unwinding it again until the wily blue-bottle dangled over the nose of the unsuspecting chub, and yanking the beast out of the water directly he had nobbled the bait. These notions the captain speedily dispelled, and assured me that dapping was high art, and the only means of making sure of those grandfatherly trout, which are so often read about, but very seldom seen.

The best of it all was that I was invited to spend a month in Ireland—stay with my friend at his people's place on the lake, and try my maiden hand at dapping with the Green Drake. This was too tempting an offer to be refused, so I squared my partner with promises of huge baskets of trout, and pledges of a speedy return. I said "I was going for a fortnight, but if sport was very good I might extend it to a short three weeks," and may Heaven forgive this little bit of deceit, for I had fully resolved to stay a month.

We started on May 20, having had a wire from the family henchman that the "fly was up." It is needless to describe the journey. Suffice it to say that we turned up safely at about ten o'clock one night, and speedily went to roost, prepared to do glorious deeds in the morning. I shall not easily forget the sight which greeted me when I looked out of my open window that beautiful May morning. First, the park, with its wealth of foliage, and as there had been a slight shower in the night, every twig and leaflet were covered with raindrops, which glistened and sparkled in the sun like gems. The vivid green of the youngest shoots contrasted beautifully with the deeper tints of the fully-grown leaves, and these, again, with the sombre hues of the pine trees and the graceful copper beeches. Beyond, the park was an undulating wilderness, dotted over with clumps of gorse in the full blaze of their bloom, with rocks here and there showing their heads above the graceful bracken, and the beautiful birch trees, with their drooping foliage and silver trunks, present everywhere. In one part of the wilderness there was a little lake, its calm waters unruffled by the light morning breeze; still beyond this a long stretch of boggy, swampy land, with bright green patches, which looked like fine springy turf; but woe to the luckless wanderer who set foot upon this inviting spot, for in he would sink, and learn for the first time the unpleasant experience of being "bogged." On the other side of this swamp the water of the big lake could just be discerned, and the hazy outlines of a range of mountains beyond. Altogether, the scene was so beautiful that for a time I forgot I had come to work and not to dream, also that the faithful James was waiting below to carry our impedimenta down to the lake. A tiny rise on the little lake, however, brought me back again into a proper and sporting frame of mind, and as I floundered noisily about in my icy cold tub, I pictured to myself the first rise of an Irish trout to my May-fly. Breakfast over, sandwiches packed, 'bacca and potheen stowed away into the creels, and we were fairly under weigh. Two miles' walking through a lovely country brought us to the lake, and there we found our boat (appropriately named "The Murragh") and two little baskets of May-flies, which the careful James had picked for us early in the morning. We rowed about three miles up the lake in the face of a stiff breeze, and put out a couple of Phantom minnows; but the result was very poor, only a few small perch, nothing more.

At last we reached the head of a wide shallow bay, and prepared for our first drift. Here it will be well to describe the tackle most useful for dapping, as many people make their first attempt with utterly unsuitable tools. I had the Captain to thank for my information, and as he was quite an old hand at it, I was equipped properly. First, the rod: This should not be too whippy; in fact, a fly-rod is hardly required, a roach rod is too stiff, and a pike rod too clumsy and heavy. A light rod is indispensable, as you are holding it all day long in a sitting position, and keeping your fly delicately hovering on the surface of the water. I like a 15ft. or 16ft. rod, whole cane butt, and second joints, and a greenheart top; the rod should be light, but powerful, for you should be able to turn a heavy fish quickly, as the rise does not last long, and if you are a great while killing your fish you lose a good many chances; upright rings by all means. The reel should hold at least one hundred yards of line, and should run freely, although, of course, a check reel is necessary. I use a thin prepared enamelled American braided silk line; the finer in reason the better. The "blow line" should be of fine silk twist, as light as possible, but strong, and should be a little shorter than the rod, so that there is no chance of drawing the knot—which joins the blow line to the reel line—through the top ring of the rod when playing a fish. The hook is most important. The dapping hooks sold at the tackle shops are bad.

The hook should have a perfectly *round bend*, and about a No. 7 or 8 in size. The hook should be short in the shank, for this reason: when you bait, you pass the point of the hook into the fly just behind the head at the back of the neck, and bring it out at the back of the body between the wings. Now, if you have a long-shanked hook, the weight of the shank topples the fly over in the water, and he does not float well. The gut should be stained coffee colour, and should be about 2ft. in length. An important thing is to whip the gut to the hook with yellow silk, as this resembles the colour of the fly and is not so easily seen. The hook is baited as I have described. If there is not much wind, one fly is enough, but, if very rough, two, or even three, flies may be used with advantage.

A good breeze is indispensable for dapping, as, if there is not wind enough to carry the line well away from the boat, the fish are put down and will not feed. Now to return to my narrative.

The Captain was in the highest spirits, singing away as he baited his hook, and prophecying a good bag. I was seated in the stern, and James (who is an expert dapper) in the centre of the boat. I was a long time learning to bait properly; but at last I succeeded, and letting out as much line as the wind would take, I kept my fly fluttering on the surface of the water. Sometimes a big wave would come rolling over it, and sometimes a puff of wind would blow it off for a second. But I soon attained the art of keeping it pretty constantly on the water.

"Three men in a boat" with a vengeance, and all of us most intently watching the three little fluttering May-flies as they rose and fell on the tiny waves. I could see the brown rocks about six feet below the surface as our boat drifted over them, and I was fast sinking into an almost dreamy condition, when I heard a most terrific splash, and on looking up quickly, I only saw two May-flies floating—the great James's fly had *disappeared*. I yelled out, "Strike!" at the top of my voice, but just then the experienced James merely raised his hand gently until I saw the top of the rod bend, and heard the reel scream, as James uttered the usual expression, "In him!" Heavens! what a rise that was, the trout came like a bull-dog, and how he did fight. Our rods were on board in a moment, and James handed his rod to the Captain, who always liked playing the faithful henchman's fish as well as his own. I watched the struggle with the greatest interest, and saw that after one or two rushes the fish kept deep, sullenly tugging at the line like a sulky salmon. Once we caught a glimpse of the fish, and James tried him with the net; but the Captain said, "I have not half killed him yet." And so it proved, for we did not net that fish for fully ten minutes. At last a triumphant "Whoo! whoop!" certified the fact of his troutship having been safely netted; and after a rap on the head from the "*praste*"—as James called the bit of wood he used—the fish was spread out upon the thwart for inspection.

What a beauty he was—exactly 4lb., and as handsome as a picture. The colouring was superb—a sort of dark olive with large black spots, the back shading off into a deep rich brown. This was my first sight of an Irish lake trout; and for beauty and (as I afterwards proved) for edible purposes there is no fish I have ever come across to touch him. First blood! and the toast was duly honoured. I was now as keen as mustard, and put on a new fly, watching it dance and flutter on the ripples with an eagerness I had never felt before. All at once, as the fly was riding up on the crest of a wave, I saw a great gleam of gold shine through the transparent water, and my fly disappeared. I struck madly, and if anyone had given me a thousand pounds I could not have helped it. The Captain screamed at me, "Why did you strike, you old duffer?" and then I learnt by sad experience that to strike a rising fish when dapping with the real fly is to lose him. Just when you see the rise slacken your line for three or four seconds: then slowly raise your hand, and the fish will hook himself as he turns to go down with the fly. I felt very sick at my clumsiness, and did not take the Captain's chaff with my usual equanimity, but a word of encouragement from

James, and a rising fish ahead soon put me all right. Half-an-hour passed, and I was just thinking of re-baiting, when I saw a grand rise a foot or two on my right. I lifted my fly quietly from the water, and, the wind favouring me a little, I let the fly alight just in the centre of the ring caused by the rising fish; my heart was in my mouth for a second as I anxiously waited to see the result. All at once he came, a magnificent head and tail rise; the fish seemed to come right out of the water, and as it were, descend upon the fly head, first. I slackened line at once, waited and counted four, then raised my hand and met with that indescribable tug which is so deliciously significant. "In him," I shouted; "rods in, please," and then the fun began. This fish was a runner, and played like a sea trout; there was no fear of not securing him, for he ran out forty yards of line and then threw himself out of the water three times; he was the maddest of mad fish, and I had a merry quarter of an hour with him. At last the fatal net wielded by the artful James encompassed the shapely form, and the captive lay gasping in the boat. This time 4½lb. wa reported, and I had the pleasure of being the hero of the occasion for a time. Scales and tight lines were the next toasts, and the "three men in a boat" hard at it again. Here let me say that it is a mistake to dap with three rods; two are quite enough, and we lost a splendid fish later on by not following this rule. The day wore on, we caught many more fish, but not one over 4½lb., still with three fish 4lb. and four more over 3lb. and one 2½lb. we had a fair beginning; and we retired to our repose with feelings of the greatest satisfaction. *(To be continued.)*

RECIPE FOR COOKING CARP WANTED.

Dear Sir,—As a constant reader of your paper and a carp fisherman of comparatively recent date, I should feel much obliged if you or any of your readers could inform me if there is any simple recipe for making this fish good for the table? My experience of the carp on the table has, up to now, not been a happy one; but I cannot help thinking there must be some way of making this handsome fish palatable without recourse to those recipes of the "bottle of port" order.—Yours faithfully, Carpist.

AMATEUR SEA FISHING AT WEYMOUTH.

Sir,—I have just returned from spending a few days at Weymouth, and only wish my time there could have been longer. I am fairly well acquainted with many of the eastern, western, and southern watering-places, but this was my first visit to "the Naples of England," and I was so delighted with all I saw that, all being well, it certainly will be by no means my last. The fashionable season ends "sharp" with August, the consequence being that throughout September and October—really the most delightful time of the year—accommodation increases as charges decrease, and with such weather as we have had and seem likely to have, a more delightful place at which to spend a week or two could not well be imagined. My object in writing is not, however, to dwell on the many charms of Weymouth—I am not a compiler of guide books—but to call the attention of such of your many readers as may yet have a week or two to spare to the exceptional advantages it offers to the amateur sea fisherman, particularly if he be fond also of that most delightful of all sea-side amusements—sailing. You can here combine the two to perfection.

The mackerel come into the magnificent bay—probably the finest, as it is one of the most sheltered on our coast—about the beginning of May, when the netsmen begin operations in the countless shoals with which the water literally teems until the latter part of June. Then, from some cause which is not quite clear to me, the fish leave the bay for about a month, when they are netted again till about the middle of August. From this time to the beginning of November is the time for the amateur, "hooking" in all its branches being then in full swing. May I here make a remark, for which I can vouch, though it may surprise a good many of my readers? Most people seem under the mistaken impression that Channel mackerel are out of condition in the autumn. The fact is, that while in April they are "as dry as a stick," they are really in the pink of condition, both for sport and table, at the latter part of August and through September.

My old friend, "John Bickerdyke," in his admirable little book on "Angling in Salt Water," chapter viii., describes all the best-known modes of capturing the mackerel, a fish which he aptly describes as "good to catch, to eat, and to look at;" and all these methods may be practised with advantage at Weymouth. I will not trespass on his ground, particularly as my practical knowledge of this branch of sport is small, and during my visit the conditions were such that to get fish I and Fred. Brown, my boatsman, had to confine ourselves to trailing or whiffing, using that best of all baits, a slice of skin from the tail of a mackerel. By the way, it is worth knowing that the best baits are cut from *lean* fish, the skin being tougher, and the reverse showing the red flesh, instead of being white as in the case of a *fat* mackerel.

Of the takes made while mackerel "hooking" I can speak with confidence. Fred Brown tells me—and his word can be confirmed any day—that he and his brother Harry left the pier at 10 a.m. one day about five years ago, working their own boats and lines, and on counting out at 3 p.m. in the harbour had taken twenty-eight dozen. Half a gale of wind had been blowing all the time, and they had to sail under close-reefed sails. A strange feature about this remarkable take was that on the count there was only a difference of two fish between the two boats. No doubt a great deal of this success—as of the extraordinary success of all their patrons, is due to a very ingenious method of trailing which the brothers Brown have elaborated after exhaustive experiments, and the working of which delighted me on my visit. Such a dodge is not, so far as my experience goes, practised by any other boatmen, and it would be manifestly unfair to the inventors to describe it; but they are very pleased to show it to customers. A "good day" among the mackerel by an amateur, who engages one of the Browns may be put at from twelve to eighteen dozen; but, of course, sport varies according to the wind, the size of the shoals, and the ease with which such shoals are found and followed. My best afternoon was seven and a-half dozen. The best mackerel ground taking the season through is undoubtedly about a quarter of a-mile from Portland breakwater, with the Nothe bearing N.N.W. as here the tides meet.

Besides mackerel, many other desirable sea fish are to be met with by the amateur in the neighbourhood of Weymouth.

Pollack whiting, as they are called here (the Lytho of the Scotch), are met with mainly on the north shore of the bay, from Ratcliff Head to Meup Rocks, E. of Lulworth; they simply abound, and run up to 10lb. in weight, affording splendid sport to the angler, either with hand-line or rod, all through the summer, though the autumn fishing is the best. The usual size is, however, represented by a bag which I made of four dozen in about an hour and a-half, going from ¾lb. to 3lb. each. A few peal whiting, or black fish (the "coal-fish" of the north), and plenty of silver or sound whiting (the whiting of commerce), and pout whiting can be got. The best modes of fishing for pollack are with shrimps or mud worms on leger, or "light" hand-lines (about half-an-ounce of lead); but spinning and "railing" with an india-rubber bait are also very deadly.

Among the other attractions of Weymouth to the amateur are the trawling-boats, which come mainly from Portsmouth, and work from Weymouth to "Whitenose"; the celebrated "pot-hauling" for crabs and lobsters around Portland; and last, but by no means least, I am assured, the conger fishing off the north shore. Small conger may be found in plenty around the Breakwater, but the big fellows, which commonly run from 10lb. to 20lb. in weight, and are occasionally captured up to 40lb., lie off the north shore.

Knowing from experience the value of really reliable "tips" as to quarters and attendants when on a fishing excursion in an unknown district, I am sure, Sir, such of your readers as are about to visit Weymouth will thank me for telling them that they cannot possibly stay at a better hotel than the Fountain, or employ better fishermen than the Browns. At the Fountain the visitor receives a cordial, old-fashioned welcome from Mr. and Mrs. Dunn and their charming daughters, find an excellent *cuisine*, and will be agreeably surprised on leaving at the smallness of his bill. The brothers Brown (Fred, Albert, Harry, and Herbert) are all really fishermen "up to date," believing in fine tackle, and having half-a-dozen of the smartest sailing boats it has ever been my pleasure to see afloat, and plenty of good "gear" for all kinds of fishing. They are very civil, smart, and obliging, and are young fellows to be trusted in every way, especially as they are abstainers, which is by no means a fault, when one remembers the "alcoholic wrecks" who tout for custom at some sea-side resorts.—I am, Sir, yours faithfully, The Judicious Hooker.

FISHING FROM SOUTHEND PIER.

Sir,—Will some one kindly give me instructions for fishing from Southend Pier? Best months, age of moon when the tide serves for day fishing, line, bait (would mussels or shrimps from London do?) I should make daily trips. I can refer to back numbers of the *F. G.*—Yours truly,

Hackney. H. Wheatley.

HARLING FOR SALMON.

Sir,—In the issue of the 12th inst., "Charalah" asks for an explanation of the term "harling" for salmon! Harling is a process adopted chiefly on the Tay, and to a small extent on other waters, which are too wide to admit of their being properly or completely fished from the banks. It is carried on by means of a boat, in which the angler sits in the stern, while a couple of men pull gently up-stream in a zig-zag fashion. The amount of pulling, however, ought to be so light that the boat should really lose way a little. Two or more rods are placed out over the stern, each with some 30yd. to 40yd. of line out, with one fly on each. When a fish bites, the angler catches up his rod and plays the fish as if he were on shore, while one boatman reels up the other lines, and the second boatman pulls for the shore. As soon as the boat touches the angler leaps out, and plays his fish from the bank.

This is called "harling," and it may be objected to by some on account of its unsportsmanlike look, but the practice is much adopted as being the only effectual way of working so large and wide a river as the Tay. On a good day it may happen that a fish may be on each rod, in which case what is lost in casting may be made up in skill in landing. Generally speaking, however, I conclude that anglers will acknowledge that one salmon caught by casting is, from a sporting point of view, worth a couple taken by harling.—Yours truly, F. Russell.

Sir,—In your issue of last week "Charalah" asks to have the method of "harling" explained, and states that he cannot find it described in "The Book of All-Round Anglers." "Harling" is a local name for trailing, or trolling as it is termed in Ireland, and "Charalah" will find a description of this method of taking salmon commencing on page 120 (Div. III.) of my book.—Yours, &c.,

John Bickerdyke.

HEIGHAM SOUNDS AS A GOOD FISHING QUARTER.

Dear Sir,—The following particulars of Potter Heigham may interest your readers. During the whole of my stay there and round about I never weighed in with less than two stone to one rod only, and on one occasion my bag consisted of fifty-six fish, rudd and roach, weighing 51½lb. This was on Heigham Sounds. The fishing round there is as good as it can be, the rudd simply abounding in tons weight, single ones being frequently caught up to 2lb. in weight. Potter Heigham is on the Eastern and Midland Railway, twelve and a-half miles from Yarmouth. The Bridge Hotel is one of the most comfortable hotels I have had the pleasure of staying at. The tariff, including breakfast, meat luncheon, and hot dinner, with first-rate bedrooms, is six shillings a day. You must, of course, fish from a boat, which can be hired for two shillings a day. I shall be happy to give any of your readers further information by writing me.—Yours faithfully,

88, Edgware-road, W. Anthony Percival.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, SEPTEMBER 19, 1891.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE fifth contest promoted by the Birmingham and District United Angling Association was brought to a successful issue on Monday last, at Wyre, near Pershore. For the last month or so this event has been the chief topic at the clubs, and a considerable amount of discussion has taken place concerning it. Notwithstanding the change in the weather, which indicated a wet day, the anglers and their friends came trooping to the station, and the first train left Bordesley fully fifteen minutes before the specified time. At Snow Hill and Hockley the committee who had the sale of excursion and contest tickets in hand were doing a roaring trade, and as much as £60 was taken in railway tickets alone. The record of last year was beaten, as near upon twelve hundred persons went from Birmingham, and about sixty members and friends of the Dudley branch went by the special trains chartered by the association. As the trains discharged the passengers the rain came down in torrents, and the station having no sheltering accommodation there was nothing to do but to face the storm and get on the way to Wyre, the nearest way to which is through a market garden with a path more like a ploughed field than anything else, but the anglers and their friends, amongst whom were many of the fair sex, braved this difficulty and eventually arrived at the Anchor Inn. Some of the females presented a deplorable condition, caused by the rain and mud. It was decided to get the whole of the committee together and consult as to the time of starting the contest, and apportion the committee over the various sections to act as umpires. During the whole of this time it continued to rain, but at 11.25 it cleared off a little, when it was decided to have the draw for places at 12.15. This was announced to the contestants, and at the appointed time the draw took place, when six hundred and twenty-nine members came forth to brave the weather and try their skill in order to secure the blue ribbon of the great Midland Association. The contest was fished on one side of the river only, and the continuous line of competitors reached right from Wyre to Fladbury, which is a distance of about four miles, the ground being marked out the day previous by the referees, Messrs. Coles and Dance. It will thus be seen that the person who had the misfortune to draw the last numbers had a good walk to do before he reached his contest ground; but the members took the matter in good part, and those who had to go the long distance set out with a will to accomplish their tasks. The signal to commence the contest was given precisely at one o'clock, at which time the rain continued to fall, and, with one or two brief intervals, continued throughout the contest, which was of the ordinary two hours' duration. The rain was accompanied with a brisk breeze, which in some of the unsheltered portions of the river caused a strong ripple on the water. This was very much against the roach fishermen; but still, under these most trying circumstances, the contestants stuck to their tasks like Britons. The usual casualties occurred to some of the anglers, and breaking of tackle was lamented by more than one. So the contest proceeded until three o'clock, when the signal was given to cease fishing. This the members were pleased to hear, as some of them were wet to the skin. The umpires lost no time in collecting the bags with the fish in, and in good time reached the Anchor Inn, where the fish were weighed. The first prize-winners weight was 2lb. 1oz., and the lowest weight 8oz. The smallness of the catches is accounted for by the bad state of the weather, and the great number of persons who were constantly walking along the banks of the river, whilst some of the anglers who used tight lines instead of running tackle were all abroad when they found that they had to fish in about 16ft. of water. The river was in splendid condition, and had the weather been more favourable there is not the least doubt but what the takes of fish would have been much heavier. At the conclusion of the weighing of the fish the sun came forth in all its glory, when the brass band in the marquee, which during the day had done their best to cheer the people up, sent forth their musical strains in honour of the welcome change, which was made much of by the excursionists, for the short time they had at their disposal, the return trains left Pershore at forty minutes past six and seven o'clock. A word of praise is due to the committee of management and the referees for the manner in which they worked to make the contest a success. The prizes will be distributed on Friday evening next, at the Birmingham Arms Hotel, Smithfield, when a smoking concert will be held.

A LARGE ANNAN SALMON.—On Friday evening, Mr. T. Reid, second keeper to Mr. Brook, of Hoddom Castle, hooked with fly and successfully landed a salmon of 43½lb. This is the largest salmon killed this season in the Annan. Mr. Reid had another salmon of 16lb.—HEATHERBELL.

FISHING AT PULBOROUGH AND AMBERLEY.—Upwards of eight hundred passengers, anglers and their wives, children, and friends went down by the cheap early special fishing excursion train to these two little rustic Sussex villages on the 13th inst.; in fact the number of passengers, ordinarily speaking, was so unprecedentedly and unexpectedly large that several additional carriages had to be annexed to it. The weather was beautifully fine for the pleasure seekers who visited the neighbourhood and the domains or grounds of Arundel Castle, one of the seats of the Duke of Norfolk, which was open for their enjoyment, and not closed, as has been erroneously stated by some misinformed correspondent in a contemporary journal. Anglers, too, had it much their own way, the water of the Arun being in splendid condition, the sheen on the surface of it not too brilliant or clear, and a nice gentle wind in the right quarter. There were some comparatively heavy fish caught, roach and bream especially, by Messrs. J. Smith, Portman, A. Conn, Parkin, C. Watling (Great Northern Bros.), F. Vaneghan (Funny Folks), Pailes, H. Whitehead (Amicable Waltonians), Flint, Genesse, Burdett, Stretch, and a number of others. Most of the fish taken were in good plump condition, and some of the roach weighed fully 1lb. each. A bream landed by Mr. Pailes, of Fittleworth, lowered the scales at 4lb. A few of the anglers who got down on Saturday spent all the night fishing on the riverside. It was stated by a pretty good authority that the number of rod fishers out must have been close upon three hundred. The next open roving competition is to take place at Amberley on October 4, and should the wind and weather be anything like favourable, it is expected that it will be extremely well patronised, more so, in fact, than the last one, which was very successful indeed, and satisfied and pleased everyone.—RAMBLER.

NOTES FROM LANCASHIRE.

A GREAT many rods have been out during the past week, and although the brilliant sunshine to some extent interfered with sport, plenty of a good kind is reported. Club contests appear to come out of the ordeal in a most inglorious fashion, and it is a question for consideration whether it would not pay the different clubs to go farther afield than to award prizes for fish that any school-boy would refuse to retain in his possession. In the leisure of the coming winter, clubs would do well to thrash out the whole question of contests.

THE Townsend Arms Angling Society is usually a well-managed society, and deserving of more support, but if they allow such items as that in connection with the prize won by G. Yates, in a recent contest, trouble is in store for them. No doubt the club think their rules sufficient, but events have proved otherwise, and in order to prevent unpleasantness in future, the full rules and regulations should be plainly set forth. No doubt a suitable prize will be provided for Mr. Yates to take the place of the missing one.

MR. SAM BROOKES, fishing the Dane this week. caught a nice basket of fish (trout and others), weighing 9lb.; amongst them was a trout of such splendid proportions that a well-known angler is having it set up. It is 11in. long, and weighs 11oz. Mr. Gibson, fishing in company with the above, also secured a nice basket of mixed fish.

THE Palatine Club attempted to fish a contest in Boynton Pool on September 12, but only Mr. Richardson succeeded in winning a prize, which is, of course, the first prize; the others still stand awaiting owners.

THE Shakespeare Club, who fished at Chester, were a little more fortunate, and obtained winners for three prizes—First, Mr. Walker, 1lb. 14½oz.; second, Mr. Reid, 1lb. 6½oz.; third, Mr. Hand, 5½oz.

THE delegates of the amalgamated districts held a meeting at Hyde on September 12. The veil of mystery and secrecy has evidently descended on this august body, for no report of their doings is forthcoming. It is perhaps as well it is so; a change of officers might conduce to the general tone of the executive.

THE Buckland list of prize-winners is as follows: Messrs. J. Coates, R. Ashton, A. Craddock, and J. Johnson. A keen contest is what might have been expected from the class of anglers in this club.

ANOTHER good club is the Dorset. They have just held a contest for very valuable prizes. The following is a complete list: Messrs. Oldham, Lees, Sykes, Hilton, Levity, Davies, Palin, Bolsover, Froggart, Stanley, Garner, Rathbone, and Pickering. Fine weather and generally good sport favoured this match, which was fished at Congleton.

A VERY serious item in connection with the contest of the St. George's Club is reported. A fraud was attempted, but detected. The committee doubtless are able to deal with the matter; but what can they expect when a prize is offered for the smallest fish, and that a "special?" The following is the list of winners: Messrs. J. Blake, W. Smith, W. Loydall, C. Jones, J. Leake, J. Craven. Special prize for the smallest fish, Mr. J. Craven.

THE Duke of Cambridge Angling Society, the Tatton Angling Society, the Cambrian Angling Society, and many others are now in the contesting humour; but details must be left out of these Notes. One contest is so much like another, that special items are very scarce.

ANGLERS visiting the Ribble will do well to have their credentials with them, as the watchers are a very energetic lot of men, and faithfully perform their duties. Only last week we heard of one walking forty miles in one day in the performance of his duty, and we say, Bravo!

THE NORFOLK BROADS.—The tide seems to be turning in the Norfolk Broads, or, rather, in the discussion over the rights and privileges—public and private—in connection with them. For one thing, the agitation has helped to clear away some of the dust raised at the outset, when the one point urged was the curtailment of public rights by private owners, and much has been revealed which during the first burst of indignation was allowed to pass unnoticed. The trippers who have made the Broads their holiday home have been proved to be as much offenders against the public right as the riparian owners who have closed their waters, and as week after week information is poured in, the case for the latter becomes morally stronger. To those who love the Broads for their natural beauty, and who go to them for rest and quiet study of their lovely scenery, the Cockney sportsman is as bitter an enemy as the most churlish of proprietors, and evidence is not wanting that some of those who are first in their appreciation of Norfolk waterways would be willing to see the riparian owners gain the day, in the hope that the old peace and solitude might be once more restored. Accounts are to hand of reckless shooting, of impudent trespassing, and of unseemly orgies, while among the more respectable yachting men complaints are heard of rowdy camps, from which foul and unseemly language has floated far upon the night air. We are aware that all this does not affect the legal side of the question, which is to be submitted to a court of law, in which both sides will doubtless do their best to prove their case; but it makes it very evident that, whichever way the issue goes, some restriction must be placed upon those who only enjoy their holidays when they make other people unhappy and uncomfortable. The question of the wild birds which have for so many generations made their home on or near the broad Norfolk lagoons must also receive attention, if we are not to lose what is to many a peculiar charm of the locality, when if the sportsman of wild and erratic aim be banished altogether from the stream there will be few to mourn over him. If every broad and stream were declared public property to-morrow, it would be necessary to make enactments to prove that a public highway is not necessarily a place for public licence.—*Norfolk Daily Standard.*

NOTES FROM NOTTINGHAM.

HEAVY rain fell in our district on Monday, and at one period barbel anglers began to quake lest the Trent would rise and spoil the prospects of sport amongst their favourite fish. The river, it is true, did come on a few inches, but the influx was untraceable on the following morning. Numerous well-known swims have been baited since the despatch of my last Notes, and at Holme Pierrepont, Mr. J. Lowater has taken in four outings something like fourteen fish, exclusive of chub, dace, and eels. His best day yielded ten barbel, although none exceeded 4lb. Mr. W. Parr, of the Colwick fishery, has killed a few barbel and chub; and at Collingham two Nottingham gentlemen have bagged, in one outing, seventeen barbel. On the 13th, Mr. H. Benson, of Derby, caught half-a-dozen at Gurton Stakes Weir, near Sutton Home; and on Tuesday further sport was met with in the same neighbourhood. On Monday, Mr. S. Pogson, of the Nottingham Bowling Green Inn Society, landed a couple of barbel at King's Mills; and in this excellent length, last Thursday, Mr. J. Greaves, of the Larkdale Inn, Oliver-street, Radford, caught a remarkably fine lot of roach with creed wheat; two of the fish weighed 1lb. 4½oz. each. Mr. Walter Marshall, of Wilford-lane, West Bridgford, had a good show with the maggot; and at Clifton, Mr. Frank Gibson, of Hyson Green, killed above 20lb. with the maggot, Mr. Gibson's best fish exceeding 1lb. 7oz.; and on Monday he took a choice assortment of chub and dace with the same description of bait. Mr. J. Taylor, Arkwright-street, Nottingham, brought bread paste into use amongst the roach at Wilford with marked success; and lower down the river some average lots have fallen to the rod of Mr. Geo. Hall. Mr. J. Boyd, Nottingham, has excelled amongst eels with the wasp grub; and on Monday I caught a splendid sample near Beeston, Rylands. Pike are now beginning to run at the spinning-bait on the edge of the streams, and a friend informs me that Mr. H. R. Jackson, of the Nottingham Wellington, lost one the other day estimated at 10lb. The fish was only slightly hooked, and turned off through one of the hooks giving way above the barb. There has perhaps been a slight improvement in fly fishing, the fish, particularly dace, rise freely towards dusk. Whilst the intense heat lasted, hundreds of flies were hatched out, and at night the surface of the river in the Wilford district teemed with them.

ASTRONOMER Joseph (Mr. Joe Minion), of the Nottingham Bowling Green Inn Angling Society, is rapidly advancing to the front as an angler endowed with the patience of Job. No day is too long for him, and he is not very particular as to the kind of bait he employs. First we hear of him baiting with "ham-bones," and next with "shoulders of mutton." On Thursday last, he hurried from home with a friend to fish his favourite ticket water, below Radcliffe railway bridge. His departure was kept a profound secret to all his friends, excepting friend John Theaker, the professional, of whom he begged a supply of worms. Commencing as early as eight a.m., he plodded on until past midnight, and then made tracks for home, having fully six miles to walk. He had slain four eels of the gross weight of a pound, had lost ten tackle, and was well satisfied. Meanwhile his family had grown greatly alarmed at his untimely absence, and search parties were instituted with a view to discover his whereabouts, as it was feared he had hooked a mammoth barbel, and had been pulled neck and heels into the river. On being told of the expedition that had set out for the recovery of his body he grew must indignant, and pertinently inquired "What do they take me for?" "They know well enough I am an astronomer; how am I to make my observations in the day? I must make them at night, and when my theme of 'star reading' is completed, I mean to lecture on it at old Sam Pogson's, and tell him from me to have a bumping muster at the club house." Personally I wish Joseph every success. He was out again on Saturday night, and discovered a new planet, but no fish.

WHAT angler has ever heard of the word "Waterlonian?" I have heard of Waltonians and Cottonians, but never, until the other day, did I know we possessed "Waterlonians." The term was freely bantered about at Host Pogson's by a veteran who was seeking to expose the grievances, or otherwise, of the Notts Anglers' Association. He desired to know what had become of certain funds, and whether they had been "handled" either collectively or individually. Working-men anglers and the "Waterlonians" were actually being sat upon. All their rights had been usurped, and nothing now was left but to "fork out." Sport had become a burden, and in the future fishing-tackle would not be worth begging. Socialism was rampant, and "so mote it be." Later in the day Mr. Pogson engaged the venerable orator to deliver a lecture dealing more fully with "Waterlonians" before the members of his society. This, coupled with the fact of the astronomer's "New Discoveries in the Heavens," should surely attract a full house. It is the intention of Mr. Phillip Wilson, the president, to take the chair, and he has promised before the lectures are given to recite his late friend's (Mr. Priestman) heroic story, entitled "He broke my back. I told him to do it, and he did it *again.*"

MR. CHAS. JACKSON, fishing-tackle dealer, Carrington-street, Nottingham, is responsible for the public announcement that two salmon have recently been caught in the Sawley waters with the spoon-bait, which, it is to be presumed, was intended for pike. The person or persons alleged to have taken them were not possessed of the necessary licences, and in the interests of the Trent Fishery Board, Mr. Jackson ought formally to lay the matter before their clerk. He has the sale of their licences, and is therefore a representative. If the fish were got, there is little doubt they would be in very poor condition, through having remained in the river since the spring.

A GLOOMY report reaches me from Shardlow. On Sunday morning, whilst most respectable people were at church or chapel, a gang of poachers, said to hail from Castle Donington, netted a portion of the river near Marshall's meadow, and subsequently carried away a large quantity of coarse fish. A gentleman, a ticket-holder, staying in the district, discovered them in the midst of their work, and it is to be hoped he may again be able to recognise them. Two were naked, and manipulated the nets in the centre of the stream. The fishery has certainly been abused by the people frequenting it, especially on Saturdays, who had no permission to use it at all. No doubt Mr. Wood, the lessee, will stir in the matter, and make an example of offenders.

NOTES FROM SHROPSHIRE.

WE have been favoured with glorious weather lately, and even Shropshire anglers have been fairly well satisfied, a circumstance which has been rare indeed during this season. The river is now, for the first time for many weeks, in really good condition, and some good trout have been captured.

THERE are several causes assigned by Shrewsbury anglers to account for the comparatively poor supply of trout in their locality, notwithstanding the constant endeavours of the Shrewsbury Severn Angling Society, backed up by the Board of Conservators, to restock and preserve the river. That the stock of trout nothing like represents the labours of the society in this respect is an undeniable fact; but there is great uncertainty as to the cause of this. True it is that many good trout are captured around the town in the course of a season, but they are few when compared with the thousands of fry that have annually been turned into the river for many seasons. Some urge river poaching as the cause of the decrease; others pollution; and still more are inclined to the opinion that the ravages of pike and other of the more rapacious of fish account for the comparatively poor sport. It is probable that all these evils have to answer for their share of the mischief; and at any rate the angling society and the Board of Conservators would do well to turn attention to them, with a view to making the Severn what there is not the slightest reason why it should not be—a first-class angling river. As to river poaching, netting has, to all appearances, decreased in a satisfactory degree, but there is no doubt that a good deal is still carried on under the darkness of night, and in the quiet reaches of the river. This the one or two bailiffs, who have to guard so many miles of water around Shrewsbury, cannot possibly be expected to prevent to any appreciable extent; and when one considers the impracticability of employing a large staff of watchers, it would lead one to turn to other means to help to prevent river poaching. Would it not be well, therefore, if the angling society were to obtain the requisite permission from the Board of Conservators to stake or stone the fords on the river, within the limits of the borough, in such a manner as would effectually prevent netting, and at the same time not interfere with boating? This would not prove a gigantic undertaking, nor a very expensive one, and it would at any rate result in a lifelong stumbling-block to the river poacher, who has undoubtedly much to answer for in the wholesale destruction of fish. River pollution, too, is, beyond question, another great cause, and it is hoped that ere long the investigations of the Severn Board of Conservators in this matter will tend to the desired result, though the question, as a whole, is of such magnitude that anglers will have to wait many years before the river is entirely cleansed. Pike, we are inclined to think, have not so much to answer for in the destruction of trout as they are credited with, but doubtless they are too plentiful in the river, and should be got rid of whenever opportunity presents itself.

. THE grayling fishing season opens very unsatisfactorily in the Shrewsbury district, and as yet no good capture of this game fish has been recorded. In years gone by the grayling was fairly plentiful around Shrewsbury, but gradually they have become fewer and fewer, until now their capture is of rare occurrence. There are one or two to be found at the Isle, Emstry, Preston Boats, and a few other localities favourable to their habits, but it will hardly be worth the angler's while to devote a day to their capture. Would it not be well for the Angling Society to try the experiment of turning a few thousands of these fish in the fords next season for a change, instead of the trout they are wont to consign to the river and their many enemies.

THE members of the Ironbridge Severn Angling and Protection Society are terminating in a thoroughly befitting manner the fishing season proper—a season which has been to them a thoroughly enjoyable and successful one. One cannot help but note the contrast between the Shrewsbury Society and the Ironbridge men in respect to these gatherings, a contrast which does not show up the former body to advantage beside their less prominent but scarcely less enthusiastic brethren from the Bridge. The Ironbridge men have lost no opportunity of meeting together, and by prize outings and other pleasant gatherings, promoting an interest in their society which will no doubt have its influence for good in the future; but, on the other hand, their brothers of the angle at Shrewsbury have, to say the least of it, been somewhat apathetic, and have not until this week held an outing.

THE Ironbridge anglers held a very successful outing on Wednesday in last week in charming weather, twenty-seven members taking part. They were conveyed by brake to Berrington Cound, Cressage or Leighton—whichever place their fancy led them to select. Fifteen prizes were offered for competition and twenty-five members weighed in. The following are the gross weights of fish caught before the handicapping was made: Messrs. J. Edwards, 6lb. 11oz.; W. Wilson, 5lb. 12oz.; W. White, 5lb. 10oz.; J. Toddington, 5lb. 2oz.; J. Norry, 4lb. 13oz.; E. Jarratt, 4lb, 10oz.; W. Hayward, 4lb. 8oz.; H. Aldred, 4lb. 6oz.; A. Aldred, 3lb. 12oz.; B. Hughes, 3lb. 12oz.; F. J. Beddoes, 3lb. 8oz.; J. Wilson, 3lb. 2oz.; T. Bailey, 3lb.; T. B. Rowley, 3lb.; W. Waghorn, 2lb. 12oz.; N. Boden, 2lb. 8oz.; J. Langford, 2lb. 5oz.; W. Bennett, 2lb. 4oz.; W. Edwards, 1lb. 14oz.; R. Ketley, 1lb. 10oz.; W. Preston, 1lb. 10oz.; A, Nicholas, 1lb 8oz.: A. Dixon, 10oz.; A. Green, 8oz.

A BOLD FISH.—An unusual incident occurred to a gentleman lake fishing in South Norway during the early part of August last. He was using three flies and struck a rising fish, and, believing he had missed it, made another cast, and hooked and landed a trout on the tail fly, weighing just over a pound, and to his surprise he found one of the droppers, a large fly, which had broken off close to the shank, fast in its lower jaw. Truly a bold fish to rise again immediately!

SNATCHING FISH. — William Stenning was brought before the County Bench, at Kingston-on-Thames, on Thursday last, for snatching fish at the Surbiton Sewer on the 26th of August last. Mr. Bunting, of the Thames Conservancy prosecuted on behalf of the Thames Angling Preservation Society, upon the evidence of William Douglas, head river-keeper to that society, and his assistant, John Davis, The defendant was fined £1, and a caution,

NOTES FROM WORCESTER AND DISTRICT.

THE rivers Severn and Teme are in capital order for fishing, and there has been some capital sport during the last few days, among the coarse fish in particular; some very large roach have been taken, one specimen near 2lb. The flies are on both rivers in abundance, the Stone Fly in swarms on the Teme, which with the Pale Blue, Blue Dun, Red Tag, Red Ant, and little green insect have killed well, but the grayling taken have been small. Some good baskets of trout have been taken; the best fish with the Wasp Grub.

ON Thursday week the St. John's Angling Society had their third outing to Lulsley, the weather gloriously fine, the water then hardly settled down; still some good sport was had, the first prize going to Mr. L. Higgs, with 4lb. 2oz.; Mr. Berrington, second, 1lb. 10oz.; Mr. Williams, third, 1lb. 9oz.; and Mr. Meredith, fourth, 1lb. 1oz.

ON Thursday last the four Worcester clubs had a game fish competition on the Lugg, by the kind invitation of their president, E. H. Brown, Esq., who gave a four-guinea cup and other prizes for competition. Five members from each club competed.

NOTES FROM YORK AND DISTRICT.

ANGLING in this district during the past few days has been somewhat slack, and little of any note has come to light. A few fishermen, however, turned out on the closing days of last week, when the water and weather were perhaps more propitious than at the time of writing. The Swale, at Richmond, has been in fine order, and the evening rise good, while I have heard of anglers doing fairly well in the Leeming and Bedale Becks. The Nidd has afforded moderate sport, the best flies being Fog Black and Red Spinner, while in the Wharfe and Yore Stone Nidge and Brown Owl have held sway. In the Derwent fishing has been carried on with comparatively good success by those who have tried its waters. Sport in the Ouse has not been over-animated, but bottom fishing in the Foss has been much better.

TROUT angling on the Yorkshire streams may now be considered as nearing its close. The fishing cannot be justly said to have been bad, taking the season on the whole, although delayed an unusually long time in the earlier months by the adverse conditions of the weather. In the many North Riding trout streams, as well as in the Yore district, the baskets have at times run heavy, and the fish in good condition, especially in the Swale, where the fish are numerous enough, but unhappily rarely attain any noticeable size. In the latter river the slaughter has been great, but, as is well known at Catterick Bridge and neighbourhood, the fishing is excellent. Alluding to the Swale, says an authority "when the waters are in full trim, ten or a dozen fish are no uncommon day's work in this river." Some nice fishing has been obtained in the Codbeck, at Thirsk, while the higher waters of the Ribble have been resorted to with good results. Throughout the Yorkshire streams the trout are reported to be decidedly on the decrease, and captures are not nearly so numerous.

GRAYLING fishing is now engaging considerable attention with a good number of anglers in this district, and, according to report, the fish is getting into better condition day by day. The present month, and October and November, are indeed the best months for taking it, and all that is wanted now is, I am informed, a slight frost to thin the natural fly off the water, and the fish will then take the artificial with much greater eagerness. Good pike fishing too, should be in store for the angler this month and next, the more ardent pike fishers asserting that they can hook the finest fish on a sharp frosty day, providing of course they can stand the weather.

NOTES FROM IRELAND.

[FROM OUR DUBLIN CORRESPONDENT.]

"BETTER late than never!" At last we are being favoured with something like decent fishing weather- a wonderful and most delightful change has prevailed pretty generally over the lakes and rivers of this country during the past week, and as the "beginning of the end" in most quarters is now at hand, angling, where such exists, is being pursued with perfect energy.

ALREADY several of the eastern districts have wound up sport—notably the Slaney, Co. Wexford; the Aughrim, and the Vartz, Co. Wicklow, and their tributaries; whilst rod-fishing on the Dargle river, Bray, may be said to be practically at an end. With regard to the latter, the run of salmon has been great lately, and the high state of the river has enabled numbers to ascend the upper reaches. Poaching in this river is still rife, notwithstanding the several severe examples that have been made; but great energy is still displayed by those on protection duty.

ON the 1st of October next, angling on several other popular Irish waters must terminate, amongst them the famous Westmeath Lakes will then have brought to a close one of the poorest seasons probably in its record, a fact purely and simply due to the adverse weather it sustained throughout its term. A fair number of rods are fishing this week, and some good takes of big trout are reported.

SALMON fishing on the river Blackwater, for nets and weirs, closed last week. The season is reported to have been good, but peal fishing was most successful, the returns for July and August being excellent. An effort is about being made to have the season for these salmon fisheries opened earlier than the 15th of February. A memorial to the Fisheries Inspectors is almost completed by those interested, and who by experiment know that spring fish are in the waters in numbers during the month of January. The dry season of last February enabled numbers of salmon to pass up the tidal portion, escaping the nets, and this resulted in good fishing for rods in the upper reaches.

HERE'S another boon for anglers! A new patent by Mr. Boursin, of Tralee, who has just invented a new method of holding flies in a fly-book. "The plan consists of attaching india-rubber bands crosswise to an ordinary fly-book, and by means of slides, cut about an inch apart, fastening the flies so that the angler can see at a glance the one he wants to use." The numerous advantages which this little invention possesses will make themselves at once apparent to the angler. Two very important ones at least are noticeable: First, on a windy day the flies cannot get mixed up or be blown away; and, secondly, when the book is closed they cannot be crushed.

ON Monday last, the city of Dublin had a visit from a royal sturgeon, which created great excitement by swimming nearly on the surface of the Liffey, almost up to the heart of the city. Hundreds of people saw the monster, and several attempted to capture it, but it effected its escape back to sea.

ALL the world has it now that a syndicate of English capitalists is in course of formation to work the Fisheries of the Irish coast, and that the promoters are largely composed of men hitherto connected with the North Sea Fisheries. What a pity such a company was not in actual working order at the close of last week, on the Skibbereen coast. The great mackerel fishery there has just commenced, and the takes are reported to be unparalleled. The boats in Dunmanus Bay were overwhelmed—in one day, 40,000 fish, and on another day, 90,000 fish were captured. There are unfortunately, no curing stations there, nor were any buyers present, so the fishermen, after saving as many fish as possible, had to make manure of the remainder, and strew the surrounding fields with what would have well represented many pounds of sterling English money.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope, Post Card Reports preferred unless for special meetings.*

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly delegate meeting will take place on Monday evening next, September 21, at 8.30.—R. GHURNEY, sec.

Anglers' Association.—The competition at Langley on 13th ult. was duly fished for in association water, when about ninety competed, I fully expected two hundred. The anglers were started off in grand style by J. Harris, of the Prince Arthur A. S. The weather was far from being prosperous, and the weeds that the water contains, especially on top of the water, but I am pleased to state the prizes were all won by the following: 1st, Mr. C. Messenger, of the Queen's A. S., 2lb. 11oz.; 2nd, Mr. Sansom, of the Marylebone A. S, 1lb. 5¼oz.; 3rd, Mr. Jones, of the Eastern Piscatorials; 4th, Mr. Rositer, Clapton Park A. S.; 5th, Mr. Row, Prince Arthur A. S.; 6th, Mr. Milford, Prince of Wales A.S.; 7th, Mr. Shiers, Camden A. S.; 8th, Mr. Shaw, Golden Barbel A. S.; 9th, Mr. West, Kilburn Piscatorials; 10th, Mr. Barnard, Marylebone A. S.; 11th, Mr. Warren, Bloomsbury A. S.; 12th, Mr. Messenger, sen., of the Queen's A. S.; 13th, Mr. Axworthy, Prince of Wales A. S.; 14th, Mr. Hall, Campbell United A. S. Mr. Harry Sargeant, of the Royal Windsor and District Piscatorial Society, kindly officiated as referee. A cordial vote of thanks was passed to the committee and stewards for the way the competition was carried out. A vote of thanks was also passed to Messrs. D. Pithouse and Alfred Higgins, of the Great Western Railway for his great kindness. The prizes will be announced in *F. G.* for the Anglers' Benevolent on behalf of this competition out of the surplus money which was left.—B. ABRAHAMS, sec.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—The next visit on the above list will place on Wednesday next, at the St. Albans and Excelsior Angling Society, the George, New-street, Kennington Park-road, where I hope to see a good muster of brother anglers.—G. W. ARMSTRONG.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks the receipt of £2 from the Original Alexandra, and 1s. 5d. from the Lord Palmerston Angling Societies, the contents of donation boxes, and four shillings and sevenpence collected at the Langley competition, on 13th Sept. The next meeting of the committee will take place on Friday evening, Sept. 25th, at half-past eight o'clock.—R. GHURNEY, sec.

LONDON UNITED ANGLERS' SOCIETIES FOURTH ANNUAL ANGLING COMPETITION, in aid of the funds of the Anglers' Benevolent Society.—At our fortnightly meeting on Friday, the 11th, I am very pleased to state that the committee was augmented by several names, also that eleven prizes were promised, some of the value of £1 1s. The next meeting will be on Friday, the 25th, at 9.30, Foresters' Hall, when I shall be pleased to hear from any gentlemen or societies that can assist me in the good cause.—S. MALBY, sec.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting-hill Gate, W.—The members met in good muster, and the chief business was of the usual kind. We fish a roving match for three money prizes, and a picture presented by one of our members, all to fish in water without payment.—B. ABRAHAMS, sec.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—This week the following members weighed in: W. Hopping, W. Thornett, J. Pailes, and G. Marriott. The next visit on the Central Association takes place to the above named society on Tuesday, September 22.—J. PAILES, sec.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—We fished at Fittleworth on the 13th inst., but only one member was successful, viz., Mr. Abel, winning the first prize with jack, weight 2lb. 2oz. The remaining prizes will be fished for on the 20th, at Fittleworth, conditions as before. Next Wednesday being general meeting night, I trust members will show up in good force, as we have some important business to bring forward, roll call at 9.30 sharp. I am pleased to say that Mrs. Hawkins, of the Swan Hotel, Fittleworth, has kindly given a prize, which will be added to our list to be fished for on the 20th inst.—W. H. POTTER, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our fifth outing this season will take place at Chertsey on the 20th inst.; roving; when I hope to see a good muster on the towing-path. Three prizes will be fished for, and Mr. Higgenbotham, of the Battersea Friendly, will also give a handsome fourth prize for the largest roach taken on that day. The next visit on the S.L.U.V.L. will go to this club, the date being Sept. 29, when we hope to see a good show. Several of our members were out on the 13th, and the following weighed in: Messrs, Jones, 3½lb. of roach and dace; Barraclough, 2lb. 5oz. of roach; Acland, 2¼lb. of roach and dace; Cooper, roach; Bond, roach; King, roach; and several others weighed in.—J. RICH, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 13th inst., several of our members were out, and a nice show of fish being the result contributed by the following members. Mr. Lambarth, jun., having a nice show of roach, bream and rudd; Mr. C. Irwin, roach and bream; Mr. W. Hakes, roach and brace, and Mr. Whitebread, roach and bream. On the 20th inst., the members fish for six special prizes at Bourne End. All members to go by the first train same morning.—E. R. EMBLETON, sec.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The members of the above society fished their September match at Chertsey on the 13th inst., in lovely weather, with the result that I had the good luck to take first prize; Mr. W. J. Wade, second; and Mr, T. Bowling, third; leaving one prize still open to be taken. Mr. Palmer had a show of fish from Pulborough weighing 6lb. 14oz. A number of our members will represent their respective clubs, at Burnt Mill, on the 20th inst., in the Club Union Competition, and I feel sure will be able to give a good account of themselves, and others will go down to the competition, held at Tovil, under the auspices of the Maidstone Angling Society. Members will please note that the quarterly night is very close, so I hope they will clear the books, and also I should be very pleased to receive the prizes that were promised.—A. G. SMITH.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—We intend fishing our monthly outing at Caversham, on Sept. 27th, to go down by first train from Waterloo. Mr. Harman has been elected chairman for the ensuing quarter, and Messrs. Scott and Savage, auditors. Members will please bring their money up with the fines next week to be eligible to fish the match. —J. TUCKER, sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—The members of this club fished a match at Amberley, on the 13th inst., for three prizes, G. Mumford taking first prize. On the 13th, Mr. J. W. Hopkins weighed in a nice tray of roach, and Mr. C. Wastell, roach, from Pulborough. Largest, 1lb. 6oz. Members are requested to attend on Tuesday next, for most important business.—GEORGE MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road.—The members of the above society fished a roving competition at Pulborough and Amberley on the 13th for their September series of prizes, with the following result: Messrs. James Smith, 11lb. 9oz., first; D. Dodson, 8lb. 7oz., second; H. Patman, 7lb. 11oz., third. Several other members also weighed in from 1lb. to 5lb. of fish, making a total gross weight of 42lb.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—The dinner, which took place on the 13th inst., went off very well, there being good fare and plenty of it. Of the two prizes which were to be fished for only one was taken (10s. 6d.), which fell to the lot of Mr. F. Barker. A committee meeting will take place next Wednesday, to consider how the prizes left to its disposition are to be fished for. On the 13th the following gentlemen weighed in, and made a good show: Messrs. Farmer, Foster, Wheelhouse, and F. Barker.—F. ROBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 13th inst., Mr. Pailes, weighed in a fine bream of 3lb. 15oz., Mr. C. Davis had roach; and Warren, tench, the latter winning a prize in the Langley Competition, on the 16th. Mr. Stewart was elected a working member.—D. WARREN.

Bostonian Angling Society.—The annual general meeting was held on the 9th inst. The following gentlemen were elected: Mr. Jennings, chairman; Mr. F. Halsell, vice-chairman; Mr. Jennings, treasurer; and Mr. J. Hoare, hon. sec. It was resolved that no fish be weighed for any day's outings, except from the waters specified for those days only. All members to start on the same morning. The following members have had fish during the past week:—Messrs. Clark, perch; F. Halsell, roach; Hoare, roach and dace; Brown, roach and dace; Rundell, a nice show of bream; and West, roach and dace. Our next outing will take place on the 11th of October, at Pangbourne.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On the 13th inst., only two of our members weighed in, Messrs. Aitchison and Westlake. A competition has been arranged to take place at Edenbridge on the 27th inst., for which five prizes have been given. All members who intend competing, will please attend next Wednesday, when the final arrangements will be made.—H. ROACH, sec.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—We fish for four prizes at Ware on the 20th inst., as under: One jack prize, ten shillings and sixpence; and three other prizes for bottom fishing; all sizeable fish to weigh; one rod only; 7.30 train from Stratford. Since my last report, Messrs. Wilson, Tucker, Bissell, Watkins, Hawkes, and Foster have weighed in bream, roach, and rudd. Our great smoking concert of the season comes off on October 6.—T. HAWKES, secretary.

Burdett Angling Society, 118, Hackney-road.—We were saved a blank on the 13th inst., by Mr. D. Flint, who brought up a nice show of bream and roach, which weighed 7½lb. We go out for prizes on September 27, and I hope members will not forget the new rules.—J. PETHER, secretary.

Buxton Brothers' Angling Society, Walthamstow.—On the 12th inst., Mr. J. Howell had a nice show of roach, and Mr. C. James caught a fine salmon trout of 4½lb. at the Rye House, a very fine specimen. On the 13th inst., a good number of our members were out, and had a fairly decent day at that much-neglected place, Flanders Weir, where that ever-courteous bailiff, Mr. McMullens, is always ready to give club anglers a welcome. The following members weighed in at night: Messrs. J. Stephens, roach and dace; J. Berry, perch; W. Billingham, perch; C. Goullee, perch; W. Whitfield, roach. On the 20th, a good number of our members have entered in the Club Union Fishing Competition at Burnt Mill.—A. SHUKER, sec.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—Members will please take notice that our outing takes place on the 20th inst. for six prizes, roving between Staines Bridge and Penton Hook, bank fishing only, jack barred. The only member to weigh in lately has been Mr. Hiscock with jack. Several members fished in the Langley competition on the 13th, Mr. Hall taking fourteenth prize.—E. W. WOOD, hon. secretary.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—On Monday last, two gentlemen were elected members. The competition announced for the 20th inst., will take place on the Broad Mead at Woking, and the competitors will leave Waterloo Station at half-past eight o'clock. One rod only. Messrs. J. S. Pulsford and J. Guest are the auditors appointed for the September term, and will make their report on Monday the 28th inst. as per rule. Sport during the past week has not been up to Dick. A few chub and barbel only.—JOHN SMITH, hon. sec.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—The next punt match will take place at Staines, on the 27th instant. Pegged-down; one rod; draw for stations on arrival.—A. TROWBRIDGE, sec.

Clapton Angling Society, Wayland Hotel, Dalston-lane.—The ordinary weekly meeting was held on Monday last at the club-house, Mr. J. P. Connellan in the chair; one new member was elected; several catches reported, and good sport had attended those members and friends who visited our waters at Ramney Marsh during the week. Mr. A. J. Oliver has had some excellent sport at Cromer. Angling matters were generally talked over, and a pleasant evening was closed by the usual vote to our chairman.—HENRY HOWSE, hon. sec.

Clarence Angling Club, Red Lion Hotel, Harrow-road, Paddington, W.—During the week better sport has been had by the members, Mr. T. F. Davison taking pike, roach, dace, some specimen perch and two large grayling; Mr. T. W. Morgan, dace and a fine grayling which is being preserved; Mr. T. Nelson, a large bag of perch. A discussion was opened by a large number of members present respecting the close season which will be brought before the members again at our meeting on Wednesday next. Members visiting our private water will now know the boundary of the two rivers as four large notice board have been placed at the extreme ends of same.—ALF E. EVANS, secretary.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey.—A roving match will take place at Cookham on the 20th inst., for two prizes. Any member not clear on the books not eligible to fish. Members are requested to attend more regularly on Wednesday nights and help to get through the business.—P. GARDNER, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—We fished a match at Denham Straghts on the 13th ult., for twelve valuable prizes, which were won with very small takes of fish, the winners were as follows: Messrs. Roake, Nunhead, Colman, Tucker, Twyman, C. Stone, Parbury, Baxter, Caddle, Duncan, Sharland, Hicks. I hope members will go out more frequently, as there are some valuable prizes offered for specimen fish.—A. SMITH, secretary.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 13th ult. we fished a boundary match at Cheshunt for seven prizes, but I am sorry to say that only six were taken. The following gentlemen were the lucky competitors: Mr. F. Woods, first; E. Wild, second; Baldwin, third; Webber, fourth; Robinson, fifth; Killick, sixth.—T. MALBY, sec.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—A special general meeting of the members of this club, will be held at the Half-way House, on Wednesday, 23rd, at 8.30 p.m. sharp, for urgent business, and it is hoped all members will endeavour to attend, it being necessary for the welfare of the club.

Eastern Piscatorial Society, Spread Eagle, Gill street, Limehouse, E.—One of our members, Mr. Jones, won third prize in the match at Langley. Our match takes place on the 20th at Pulborough. The prize-list has been extended since my last. There is now six prizes value three guineas, which we trust will all be taken.—W. BARTLETT, hon. sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On the 13th inst. the following weighed in: Messrs. F. Vanhegan, roach, bream, and perch; and Biggs, roach and dace. At the last meeting five shillings was voted to the Farmers' Wheat Competition, at Pulborough, and our worthy host, Mr. A. A. Eldridge, has also given 10s. A concert and draw will take place at the above on Monday, October 12, for the benefit of Mr. S. Watling, tickets for which will be sent round to the different clubs. —J. W. BIGGS, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had a nice show of bream, on the 13th inst., taken by Mr. Slade, 11lb. 11oz., and a few bream and dace, by Mr. Baildham and Mr. Stebbings. Other members were out but not successful.—A. PAYNE, sec.

Great Eastern Angling Society. Castle Inn, Leyton-road, Stratford New Town.—On the 13th inst. the members of the above were out. Mr. G. F. Weaver weighed 7lb. of roach and bream; F. Bates, carp, 3lb.; Mr. W. Steer, a friend, also favoured us with a show of roach.—G. F. WEAVER, sec.

Gresham Angling Society.—The sea fishing competition came off near Southend on Tuesday, when twenty-one members and friends went out in four boats. The day was everything that could be wished, but the fish were not feeding freely. Some members had tolerable catches, and others got none. On returning to the club in the evening it was found that Mr. F. M. Jones had taken the first prize of tackle, worth one guinea; Mr. Allen, second, worth half-a guinea; and Mr. W. R. Dippie, third, worth half a guinea. Something like one hundred fish were taken, chiefly flounders and plaice. At the weekly meeting held the same evening, Dr. Brunton, M.D., in the chair, Dr. Davidson reported having with two friends, caught two hundred and fifty-nine fish, principally whiting and codling, at Deal. Mr. Bramley with three other members had made a good bag at Leigh last Saturday-Messrs. Young, Close, Field and Dr. Brunton also reported having fished. A new member was elected. The Rev. C. E. Meyer read an exceedingly humorous and interesting paper on "Fishing on the Yare," and a discussion ensued on it. A vote of thanks, on the motion of Mr. E. H. Bramley, seconded by Mr. C. P. Bentley, was given to the rev. member. Mr. E. C. Clements presented a "Guide to Hastings and St. Leonard's," with some photographs, to the library, for which he was heartily thanked. Mr. Fletcher proposed a vote of thanks to the sub-committee Messrs. Norman, Fosbrooke, and Taylor for having made the arrangements for the sea fishing, which was seconded by Mr. Girling, and carried. After the usual toast, "Prosperity to the Gresham Society," and a vote of thanks to the chairman, the meeting separated.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On the 13th inst., several of our members were out, the following weighing in fish: Calcull, a nice show of perch; Wells, chub and dace; Russell, roach; Blaham, junr., roach; A. Fish, bream, roach, and rudd; Saalfield, carp and dace; Rider, perch; Bagshaw, senr., roach: Nuckley, bream; and the promising young angler, A. Fish, junr., bream; a better show than his father's, so good luck to him.—W. FENNER, sec.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—We had a fine show of dace, barbel, and chub, on the 13th inst., and on the 14th inst., a splendid show of roach and bream by Mr. Gehrling. Our annual supper is to take place on the 24th inst., when we hope to see as many friends as possible, also to arrange an outing before the fine weather is all gone.—F. GRIFFITHS.

Hoxton Brothers Angling Society.—On the 13th inst., we had a blank. The members will fish for special prizes on the 27th inst., at Cheshunt.—R. GHURNEY, sec.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—Several of our members were out on the 13th inst., but met with very poor success. Mr. Pope saving us from a blank with roach. We are still open for a few more members.—A. PAIN, sec. *pro tem.*

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—Several members were out on the 13th inst., but only W. Stretch showed fish, four very fine bream, weight 10lb. 2¼oz., saving the club from a blank. The smoking concert for the benefit of Mr. C. Leach was a success; we had plenty of talent. Secretaries please note that monies and unsold tickets are to be returned by Sept. 24th.—J. H. HERBERT, sec.

Izaak Walton Angling Society.—The members competed for four special prizes on the 13th instant, but only three succeeded in taking the required weight. Mr. J. K. Charters was first; Mr. A. Furlong, second; Mr. G. Rogers, third. Mr. H. C. Wheatley added to take of last week another show of 15lb. 15¾oz. of roach. The heaviest two scaled 1lb. 6¼oz. each.—H. B.

Jubilee Angling Society, Portobello, Kensal-road.—The only members weighing in fish on the 13th instant were Mr. H. Challen, jack; Mr. Sadgrove, roach and tench. Mr. W. Wheeler was elected a member of our society on Tuesday last.—A. IDE, sec.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—Members are reminded of the two competitions for September, *i.e.*, for the heaviest and second heaviest take of fish on any one single day during this month from the Thames. First, punt fishing; second, bank fishing. Prizes of one guinea and half a guinea for each competition. During the past week the following members have weighed in: Messrs. T. Salter, 15lb. 5oz. barbel; H. Tame, two jack, 8lb. 5oz.; Master, 5lb. 8oz. roach and dace; Prole, 3lb. 8½oz. dace; Wilmot, 3lb. 4oz. roach; Evans, 1lb. 8oz. roach.—T. SALTER, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 13th inst., the following members weighed in fish: Mr. Porter, roach, bream, and gudgeon; Mr. Watling, roach; Mr. Webster, roach, dace, and chub; Mr. Ellingham and Belton, roach. Mr. Richardson, and Mr. Wallis, were unanimously elected working members of the above.—W. WATLING, secretary.

Liverpool Angling Association.—There was a good gathering of members at our last week's meeting, the members of the Vyrnwy fishing party being expected, and everyone was anxious to see what they had done. Alas, most of them had fared very badly, and were ashamed (I suppose) to show their almost empty creels at the club-house, which was rather weak conduct, though no doubt quite a natural thing to do. The only two members weighing in, Mr. Mason, first; Mr. Wilson, second. The curator of our parks and gardens had a morning's netting in some well-stocked water, and got over seven hundred bream, many of them weighing 1lb. to 2½lb. These were all placed in our park lakes, in which there is sure to be grand fishing next year.—RD. WOOLFALL.

Liverpool East End Friendly Angling Association, 150, West Derby-road, Liverpool.—We had a fair muster of members present. At our meeting on Sept. 1st., when our third match of this season was proposed to take place at the Mollington Canal for three prizes, which were won by the following competitors: First prize won by Mr. R. Poston, with roach and gudgeon; second prize won by Mr. E. F. Matthews, with roach; third prize won by Mr. J. Hitchcock with roach. Other members had fish but did not weigh in. Eighteen competitors took part in the above match, not at all a bad muster for this society, which was only formed this year. It is to be hoped all members will be present on Sept. 29th, it being quarterly night.—T. C. SEGAR, sec.

Marylebone Angling Society, Pine Apple, Carlisle street, Edgware-road, W.—On the 13th inst., our members were at various waters, but the takes of fish were not so good as we have had lately. Messrs. Penfold, Melbourne, W. Pearce, and Sansom, had bream, roach, and tench. Mr. Sampson and Mr. Barnard won a prize each in the Langley competition.—W. F. PEARCE.

Merry Anglers, The Three Crowns, Jackson-street, Manchester.—The above club held their annual fishing match on the 6th inst., at Chester. All the prizes were taken, and a very enjoyable day spent by the members notwithstanding the fact that sport was not fast and furious. The prizes were handsome and valuable, numbering in all sixteen. First value, £3 3s.; second value, £2 2s.; third value, 30s.; and so on in proportion. Mr. E. S. Shrubsole, of London kindly offered a prize when he lately visited this club, and it has been won by Mr. Thompson. The annual dinner will take place as usual at the club house, and Mr. Shrubsole has promised to try and be with us. On behalf of the Manchester Working Men Anglers, I can assure him a hearty welcome.—THOMAS TULLEY, hon. sec.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—Several of our members have been out during the week, Mr. Feakes being the most successful having been out with a friend and having good sport among the perch. We had an election of new officers for the end of the half year, it was also arranged to have an outing for prizes at the Welsh Harp on the 27th. Open to all honorary members. I hope the members will show up in good force on this day.—J. COMBER, sec.

Mitre Brothers Angling Society, Mitre Tavern, Kingsgate-street, Holborn.—Members of the above society held their annual dinner on the 13th of September, at the Black Dog and Duck, Sunbury, near Pulborough, when a very nice dinner was served up by the host, Mr. Henley. After dinner Mr. Selman and Mr. Jolliffe, secretary and chairman, were both presented with two gold rings, as testimonials from the club, by Mr. Conway, treasurer. Everyone passed a most enjoyable day.—J. CONWAY, treasurer.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—Mr. W. Grimmett, chairman of the club, has weighed in 14lb. 13oz. of roach in connection with our competition started on behalf of the T.A.P.S., being the first to show fish. Mr. Newbury's great catch of 60lb. from Staines does not reckon in the above competition. It is to be hoped that other clubs will take tickets, price one shilling, as soon as possible, as the time for big takes is at hand, and the prizes are both numerous and valuable. A well-attended meeting was held on the 17th inst., when it was decided that our next outing, Thursday, September 24, should be an open one. I am glad to say that several of the members took tickets for the T.A.P.S. competition. Besides the two prizes on the list, two lapsed prizes have been added. It was also carried that the lapsed prizes of September 10 be fished for on Thursday, October 1, at Twickenham, by those members who went to Bures.—A. E. Baldwin, sec.

North Lambeth Angling Society, 108, Westminster Bridge-road.—Most of our members were out on the 13th, but owing to being some distance off returned too late to weigh in. Members are reminded that the last Friday in this monthy is quarterly night.—F. Wallis, sec.

North London Angling Club, Tap House, Holloway-road.—Since my last the takes have ruled small. On the 10th inst., Mr. Spike, fishing at Chingford, landed a handsome barbel weighing 6¾lb., which has gone to be preserved. The match on the 13th inst., at Cheshunt, was a failure. The prizes will be fished for on the 20th inst., between Waltham and Enfield. Members to go down by the 9.19 from Hackney Downs.—H. Stretch, hon. sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland Park, N.W.—On the 10th inst., Mr. Schultz, jun., roach; and on the 13th, Messrs. Harris, perch; Schultz, jun., roach; J. Plumpton, roach; and Mr. Goodman also had fish. Mr. Pritchard lost his privilege ticket (Central, No. 318) club cards, &c., at St. Margarets, August 30. Anyone finding the same will greatly oblige by returning them to above address. A brake outing to Boxmoor, will take place on the 27th inst., starting from the club-house at 6.30 a.m., any gentleman wishing to join us can obtain tickets from above house any meeting night price 3s. 6d. each, no extras.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—On the 6th inst. several of our members were out, and the following weighed in fish: Mr. Bygrave, sen., roach and dace; Mr. Bygrave, jun., tench; Mr. Harrison, perch and dace; and Mr. Neville, perch. On the 13th, Messrs. Bygrave, roach and dace; Harrison, perch and roach (all good specimen fish); Neville, a nice show of perch; T. Forster, gudgeon, also a fine eel scaling 2lb.—J. Cuthbert, sec.

Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham.—A match for a series of prizes took place at Pulborough on the 13th inst., when all the prizes were taken, but with very poor shows of fish, Mr. Daniels being first; Mr. Steedman, second; Mr. Gardham, third; Mr. Stedolph, fourth; and Mr. Williams, fifth. Mr. Tozer had a stroke of bad luck, being broke away by a very large fish. Mr. Tozer was elected secretary for the coming year.—A. G. Duke, sec.

Phœnix Angling Society, the Crown, Old St. Pancras-road, N.W.—On the 13th inst., Messrs. Carr, Brown, Dove, Raymond and Heelas weighed in a few fish, the latter being declared the winner of the prize. On Tuesday, several new members were made. On Sept. 27th, three valuable prizes will be competed for. All members to go where they like, from Saturday night to the following morning at ten. All members please note.—W. Elbourn, sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Only a few members turned out on the 13th inst., several being in the competition at Langley, which I am pleased to say was a great success, every competitor being satisfied. One of our members, Mr. Rowe, was successful in winning the fifth prize, which he brought to the club, and they were very pleased to see such a pretty prize, and they intend on the next competition to go in force. This society has voted half a guinea to the Rye House Competition.—J. W. Harris, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—Sport was very tame amongst us on the 13th, only the following weighed in: Robbins, Davy, Twoomey, Scott, Matthews, and Clest. Two of our members were successful in the Langley competition, namely Whitford, and Axworthy.—W. B.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The following members weighed in on the 13th inst.: Messrs. F. Lamberton, sen., 3lb. of roach, dace, and chub; H. Mitchell, 2lb. 15oz. of roach and dace; F. T. Lamberton, 1lb. 11½oz. of roach and chub; P. Martin, 1lb. 13oz. of roach and dace. The next monthly outing takes place at Twickenham Punt Fishing, all members wishing to compete to give their names not later than next Wednesday night, for the punts.—F. T. Lamberton, sec.

Royal George Angling Society, the Hope Tavern, Tottenham-street, Tottenham Court-road.—Several of our members were out on the 13th inst., but were not successful, only Mr. Webber and Mr. Chart weighing in. I trust members will not forget Sept. 27 for Mr. Wood's prize of one guinea.—F. C. Longland, sec.

Royal Oak Angling Society, Royal Oak, Roman-road, North Bow, E.—Several of our members were out on the 13th inst., but the only gentlemen who had sport were Messrs. Parsley, Cox, A. Barclay, Henson, G. Yeo, and J. Yeo, with a fair show of roach, perch, and bream. Messrs. Denyer and Barrow had some nice tench, but were too late to weigh in. On the 15th inst., Mr. G. Barclay showed bream.—A. Barclay, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 13th inst. we had a few fish weighed in by the following members: C. Smith, jun., chub; J. Petrie, roach; H. Bigsby, tench; W. North, roach, dace, and gudgeon, 12lb. 2¼oz. (one gudgeon 1½oz.) On Tuesday last we had a poor muster again, when Mr. Robert James Wallage was proposed as a working member, and will be balloted for on Tuesday next. The result of the three months' fishing for the gross weight of roach has ended in a win for Mr. W. North, with 66lb. 12¼oz., Mr. J. Petrie coming next with 65lb. 8oz. A smoking concert will take place at the above house on Monday, September 28, for the benefit of Mr. S. E. Cane. Tickets are now ready.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—Several of our members have been out during the week, the most successful being Messrs. Fountaine and Warsap, the latter of whom had a nice show of roach and dace, several of the roach going over ½lb. If this should meet the eye of the member who is now taking his holidays and indulging in sea fishing, we should like to remind him that we have not as yet seen any specimens from the briny deep of his catching. Members will be pleased to learn that arrangements have now been made for holding a meeting at our rooms in support of the Norfolk Broads Protection Society next month. Further particulars next week.—Crystal Hook.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent-garden.—On the 13th inst., we had another very good show of fish; Messrs. Curtis and Cherry having over 30lb. of tench and perch. Messrs. O'Callaghan and Geale had bream. Our next outing will take place at Goring, on Sept. 27th, at nine a.m. train from Paddington. Three prizes, usual conditions, to enable members to fish as long as possible, the fish will be weighed down there.—Pelican.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—We fish a roving match at the Forty Guinea Water on the 20th. The members weighing in fish on the 13th inst. were: Mr. T. Jones, bream and roach; H. Spenceley, chub and dace; R. Spenceley, dace.—R. S., sec.

Sons of the Lee Angling Society, Duke of Cambridge, Great Cambridge-street, Hackney-road.—The 13th was our first weighing-in night, but only two members weighed in—viz., Mr. Whitehead, with bream; Mr. Snaith, with roach and dace.—M. H. Daltrey, sec.

South London United Anglers' Visiting List.—A visit of the clubs enrolled on the above list was paid to the St. Thomas's A.S. on Tuesday, the 15th, when a most pleasant evening was spent. On the roll being called by Mr. J. Wright, vice-president of the list, the following fifteen clubs responded: Bermondsey Brothers, Second Surrey, Rodney, Peckham Brothers, Anglers' Pride, Battersea Friendly, St. Albans, Excelsior, Waggoners', Blackfriars, St. George's, Clapham Junction, Amicable Excelsior, General Post Office, Causton, and St. Thomas's. The next visit will be to the Amicable Excelsior A.S., held at the Greyhound Hotel, High-street, Battersea, on Tuesday, the 29th inst., when I hope they will receive a bumper.—A. Conn, hon. sec.

Stepney Angling Society, Beehive, Rhodeswell-road, Stepney.—I regret I have very little to report this week on, although the 13th inst., looked all right from a fishing point of view, only three members weighed in—viz: Messrs. Gerrard, Jolly, and Ruston, with a decent show of roach and bream.—E. N. P., hon. sec.

United Brothers, Deptford.—Several members of the above were out on the 13th inst., with the following result: Messrs. F. Beak, W. Tyler, B. Champion, W. Windred, H. Freame, H. Tyler, F. Penton, W. Bennett, weighed in roach; Mr. Millidge, dace; G. Marshall and W. Wood, perch. The members of the above will fish a pegged-down match, on the 4th of October, for several very handsome prizes. Water to be decided on Saturday evening.—H. Tyler, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross. — Several of our members were out on the 13th, and the following weighed in: Mr. Clegg, roach (he also winning the prize given by Mr. Offer), largest fish, 14oz.; Mr. Bird, senr., one fish, bream, 4lb. 5½oz.; Mr. Bird, junr., jack, roach, and dace; others had fish, but did not arrive. I wish to remind members to attend on Tuesday next, as there is some important business to be brought forward.—H. C., hon. sec.

Waltonian Angling Society, the Cape of Good Hope, Albany-street, Regent's-park.—On the 13th we had some nice takes of fish: Messrs. Walthan, roach, &c., 5lb. 1½oz.; Seyton, roach, 4lb. 4oz., one splendid fellow weighing 1lb. 1loz.; R. Dodge, roach, 3lb. 9oz.; Morris, roach, &c., 5lb.; W. Dodge, R. Dodge, jun., and Every also weighed in. I wish to remind members that September 30 is our half-yearly distribution of prizes and musical evening, when we hope to have a good muster of members and friends; our lady friends are also cordially invited.—J. Packman, secretary.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—The match on the 13th inst., passed off very favourably, Mr. H. Lees winning first prize. On Wednesday, September 16, there was a good muster of members when it was decided that we fish our next match on the Thames at Pangbourne, on Wednesday 23 for five prizes the first £2 2s. 6d., given by Mr. Rump; second, £1 11s. 6d. given by Mr. Crisp; third, value £1 6s., given by Mr. Grigg; fourth, value £1 1s., given by Mr. Charick; fifth, given by Mr. Sloperally, there will be G. W. Railway two horse buss engaged to take us over to Paddington so that all members will meet at the club-house in time for the same, not later than 6.15 a.m. to catch the 7.25 out from Paddington. Fishing to commence at 10 a.m., leaving off at 5 p.m. in time to catch the 5.57 train. A bus will be at the station to take us back to the club-house, when there will be provided a leg of mutton supper for the competitors and friends, to be on the table at nine o'clock prompt. Mr. W. Obenden, of Prince Regent, North-street, Walworth was unanimously elected a member of this society.—C. Hibble, secretary.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 13th inst., M. A. Coras won the third prize from the September competition with roach and dace. Also weighed in Mr. R. J. Dartnall, roach and dace; Mr. T. Jenkins, roach and dace. On Wednesday last Mr, J. Drivell was duly elected a member.—R. J. Dartnall, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—We had an outing at Bourne End, on 13th inst., for four prizes, taken by the following members: Messrs. Dessert, first, roach; Kirtland, second, roach; Blyth, third, roach; Casey, fourth; other members, Hurden, dace; Francis, a nice show of bream; Maples, bream; Parslow, roach; Fullbrook, roach and dace; Mercer, roach and perch. Hoping all members will attend next meeting night, it being the commencement of the second quarter.—W. M., sec.

Western Piscatorials, Bear and Rummer Tavern, Mortimer-street, Cavendish-square.—A well attended outing of this club took place on the 13th inst., to Henley. A most enjoyable day was spent, the weather being so brilliant; and although the water was a bit too clear, Mr. Schmidt managed to capture, good jack and roach taking the first prize for the day; Mr. Rider, with roach, taking two prizes, and Mr. Warner taking third prize, with perch and roach; Mr. Buffery also weighed in roach.—D. W. Knans, sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford. — Our members were out on the 13th, and the following weighed in fish: Mr. Goodrich, 3lb. 13oz. of roach; Mr. Allerton, tench. I hope our members will attend in strong force on the 20th ult., at the fishing match at Hatfield-Peverel, all to go by the first train same morning; train leaves Stratford Station at 7.50 a.m. There will be a trap at Hatfield-Peverel, to meet the train from London. Mr. Wadworth weighed in a trout of 5lb. 3oz.—R. Lowther, sec.

Holloway's Ointment and Pills.—For the cure of burns, scalds, wounds and ulcers, this justly celebrated Ointment stands unrivalled. Its balsamic virtues, immediately on application, lull the pain and smarting, protect the exposed nerves from the air, give to the vessels the vigour necessary to heal the sore, and confer on the blood a purity which permits it only to lay down healthy flesh in place of that destroyed. Holloway's Pills simultaneously taken, must assist the Ointment's purifying and soothing power. Together these medicines act like a charm; no invalid, after a fair trial, has found them fail to relieve his pain, or cure his disease. The combined action of the Ointment and Pills, in all disorders, is too irresistible to be withstood.

West London Angling Club, Dartmouth Castle, Hammersmith.—I beg to remind members that the second club match of the season takes place on the 24th and 27th inst. in any public water. All fish to be weighed in on the day of capture. Prizes and weights as before. Members are allowed to start the day before the match, and those fishing on the Thursday must give notice at the club-house. Mr. Elsmore's presentation prize of one guinea is open for competition in this match. Mr. Elsmore has weighed in 15lb. of bream and two roach—1lb. 14oz. from the river Ant Navigation, and Mr. J. B. Holloway, two roach, 2lb. 1oz., during the week from the Avon.—J. J. Hunter, hon. sec.

AFTER A DAY'S FISHING,
Call on TIBBATTS,
AT "THE CITIZEN," 70, HOUNDSDITCH
(OPPOSITE BISHOPSGATE CHURCH),
Two minutes walk from Liverpool-street and Broad-street Stations.

English and Welsh Reports.

The Lower Thames.—General Remarks.—Since my last record of the doings of old Father Thames I have been paying another flying visit to the fish farms of Norfolk and Suffolk, and on no previous occasion have I met so many of my metropolitan friends, not only of anglers, but of others who have been tempted to visit the eastern coast for a complete change of air, and who have found its bracing nature to have given fresh tone and character to their constitution. The broads are now looking at their best, and the reports of London anglers are very satisfactory. The facilities afforded by the Great Eastern Railway in their Friday till Tuesday's tickets, at ten shillings each, from Liverpool-street, gives a very tempting run of about four days' fishing to the anglers of our great metropolis, and I have found many who could not spare time for a longer stretch at once to avail themselves of it. The railway companies of the present day are always showing themselves desirous of granting concessions to anglers in places far away from London—as, for instance, the Great Eastern Company at Yarmouth and other places are liberally carrying out the principle of reduced fares to anglers. The Great Northern Company is always desirous of giving every facility to anglers. Only about a fortnight since, the Grantham Angling Society, in reply to an application for the privilege of their members travelling to Bottesford, Bingham, Radcliffe, Nottingham, Newark, Retford, Peterborough, Stamford, &c., at a reduced rate, received a favourable reply, and in addition, making the tickets available for three days. This society now numbers about two hundred members. There can be no doubt that every year angling is becoming a more popular sport, and when the anglers can be assisted as they now are by the railway companies, it will not only cause a further increase, but anglers will go to greater distances for sport, and traffic will be considerably augmented. I am now back again to my old river, and glad to find the Thames anglers have had no reason to complain of the want of sport. The takes of one hundred and twenty-one bank anglers and fifty-three punts were examined by the head river-keeper of the T.A.P.S. on the 13th inst., between Kingston and Isleworth, and with the exception of one or two very minor cases, all the fish were up to the Thames standard. This is very satisfactory. The examination of the takes of the anglers between Staines and Hampton was made on Tuesday last by the officials of the T.A.P.S. There were out thirty-one punts and private boats, and a considerable number of bank fishers, and it is most gratifying to state that they found everything all right, and no under-sized fish, either in the punts or in the possession of this fishing on the banks.—B.

Richmond.—Henry Howard, in four days, thirty dozen of roach and dace; Job Brain, in the week, 36lb., with an addition of twenty-six barbel; H. Mansell, during the week, 50lb.; H. Wheeler, in one day, 16lb., and two barbel; Christopher Brown, in two days, four barbel and four dozen roach and dace.

Twickenham.—C. Brown, in three days, 20lb. of roach and dace and three barbel; Richard Coxen, in three days, 30lb., and three barbel, attending on Mr. Tarrant; J. Coxen, in four and a-half days, 37lb.; J. Frost, in three and a-half days, 38lb., five barbel, and two bream; Pert Hammerton, in one day, 20lb., and the take was seen by one of the committee of the T.A.P.S.; A. Hammerton, during the week, 50lb., and four barbel; J. Dunn, in one day, four dozen; John Spong, in five days, 50lb., and four barbel; F. Wiggins, in two and a half days, 70lb., and one bream.

Kingston.—John Johnson, during the week, nine jack, four bream, three barbel, and twenty-seven dozen roach and dace; M. Bolton, in four days, eighteen dozen of roach and dace, one jack, and five bream; J. Wilkes, in the week, two jack, one barbel, and fifteen dozen of roach and dace; J. Wright, fishing on the bank during the week, has caught forty-three chub.

Thames Ditton.—Mr. G. B. Carruthers, of Long Ditton, with a friend, fishing with Lawless, got eight dozen of roach and dace, one jack of 3lb., and a nice perch of 1¾lb.

Sunbury.—The punts of Messrs. T. and A. Stroud during the week have brought in eighteen barbel, seven jack, and sixteen dozen of roach and dace; and those of Mr. Edward Clarke, sixteen dozen of fine roach and dace and ten barbel.

Penton Hook.—F. Collier, in barbel fishing on Thursday in last week, caught one weighing 9¼lb.

Staines.—John Keene, jun., says he has been out all the week, and had some fairly good sport one day with Mr. Gambler, of the Larkhall Angling Society, twelve barbel and six dozen of roach and dace; another day with Mr. Wilson, four barbel and five dozen of roach and dace; another day with Mr. Back, ten barbel and five dozen of roach and dace; and another day with Messrs. Hayes and Mills, twelve barbel, one bream, and five dozen of roach and dace. All the fish were taken on roach-tackle; the largest barbel was over 5lb., and some of the roach over 1lb.

Upper Thames.—The river continues in the very best of angling condition, and most fish, with the exception of barbel, are well on the feed. The weeds, which year by year become more and more tiresome in the Upper Thames, are rolling down, and consequently angling fine and far off is in a great measure free from the everlasting summer expression of "Hang those weeds!" The best roach and chub are being taken with tail of lob-worm; but even paste is acceptable, as evidenced by a 20lb. basket of roach, chub, and dace taken in the Aston waters with bait made up of arrowroot biscuit and condensed milk, and, as my correspondent facetiously remarked, "How the fish 'nestled' to it!" Jack are running now the weeds are going down, but I do not glean that at present any monarchs have been dethroned. Mr. A. Davis, jun., of Marlow, writes me: "Self and friend had an afternoon's roach fishing in Bisham Reach the other day, with Ted Shaw as attendant. We were fishing not quite four and a-half hours, and took eighteen dozen roach between the two rods, most of the fish being above summer average; of course we were favoured by the conditions—viz., water nice height and colour, no wind, no sun." Thursday night.—Those anglers who can now run down to any station on the Upper Thames will be satisfied with sport and the glorious surroundings of the river this autumn-time.—Marlow Buzz.

Thames (Windsor).—At time of writing chill October has suddenly taken the place of July weather, and should not be surprised to see snow in less than a month, in fact Jenkins' chart gives the first fall on or about October 7. The river is looking well for the angler, but few have been out, and the Thames valley is fast resuming its normal condition. Few launches are running, and many boat builders have already housed the bulk of their stock for the winter, which, to the angler, is the most enjoyable time, the river then being his. Some fine barbel have been caught since my last, largest 8lb., on the 11th inst., by R. Gray; and a gentleman with J. Gray, jun., 13th inst., had one, 7lb. 2oz., with a nice show of dace; Messrs. W. Fountain and W. Crook, of Eton, have also had good sport, out with G. Pince, of Etonwick, taking on one occasion eight barbel, four chub, three eels, the largest eel, which was caught by Mr. Fountain, being an extremely handsome one for the Thames, it weighed 3lb. 7oz. On another occasion the same gentleman had thirteen barbel, largest 4lb., eleven chub, and two eels. Several baskets of roach and dace have been caught, but no extraordinary specimens. Gudgeon have fed fairly well, Messrs. Siddall and Wright, of Windsor, being the most successful amongst these. Water in good fresh condition, but getting bright.—B. R. Bambridge.

Ancholme District.—Despite the very fine weather of the past week, sport has not been good, though most anglers have caught something, and a few did fairly well. The river swarms with fry from one end to the other.—Thomas Ford.

Arun (Pulborough).—The water is now in capital order for all-round angling, and during the past few days a marked improvement has taken place in the fishing. London and Sussex anglers have been out in large numbers, and some of the roach caught have been excellent specimens. Anglers should not forget to bring some boiled wheat with them, as roach and bream will take this bait in preference to all others at times.—Goose Quill.

Barle (Dulverton).—The river has run off gin-clear. It is cloudy, warm, and raining, but the glass is rising steadily. A small Devon, or better still, a quill minnow, should prove killing. Unless we have more rain the back-end salmon fishing will prove a farce.—Iron Blue.

Brighton.—Sea Fishing.—With the exception of two or three roughish days, viz.—Monday and Tuesday last, and to-day 17th, boat anglers have been having excellent sport, and making large catches of plaice, and dabs, including many of large size. One party secured over one hundred fish on Saturday last, and yesterday, a party of three or four caught over sixty fish in three hours, including several silver whiting, fresh herring, mussel, and lug worms are being used as bait; but the last named is by far the best, more especially for flat fish.—H.

Chichester and Sussex Rivers.—Anglers are proverbial grumblers. For the past few days the weather has been too bright for successful sport during the day. Water has been in good order, but only at early morning and at eventide have fish been on feed. At Chichester Canal, bream and roach have been feeding well, but heavy bream are things of the past; nothing exceeding 2¼lb. have been recorded. The dace and roach have afforded sport on the Adur, and bream, roach, and a few dace have been taken from the Arun. The Ouse is in grand condition, and from the upper waters several roach up to 1lb. and chub of 2½lb. have been brought to bank.—George F. Salter.

Douglas (Isle of Man).—After a week of perfect summer weather there seems signs of a change. Fortunately there has been a good body of water, and, with plenty of fish, angling has not suffered as it would from a drought in summer. Good baskets can still be made. Sea fishing is at its best, but there has been no wind to give the mackerel boats much chance. The fish, as usual during this month, are, although very plentiful, rather small. Good ground fishing for them can be obtained by anchoring or making fast to the herring boats whilst washing their nets, baiting with the milt of herring. All other varieties of fish are taking well, and during the late calms flat fish spearing has been good.—Stormy Petrel.

Dove and Tributaries.—Mr. Phillips has taken six brace per day in two days on the Dovedale length. Mr. P. fished this length several days prior to his making these bags, but with what result we do not know. The water is clear, and the weather open and clear here now—just the thing for grayling fishing.—D. and W. H. Foster, Ashbourne.

Filby Broads—Some good sport has been obtained on these waters by Mr. Medcalf, of the Duke of Norfolk Angling Club, who succeeded in landing last week in four days about 120lb. of bream and roach, and one or two small jack, caught with worm. The fish are well on the feed here just now, after this spell of warm weather and sunshine.—S. Walpole.

Ilfracombe.—Sea Fishing.—Some good sport has been obtained during the past few weeks by anglers fishing with rod and hand lines. Mr. German, from the jetty, hooked several grey mullet, weighing 1lb. each. Mr. Kelly hooked two dozen smelt; these fish are rarely caught with rod and line. Mr. Skinner, a visitor, has had some fair sport, having captured several soles, some weighing 1lb. 10oz. each; also some large plaice, codling, and pout. Mr. Passmore hooked a sole weighing 1½lb.; these fish were all caught from the jetty. Mr. Gosling, fishing off Mill Mark Sampson's Bay, caught sixteen large whiting, pout, and two eels. The weather at present is fine with every prospect of good fishing.—E. Corner.

Lake District.—The brilliant weather of last week gave place on Monday to sharp showers, which have since continued to fall up to the hour of writing. For the first time this year no fault can be found with the condition of any of our rivers. The frequent heavy floods have thoroughly cleansed the beds of the rivers from accumulated filth, and there is nothing now to foul an angler's line or disgust his olfactory organ. Many well-known rods have been seen during the past ten days, though visitors seem thus early to have been driven away by the frequent storms. Worm fishing has been indulged in when the waters were discoloured, and with this bait Mr. J. Wilson last week took thirty-seven trout in the Sprint, twenty-two falling to another rod from the same stream. Mr. T. B. Wright also landed fifteen and seventeen trout on separate occasions from the Sprint, the Dark Snipe accounting for both these baskets. On the Kent, Mr. J. Craig had a 5lb. salmon in Levens Park, and Mr. R. Halhead, fishing the Lune in the neighbourhood of Ravenstonedale, last week, totalled thirty-seven trout, averaging ¾lb. each—not a bad record for a mountain stream.—Westmeria.

Lea and Stort.—As a rule angling has been moderately good at most places, fish of most kinds have been on the feed, and some very decent catches can be recorded. The weather has been so very changeable that very few anglers have been out during the week, but as a rule they have had moderate success. I have not heard of much having been done in the upper waters, but some few takes of roach, perch, and jack have been made. Waltham Abbey.—Accounts from here are very good. On the 12th inst., Mr. H. Moxom (the Irish champion) had about 30lb. of perch and roach; Mr. R. Symons, the next day, caught a handsome jack, which scaled 7lb. 1oz.; Mr. Dean had a good show of roach; others had fair takes of roach and perch; Mr. Williams had an eel of 2¼lb., and Mr. Cleverly a perch of 1½lb. Ponders End.—Mrs. Geo. Hollingbery has taken a few nice pike, and is on the track of a monster of the species. Games' Fishery, Higham Hill.—Sport here has been very good; takes of perch have been numerous, amongst them a fine specimen of 1¾lb. Several good pike have been taken, the best one scaling 7¾lb.; on the 13th inst. five pike were caught, the largest 6½lb. Ferrie Boat, Tottenham.—Some roach, perch, and a few jack have been landed. Thursday evening, rivers in good fishing condition. —Spliced Joint.

Leicester.—There has been a great change atmospherically since my last report; a heavy downfall, however, was welcome, as it tended to improve piscatorial matters somewhat, the waters, owing to the extreme heat, having become very low and bright, and fish had gone off the feed. But the weather was very cold compared with the brilliant days the other part of the week. Most interest was centred in the annual match on that day, consequently but little other fishing was done at Leicester. The winners of the contest were Mr. Backus, for the third successive year, first; W. Thompson, second; Mr. W. Green, third. Sixty competed. Sport this week in the canal and backwaters at Aylestone has been at low water mark. Out of Leicester matters have been a little more lively, good fishing being had at Blaby, Narborough, and down the Wreake way. Not many anglers were out on Thursday.

Loddon (Earley).—The river is in capital condition and some good sport has been had this week. Roach being well on the feed, good baskets have been made. Also chub scaling up to 4lb. Mr. Wise got three very nice jack, 4½lb., 6lb., and 7lb. respectively.—J. R. Gould.

Lugg and Arrow (Leominster).—These streams are keeping in good order for fishing, being a nice colour. The weather at the end of last week was very bright, but it has gone dull, and the fish are now moving better at the Pale Dun, Red Tag, Willow Green Insect, Mid Blue, and Whirling Blue. A few rods have been out and some fair sport has been had. The grayling have been sporting the best. The Pinsley is in good order for fishing; sport is fairly good.—Gwynne.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are now in good order, and grayling rising fairly well. Few rods out, yet some baskets of seven and a-half brace and under have been made. The bright weather of last week has given place to mostly dull, with some showers. Flies same as last report. The Grasshopper (sink and draw) has been tried with success. Grayling are in capital condition.—R. T. Williams.

Medway (Maidstone).—Waters in good condition and weather more favourable during past week, and some good catches have been obtained, more particularly at the weirs. Pike ought now to come to the bait; it has not come to my knowledge of any being caught lately. There are some good ones to be obtained by those who persevere and go to work the right way. The prospects for the angler are good if present weather continues. Roach and bream are taking boiled wheat or well scoured brandlings. I know of a good take of roach with, the Wasp Grub being obtained by an old angling friend.—W. Shrubsole.

Medway (Tonbridge).—Water in the pink of perfection and everything looking well. Bream and roach biting well on judiciously baited swims, and pike will not feed. Anglers who intend to fish with pleasure cannot do better than give a visit to Tonbridge.—Ye Medway Water Rat.

Nene (Northamptonshire).—On Thursday a few anglers were out, but were not very successful. At Peakirk a few perch have been taken, and pike were tried for, but without result. Mr. C. Irvine, of Peterborough, had good sport on Saturday, while roach fishing. He obtained a basket of thirty-five in a short time, including two or three ½lb. The bait used was paste. The last fishing match of the season, promoted by the Whittlesey Angling Association, was held on Thursday afternoon, in the Bower river. A local report says that considerable amusement was caused by the careful handling the very small fish received at the hands of the several competitors. The first prize was won by Master W. Fevre. The association, which was only formed last season, is in a flourishing condition, the members numbering over fifty. Some good sport has been obtained from the neighbouring waters of the Welland. Mr. Wm. Wyche has been very successful amongst the perch and pike. The average pike scales 6lb., but several reached 7lb., and Mr. Ulyett captured one of 9lb. last week. Roach and bream are also feeding well, the bream especially running very heavy. Mr. Thorpe has landed the most weighty fish of the season, one of 6lb. 4oz. Between Waterwaste and Alwalton some nice pike can be met with, the largest being taken from the former place, which is situate about six miles from Peterboro'.—Nene-bank.

Norfolk, Suffolk, and Cambridgeshire Waters.—Many anglers, both London and local, were out on Saturday and Monday, and some good heavy baskets of roach and dace were taken. Two of our leading jockeys took from the Lark, at Mildenhall, a basket of over 26lb., principally dace. There are plenty of good swims all along the bank from Barton Mills to Mildenhall, right on to Prickwillow, and plenty of good fish. Creed wheat and gentles are the best baits, and sorrell coloured gut and small hooks. In the Cambridgeshire Ouse, from Upwell to Ely, fish may be taken. I, however, recommend anglers to get a ticket from Benton, the keeper, and he will tell them the most likely swims below Ely to Littleport. Some good fishing now at Denver, near the sluice. Host Read, at the Inn, is a good angler. Several complaints have been made to me about the fish feeding so badly in the Yare. I think it's rather early for them as the weather has been at present. Brandon, Thetford, or Lakenheath, are sharper waters, and not so deep, and any of them are easy to get at: plenty of fine roach at the last two places, and feeding fairly well. Bream should be well on in the Yare, Ant, and Stour, but they are not, neither can I account for it. A splendid trout of 8lb. was taken from the river Lark on Saturday, and sent me to preserve. On Monday last we had a lot of rain here and wind rather high. Angling prospects generally good.—William Howlett.

Ouse (Huntingdon).—The change in the weather has brought both roach and bream on the feed again, and sport has been very fair. Jack have been feeding well and some nice ones have been taken with both live and spinning bait. A nice-conditioned fish was taken on the 13th, going 5½lb., and there are prospects of good sport. The water being in good condition there is every chance of taking fish.—H. Rout.

Prince Town.—I am here at Prince Town for a few days, and the rivers are in first-rate order. About half-a-score of rods have just passed my window coming from the station, and they will disperse themselves on the various streams around here. Mr. Rowe, the proprietor of the Duchy Hotel, and I were calculating the other evening over the fragrant weed and the dew of a Scotch mountain the approximate length of river bank that there was fishable within a six-mile radius from Prince Town, and we reckoned up nearly one hundred miles, and the advantage is that when the larger streams are too full of water there are plenty of small streams that can be tried, and some of these contain some fine trout. Within the last week or so salmon have been taken very near Two Bridges, one 14lb., two 13lb., one 12lb., two 8lb., besides other baskets of trout of 12½lb. and upwards. One gentleman from Plymouth had two and a-half dozen nice fish all a fair size last week, nearly all caught with the small Blue Upright; several other catches varying from one to three or four dozen have been taken, and as all fish under six inches have to be returned to the river the average size of baskets has been good. There are no pollutions on the rivers, and the fish are very game. The rivers that can be fished by anyone making Prince Town a centre are East Dart, West Dart, Cherry Brook, Cowsick, Rattlebrook, Tavy, Wallabrook, Blackabrook, Surncombe, Harterbrook, and Wollibrook. So that if a score or two of rods happen to be out there is plenty of room for them, and if the large rivers are too full the several small streams that feed them can be fished, and they all contain good trout. In the early part of the season Captain Encry had a salmon 18lb. weight.—W. Hearder.

Rother (Fittleworth, Sussex).—During the past fortnight this well-known Sussex stream has been visited by many anglers, and several good baskets of roach and bream have been made. The water is in first-rate condition, and good sport may be looked for. On the 13th inst., an angler named Stretch caught four fine bream, and Mr. Pailes, of the Alma Club, London, landed a single fish, weighing 4lb. A Mr. Cartwright, belonging to one of the London clubs, caught two roach, one about 1¼lb., the other was quite 2lb. The fish, I hear, were landed during the night, and whilst the angler was indulging in forty winks, the big one disappeared. He at once commenced a search for it, and after a time found it surrounded by rats. The animals had dragged it about 30yds., and he only traced it by the scales which had been left on the grass. The fish was certainly worthy of a glass case, but it was too much injured to allow of preservation.—Goosequill.

Taw (North Devon).—Rivers are in good form—trout are taking well: some gentlemen with minnow have two dozen, others twenty fish. One gent took twenty-six. Monday—salmon and peel are also taken with the minnow. —Rusty Game.

Tees (Barnard Castle).—Salmon fishing has again been good this week, although the river is now getting low, and rain would do good for piscators but not for the farmers. Messrs. Dent, Wandless, Bainbridge, and Parkinson, have all had fish; but owing to absence from home I have been unable to obtain the weights for you. The old fisherman, Peter, has also had a grayling, ¾lb., during the week, this being a very rare fish here, not more than one or two being caught in a season, and in many none at all. Flies taken: Same as last week, but of a smaller size. —J. H. R.

Teme (Ludlow).—The Teme is now running in capital order for fishing, being clear and a nice level. The weather has been changeable, and rain has been had. The warm days at the end of last week brought the fish well on the move, and they rose well at the Green Insect, Willow, Red Ant, Whirling Blue, Wickham and Yellow Tag. Bottom fishing has been good with the Wasp Grub. Minnow fishing in the evening has accounted for some good fish. At the end of last week Mr. R. Brookes landed sixteen good fish with the Willow. In the Ashford Water some fine grayling have been landed. On Tuesday, in the Burway Water, Mr. Ralli took 23lb. of fine trout and grayling with the Green Insect. Up the same water the

Rev. Barker, Berkhampsted, and Mr. H. Brookes landed fifteen nice fish with the fly. In the Castle Pound a pike, 3½lb., was caught with the spoon bait, by Mr. Bartholomew. The Ony, Corve, Clun, and Ledwyche are all in good fishing order. Near Stanton Lacy two gentlemen caught fourteen grayling with the fly. In the Ony, sport has been good with the fly.—S. LUDLOW.

Teme (Tenbury).—In this district the water is running in good fishing order, being a nice height and colour. There has been some rain, but it has not interfered with the colour of the water. The fish have been moving well at the fly, and some nice fish have been taken bottom fishing. On Tuesday a nice lot of grayling were landed with the fly. On Wednesday morning some good sport was had. The Rea and Kyre and Ledwyche are all in good order for fishing.—WORCESTER.

Tyne (Corbridge).—River in flood for near two weeks; very little fishing has been done up till Wednesday. Mr. Bigge caught a nice salmon, 18lb., on the 16th inst.; and Rev. A. Hemstead got a fine trout, 3lb. 2oz., with a salmon fly. River filling up again.—GEO. HAMILTON.

Witham (Dogdyke, Lincolnshire).—The fishing at this place has been on the whole fairly good. On Monday, the 14th, Mr. W. H. Robinson, of Sheffield, caught 3st. 3lb. of roach, all of which were caught with creed wheat, opposite the Packet Hotel, from a punt. Several other gentlemen from Sheffield got fairly good baskets. The fishing at this place will be still better in a few days' time, as the river is being cleaned out with a steam dredger. An eel, a perfect monster, was taken from the water dead by Mr. Robinson, and it had apparently been killed on a night line. It was pronounced by all the visitors to be the largest they had ever seen.—H. B.

Wimbledon Lake (Wimbledon). — The following gentlemen have weighed in fish taken this last few days, and the pike are well on the feed: Mr. R. Bird, hon. sec. Earlsfield A. C., took a well-made jack of 4½lb., some dace, and one eel; Mr. Rawlins, of Hammersmith, one jack, 11lb., which was a splendid fish, well spotted and in fine condition; Mr. Woods, Putney, five jack, largest, 7lb., smallest, 3lb.; Mr. Brooker, Earl's Court, on Monday, caught a brace of jack, 4½lb. and 3lb., and bream, largest, 2lb.; Mr. Hubherd, of Chester-gardens, one dozen and a-half bream, and two eels; Mr. Sclage, Kensington, some nice roach and dace, some 9in., and a fine eel of 3½lb.; and Mr. Johnson, the Strand, one jack, 3¼lb.

Wye and Derwent (Derbyshire).—Anglers are now enjoying good sport here, and good baskets of trout and grayling are being killed daily. Fishing on the Wye has improved during the last few days and some being large grayling are being killed. I had one, on Wednesday, amongst a basket of three and a-half brace, which weighed 1½lb., and was in grand condition. The Darley Dale Water has not been much fished this week, but several gentlemen have had fair sport. The Marlock waters are now getting in nice trim for fly fishing, and sport daily has been had up to four brace per rod. Killing flies are Green Midge, Golden Dun, Silver Dun, and Ash Dun.—DOTTEREL.

Yare (Norwich).—On this river sport has been, if possible, worse than since I last reported, as numbers have fished at Brundall, and also at Buckenham, &c., and not had a bite during the whole day, and these comprise some of the best anglers in the district. I am quite unable to account for it, as the river teems with fish. Nearer Norwich sport is better, good bream, &c., are being caught, and also some fine dace; one measuring 13in. was caught on Tuesday. At Oulton Broad this evening I hear from Host Mason that only here and there during the past three weeks has any really good takes been had, but some good bream up to 3lb. or 4lb., and roach up to 1lb. 13oz. have been caught. To-night (Thursday) there are shows for rain, which may alter the state of fishing in these parts should it come. A meeting is now on at Lowestoft about the broads question.—ROBERT MOLL.

Lake Vyrnwy (North Wales, via Oswestry).—In consequence of a continuation of bright sunshine and calms, during the past week, several anglers did not fish to the close of the season as they intended. Those, however, who did remain were well repaid, the last day (Tuesday) having proved the best for some time. Captain Stevenson caught his limit fifteen, but thinking to improve his average weight returned to the water early in the day two takeable fish. Much to his regret, after getting thirteen he did not succeed in further adding to his basket, and so came home with thirteen very pretty trout, weighing 9lb. 2oz. Mr. G. Ward who was only fishing half-a-day, curiously, also brought in exactly the same number and weight, thirteen plump fish, 9lb. 2oz., two of them being 1lb. 2oz. Both these anglers report the trout fought as gamely as any they have taken for the season. Best flies: Alder, Golden Dropper, Lee's Favourite. After a most successful season the trout fishing on this lake terminated satisfactorily on Tuesday last. One of the severest winters on record has been followed by a season of such adverse climatic influence that at times fishing has been almost impossible. However, it is very gratifying to note that the following good results have been obtained — even under such unfavourable circumstances. It must be distinctly understood that all the fish have been taken with artificial fly only, no other lures being allowed; this policy has been so encouraged by generally expressed opinions, that it will be maintained in future. At present the limit of a day's catch is fifteen trout to one rod, or twenty-five to a boat (two rods), but the season has closed so satisfactorily and the breeding ponds have made such progress that the management have decided to extend the limit for next year to twenty. Total 4,143 trout, weight 3,661½lb., average 14·152oz. The greatest number of fish were taken during the months of April and May, but the second week in July was the most prolific of limits. Anglers with highest scores: G. Ward, 258 trout, weight 222¾lb; Captain Stevenson, 206, weight 151½lb.; Alderman Thomas Hughes, 152, weight 148½lb.; W. H. Watts, 111, weight 127½lb.; F. Weare, 109, weight 100lb.; the two first named having made their highest score the last day of the season. Best day's catch, March 28, 135 trout, weight 115¾lb. Best individual day's catch, May 11, Alderman Thomas Hughes, fifteen, weight 17lb. Best boat's catch (two rods), April 21, Messrs. A. P. and H. Fletcher, twenty-five, weight 26¼lb. Best average weight for season, Alderman T. Hughes, 15¾oz. Best average for times out, W. H. Watts, fifteen day's fishing, 9·4 trout, 8½lb. per day. Heaviest old river fish, J. Roberts, 3lb., Mrs. R. H. Best, 2lb. 11½oz. Heaviest Loch Leven, Mr. H. Watts, 2lb. 6oz. (length seventeen inches), this trout shows a remarkable development, having been put in this water as fry only a few days over two years previously. Next season opens Saturday, March 26.—LONG DRIFT

Towy (Llandilo, Carmarthenshire).—The fishing has not been particularly good during the past week, the river having gone down considerably, and the water becoming bright. Our Mr. Lewis caught an 11lb. salmon with worm a few days ago; Mr. Burgess, a sewin of 2lb., with live minnow; Mr. David Edwards two sewin; and Mr. Lewis Clark, two sewin, all with worm; Mr. Thomas, one sewin, 2½lb., with minnow; Mr. Lewis, a couple of jack, one with worm and the other with minnow; and Sir John Llewellyn landed a nice salmon, 12lb., on the Cothy, a few days ago. Large quantities of trout, bearing the mark of the net, continue to be offered for sale, we much regret to say.—H.

Usk (at Usk).—The river is in fine ply for angling, and salmon are taking very freely, and large numbers are daily captured. Mr. F. H. Browne, of Llangibby Rectory, near Usk, in seven weeks' fishing captured one hundred and three salmon, a feat that is not in the recollection of any angler in this neighbourhood. Many anglers have caught close upon a hundred this season. The river is in capital order, and will remain so for some time.—T.

Scotch Reports.

Altnaeealgaeh Hotel Waters (via Lairg, N.B.).—On Tuesday, the 8th inst., Dr. and Mrs. Underhill, Edinburgh, fished Loch Bourlan, and landed twenty trout, aggregating 8lb.; Dr. Houghton, London, and Mr. Squarey, Birkenhead, on Loch Cama, had thirty-two, 10lb.; Mr. and Mrs. Morris, London, on Loch Urigill, fifty, 14½lb.; and Mrs. Squarey, Birkenhead, and Mr. Lush, London, on Loch Cama, sixteen, 5½lb. On Saturday last, Mr. Singleton, London, fished Loch Cama, and with small fly, landed a *Salmo ferox* of 3lb., besides twenty-four trout, which aggregated 12lb.; Dr. and Mrs. Underhill, tried Loch Urigill and got sixty, 14lb. On Monday this week, Mr. Singleton, on Loch Urigill, fifty, 13½lb.; Dr. and Mrs. Underhill, on Loch Boarlan (half a day only), thirty-eight, 10lb.; Mr. Squarey, Mr. Lush, and Dr. Houghton, on Loch Cama (for about two hours), twenty, 7lb.; Mr. Morris fished the Ledmore stream, and made an excellent basket of over four dozen. The weather is now improving.—McB.

Ayrshire Lochs and Streams.—Fair sport has lately been had in the Ayrshire lochs and streams. In some of the lochs the yellow trout are getting fast out of condition. Nine gentlemen from St. Mungo, Glasgow, visited Loch Doon on Saturday, and their total catch amounted to one hundred and eleven yellow trout, the heaviest of which weighed 14oz. The streams have given fair sport, more especially the glens where the trout appear to be still in good condition, probably owing to the fact of their obtaining abundance of food during the late spates. Glengarnock and other streams in the Kilbirnie district have afforded good sport lately, and all the waters were in first rate order on Wednesday.—HEATHERBELL.

Border Esk.—Salmon are now very plentiful in the Esk, which is running very clear. In the upper waters sea trout and herling abound. The weather is too bright for day fishing, but the angling at night yields good sport. Mr. J. Elliot had nine dozen yellow trout in Ewes. In the Langholm water, Esk, Mr. Thos. Hounam had a sea trout, seven herling, and a number of yellow trout; Mr. J. Anderson had a basket of herling and yellow trout; Mr. T. Irving had two sea trout, 4lb. and 2½lb.; Mr. J. M. Little, Carlesgill, caught a grilse, 5lb.; and Hon. C. Lambton had a salmon in the reserved water. In the Canonbie water, Mr. W. Davidson landed a salmon, 5lb.; and Mr. R. Jardine, one of a similar weight. In the Byreburn-foot water, Mr. R. Doughty had a hard run with a big salmon. This is a very rocky portion of the river, and difficult to negotiate, after hooking the fish. Mr. Doughty followed it some distance by wading, but coming to an impassable spot, he threw his rod to Mr. Snowden on the opposite bank, who made a bold fight to capture the fish. Three times this gentlemen was over-head before he resigned the contest through the breaking of his line on a sharp rock. The run lasted close on an hour. Some good hauls are being made in the Metal Bridge water, especially at night.—GILNOCKIE.

Breadalbane Arms (Aberfeldy).—On Thursday, Mr. Harrison fished Loch-na-Craig, and got eleven trout, 4lb., and on Friday, Mr. Proctor got nine trout, weighing 3lb. —A. N.

Carron (Easter Ross, Ardgay, N.B.).—Weather still unpropitious, and very little angling attempted. Mr. W. Allis Smith, of Glencalvie, gets a fish occasionally on the upper reaches. Mr. Hartley and party have landed seven fish in all—including salmon and grilse—on the Braelangwill Lodge waters. So far as can be ascertained no fish has been got on any of the lower beats since beginning of last week. Miss King, and Mr. Charles King, Clifton, Bristol, who are staying at the Balnagown Arms Hotel, were out on Kincardine Burn on Wednesday, and made a basket of thirty-six trout.—McB.

Dee (Aberdeenshire).—The abnormally fine weather has brought down the river considerably and somewhat checked the run of fish. The autumn sport increases apace, and some very good work has been done, chiefly on the middle and lower reaches. On the Invercauld Arms Water, Mr. McGregor's guests are having two and three fish daily. On the Glentana Water, Sir William C. Brooks and party are just getting into the autumn run. On the Kincardine Lodge Water, Mr. Wm. Lamond landed two fish of 6lb. and 9lb. on Saturday last; while Mr. A. A. Hudson, London, had one of 17lb. on the Lower Borrowstone section. On the Ballogie Water, Mr. W. E. Nicol had several fish during the week, while Mr. Chalmers was also successful on the Sluie Water. On the Woodend section, Mr. Tarnell Watson landed one of 15½lb. on the 3rd inst., one of 12½lb. on the 4th, two of 27lb. and 9lb. on the 5th, and one of 26lb. on the 7th. Mr. Watson has had a special run of luck in heavy fish this season, already having the previous week landed one of 39lb. On the Blackhall Castle Water, Mr. G. T. Hay and party scored several successes, as also did Mr. Wordie, on the Lower Crathes, details of which are not to hand. On the Park Water, Sir Charles Turner and Mr. Pearson landed ten heavy fish, while Mr. Boyle had two on Maryculter Water, and a good many were also got by Mr. Baird's party on the Durris Water. The fancy double iron, such as Jock Scott and Silver Doctor, Beaconsfield (Blacklaws), and kindred flies, are still the taking lures from an inch to an inch and a-half, while the larger Gordon and Eagle tell fatally towards evening. On the Blackhall Castle Water, Mr. J. T. Hay and party have had splendid sport lately, having landed six fish from 7lb. to 18lb., eight fish scaling from 7lb. to 30lb., and ten fish from 8lb. to 20lb., on various occasions. The fish got recently have been fresh from the sea, with sea lice adhering and of excellent quality and colour for autumn fish. There are plenty of fish in the pools, but another fill is needed to make them take more freely.—DEESIDER.

Deveron (Banffshire).—In the end of last week the weather was of a very favourable character for angling, and with the exception of Monday of this week, when rain fell heavily during the whole of the day, somewhat spating the river. The water has been in excellent condition and anglers are now enjoying splendid sport on the whole expanse of the river, excepting those waters in which the lessee is absent, or too busily engaged with the gun. On the Netherdale water, Keith Maitland, Esq., had two salmon of 7lb. and 9lb.; Sir James Maitland had one of 9lb.; and Mr. Fraser, keeper, had another of 17lb. On the Mayne water, Mr. Thurburn had a grilse of 6½lb., and three salmon weighing an average of 9lb.; the keeper, Mr. Sandison, had four salmon and one grilse, the former weighing from 19lb. to 21lb., and the latter, 3½lb.. On the Mountblaize water, from three to six salmon were killed daily, and on the Forglen water there was also capital sport. On the upper section and on the Free water at Huntly, a few grilse and salmon were also landed.—H. W.

Don (Aberdeenshire).—During the past week several fine fish have been landed on the Kintore Burgh waters by Messrs. Morrison, T. Watt, and W. P. Campbell, who have had fish ranging from 9lb. to 26lb., mostly fresh run. On Mr. T. H. Bott's water, Mr. John Campbell landed a fine fish of 12lb. the other day, while some splendid work has also been done on the Grandholm Persley reaches and at the Cruives. Good sea trout and finnock fishing is also being had on the tidal waters, but another fill is getting more and more needed every day as the river is too clear for the best sport being got.—DON.

Helmsdale (Helmsdale).—Since last week, little improvement can be noted in angling here. Mr. Nutting, the shooting tenant of the Nanidale shootings, had only three salmon, while the other anglers had one or two. This fact is rendered the more astonishing from the circumstance that rivers in our immediate neighbourhood are yielding fair sport. The Berriedale for example, nine miles east of this place has yielded good sport. Several of the Duke of Portland's guests, amongst others Lady St. Gore have had grand sport. This is possibly accounted for by the fact, that the Berriedale is pure and simply an autumn angling stream, in spring it is utterly fruitless in sport. Then again the Brova twelve miles west of us has up to date given fair sport both in salmon, grilse, and sea trout angling, but here again crops up the fact that this water has no renown as a salmon river in spring, whereas the Helmsdale has for long been noted as one of the very best rivers for salmon angling in spring. Still all this does not account for the utter barrenness of sport in autumn here for some years past. I have repeatedly of late in these columns, told of the extraordinary numbers of fish now on this river, but it would require one to go and see for himself before he could quite believe it, and then, if he was an angler he would come away convinced but quite disappointed and utterly at loss to understand how he could get no fish out of such abundance. And still they come! The other day fish were freely and in numbers taking the river above the bridge at Helmsdale; so that not only is there any amount of " brown fellows," but there must also be plenty of "silvery" fish as well. It is to be hoped that the few remaining days of the fishing may prove more successful, although the time is now so short that little can be expected. Sea fishing when tried has been very productive, the coast abounding with saithe, cod, haddocks, flounders, &c. Trawlers are not allowed on any part of this coast either in three mile limit or in deep water, so I think that accounts in a great measure for the increase. Saithe or pollock affords grand sport with the White Fly, and a small minnow is very good also. The herring fishery is now closed for the summer season, to begin on a smaller scale in December, when much less valuable fish are obtained. Rain, is the order of the day, and farmers are nearly at their wits end.—S. C.

Inveran Hotel Waters (Invershin, N.B.) — On Thursday week, Mr. Hall, Sutherland Arms Hotel, fished the lower reaches of the river Shin, and landed a grilse, weighing 5½lb., and on Friday, a six-pounder, on Poll Clarag. On the following day, Mr. Lewis Hall, grassed a salmon weighing 31lb., on Round Pool; the fish, however, was not in good condition, otherwise it would at least have weighed 35lb. On Monday, last week, Mr. Hall got a 6lb. grilse on Angus Pool, one weighing 4½lb. on Poll Clarag, and a salmon of 8lb. on Fir Dam. Two or three fish have since been got, but particulars are not to hand. The weather which was very changeable for a long time has now every appearance of settling.—McB.

Kenmure Arms Hotel (New-Galloway).—The fishing has not been extra good this week. A few salmon were killed on the upper reaches of the Ken, and some fair baskets of trout have been obtained. Dr. Fentou had a basket of nice trout on Wednesday in Lochinvar.—B. B. BANTOCK.

Lairg (N.B.).—The weather of the past week was much improved, Thursday, Friday, and Saturday being warm and bright. On Monday, Dr. Borkless, fishing the lower end of Loch Shin from the bank, was successful at first cast in landing a grilse of 5lb. On Tuesday, Mr. Keith, fishing Loch Shin, made a basket of ten nice trout. On Wednesday, Mr. Mills, London, in two hours' fishing caught four trout, 2½lb. On Friday, Mr. Mackenzie landed fifteen fine trout, aggregating 9lb., on Loch Shin. On Saturday, Captain Haggard, on the same loch, made a basket of nice trout; Mr. Henneckman fished Loch Beannoch and landed eight lovely trout, weighing 6lb.—J. Y.

Liddle.—This river continues in good order, and large takes of herling and sea trout are being secured. Mr. J. Anderson caught two salmon of 6lb. and 7lb.; Mr. J. Crozier, Carlisle, landed two salmon, 10lb. each; Mr. A. Nichol, nine sea trout and several herling; Mr. R. Crozier, seven sea trout and some herling; and Mr. E. Black, Sheffield, one salmon, five sea trout, and several herling.—G.

Loch Dhu (Caithness).—Sir William Montague Call, Bart., Balcraggie Lodge, fished this loch on Wednesday and killed ten fine trout, averaging nearly ½lb. On Saturday, Lady Call, in less than two hours, landed a trout of a pound and several smaller ones.—J. Y.

Lochmore (Strathmore).—Salmon fishing closed here on Monday, the 14th inst., and for some time back the loch has not been yielding good sport. The excessive heavy rains kept it always too high for fly fishing, and the water was very dark-coloured. Sport on the river has been fairly good, the number of salmon was above the average, but lighter in weight. Grilse and sea trout were scarce; brown trout were plentiful and in excellent condition, and of good size, from 10lb. to 22lb. baskets being got frequently at one fishing. There are so many salmon in the river there will not be sufficient room for them on the Redds when the spawning season arrives. It is the spring anglers who are to thank for such a good stock of fish, owing to their having bought off the nets and had them removed for the past two years. Sir J. G. T. Sinclair and his tenants are now reaping the benefit in the autumn.—A. H.

Loch Rannoch (Kinloch Rannoch).—Subjoined is the past few days' angling report and list of takes by parties resident at the Dunalastair Hotel: On the 9th inst., Dr. Banks, of Liverpool, and the Hon. Mr. Mansfield, of Oakmore Hall, Cheshire, succeeded in capturing twenty-four very good trout, and Mr. Hoyle, of Liverpool, after two days' successful sport, secured a heavy basket of 67lb. This has been the heaviest basket of the season, averaging for each day 33½lb. On the following day Mr. Hoyle killed ten pretty heavy trout, and Dr. Banks and the Hon. Mr. Mansfield had eight. On the 11th, Dr. Banks and Mr. Hoyle captured sixteen fish, and the Hon. Mr. Mansfield on the river killed thirteen, one of his trout being a beautiful specimen of fully 2¾lb. On the following day, Mr. Hoyle fished Loch Tummel, and captured two very good Tummel trout, and on the river the Messrs. Pape, of Pickering, Yorks, killed twenty-two, and Dr. Banks and the Hon. Mr. Mansfield, on the loch, had a basket of 5½lb. On the 14th, Mr. Hoyle fished the loch, and captured thirteen trout, and on same water Dr. Banks killed nine. On the river, the Hon. Mr. Mansfield had eleven trout. On the loch, on the following day, Mr. Hoyle killed eleven fish, and Dr. Banks had seven very nice fish. On the river, the Hon. Mr. Mansfield had thirteen trout, and the Messrs. Pape, on same water, had a basket of fully 6lb.—Jn. K.

Naver (Strathnaver, Sutherland).—The weather has very much improved of late.—Since last reported the following fish have been landed—viz.: Major E. A. Burnett, Dalvina Lodge, two salmon weighing 14lb. and 8lb. respectively; Mr. Stubbord, Syre Lodge, Strathnaver, two salmon and one grilse; and Mr. Wormald, Skelpick Lodge, one salmon weighing 19lb., and another of 18½lb. The herring fishing has been a failure, and a good deal of distress in this district is likely to be the result.—McB.

North Uist.—On Loch Maddy Hotel waters, on Monday, Captain Conway landed a basket of 5lb. brown trout. On Tuesday, on Loch Nacsile, Colonel Ogilvie had a fine basket consisting of one salmon, 13lb., and two sea trout, scaling 5lb. and 8lb. respectively, while Mr. Morgan had 13lb. brown trout. Other baskets were light. On Wednesday, Captain Conway landed 7½lb., brown trout, on Loch Cronvaal, and Mr. Willet, 3½lb. sea trout on Strathmore.—W. S.

Overscaig Hotel Waters (via Lairg, N.B.).—The cold, wet, and boisterous nature of the weather has been such that most of the angling fraternity decamped southwards. Now, however, that the weather is settling down, good sport in trout and *ferox* angling might still be had. Mr. Hinde and Mr. Kirkebride, Nottingham, were out together a few days ago, and landed fourteen sea trout, which aggregated 10lb.—McB.

Rhiconich Hotel Waters (via Lairg, N.B.).—The high winds and heavy rains have been most adverse to angling, and very little has consequently been done. On Monday week, Mr. Dugdale, London, fished the river Laxford and landed four sea trout, averaging 1lb. each, one grilse, 5lb., and two salmon, 6lb. and 8lb.; Mr. Milles, London, on Loch-na-Caillich, had five sea trout, 7lb. Loch Inchard was fished by Mr. Doubavond, London, who landed 36lb. lythe; and by Mr. Clark, Bedford, 40lb. lythe. On Tuesday, Mr. Doubavond fished Loch No. 1, and made a basket of forty trout, aggregating 12lb.; Messrs. Clark and Turing, on Loch Inchard, landed 55lb. lythe; and Mr. Milles, on Loch Sgeir-a-Chath, three sea trout, 3lb. in all.—McB.

Shin.—On Tuesday of last week, on the upper reaches of this river, the Tressady Lodge party landed two salmon, weighing respectively 6lb. and 11lb.—J. Y.

South of Scotland.—Generally the salmon angling in the South of Scotland rivers has shown a falling off in the sport compared with that of last week. For about a week the fish have been very "dour." The weather has certainly been too bright until within the past day or two, and although Wednesday and Thursday were to all appearances favourable, but little was done.

Annan.—The talk of the week among anglers has been the big salmon killed in the Hoddom Castle Water. The keeper, Mr. Reid, hooked the salmon in Meinfoot Pool. He never showed above water at all, and after having him on for twenty minutes, Mr. Charles Inglis, Commercial Hotel, took the gaff, and clicked the fish as he ran past. Up till this moment no idea had been formed that he was a fish above 20lb. A great struggle took place before he could be safely landed with the gaff. Although he lost weight on the way home to the castle, he weighed 43½lb. He took a brown turkey fly. The keeper proceeded to the Duke's Pool, and with the same fly killed another of 16lb. The head keeper, Mr. Dalziel, ran two big fish the other day, and lost both. Mr. James Beel killed one of 15lb. in the Castle Water, on Saturday, and Mr. George Wardrope, Ecclefechan, landed one of 10lb. On Tuesday, Mr. Arthur Nicholson, St. Asaph, North Wales, fished the Hoddom Water and landed a very beautiful fish of 18lb. Mr. Nicholson hooked another salmon of like weight, and succeeded in grassing this one also. Unfortunately Mr. Nicholson, in abstracting the fly out of the mouth of the salmon ran the hook (a small one) into his finger. At the same moment the salmon made a struggle, and rolling down the steep bank, escaped into the pool in a moment. He rose another big fish, but failed to hook him. In Mount Annan Water, Mr. Dirom, of Mount Annan, landed a salmon of 9½lb. out of the "Salmon" Pool, on Tuesday, and his fisherman, Mr. Andrew Bell, grassed a pretty fish of 10lb out of the same cast. On Friday, Mr. Bell landed a good salmon out of the "Ellies" Pool of Mount Annan, which weighed 18lb., this fish rose at the Black Doctor. Mr. Dirom has been very successful with this fly. Mr. John Rutherford, of Summer Hill, Annan (ex-Mayor of Blackburn), killed one of 10lb., out of Luce Pool. In the lower waters, nothing has been done since my last report. The other district rivers are not giving so much sport.

Nith.—The Nith is in fair good order, and I hear of some capital baskets of yellow trout being had in upper waters. Salmon are showing in the lower pools.—Heatherbell.

*** **Club and River Reporters will oblige by sending in their Reports early in the week.**

Tay (Perth).—The river continues in good angling ply, and fish are plentiful, although the hot sultry weather has been against fish rising freely. On the Delvine Upper Waters, Mr. Wyman, London, had six salmon and grilse, 24lb., 22lb., 15½lb., 10lb., 8½lb., and 7½lb. On the Bertha Water, Messrs. Sutton and Wyman, London, had six salmon and grilse; and on Hobhall Water, Messrs. Field and party had thirty-seven salmon and grilse. On the Taymount Water, Mr. Murray and party killed twenty-one salmon and grilse. On Friday, Sir J. E. Millais had four fish and a grilse on the Bendill Water, and on Wednesday he killed two, largest 20lb. On the Delvine Upper Water, on Friday, Dr. Wyman killed two, 23lb. and 14lb.; Mr. Francis, one of 18lb.; Mr. R. Wyman, two, 18lb. and 15lb. On Monday, Mr. Francis killed one of 15lb.; and on the Bertha Water Mr. Sutton Wyman killed two, 15lb. and 18lb. Mr. McLean had fourteen fish and grilse on the Redgorton Water, on Friday. On the Stanley Water, Mr. C. Holland had nineteen for the week; and Mr. Laudon, London, killed seven in three days, largest 29lb. On the Stanley Water, on Monday, Mr. Foreman, London, killed one of 18lb. On the same water, on Tuesday, Captain Bald killed a fish and a grilse. On the Free Water, Mr. Harris had a fish of 10lb. on Thursday; Mr. Brady, a grilse; Mr. Forbes, a fish, 20lb.; Mr. Spiers, one, 16lb.; Mr. Grant, one, 12lb.; Mr. Wardrope, Dundee, one, 18lb.; Mr. Cosgrove, four; Mr. Lindsay, three. On Wednesday, Mr. Harris, one, 18lb.; Mr. McIntyre, a fish and a grilse; Mr. Muirhead, one; Mr. Cook, two; Mr. Cosgrove, two.

Earn.—On the club water at Criff, Mr. Jack killed two, 18lb. and 7lb.; Mr. East, London, two, 11lb. and 9lb.; Mr. P. White, one, 15lb.; Col. Allox, two, 13lb. and 7lb.; Mr. McGregor, seven, 18lb., 17lb., 14lb., 11lb., 9lb., 6lb., 6lb. On the Dupplin Reserved Water, Mr. Kilryann had three before lunch, 28lb., 25lb., 21lb., and a grilse; Mr. Laudon, London, killed seven in six days on the Trinity Gask Water.

Garry.—Lord Strathallan killed two, 20lb. and 13lb.; Mr. Woodhouse, three, 17lb., 11lb., 10½lb.

Thurso and Lochmore (Halkirk, N.B.)—This river and loch closed for salmon angling on the evening of the 14th inst., after the most successful autumn season ever experienced on this river; indeed, so far as the Brawl Castle water is concerned it has far exceeded any previous record, and although I have not got any statistics from the Strathmore section, I am creditably informed that the sport there was very good, especially when a boy of ten and a-half years could pull them out day after day. The fish ran wonderful small, the heaviest for the season only weighed 15lb., 14½lb., 12½lb.; all the rest were from 7lb. to 10lb. with a few grilse from 4½lb. The scarcity of grilse is a remarkable feature in a year like this, seeing there were no nets at the river-mouth, and always plenty of water in the river to bring them up; on the other hand, it is admitted by everybody that never were there so many salmon seen in the river. Had they been taking as well as formerly, the catch could have been doubled. At present the bag on the Brawl section since the 12th of August is ninety-seven fish, average weight 8½lb. This is a poor river for sea trout at the best, but I never remember a year quite blank of them before.—A. H.

Tweed, &c.—Salmon anglers on this river during the past week have had, generally speaking, a fair amount of sport, notwithstanding the fact that the volume of water in the river during the latter days of last week and the beginning of the present one, was such as to preclude the anticipation of heavy takes. The weather, too, was against the Waltonian, being bright and warm, with too little breeze for this sport. The results, however, have been by no means unfavourable, and now that the river has got into fairly good ply, better things are being looked forward to. On the various salmon angling waters, the sport got has been fairly distributed, both on the reaches above and below Kelso; but, on the whole, the upper stretches have yielded the best returns. A considerable number of both salmon and grilse have been killed, and the fish got have all reached nice weights. No exceptionally heavy salmon have been landed, but the quality is good and the average weight satisfactory. That there is sure to be a run of fish to all the angling waters now that the nets are off, is undoubted, and this circumstance is looked forward to with keen relish by all interested in salmon angling, in the lower and middle districts, which have not been so well stocked with fish as could have been wished, owing to the recent succession of floods having allowed the salmon and grilse to keep on "running" to the upper and higher reaches. A very favourable rise in the river, 2ft., on Monday night, will have done much towards the stocking of the lower and middle casts, and as the river has once more subsided to a nice size, successful sport is now anticipated on all the waters. On the Mertoun water on Friday, September 4, Lord Charles Kerr killed three salmon, and Cameron, of Lochiel, had one of 13lb. On the following day the latter killed a 12lb. fish. On Tuesday, the Hon. Charles Scott had two salmon of 11lb. and 13lb., and one 5lb. grilse; and on the next day he had one grilse of 5½lb., and one of 8lb. One fish of 13lb. also fell to the rod of the Lochiel on Friday last. On the Littledean casts, on the same water (Mertoun), Mr. C. W. Campion, on Thursday, killed the heaviest fish of the season with the rod, so far as is yet recorded, one of 40lb., and he also lost another very heavy fish; while on Friday he killed two more salmon. On the Dryburgh water, Sir William Scott has had several fish, and Lord Brougham, on his portion of the Mertoun water, has also had good sport. On the Carham water, Mr. J. Gilbey Vockes, on the 3rd inst., had 10lb. of yellow trout: on the 4th, one grilse of 8lb.; on the 5th, two salmon of 17lb. each, and one grilse of 7lb.; 8th, one salmon of 12lb., and a 9lb. grilse. On the 10th, Mr. J. Vockes had a fish of 11lb., and two grilse of 6lb. and 9lb. respectively. On the 11th, Mr. Gilbey Vockes had an 8lb. grilse, and on the following day he had a 15lb. salmon and an 8lb. grilse, and on the 14th, Mr. J. Vockins had a very nice salmon of 11lb. On the Ednam House water, Mr. J. H. Drummond got a couple of grilse; 7lb. and 8lb., on Friday last; and on the Makerstoun water, the Hon. J. H. Madden, M.P., had also a couple of grilse. On the Floors Castle fastnesses, on Wednesday last week, his Grace the Duke of Roxburghe killed four salmon, all good weights, and on Saturday he had one grilse. On the Thornilea water, one grilse of 10lb. was got, the first of the season in the district, by Mr. Hardie, Walkerburn; and one salmon of 16lb. was killed in the same district on Thursday last, on the Lees water, Admiral Walker has had fair sport, including two salmon on Saturday. On the Twizel water, Mr. Wales has had two or three fish. On the Rutherford water and the Boldide water, so fair sport has also been got during the week, but the records are not yet to hand.

Close of the Netting Season on the Tweed.—The net fishing season closed on the Tweed on Monday night, and the results are believed to have been highly satisfactory, the produce of the last two or three weeks having been so heavy as to compensate for all previous deficiencies. Salmon have been much more numerous than in several recent years. There was also a good supply of grilse; but a falling off in sea trout, especially as compared with last year, when they were exceptionally plentiful. The spates which prevailed during the month of August induced a great number of fish to enter the river, the result being that the upper netting stations did better proportionately than those in the tidal way, last week's record especially being the best experienced for a long time. On Tuesday morning the produce was almost unprecedented. Little Haugh had sixty salmon and forty grilse; New Water, forty salmon and fifty grilse; Tweed Mill, twenty-three salmon and eighteen grilse; English Water, twenty-one salmon and fourteen grilse; Great Haugh, twenty-four salmon and over thirty grilse; Twizel Boathouse had over eighty fish, including one splendid salmon of 42lb. weight. All these stations are on the upper part of the netting district, and the conveyance of so many fish to the railway taxed the resources of the lessees. The salmon have been generally of good size, with few exceptionally heavy weights; one fish, perhaps the largest of the season, was caught at Yardford, near Norham, weighing 46lb., on Friday week.—Maxwheel.

Whitadder (Ellemford).—The fishing this last week has been fairly good. Mr. C. Anderson, of Edinburgh, had on successive days 3½lb., 3lb., 3¼lb., 3½lb., 4½lb., 5½lb. The river was in flood on Tuesday. Several sea trout have been seen; they must have come up in the former flood. Weather very unsettled.—R. J. Fenton.

Ythan (Udny Arms, Newburgh, Aberdeenshire).—Splendid sport continues to be got both from bank and boat by the numerous guests staying at the hotel on every favourable occasion. The hotel accommodation is now fully taken up till the end of September. In order to prevent disappointment, sea trout anglers intending to have a cast on the Ythan tidal, should communicate early with Mr. Ritchie, the proprietor of the Udny Arms.—G. N.

Irish Reports.

Ballinderry (East Tyrone).—Sport continues to improve. On Saturday, Mr. Alerson killed two salmon, 5lb. and 12lb. respectively, and a "dullaghan" or Lough Neagh trout of 10lb. on the Tuelguiggan reaches. On the Cloggan reaches, Mr. J. Browne killed four trout. Mr. Charles Stevenson, last Monday, bagged thirteen trout on the Ardtrea reaches. At Coagh, Mr. C. B. Irvin, on Thursday, had six trout, and Mr. F. Woolcoombe had a lake trout over 2lb. Mr. Robert Campbell, fishing the Kingsmill tributary, killed fourteen trout, and on the Kildress stream, in a couple of days, your correspondent bagged thirty-eight small trout. At the Burnough, professional netters are making good takes.—J. A. B.

Clonbur (County Galway).—Fishing on Lough Mask on the 16th inst., I was fortunate enough to secure a fine pike, weighing (one hour after capture) 33lb. The fish was caught trolling with a large Brown Phantom, and was in splendid condition. It measured 3ft. 10in. from tip of snout to end of tail. I am sending it to Cooper for preservation. A friend fishing with me also got a good fish of 18lb., caught on a Blue Phantom and single-gut trace.—W. Fred. Laurie.

Lough Currane (Waterville, County Kerry).—Sport has been very poor. Nothing will be done until we get a change. The fish are numerous, and good sport is anticipated from this to the end of the season if a change for the better sets in in the weather. Sea angling has been first class, and good sport has been had by Mr. W. A. S. Riversdale and Mrs. Riversdale, Mr. Batesman and brother, Colonel Rogers, Colonel Kirkwood, Miss Hartopp and party, and some others. Whiting and gurnet were the fish principally taken.—Thomas J. Dennehy.

Lough Neagh.—Salmon are getting scarcer as they are running up the streams. Lake trout are rising better. Mr. Thomas Taylor during the week bagged fourteen trout and nine pike; Mr. John Meanagh, twenty-one trout and three pike; and Mr. John Donoghey, forty-three trout. Coarse fishing is prime, and pollen that has been latterly taken is considerably improved in size. In the small feeders of the lough trout are numerous. The other evening a countryman speared an 8lb. lake trout in the Clonoe. Mr. C. R. Stevenson and I are going to try our luck to-day (Wednesday).—J. A. B.

Moy and Lakes (Ballina).—On the two last days (14th and 15th) for salmon fishing in this river, some nice sport has been had. Mr. J. C. Wilson, Mr. Henry Scroop, Master Simon Scroop, Mr. F. Warron, Mr. Theobald Divers, Mr. Willie Porter Helley, your Correspondent and others, all had from one to three fish on the above days, ranging from 11½lb. down to 6½lb. With this fine weather the loughs, which were too high latterly to afford much sport, are now falling fast, and trout fishing has improved those last few days. On Monday, Mr. W. Slater had a nice basket of twelve trout, weighing 16lb.—Frank Hearns.

Shannon and Lough Derg (Killaloe).—We have had most charming weather on river and lake since my last despatch, which brought out in all its glory the delightful scenery of this lovely place. The three last days of the past week in particular were simply delicious—days on which it was a luxury to live. Many anglers went up the lake after the trout and pike, and others went down the river on the off-chance of killing a salmon or grilse. To the latter sport the floods have proved the only obstacle, but I hope it will be different next week, as the water is steadily falling. Mr. G. H. Gillott, of Birmingham, got a nice plump grilse yesterday (Sept. 15), and lost a 20lb. salmon after a good long tussel in a raging flood. Just as the attendant was going to gaff the fish, the hold gave way, and off Mr. Salmo glided, I hope, to be caught another day. This is a *dies non* on the river, as all hands are away at Castleconnell regatta, where the sports are always carried out in a most satisfactory manner. At many points on Lough Derg a good many fine pike were landed last week. I am collecting details, and will publish same later on.—S. J. HURLEY.

Strule and Mourne (Newtown Stewart, Co. Tyrone). The fishing on these rivers is not as good as was expected this week, taking into account the great number of salmon with which they are stocked. I have not got the names of all the gentlemen who killed, but the following were successful: Mr. Donnell killed two on Monday, and two on Wednesday; Major Lawrence, killed two on Tuesday; Mr. J. Houston, one; Mr. Mullen and T. Fullerton, also killed on that day; and Mr. M'Cloy, killed a new run fish of 15lb. same day. The weather seems rather dull and fish are not taking freely, but you can count from fifteen to twenty fish showing themselves any day.—JOHN J. MOORE.

AT LAST!

[FROM THE "GRIMSBY OBSERVER."]

I HAVE been a bachelor for more than twelve months, which is a long period for a fish to remain in a state of *single blessedness*, so I have ventured from my watery retreat in the park lake for a short time, to write a letter to inform that portion of the Grimsby public which frequents the park of my approaching nuptials. Oh, Mr. Editor, these twelve months have been an awful time for me. I am just upon thirty years of age, and the bluest of blue blood flows in my veins. I am not a common river carp; my associations and family connections from the first day of my existence have been of the most aristocratic and exclusive nature. My parents—indeed, my ancestors for many generations—were born on Yarborough soil. Oh! how I sigh for Croxby lake! It was there we were all born. And then one day, simply because I saw a lump of sweet paste—so innocent looking—and took it in my mouth, I was ruthlessly snatched from the home of my ancestors and transferred to the lake in the Grimsby People's Park, there to lead a solitary life, so far as my own kith and kin are concerned, for upwards of twelve months. No, Mr. Editor, I never expceted to see my flame, Bessy, again. She was twenty-five years old, which is quite a juvenile age for one of the carp species, and we had courted a number of years, and we were just about being married, when some horrid man, as I have since heard, laid that tempting morsel of paste right under my nose. It was just breakfast time—that horrid man must have known I was hungry. Well, I took the paste in my mouth and commenced to swim away, when all at once—*Whew!* I felt something awful being driven into my jaws, and a shock like a young earthquake. I struggled hard for a long time, but eventually I was towed ashore with a long line and lifted in a net out of the water on to the bank. Oh! if I had been wise in time! I found standing on the bank, showing every sign of the most rapturous glee and pleasure, a man I had often seen on the bank previously, and I had often wondered what brought him so frequently to the lake side, little deeming he had any designs against myself or any of my species. I have since heard it was Mr. Arthur Mountain who lured me with that piece of paste. Well! he took me away from all my relatives and friends, and, worst of all, from Bessy. He stowed me away in some wet grass, and put me in a large basket on his back, and then jolted me all the way to Grimsby, until my whole body, including my dorsal fin, ached most dreadfully. To cut short this part of my sad experience, Mr. Mountain in a day or two carried me to the park and put me in the lake, where I found lots of other vulgar fish with no aristocratic connections or antecedents at all. Certainly, there were some trout, which are all very well in their way, but they only live ten or twelve years, whereas my species live for two hundred years. It was useless forming a friendship with a fish of such fleeting existence as that. My weight was then 12lb. 10oz. I roamed about the park lake, and soon found I was the only carp there. What a cruel fate was mine! Quite a young bachelor, and no means of communicating with my Croxby friends. It appears that someone wrote to the Grimsby papers and stated that a fine carp had been placed in the park lake, and lots of people came to look for me; and because I was too timid to show myself to them their first time of coming, they seldom if ever came again. One gentleman wrote to the papers and sent a list of the food I was partial to, but some people brought new potatoes and peas without peeling the former or part boiling them or the peas. They never washed the lettuces they threw in, and seemed to think that as I was only a carp I was not particular about the food I took, or its cleanliness. One kind gentleman, however, came lots of times during the cherry season, and threw in lots of that delicious fruit, which I enjoyed very much. In return for his kindness, and to show I was not ungrateful, I let him see me several times. But, oh lawks! Mr. Editor, I have had some awful frights. The first morning after I was put in the lake one of the park gardeners got into the pram (punt) with a long pole, and went about all over the lake, and I quite thought he was on the look-out for me. That gave me an awful fit of the cold shivers. However, I found out, after a few mornings, that it was his practise to go every morning in the pram, and feed the rabbits and waterfowl on the islands. Then those horrid swans! they were continually diving their long heads and necks under water, and if I happened to be anywhere about having a quiet doze they always struck at me most viciously with their bills, so I keep as clear of the swans as I can. Well, the Egyptian geese were nearly as bad. If I put my dorsal fin or tail out of the water, they were down upon either one or the other at once. They were very savage birds, and I saw them kill three little wild ducks one night this summer. And those little diving ducks! they used to pop down four and five at a time and keep under the water thirteen or fourteen seconds. They frightened me very much at first, but we are good friends now. The Muscovy ducks chased me a bit at first, and gave me a lot of trouble and anxiety, and more exercise than I cared for, but when their "breeding time" came they let me alone. The Spanish geese were all right except for their everlasting cackle—they are as bad as women—they disturbed my afternoon naps a good deal. However, I suffered more from that skating last winter than anything. For six weeks I had no rest at all, and some days there were so many people on the ice I thought they must come through it and crush me. I have heard Mr. Norton, the park-keeper, say, "It's a long lane that has no turning," and often wondered what he meant, but I know now, and that is the reason why I have headed this letter "At last!" On Tuesday last, about half-past nine in the morning, I saw on the bank of the park lake Mr. Buchan, the borough surveyor, and a lady, and with them the gentleman who used to bring me the cherries. Mr. Buchan had a large bundle with him, which he carried with great care, and I heard him say, "It pulled like a great bullock." The cherry gentleman suggested "more like a calf." I immediately came to the conclusion I was going to have some extraordinary companion. I heard some further talk about weights and scales being fetched, and Mr. Buchan guessed 11lb., and the cherry gentleman guessed 12lb., and I began to think it must be a very small calf to weigh so little. Mr. Buchan then said it had knocked some scales off when in his bath, and as I knew that calves had not any scales and were not usually put in gentlemen's baths, I began to turn over in my mind whether I was not going to have a companion of my own species brought me. I saw a bottle produced and some liquid poured over where it was said the scales were off, to prevent any fungoid growth, and then, to my intense, delight I saw my "old flame" Bessy brought out from a number of wet wrappers and carefully placed in the park lake. As luck would have it, she swam right into the weeds where I was in hiding, and immediately recognised her former lover. Bessy was very plump and in most perfect condition, and told me she weighed 12lb. when put in the scales and, as I weigh now rather over 13lb., we are a very comely couple. Bessy told me she fell a victim in precisely the same manner as I had done—namely, to a small sweet piece of white paste, and the experience of her capture was nearly identical with my own, the only difference being that Mr. Buchan was the lucky captor instead of Mr. Arthur Mountain. Bessy and I will wait until the spring before being married, and when we have got over our family troubles and hatched some small carp fry, we shall begin to sport ourselves in the park lake about July next. Bring us lots of cherries then. This is a long story, Mr. Editor, but I thought your readers would like to hear a little more about myself and also about my future wife.—Yours, piscatorially,

THE CARP IN THE PARK LAKE.

PRAWNING AND SHRIMPING AMONG THE ROCKS.

Now we are having a spell of fine weather, with the wind off the land, it affords a rare opportunity for pursuing the above sport, because the water is smooth and the pools do not get disturbed. Year by year this mode of enjoyment is being practised by an increasing number of people, and ladies are going in for it with great gusto, because it is a healthy exercise, with fresh sea air, and the paddling in the salt water has a very beneficial effect on the system. A party of ladies and gentlemen last week at Wembury took over two gallons of very fine prawns in an afternoon with four nets. The party was accompanied by a well-known medical man, and he told me that the trip had done him a great deal of good, and he thoroughly enjoyed some of the prawns that were boiled for supper. The proper rig for this sort of work is to have an old pair of stockings, and shoes with good thick soles, for you have to wade sometimes nearly up to your knees in the water. The net that you use is a spoon-shaped one, about 16in. by 14in., and having a good stout ash handle about 5ft. or 6ft. long; on the inner edge of the iron ring, which is made of oval iron, is drilled some holes about an inch apart, and the net is fastened on with wire in such a manner that it does not get chafed or rubbed whilst working amongst the rocks. A canvas bag tied around the waist is very handy for placing the prawns in as they are caught. The arms should be made bare to above the elbows, or the clothes will get very wet by constantly placing your hand in the net.

It would be advisable, if the sun is very hot, to get an old pair of stockings and cut off the feet, and pull them up over the arm like sleeves; this will prevent the skin getting blistered.

The best places for catching prawns are the pools that are left amongst the rocks at low tide, and this is applicable all round our coast, and is not by any means confined to this neighbourhood.

The best time for prawning is to commence about two hours before low water, and then you can fish for four hours—namely, two hours of the last of the ebb and two of the young flood, and if you choose the time when it is low water, at twelve o'clock, you get the lowest tide and better sport. In places where there are no rocks, but only a sandy beach, we use the same sort of net, only on a D-shaped ring, instead of a spoon-shaped, and they are pushed along the sand on their flat side. Nearly all the prawns that are caught are taken in this way. WILLIAM HEARDER.

REWARD OF BRAVERY.—Readers of the *Fishing Gazette* will be pleased to learn that Mr. Robert Steele, of Bowholm, Canonbie, Dumfriesshire, has been awarded the honorary testimonial on parchment of the Royal Humane Society, for the rescue from drowning in the river Esk, of Walter Elliot, on the 14th of July last.

EXCITING ANGLING ADVENTURE.—Mr. Hastings Beaumont, solicitor, London, and Mr. W. H. Steele, property agent, Glasgow, were fishing from a boat on Loch Tulla, Argyllshire, on Monday, close to where the river Orchy leaves the loch, commencing its course in a series of long and deep rapids. The latter gentleman hooked a salmon, which ran out a considerable length of line, and in the excitement which followed the boat got into the strong current occasioned by the late heavy rains, and the oars were powerless in preventing its being carried on to the rapids. It shot into them, and was carried down about 100yd. almost in the space of a moment, striking a rock in the centre of the river, where it remained fast, at the same time throwing Mr. Steele into the surf. He reached the bank with considerable difficulty, being bruised very much by the large stones and rocks over which the flooded waters were rolling. Owing to the noise of the waters the occupants of the boat could not be heard on the bank. Mr. Steele pushed his way over the moor to the nearest road, near which the navvies employed in the construction of the West Highland Railway were working and procured assistance. Mr. Forbes, of the Invereran Hotel, and several navvies, supplied with ropes, arrived at the spot about half an hour afterwards. A rope was thrown out to the boat and fastened to it, and the occupants safely landed by holding on to it and working hand over hand to the bank. It took five men to pull the boat, which was much damaged from its position. Beyond some bruises and scratches, both gentlemen were uninjured.

THE "STANDARD" MEAT BISCUITS FOR DOGS.

USED BY SOME OF THE LARGEST EXHIBITORS.

TESTIMONIALS.

THE "STANDARD" MEAT BISCUIT CO. GLENBOIG, N.B.
Sirs,—I have given your "Standard" Dog Biscuits a fair trial and I consider them to be as good, if not superior, to any I have yet tried.
Yours truly, ROBERT CHAPMAN.

THE "STANDARD" MEAT BISCUIT CO. EDINBURGH, N.B.
Dear Sirs,—Your Dog Biscuits are simply perfect. My dogs prefer them to any others. Please repeat my last order, namely 5 cwts.
Yours faithfully, W. R. REID.

We take the liberty of recommending to you the

"STANDARD" MEAT BISCUIT

manufactured by this Company from the purest materials, and which has been proved and tested, meeting a decided want in the rearing and feeding of dogs.

The Manager, who has the combined experience of a breeder along with a practical knowledge of biscuit making, finds that a constant use of these biscuits is attended with the best results.

THE BISCUITS ARE EATEN GREEDILY DRY, BUT IF PREFERRED SOFT, THEY SHOULD BE COVERED WITH WARM WATER FOR **10 MINUTES**

Sample 1 cwt. bag, 20s.; ditto ½ do., 11s., carriage paid. Special Terms for larger quantities.

THE "STANDARD" MEAT BISCUIT CO., EDINBURGH.

— NOTICE. —

Fishing Gazette is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

mmunications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to R. B. Marston, the Editor of the Fishing Gazette, St. Dunstan's House, Fetter Lane, London, E.C.

respondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

Terms of Subscription.

Gazette can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston, and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

One Year, post free, to any part of Great Britain and Ireland			10s. 6d.

HINTS TO AUTUMN ANGLERS.

LMON, SEA TROUT, & FINNOCK LURES.

By Mac.

This paper is meant to follow up, with some actical hints, those two relating to fisheries hich have preceded it during the past two eeks; and although it is not claimed by the iter that it will prove instructive to many, yet ere may be parts of it that will be of some little iding service to those who may find themselves hing waters new or almost entirely new to em. Once again it is repeated that after this mo of the year brown trout fishing in Scotland no longer worth looking after; that only the igratory fishes are in season, and that the only stricts in which there is a true autumn run, in od strength, of such fishes, are those of the East oast rivers, the North-East Coast rivers North of e Ness, the Solway rivers, and waters of etland, and of some of the Western Isles.

Anglers who "tour" about and look for fishing ore especially salmon and sea trout fishing) ee of charge ought not to pitch their expectations very high. True, they should look for ort; but when they do not get it of a quality to their mind it is sheer folly for them to get funked," spoil their temper, and neutralise all e good which when they started on their tour ey were confident of deriving from a well-rned holiday. Everyone has his chances—he may be in the best or the worst of luck. If the former, let him rejoice and be satisfied to his fill; if the latter, his best policy is to take matters philosophically. From much experience the writer speaks. Often he has had his times of grand and more often his times of miserable luck; but his greatest successes have never elated him to excitement, nor his most miserable disappointments caused him to funk. The angler who addresses himself with determined will to redeem his failures, works hard and persistently for his sport, is ever hopeful, ever pegging in, no matter how discouraging matters look, is a hero, one worthy of admiration; but the "funker," whether he "bursts up," skulks off, or is always complaining, crooning, croaking, and making himself and everyone about him uncomfortable, what shall he be called?—the poorest, most miserable and pitiable of creatures; aye, that indeed, because in him are not the instincts of a true sportsman. Him, therefore, this paper is not for—he could not profit by it. It is given, whatever its merits, solely for the benefit of those (strangers) who can and will fish, and whose success is the reward of their noble perseverance.

Of lures and their adaptability, in a general sense, to circumstances, I now come to speak; and first of the lures themselves—not of all, but of some—I mean to give a brief description. These I divide into four classes in their order: flies—spinners—wrigglers and creepers—and worm and prawn.

Flies.

For salmon the flies used in the autumn require but little said about them, as like at other seasons size is the most important consideration. For autumn, however, a smaller fly than that used in the spring is the average size and "fancies" pretty generally are preferred to plain, sombre patterns. Yet, while this is the case, there nevertheless are times when a very large or a dull-looking fly will work better than any other, even in the back end. Fresh-run fish are wont to take larger flies than those which most readily tempt their "potted" congeners. In the autumn more especially this is noticeable; and why as a rule smaller flies are required at that time than in spring is no doubt because the fish, more or less in a brood state, are not such free risers. There is no other reason that we can assign for it. The look of a fly, be it the right size, is everything to the fish; and so we find in the autumn, as in the spring and summer, a bright fly (when the water suits) answers best on a bright day, and a dull or rather dark fly on a cloudy lowering day. This of course will not always be found to hold good, but there is reason for it; and the experience of most justifies the fact being mentioned. For autumn salmon angling very good patterns are Jock Scott, Silver Doctor, Blue Doctor, Black Doctor, Childers, Durham Ranger, Black Ranger, Dunt and Gordon—for daytime fishing; and Eagles, grey and yellow, fancy or plain, for evening fishing; and specially good sizes are Nos. 2, 1½, /0, 2/0, 3/0, and 4/0—the smaller for low waters early in the season, and the middle and larger sizes for later on, heavy waters, and very cold rough days. In the lists given will be found patterns and sizes to suit at almost any time (when fish will take a fly) on any river to which the angler may pay a visit.

Anglers should not hang long on any cast provided they have plenty range of water; fish it carefully they should, but it is missing their chances to tarry where fish are not taking, because, and not unlikely, they may be taking somewhere else. We have often noticed that on close calm days, lazy clouds reflected on the water prevented the fish taking *here*, whilst *there*, not (say) a mile distant, they were taking well. Again, it is important to cross all the fish within compass, as the more fish carefully crossed the more the chance of a take. When a fish misses he should be tried again after a short time—a shorter time being allowed when he rises in a sharp stream than in a pool. The same fly should be used if he does not make a lazy gingerly rise, or what is called a "short rise"; but when such a rise is got the fly should be changed for a smaller one of the same or about the same pattern. At all times deep sinking of the fly is advisable in autumn, and those who fish deepest, everything else being equal, oftenest catch large fish. Often a fish comes at the second cast if the fly is not played the same as the first time. Suppose for example the angler brings round his fly the first time without much motion, he should the second time bring it round rather smartly (over the same track), giving it a good deal of life, or "jerk," by working the rod, or the reverse may be adopted; either often pays. For early in the day fishing, after nights of sharp frost, when, with the water in good size the fish often take splendidly, it is recommended, especially should the sun be strong, to first go in for those casts that earliest catch the sun's rays. As a rule they are the best early in the day catches. In autumn, especially after October comes in, it rarely matters much for the sun being shining right down a pool—straight in the head of the fish. Frequently such will be found an advantage rather than a drawback should a bright glancing fly, not very large, be fished with.

A few general hints as to fishing for salmon with the fly have now been given, but by those without a correct knowledge of the water they cannot to anything like the full extent be taken advantage of. Most strongly therefore is it urged on the stranger angler that he should do everything to find out for gillie a man who "knows the water" in all its outs and ins—knows where and with what, according to the conditions, fish are likeliest to be got. The advantages to be derived from having the services of such a gillie cannot be over-estimated. There are born fishers of humble position, native and "*acquant* with the fishings," to be found almost everywhere, and these are the men who from their own experience and close observation are the most to be depended on to circumvent the fish, or make it be known how they can be circumvented. They know every tip, and every lie, and if fish *will* take they will take them with something or other. Knowledge of a fishery—real thorough knowledge—only comes of experience and long and close observation, and a lack of this on the part of those who will not seek, or are above submitting to be guided is generally *at the bottom* of want of success. Get, it is repeated, a most competent local fisherman for gillie. When the writer was a youthful "braw, brisk fisher," brimful of cock-sureness, he was always confident (and confidence is a splendid thing when one *does* know the water) when he fished strange waters of doing quite as well as anyone else if only he was shown the pools. But this idea he has long since given up; it does not pay in practice. The various states of the water make places which are "lies" at one time no "lies" at other times; and there is often much water which seems very likely, but where no fish ever lie. Consequently the angler, when an entire stranger or but little *acquant*, may often spend most of his time in fishing positively useless water. Then what about flies or baits and spinners?—the best sizes and how to work them under the ever so many occurring differences of conditions? about this the stranger knows little or nothing; the native everything or almost everything.

Flies for sea trout and finnock fishing in tidal and non-reaches of rivers during the autumn may generally, if anything, be larger than those used in summer. The patterns are pretty much the same. Different bodies with brown or green herl wings are deadly in most tideways (on sunny days), and along with them may be included Saltoun, Wickham, Scarlet and Teal, Claret and Mallard, Teal and Silver; and two flies, one with raven wing, black body, with two turns red at tag, small jungle for cheeks and black hackle; and the other with mallard wing, brown body, and coch-y-bondhu hackle. Many others might be named, but those given form in themselves an excellent and ample range for nearly all running waters. Sizes vary from No. 10 upward to No. 7, according to the weather and the state of the water. About all round, silk and slim bodied flies are best for stream fishing, but for lochs fuller bodies have mostly everywhere the preference, and on some such waters it has been seen that the roughest and most clumsily tied flies do best of all. Of course everyone thinks most of the flies with which he obtains most success—and quite right to. Loch flies, therefore, no list of is given, as of such there is endless variety, all nailers, and so not to be overlooked without offence to this, that, or the other party. Many are nondescript and curious things, ranging in resemblance from a beetle to a butterfly! Yet they kill, and who that believes in them will not valiantly stand up for them? Of fishing in lochs for sea trout I say nothing on the present occasion, as pretty generally all over the season is now about past.

Very few streams afford really good finnock and sea trout fishing with fly in the autumn. I know of only four, and even they cannot be depended on for any length of time. The best streams known to me are those which run clear a day or two after a flood, and the best time is when the clearing is in process. At all other times some lure or other of a different kind does better than fly. Finnocks are most tantalizing: very frequently, as the angler will notice when fishing for them, it is a case of from the "hay to the heather" of a sudden. When they are in right humour they take splendidly, but in a twinkling they drop off, after which not one will stir. For half-an-hour they may be mad "on" several times in one day, and then perhaps for two or three days they may not be on at all. At other times they will sport with the fly, leaping at every cast, and yet not one in fifty of them take.

On the whole light tackle is best for finnock fishing, and the approved style of doing it is to cast as for salmon, and work the fly in the same way round to the side but with sharper movement. At one time the best sport will be got by sinking the fly, at other times by nearly skimming it on the surface. Where the water is subject to tidal influence the plan to adopt in order to have most success is to follow the receding tide (the best chance of all), and to retire from the incoming tide—keeping in each case quite close upon the water influenced by the tide.

Description of, and hints as to the use of several of the other lures referred to, will be forthcoming next week.

CHUB AND DACE: AND ANGLING FOR THEM.

By Alfred Jardine.

(*Continued from page 180*)

Leuciscus-cephalus—i.e., the chub, or chevin; and the dace, *Leuciscus-vulgaris*—I shall, in continuing my articles on the *Cyprinidæ*, treat of together, as they have somewhat similar characteristics, and are the only two among the *coarse* fresh-water fish that rise *freely* to a fly. There is a difference, however, between them, which is easily distinguished by anglers who know somewhat of ichthyology; and although small chub, of say a pound weight, are sometimes mistaken for *very large dace*, yet, by bearing in mind the following rules, no fisherman need be in doubt which kind of fish he has captured: "The anal fin of the dace is a pale greenish white, with occasionally a very slight tinge of red; in the chub this fin is a brilliant pink."* The hinder margin of a dace's anal fin is *concave*, that of the chub is *convex*; its tail and dorsal fin are dark, and the back somewhat bronzed, compared with the dace, whose general appearance possesses a much more silvery brilliancy; its scales, also, are smaller in proportion, counting fifty along the lateral line, while a chub's number only forty-four or forty-five.

Chub spawn in April or early May. Frank Buckland says: "Little or nothing is known of their mode of spawning, where the eggs are deposited, whether they sink or float—are cohesive or not—or how long they take to hatch out."

Some naturalists believe dace have two spawning seasons, April and June. It is certain they make (as it were) two migrations in the Thames, and some other rivers, assembling in vast numbers, and heading up to the lower side of the weirs to spawn; after which they get on to the gravelly shallows to scour themselves, where they rapidly regain condition, and during the autumn months, rise freely to an artificial fly. In the winter they seek deeper waters, and are then captured more readily with baits and float-tackle.

Chub grow to large size in the Thames, Kennet, Colne, Loddon, Lea, and many other rivers I might mention. They are often caught of 4lb., occasionally exceeding that weight; but to capture a six-pounder is an event—in fact a triumph that has not fallen to the lob of many anglers. As I am writing this article, my angling chum, Mr. Henry Brett, sends me word that when he was fishing last week in the Teme, Worcestershire, he caught on Nottingham tackle, with greaves, a fine chub of 5½lb. weight.

Among the finest specimen chub shown at the 1883 International Fisheries, were the following: One, 6lb. 2oz., Mr. H. Cresswell, True Waltonian Society; one 6lb., Mr. Howlett, Newmarket; one, 5lb. 12oz., Mr. J. Callaghan, London; one, 5lb. 12oz, the Friendly Anglers; one, 5lb. 10oz., the Maidenhead, &c., Angling Association; one, 5lb. 8oz., Mr. T. E. Gunn, Norwich; one, 5lb. 4oz., J. W. Gant, London; two, 5lb. 4oz. each, the Piscatorial Society; and I believe there was a larger one than either of the above, but I forget the name of its captor.

Chub, as a rule, associate together in holes and eddies; bushes and trees overhanging steep clay banks, where is a few feet depth of water, are likely places to try with success. Solitary stray fish are frequently found scattered here and there in open places among weeds, or on shallows; but, as a rule, they are ill-conditioned outcasts, falling an easy prey to the flyfisher.

Probably no fish of quicker vision inhabit fresh waters, and this may be the reason why they take a fly so readily, when the "lure" is deftly cast over, or near to them; but a gleam of the rod, or the shadow of a bird falling on the water, a heavy foot-fall near the bank, or any commotion while fishing from a boat or punt, down the chub sinks instantly to the bottom, for he is the "fearfulest of fish."

The fly-rod should be 11ft. or 12ft. long and moderately stiff, with upright rings — some anglers use a double-handed one of 14ft.—with which weapon, when fishing from the river's bank, much more water can be covered than with a single-handed rod; but from a punt, one of the latter, 11ft. in length, is much handier, especially if casting or whipping under boughs, where chub love to lie in wait for the caterpillars and other insects which fall off the leaves.

A tapered waterproof silk line, fairly heavy; 3yd. of round (selected) trout-gut, stained a pale olive, and with some chub flies built on eyed-hooks, the angler is ready for his sport. Among the most killing flies are, Black and Red Palmers, Marlow Buzzes, Bumble Bees, Wasps, and the Marlow Crow. All should be varied in size according to water, weather, and weight of the fish expected to be encountered. Small flies should be used on bright, sunshiny days, but larger ones after dusk; a gentle or two put on the bend of the hook, or a small piece of white kid on its point, add to the seductions of the lure and make it more deadly. A boat, if using the greatest care, is liable to rock, and cause ripples or small waves, which alarm the fish; a punt is the best, as it floats steadily—it should be dropped down-stream stern first, not with a rypeck prodding the bottom of the river, but a strong cord (or clothes-line), to the end of which is a weight heavy enough to hold the punt. An old disused iron railway-chair (one can be obtained at most railway sidings) is the very thing; this may be suspended at the head of the punt, the cord roved through a block, but, except when travelling, the weight should not be hoisted above the surface of the water, so that it can be lowered without a splash as occasion requires. When the punt is about 15yd. above the bush or bank desirable to fish, the weight is let down *quietly* and *rope paid out*, until the angler is opposite, or a little above where the chub lie; then his fly should be cast close to the bank, or just above the bush, and the point of rod depressed to let the fly float under the overhanging branches.

A capital plan is to cast the fly *on to* a bough or the leaves, above the water, then drag it off quietly, and as it falls on the surface, or slowly sinks under, the fly is almost sure to be taken; but if not, draw it slowly a foot towards you—this generally proves irresistible if a chub is thereabout, which, when hooked, should be *held* a second or two, and thus prevented gaining its refuge or stronghold among the submerged roots, boulders, or holes in a water-washed marly bank; and if necessary the punt pushed out towards mid-stream, so that with a heavy fish, the angler may have every advantage in playing and getting it to the landing-net.

Natural flies, such as bluebottles, bees, wasps, and large moths, also caterpillars, are all killing baits, and taken readily by chub. They are so greedy that it is rather difficult to say what they will *not* take; frogs, slugs, worms, gentles, wasp-grubs, and minnows, used at the proper seasons, are baits which seldom are "amiss"; and where fruit trees, such as cherry, mulberry, or plum, overhang a river and drop their ripe fruit into t water, it is swallowed with evident relish. summer, "bolusses" of rich Cheshire or chedd cheese are "gulped" with gusto; while in wint bullocks' pith and brains, or tallow-chandle greaves, appear to be considered luxuries.

A bunch of gentles, or the tail-end of a lo worm, on a hook with a short shank, dexterous cast close up to a steep bank where the water moderately deep *and streamy*, or under trees a bushes throwing their boughs over the river, into the little bays between reeds and rushes, w often lead to the capture of a chub above avera weight, for the largest fish are generally to found in such "locales."

"Dipping" or "dapping" is another way, perha less interesting than the methods already describe but easier, because it can be pursued from t river's bank. A stiffer rod is required, with uprig rings, a strong, but *fine*, silk line, and 3ft. of trou gut, selected fine and round, all the better stained a pale green or olive, so as to harmoni with the leafy surroundings, and with a drill pistol bullet (painted green) fixed on the gut, 18i above the hook, the "dapping-tackle" is complet Reel up the line till the bullet is close to the t ring, and, after selecting a small opening amo the leaves and branches, push the point of the r through, pay out line, and drop the bait near the water, when, should you notice a chub rovi about on the look-out for bluebottle flies, bees, caterpillars, quietly drop your rod-point till t insect *is on* the surface of the stream. If yo lure is not at once perceived, then by gent tapping the butt of your rod, you will make slight vibration of the line and a quivering, li like motion of the insect, which, "ten to one *Leuciscus-cephalus* will not be able to resist, and yo bait will be swallowed with a gulp; then keep t chub well away from roots or other obstructio under water; and, because of the branche a leaves, a small gaff on a long staff will be fou much more handy than a net to land the fi with.

Fishing with juvenile frogs, either "swimmin them or casting them, *à la* artificial fly, are spo manlike and generally successful ways by whi to capture chub. There is very little difficulty getting small frogs for bait; when the grass of t water-meadows has been cut, the country la will, for a few pence, collect any quantity of the young amphibians, which can be kept alive and capital condition by placing them with some dan moss into a *minnow* bait-can; one a few inch square will carry enough for a day's fishin Select a frog the size of a cob-nut; put the poi of the hook through a little bit of the skin on t frog's back, pushing the hook through to *its ben* If you follow Izaak Walton's advice with regard *worms*—"*to treat them tenderly, as if you lov them*," and serve small frogs the same wa they may perhaps appreciate the kindness, a enjoy chub fishing. But anyhow it is a dead method, and the way to do it, and the tack employed is, as I now describe. Tie two yar of fine, but strong, gut—such as is used for tro fishing—to your chubbing line. A plaited one, a Nottingham reel, is the proper kind of tackle use; and a rod such as described in my last week article. Make an *underhand cast* or swing of t frog to the opposite side of the stream, whe boughs and branches project; and the more the overhang, and the nearer to the water they ar the better, so that they do not absolutely go *und the surface* of the stream. Such fastnesses a these cannot be fished "with fly," or "by dapping, and they are the natural strongholds of very heav chub.

The frog, *carefully* thrown across, so as to avoi a "hang-up" in the branches, drops into th water, and immediately strikes out for the oppo site shore; the angler draws off line from his reel letting the tiny frog swim under the boughs; or b gently drawing it back, and letting it go again o a voyage of discovery, he thus fishes all the mos difficult and, consequently, most chubby places being almost to a certainty rewarded by the cap ture of some very fine fish.

A small frog may also be used "dibbing" abou bushes—the angler, of course, keeping himsel carefully concealed. This method is the same a with caterpillars, cockchafers, or other insects except that the frog on touching the water wil begin to strike out, and probably attract some sedate old chub thereabouts, who very likely wil swim up and take the frog into custody for kicking up a disturbance.

---

* The *Fisherman's Magazine* (No. 10, p. 11).

In "whipping" for chub, young frogs are often used in preference to other bait. A couple of No. 5 Limerick hooks, brazed together, with a little lead or solder melted on the shanks, make a capital tackle. In fisherman's parlance, the hooks are "set rank," and are bound to stout gut; the loop is placed on a baiting needle, and drawn in at the frog's mouth, out at its vent, and its hind-legs tied to the gut; the hooks lie on each side of the frog's head, and the lead is in its throat—(prior to doing this the frog must of course be killed by a tap on its head)—the frog has sufficient weight to sink head first; and after it is cast to the desired spot, it is worked by alternate "sinking and drawing," thus giving somewhat the appearance of a frog swimming.

With the coming month we may expect to have colder nights, and chub will seek deeper waters; weeds will soon begin to decay, the first flood water sweeping them away in some degree, thus making the streams and eddies fit for legering and float fishing. *(To be continued.)*

Notes

IT is proposed by Sir J. G. T. Sinclair, Bart., of Ulbster, Caithness, to make an artificial loch for salmon high up on the Little Thurso river, near the shooting Lodge of Glutt, the object being to afford sport to the shooting tenant. The loch will be constructed by building a substantial wall across a narrow gorge through which the river runs, and have a pass for the salmon to enter the loch.

THE Glutt river is of no repute for salmon fishing, and the reason is the want of good pools. The artificial loch would undoubtedly be an inducement to fish ascending and taking up their quarters there in the spring and summer months. There is, however, one objection to it, and that is, it would probably drain the Lochmore of the early fish before the spring angling was not more than half over.

IN that case the spring anglers would lose a great part of the sport they usually enjoyed on Lochmore, and although they would have the right of fishing the new loch up to the end of June, the distance from Strathmore Lodge, where they reside, to Glutt, is about fourteen miles, and the roads in April are not, as a rule, so good after winter frosts as they are in autumn. The size of the loch will be about three-quarters of a mile long by two hundred yards broad.

RECENTLY, T. Reid, keeper, killed a 43½lb. salmon on the Hoddam Castle Water, of the Annan. The fetching fly was a brown turkey-winged pattern. Glede and turkey-wingers, with composite bodies, and generally a good "tit" of the brown in them, are very favourite flies on the bulk of the rivers of the Solway, the Annan and the Esk amongst the rest.

DURING the past fortnight some of the heaviest fish landed by the rod in Scotland, have been the Annan one mentioned, one on Brora 40lb., one on Tweed 40lb., one on Spey 36lb., and two on Dee 39lb. and 35lb.

A NUMBER of the free and nominally free salmon fisheries in Scotland, on which the best sport is had with true back-end salmon, have already this autumn yielded some capital sport. Probably the *free* water of the Tay at Perth, the Burgh water of the Don, at Kintore; the Richmond and Gordon *free* fishings of the Deveron, at Huntly; and the Heathcot water of the Dee, near Aberdeen, are the fishings that have done best as yet. On the last-mentioned, a 34½lb. fish was caught, but a short time since, by a Major Campbell, fishing with a Spey fly. The great flood of Monday having no doubt caused most of the "waiting" fish to ascend, we think it would be well for waiting anglers to wait no longer, but set out North at once.

IN very low, clear water, more especially during weather when frost comes on at night, it has been found that if fly does not work, there is always a chance in the moderate-paced streams, of sport with back-end fish in nearly every late river in Scotland, by using prawn.

WE regret to hear that salmon disease has again made its appearance—and so early in the season, too—in some Scotch autumn rivers.

DURING this month and the closing days of August, splendid grilse were got in the Tweed and the Ness, many running 9lb. and 10lb. a-piece, and some up to 11lb.

FIFESHIRE fishermen are evidently agitated over the question of salmon fishing at sea. It seems that large numbers of salmon have been attracted by the electric light to the vicinity of May Island, and the point is, to whom do the fish belong? One speaker at a meeting at Cellardyke pointed out that fishermen may be allowed to catch salmon, but they are not allowed to land them. The Scotch Fishery Board have taken up the matter, and the question is to be considered at a meeting on the 29th inst.

ALTHOUGH during the whole of the past summer grilse and sea trout were almost unprecedentedly scarce in the netting and angling waters of the East and North-East Coasts of Scotland, they *now* in nearly all the rivers in these districts appear to be considerably more numerous than they usually are at this time of the year.

WITHOUT a doubt (speaking of fishing all round) grilse and sea trout have been but a poor "crop" this year. They did not exist in sufficient numbers to make a good fishing, even supposing they had come inshore at the natural time for their doing so in greatest strength. For some unaccountable reason—unaccountable because salmon came on so well and so plentifully—they kept away from the coast and rivers; but now what backlying stock there is of them comes on, as come on they must, since, getting gravid, they are bound to make their way up the rivers to the spawning grounds.

ON Thursday of last week General Fielding had ten salmon on the Delfur beat of the Spey.

TO counteract the effects resulting from poachers and pot-hunters, four things are greatly needed in Scotland: an annual close time for trout, with the capture of trout under a certain size made illegal; a much more extensive stocking of the best public and hotel waters with yearling and two-year-old trout; an Act making illegal the sale or exposure for sale of salmon, grilse, and sea trout during the back-end angling time after the netting closes; and on every salmon river of importance the establishment of a salmon hatchery on a large scale, with rearing-ponds attached, wherein the young fish could be kept till they got forward to the smolt stage.

OF the kind mentioned, a hatchery for the Aberdeenshire Dee has frequently been under consideration, but it still hangs fire.

WITH reference to stocking, a very widely-experienced angler writes: "For many years I have noticed the size, number, and even the quality of the trout falling off, owing to poaching, 'lifting' at the spawning season, the ever-increasing number of anglers, the killing of all fish that come to the hook, and the want of enterprise, nay, selfishness, on the part of those—proprietors, hotel-keepers, &c.—who reap the profit from what, done by angling associations in an indifferent manner, ought to be done by themselves systematically and thoroughly."

SOME stretches of the Deveron have yielded first-rate sport since the netting closed. At Huntly, on the extensive stretch of *free* water, a number of good fish, not long run, have been secured. The average weight of this river's back-end salmon is about 11lb. Lately the water has kept in good size. Monday and Tuesday it was in flood, but again it is in order.

ON the Lochy, which is one of the very best rivers in Scotland for sea trout, both as regards size and numbers, anglers appear to have done not at all well this year. One of them writes: "We had only something like tens, to hundreds last year." This shows how scarce the sportive *Salmo trutta* must have been; only it was the same mostly everywhere else.

WITH the water steadily falling away in volume and the weather being *muggy*, or otherwise against sport, but little of noteworthy account was done on any of back-end salmon angling rivers in Scotland, during the second half of last week. The low water was against the fish ascending freely, and in many of the estuaries and close to the coast near the mouths of the rivers vast numbers of them were to be seen leaping and rolling about, *irksome of their enforced waiting* (?).

BUT at last water has come to let them "up"—and with a vengeance. Early on Sunday morning rain commenced to fall, and without intermission it continued in many districts for thirty hours. At Aberdeen the rainfall registered in that time 3 4in. Every river from the north of England to John O'Groats, along the eastern seaboard, has been in high spate. The Tweed registered eleven feet of flood water; the Dee has only once been as high during the last twenty years; and many other rivers were swollen to almost their record flood-mark within the same period. A great amount of damage has been done on the low-lying grounds, whole fields of stocks having been carried away.

FOR two days the weather has firmed up nicely, and the rivers generally are (this Wednesday night) in rather round volume, but at the same time first-rate colour. Without any more rain they should keep in grand angling fettle for quite a week. During their running down, spinning baits and worm, it is reported, have been most in vogue with anglers.

LORD ABINGER'S fine fishing, the Lochy-Spean, which accommodates a large number of rods who "take" the fishing, seems to have fished very queerly during August. The report is: "Some of the lower beats did fairly, some of the upper badly. The sort of weather all along was against good sport. On the lowermost beats the fish being fresh in from the sea took best, as they always do when fresh run. For the season the sea trout was almost a failure, like as nearly everywhere else. They were as tens to hundreds last year. Presently there are plenty of fish, both salmon and grilse, in the lower reaches; they came up late, and they are much above the average in weight. I was very pleased with your article on fishing a 'Swirl.' For a fish taking, all depends on how the fly is brought over him."

THE following occurs in the angling gossip of a provincial north-country daily:—"Last week a Southron angler, staying at Ellon for the fishing, found himself fairly nonplussed by lack of wind and ignorance of the favourite spots and proper flies. Looking over his fly-book in a despairing sort of way, he chanced on a large yellow floating May-fly, such as is used on the English Tees and other dry-fly streams. Partly to keep his hand in, and partly to see if there would be any result, he mounted it, and launched it on the glassy surface of the river. Whizz! It was taken at once, and a 9lb. trout was landed. Off it went again, after being whisked through the air to dry it, and floated only a few seconds until it was gobbled, and another trout landed. This occurred eleven times, and the twelfth trout carried the fly off victoriously, thus putting an end to the successful experiment of dry May-fly fishing on the Ythan in the month of September." Well may this take the cake—it beats cock-fighting! If true, it is a nine days'—nay, an age's—wonder. A 9lb. trout in the Ythan! Whoever heard of such a yellow trout before from Ythan, where a 9oz. trout is considered a "grand" fish? But Southrons, who fish Don, Deveron, and Ythan, you *now* have got the correct tip—in future you'll know what to do—fish the May-fly, and *fish it dry*. Then you'll never be disappointed, remorseful; your baskets, be they ever so large, will be crammed, even to the lid not getting down!

— TOBY. —

TOBY was not the name given to him by his orthodox gossips; but refer to him by his more sedate name of John, and his acquaintance would have to think awhile before recognition. But who is there on the whole countryside who would fail to recognise him by the familiar name which stands as the heading of this chapter? Sooth to tell, he is, or was, more notorious than famous; but of late years he has settled down to a comparatively quiet mode of living. He affects some of the simplicity of his world-wide known namesake in "Tristram Shandy," but few who know him would deny that in his case "still waters run deep." He is a character of many sides; it is chiefly to that of an angler that he owes whatever of immortality the *Fishing Gazette* can bestow.

He has lived all his life in the country, and from the time he could first handle a fishing-rod and a gun he has been a "sportsman," though, perhaps, inimical critics would apply to him a much harsher term. His sporting proclivities have aforetime led him into difficulties, but he has ever remained as irrepressible as the most dogged of British subjects could be. He was wont to tantalise on the first opportunity any magistrate who had fined or committed him. On one occasion he met a landed proprietor —Mr. Edward ———, J.P.—who had been instrumental in bringing him before the other justices. "Ned," said he, familiarly, adding also the J.P.'s patronymic—"Ned, I zeed leben (11) patridges t'other day; onny vour vlied away." Nothing he knew could be more galling.

Toby is no respecter of persons. If gratitude is evidence of a lively sense of benefits to come, politeness coming from him is no less so. But to anyone from whom nothing could be expected, Toby can be curt, not to say rude. A story is told of him *apropos*. Time was when the presence of the squire was an overawing one among the country folk. It was not often he was seen among them, and when he did come he was treated with the profoundest respect—familiarity had not bred contempt. "Yer honour's glory" he was addressed as once on a time; and tradition does say that a sycophantic tenant, not dreaming of irreverence, once styled him in all seriousness "My Lord God Duke." In no man's presence Toby feels afraid; but the squire's brother thought otherwise, perhaps. "See," he said, whilst driving along the highway, with the squire as his companion, "here is the most notorious poacher in all the country round ahead of us; I'll speak to him." And then, coming within speaking distance, "Well, Toby, have you killed any hares lately?" Toby turned, and seeing who his questioner was, and who was his companion, blurted out a brusque request that he should address an interrogative to the basest part of his person.

It was his fondness for "sport" which lost Toby his left hand. A gun exploded—(most fearful weapon it was, you may depend upon it; we should consider it so, looking at it with eyes accustomed to modern pieces)—and blew it off. He bound the stump with his handkerchief, and with a stoicism worthy of Diogenes walked to the nearest surgeon and had it dressed, without an anæsthetic, and with scarcely a movement of a facial muscle.

It would be impossible to find a date when he commenced angling, but from time immemorial he has been wont to produce, generally in the early part of the season, fine dishes of trout. Toby never made any secret of his methods—worm fishing in foul water and night-lining in clear—but he was ever mysterious as to the precise locality from which he obtained them. He once called at a great house with a nice dish of fish, which he was anxious to exchange for filthy lucre, to obtain the wherewithal with which to moisten his gullet, for Toby was never a disciple of Sir Wilfrid Lawson. The lady of the house was called to see them, and exclaimed, "What a beautiful basket of trout, Toby! Wherever did you get them?" The answer came promptly, if not politely or strictly to the point, "In the watter, thek 'ed"

He is used to giving such evasive answers. One morning he called at the house of a farmer with a fox he had shot, in the hope of obtaining largess for the act. Farmers and foxes are not always on the best of terms. "Where did you shoot that, Toby?" "Where he was, thek 'ed! Cudden kill'n where he wadden!" came the ready response.

My first acquaintance with Toby commenced soon after I came into the neighbourhood. To a certain extent we have a fellow-feeling; and one evening, meeting him in the road, I was attempting to draw him out. He had been indulging more well than wisely in his favourite potion, as was quite evident. A benevolent old banker and his wife passed, and the former turned and said, "Ah, Toby, I am afraid you have been lifting your elbow too high to-day." The reply was caustic and characteristic: "Ot's th'ods to thee, thek 'ed?" The old gentleman very quietly observed, "I am afraid it's a great deal of odds to you!" and passed on.

One would have thought that the loss of a hand would have debarred one who could not reckon on assistance from angling with the worm, but it seems not to have been any great drawback to his pursuit of his old game; nay, perhaps it has forced it upon him more; for though he and work were never on the most intimate terms, they were brought into some sort of relationship at times; but after he became maimed, he was only half a man, or less, in field work; and he contrived a device by which he is able to place on a worm neatly, and of course one who can do that can unhook a fish. He straps a piece of wood to his side, where it looks something like the old knitting-sticks of our grandmothers, and manages somehow, though I never saw him in the act.

TOBY.

Toby is not a great talker, and is somewhat epigrammatic in his style. "Vules can't catch vcesh!" is a favourite axiom with him. Probably, if pressed, he would admit that he considers the converse of the proposition also true—that those who cannot catch fish are fools. You see here something kindred to Carlyle's thought, "What a lot of people there are in the world, mostly fools." As Toby would class all who cannot catch fish in uncomplimentary category, and as those who can catch fish are in a very small minority, it follows that there is a concensus of opinion between the two. Extremes meet.

To be called after the dear old gentleman of Tristram Shandy is a greatness thrust upon him by unauthorised sponsors which he does not appreciate. Say "Good-night, Toby!" and you will get a reply of three or four words, one of which will certainly be "thek 'ed"; but call him "John," and you *may* get a less unappreciative reply.

Once I met him on the river, when he was minnowing with a view to setting his night-lines, and he followed me for an hour or two, watching fly-fishing—a new phase of the craft to him—with the keenest interest, and behaving, I must say, with the greatest consideration—never pushing himself in the way, and ever ready to render assistance when I got hitched up, or came to a halt for any reason. He is one of the last persons in the world that you would expect to get excited, but he did on that occasion—when I got into number two of my biggest fish for the season; and he was dangerously near becoming a marsport in his eagerness to land the fish with the net before it was anything like being exhausted. I had to go on after the fish had ceased rising (when I knew it was useless) to please the old veteran.

Toby is as hard as nails. He often starts on his fishing expeditions in the evening, sleeps somewhere in a shed, and is then ready on the scene of action betimes in the morning. I met him once, very, very early in the season, on a bitterly cold day, when I felt it advisable to add a jersey to my usual winter clothing. He was worm fishing—and in his style it is very slow work—with coat open, and waistcoat too if he had any, and his breast visibly exposed to the cold air.

The lone man's companion, tobacco, Toby likes in either form, but he prefers it in the mouth to having it in a pipe, on the ground that it goes farther; probably, too, because to a one-handed man holding a rod a pipe must be a nuisance. He was once offered a pipe of tobacco, which he, of course, accepted, and at once placed in his mouth. The donor said, "I would not have given it to you if I had known that you were going to eat it." The reply showed the old man not to be devoid of wit —"'Tis a shame t' burn wots gude t' ait" (to eat).

Always a ne'er-do-well he has, of late years at any rate, been a harmless one, and he seems to be tolerated any and everywhere on the streams within his reach; it seems agreed by common consent that an old man—sportsman or poacher—who at over eighty years of age has retained his keenness for trouting to such a degree that he will walk five or six miles for it, should be allowed to go on the even tenor of his way.

The photograph is by Mr. J. F. Finucane, of Stratton, an amateur. Toby has a deeply-rooted aversion to having his picture taken. All overtures having for their object a "sitting" from him—either for photograph or painting—have been fruitless. He is a short man, and probably like many another short man a little vain of his height, and so it came about that he stood for his picture without knowing it. Mr. Finucane, with his "Facile" under his arm, explained to him that it was a newly-invented machine for taking heights. The wondering and credulous old man (and it was a wonder that such a crafty individual was so easily out-manœuvred) drew himself up, and in a second it was done.

J. H. B.

A GENERAL meeting of the Conservators was held in the Court House, Waterford, on Saturday, 19th inst., to consider the proposed bye-laws, &c., for the improvement and protection of the salmon fisheries of the river Suir, Nore, and Barrow. All the bye-laws connected with the Suir were approved of, with the exception of the first one, which was to close the rod season on August 15, the same time as the nets. This was rejected with only one dissentient vote. It was held that rods were a protection to a river, inasmuch as their presence on the banks kept poachers away. The harm they did was a mere bagatelle compared to the good thus done, and also, as anglers and upper proprietors were the natural protectors of the spawning fish, they were entitled to the additional ten months when the net season was closed, otherwise you could hardly expect them to protect fish, out of which they were to receive no benefit.—RICHARD BRADFORD.

SOME NOTES ON THE BEDFORDSHIRE OUSE.

By an Old Hand.

(Continued from page 167.)

Swavesey.—This village is situated about three and a-half miles south-east from St. Ives, and nearly nine north-west from Cambridge. Formerly a market was held here on Tuesdays; and at one period the river was navigable to the end of the remarkably wide, straggling street, still called Market-street; and the house at the head of the river is still called the Coal House, it being situated near the spot where the coals were landed. The station, which is only three miles from St. Ives (to my fancy the *beau-ideal* of an English market town), is within a stone's-throw of the handsome Norman church dedicated to St. Andrew, and consists of a nave, chancel, and, I believe, western tower, and contains an excellent peal of six bells. A quarter of a mile south-west of the church is the site of a castle, probably the ancient seat of the Zouches, who resided here in the fourteenth century. A part of the remains are now incorporated with a cottage, a short distance from a field still called "Castle Close."

Several delightful lanes or "droves" run from different points of the village (notably the one past the "cemetery"), and the pretty hamlet of Fenstanton (or, "Fenny" Stanton, as it is called) is not far distant.

A remarkable feature of the village is the quaint old thatched cottages, some of them looking like old hay-stacks with windows, and the one called the "Bottle" I think takes the cake in this respect; and the spaces between these ancient dwellings being occupied with houses of a more modern and imposing type, give the portion of the street near Amen Corner a most peculiar appearance, as these tenements are for the most part whitewashed, and abut on the roadway. When the river overflows the banks the roar of the water can be distinctly heard in the village.

There are about twenty inns to the one thousand one hundred inhabitants, so the angler can take his choice. I put up at the Rising Sun, and being opposite the Post-office I found it very convenient. Every comfort can be obtained here at most moderate charges. The proprietor keeps three cows, makes his own butter, and grows his own vegetables, and to those anglers wishing to operate upon the Ouse from the village of Holywell (up-stream) to about a mile below the old drain (down-stream), mentioned above, cannot do better than make Swavesey their head-quarters.

The following notes from the picturesque village of Holywell, to Over or Brown's Hill, Staunch (down-stream), by a Swavesey resident, will, I think, prove both useful and interesting.

"On the Swavesey side of the river, in the second field from the ferry, we come to Ducker's Hole. It contains chiefly pike, perch, roach, bream, and a few chub. On various occasions I have caught a good number of pike here. The next hole is near a drain, which runs from Swavesey parish to the flood-gates. See previous remarks. It is in the bend of the river, and can be best fished for pike in winter, as the water round about, in which the pike shelter, is full of weeds and rushes, and they prevent it being fished. This swim contains principally pike, roach, perch, and chub. I have caught a good many large chub with a *small* gudgeon, and good sport may be expected when *fresh water* is being let off from St. Ives Staunch, which is situated a few miles above Holywell, and below the former town. I have also taken numerous pike, more especially near the end of the season, when they draw near the drain *to go up* and spawn."

But why, may I ask, are they not prevented from going up to spawn? I ask this question more particularly, because, during my stay, a yokel threw out of this same drain about two stone of splendid bream with a fork. I was spoken to about these bream by several of the inhabitants, who expressed their indignation at this wholesale slaughter. I also counted from twelve to fifteen splendid specimen on the surface (dead), seven or eight in the old dock, near the railway gate-house, and the remainder in various parts of the drain below. It is just possible that most of these fish had worked up in a rise of water, or, as my informant Mr. B. said, in the spawning season; but I have an idea that a good strong grating fixed near the flood-gates would prevent this exodus from the main stream. If I am correct, then all I can say is the sooner something is done the better, but sooner catch them before going up to spawn than let them go up either to die, or be thrown out of their native element in the manner described. Opinions varied as to what killed these fish. They have been removed since this was written.

"This year," says my informant, "I took a pike over 9lb., and two others about 7lb. each, and several under this weight. Most of these I got spinning, and *skull-dragged them out*."

Explanation is here necessary. On Mr. B. telling me that he thought nothing of lifting or dragging out, as the case might be, pike 4lb., 5lb., or 6lb. in weight, I could not help replying, "My dear sir, you are a regular old skull-dragger." I thought he would have cracked his sides with laughing, as the saying is. "Do you mean to say that you allow them no grace, no play?" "None whatever. I have them out in no time." What a rod and line he must use. I could no more lift or drag out a pike 5lb. or 6lb. with the rod and line I use than fly.

I hope these few remarks on skull-dragging will be the means of making him amend his ways, and consequently obtain more sport in playing and killing his fish.

He goes on to say: "Below this point there are no special *holes* until one comes to the field next to the Over Staunch, where the water is deep for a good distance, but near Overcourt, or Overcote, there is a noted place for pike, called the Oiser Holt. This is the best after a flood, when the pike get left here, but from the mill to Overcote there is deep water and plenty of perch, roach, and bream."

I saw a shoal of the latter near the Oiser Holt the other evening.

"Near the staunch there is a good stretch of deep water, which contains pike, perch, roach, and especially bream. The last Saturday in July, coming home from the staunch, the water was alive with them for chains in length" (the ordinary measuring chain is here meant, I imagine). "Very large ones kept 'rolling' or priming. The best time to catch them is at night or early morning."

This account substantiates my previous remarks; but do not imagine that you can catch these fish, or for the matter of that any other species of fish I have mentioned, as you please, or you will be greatly mistaken. They want catching, and a good job, too, I say, because if anglers could catch fish in these days as easily as they could even within my recollection, you may take my word there would very soon be no fish left; and this is one reason why fair rod and line fishing will never deplete a river, more especially if ANGLERS would return all fish under a certain size.

"The swim should be baited before fishing for two or three days with grains and lobs. The grains can be purchased of the brewers for sixpence per bushel. I say two or three days before, as they appear to have no settled hole, and it is difficult to get them together."

How very true this is. He says, "I do not like night fishing myself, it is too risky. I tried it two years ago. The bream happened to be on the top near the staunch, and I baited a place a few chains off the staunch with grains, greaves, and lobs; they stopped on the move back, and I and another angler caught between twenty and thirty fish between 3lb. and 4lb. each, and two or three weighed nearly 4lb. each. Night fishing to be pleasant wants a good companion, a tent, and a man to prepare hot drink (tea or coffee is no doubt meant), plenty to eat, and then, if the bream feed, the night passes very well."

I should think it would, very well indeed.

"The night that we took the fish was the only fair take that season. A few stray salmon trout find their way near the staunch. I saw one last Saturday about 5lb. jump out of the water; he was also seen on Sunday lying quietly by the side.

"Several other anglers tried repeatedly for the bream, but without success; and I very much doubt if the swim was baited well enough."

Novices please note.

"The best time for pike is from November to March, when the weeds a re dead and there is not so much harbour for the fish. The best baits are dace, roach, and gudgeon. In the summer months I think nothing is so good as a large gudgeon either for spinning or live bait fishing. I have caught large fish with them. The best water, especially for pike, is when the doors are open at St. Ives Staunch, and fresh water comes down. This invariably makes the fish feed. After a flood, when the water begins to clear, sometimes a good many pike are taken; then sharp runs near holes should be fished. Church hole, opposite the Church above Holywell, is a very noted place; and on one occasion this year, after a flood, a great number were taken in this hole.

"The best time for bream is July, August, and September, especially if the weather is hot; then night, or early morning, is the best time. In different parts of the river during the summer months many large chub are taken with the artificial fly." But more of this anon.

(To be continued.)

NEW PATENTS.

The following is a list of New Piscatorial Patents, specially compiled for the *F. G.* by Messrs. Hughes, Eli, and Hughes, Patent Agents and Engineers, 76, Chancery-lane, London, W.C., authorised Attorneys for the Procuration of English and Foreign Patents, Designs, and Trade Marks:—

15,945.—A. Kelly, of London, for "Improved fishing appliance."

Deal Pier.—Mr. Sachs writes: "The fishing from Deal Pier is first-rate now. One angler last week took one hundred and seventy with rod and line; another nearly three hundred from a boat, also with rod and line. You have to go early to procure a standing-place, as there are so many ladies, children, and gentlemen with rod and hand-lines crowding all the best places."

Iceland and Faroe Cod Fishing.—The Lerwick schooner *Sapphire* has arrived in Shetland, from Faroe and Iceland, with 20,000 cod. She reports the other vessels having takes of from 4,000 to 22,000. The first English smack—*Gleaner*, of London—put into Shapinshay (Orkney and Shetland Isles) recently, and landed twenty tons of salt fish. She had about thirty score cod in the well.

Herrings in the Feugh!—An old cobbler out Finzean way, in the Aberdeenshire district, was in the way of taking a holiday to himself up the famous Feugh, which runs through the Forest of Birse. He usually took the water on the rise, and with "worming" up and "flying" down, made almost certain of a good basket. After which, he foregathered in the keeper's house for a chat over a real "birse" cup, in the land of Birse—the Feugh flows through the parish of Birse. Not long ago the annual excursion came off, a good basket was made, and Jonathan, rejoicing over his glorious luck, deposited his basket at the keeper's door, and soon got well into the afternoon's carousal. Now that very August afternoon, the travelling merchant had brought the keeper's wife two dozen fresh herrings, which were to be salted and used as occasion required, and these were in a basin not far from where the basket was carefully deposited, for Jonathan left them always outside in case he might be expected to leave some behind, otherwise the day's outing would have been shorn of the chiefest glory when the conquering hero returned home, had he parted with any of the trophies of the fight. Now it entered into the wicked head of the keeper's daughter—a spoiled little vixen, to play a joke on Jonathan, and especially as she had just heard that Mr. Joseph Farquharson, the artist, wanted to see him on his way home, to have a look at his trout, as he was introducing an angler with his catch into a landscape he was just finishing—to exchange the herring for the trout. Jonathan duly met Mr. Farquharson, and with many a broad grin and proud smile, prepared to show him his basket, remarking at the same time, as he undid the lid and tumbled his catch on to the grass, that "never had better luck in his life!" When lo, he started to his feet, fairly dumbfoundered and clean off his head. "Gracious! what has happened to me to-day?" he blurted out. "I'll tell you what," remarked Mr. Farquharson, as he took the situation in at a glance, "a shoal of herrings have got up the Feugh with the recent rains." The cobbler believes it to this day.—Dod.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear. Best quality only.—East London Rubber Co., 8, Shoreditch, E.

THREE GOOD THINGS.

We have pleasure in drawing the attention of our readers to Messrs. Hardy Brothers' new "Perfect" creel, new combined spear and butt cap, and new patent "Perfect" reel. We are at a loss to understand why Messrs. Hardy should attach the term "Perfect" to their new creel and reel. The probability is that they will before long introduce yet further improvements in both articles; it will not be Messrs. Hardy, as we have always known them, if they do not. When we inform our readers that the name is the principal thing we have to complain of in these latest additions to the angler's outfit, it will be easily understood that we think very highly of them.

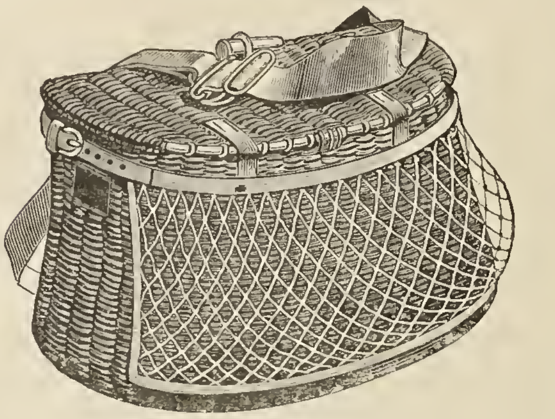

Fig. 1.—The New "Perfect" Creel.

Undoubtedly the new creel, in combination with the tackle-book strapped to the lid, will rapidly gain favour; we have seen few so-called improvements in creels that have impressed us so favourably. In the first place, the lid is made to open *from* the angler and not *against* him, and as the patent tackle-book is strapped to the inside of the lid, the action of opening the basket exposes and places it at a convenient distance for the angler to select a fly (see Fig. 2). The lid opening the reverse way is a happy idea; and the tackle-book has many advantages in addition to the one of being strapped to the lid, the fear of dropping it in the water being thus reduced to a minimum. It carries a great number of either eyed-flies or flies attached to gut, casts, &c. In the case of flies attached to gut, the gut is held quite straight; and a single fly can be selected or returned to its place after use, without disturbing the others. In placing flies in the book, the hook is stuck into the cork bar, and the gut is gently pulled straight and then slipped under the little discs, which hold it firm. When a fly is required it is simply drawn out. The discs used in this book are a decided improvement upon any idea of holding the gut we have hitherto seen. The book can also be carried in the pocket if preferred. The creel has a top compartment for carrying lunch, &c., the same as in Messrs. Hardy's Carry-all Creel. This compartment can be removed when necessary, as, for instance, in carrying wading brogues; it is waterproof and can be used as a seat; when not required, it is fastened with straps to the bottom of the basket quite out of the way. This new creel is also fitted with a net (see Fig. 1), which will be found most useful and convenient for carrying a light coat, wading stockings, &c., and in fishing comes in handy for dropping fish into, besides accommodating any fish too large for the creel. The straps on the creel are so arranged that they can be worn either the same as a knapsack in travelling, or slung from the shoulder in the ordinary way in fishing.

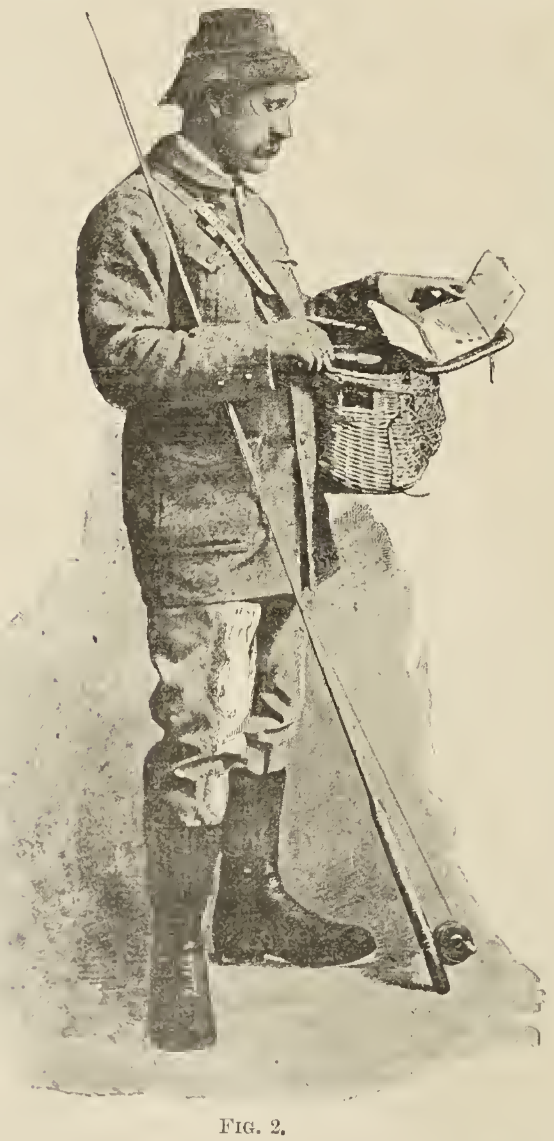

Fig. 2.

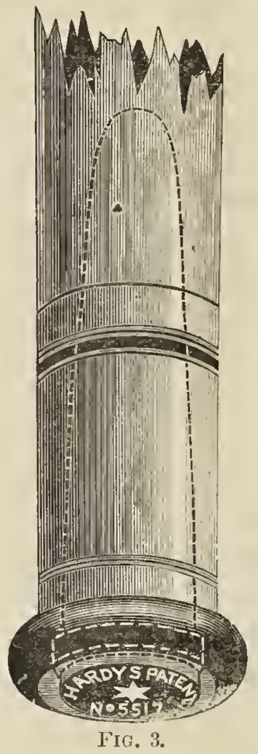

Fig. 3.

The knapsack arrangement will be found a wonderfully welcome relief when 10lb., 15lb., or 20lb. of fish are to be carried any distance. Altogether we consider this a very excellent creel, and without hesitation recommend it to the notice of our readers.

Those anglers who use a rod with a spear to it know the bother there often is with the ordinary screw spear and butt-cap. It is never available when wanted—either lost or left at home; and when the spear is in use there is always the chance of the butt-screw being lost. Some time back we had a "patent" spear attached to one of our rods, and now Messrs. Hardy have patented a combined spear and butt-cap very much like it.

Messrs. Hardy say: "We have had the difficulties and inconveniences connected with the ordinary spear and butt-cap so often presented to us by customers asking for extra spears or screw-buttons, that we have long felt the necessity for an improvement. After a lot of experiments in more or less complicated arrangements, we at last devised this simple arrangement, which completely solves the problem." This "new" spear will very probably find favour in the eyes of many of our readers. It really is an ingenious and useful arrangement; and as Messrs. Hardy are prepared not only to fit it to any new rod ordered, but also to any old rod at a small charge, it will soon be placed in the hands of anglers, and survive or fall upon its merits. We are inclined to look at it favourably. The spear has a double-turned flange at end, as may be seen by the dotted lines in Fig. 3, under the screw-cap. This flange is screwed up between the butt-cap and the end of the socket, whichever position it is in (Fig. 3 is the spear not in use, Fig. 4 the same in use), and is firmly held. This arrangement is undoubtedly neater than the old.

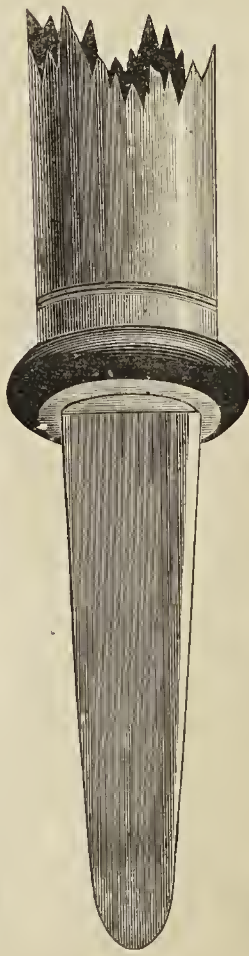

Fig. 4.

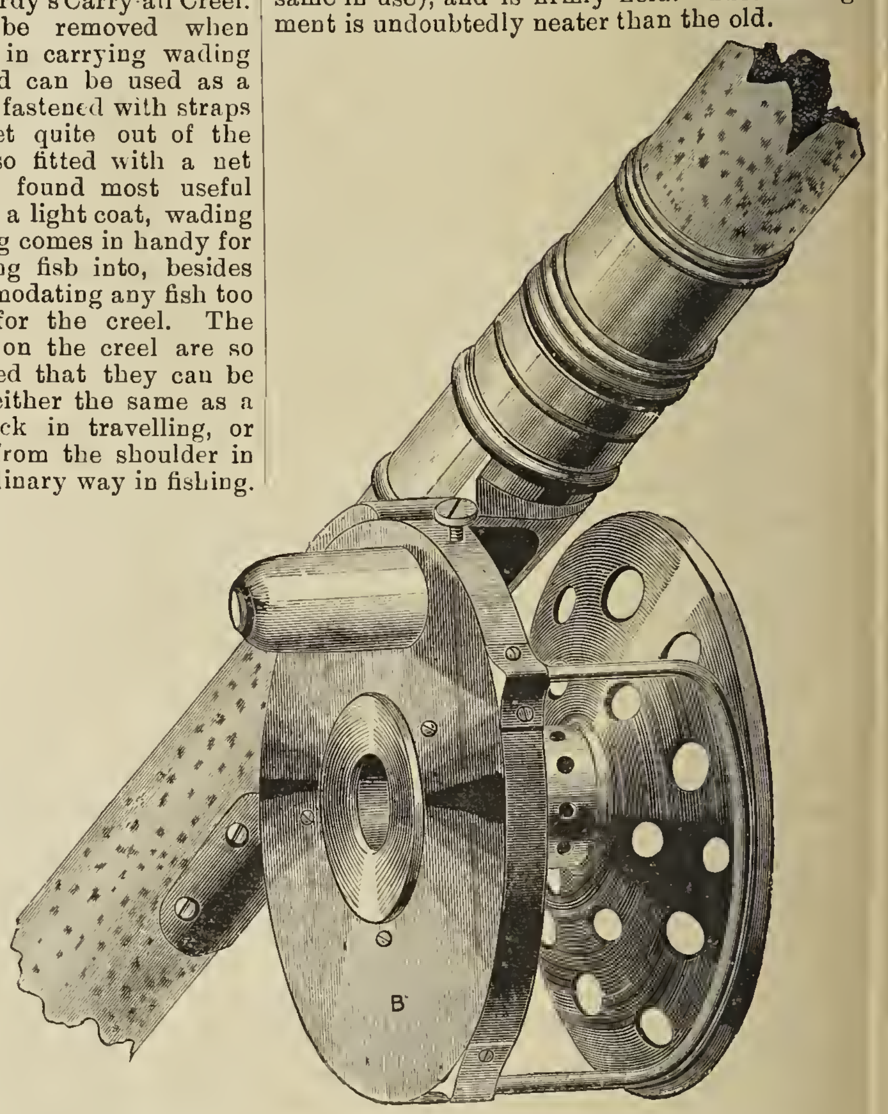

Fig. 5.

In Hardy's new patent reel we certainly have something that is calculated to open the eyes of the users of the ordinary revolving-plate winch. Before proceeding to make any remarks upon it we will quote the makers' assertion.

Messrs. Hardy say of their new "Perfect" reel: "It has been made the subject-matter for two patents, and has occupied us some three years in perfecting, having made and practically tested something like twelve varieties of construction before we arrived at the present form, which we fearlessly claim to be the best reel made anywhere, and this we do with a full knowledge of all reels manufactured on either side of the Atlantic."

Messrs. Hardy have indisputably produced something new in winches. We have continually advocated in these columns the use of simple and well-made reels; in fact, we have always asserted, and still believe, that the more simple an angler's outfit is the better. It is not to be wondered at, then, that we at first were inclined to think this new reel was far too complicated and delicate to ever become popular among fishermen, as we know very well that ninety-nine out of a hundred anglers would think the same as we did the first time they saw it. After a careful examination, we are inclined to considerably modify our first impression. The Messrs. Hardy's skill and knowledge as practical engineers have been of immense use in its production, and, as a matter of fact, although the winch is made up of many minor parts, it is so constructed that only three main parts compose it, and it can be taken to pieces to clean instantly without any mechanical knowledge or tools. We are also inclined to believe that it will not easily get out of order. It is very light, and has great line-carrying capacity. It is ventilating, and assists, so far as possible, in drying the line. It has a regulating check, and running upon ball bearings or beautifully-fitted ordinary bearings, is almost frictionless. When fitted with these ball bearings, we fear the reel will be liable to come to grief. Messrs. Hardy have decided to make these winches with ball bearings, or with plain ones, so that the angler can please himself which he has; we have a sincere regard for the plain bearings, they run quite freely enough for us. There are several "points" about this new winch that impress us very favourably: before proceeding to enumerate them, however, we will endeavour to make clear the illustrations to our readers. Fig. 5 is the reel complete. Figs. 6, 7, and 8 are the three main parts composing it. To arrange them it is only necessary to pass bearing *G* on Fig. 7 through bearing on Fig. 8 from the opposite side to that shown in illustration Fig. 8; screw nozzle on *B* (Fig. 6) into *G*, and there you are, don't you know. To take the reel to pieces, the handle on the revolving plate *B* is turned the reverse way while holding *G*, this unscrews *B* from *G*, and once more there you are. This is the only metal reel we know of where *the whole of the working parts are one side, and can be got at so easily.* In Fig. 8, which shows the working parts, *A* is the regulator by which the *exact* stiffness of the ratchet can be easily and instantly adjusted; *C* is the spring against which *A* is more or less tightly screwed; this in its turn presses against *B*, the tongue, which in its turn acts upon the ratchet (or check).

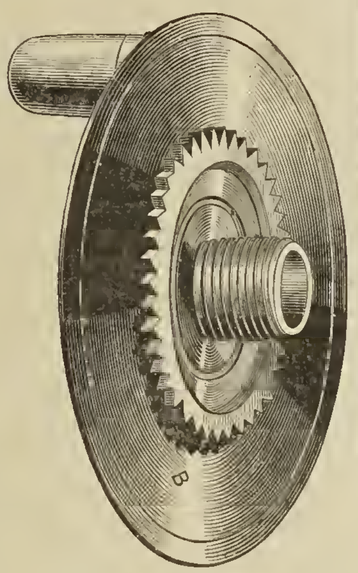

FIG. 6.

Now for the "points" that impress us favourably. We consider this adjustable check by far the best ever produced, and sincerely hope Messrs. Hardy will see their way clear to attach it to their ordinary winches. It will be seen that the tongue *B*, instead of merely being fastened by a screw or rivet to the cheek of the winch, is slotted and works on a pivot on the underside of the bridge *F* and against the cushion spring *E*, which regulates to a nicety the pressure on the ratchet wheel, and takes up such wear and tear as occurs, by pressing the tongue a little more forward to the work. The regulating screw *A*, is thus really acting upon spring *C and spring F* simultaneously, hence the really beautifully smooth check that is produced. In the reverse motion of a reel, that is when the line is drawn off, it is an enormous advantage to be able to regulate the resistance so as to prevent any possible breakage of tackle by too hard striking or holding a fish, and with this adjustable check arrangement, it can be done to the most minute degree by regulating the reel and striking from it. A trout reel can be so regulated that you can strike without breaking gossamer gut or tearing out a 000 hook, and by turning down screw *A* the same reel can be made strong enough in the "check" to strike No. 7 Limericks into sea trout, or even stronger for spinning a minnow. The regulating, as we have said, is effected perfectly and simply, and we congratulate Messrs. Hardy upon their production.

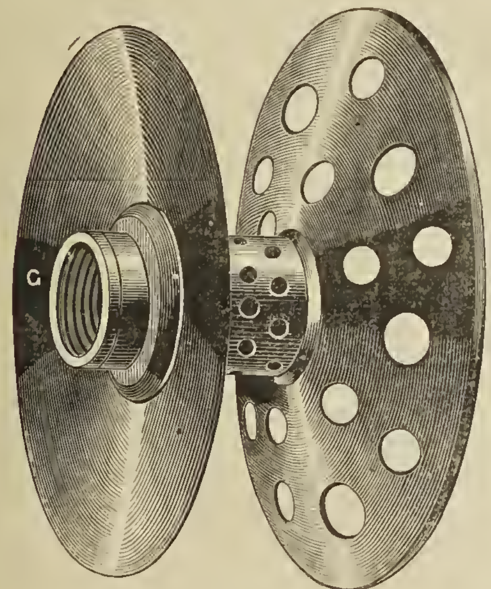

FIG. 7.

The creel, the spear, and the reel, we need hardly say, are turned out in a workmanlike manner. Messrs. Hardy, from the commencement, have adopted the motto, "What is worth doing at all is worth doing well."

These patents are illustrated in the new "Price List and Anglers' Guide," of one hundred and eighty pages, which Messrs. Hardy have just issued, and in which we notice some new and original rods, notably the "N.B. Perfection" (page 108), the "Ideal" (109), the "Hi. Regan" (116), the "Norwegian" (121), the "Hollingsworth" (122), the Thames punt, also a cyclist's and a dapping-rod for the Irish lakes.

There are also new things in landing-nets, illustrated; in fact, this is more than a mere trade catalogue, as it is interspersed with valuable hints on fishing in New Zealand, Norway, &c. (see pages 24 to 30). There is also a detailed account of Messrs. Hardy's factory, a chapter devoted to the manufacture of rods, and a scientific treatise on rods and their relative values, which all should read. We advise our readers to send three penny stamps for a list, which will be forwarded them on receipt.

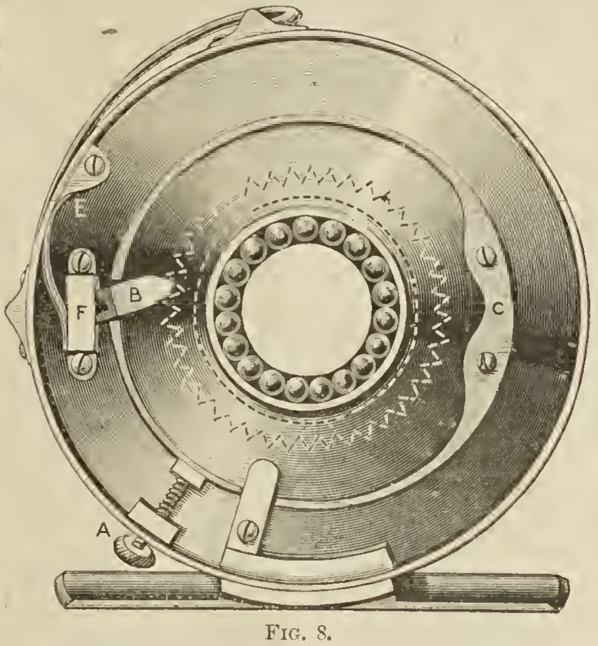

FIG. 8.

Waltoniana

THE Thames is in fine fishing order just now, and for a week or more the sport should be excellent, especially among the roach, whose appetites are nearly always improved by showery weather. In some parts of the North, fishing has for a time been put a stop to by excessive floods.

IT is satisfactory to find that at last steps are being taken to put a stop to the snatching of fish at the outfall of Surbiton sewer. At the end of last week, a coachman, named Henning, was summoned for taking fish out of the Thames by "snatching," and for taking an undersized bream. Douglas, the head keeper of the T.A.P.S., was the principal witness for the prosecution, and the case was clearly proved. Henning was fishing with unbaited hooks, with which he foul-hooked several fish, one being a bream two inches under the regulation size. The magistrates inflicted a fine of £1 for the snatching, but dismissed the summons for taking undersized fish; but why, history doth not tell. I was glad to see that in this, as in some other recent poaching cases, the solicitor of the Thames Conservancy prosecuted. Formerly, proceedings of this kind had to be undertaken by private persons, or by fishery associations, the Conservators apparently thinking it no part of their duty to preserve fish.

THERE is, generally speaking, so much grumbling about rivers with no water, and salmon which will not rise, that a really cheerful, contented letter from an angling friend is almost worth framing. Two friends write in the most satisfied way of their sport. One was salmon fishing in Scotland in July, and had only one blank day. On the best day of all, the ladies of the party came out to make tea, and demanded to be spectators of the killing of a salmon. "I did my best," writes my friend, "by reserving a cast until they came, and was successful, as I stuck into and killed a very larky fresh-run 18lb. fish, which showed plenty of sport, and made them all wildly excited. I had previously killed three grilse." Now was not that all very nice and just as it should be? How often does one kill a salmon when ladies come out especially to see it done? I don't think I ever heard of it before, except perhaps in Mr. Black's charming descriptions of life in the Highlands. Who does not remember that morning when Sheila got up early and took the young man fresh from Piccadilly down to the Whitewater, and how readily the fish rose until the sun over-rose the fish and put them down?

ANOTHER friend, who is numbered among the great ones of Burlington House, writes from the Austrian Tyrol: "We have been here since the middle of June, 5,000ft. up among snow-capped mountains, to be 'braced' after the influenza. I think the cold winds, the bright sun, and the thin wine have nearly done it, so we shall soon run down to Florence. There is a river here about as large as the association water at Newbury which connects two lakes. It is about one and a-half miles from lake to lake, and I have it all to myself. I wanted to rent it, but the fishermen who own the fishery would only agree to let me fish on condition I paid for all the fish caught; consequently I carefully placed in the water all but those we required for the table. These men all day net the lakes, but leave the river alone. Some days I could fill my basket two or three times over, mostly with trout. The largest I have taken are about 17in long, and they all love the Coch-y-bondhu. The other fish here are called asche. They take a fly freely, are very game, and lie in rapid water. I wonder what they are in English? They run up to about two pounds in weight." Asche is the German name for grayling.

THE general public have, I fear, a somewhat hazy notion of the question which is to be fought out in respect to the Norfolk Broads. That an attempt is being made to close waters on which for many years they have boated, fished, and shot, they fully understand, but the whys and the wherefores of the matter are not well understood. To understand the question it is necessary to know something of the history of the broads. If they had no particular history, it is perfectly clear that so far as they are affected by the tide, the public would have the right to shoot, fish, and navigate; but beyond tidal limits the case might well be different. According to Mr. T. J. Woodrow, C.C., who is the hon. sec. of the Norfolk Broads Protection Society, the address of which is 18, Coleman-street, London, an arm of the sea once covered the whole of the flat district, which is now generally spoken of as the Norfolk Broads. The sea receded to the present coast-line, and various tortuous waterways were left, some of them, where the land was flat and low-lying, widening out into large meres. The land and water left by the receding sea belonged to the king. About a hundred years ago the people of the district obtained an Act of Parliament to divide up this land belonging to the Crown among themselves. Anyone who protested against this scramble for public property probably had his mouth shut by being given a good slice of the land in question. Some of the awards under these Allotment Acts went so far as to grant certain of the broads to the persons who were given the adjoining land. Mr. Woodrow says that there were saving clauses in the Acts in favour of the King and the public, and that there was nothing in the Acts implying an intention to make private property of the rivers and broads. Hickling Broad, the piece of water concerning which the legal battle is to be fought, was one of those allotted under the powers supposed to be given by the Allotment Acts, and should the alleged owner win his case, a very large number of the broads will be closed to the public. The result will, as in many other legal fights, depend upon the amount of money forthcoming for the purposes of the defence, and it is to be hoped that the society will be most liberally supported in their endeavour to preserve for anglers and others one of the finest and most remarkable holiday-grounds, or waters, in the kingdom.

Templar.

SOME NOTES ON THE ARUN.

By the O. O. D.

To those who are going to fish in the match on the 4th of October the following notes may be useful.

Ground-Baiting.

The best time to bait a swim at the time of fishing is when the tide is at its lowest; and in so strong a running stream it is most essential that the ground-bait should be very stiff and adhesive, and a few good lumps of ordinary paste cast into the swim, as it adheres to the bottom, looks nice, white, and tempting for a considerable portion of the flow, and, I have no doubt, helps to attract and keep the fish in the swim. Of course I am presuming the novice or stranger is fishing with a tight line without either reel or float, and must necessarily know to a few inches where the bullet or weight will rest, and therefore knows exactly where to throw his ground-bait. This is a great advantage gained when adopting the above method; as no matter what length of line is used, the bait is nearly always in the same spot.

It is perfectly useless throwing in bread and bran on a strong run up (the tides differ), for it quickly disperses, and takes the fish out of the swim instead of detaining them; and by carefully baiting a swim at the lowest part of the tide the angler obtains the benefit both on the run up and run down.

Endeavour to choose a swim that will suit both rod and line to a nicety—*i.e.*, neither too far out nor too close in, but where there is a chance of taking a few fish. I mention this in passing, because in some swims there can be no question that the fish keep a good distance out—more on the outer edge than in the centre of an eddy.

Fish hard—*i.e.*, try all you know—the last hour of the ebb and the first hour of the run up. About an hour before high water is the best time of all; but, as a rule, when the water is perfectly still the fish leave off biting. I have repeatedly noticed this; and if too much ground-bait has not been thrown in, this is the time to bait up again, for the fish will often begin to bite directly the ebb makes a stream.

It is almost impossible to harbour fish in a tidal river like the Arun (even in eddies) for the strong under-current soon breaks up the ground-bait and carries it away.

I know several anglers who have tried baiting up swims, but they never derived any real benefit from it, and in my humble opinion it does not pay for time and trouble. Of course I am speaking of that portion from Timberley Bridge, down-stream past Bury, Houghton, Stoke, to Arundel, where the best fish are taken in the early part of the season.

It appears to me that after spawning the fish affect the strong water, but do not go very far beyond Arundel. This remark does not apply to eels and flounders, although I have seen some remarkably good eels and flounders taken in the first field below Houghton Bridge.

Have Two Swims.

The novice should find two swims—one to fish on the run up of the tide, and the other on the run down. This should not be forgotten, because a swim quiet at the flood is often the reverse on the ebb, and *vice versa*. A considerable number of fish come up on one side of the river, and return on the other; and it is for this reason the man in a boat (a well-known figure) can fish swims other anglers cannot, and can frequently show fish when they cannot; but the reverse of this is sometimes the case, for with all his advantages even he has drawn a blank.

I think it is more difficult to get bream on the feed in a tidal river than a non-tidal one, and this is saying a great deal; but one may often take three or four fish in the former river when one cannot take a fish in the latter, and for this reason I should think they were more dispersed.

Landing Net.

The net should be deep, and at least 16in. in diameter; the handle light, strong, and as long as possible. On a neap tide a telescopic handle 10ft. in length is not a bit too long. The water runs out, and leaves the banks exposed to such an extent that it is impossible to reach the fish with an ordinary net, and scores of anglers have lost many a good fish because they were unable to reach them and get them over the mud.

Baits.

The two best baits for bream are a nice clean fresh bit of white paste and the brandling worm, but there are occasions when bream will take the marsh worm. I have never heard the lob spoken of as a good bait, except to catch a large eel or two. Both bream and roach fight well in this river; and, as a rule, they are clean, and not so slimy as those caught in ponds and slow-running rivers. These latter fish do not seem to have half the strength to pull, and the only way I can account for it is that their muscles, &c., are brought more into play in contending against the extra strong tides.

Correspondence

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE THURSO RIVER.

Sir,—A paragraph appeared in your "Notes" column last week, in which the writer points out the uselessness of extending the rod fishing on the Thurso river farther into the autumn than the present close time—viz., 14th September, and says, "It matters little, since the Thurso has no migration of the true autumn salmon, nor is it likely that it could be made to have it." This is a bold assertion, and shows that the writer is not acquainted with the river. Allow me to inform you that clean or *true* salmon ascend the Thurso every month in the year, though, of course, as in all other rivers, in some months the run is stronger than in others. I have no doubt, since the nets have been taken off, that in a very few years the autumn run of *true* salmon would improve as sure as that of the early spring run.

I remember many years ago, when salmon were more plentiful in the Thurso than they have been of late years, that the late Mr. Dunbar was applied to for a salmon in the close season (October) for a very auspicious event which was to be celebrated in the south. With one sweep of a small trout-net in Lochmore he caught two *true* autumn-run salmon of large size, and frequently have they been got in the net while catching the spawners for their ova for artificial breeding purposes. These are facts which can be corroborated by others, and go to prove conclusively that *true* salmon do ascend the Thurso in the autumn. Leave off the nets, and there will be still more of them. Apart from that, why should the Thurso be closed a whole month earlier than any other river in the north? I remember when it was open till October 15.—Yours truly, Volta.

AN "EXTRAORDINARY SPECTACLE."

Sir,—Happy, thrice happy, must that "elderly gentleman," or General, have been, who, "seated in a punt," was catching fish in the Serpentine one day last week. The *Fishing Gazette* has often advocated the throwing open of the London park waters (under proper conditions as to time, &c.) to the anglers. If His Royal Highness the Duke of Cambridge, as Ranger of Hyde and other Royal Parks, gave the elderly ex-Army angler permission to fish for the purpose of eliciting public opinion, his Grace could hardly have done a better thing, because in thus magnifying his office as Ranger, he has necessarily led people to think that the said elderly gentleman has metaphorically "broken the ice" by casting his line, with the impaled worm or gentle, and enticing the fish to "bite," and bite they did, as it is said the elderly angler was successful. Now before the Serpentine had got its deep and dangerous holes partially filled, and the other portions seen to, the water was thought to be "hungry" in the sense that no rushes and other marine growths formed a harbour for the natural food of fish. One solitary large perch was the only fish found to be in the waters some years since; but now, possibly owing to some of the fine fish from the Round Pond in Kensington Gardens having been turned into the Serpentine, and these, thriving under the altered conditions of the latter water, says a writer in *Truth*, "began to" grow "foul from overcrowding!" Happy state of things! If a General can fish in the Hyde Park water, why should not the general public, and in the Regent's Park lake, too, of which the Commander-in-Chief is also Ranger? His Grace would thus win the acclaim of "troops" of grateful and gratified friends among the Democracy, as also among the "gilded youth," who, as boys, have hitherto delighted to sail their tiny craft on the placid waters in grand old Hyde Park. Then the London County Council might well follow the "lead" set by Royal graciousness, and all the public Parks' and Commons' waters could be stocked for the reasonable use of Her Majesty's loyal lieges. The lakes, or some of them, in Battersea Park, are "fed" by the tide from the Thames, and once the fish and eels run thence, most all of them remain and grow and probably increase. Thousands of eels were taken out and carted off to Billingsgate Market. Old Father Thames would be nearly always "feeding" this water, and elongated "danglers" would vary the capture of the silvery dace and roach. A happy coincidence often gives a new current to one's thoughts. May the "elderly gentleman" and General combined, fishing from a punt in the Serpentine, be the forerunner of thousands of law-abiding anglers enjoying a little sport in the Royal and the People's Parks, for one and all would then throw up their "castors" in honour of the Duke of Cambridge, "as the friend of London anglers!"—Yours, &c., Rus.

A CAUTION.

Sir,—On Sunday, the 12th inst., two so-called anglers were fishing in the Abbey river, at Chertsey, without the permission of the Chertsey A.S., to whom the right of fishing belongs, and when caught by the police they gave the names of G. Reynolds and A. Sylos, and stated that they were members of the Bermondsey Bros. A. S. Now, as we have no members of those names on our books, and also on that particular date our members were fishing a competition at Pulborough, for their September series of prizes, I should like those individuals to come out of their shells, and clear the stigma they have cast on the above society.—Yours faithfully, A. Conn,

Secretary, Bermondsey Bros. A. S.

Grange-road, Bermondsey.

PIKE FISHING IN IRELAND.

Dear Sir,—I find that I have misinterpreted "Templar's" remarks regarding Lough Derg pike. I am so sorry.

One word only shall I add. Neither Killaloe nor its fishing—whether salmon, grilse, trout, or pike—require any "cracking up," and if it did, I would not stoop to such contemptible work.—Yours faithfully. S. J. Hurley.

Abbey View, Killaloe.

THE MARLOW ANGLING ASSOCIATION.

Sir,—In the *Fishing Gazette* of the 5th inst., remarks are made with respect to the beneficial effects of the Angling Associations of Reading, Henley, and Marlow. The two former thrive, and are doing good work; but the latter is defunct, and matters connected with the district it formerly supervised show signs of the neglected condition into which it has fallen. For instance, it is illegal to lay night-lines; nevertheless they are systematically laid, and professional fishermen and others have seen them being laid without taking any heed. It is possible—in fact, very probable—that in many parts of the river illegal practices are indulged in, and it is desirable that the river should be protected. The Conservators appoint a watcher, who travels many miles in the course of the day, and his duties certainly could not be increased; besides which, irregularities could only be kept in check by local supervision—by persons likely to know something of the movements of suspicious characters. However, there the case is; the question being whether things must be left as they are, with the chance, if not certainty, of drifting from bad to worse.—Yours, &c., A Subscriber.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, SEPTEMBER 26, 1891.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE old established St. George's Society, held their annual dinner on Tuesday evening, at the Waggon and Horse Inn, Birmingham. The dinner was well attended, and was served up by Host Bushell, in first-class style. On the centre tables were placed the prizes which were won at the late contest at Pershore. After the cloth was removed, the toast, "Success to the St. George's Angling Society," was given by Mr. Randford, vice-chairman, and responded to by Mr. A. G. Hall, chairman and president of the society. Mr. C. White then gave the toast, "Success to the Birmingham Angling Association," to which Mr. T. Coles responded, and in his reply drew the attention of the members to the great question the association had in hand, of securing water for the use of the members, and concluded by saying he should like to see all the barren and depleted water in the Midlands stocked with fish, so as to provide sport for the members. The toast of "Success to the Angler's Benevolent Society," was ably given by the chairman, and responded to Mr. A. Keeling. The evening, by this time getting far advanced, it was decided to proceed with the prize distribution, which was as follows: Mr. C. Wainwright, first, silver challenge cup, which he has to win again before it becomes his property, a marble clock, given by the club, a splendid album, for the largest fish taken in the contest, and a large portrait of himself given by Mr. Broadhead, who also presented a similar portrait to the society. Mr. Randford. second, a large travelling bag; Mr. C. Cottrell, third, writing desk; Mr. Bowler, fourth, tea service; Mr. Callaway, fifth, dinner service; Mr. Rose, sixth, a barometer; Mr. Havers, seventh, toilet service; Mr. H. Atwood, eighth, fancy lamp; Mr. T. Smith, ninth, glass flower stand; Mr. Moore, tenth, field glasses; Mr. Starsmore, eleventh, set of carvers in case; Mr. T. Bayliss, twelfth, biscuit jar; Mr. H. Waller, thirteenth, cruet. About twenty prizes were left for a future contest. At the conclusion of the distribution of prizes, a hearty vote of thanks was given to Mr. A. Keeling, for the manner in which he had conducted the contest. To this, Mr. Keeling suitably replied, and a little harmony brought a very enjoyable evening to a close. The next contest in connection with this society will be decided at the next meeting, and in all probability take place on October 18 next.

THE Birmingham Tenby Society held their consolation scramble on the 20th inst. at Tradley. There were about ten prizes left from the annual contest, and these were considerably augmented by a special prize given by the worthy host, Mr. C. Cottrell, and other gentlemen connected with the society. The weather was considerably against anything like a fair representation of the members turning out to the contest, as a long time previous to the departure of the train a steady rain began to come down, and the outlook predicted a wet day, so under the circumstances only about twenty of the members made the journey to Croxall, from which station to Fradley the members walked, which is a distance of something like four miles. This was accomplished in a drizzling rain, and on account of this the contest was delayed until twelve o'clock, when the contest began in a steady downpour, and one o'clock the rain came down in torrents; still the members kept to their places, and braved the storm, which towards the latter part of the contest passed away, and at 2.30 the whistle was sounded to cease fishing, when the weighing in of the fish was got through at the Swan Inn, the result of which was: Mr. Horobin, first; Mr. C. Wainwright, second; Mr. Bowler, third; Mr. T. Bayliss, fourth, &c. The prizes will be distributed at the next meeting of the society. The superintendence of the contest was in the hands of Mr. Coles, who, as usual, gave every satisfaction.

THE Good Intent Society, which meet at the Vine Inn, Hurst-street, Birmingham, held their annual contest at Alrewas, on the 20th instant. The contest commenced about ten o'clock, in a drizzling rain, and finished at twelve o'clock, which enabled the members to adjourn to see the weighing in, and to miss the heavy shower of rain that came on at about this time, and lasted for about an hour. The members did not turn out in their full strength, which was owing to the weather. The prizes were of a useful kind, and were to the number of sixteen, the chief prize being given by the host, Mr. Bowlby. Nearly the whole of the competitors—which numbered about twenty—succeeded in taking fish, and will be presented with a prize. Messrs. Penn and Matthouse acted as referees, and weighed the fish, the result being: Mr. Potter, first; Mr. W. Bird, second: Mr. Blackwell, third. After the weighing in the members spent the afternoon at the waterside, and succeeded in taking some decent fish, which consisted chiefly of roach.

A FISHING contest, which is open to all members of the Provincial Angling Association, is announced to take place on Oct. 11, when the following prizes will be competed for: 1st prize, silver centre stop watch, value £5; and five money prizes, consisting of purses of £1 10s., £1, 15s., 10s., and 5s. respectively. The contest will be within twenty-five miles of Birmingham, and will be fished under the association rules. All entries to be made to Mr. C. Littlehales, White Hart Inn, Great Hampton-row. All persons wishing to enter must produce their association cards at time of entering.

A MEETING of the committee of the Birmingham Angling Association will be held on Thursday evening next, Oct. 1, at the Birmingham Arms Hotel, Smithfield, chair taken at 8.30. A special general meeting will be held on Oct. 8 next, when the question of acquiring water for the members of the Birmingham Association will be discussed.

Holloway's Pills.—In general debility, mental depression and nervous irritability there is no medicine which operates so like a charm as these famous Pills. They purify the blood, soothe and strengthen the nerves and system, give tone to the stomach, elevate the spirits, and, in fact, make the patient sensible of a total and most delightful revolution in his whole system. They may be commended most unreservedly as the very best family medicine in existence. Though so powerfully efficacious, they are singularly mild in their operation, and might be given with perfect confidence to delicate women and young children. They contain not a grain of mercury, or any other noxious substance, and cannot do harm. Delicate females and all persons of sedentary habits will find these Pills a blessing.

NOTES FROM LANCASHIRE.

WE have at last come to the conclusion, that if any fishing is to be had this season, we must turn out and face the climatic conditions whatever they may be; consequently many ardent anglers can testify to the wet and cold of the past week or ten days, by the various legacies in the shape of colds and rheumatism, which their daring has caused them to inherit.

A FURTHER proof of the excellent fishing to be had in Ireland is furnished by the report to hand from Mr. Cordwell and the party who accompanied him. During their tour they visited Loughs Rath, Golvagh, and Nadarragh; and rivers Ballintra and Merver. The sport was invariably good wherever they went, and the abundance of trout rewarded their efforts. Lough Rath was perhaps the best of the lot, for in one hour twenty trout were killed by one angler. Salmon were not so plentiful, but eels were to be had at anytime. Mr. Cordwell varied his fishing by taking views of the different places visited and many beautiful scenes can now be recalled to his mind by the aid of photographs.

THE delegates, at their meeting at Hyde on Sept. 12, are said to have put a rod in pickle for one of the officials of the Manchester district.

THE Wellington Club is particularly unfortunate with its contests. On Saturday last was held the adjourned contest for prizes unawarded from the initial contest. Again wretched sport was obtained; still seven prizes were won, and even now six prizes are awaiting winners.

THE Levenshulme Club are continually troubled with the visits of trespassers and others who refuse to acknowledge the rights of this club, although they rent and preserve the waters. Some example will have to be made of the offenders before the nuisance can be effectually stopped. On the 19th, the club fished a match, with the following result: Messrs. C. H. Robinson, one; R. C. Rainshaw, two; W. Mycock, three; J. Marsland, four; S. Makin, five. Several specials were awarded.

THE Openshaw Club turned out in goodly numbers to contest for valuable prizes in private waters at Hyde. Plenty of fish were taken, but the weights are wisely withheld. The winners were—Messrs. W. Threlkeld, one; W. Watson, two; S. Eyres, three; J. H. Chadwick, four; E. Tudor, five; G. Yates, six; seven, eight, and nine divided between Messrs. F. Wood, L. Peels, and T. Jones.

THE Hulme Crown Club intend turning out to fish for a valuable prize offered by the jovial host of the Crown, together with a goodly sum of added money. Lostock is the rendezvous, and Saturday, the 26th, the day fixed for the competition.

MR. NEWTON, of Salford, has been elected by rotation to fill the presidential chair just vacated by Mr. Oliver in the delegate council of the Amalgamated anglers. Mr. Newton will receive the support of all true sportsmen.

THE members of the Biskette Club, who generally are ardent anglers have been very energetic during the past week or so. Messrs. McCrirrick, Allsop, Brooks, Limpé, Cliffe, and others have been out and good sport reported. This club never contests for prizes, or takes any part in matches, but nevertheless contains several anglers of note.

So long as weighing in of fish is allowed to take place on loose principles so long will fraud be attempted. Only last week, a large eel got into a hole owing to the overflow of a Cheshire mere, it was at once captured—a hook attached, and a neighbouring cottage visited with the hope of getting a voucher. The would-be swindler, however, caught a tartar, for he had applied to a watcher who at once refused and retained the fish, which weighed several pounds.

NOTES FROM NORFOLK.

ANGLING generally has somewhat improved during the last few days, but bottom fishing is not what it should be on the Yare, by Buckenham and Cantley, as owing to the lack of heavy rains the water is as clear as crystal. This, of course, has been in favour of the pike fisher, and several pike have been taken with both natural and artificial baits. A few bream have also succumbed to some of our local sportsmen. On Wednesday about 2½st. (14lb. to 1st.) of these fish, weighing from 1lb. to 2lb. each, were taken by one rod.

AT Brundall and Surlingham a few roach have been taken but no fish of any size. The river here is in very good condition owing to the few showers that fell at the end of last week which imparted a good colour to the water, but this colour has all cleared off by the time the ebb water reaches Rockland Dyke.

ON the Bure some fair catches of bream and pike have been made. On Monday 2st. of bream were taken by two rods, near the Cockshoot Dyke at Horning, and 3st. of the same fish were caught close to Horning Church. At Wroxham some pike and perch have been taken (spinning) during the week, one gentleman having a fair basket of pike from 3lb. to 5lb. each.

ON the 13th inst. a splendid brace of bream were taken at Drayton on the Wensum, one weighing 7lb. 2oz., the other exactly 8lb., the latter fish measured 25½in. They are being set up by a local naturalist, and will make a handsome case.

NOTES FROM NOTTINGHAM.

OUR anglers have experienced a marked change in the state of the weather, and there is little doubt that it has influenced the feeding habit of all coarse fish. From the extreme heat of summer we have descended almost to the chilly blasts of November. On Tuesday the river rose something like a foot, and the rise was bringing down a considerable quantity of loose weed. This, at all times, is most annoying to the angler. There has not been a heavy downfall of rain locally, so that the Dove and Derwent were perhaps responsible for the temporary influx. On Saturday afternoon Mr. W. Hall, of the Nottingham Wellington Angling Society, patronised the Kelham subscription water and returned with four or five very big barbel, the heaviest making a fraction over 6lb. It was recorded on the society's books. Recently, several remarkably fine specimen of barbel have been weighed in. A report had obtained local publicity that a fish of above 11lb. had been killed in the district, but I confess I have not, after much trouble, been able to trace its captor. Some people will publish anything. At Colwick Mr. W. Parr has landed a barbel of 5½lb.; and amongst a score caught by Mr. H. Benson, of Derby, at Sutton-on-Trent, was one of 5lb. Last Thursday I fished a private water near Newark with Mr. F. W. Kidd, the well-known auctioneer of Nottingham, and between us we had seven handsome barbel, Mr. Kidd letting the "hammer" go in thoroughly workmanlike fashion. Sport has fallen off at Shardlow, the principal takes comprising chub and dace; but at King's Mills, Mr. T. Wood, the lessee, has been busy amongst the barbel, getting one splendid fish weighing within a fraction of 7lb. Mr. Clayton, of the Wellingtonians, wound up an enjoyable holiday last week with about 60lb. of fish, chiefly barbel; and I hear that an extraordinary catch has been effected in the lower waters by Mr. Thoms and party, of Radford. Maggots have accounted for respectable bags of roach at Burton, Joyce, and Stoke, and in the private waters of the Earl of Carnarvon a few large chub have succumbed to the wasp grub. At Hilford, on Saturday, a local gentleman took a number of fine roach with the artificial fly, and these fish ought now to rise freely. The killing fly on Saturday was dressed with dark outside woodcock and orange body, ribbed with gold.

I HAVE frequently in my Notes referred to the Barton Fishery and its close proximity to Nottingham. The water contains a large quantity of heavy roach and bream, besides barbel, chub, dace, perch, and pike. It is well looked after by Mr. Roadley, the lessee, and his son, but they cannot always be about. Recently the abuse of setting lines has been introduced by a gentleman (?) living in the immediate neighbourhood. And they do contain hooks, I assure you. No person calling himself a true angler would ever think of using lines, either by day or by night, and in calling public attention to the case under notice, I do hope that Mr. Roadley, in the interests of his subscribers, will put down the practice with a strong hand. If every frequenter of the fishery is allowed to set a long line, rigged up with a score or more hooks, it will very soon be good-bye to fish of all descriptions, with the exception, perhaps, of pike. Recently, in the length, some very fair bags of roach have been obtained with creed wheat and maggots. Last Wednesday, three Nottingham gentlemen tried the deep water above the stakes with old milk cheese, their object being to get the barbel on. The hole had been baited on the Monday, and the trio seemed extremely sanguine of scoring heavily. But the scoring was reversed. Tackle was lost, baits were soon washed off, and in the end the basket contained one solitary eel, killed, I understand, with the worm. Cheese fishing is out of date. Greaves is all right, although this is frequently overdone.

ENCOURAGING the hait is a new wrinkle to fishermen. The other evening at Wilford three villagers were legering for eels on the gravels below the church wall, when one of them succeeded in landing, with the worm, thirteen beautiful fish. His friends were using the same description of bait, but as ill-luck would have it they failed to get a pull. When about to depart, well satisfied with his evening's enjoyment, Mr. B. observed that he was extremely sorry his friends were so unsuccessful, "Yes," replied one, "you must charm your bait." "Charm," retorted Mr. B., "I don't know what you mean. I may tell you, however, that I always encourage my worm before placing it on the hook." "Do you?" queried the friend, looking in his face with astonishment. "Perhaps you may kindly explain." Mr. B.: "Oh, yes. Why, when I was catching 'em didn't you notice that I always, in baiting, spit on my worm? You do the same, and you won't regret it. Good night!"

ASTRONOMER JOSEPH (W. Joe Minion), of Host Sam Pogson's Society, the Bowling Green Inn, Canal-street, Nottingham, is immensely flattered by my Notes which appeared last week. He has told many of his club friends that he feels under a very deep debt of gratitude to me. Henceforth the original name of *Minion* will be entirely dropped out of his vocabulary. Astronomer Joseph is high sounding, and likely enough, he says, to win him an important public appointment. Since Sunday he has actually sent me a large bronze medal in acknowledgment of my feeble efforts on his behalf. In a peculiarly-worded letter accompanying the gift, he says: "Dear Sir,—Kindly accept the enclosed. As a work of art I may tell you the Astronomer has been busy. The creatures like scorpions entwined in affectionate embrace round the rim of the medal are my favourites—eels. There are three, and you will notice an 'infant' specimen representing my coat of arms in the centre. The four were slain by me in my own 'eclery' at Radcliffe, on the night of my memorable astro-discoveries. On the obverse side you will readily detect the face of your own dear familiar (yes, Joseph, it is a very good likeness). I am in the act of raising to my frothy (mouth, I presume) a fine old flagon with the words inscribed thereon 'S. P.'s C. H. B. A. Sam Pogson's celebrated home-brewed ale.' Of course, I am aware you are a 'T. T.,' but of late Sam's best has really been in it. The other emblems, including the leg of mutton, are intended to represent ground-bait." Joseph then winds up as follows: "Now do you think you could do me a favour? In the Astro-club, which is very expensive, I have not, so far, weighed in a fish. I want you, on the extreme quiet, to kill me an extra specimen dace. I care not whether it comes from Willington or Great Ponton. Failing a dace I could put up with a high-bred (Joe, whatever do you mean?—hybrid). The 'Innocents' cannot detect the difference; at all events, I must be first either by hook or by crook. Next week, you know is our fair, so look out for a goose." Yes, Joseph, goose enough! The bird is already ordered, and the wife has the sage and onions in the larder. I am afraid I cannot well comply with your request. You shall have a day's fishing with me, and I promise you that *all* the fish killed shall be thrown into one basket, so that you may take your choice.

A "RED LETTER" day amongst the chub, by Mr. F. F. Cleaver (ex-sheriff of Nottingham), Mr. Sam Pogson, and Mr. Jno. Theaker, assisted, of course, by the "Astronomer," unavoidably stands over until my next batch of Notes.

NOTES FROM SHROPSHIRE.

FROM the *Montgomeryshire Express* this week I glean some very interesting information concerning the fish passes in the weirs on the Severn and their efficiency or non-efficiency. Beyond question the bad state of these so-called passes (?) have to answer in a great measure for the decrease of salmon in the river, and until considerable improvement is made in them there cannot be a very material increase in the number of Severn salmon, especially in the upper waters, notwithstanding any other measures which the Board of Conservators may take to achieve this desirable result. Commencing with the upper waters themselves, there is a weir at Llanidloes which possesses no fish pass whatever, but the expediency of allowing salmon to pass it is questioned, for above it the tributaries are of such small dimensions that the spawning fish would encounter many dangers including that to which they would be exposed from the ravages of the poacher whose operations cannot be superintended as they ought by the very small staff of watchers that are employed by the Severn Conservators. Moreover, there is already accessible ample spawning grounds, sufficient for the requirements of more salmon than fishermen in the upper waters can ever hope to see in them. As to the weirs at Llanidloes, the same remarks apply, and from here to Newtown one small weir only exists—namely, Milford weir, which a little alteration in its pass would make satisfactory. In the locality of Newtown the weirs possess passes of a fairly efficient nature, and coming lower down we have Penarth weir, which also has a good pass. On the Rhiew a new weir has been constructed, minus a pass; but if the upper water fishermen are met fairly by the lower interests there is no doubt the owners would be persuaded to remedy this defect. At Kelkewydd Mill, near Welshpool, there is a most elaborately constructed weir, but it is a strange fact that the fish do not utilise it in their migration, but prefer ascending outside it. From here the fish do not encounter any but natural obstacles of a comparatively unimportant nature until a little below Shrewsbury, though at the same time it may be mentioned there are some rather bad obstacles on the Vyrnwy and Tanat. At Preston Boats, within a mile or two of Shrewsbury, there is a somewhat doubtfully-constructed weir established by an old Act of Parliament, which it would take very powerful action to abolish. In this there are several eel-traps which, when set, appear to be capable of taking pretty nearly everything in the shape of fish that passes down the river. "It is said," says the *Montgomeryshire Express*, "that hundreds of 'smolts,' or young salmon, on their way to the sea, get killed in the baskets. If this is so, the Board of Conservators would be doing a good action if they were to buy up the fishery, and throw the river open, for the destruction of young salmon cannot but have a prejudicial effect on the fisheries." This is the opinion of the writer of the article from which I quote the above; but I am inclined to think that the eel-traps complained of do not do such injury to the salmon as set forth. Passing in from Preston Boats to below Stourport, a wide stretch of water, in which the fish have a comparatively clear run, there appears the formidable Lincoln weir, which has been the subject of much comment in the recent discussions at the meetings of the Board of Conservators on this question, and during the inquiries held by the committee as to the efficiency of the passes. Here there is what is confidently described by many qualified judges as a most inefficient pass, and it is stated that the salmon attempting to leap it "drop back in scores," and some even remain to spawn below the weir. In this fish-pass the gradient is 1in. in 9in., and it is further alleged to be so badly constructed that "it is a wonder any fish ever get into the upper waters." If such a lamentable state of things exists here as is stated—and I have no reason to believe anything to the contrary—it is to be hoped that Mr. Berrington, Her Majesty's Inspector of Fisheries, will in his report condemn the pass as inefficient, and propose the adoption of very extensive remedial measures, and also with regard to those weirs below Lincoln. Holt weir is about the worst below here, but with a trifling alteration this can be made passable. The Beverley, Diglis, Tewkesbury, and other weirs are described as not being such obstacles to the passage of salmon as those of Holt and Lincoln.

THERE was a considerable rise in the river on Monday and Tuesday, and the water became discoloured, but is now in fair condition again. Some good catches of pike, trout, and rough fish have been made lately, and the trout season is ending fairly well, but without doubt it has been in this district an exceptionally poor one. Mr. Dixon has been about the most successful local angler, and some heavy trout have fallen to his share. The professional anglers, too, have had a fair number of fish, but the average angler has come very badly off. One veteran flyfisher tells me that he has had only thirteen trout during the whole of the season.

MR. BERRINGTON, the Chief Inspector of Fisheries, made a tour down the Severn, last week, for the purpose of inspecting the weirs and fish passes, with a view to the ultimate improvement of those which are defective. I gather that in the lower waters there are at least two in which he would suggest alterations should be made, so as to enable salmon to have a more free passage to the spawning beds in the upper waters, and if this be so, the visit of inspection will be productive of good results. I understand that the report of the inspector will probably be presented to the Severn Board of Conservators, at their next meeting, which promises to be a very important one as far as the interests of the salmon fishers of the Severn are concerned.

THE Severn Board of Conservators will hold a meeting on October 1, and the upper water district members who desire the adoption of radical reforms in regard to the salmon fishing should be present to support the new bye-law which will be proposed for adoption, by which it is intended to stop the salmon fishing for rods as well as nets during the month of February. It is not to be expected by any means that this will meet with the approval of all the members, but it has a very good object in view—namely, to get more breeding fish in the upper waters and to enable them to have a free run.

NOTES FROM YORK AND DISTRICT.

ANGLING matters have during the week been tolerably quiet. The weather has not been imminently suited to the favourable exposition of the piscatorial art. Grayling fishing is now the great thing, especially on the West Riding rivers; whilst pike are attracting a goodly number of rodsters. Legering seems to be the favourite method of capture, but many fish with the paternoster or the float. Just now the paternoster is the most advantageous method, and will amply repay any little trouble. The most interesting event in fishing circles is the pending competition of the Leeds Amalgamated Society of Anglers. The final arrangements have now been concluded, and entries have been closed. The first four prizes will be of the following value: £5, £3, £2, and £1 10s., and as I hear that over two hundred and sixty competitors have entered the lists, some capital sport should be experienced. Some time ago, I gave the conditions of the contest in the *F. G.*, and I soon hope to chronicle a successful and not unenjoyable day's fishing.

THE fourth and last match of the season, under the auspices of the Fulford Friendly Angling Society, was held on Wednesday last, by permission of Mr. Stephen Young, at Scoreby. The weather was fine, and the water in tolerably good condition, so that fair sport was obtainable. There were some sixteen competitors, and the eight prizes which were offered were won by the following:—First, Mr. E. Walker; second, Mr. C. W. Arminson; third, Mr. E. Staines; fourth, Mr. A. Simpson; fifth, Mr. J. W. Davison; sixth, Mr. J. A. Green; seventh, Mr. J. E. Wilkinson; eighth, Mr. A. W. White. The rod presented by Captain W. H. Key, J.P., the president of the society, for the best average of the year, was secured by Mr. C. W. Arminson, of Church-street; and a special prize for the best catch of eels for the day was secured by Mr. J. W. Davison.

THE Swale at Morton, was on Saturday, the *locale* of a very interesting event, being the September competition of the Darlington Silver Trout Anglers' Association, in which the Association's Silver Cup and the President's Silver Medal were the chief incentives to emulation. The waters in the district are preserved by Mr. George W. Elliot, M.P., for the Richmond Division, and the necessary permission to fish was cordially granted by him. The number of entrants was thirty-eight, whilst the prizes numbered thirty-one. The water was in good condition, and the weather favourable, so that thirty-two of the competitors weighed in. The contest was of a "go-as-you-please" character, and the anglers fished with either fly or bottom. The first nine anglers caught 22lb. of fish, the winner of the first prize—the cup, and the president's (Mr. C. H. Sharpe) medal, was Mr. M. Swainston, with 4lb. 7¼oz.; the second was Mr. F. Varley, 4lb. 6oz; third, Mr. J. Timms, 4lb. 4½oz. The other competitors took prizes in the order named: Messrs. Wood, Hooper, Judson, W. Timms, W. Maughan, Arnett, Taylor, Hindle, J. Dutton, Gillam, Bagshaw, Rutherford, Lloyd, Cummins, Sowden, Greenhalgh, Watson, Martin, Temple, Smythe, Hull, Sharp, Honeyman, Teasdale, and Prince; while J. Maughan and Goddard tied for the last prize. The special prize for the best dish was won by J. Timms, and that for the heaviest single fish by J. Wood. The hon. secretary (Mr. J. Smythe) conducted the party, and weighed in.

THE Royal Exchange Angling Society fished their annual match at School-house Hill, near Malton, the other day. "It is hoped," said the secretary, in the preliminary announcement, "that members will turn up in good force. There is a good prize offered for visitors, and each member is supposed to bring a friend to fish for same." As a consequence, the competition was a decided success, between thirty and forty members and friends taking part in it. A saloon carriage attached to the train, leaving at 9.5 a.m., conveyed the party to their destination, and every arrangement was made for their comfort and convenience when arriving there. The most successful competitors were: First, G. Allenby, 3lb. 9½oz.; second, T. Johnson, 3lb. 6oz.; third, W. G. Royston, 3lb. 2¾oz.; fourth, Arthur Scott, 3lb. ½oz.; fifth, H. Blaker, 1lb. 15¾oz.; sixth, E. Rowley, 1lb. 11½oz. The visitor's prize was won by Mr. Bramfitt, with 3lb. ¼oz. The prizes will be distributed on the second Tuesday in October.

THE annual dinner and distribution of prizes in connection with the Albert Angling Society, took place on the 17th inst., at the Prince Albert Inn, Newtown, when about forty members and visitors sat down to a capital spread. The chair was occupied by the president (Mr. John Lee), and the vice-chair by Mr. John Orange. Amongst the visitors were Mr. E. Moore, President of the Leeds and District Amalgamated Society of Anglers; Mr. Mason, of the Golden Fleece Angling Club; Mr. Greenhill, of the Holbeck Angling Club; and Mr. Maney. The prizes won at the recent competition were distributed as follows: First, J. C. Moss, 1lb. 4oz.; second, J. Williams, 10oz.; third, J, Kirby, 9½oz.; fourth, S. Betts, 9oz.; fifth, G. Weekly, 8oz.; and sixth, J. Bywood, 6½oz. A most pleasing feature of the evening was the presentation to the hon. sec. (Mr. Sedgwick), which was made by the society, as a recognition of his untiring efforts on behalf of the society.

THE City of York Angling Association held its last match of the season on Tuesday, in the river Nidd, just above its junction with the Ouse. The weather was very unfavourable, rain falling all the day, and the river contained nearly 4ft. of flood water. Hence, under such adverse conditions, the kill was only small. There were seventeen competitors, and the following were the winners of the eleven prizes: First, Mr. Smith, 2lb. 10½oz.; second, Mr. Wood, 2lb. 9oz.; third, Mr. Broadley, 1lb. 14½oz.; fourth, Mr. T. Simpson, 1lb. 13½oz.; fifth, Mr. Robinson, 1lb. 3oz.; sixth, Mr. P. Lund, 1lb. ½oz.; seventh and eighth, Mr. Schumacker, and Mr. Bean 12½oz. each; ninth, Mr. Coop, 12oz.; tenth, Mr. T. Laverack, 6½oz.; and eleventh, Mr. Chapman, 5½oz. The arrangements was effectually carried out by Messrs. Robinson and Ankers, the hon. secretaries.

NOTES FROM IRELAND.

[FROM OUR DUBLIN CORRESPONDENT.]

ALTHOUGH the past two or three days has savoured a little of winter, the weather continues favourable to sport; but fishing on the Co. Dublin rivers is not brisk by any means; rods are getting scarce. In another week or so I imagine angling will be practically over in this large district. The waters are in fine condition now for fly-fishing, and good sport will probably mark the close of the season.

A COUPLE of remarkably big takes are reported from Lough Mask (Co. Galway) this week. Mr. Lawey, Ceylon, and Mr. Small, Melrose, have been fishing the lake, and in three days they killed two pike, one weighing 33½lb. and the other 18lb., together with 60lb. of brown trout and a couple of small perch. These takes are reported from Clonbur (Co, Galway), the headquarters of the anglers.

MR. J. C. PINKERTON, Italian Consul, Belfast, in passing through Ardglass (County Down) on Thursday last had his attention drawn to an object of wonder on exhibition in the shape of a strange fish which was caught in a fisherman's net there. It weighs ¾lb., and is certainly a curiosity. It has the head of a pike, and, from the gills to the tail, on each side, there is a bright, vivid line of deep blue a ¼in. broad. The top fins of the tail are spotted the same, and round the head and shoulders a profuse network of deep blue lines one-eighth of an inch broad, which gives the fish an unnatural appearance. Mr. Pinkerton purchased it, and is having it preserved, when he will present it to the Belfast Museum as an extraordinary specimen of a fish.

SEA angling continues brisk at the notable points around the Irish coast, and on fine days numerous boats are to be seen with lines out around Dublin Bay. At Waterville (County Kerry) this sport is excellent. In one day, Dr. Sharkey and his brother had an enormous take of whiting, gurnet, bream, pollock, and cod. My informant states that Mr. Riversdale caught two hundred and twenty fish; Mr. Batesman and his brother, one hundred and thirty-five; and Col. Rogers, near one hundred. This certainly looks spicey, whilst angling on the lake is only indifferent.

NOTES FROM TYRONE.

IN the past week angling has revived considerably on the majority of the Tyrone waters, and the season, now drawing fast to a close, bids fair to terminate well. Latterly the Ballinderry has been yielding fair trays of trout, and also the Rock, Tullagh, Kingsmill, Littlebridge, and other tributaries. The Blackwater, for the greater part of the season, has justified its nomenclature, being generally flooded and consequently muddy. All-round angling is looking up well on all its reaches just now. Such small streams as the Terrew, or Newmills river, are at present in good form for fly-fishing, and Olive and Claret have accounted for heavy bags. The Kildress stream is well stocked with small, but very game trout, that fight most wickedly when hooked. Sport, all the season, has been unusually good on it, as it escapes comparatively free from the flax-water nuisance.

ON all the above waters the season terminates on the 31st prox.

I HEAR that good runs of salmon have filled the Strule, Mourne, Finn, and other northern waters, but sport is not as good as it might be. A good many Liverpool gentlemen—among them, Mr. McKinnie, Mr. Ramsbottom, Mr. Fletcher, and Mr. Johnston—have had fair success on the Newston-Stewart reaches of the Mourne. Anglers on these waters should make the best of their time, as there are scarcely three weeks of the season to come now.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association.—The delegates met at Foresters' Hall, on Monday last, the 21st inst., at 8.30 p.m. The vice-president occupied the chair. After the minutes of the last delegate meeting, held on the 17th ult, had been read and confirmed the minutes of the General Committee, held on the 7th inst., were read, and then those of the Renting and Preservation Committee for general information. It having been decided to stop night fishing on our several fisheries on the Grand Junction, Langley, and Slough canals, posters will shortly be issued to this effect, warning anglers that the association has so decided. An arrangement has now been come to with Mr. Capon, who has lately taken the house for many years past in the occupation of Mr. Stove, for members of the association to have the privilege of passing through his ground, thus saving them much inconvenience and a long detour. An excellent arrangement regarding railway privilege tickets has also been come to that will prevent the occasional mistakes now made by some members who, not using their tickets very often, sometimes mistake their passengers' railway privilege ticket for the current one, even when they have both, owing to two years being printed on some in a conspicuous manner. The following will be substituted for same, viz.—"This ticket will expire on the 4th June, 1892," or as the case may be. The Park Angling Society, meeting at the Park Hotel, Tottenham (secretary F. Bone), was unanimously enrolled after the members of its deputation had convinced the delegates that its rules were in accordance with the requirements of the association. The Serapis Angling Society, meeting at Nevill Arms, Stoke Newington, also applied for enrolment, but as the secretary had omitted to bring a copy of its rules it was decided after a short debate, to refer the consideration of the proposal to the next General Committee. The East London Piscatorial Society applied for honorary bailiff warrants for two of its members for the Lea, viz.—Mr. Worrall (treasurer), and Mr. Myers (chairman). The application was unanimously accepted, subject to confirmation by the Lea Conservancy Board. The visiting officers next gave their reports. Mr. Manning had paid a visit to the North Western Angling Society, which, owing to a wet night, was not so well attended as usual, eight clubs only being represented. Mr. Armstrong had visited the Peckham Brothers, who had representatives from seven clubs; also to the Rodney, where fourteen clubs sent delegates. The Great Western Railway Company are also to be applied to for some further privileges on behalf of certain local anglers. A further application was made for a honorary bailiff's warrant for the association waters on behalf of Mr. Hall, secretary of Campbell United Angling Society, and for Mr. Buildham, of the Globe Angling Society, as hon. bailiff of the Lea. The roll was called at 10.30 p.m., when the following fifty-three clubs were represented: Anglers' Pride, Bostonians, Bermondsey Bros., Brunswick Bros., City of London, Cobden, Crown and Buckland, Clapham Junction, Duke of Norfolk, Dalston, Golden Barbel, Good Intent, Globe, Gresham, Greenwich, Great Eastern, Eastern Piscatorials, Hoxton Brothers, Highbury, Izaak Walton, Islington, Jubilee, Mildmay, North Eastern, North London, Midland, Allason United, Campbell, North Western, Clissold, Lady of the Lake, Islington Bros., Odds and Evens, East London, Causton, Sons of the Lea, Allason, Original Alexandra, Prince of Wales, Peckham Bros., Prince Arthur, Rodney, Royal Oak, South Belgravia, Sundial, Social Bros., Waggoners, Wenlock, Hearts of Oak, Camden, North Lambeth, Marylebone.—HON. REPORTER.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—On the 20th inst., our members were at Fittleworth, but only one was successful—viz., Mr. Harding, with roach, he winning Mr. Hill's prize. Mr. Moir also weighed in roach and bream; Mr. Potter roach and dace. The remaining prizes will be fished for on Sept. 27. All members to go where they like; all to go on same morning. The next return visit on the Central Association will take place at the above, when due notice will be given.—W. H. POTTER.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our fifth outing this season ame off on the 20th inst., at Chertsey, and there were wenty-two competitors. The four prizes were all taken s follows: Mr. B. Acland, first, with 1lb. 10¼oz. of roach; Mr. Jones, second, with 1lb. 10oz. of roach and dace; and Mr. King, with 1lb. 8oz. of roach, and also taking fourth prize with the largest roach, 10¾oz., presented by Mr. Higgenbotham, and nearly all weighed in fish. The next isit on the S.L.U.V.L. goes to the above club on Tuesday next, Sept. 29, when we hope to see a good muster.—J. RICH.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 20th inst., ur members mustered twenty strong to fish for prizes at Bourne End, and although the takes were not very large, he prizes were all taken by the following members: Mr. Humphreys winning first prize with jack; Mr. Lambert, un., second, with roach; Mr. Lambert, sen., third, with oach; Mr. G. Merry, fourth, with dace; Mr. W. Embleton, un., fifth, with roach; Mr. Dyer, sixth, with roach; Mr. J. Nunn, jun., also weighed in roach; Mr. Rowe lso weighed in, and Mr. Whitehread with some ood bream and dace. I hope that brother anglers will how up in good force on Monday, Oct. 5, as our visit on he Clerkenwell and District United takes place at the hove house, and all will be heartily welcomed on that ccasion.—E. R. EMBLETON, sec.

Anchor and Hope Angling Society, Canal Bridge, ld Kent-road.—The usual weekly meeting was held on Vednesday, with a poor attendance, which I hope will not e the case next week, the same being quarterly night, so hope they will attend early. Mr. F. W. Martin had the ood fortune on the 20th to take the first prize at he pegged-down match at Tovil, consisting of a pig and dded money. Our other members were not successful at Burnt Mill, in the club union competition. Mr. Palmer had show of fish from Pulborough on the 20th. Mr. Eldridge as another competition on Oct. 4, at Amberley. I should eel obliged to receive the prizes that are promised, early ext week.—A. G. SMITH, sec.

Battersea Friendly Angling Society, Queen's otel, Queen's-road, Battersea.—The members of this club ill fish a match on Sept. 27, for three prizes; all starting y train, leaving Clapham Junction at a quarter to nine. ank only. On the 20th inst. Mr. C. Wastell weighed in a ne show of roach and dace. The date of next punt competition will be fixed on Tuesday next; all members are quested to attend.—GEO. MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, range-road.—Several members were out on the 20th, but ly three returned with fish. Mr. H. Patman, bream, ach, and dace; J. Smith, roach and dace; A. Conn, erch and roach, one perch a nice fish of 1lb. 3½oz., from e Thames.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, outhwark-street, Blackfriars, S.E.—We had a very nice ow of fish on the 20th inst., the following gentlemen eighing in: Mr. Wheelhouse, roach; Mr. Hacker, roach; r. Roezilier, perch; Mr. J. Barker, carp. On Wednesday ght the committee settled how and when the rest of the izes were to be fished for, elected Mr. Wertheim hon. ember, and Mr. J. Rutland working member. Just at tter end of the meeting, Messrs. J. Barker and Wilson eighed in a splendid show of roach and dace.—F. OBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose d Crown, Broad-street, Bloomsbury, W.C.—On the tb inst., the following weighed in: Mr. C. Davis, roach d dace; Mr. Rich, roach and dace. In the report from e river Rothor, at Fittleworth, in your last week's issue, was stated Mr. Pailes, of the Alma A. S., caught a 4lb. eam, it should have been the Bloomsbury Bros. A. S.— WARREN.

Brompton Angling Society, Grove Tavern, Beauamp-place, S.W.—On the 20th inst., several of our memrs were out, but only one weighed in; the lucky member as Mr. Coombes, who weighed in a nice jack. Mr. J. ll weighed in some nice roach, dace, and chub. All oso members who were not present on Wednesday will ease remember that the train for the competition at lenbridge leaves Victoria at 9.50 a.m. on the 27th inst.— ROACH, sec.

Brunswick Brothers Angling Society, Cherry Tree, unswick-road, Bromley, E.—We fished for four prizes the 20th inst., but no one took the required weights to ke a prize. The three prizes for bottom fishing will be ntested for at Dagenham Gulf on the 27th inst.; one rod ly. The jack prize, value 10s. 6d. remains open until esday, October 6. Members are allowed to fish two ys for this prize, but the heaviest one day's take to win. e had a good business meeting on Tuesday last and were ecred by the faces of some old friends. Members please te next Tuesday is half-yearly night. I trust each one ll clear up on that date, so that I may prepare the audit e same week, for presentation to the members on the lowing Tuesday. Our smoking concert takes place on esday, October 6, also distribution of prizes.—T. AWKES, sec.

Burdett Angling Society, 118, Hackney-road.—We had ice show of fish at our club-room, on the 20th inst. Mr. Flint, had 4¼lb. of roach, bream, and dace; Mr. Burton, ch, bream, and dace, 3lb. 10oz.; Mr. Gurney had 2lb. of ub and perch. Notice to members, we go out for prizes the 27th inst.; we fish for five prizes at Windsor; mems to sign at club-house on Saturday night.—J. PETHER, cretary.

Burton Piscatorials, Globe, Derby-street, King'sss.—Several of our members were out on the 20th inst., d the following were fairly successful: Messrs. C. Biggs, ., Brierly, and Richards. We fish a sweepstake at urne End on October 4, when we should like to see a d muster of members compete.—C. ROBERTS, hon. cretary.

ambridge Friendly Angling Society, Masons' ms, Titchhorne-street, Edgware-road, W.—An outing will take place on October 4, at Goring, from first gate above the ferry down to the bridge (Streatley side); all fish to weigh; one rod only; weigh in at Goring. On the 20th, Messrs. Allen and Wilson had some very nice roach from the Thames.—W. SUTTON, sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On the 13th inst., Mr. Boxall had a nice jack; Mr. A. Chapman, jack and perch; Mr. Chapman, sen., jack; Mr. Shires, tench. On the 20th, Mr. Boxall, jack; Mr. C. Chapman, jack; Mr. Langton, jack and roach; Mr. Fitter, roach and dace; Mr. Sharp, roach; Mr. King, roach; Mr. A. Chapman, jack.—E. T. WHITE.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane. City.—The meeting was well attended on the 21st inst. A lengthy discussion on fish culture and baits emanated from Mr. A. Sowerbutts. The outing, on the 20th, at Woking did not prove to be the success that was anticipated, and nothing has been weighed in since my last report worthy of note. Mr. T. Crumplen, of the Piscatorial Society, has kindly consented to preside at the meeting on Monday next (28th inst.), when Mr. Harry Dunn reads his paper on barbel fishing. I may also mention that the meeting will open at 8.30 with the "Angler's Song," from "Izaak Walton," with additional verses by "Old Izaak," of the *People*. Mr. H. W. Sharp will be the vocalist, and will sing Lawes's original music.—JOHN SMITH, hon. sec.

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—On the 13th inst., Mr. Macdonnell had dace and flounders, from Amberley. On the 20th inst., Mr. Castle weighed roach, dace, and gudgeon—the heaviest dace 8oz., from the Mole; Mr. Macdonnell, roach and perch, winning the sixth prize in the Working Men's Club Competition, at Burnt Mill.—CAS.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—Since my last, the following members have weighed in fish—viz., Messrs. E. Wilson, 14lb. 12oz. barbel; G. Edwards, 8lb. 9½oz. barbel; Mr. Turner, 5lb. 0½oz. barbel, &c.; A. Painter, 2lb. 3oz. jack, and 1lb. 14oz. roach; Collis, 3lb. 14oz. pike; Robinson, 9lb. 9oz. barbel. On the 27th instant we fish a punt match at Staines.—A. TROWBRIDGE, sec.

Clapton Angling Society, Wayland Hotel, Dalston-lane.—The ordinary weekly meeting was held on Monday last, Mr. J. P. Connellan in the chair. Three letters of inquiry as to membership were read. No special catches were reported. A friend of several of our members has lately purchased a number of acres of land abutting on the old Lea. It is a well-known spot, and abounds with fine fish. The only time I visited it I saw a barbel of 4lb. landed. I have reason to believe that our society will have the great privilege of angling in this water. It will now be strictly preserved, and being near Angel-road Station, will be easily accessible to our members. Good accounts still to hand of successes at our private waters, Ramsney Marsh.—HENRY HOWSE, hon. sec.

Clarence Angling Club, Red Lion Hotel, Harrow-road, Paddington, W.—The only fish took during the week were about four dozen roach, several scaling over 1lb., by our president, Mr. J. F. Dawson. Members are requested to attend early on Wednesday next, for particular business which has to be discussed.—ALF. EVANS, secretary.

Clerkenwell and District United.—The next visit on the above will be to the Amicable Waltonians, held at the Sun Tavern, Great Sutton-street, Goswell-road, on Monday, October 5.—F. CASTELL, hon. sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—Only two members weighed in fish on the 20th inst., Messrs. E. Baxter and E. George, with a nice show of dace from the Thames.—A. SMITH, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 20th inst., several members were out, but the only gentlemen that were at all successful were Messrs. Webber, Thornton, and Newsome, who had a nice show of bream, roach, perch, and dace. On Tuesday, the 22nd, Mr. Bohill had a nice show of roach from the Lea. Members please note that next Tuesday is quarterly night.—S. MALBY, sec.

Eagle Angling Society, Chesnut-road, Tottenham.—Messrs. Dwyer, Ashmore, Barlow and Bennett have had some good takes of roach, dace, and perch, one perch scaling over 1lb. For the information of members living at a distance, I give a list of prizes already promised by members and friends, open to all members of this society, the first of which takes place on the 27th instant—viz., Dr. Hall's prize, one guinea. Boundary match between St. Margaret's Lock and the next lock towards Ware, river Lea, on September 27. Gross weight of any kind of fish named in book of rules to win, and to be weighed in at headquarters same day. Two rods allowed. Mr. Barlow's prize, an oil-painting, "Jack in a Roach Swim," by Roland Knight. For one day's fishing in any public water, on October 11, or Tuesday, October 13. Members competing must previously declare to the secretary which day they intend to fish. Gross weight of fish named in book of rules to win, and to be weighed in at headquarters the same day. Two rods allowed. Mr. C. Graham Bennett's prize, to the value of half-a-guinea, for the largest pike or jack caught when fishing from the society's private land at Tottenham Lock. To end of season. Mr. Longfellow's prize, to the value of half-a-guinea, for the best dace of 8oz. or over, caught in any public water. To end of season. Mr. Dyer's prize, to the value of half-a-guinea, for the best roach of 1lb. or over, caught in any public water. To end of season. Mr. E. B. Ridgway's prize, a Slater's whole cane rod, for the best perch of 1lb. or over, caught in any public water. To end of season. The secretary will be pleased to receive further offers of prizes from members and friends.—T. F. B., hon. sec.

Eastern Piscatorial Society, Spread Eagle, Gill-street, Limehouse, E.—Our match on the 20th terminated satisfactorily, all the six prizes being taken in the following order: Mr. Bartlett, first; Mr. Jones, second; Mr. Hines, third; Mr. Floyed, fourth; Mr. Boik, fifth; Mr. Turner, sixth. All the above had roach and dace, but no takes large enough for special mention.—W. BARTLETT, hon. secretary.

East London Piscatorial Society, London Hospital Tavern, Whitechapel-road, E.—Our competition outing took place on Thursday, Sept. 17th, at Hampton Court. Mr. Foggie won the first prize, £1 11s. 6d., with 3¼lb.; Mr. Ockelford, third, 10s. 6d., 1¾lb. The other prizes were not taken. Mr. Dyne and Mr. Stammers did not feel inclined to fish, so took a boat and annoyed the competitors by feeding the swans in their swims, but were rewarded for their sportsmanlike behaviour by falling in about 12ft. of water, much to the delight of the others.—FRANK WOODS, secretary.

Eustonian Angling Society, King's Head. Swinton-street, King's Cross.—Since my last report of the 16th inst., Messrs. Abbott, Baily, Drake, and Taverner, have weighed in some very good shows of roach, bream, and dace; not forgetting Mr. Taverner and Baily for their show on the 20th inst. On October 4, we have an outing at Amberley, members and friends included. We should like to see the members attend the club more regularly on Wednesday evenings.—R. MOLL, sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On the 20th inst., Mr. F. Vanhegan and Biggs, weighed in roach, dace, and bream. Gentlemen on the committee for George Watling's benefit, please notice the next meeting will take place on Monday, Sept. 28.—J. W. BIGGS, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had but a small show of fish on the 20th inst., about 12lb. of roach and bream, taken by Messrs. Riggs, Stebbings and Ballard. Other members out but not successful.—A. PAYNE, sec.

Golden Barbel Angling Society, Yorkminster, Foley-street, Portland-road.—On the 8th inst. Mr. Bishop weighed in a nice show of bream. On the 13th Messrs. A. W. C. Bowring, Chapman, Glaicester, De Perrian, C. Porter, J. Porter, and Bailey had a show of bream, roach, perch, rudd, and dace, 46lb. in all. On the 20th Mr. De Perrian, jack, carp, and bream, 39lb.; also Messrs. Green, Chapman, Clark, Dodd, Perkin, J. Porter, Guynan, and Bailey, some fine shows of bream, roach, dace, jack, and perch—about 100lb. in all. The train starts at nine o'clock from Paddington on the 27th for the sweepstake at Goring. Those down over-night to meet the first train down.—A. FISH, sec.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—Thirty of the members of the above club fished a pegged-down match at Shiplake on the 13th inst., the winners being in the following order: First, Mr. Devon, winning a handsome pair of vases, given by Mr. W. G. Wood, of the Hoxton Brothers; second, Mr. F. Grey, one guinea; third, Mr. A. Taylor, one guinea; fourth, Mr. R. Murphy; fifth, Mr. H. J. Tibbatts; sixth, Mr. Maddams; seventh, Mr. J. Smith; eighth, Mr. Snook; ninth, Mr. Bowker; tenth, Mr. Shervill; and several others took fish. On the 20th, Mr. F. Grey brought in a nice show of roach; Mr. Lyte, roach and dace; Mr. Parker, roach. On the 22nd there was a good attendance of members, when it was decided to fish for ten prizes on October 11, at Pangbourne; roam of water. Next Tuesday being quarterly night, I hope all members will make themselves free to compete.—R. MURPHY.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—On the 13th inst., Mr. J. Grande weighed a bream of 3lb. On the 20th, Mr. G. Johnson weighed perch and bream; and J. Grande roach and bream.—G. F. WEAVER, sec.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville, N.—On the 13th, the following members weighed in some good bream and roach from Pulborough: Messrs. W. Theobald, 2lb. 10oz.; C. Watling, 5lb. 10oz.; J. Hewitt, 7lb. 13oz.; W. Parkin, 6lb. 11oz.; one roach, 1lb. 9½oz.; C. Large, 8oz. On the 20th, Messrs. W. Parkin, 7lb. 2oz.; C. Large, 6lb. 8oz.; C. Watling, 4lb. 14oz.; H. Watling, 4lb.; W. Barnes, 6lb. 12oz.; J. Hewitt, 3lb. 2oz.; S. Hambidge, 3lb. 12oz.—J. A. FITCH, sec.

Gresham Angling Society.—The ordinary weekly meeting was help on Tuesday, with Mr. C. E. Fosbrooke in the chair. The prizes taken at the sea fishing competition on the 15th inst. were presented. A new member was proposed—Mr. C. S. Bentley presented an addition to the library of three engravings, for which he was thanked. Arrangements were made for the roach competition at Kelvdon next Tuesday, the 29th. There will be four prizes, namely—tackle, worth a guinea; a cigar-holder; tackle worth half a guinea; and tackle half a guinea. The member taking the best three roach to have the first choice, the next best three the second choice, the next best the third, and the next the fourth. Members intending to take part in it will please inform the secretary not later than Saturday. Train will leave Liverpool-street at 9.3 a.m. The secretary reported that the club water had been secured on a three years' lease. Those members who have not received membership tickets should apply to the secretary at once for them, as they will be required to produce them when fishing the club water. It was resolved that a book of reference should be kept, in which members who had been fishing should enter particulars of their sport, accommodation, charges, travelling, &c. It was also agreed that a sea fishing competition between members with rods, and an equal number with hand-lines should be held in the latter part of October; and Mr. Jonas offered a first prize of some article worth a guinea. Dr. Ladell, who was elected a member last week, made his first appearance, and exhibited a splendid tray of nine rudd and bream, weighing 12lb. 11½oz., caught by him the previous day on the Norfolk Broads. Mr. Parker reported having with a friend caught eighty-four flounders and plaice last Friday, and sixty-four on Saturday, many weighing over 1lb. each. Messrs. Young and Birch had caught about 30lb. of codlings off Deal. Dr. Brunton stated that one of our members, Mr. Thomas, had been salmon fishing in the Earn, and had sent him a salmon weighing about 20lb.—caught by himself. The society possesses some valuable papers that have been read before them at various times, and it was resolved, that on and after the 1st January next, each new member shall be presented with a set, on paying a year's subscription. The toast of the successful angler was proposed by Dr. Brunton, and acknowledged by Dr. Ladell, and after the usual toast of "Prosperity to the Gresham Society," the meeting separated.—JAMES TAYLER, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On the 20th inst., several of our members were again out, the following bringing up some good shows: Messrs. Braham, junr., roach; Russell, roach; Muller, perch; Geeves, junr., roach and dace; A. Fish, bream and roach; Rider, a good show of perch. On Wednesday last, Mr. A. Fish brought a nice tray of bream and roach, weighing over 12lb., from Dagenham, proving there must still be plenty of fish there.—W. FENNER, secretary.

Hoxton Brothers Angling Society.—On the 20th inst., we were saved from a blank by Mr. J. Huntly, who weighed in bream and roach. On the 27th inst., the members will fish for special prizes at Chesbunt, from the Jolly Bargeman to Aqueduct Lock.—R. GHURNEY, sec.

Independent Brothers Angling Society, Three Doves, 21, Berwick-street, Oxford-street, W.—On the 20th instant, the following weighed in: Mr. Morris, dace and gudgeon; Mr. Wilson, jack. Messrs. Norman, Pope and Pocock also had fish, but left it too late to get to London in time to weigh in. This, I think, is a great pity, as we might have had a nice show if it had not been for the laxity of these members.—SNAP.

Islington Angling Society, Jubilee House, Hornsey Rise, N.—The usual fortnightly meeting was held on Monday last, at Jubilee House, Hornsey Rise, when Mr. C.

S. Bentley was in the chair. A new member was balloted for and elected, and some other formal business transacted. —C. DOWNING, sec.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—We met on the 17th inst. when it was arranged to have our return visit on No. 2 Eastern District, on Monday, Oct. 5; secretaries will kindly accept this, if not receiving notice. We hope to have a bumper, as it is the first at the new house; W. Stretch in chair. The following weighed in on the 20th inst.: Mr. Key, roach, chub, and gudgeon; Mr. Holder, roach. Others were out but got up too late to weigh in.—J. H. HERBERT, sec.

Izaak Walton Angling Society.—The members will compete for four special prizes on October 4; also for two ditto on Wednesday, October 7. Competitors may choose their own fishing waters for these prizes; no competitor to leave London before five a.m. on the days of the competition. Messrs. C. Layton and A. Furlong weighed in roach on the 20th inst. On Wednesday, 23rd inst., Mr. T. Harrison exhibited three grand roach, which weighed as follows: 2lb. 0¼oz., 2lb. 2oz., 2lb. 2¾oz.; total weight, 6lb. 5¼oz. Mr. H. C. Wheatley weighed in roach on the same day.—H. B.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—A half-yearly meeting of this association will be held at the Queen of England Hotel, Goldhawk-road, W., on Friday evening, October 2, at 8.30 a.m., for the purpose of laying before the members the position of the association, when it is hoped all members will attend. At a committee meeting held on Friday, the 18th, one new angling member was elected, bringing our total number of members up to one hundred and sixteen. Messrs. Carter, Coates, Evans, and Mason have weighed in some very nice shows of roach during the past week.—T. SALTER, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N. — On the 20th inst., the following members weighed in: Mr. More, bream and roach; Mr. Belton, roach and dace; Messrs. Watling, Ellingham and Webster, roach; Mr. Richardson, jack; Mr. Porter, while chub fishing with cheese paste at Windsor, hooked and landed a fine barbel, 6lb. 2oz.—W. WATLING, secretary.

Liverpool Angling Association.—Our friendly contest with the St. Helen's Angling Association, in the Knowsley Water, on the 17th, duly came off, and we were beaten after a close and exciting finish, as one decent fish would have made all the difference. However, more power to your elbows, Messrs. Durie, Woods, and Co. We had a dinner in the evening at our club house, at which there was a very good muster. Mr. H. Leaman presided, and Mr. I. H. Jones faced him. A first-class dinner was provided by Mr. Thomas Bush, and it received due recognition. Everything passed off well, the harmony was of a high order, the punch ditto, and twelve o'clock arrived all too soon. Our St. Helen's friends were very much pleased with their reception, and taken altogether, it was a function that leaves behind it pleasant memories, brings everyone nearer to each other, and cements friendships, which last a life time.—R. WOOLFALL.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 20th inst., our members were at various waters, but the sport was not so good as on the previous week. Mr. Sansom had a nice show of tench; Messrs. Mellish, Pearce, A. Clark, and Tilley having roach and dace.—W. F. PEARCE.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—We had a good meeting on Tuesday, and three new members joined; we still have room for a few more should any gentleman wish to join. We fish the Welsh Harp on September 27, for prizes, open to all honorary members; the train leaves St. Pancras at 7.30. I hope all who have given their names in will not fail to put in an appearance. Mr. E. Jones saved us from a blank on the 27th inst., with some nice roach. Messrs. H. Stains and S. Higham were also out, but could get no fish to reach our standard.—J. COMBER, sec.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—I have to remind members that the principal competition of the year will take place on Thursday, October 8, for the following valuable prizes: Mr. W. F. Grimmett, plate, five guineas; Mr. J. Sceats, champagne, three guineas; Mr. R. La Feuillade, plate, two guineas; Mr. R. Mudd, plate, one guinea; Mr. J. Webb, cash, half-a-guinea —honorary members only; Mr. J. Bussy, plate, one guinea; Mr. A. Matthews, tackle, half-a-guinea—visitors, non-members only; Mr. A. Matthews, tackle, half-a-guinea. As a large number of friends may be expected to take part in the outing, it has been decided that two parties be formed, one to fish at Richmond, and the other at Twickenham, from punts. In order that I may obtain the necessary punts, members will kindly inform me by October 1 whether they or any of their friends propose to take part in the competition. It has been suggested that we have dinner at the club-house on our return. This and other details will be arranged at the meeting on October 1, when the members' attendance is particularly requested. For the competition to-day (Thursday, Sept. 24), Mr. Newbury was first with 20lb. 3¾oz. barbel, chub, and roach; Mr. Hearn, second; Mr. Bassett, third; Mr. Matthews, fourth; Mr. Grimmett, fifth; Mr. Turnham, sixth. Mr. Mudd was disqualified under Rule 18.—A. E. B.

North Eastern Angling Society, City Arms, 9, Blomfield-street, London-wall, E.C.—On the 17th instant, the return visit was held at the above. There was a fair muster, considering it was a wet night. However, we had a very pleasant evening. Last week two of our members had a couple of days' rod fishing off Deal, and met with very good sport, having a take of three hundred and twelve fish.—G. T. F. FLETCHER, sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland Park, N.W.—On the 17th inst., Mr. Schultz, jun., weighed in roach:—the following members weighed in on the 20th, Messrs. Harris, four, jack and a nice perch, 1lb. 2oz.; Holman, jack; Weaver, roach; and Billings, roach and dace. We have a new member for election next week. I wish to remind members and friends of the brake outing to Boxmoor, on the 27th inst., where there are several prizes to be fished for, and our worthy secretary has endeavoured to secure every accommodation for the excursionists.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—The next visit of the No. 1 Eastern District will be held at the above house, on Wednesday, October 7, when any club not having notice will kindly accept this as such. On the 20th inst. several of our members were out, but met with only poor success, Messrs. Bygraves, Harrison, and Neville alone bringing in a few roach and perch.—J. CUTHBERT, sec.

Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham.—Mr. Daniels had a good show of fish on the 20th inst. from Amberley, and several other members weighed in. A general meeting will take place on Wednesday next, to elect a secretary, and arrange a match. Members are requested to attend.—A. TOZER, secretary.

Piscatorial Society, Mona Hotel, Covent Garden.—Mr. Harden, Sept. 14 and 16, one grilse 9lb., one salmon, 20lb.; Mr. Foreman, Sept. 14, 16, and 17, one grilse, 8lb., three salmon, 51lb.; Sept. 18 and 19, two salmon, 42lb.; total, 124lb.; caught on the Tay. Mr. Fennings, Sept. 23, three large grayling and numerous large roach. Mr. Walker, a splendid lot of large roach, all over 1lb., some nearly 2lb. each, from Ringwood.—T. R. S.

Prince Albert Angling Society, Prince Albert, Lincoln-street, Bow-road.—Our members were out on the 20th inst., the result being, Mr. Fitts, first, with 3lb. 8oz. of bream; also Mr. Ford, 2lb. 8oz. of bream; and Mr. Jessop, roach and dace. We have some important business to discuss on October 1. I hope all members will attend on this occasion as several prizes have been given to the club. —F. PIGNATELLI, hon. sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—On the 20th inst., several members went out to various places on the Thames and association waters when the undermentioned members weighed in: Mr. Harris, perch and roach; Mr. Rowe, bream. I beg to remind members that a match has been arranged to take place on October 18, and that I hope to see a good muster on Wednesday next, to make the conditions and pay up arrears.—J. HARRIS, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—There was only a moderate show of fish on the 20th, Mr. Ivermee having a fine show of tench; Mr. Buckland, bream; Clist and Axworthy having fish. There was a special meeting held on Wednesday last, when it was decided to fish for a series of prizes drawn from the funds of the society, to take place on October 11, from Bourne End Railway Bridge to Marlow Point. All to start by the first train, and return by one train. Two rods allowed, and all fish to weigh.—W. BOWYER, sec.

Rising Sun Angling Society, The George, Brook-street, Holborn.—On the 20th inst., Mr. Sharpless had a nice show of roach and dace, and Mr. Comley a nice show of roach. On the 21st inst. we had a very good attendance, and it was decided to call a special meeting for the 28th inst. for important business, when I hope to see all members present. There are still several good prizes to be fished for. Mr. Sharpless was elected chairman for the month. We have room for a few more working members. —F. BRADLEY, hon. sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The following members weighed in on 20th: Messrs. Martin, roach and dace; Mitchell, roach and dace; F. Lamberton, jack; F. T. Lamberton, roach; Tidmarsh, barbel; J. Wigley, roach. The punt match takes place on 27th inst. at Twickenham; all members to cease fishing at 6.30 p.m.

Royal George Angling Society, the Hope Tavern, Tottenham-street, Tottenham Court-road.—On the 20th inst. we had some very good shows of fish on our trays by Messrs. Chart, Webber, Holder, Harris, &c. We fish on the 27th for Mr. Wood's prize of £1 1s., bank only, one rod, when I hope all members will weigh in. One of our members showed some handsome roach on Wednesday last from private waters; three of them weighed 5lb. 6oz., but the largest was sent to be set up by Cooper, and was not weighed. Having to leave our present club-house through unforeseen circumstances, we are compelled to look for another, and after being discussed by members present it was resolved to call a special meeting for the 30th, to decide respecting the removal. I trust all members will make this a point of attending.—F. C. LONGLAND.

Royal Oak Angling Society, Royal Oak, Roman-road, North Bow, E.—On the 20th, several of our members were out, but the only gentlemen who had any sport were Messrs. A. Barclay, bream; G. Barclay, jack; J. Holden, roach; F. Barrow, chub and perch; Cox, roach. I have much pleasure in reporting that Mr. F. Barrow, fishing in the Club Union Competition at Burnt Mill on the 20th inst., was fortunate enough to take first prize. On Tuesday, Sept. 22, Mr. G. Barclay had jack and perch and Mr. Cox, roach. A special general meeting has been called for Tuesday, Oct. 6, to discuss important business, when it is hoped everyone will attend.—A. BARCLAY, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—On the 16th inst. the quarterly prizes were handed over to the various winners, viz., Messrs. Wood, J. T. Wright, J. Wright, W. Wink, A. Forrester, H. Howard, and F. Ovens, and J. Wright won the prize given by Mr. Wood, viz., cloth to the value of £1. On the 23rd books were audited by Mr. Green, and found to be correct. Mr. Jarrett has kindly given a set of weights for the use of the club. On the 20th, Messrs. Wood, Stone, Salisbury and Wink had roach, dace, jack, and perch. On the 19th, J. Wright had roach, dace, and gudgeon, 11lb. 9oz. —J. WRIGHT, sec.

Sheffield Angling Association. — The thirteenth annual match of this association was fished on Monday, the 21st, at Saxilby, near Lincoln, in wretched weather. The competitors reached the large total of six hundred and seventy, and were stationed at intervals of 10yds., one half towards Lincoln, the other half towards Torksey. As was expected, the catches were very poor, the weight caught by the winner was 1lb. 5¾oz. The value of the prizes was £65, and was divided into thirty-six money purses, but only twenty-two competitors caught fish. The match was badly managed, as one half fished nearly an hour-and-a-half longer than the other, and the general opinion of the competitors was that the match ought to have been fished at a better place, as the Fossdyke is fished to death. Before concluding this account of the match, I would suggest that this association should, before fishing their match at this place again, stock the waters with fish. When it is borne in mind that this society numbers no less than seven thousand eight hundred members, and a large number of whom take from these waters any and every fish, however small, it is plainly to be seen that any waters will soon be emptied of all their fish.—BREED WHEAT.

Silver Trout Anglers' Association, Darlington.—The members of this club held their annual September contest in the river Swale, near Scruton Hall, the seat of George Elliott, Esq., M.P., who kindly gave permission to the club. On Saturday, the 19th inst., thirty-eight members entered, and thirty-three caught fish of various weights. The first nine on the list caught over 22lb. weight between them. The weather proved favourable, and the water fairly so. It was a "go as you please" match, competitors fishing either fly or bottom. The winners were as follows: First, M. Swainston, taking £1 10s. 6d., the silver cup of the Association, and silver medal (given by the President, Mr. C. H. Sharp), with 4lb. 7¼oz.; second, F. Vareg, prize value £1 8s., with 4lb., 6oz.; third prize, J. Timms, £1 5s. 6d., with 4lb. 4½oz. Others as follows: Messrs. Wood, Hooper, Judson, W. Timms, W. Manghan, Arnett, Taylor, Hindle, Dutton Gillam, Bagshaw, Rutherford, Lloyd, Cummins, Snowden, Greenhalgh, Watson, Dinsdale, Martin, Temple, Wilson, Smythe, Hull, Sharp, Honeyman, Teasdale, Prince, J. Manghan, and Goddard tied for thirty-first prize. The members had a most enjoyable day, and returned to their club-room in the evening.—J. F. SMYTHE, sec.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—On the 20th inst., Mr. O'Callaghan had a few bream, and Mr. Curtis, tench; Mr. Swales had about 4lb. of roach, dace, and perch from the bank (Thames). On Tuesday last, Mr. Phillips had just on 40lb. of roach, rudd, and jack; the roach were splendid specimens—the seven largest weighing 2lb., 1lb. 14½oz., 1lb. 12½oz., 1lb. 12oz., 1lb. 11½oz., 1lb. 7½oz., and 1lb. 7oz.; one rudd, 1¼lb. Members are reminded that our outing at Goring takes place on the 27th inst. Train leaves Paddington at nine a.m. sharp. The fish will be weighed down there.—PELICAN.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—The roving match on the 20th was a poor success, as only two prizes were taken, the successful members being Mr. Stevens, with jack, and Mr. Dean, perch, leaving four prizes to be fished for. The following members also weighed in fish: Messrs. Hooper, a splendid roach, weighing 2lb. 5oz., which will be preserved; T. Jones, bream and roach; Tolykett, roach and dace; D. Marks, dace; H. Spenceley, dace; R. Spenceley, dace.—R. S., sec.

South London Angling Society, George and Dragon, 235, Camberwell-road, S.E.—In the match on the 13th inst., six of the seven prizes competed for were taken. On the 27th we fish for four prizes, Mr. Hibble's prize included.—J. G. F., sec.

South London United Anglers' Visiting List.—The next visit on the above list will be to the Amicable Excelsior Angling Society, held at the Greyhound Hotel, High-street, Battersea, on Tuesday, 29th inst., when I hope to see every society on the list represented. For the information of those who have not yet visited this society, their club-house is about five minutes' walk from Clapham Junction Station, and the Battersea trams pass the top of the High-street.—A. CONN, hon. sec.

St. Andrew's Piscatorial Society, Turk's Head, East-street, W.C.—On the 20th inst. Mr. A. Long had a few good roach, and Mr. Harris had perch. On September 23, Mr. Sparkes, one of our latest members, had 15lb. of barbel, roach, and dace. Members are requested to clear the books for prizes to be fished during October.—B. CHEVALIER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Several of our members were out on the 20th inst., but only two weighed in—viz., Mr. Lewis, perch; Mr. Cowley, roach. Tuesday next is quarterly night; members absent without notice will be fined.—H. B.

United Brothers, Deptford.—Several members of the above were out on the 20th inst., with the following result. Messrs. H. Richards, B. Champion and F. Beak, roach; W. Bennett, bream; A. Smith, perch; and H. Fennell, roach and perch. The members of the above will fish a pegged-down match on October 4, in the Lea, for several very handsome prizes. Mr. W. Windred has given a marble clock for the gross weight of roach. Each fish to weigh 8oz. Mr. Sezfang has given 10s. 6d. worth of tackle for the largest roach taken in the month of February. Two more members are to be ballotted for on Saturday evening.—H. TYLER, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—Several of ours were out on the 20th, but only one turned up, Mr. Clegg, who had roach; Mr. Bird, jun., not being able to reach the club-house in time, brought them up on Monday morning, he having a fine show of roach and jack. We had a fair attendance on the 22nd, Mr. Philips in the chair, faced by Mr. Petty. Mr. Skinner was re-elected delegate for the ensuing quarter. Members who were away last week, if they will kindly show up they will hear something to their advantage.—H. C., hon. sec.

Waltonian Angling Society, the Cape of Good Hope, Albany-street, Regent's-park.—We had only had a very small show of fish on the 20th, Messrs. R. Dodge, roach, 4lb. 8oz.; H. Putnum, roach, 3lb. 15oz.; Miller, roach, 3lb. 8oz.; W. Dodge, roach, 1lb. 2½oz. I hope our members will not forget that next Wednesday is our musical evening; and we hope that we shall have a good muster of members and friends. Ladies also are cordially invited, so I quite expect that we shall have a most enjoyable evening.—J. PACKMAN, sec.

Walham Green and Fulham Angling Society, Albany-street, Regent's Park.—The members of the above held their usual weekly meeting at their club-house, the Stamford Arms, Fulham-road. Mr. H. Sutehall presiding. The minutes of the previous meeting were read and confirmed, and general business transacted. Since my last report several of our members have been out. Mr. Templeman saving us a blank by weighing in a nice show 9lb. 3oz. of roach and dace from Richmond. I have to remind members that a roving match takes place on the 27th inst., and that Wednesday next is quarter night, when all subscriptions are due.—E. SUTEHALL, sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 20th inst., Mr. C. Newbury one of our honorary members showed 12lb. 10oz. of roach and barbel; Mr. H. Sloper, 10lb. 8oz. roach and barbel; Mr. F. Hailey, 6lb. roach and bream; Mr. R. J. Dartnall, 5lb. roach and perch; Mr. W. H. Bryant, 3lb. 15oz. roach; Mr. S. Cooper, roach 3lb. 12oz. On Wednesday next the place and conditions of the October competition has to be settled.—R. J. DARTNALL, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—The following members weighed in on the 20th inst: Frances, bream; Kirtland, roach; Baker, jack; our hard-working member, Mr. Dessert, gaining fifth prize in the match promoted by the Working Men's Club and Institution. Our next outing will take place on October 11, at Witham.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out in fair numbers on the 20th inst., to take part in the match, and the prizes were taken as follows: Mr. R. Lowther, first, with bream; Mr. W. Stevens, second, roach, who also took a specimen prize, given by our worthy host; Mr. G. Hobbs, third, roach; Mr. F. Humphreys, fourth, perch; Mr. W. Cox, fifth, perch and dace. Mr. Goodrich, though not in the match, weighed in roach and dace.—R. LOWTHER.

AFTER A DAY'S FISHING,
Call on TIBBATTS,
AT "THE CITIZEN," 70, HOUNDSDITCH
(OPPOSITE BISHOPSGATE CHURCH),
Two minutes walk from Liverpool-street and Broad-street Stations.

English and Welsh Reports.

The Lower Thames.—GENERAL REMARKS.—It is very questionable whether the conviction of last week for snatching fish at the Surbiton sewer will have any salutary effect on the real offenders who are constantly engaged in the illegal practice, as the defendant in the case did not belong to the class deserving punishment. There is what may be termed an organised gang of delinquents, and the movements of the river-keepers or anyone likely to interfere with them are watched, and signals given. When the case came on the question of unbaited hooks cropped up, and the presiding Magistrate, who can speak practically, and has done on the evils of snatching, remarked, "he had seen a good deal of snatching with baited hooks to cover their designs." I am, however, told the real offenders are somewhat paralysed with the conviction, and they are likely to be quiet for some time. I think with all the publicity that is given of the bye-laws of the river, the plea of ignorance ought never to be accepted, and when a man conceals an unsizeable fish in his pocket, apart from his other captures, there is an evidence of his guilt, and the plea ought not to be received. In the examination of takes to which I referred last week taking the river from Isleworth to Staines, and not finding one unsizeable fish amongst not less than three hundred anglers, for in this calculation of members I only allow two anglers in each of the eighty-four punts, it is something to be proud of; and being the originator of the movement, I am more than gratified with the result. I am also glad to be able state the two bank anglers who have been found taking unsizeable fish, and who have yet to answer for the offence, are not connected with any angling club. I accidentally on the river last week came in possession of a copy of the "Certificate of Weights," and the sizes of fish adopted by "the Shepherd's Bush Angling Association," and the following are some of them: Pike, 24in.; perch, 9in.; roach, 8in.; barbel, 16in.; dace, 7in.; bream, 12in. As all these are in advance of the present Thames standard, it evidences a move in the right direction; and those who at this time are anxious, and rightly too, for an increased standard to be adopted for our Metropolitan river must feel the movement they have in hand is likely to have a successful issue at no very distant period if they do not ask for too much.—B.

RICHMOND.—H. Howard, in four days, thirty dozen of roach and dace, and nine barbel; J. Brain, in the week, 50lb. of roach and dace; and Henry Mansell, 56lb.

TWICKENHAM.—George Coxen, in four days, six barbel and seventeen dozen of roach and dace; R. Coxen, one day with Mr. Stollery, thirty-three barbel, and another day in two hours with Mr. Tamart, twenty dozen of roach and dace and fourteen barbel; J. Coxen, in four days, 40lb. of roach and dace; John Frost, in four and a-half days, 56lb., nine barbel and five bream; John Spong, in in the week, 70lb., and seven barbel; and F. Wiggins, in five days, 107lb., one bream, and two barbel; Mr. J. K. Bohling, fishing in the deeps, caught a beautiful carp of 5lb. 2oz., on roach tackle, fine drawn gut and No. 10 hook.

TEDDINGTON.—W. McBrido, in three days, eight dozen of roach and dace, three jack, and twenty dozen of fine gudgeon; Mr. Sinibaldi, one jack of 11½lb.; and Mr. Veal one of 10½lb.

KINGSTON.—John Johnson, during the week, eighteen dozen of roach and dace, three brace of jack, five barbel, and seven chub; J. Wilkes, twelve dozen of roach and dace, five dozen of gudgeon, two brace of jack, six barbel, a couple of bream, and one brace of perch; and N. Bolton, in four days, twelve dozen of roach and dace, three and a-half brace of jack, two brace of perch, and seven dozen of gudgeon.

SUNBURY.—The boats of Messrs. T. and A. Stroud have taken about seven dozen of roach and dace each per day, and with a supplement of nine brace of jack, the largest fish weighing 10½lb. Mr. Edward Clarke reports he has been doing very well amongst the roach, dace, and barbel during the week.

CHERTSEY.—John Poulter, in three days, eighteen dozen of roach and dace, and seven chub, the largest 2½lb.; L. Hackett, during the week, twenty-two dozen of roach and dace, and seven barbel; Henry Purss has been getting some good takes of roach.

STAINES.—John Keene, jun., has been out all the week, one day with Mr. Hayes, 33lb. of roach and barbel; another day with Mr. Waterer, six dozen of roach, seven barbel, and one brace of splendid perch, the largest perch 1lb. 10oz., all of which were returned to the river again; another day with Mrs. Henderson, eight dozen of roach and dace, and five barbel, all of which were put back again; another day with Mr. Edwards and son, four dozen of roach and dace, and ten barbel; another day with Mr. Codd, two dozen of roach, four jack, and seven barbel; another day with Messrs. Newbury and Sloper four dozen of roach and dace, seven barbel, and two chub; and another day with Mr. Codd, four chub, the largest 4lb.

Upper Thames.—Jack seem to have been affording the best sport during the past week, as from most Upper Thames resorts I hear of takes of four and five per day to anglers who ventured out; but the quality has not been over grand, the big jack still holding to the decaying weed beds. In the Marlow Weir Pool this week, a gentleman fishing with G. Coster, took two jack, scaling 5½lb. and 8lb. respectively. At Hurley, Mr. W. Ford yesterday (Wednesday) had a pretty little jack of 5lb.; and Messrs. Walker, Ford, and Jones essayed the roach, but in the afternoon's fishing only captured some two dozen, chiefly only bait size, and more welcome for that than show or culinary purposes. Water a nice height and stream, but extraordinarily bright after so much rain.—MARLOW BUZZ.

Thames (Datchet).—The late rains has done a lot of good to the river, and all the fishing are feeding pretty well, barbel and roach especially, lob worms can be got in any quantities for the trouble of picking up. The weeds seem to be rotting early, we shall soon be able to get at the jack.—G. LUMSDEN.

Thames (Windsor).—Beautiful autumnal weather at time of writing and a rising glass bids fair for good autumn fishing, but as water daily gets brighter, fine tackle must be used. This week the best barbel have been had on fine roach tackle whilst roach fishing, the best 6½lb., from the bank, by Mr. A. Porter, of the Lincoln Angling Society, London. The other extremely handsome specimen was one which I weighed, going 6lb. 1oz., caught by Mr. Willett, of Broadway, Barking, whilst roach and dace fishing with James Gray; this fish is being preserved, and will make a very pretty case. The best miscellaneous basket was one by James Gray, consisting of four barbel, three chub, and five dozen dace, in all 20lb. Very few jack have been landed, and till the weeds rot off will not be sought for much; a brace going 6lb., by Mr. W. Fountain, of Eton, is the only item worth mentioning in this class. Chub should now prefer cheese or greaves to the fly; barbel and dace, greaves; and roach, gentles, paste, or wheat, but all on fine tackle, as water is getting very bright.—B. R. BAMBRIDGE.

Ancholme District.—Sport has not been so good this week owing to cold easterly and northerly winds. Mr. Summerson, however, had a good day on Friday. A trout and a chub have been taken this week. These fish are still rather rare as they were only introduced two or three years ago. Mr. Hawkins had a good bag of roach on Saturday. Bream seem to have gone off the feed. Trout fishing is well-nigh over; and pike are not yet well on the run.—THOMAS FORD.

Arun (Pulborough).—Since the discoloured water disappeared excellent angling results have been obtained, although the weather during the past few days has not been at all pleasant. The river keeps in prime order, and I hear of more satisfactory doings amid roach and bream. The second competition of the season, promoted by Mr. A. A. Eldridge, takes place at Amberley, on Sunday, Oct. 4, tickets for which, price 6d., can now be obtained at the Rose and Crown, Goswell-road, London. On the 20th inst., although the weather was rather unpropitious for angling some excellent takes were made, and I hear that quite three hundred anglers were operating between here and Amberley. Messrs. C. Watling, C. Large, W. Parkin, and H. Watling (of the Great Northern Bros. Club), caught 23lb. of roach, bream, and dace between them; Mr. C. Burnett (Reform), secured a handsome show of roach, weighing 10lb.; Mr. F. Vanhegan, had 7lb. of roach and bream; and Mr. W. Biggs, 4lb. Some pretty dishes of fish were also obtained by Messrs. D. Flint (Burdett), C. Walters, and G. Norris (Crown and Buckland), H. Patman, and G. Smith (Bermondsey Bros.), &c. Another fine bream of 3lb. 15oz. was, I hear, killed at Fittleworth. Pike have not yet commenced to feed, but should do so shortly, and I beg to recommend a lively dace or gudgeon as bait. A big carp has played sad havoc with an angler's tackle at Pulborough, carrying away his gut and float, and smashing the top joint of his rod.—GOOSEQUILL.

Barle (Dulverton).—The river is in fine order. Mr. Heath has killed three salmon, of 7lb., 8lb., and 10lb. (the smallest fish the best). Your reporter has had luck, the gafier having muffed four fish. After being fast into a nice one, of I guess fully 15lb., he with the gaff cut off about 18in. of the cast and a Silver Doctor.—IRON BLUE.

Brighton.—SEA FISHING.—Sport with dabs and plaice, with a sprinkling of small conger and gurnard, continues exceptionally good—and boat anglers, who are fortunate enough to secure a supply of "lug worm," are catching from fifty, to a hundred fish per boat, in the course of a few hours fishing.

Chichester and Sussex Rivers. — Since my last letter the weather has changed for the worse, although the rain brought fish on feed, yet in some districts the waters are somewhat clouded. Some of our trout streams dependent on springs are very low, and what few fish are left may be seen floundering in the pools—if pools they may be called—an easy prey to the poacher. From the Arun several good bream and roach have been taken, the heaviest bream notified me weighed 4¾lb. The Rother is in fair order and from the neighbourhood of Fittleworth several good bream and heavy roach are reported. Angling has not been so remunerative in the Pelham portion of the river. The Adur is a favourite resort of Brightonians, and has this week furnished several baskets of roach, a few dace and flat fish. Patrons of the Ouse have taken some good specimens of roach. A pike of 7¾lb. was taken on Monday, in the upper reaches, and at Chichester Canal numerous anglers have been rewarded with sport among the bream and roach. A brace of pike weighing about 4lb. each, was taken near Donnington, on Tuesday with live bait.—GEORGE F. SALTER.

Douglas (Isle of Man).—A very heavy rainstorm on Sunday has brought down so much water, that fly fishing is useless; still it will enable the spawning fish to get up. Our keeper, Sandy Mckaye, a pupil of Buckland's, tells me, plenty of "fush" have safely passed the weir at the Mumery. Sea-fishing is still very good, but I fear the mackerel are leaving us, but it has been a capital season, and there is every prospect of good sport in the near future when the equinoxial gales are over.—STORMY PETREL.

Dove and Tributaries.—Weather not good for grayling fishing, and trout are now out. Fine weather is now wanted for fishing purposes as well as for agricultural.

Eden (Kent).—Though the river could not be in better condition, roach have been biting very poorly lately. The maggot, red worm, and paste baits have been tried, but with only moderate success, and this towards "the cool of the evening," when a few good fish have been caught. Mr. Godley, sec. of the Marlborough Angling Society, took six nice roach the other evening near Edenbridge, in addition to two and a-half dozen of gudgeon. Mr. Pugh and Mr. Wiseman have had about six dozen of gudgeon between them, and I have made a basket of a few roach and three dozen of gudgeon this week. The best bait for gudgeon is the maggot, and paste made from arrowroot biscuit with the brown coating removed is most taking with the roach.—GOOSEQUILL.

Esk (Whitby, Yorkshire).—Owing to the bad weather and the low state of the river, angling has been at a discount lately. The recent rains, however, have done good in bringing the river into flood, so that vast quantities of salmon and salmon trout have been able to get into the upper streams. The river is practically full of fish, and there never was a time when the prospects of good sport were so encouraging. The weather is now fine, and in the course of a day or two the river will be in first-class fishable order.—JNO. J. JACKSON.

Fen Waters (South Lincolnshire).—Trolling is now getting more popular than bottom fishing, though roach, perch, and bream are still furnishing a good deal of sport. Bottom fishing is now carried on with more success than for some time past, as the weeds on the drains are dying down and more swims are available. There are a good many weeds, however, still in the waters, which in a general way interfere with the pike fishing. The stormy weather at the end of the week was disappointing to the visitors, but since then things have settled down, and prospects for this week are very good. Among the instances mentioned in the way of catches, I hear, that a gentleman in the Fortyfoot has been averaging six fish a day, taken with small roach; and another on the Donington Fen, caught three pike one day, of an average of 4lb. each.—LIMPET.

Idle (North Notts).—There is not much to be said of the angling on the Idle, owing to the storms of Saturday, Sunday, and Monday, but the water is fining down, and the weather has settled, consequently prospects are much improved. It will now be possible to get hold of a few grayling on the upper waters, and possibly in the neighbourhood of Retford. I would recommend grasshopper fishing for them, in preference to flies, as there are so many leaves floating on the surface of the water. It is also a good plan to try with small worm, either swimming it or using it grasshopper fashion. There has not been much done in coarse fishing up to the present, but decent baskets are sure to be made by this.—L.

Ilfracombe.—SEA FISHING.—There has been some fairly good sport this week by anglers fishing from the boats with ground lines, Mr. Hopkins having secured twelve large whiting-pout, and on Wednesday two gentlemen visitors succeeded in landing one hundred and fourteen whiting-pout and codling from off the pier. Mr. Affleck caught some fine codling. Several parties fishing in Rockham Bay hooked from 20lb. to 25lb. of fish each boat. A gentleman informs me he has caught the largest mullet for the season; it weighed 2½lb. Weather at present fine.—E. COMER.

Lea and Stort.—Angling on the whole has only been moderately good, many good catches having been made. In the Stort at Roydon, Mr. Hull has had some very good takes of jack, two of his best going over 12lb., both caught in a very short space of time. An unfortunate affair has happened in the Burnt Mill district. It appears that a gentleman, who holds the power to prevent unruly anglers from trespassing and doing damage, asserted his rights by having the water drawn off on the 20th inst., when a number of anglers, who had assembled for an angling competition, found their occupation or amusement gone. At Rye House there is plenty of good jack up to about 6lb., having been caught, also some few roach and perch. Reports from Broxbourne are generally favourable. Sport at Waltham Abbey has been again very good; on the 20th inst., Mr. Dyer, fishing with a live minnow for bait, was fortunate enough to capture a handsome perch, of 1¾lb., which Mr. H. Avis, of the King's Arms Fishery, has sent for preservation. Mr. Appleton had a nice show of dace and roach. It is proposed to have an open angling competition here shortly, and at the same time a novelty in the shape of a fisherman's obstacle race; money prizes on both affairs will be given. A few jack, roach, &c., have been taken at Ponder's End. Pike and perch have been fairly well on at Games' Fishery, Higham Hill, and some nice bags have been made. Takes of roach and pike have been frequent at Ferrie Boat, Tottenham, the best of the latter weighing about 4lb.—Mr. Bennett has done well, fishing the dry fly in his usual skilful manner.—SPLICED JOINT.

Leicester.—Signs are not wanting of the near approach of autumn. The weather changes in a most perplexing manner; one day it is warm and summerlike, and the next more like winter, which, as may be imagined, is not at all in favour of fishing. The attendance for the time of year at the waters continues very good, and, with most of the fresh-water fish in good condition, anglers are anxious to get all the sport possible. Roach fishermen continue actively engaged in their favourite pursuit, and a lot of small fish being required for pike fishing, keeps them constantly at work. At the Leicester and Aylestone Waters some fair pike have been secured during this week, Messrs. Prime and Green being the most successful in this line. The specimens were not large; the heaviest that came under notice being about 4lb. Messrs. Dewick, W. Green, and Prime also showed good lots of roach and perch. From the backwaters at Aylestone a few chub were taken, but nothing of an extraordinary size was landed; perhaps the best was one by Mr. Rylott, weighing 2lb. The resorts near the town have been chiefly receiving the attention of pike anglers, whose efforts received reward in the shape of satisfactory baskets, especially at the private waters which abound in Leicestershire. At the Wreake, sport was encouraging among the roach and pike, and at Narborough the subscribers have again been chiefly trying for pike with success. The waters are now in capital condition, being clear and plenty of it.

Loddon (Earley).—The weather has been very stormy the last week, but the river is in good condition, and good sport has been had. Several anglers have taken good baskets of roach and chub, also a few jack. The weeds are fast dying down this season.—J. R. GOULD.

Lugg, Arrow, and Pinsley (Kingsland).—From Saturday evening till Tuesday morning we experienced a succession of strong winds W. and N.W., with heavy showers of rain, which caused these rivers to rise some nine inches of stained water. It is now (Wednesday) running down and clearing rapidly, and will be in good order for grayling, by the time these lines are in print, should the present fine weather hold. Some good sport was obtained last week. All the autumn flies are now out. Mid Blue, Whirling, Late Brown, Pale Sept. Dun, Willows, Red Tag, and Green Insect.—R. T. WILLIAMS.

Lugg and Arrow (Leominster).—Fishing has been very quiet this week, and but few rods have been out. The water should be in good fishing order by the end of the week. The Pinsley is clear, and in order for fishing.—GWYNNE.

Medway (Maidstone).—Water in good condition. A few small pike have been taken—none of any size. Roach and bream are biting moderately well; but it has not come to my knowledge of any large takes of either. The prospects and conditions of water are good for the anglers. Wheat holds good for roach and bream. A good, lively dace should find some success for the angler with the pike.—Wm. Shrubsole.

Nene (Northamptonshire).—Have heard of a magnificent catch of perch by a Peterborough angler. His total amounted to forty good specimens, and they scaled from ¾lb. to 3lb. This is the best catch of the season by a long way, the perch generally having provided but indifferent sport. The fine weather of last week drew many anglers out to try their luck, but the weather had completely altered by Saturday, and this week the elements have been generally unfavourable. Bream have been quite backward lately and little has been done with them. The best have been grassed near Wisbech. Roach have provided the best sport and good takes are to hand almost daily. Mr. Tom Milford has obtained several of ¾lb. during the past week. At Woodstone an eel of 1½lb. was taken. It has been pointed out to me that I failed to report the capture of a fine dace early in the season. The fish in question was hooked near Woodstone Staunch, and was a well-developed specimen of 9oz. A fine dace this for the Nene. Pike have been tried for a good deal, but nothing large has been obtained. Two London anglers, Mr. Macdonald and Mr. Waugh, captured 30lb. last week, but the heaviest only scaled 5½lb.—Nenebank.

Norfolk, Suffolk, and Cambridgeshire Waters.—In most all our Eastern Counties' rivers angling has, during the last few days, been fairly good, more especially in the sharp-running streams. To say the roach and dace are well on in such waters as the Yare, Ouse, and Cam is not correct; they are feeding very little. I had a good long journey all along several of these deep, quiet rivers last week, and really the weeds were as green as lettuces, and looked like growing on. I dare not advise anglers at present to venture on any of these. Wait a bit longer, the river at Brandon is much better. I saw one lot of roach on Saturday, eight fish, weighing 9lb.—a beautiful lot. I had a try near Worlington and Mildenhall on Friday, in company with Andrew Antony. We took a lot of about fifty nice fish—some very fine dace, some of them nearly 1lb. each. Fishing in the Yare at present is only a waste of time; the Ouse, below Ely, just the same. We have had a lot of rain and a cold and damp south-west wind. Fish ought to be well on now everywhere. I still advise anglers to try Brandon.—William Howlett.

Ouse (Huntingdon).—Some local fishermen have been out and returned with good fish, Roach and bream have been feeding very fair, wheat and brandlings being the bait. Jack have been feeding very fair, especially the small ones. I have not heard of any good ones being taken, although some have been hooked and lost, but the water retaining its good condition will no doubt afford good sport. H. Rout.

Ouse, &c. (York).—The heavy rains of the past week have again greatly interfered with sport, and caused our main river to rise and run a thick colour, previous to which the Ouse and tributaries had just got into fair fishing order, and some capital catches of roach, chub, and dace were being reported. Last week I paid my last visit of the season to the trout streams of the Pickering, Sinnington and Rye districts, and found the fish in several instances showing signs of spawning. Grayling are in fair condition, and already some splendid fish are being taken in the Rye and Derwent.—Ronald.

Plymouth.—Sea-Fishing.—Sport of all kinds is to be had in and about the Plymouth Sound, the fish being caught are mackerel, pollack, bass, mullet, whiting, poulting, and flat fish, and dozens of the boats that can be obtained from Aldridge's West Hoe Pier for about sixpence per hour are engaged in this sport. The fish are within ten minutes pull of the pier, and it is very seldom that a boat comes back without any. I had some nice ones last week caught at sunset on the Black Indiarubber Sandeel, they were taken on one particular spot, and it is a funny thing I never had a bite unless I rowed over this place, it evidently was a channel where the fish congregated to catch the feeding stuff that was being brought down by the ebb tide. Prawning is still in full force, the tides making out well.—William Hearder.

Scarborough.—(Sea Fishing).—Sport with mackerel has been exceptionally good during the past week. One angler caught about a hundred the other day, in the course of two or three hours, fishing from a boat close to the outer pier. Pier anglers, too, are having good sport with billet, and "par," and dabs are very plentiful; as also silver whiting, in the immediate bay and rock. Cod will soon be abundant over the "scars."—H. S. Harland.

Severn (Shrewsbury).—There has been some better angling during the last week or two, and a good many pike and rough fish have been taken, but trout do not appear to be very plentiful. The wasp maggot has been taking well, and some heavy roach have been taken with paste. A number of fine pike have been taken at Uffington by Messrs. J. Evans (five), Edwards, Breeze, Humphreys (one, about 7lb.) Three good trout were captured on Monday. Mr. Cartwright has landed some big roach, which are taking well. A handsome pike of between 20lb. and 30lb. was last week taken at Welshpool, and has been sent to Mr. H. Shaw for preservation.—Piscator.

Severn and Lower Teme (Worcester).—Some good fish have been taken in the above rivers this week. Roach in particular are well on the feed; several baskets of from 10lb. to 15lb. having been caught. At the time I write both rivers have risen considerably, but keep a good colour for bottom fishing.—R. Wingfield.

Tees (Barnard Castle).—The salmon catches here since I wrote last week have been—Mr. G. Bainbridge, one, 8½lb.; Mr. R. Wandless, three, 14lb., 10lb., and 5lb.; Mr. T. Parkinson, one, 12lb.; Mr. Dent, one, 9lb.; and Mr. Hogg, of Wycliffe, has a total of fourteen fish for the season so far has gone. The river has been very low, but, with the rain of Monday and Tuesday, is now in flood, and by Thursday will be in first-class fishing order. I was on the Estuary on Friday last, and saw salmon leaping on all sides. Doubtless many of these will now run up with this flood.—T. H. R.

Teme (Ludlow).—The Teme in this part is running high and has been coloured owing to the stormy weather at the beginning of the week. Bottom fishing with the wasp grub has been successful. The Ony, Corve, Clun, and Ledwyche, are all stained; fishing in them quiet.—S. Ludlow.

Teme (Tenbury).—The water in this district is now running a little stained, and has risen, owing to the heavy falls of rain at the beginning of the week. The weather has taken up a little now and by the end of the week the water should be in good order for either fly or bottom fishing again.—Worcester.

Torridge (Torrington).—River in good order for fishing. J. D. Bastard took four peal; Admiral Bland, two; and S. Jackson, one. Many salmon and peal have been seen jumping. There is plenty of water in the river, and some good fishing may be expected now. If no more rain it will be a good time for float-fishing next week.—Practical Angler.

Witham, &c. (Mid-Lincoln).—The great attraction this week in the Witham district, was the match promoted by the Sheffield Angling Association, which offered many valuable prizes, to be fished for by members. Something like seven hundred turned up to fish. The Fossdyke on either side Saxilby was chosen as the place for the contest, which took place amid a drenching rain on Monday. Fishing is said to have commenced at twelve o'clock and gone on till four in the afternoon, but there have been statements made that the start was delayed considerably, for an hour and a half in fact, and there has been grumbling. The success was but poor as might be expected, the leading take being under 2lb. Angling in other districts this week has been quiet. Next Monday there will be another great gathering of pot-hunters, at Boston, where a committee has gathered subscriptions for the purpose of offering prizes to all-comers. This event will take place on the Cowbridge and Bargate Drains.—Luci.

Wye and Derwent (Derbyshire).—During the latter end of last week, good sport was general in this locality. Both trout and grayling rising well to the Silver Dun, Ash Dun, and small Red Ant flies. The Derby and Matlock waters were just getting into nice order for fly fishing, when the rain came on the 20th inst., and caused the rivers to rise considerably. Nothing much has been done since then, except by the bottom fishermen. The rivers are now running down nicely, and if the fine weather lasts good sport may be had to the end of the season for trout fishing, Oct. 1st (inclusive). The above named flies will be found the most killing.—Dotterel.

Yare (Norwich).—Sport has been very much better lately. Last Saturday three gentlemen, fishing at Buckenham Ferry, caught seventy-five roach and bream, which number should, if fair-sized fish, weigh at least 3st. or 4st. Yesterday some excellent sport was had at the same station. One gentleman caught, amongst a fair take, one bream of 4lb., and another got eight bream, average about 3lb., and some fine roach of over 1lb. To-day (Thursday) sport has not been so good; whilst at Brundall nothing but bad luck has been experienced. From Cantley I do not hear of anything except the presence of large numbers of bream and roach. On the Wensum, above Hellsdon Bridge, two very large bream—viz., 8lb. 10oz. and 6lb. 8oz.—were caught last Monday week (angling). These were offered for sale and weighed in Norwich.—Robert Moll.

Dovey.—The recent rains have been sufficient to put the upper waters of the Dovey in first-rate condition, and good sport is being had at Mallwyd by the visitors at the Penarth Arms. Mr. W. B. Collyns, jun., killed last week seven salmon, weighing 11½lb., 15½lb., 6½lb., 12lb., 15lb., 11lb., and 15lb. respectively; Dr. Harrison, R.N., Plymouth, killed two salmon, 16lb. and 11lb.; Mr. H. H. Walker, Corwen, killed one salmon and a number of sewin. The river is now very full and in capital order for fly-fishing, and numbers of fish are travelling up daily. The season on this part of the Dovey closes on 29th Nov.—Tackle.

East and West Cleddau (Pembrokeshire). — We have had a succession of heavy showers, which keep the rivers in first-rate order for fishing. During the past week the takes of trout both by worm and fly, have been heavier than usual (up to 8lb. or 10lb. per basket). It is however, full late in the season for taking trout, but we yet hope for some sport with the salmon.—H.

Towy (Llandilo, Carmarthenshire).—We had the river in flood again about a week ago, since which the water has been rather thick, and only a few salmon and sewin taken, and as for trout fishing, it may now be considered as over for the season. Among the salmon landed during the past few days may be mentioned one of 8lb., by Capt. Clark; one of 10lb., by a visitor; and one of 12lb., by Mr. Llewellen; and several on the Cothy, by Sir James Drummond. Our townsman, Mr. David Edwards, has been the most fortunate angler as regards sewin this season. There are now lots of salmon up, and good sport anticipated. There is some talk of forming an angling club, and of the better preservation of the river in the immediate vicinity of Llandilo, and not without cause, for about half-a-dozen trammel nets, of small mesh, are known to have been worked by night poachers during the season now drawing to a close.—H.

Usk (Abergavenny).—The river is in first-rate condition, and the salmon plentiful. During the last few days, salmon have been caught in the association water by the following gentlemen:—Messrs. Wm. Davis, J. Lamont, J. Clare, H. de Parker Jervis, H. Clare, and Rev. F. de Beamish. Mr. W. Davis caught four to-day (23rd), weighing 18lb., 13lb., 8½lb., and 5½lb. each. Prospect for the next week, good.—Joseph Clare.

Scotch Reports.

Aberfeldy (Breadalbane Arms).—Mr. Blair fished Loch-na-Craig, on the 22nd inst., and got fourteen trout, weighing 4lb., and to-day, nineteen trout, 5½lb.—A. N.

Border Esk.—The Esk is now in good order for salmon fishing, and numbers are being caught both in the lower and double waters, Messrs. Hall and Lupton, Eskdale Temperance Hotel, Langholm, had four sea trout and two dozen yellow trout in the upper waters; Mr. St. George Tucker of the same hotel, had two sea trout, one of 3½lb.; Mr. A. McMillar, had two sea trout, and two whiting; Mr. Thos. Irving, had three sea trout, and three whiting; and Mr. J. Harkness, landed a salmon of 9lb., at the back of Langholm Distillery, a little above the Skippers Budge. From the Cauldron Pool, in the Canonbie Water, Mr. Scott, Holmfoot. landed two salmon, one of 25lb., and another 9lb.; Dr. Burrell, of London, staying at the Cross-keys Hotel, caught three salmon, one of 14lb., from the Red Lynn Pool (a fine stretch of water here, and come-atable on either side), and one of 7lb., from the Willow Pool; Mr. D. Edgar, Rowarburn, had a salmon of 8lb. from the Round Pool, and one of 6lb. from the Red Lynn Pool; Mr. G. Irving, Prior Hill, had two grilse of 6lb. each; Messrs. D. Jardine and W. Davidson, Canonbie, had each a small salmon; Dr. Roper, London, had a good run with a big fish in the Red Lynn Pool, which got away, subsequently the Dr., landed a salmon of 8lb.; Mr. John Wylie, Upper Burnmouth, caught two salmon at a fishing, 15lb., and 5lb. respectively; and Mr. D. Reid, landed a salmon of 18lb., from the Liddle. In the Langholm Water, Mr. Thos. Jamieson, had three salmon, 9½lb., 12lb., and 17½lb. respectively; Mr. W. Irving, had one, 20lb.; Mr. James Scott, one, 5lb.; Mr. Walter Scott, one, 18lb.; and Mr. Carthew-Yorstoun, one of 8lb.—Gilnockie.

Dee (Aberdeenshire).—(23rd) Just at the most opportune time the river is again in great flood, and although the much-wished-for fill is more than could be desired, yet its after as well as present effects cannot be over-estimated at this as yet advanced season. On the Queen's Water, at Balmoral and Abergeldie, as well as the Berkhall reaches, a few autumn fish have been landed, while the Invercauld and Cambus O'May Waters have also replied satisfactorily. On the Aboyne reaches Mr. Upcher, and other of Mr. Sanderson's guests, had fair sport last week. On the Desswood Water, Mr. Davidson's keeper landed one of 10lb., while Mr. Henry Champion had one of 9lb. on the Ballogie Water. On the Carlogie section, Captain Charles Campbell landed one of 7lb. on Thursday, while Admiral Sir Michael Seymour had one of 22lb. on the Borrowstone Water; and Admiral Charles G. Fane one of 14lb. on the same water on Friday. On the Kincardine Lodge Water, Mr. William Lamond had one of 14lb. and one of 8lb., on Saturday, while A. Duncan, keeper to Dr. Farquharson, M.P., had one of 20lb. on the Commonty Water. On the Woodend Water has had some splendid sport, as the autumn has gone, landing five fish, scaling respectively 20lb., 9lb., 8lb., 16lb., and 17½lb. On the Crathes Park and Drum Waters good sport has also been had. On the Aboyne reaches several good fish have been taken during the week. On the Huntly Arms Water, Mr. Allan had two, scaling 10½lb. and 19½lb. On the Huntly Lodge Water, Mr. Whiteley had one of 17lb. Large flies are now preferred, especially in the darker waters, and as the shades are coming more quickly down. On the Ythan capital sea trout fishing is being enjoyed on every favourable day.—Deesider.

Deveron (Banffshire).—The rains in the beginning of the week were the heaviest of the season, and in consequence the river Deveron and its tributaries have overflowed their banks to a greater extent than they have done for several years. Great damage has been done, and a large quantity of the crops carried off by the flood. In the end of last week, before the rain commenced, anglers were very successful, and fish, newly run and of good size, were got on most of the beats. On the Netherdale Water, Mr. Fraser, keeper, had four fish, one of 21lb.; on the Forglen Water, Captain Abercromby, landed nearly one dozen fish, ranging in weight from 9lb. to 17lb.; on the Muiresk Water, one fish was killed by Captain Farquhar, of 10lb., and another one of 20lb.; and two by Mr. H. Farquhar Spottiswood, of 9¼lb. and 11½lb.; on the Mayne Section, Mr. Thurburn, had a salmon of 16½lb., and the keeper Mr. J. Sandison, had three, weighing 6½lb., 11lb., and 24lb. On Tuesday and Wednesday the weather was dry, and the water settled down considerably. Anglers are now beginning to experience slight frosts in the evening and morning. There are a number of large fish in the river at present, the height of the water over the Cruive Dykes giving them free access.—H. W.

Dunbeath.—Sir William Montague Call, Bart., Balcraggie Lodge, fishing for a couple of hours on Tuesday evening, landed a salmon of 8lb. This river is in ply only after a spate. Spates have been very frequent during the season, but although carefully fished on these occasions by anglers from Dunbeath Castle, the Lower Dunbeath party and the Balcraggie Lodge party, only one fish—an eight-pounder—has been taken. The net fishings around the mouth, however, have been unusually productive this season.—J. Y.

Helmsdale (Helmsdale).—Beautiful clear and cool weather has succeeded the wet muggy weather of many weeks past, and to the farmer has come in time to save his crops from literally rotting. But for all this change, angling has shown no marked improvement. Now and again a fish is got, but this is the exception and by no means the rule. It is useless speculating as to the cause of such a state of matters, for one is left only as much in the dark as ever; all one can say is, "the fish are there in myriads, and we cannot get them to take." Such is truly the case. Taking a ramble the other day as far as Baden Lock, one could see, even there, eighteen miles from the river mouth, fish disporting themselves in full silvery uniform, showing plainly that many of them had just left the sea, and lost no time in going to the very head of the river. Mr. Muir, the tenant of the shootings and fishings, at Baden Locks gets, a fish on rare occasions, but it cannot be called sport. By the way, this gentleman has made great improvements there. The lodge is greatly enlarged, stables, coach-houses, kennels, &c, have been added to the old lodge, and the place is now quite different from what it ever was before. Owing to the continued wet weather (which is now happily over), a number of the shootings' tenants have left, but possibly with the improved weather may yet return. Sport has been very fair under the circumstances, indeed, much better than was looked for. Referring again to the large number of salmon and grilse on this river, I think it would be an excellent idea to net the pools now, taking out all barren fish, of which there are always great numbers. This would prove very beneficial to the river, for there is no doubt whatever that, owing to the great numbers of fish on the water, many of those fish will, as the water gets low, die, and so pollute the water, and possibly cause disease. This course has often been suggested by gentlemen of great experience in angling and in the preservation of rivers, but has never yet been carried out here, and possibly may not be, but the idea is worth consideration. Sea-fishing is still doing well here, but few are giving it a fair trial.—S. C.

Inveran Hotel Waters (Invershin, N.B.) — On Saturday week Mr. Hall and party from the Sutherland Arms Hotel, fished Loch Craggie and landed eighteen beautiful trout, which averaged about 1lb. each. On Thursday, Mr. Friar, also from the hotel, fished the lower reaches of the Shin, and at Fir Dam landed a grilse which weighed 6½lb. As the weather has now changed for the better, an improvement in sport may be anticipated.—McB.

Naver (Strathavner, Sutherland).—In the course of past week the following sport has been obtained. Colonel Friars, Dalvina Lodge, landed three fish weighing respectively, 5lb., 7lb., and 9lb., and lost another; Major E. A. Burnell, Dalvina Lodge, caught two of 7½lb. and 6lb.; and other two were got, by Mr. P. H. Wormald, Skelpick Lodge. On the Lyre Lodge Water Mr. Geo. B. Stubbard landed two nice fish. one of which weighed 14½lb. The water is at present in good order, and well stocked with fish.—McB.

Ness (Inverness).—This water continues in splendid trim, and fish very plentiful in the pool, but are now very huff in rising to the fly. The following are the takes for the week: On the Ness Castle Water, Mr. Fountaine Walker killed twenty-one grilse and two salmon, 18lb. and 19lb. On Dochfour Water, General Godman, five grilse. On Holm Water, Mr. Bradly Martin, six grilse. On Lower Water, Mr. Bulloch killed three grilse; Mr. Allison, one grilse; General Grant, six grilse. On Freeday, the local anglers killed fourteen grilse.—D. Watson.

Rhiconich Hotel Waters (via Lairg, N.B.).—Mr. Turing, from Bedford, was out on Loch-na-Blarloch on

Tuesday, and landed thirth-six trout, which weighed 10lb. in all. On Wednesday, Mr. MacKenzie, Sunderland, fished Loch Sgeir-a-Chath, and got three sea trout, averaging 1½lb.; and Dr. Martin, London, on Loch-na-Caillich, three sea trout, averaging 1lb. each. On Thusday, Mr. MacKenzie, Sunderland, fished Loch Garbetbeg, and grassed three salmon, weighing respectively, 13lb., 12½lb., and 15lb.; and Mr. Clark, Bedford, on Loch Inchard, 140lb. lythe and coal-fish. On Friday, Dr. Martin, London, fished Loch Garbetmore, and landed a grilse, weighing 5lb., and two sea trout, 2lb.; and Mr. Clark, on Loch Garbetbeg, four sea trout, 5lb. On Saturday, Mr. MacKenzie, Sunderland, fished Loch Garbetbeg, and grassed two salmon of 6lb. and 8lb.; Mr. Clark, on Loch Inchard, landed 160lb. of lythe and coal-fish; and Dr. Martin, on Loch-na-Caillich, three sea trout, 3lb. On Monday, this week, Mr. MacKenzie, Sunderland, fished river Laxford, and landed three salmon, 9lb. 6lb., and 6½lb.; Mr. Clark, Bedford, got an eight-pounder on Loch Garbetbeg; and Dr. Martin, London, on Loch Sgeir-a-Chath, three sea trout, averaging 1lb. each.—McB.

South of Scotland.—In every river in the South of Scotland salmon are plentiful, but they are extraordinary shy, and refuse all lures. This is rather singular especially when water and weather have been favourable for over a week. Day after day anglers in large numbers have been whipping favourite pools without a single pull. Flies of all patterns have been put over the fish with the same results. The salmon, too, keep plunging about in some of the pools; in others they boil like taking fishing, but when fished over they never appear to notice the lure. THE ANNAN.—In the Hoddon Castle Water, on Friday evening, Mr. Brook's head keeper, Mr. Sandy Dalziel, killed a beautiful salmon of 23lb. in the bridge pool, and in the churchyard pool we had another salmon of 12lb. Both fish rose at a Brown Turkey fly. On Saturday in Sir Robert Jardine's Water, near Castle Milk, Mr. David Bell, Kettleholm, landed one of 16lb., and on Tuesday, in the same stretch, Mr. Lawson, Lockerbie, killed one of 15lb. In the lower reaches only one poor, ill-conditioned fish, of 10lb. has been landed this week. Mr. W. Wallas, gunmaker, Wigton, killed a few fine fresh run herling on Wednesday, and Mr. Wallas, Loudon, had also several nice ones. To-day (Thursday) rain fell all forenoon, and few faced the weather. The rain cleared off during the afternoon, and while I send off my notes, anglers are out in full force salmon fishing. THE DEE.—The Kirkcudbrightshire Dee remains in first class fishing order and salmon are plentiful. During the week a number of gentlemen have killed salmon, but in a general way the fish are rising indifferently. Trout and herling is not much prosecuted now that salmon are in the rivers, but a few odd baskets are had by those who go in for these fish. The FLEET: Like the Dee, the Fleet, is in good order; salmon are plentiful, but they are very sulky all over the river, and little has been done. The NITH: This river is in good ply, but it is not affording good sport among salmon. In the Thornhill and upper reaches several nice catches of herling and trout have been recently taken with fly. The sea trout, however, are not worth fishing for now, as they are getting black in colour, and quite soft in flesh. Altogether they are out of season, and should be left alone now along with yellow trout. Several of the rivers this week show a fresh run of bright herling in fair, good condition. The weather is still unsettled-looking.—HEATHERBELL.

Tay (Perth).—The weather during the past week has been colder, and therefore more suitable for angling, and fish have been rising much better. The river is still in good order. On the Stanley water Captain Bushman killed three fish, about 20lb. each, and a grilse. On the same water, Mr. E. Foreman, London, killed three, 17lb., 9lb., and 7lb. On the Taymouth water, Col. D. Moray, landed eight fish. On the Delvine water Col. Hornsby Drake killed one fish of 14lb.; Captain Palliser a grilse of 7lb. On the Benchill water, on Friday Sir J. E. Millan killed four, 19lb., 19lb., 9lb., and 9lb. On Saturday Col. Hornsby-Drake killed one, 28lb. On Monday Mr. Field's party had eight fish on Stobhall water, and Mr. Maples two on Burnmouth. On Logierait Hotel water, Mr. T. Wise, London, had a fish of 20lb. Sir J. E. Millin had two on the Benchill water same day, and Mr. McLeon had four on the Redgorton water. On the Delvine water Mr. Du Caine had a grilse of 7lb. on Tuesday. On the Burnmouth water, on Wednesday, Rev. Mr. Cameron and Mr. Archibald Fillieutby killed eight fish and one grilse. Free Water.—Mr. Fenton, one grilse; Mr. Cook, one salmon. On Friday Dr. Orton had one, 18lb.; Mr. Cosgrove, two; Mr. Ireland, one; Mr. Wardrope, a fish and a grilse; Mr. Ramsay, one, 9lb.; Mr. Grant, three grilse; Mr. Piteaithy, one: Mr. Mason, one; Mr. Armstrong, two; Mr. Spiers, two; and Mr. W. Armstrong, two. On Monday Mr. Spiers had four; Mr. Beady, three; Mr. Linday, four; and Mr. Cosgrove three. On Wednesday Mr. Ireland, two fish and a grilse; Mr. Brady, three; Mr. M. Ferlane, one; Mr. Howe, one grilse; Mr. Cosgrove, three; Mr. Wardrope, four; Mr. McIntyre, two; Mr. Malcolm, four; Mr. Than, one.

EARN.—On the Dupplin reserved water, Mr. E. B. Williams killed three, 18lb., 17lb., and 16lb. On the Drummond Castle Water, Mr. M'Leod, London, killed one, 19½lb.; Mr. East, one, 18lb. On the Club Water, Mr. Tach killed one, 20lb.; Mr. D. Forbes- three, 19lb., 18½lb., 13½lb. On the Strowan Water, Colonel Allex, killed one, 16lb.

Thurso and Lochmore (Brawl Castle.).—Since the river closed for salmon fishing, the Brawl Castle anglers have been prosecuting the trout fishing, but as the season for them is almost over, their luck was variable. On Wednesday, Major Nicolson, Mr. Gardner, and Pipe Major Grant, fished Loch Sternster, and caught fourteen trout, the heaviest weighed 1lb. On Thursday, the same party fished Lochmore for trout, and caught forty-five, average weight four to the 1lb. On Friday, Pipe Major Grant fished the river and caught a good basket of trout, the largest weighed 1lb. On Saturday, Lochmore was again tried for trout, but owing to a strong wind, the party only succeeded in getting 5lb., when they were obliged to give it up. The Strathmore Party, consisting of Thomas Baring, Esq., Col. Baring, Master Windham Baring, and friends, caught twenty-nine salmon, and 117lb. of trout, since the 12th of August; Mr. Baring leaves to-day, for the season after enjoying good sport on land and water, and he has taken a lease of Strathmore shooting and fishing for the next four years.—A. H.

Tweed, &c.—Since my last notes, the vale of Tweedside has been nothing more nor less than a scene of deluge and devastation. The splendid sport obtained with salmon, and which was given in your last issue, rather raised the hopes and anticipations of the Waltonians as to a further fillip in the matter of salmon angling. They have had a dreadful take down, and how matters will now turn out is beyond the ken of the wisest. The river ran in good ply last week, and until Saturday evening there was not the slightest indication of the severe and disastrous storm that was so soon to follow the short spell of glorious weather that we had been blest with—blest so far as the ingathering of the crops was concerned, as well as it being in a great measure fairly good for the prosecution of angling for the *salmonadiæ*. Up to midnight on Saturday, the weather was beautiful in the extreme, but shortly after that hour, the elements changed somewhat suddenly. The sky became very much overcast, and rain began to fall in a heavy drizzling sort of fashion, but later on it came down in earnest. This continued all day on the Sunday, and on the evening of the day the wind, which had sprung up from the north-east, had began to blow a gale, while the rain increased in violence and came down in blinding sheets. All through the night of Sunday the storm continued, and on Monday morning at 6.30 the Tweedometer at Kelso Bridge showed a rise of one and a-half feet. From this time the rivers—both Tweed and Tevoit—began to rise very rapidly, and at nine a.m. the gauge showed 7ft. of flood water. As the day wore on this height was further increased to 10ft., and the river still further swelling marked a rise of 11¾ft. at Kelso Mills during the day. This was the highest point the floods reached, and was nearly as high as that reached during the deluge in 1881. Although the storm continued until Tuesday forenoon, the rivers had begun to subside somewhat before this time, and on Wednesday evening the guage marked fully over 2ft. above the normal height. The storm has caused great destruction to property; one railway bridge over the Tweed was washed away, while a great quantity of grain, besides bullocks, &c., have been washed away; and one man was drowned at Galashiels. In consequence of the flood, angling will not be practicable until Friday, and that only on the shallower casts. That this storm will have a tendency to bring fish towards the mouth of the river cannot be gainsaid, and anglers are hopeful that a further fresh run of salmon into the river will be the outcome of the flood; and should this prove correct, good sport may be expected once the salmon have had time to rest, and get lain down in the various fastnesses. The following are the takes got before the river rose, not reported since my last notes: On the Makestown Water, on Wednesday, last week, the Right Hon. D. H. Madden, M.P., had a grand day's sport, killing no less than nine fish—eight salmon and one grilse—the weights of which were, 16½lb, 16lb., 16lb., 16lb., 15lb., 12lb., 12lb., 8lb., and the grilse 6½lb.—a new fly (Jack the Ripper) killing eight of the fish; on the same water, the following day, Mr. Madden had again six fish—20lb., 16½lb., 15½lb., 13½lb., and two grilse of 7lb. each; on Friday he had four weighing 16½lb., 16lb., 10lb., and 8lb.; and on Saturday again he killed a similar number, one salmon and three grilse, their weights being 11½lb., 8lb., 7lb., and 6lb. On the Ednam House Water on Wednesday, Mr. Drummond, had two grilse; on the same day, on the Floors Castle Lower Water, on the "Putt" cast, Lord Alastar Ker, second son of his Grace the Duke of Roxburghe, killed three fish on the upper water. Lord Bowmont had four fish. On the Hendersyde Water, the same day, Sir Richard Waldie Griffith, Bart., had one salmon and a grilse, and Mr. Robertson, one salmon and three grilse (both gentlemen fishing from one boat). On the Spronston water, Mr. Tait, fisherman, had one grilse. On the Florrs water on Thursday Her Grace the Duchess of Roxburghe killed three fish, and the Duke one; on the Hendersyde water, Sir Richard W. Griffith had one salmon, and Mr. Robertson, one of 25lb.; on the Ednam Herne water, Mr. James Steel, jun., had an 8lb. grilse. On Friday, on the Florrs water, the Duchess of Roxburghe had a couple of salmon, and a like number was also killed by the Duke; on the following day, Lord Alistar Ker, had one of 17lb. and one of 18lb., killed at the "Blackstane" (upper water) cast; while on another part the Duke of Roxburghe had one salmon and one grilse. On the Hendersyde water, Colonel Chaplin, V.C., had one salmon the same day. On the same water on Saturday, Mr. Robson, of Oaklands, had one grilse. On the Ashiestiel "nest" water, a fair day's fishing was had by Mr. Usher, Edinburgh, who had three salmon; and on the Leaddon foot pool, Mr. Roberts, Torweedlee, had one fish. Fairly good sport was also got on some of the other waters, viz.—Rutherford, Boldside, Pavilion, and Mertoun.—MAXWHEEL.

Irish Reports.

Ballinderry (East Tyrone).—The Ballinderry is now in good form for all-round angling. The most of the fishing done during the past month, is by local anglers. The best taking flies are the Olive, Claret, and Hare's Leg. Coarse fishing in all the reaches is excellent.—J. A. B.

Lakes Ballina.—During this past week some nice baskets of trout has been got in the lakes. Mr. W. Kingston on the 16th, seven trout, 6½lb.; 17th, twelve trout, 12lb.; 18th, five trout, 9½lb., largest trout, 6lb.; Mr. Webbs, six trout, 7½lb., largest fish, 3lb. On the 19th, Mr. W. Kingston had ten trout, 13lb., largest 3lb.; 20th, Mr. W. Kingston and Captain Bond, seventeen trout, 16lb., and returned to the water a good few fish under half-pound. The Messrs. Scroop's are also having some nice baskets of fish. Most days the particulars of number and weight I have not ascertained.—FRANK HEARNS.

Lough Currane (Waterville, County Kerry).—Only a few anglers have been out. The best basket for the week was one of ten white and four brown trout, creeled by a gentleman fishing with Daniol Leary. Other takes varied from six to a dozen trout—white and brown. On the upper lakes (preserved), some large baskets were had on Friday and Saturday. The best I heard of was one of six dozen, by Dr. Sharkey and brother. This included only three white trout however. The weather has been unfavourable for the most part of the time, and is still very unsettled. Sea angling has been good on a few days.—THOS. J. DENNEHY.

Lough Mask (Mount Gable Hotel, Clonbur, County Galway).—The take of fish on Lough Mask for the past week was the largest of the season. Messrs. Small, Melrose, and Laurey, Ceylon, got a pike each, one weighing 33½lb., the other 18lb.; they also got 60lb. of brown trout in three days, all got trawling. Mr. Galagher, Dublin, lost a large lake trout on the 16th inst., supposed to be 14lb.; he played him for thirty minutes, and walked away with his tackle.—SCYMAN SUMMERLY.

Lough Neagh.—Reports from this vast lough, show a falling off in the takes of salmon, and just now trout netting is declining, due to the multitudes of fish running up the inland rivers. The only sport to be found with trout at present, is in the small feeders of the lough when they are high in flood or falling down. On the Duckenstool Stream, on Wednesday last, your correspondent and Mr. Stevonson had seven and nine trout respectively. Bream are getting scarce. Perch and eel fishing are fairly good.—J. A. B.

Suir and Tributaries (Clonmel).—The following is a list of salmon killed on Lord Donoughmore's waters since 28th August. On that date, Hon. G. W. Hely-Hutchinson got one fish, 6¼lb.; 31st, J. Gearon, one of 17lb.; 2nd Sept., Mr. Hely-Hutchinson, one, 15lb.; 3rd, J. Gearon, one of 6lb.; 4th, Mr. Hely-Hutchinson, one of 4lb.; and J. Gearon, two, 4lb., 7lb.; 5th, Mr. Hely-Hutchinson, one of 5½lb.; and within the three following days J. Gearon landed five, 15lb., 6½lb., 8lb., and 5½lb. respectively; 11th, Capt. Armstrong. Mealiffe, got one of 3½lb., and on the 18th four more, 14lb., 8lb., 7lb. and 7lb. Some good trout fishing was also had on the various waters, Dr. Harvey got three dozen on the Anner; Col. Wolseley, twenty-two, on the Suir, all in very good condition.—RICHARD BRADFORD.

THE GREATEST ANGLING SWEEPSTAKES ON RECORD, AT SAXILBY.

THE thirteenth angling sweepstakes, promoted by the Sheffield Anglers' Association, was decided in the waters of the Saxilby Canal, at Saxilby, Lincolnshire, on Monday afternoon, and in point of numbers of anglers engaged exceeded anything of the kind on record. Ever since the formation of the Sheffield Anglers' Association, it has grown in strength, and at the present time the Sheffield Association is the strongest and most wealthy organisation of its kind in England. Upwards of two hundred and fifty angling clubs are affiliated with the association, representing a membership of nearly eight thousand. Of late years the value of the prize money has been increased until the Sheffield Association sweepstakes has become the most important event of the season. This year £65 in money, besides a lot of minor prizes, was given for competition. The weather at Sheffield on Monday morning was very threatening, but, despite this, upwards of one thousand anglers travelled by special train to Saxilby. Of these, six hundred and seventy paid an entrance fee of one shilling each, this being the largest number of anglers that ever competed in an angling sweepstakes in England. Upwards of three hours was consumed in allotting the competitors their stations, each angler having 10yds. of water. With such an enormous number of anglers, the line (including brakes) was four miles in length, one end extending towards Lincoln, and the other towards Torksley. Fishing began at twelve o'clock and continued until four, but owing to the heavy downpour of rain, which fell incessantly throughout the whole of the four hours allotted for fishing, the catches were the lightest ever taken in a Sheffield Association match, the weights ranging from 1lb. 5¼oz. of the first twenty-two successful anglers down to 6½oz. Last year the winner caught upwards of 10lb. weight, but the light catches of Monday's sweepstakes were entirely owing to the inclement nature of the weather, as the Saxilby Canal is well known to be well stocked with coarse fish. The following were the first twenty-two prize-winners:—

	lb.	oz.	£	s.	d.
W. Wostenholme	1	5¾	5	0	0
W. Arnold	1	5¼	4	0	0
G. Allen, jun.	1	3	3	0	0
W. Newbould	0	13½	2	10	0
George Bailey	0	13¼	2	4	0
—Ladlow	0	12¾	1	18	0
B. Nelson	0	11	1	12	0
T. Gunstone	0	10¾	1	10	0
H. Skinner	0	10½	1	8	0
W. Stanilaw	0	10¼	1	7	0
H. Quixall	0	10	1	6	0
Joe Percy	0	9½	1	5	0
W. Blackburn	0	8½	1	4	0
C. Clark	0	7½	1	3	0

Alf. Crofts, 7½oz., and H. Brown, 7½oz., divided £2 3s.; W. Hall, 7¼oz., £1 1s.; W. Smith, 6¾oz.; J. Brooks, 6¾oz.; J. Platt, 6¾oz.; and W. H. Hall, 6¾oz., divided £3 17s.; H. Hardy, 6½oz., 17s.—*Sporting Life.*

THE DUMFRIESSHIRE OTTER HOUNDS.—On Friday morning the cosy and romantically situated little town of Langholm was the scene of unusual excitement, as Mr. Bell Irving, the Master of the Dumfriesshire Otterhounds, made the hills and woods of Eskdale re-echo the shrill notes of his hunting horn at an early hour. There was a good muster, both on the bridge which spans the Esk, and on the river's side. What a splendid sight! There is the huntsman in correct attire, in the midst of the hounds, whose every hair bristles with excitement, and the terriers too, yelping and barking, in their eagerness for the fray, while several ladies bent on following the hunt on foot, assist in forming a picture seldom seen, even in that picturesque district. At the junction of the Esk and Ewes, a little above Langholm Bridge, the hunt commenced amid a grand burst of music. Near one of the pillars on the side of the river, a lively drag took the hounds off at full cry up to Duchess Bridge, when the otter made for the steep bank, and ran half-way up, hotly pursued by the entire pack and in view of the whole field. It was a false move apparent to all, and not the least so to the most interested party, as the "varmint" quickly retraced his steps and reached the river again in safety. The melody now swelled into a copious volume as the otter steered towards Potholm and reached Potholm Pool, where some grand swimming took place. As seen from both banks the spectacle was animated in the extreme, and the excitement was redoubled when the game again took the bank in the hope of reaching the woods. Once more he was doomed to disappointment, as he was quickly driven back to the water. Steadily the hounds worked in the deep pool, until the game was sighted making down-stream. The hounds were now close up, and the varmint was chased into a syke which leads up to Potholm; finding no refuge here, he turned and ran up the bank towards the river, where he was met by the veteran hound, "Chorus," who resolutely seized the animal and a battle royal took place on the greensward. Soon a terrier joined issue, and the whole pack swooping down on the devoted otter, the unequal conflict was soon at an end. It proved to be a fine dog otter, weighing 22lb., and was presented by the Master to His Grace the Duke of Buccleugh, at Langholm Lodge. The hunt was continued up the water towards Billholm, once the residence of John Wilson, son of Professor Wilson, when the field was considerably augmented, among others being the Misses Borthwick, who joined the hunt, and crossed the river several times. Mr. J. W. J. Paterson, Master of the Eskdale hounds, and other well-known gentlemen now appeared on the scene, but although another drag was lifted, the otter holed, and could not be unearthed, consequently the hounds were called off, and most of the party proceeded to Langholm, delighted with the day's sport.—G.

THE SHREWSBURY SEVERN ANGLING SOCIETY AT HAWKESTONE.

THE weather on Thursday, the 17th inst., was not favourable for angling. Anglers never have held an outing on a really favourable day, and suited to everyone's mind; but the Shrewsbury Severn Angling Society had been led by past experience of many previous excursions of a like nature to expect a thoroughly enjoyable day, and they were not disappointed. To them the outing was one of exceptional interest, because it was the first of the season; it was to be held at Hawkestone, at Lord Hill's charming estate; because the host and hostess of the hotel hard by are famed for their catering; and lastly, because there are thousands of fish in the spacious lake from an inch or two long to monsters of the deep, whose proportions were only to be darkly hinted at as creatures more to be shunned than courted by the gentle angler. With these pleasant anticipations, therefore, it was a merry party of some forty or fifty anglers that assembled at early morn in the two brakes chartered for their accommodation. All reached Hawkestone in the best of spirits, full of anticipation, and loaded with all the deadly baits that the mind of murderous angler could conceive—from the innocent bread-paste to the deadly spoon-bait, and from the gentle worm to the silvery dace wherewith to lure the voracious pike. The drive from Shrewsbury was a pleasant one, and at ten o'clock the party landed at Hawkestone. A brisk walk through the charming park, dotted with the pretty silver grey, black, white, and grey rabbits, and stately, timid deer, brings the party to the edge of the great lake. Then all is bustle and activity, and very quickly the boats are got out, rods and tackle hurriedly prepared, and places sought by those whose misfortune it is to have to angle from the bank, which on the deep side, where lie the most fish, is thickly wooded. The scene is an animated one—here an expectant boat-load of anglers being rowed to the best part by the sturdy keeper, there a quartet of old hands in the Pengwern dinghy, looking for their own happy hunting-ground, made famous by the splendid captures made there two years ago; and at the side of the lake a line of enthusiastic anglers forcing their way through bush and brier, entangling lines, losing hooks, breaking tackle, tearing clothing, and using—well, language quite appropriate to the occasion. But soon they all settle down; boats are anchored, lines set, temper recovered, and places found on the bank. And then angling begins in real earnest and continues till lunch-time, when there is a general move for the boats which are plying to and from the boathouse, where luncheon is prepared. Here, with pride, Mr. Boulton displays his 7lb. pike and another of smaller dimensions which have fallen victims to his skill; Mr. Cox relates how he has battled with and conquered a 2lb. perch—a beauty, indeed; and many others modestly relate their doings, casually mentioning that they have caught so many, but carefully refraining from remarking upon their size.

Luncheon over, all are soon at work again, and so the fun continues throughout the afternoon. At dusk a general move is made for Hawkstone Hotel, and there the spoil is displayed. Mr. Pritchard has captured a 2lb. bream—the only heavy fish since luncheon time—and many others have brought to bank their half-dozen or so of small perch. The basket of Messrs. Morris, Piper, Gregory, and Smith comes in for a good deal of criticism. It holds no less than one hundred and seventy perch and roach, and two small pike, but as for size, well it is sufficient to mention that one medium-sized creel held the lot. Then the company sat down to one of the best dinners that Host and Hostess Williams have ever prepared.

Mr. Morris presided, and Mr. Williams took the vice-chair, among the anglers present being Messrs. Binnall, J. Turner, H. W. Hughes, Toutham, Ledger, B. Pritchard, H. Smith, Boulton, Gregory, Jones, Kent, B. Harries, Brown, Piper, Hagger, Edwards, Aitken, Cox, Jackson, Jolliffe, &c.

The after-dinner conversation was, of course, all about angling. Mr. Smith related how he had helped to swell that big creel of perch by the aid of two rods and three hand-lines; and Mr. Boulton told an awful tale of the tremendous pike that he had seen in the lake, winding up by expressing his conviction that there were monsters there of unheard-of proportions, so great in fact that he "would not swim across it for a thousand pounds." However, the money was not forthcoming, and the angler's courage was not put to so awful a test, or it would be a question whether avarice would not get the better of his fear.

Dinner over, Mr. Morris gave the loyal toasts and afterwards "Our Noble Selves," or "Success to the Shrewsbury Severn Angling Society," a toast that was received with loud applause. There were, he said, few societies that could look back upon such a record as theirs, and which after twelve years' existence were in as lively and prosperous a state as the Shrewsbury Severn Angling Society. Mr. J. Williams's name was coupled with the toast which was drunk with the utmost enthuisasm.

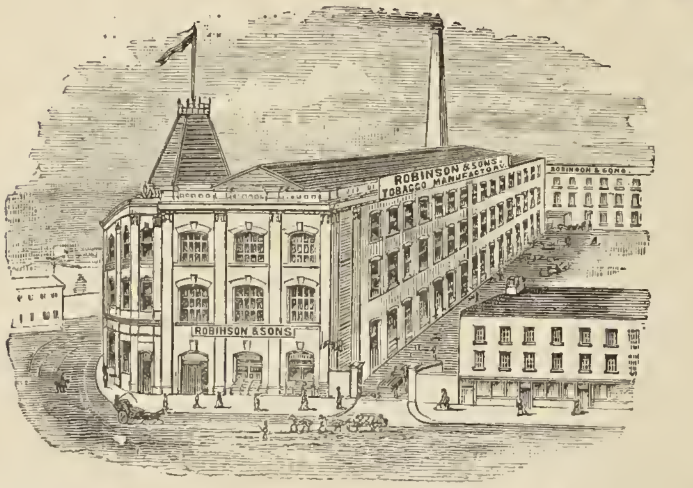
The Hon. Secretary, responding, expressed the pleasure it gave him to see that so many anglers had responded to the invitation to attend that gathering, and he was pleased also to find by the expression of their faces that they had thoroughly enjoyed themselves, although sport had not been so good as they might have wished. With regard to the work of the society, he believed it was doing a good deal for the benefit of the town of Shrewsbury, and although he was not a Shrewsbury man himself, he was ever desirous of assisting them in contributing to the interests of the town. He believed that in the Severn they had a river that ought to be second to none as a trout as well as salmon fishing river. He was glad to say that during that week the Chief Inspector of Fisheries, Mr. Berrington, was making an inspection of the weirs and other obstructions to fish getting up the river, from the estuary to its source. If the desired improvements were carried out they would have salmon angling at Shrewsbury as well as trout fishing. He would suggest that if any of them were riparian owners they should take out a salmon licence and attend the Board of Conservators meetings as *ex-officio* members, thus being able to support them with their vote. They had an important motion coming on at the next meeting, with regard to the extension of the close season, and he hoped that the representatives of the upper waters would all attend and look after their interests. In conclusion he thanked them all for the support he had at all times received from the members of the society and its committee, as their secretary.

The evening's proceedings closed with the health of the host and hostess being heartily drunk. Then there was a general move for the boats, and the party were speedily on their return journey, home being reached at ten o'clock, the whole of the party voting the excursion one of the most enjoyable that the society has ever had.

PULBOROUGH AND AMBERLEY FISHING EXCURSIONS.—The success and pleasure which the last fishing match and outing in the Sussex valley afforded to anglers generally has induced Mr. A. A. Eldridge, of the Rose and Crown, 21, Goswell-road, to arrange for another open roving contest, which has been fixed for Oct. 4, the competitors on this occasion starting their operations from Amberley. For the last event twenty-seven prizes were awarded, and it is hoped this time, if the necessary subscriptions are forthcoming, to increase the number to thirty. The principal contributions up to the present are Mr. W. Duke, Haughton Bridge Inn, Amberley, £2 2s.; Mr. Eldridge, £2 2s.; Mr. C. Cunningham, St. George and Dragon, Houghton, £1 10s.; Mr. Ratley, the Cricketers, 10s. 6d.; and Mr. Ellwood, Red Lion, Amberley, 11s. 11¾d. The entrance fees of sixpence are to be added to other amounts which are expected to be given, so that in all probability, if the entries are large, as seems likely, there will be an aggregate apportioned sum set apart to be competed for. The conditions and requirements are very simple—no live bait to be used; jack, eels, pope, dabs, bleak and gudgeon barred; Thames measure; no one to fish within ten yards of another without his consent; one rod only to be carried; all competitors to land their own fish; and any disputes that may occur are to be settled by the stewards, who will be conspicuously indicated by a rosette, or some distinctive badge or medal, at the river side. One particular will have to be carefully observed, which is that all competitors must see that their tickets are properly stamped at the Houghton Bridge Inn before leaving for the swims, for anyone neglecting to do so will be disqualified. The tickets for the contest are to be had from Mr. Eldridge only, and all entries will close on the evening of the day prior to that of the contest. The special train will continue to run during the coming month, leaving London Bridge (L. B. and S. C.) platform at five minutes to seven in the morning.

THE PISCATORIAL SOCIETY.—At the meeting held on Wednesday, September 23, the hon. sec. heard from two of the members, fishing at the present time in Scotland: Mr. H. Hardes, one salmon, 20lb., one grilse, 9lb.; Mr. E. Foreman, sen., one grilse, 8lb., five salmon, 17lb., 18½lb., 19lb., 20lb., and 22lb.

A STRANGE FISH.—On Thursday week a remarkable fish was caught in the fishermen's net off Ardglass. It was ¾lb. weight, with a head like a pike. From the gills to the tail on each side there was a bright vivid line of deep blue, a ¼in. broad. The top fins of the tail were also a vivid blue. Round the head and shoulders there was a profuse network of deep blue lines about the eighth of an inch broad, which gave the fish an unnatural appearance. Being an object of wonder it was exhibited amongst the inhabitants of Ardglass, who had never seen any fish resembling it. Mr. J. C. Pinkerton, Italian Consul, Belfast, in passing through the town had his attention called to it, and purchased it. Mr. Pinkerton intends preserving this rare specimen, and presenting it to the Belfast Museum.



SMOKE "ORIEL" NAVY CUT.

THE HIGH CLASS TOBACCO,

MADE FROM PICKED LEAVES OF THE FINEST QUALITY.

Extract from the "FISHING GAZETTE" of February 21st, 1891:—

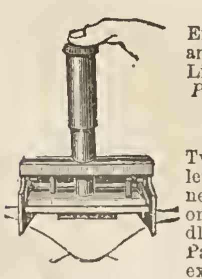
A GOOD SMOKE.

DEAR SIR,—Knowing how much you enjoy your pipe when out a-fishing, may I ask if you, or any of your friends, have ever tried "The Oriel" navy cut, manufactured by Robinson's, of Stockport? If you have not, do so at once, and I venture to say that you will be well pleased with it, being very cool and lasting, with an exquisite flavour. I have no interest in the matter whatever, but simply recommend it as my *beau ideal* of what a fisherman's tobacco should be.—Yours truly, SMOKER.

Sold at 5d. per ounce, in 1 and 2 oz. Packets, and 4oz. Tins. Any Smoker having difficulty in obtaining it from his usual Tobacconist can obtain it direct from the Manufactory

POST FREE. 2oz., 10d.; ¼lb., 1s. 8d.; ½lb, 3s. 4d.; 1lb., 6s. 8d. POST FREE.

Sole MANUFACTURERS: ROBINSON & SONS, TOBACCO & SNUFF MILLS, STOCKPORT



INDIA RUBBER STAMPS

NOTICE.

The Fishing Gazette is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to R. B. Marston, the Editor of the Fishing Gazette, St. Dunstan's House, Fetter Lane, London, E.C.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

Terms of Subscription.

The Gazette can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston, and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

HINTS TO AUTUMN ANGLERS.

LURES.

By Mac.

Under the spinner division of lures are included Phantom, Devon, spoon, and all the natural and imitation baits with which spinning is practised. Amongst these the best in autumn for salmon, sea trout, and finnock are Phantom, Devon, natural minnow, gudgeon, and sand-eel. Phantom, natural minnow, and gudgeon, seem on the whole the most extensively used, hence the deadliest baits for salmon; but not very far from the sea, and when the fish are fresh or moderately fresh-run, the clear Devon is without a doubt very effective in taking toll of the resting travellers. Sand-eel is used only for spinning in tideways for sea trout and finnock, and nowhere where it can be properly used is there any deadlier lure, particularly for the larger fish. It is chiefly from boats that the spinning with it is practised, and undoubtedly—for reasons which it were needless to name here—there is a great future before it. But it comes to us almost exclusively as a summer-time angling variety, and so to speak of it at any length would scarcely be opportune at the present time. The sand-eel, however, we may say is baited on three triangles and a lip hook, on the Chapman spinner, or on the Archer spinner. But no doubt something still better for securing the fish will yet be brought out. Phantom, natural minnow or gudgeon, not one of them is much used for sea trout or finnock fishing; but the Devon—especially the clear one—is, when conditions answer, a nailer in tideways, which no lure, not even sand-eel, tube, haddock liver or worm can excel. The sizes of it most used and most fatal for spinning from boat or bank are those of $1\frac{1}{4}$in., $1\frac{1}{2}$in., and $1\frac{3}{4}$in. in length. No colour of Devon is nearly so fatal as the clear or silver one; perhaps next to it—but a long way behind—comes the bronze or copper-coloured one. For salmon, however, especially when they have been up from the sea a considerable time, the clear Devon has no chance against the coloured—those painted different colours, and to resemble small fishes.

Under the best fishing conditions for finnock and sea trout in tidal waters, the prevailing best size of all of the clear Devon is $1\frac{1}{2}$in. It requires very low fine water, with running tackle to match, for the 1in. and $1\frac{1}{4}$in. sizes. Heavy waters, and rough stormy days, may make it necessary to use a 2in. size. The salmon sizes of the Devon, whatever the colour be, run from 2in. to 3in. It is rare indeed to find any size under 2in., or over 3in. absolutely necessary. The blue, and the brown, are decidedly—of the Phantom class—the best all-round killers. One suits at the one time, and the other at the other best, but I think that, in the main, it is more a matter of preference on the part of the fisher than the fish. The most useful sizes are 5, 6, and 7; 5 being probably the favourite with the bulk of fishers for general work. I place the Phantom far before the Devon as a lure for back-end salmon, which have got pretty far inland, or been over a week's time out of the sea and tideway. Slow spinning with it pays best, and I would seek to emphasise this remark. By no means spin the Phantom fast. Fish it unloaded where there appears likely to be much bother with stones or stuff on the bottom. But have it loaded where the water is very deep or strong; indeed, deep sinking and slow working is best everywhere, except in shallow water, where the bait is constantly in danger of sticking in, or on something or other much less pleasant to the angler to get a hold of than a fish. I have invariably observed that the longer the salmon and grilse are out of the sea, and the farther they get inland or up the rivers, the more do they show a preference for spinning and bottom lures over the fly. This does not mean that they get better and better takers the farther and longer from the sea they are. No; for the fact is they get worse takers. It only means that fly very much sooner than the other lures, and in a far greater degree corresponding with its previous relative merit, loses its effectiveness with the fish.

(To be continued.)

— AT SLAPTON LEY. —

By E. S. Shrubsole.

A dip in the billow,
A stroll by the shore;
Plenty of fishing,
And cream galore!
(With an apology to Mr. Punch.)

There are those who delight in spending a holiday amid a continual round of excitement, noise, and bustle; others assert that perfect happiness is only to be found "in a nook with a hook"; while yet another section of society laud to the skies the advantages of a holiday in bed! It takes all sorts to make a world. Most anglers prefer to spend their holiday far from the haunts of the cheap tripper, away from the noise of popular amusements and promenade bands. By the banks of those

"Shallow rivers to whose falls
Melodious birds sing madrigals"

the quiet piscator finds peace, and the much-needed rest from the hurry and hustle of business. Lingering by the weedy depths of the old mill pool, whose quiet surroundings are intensified by the occasional cry of the moorhen, the hum of innumerable insects, and the brilliant flash of the kingfisher, he finds soothing solace for his jaded spirits. Not for him are the merry-go-rounds and shooting galleries; he finds no pleasure in tourist-thronged continental resorts, "happy days" at Rosherville, racing up and down the Thames, or hurrying to 'Appy 'Ampstead. Popular sea-side resorts have no attraction for him, theatres, music-halls, and exhibitions are a bore; he only wants to obey the father of all anglers,

"And be quiet, and go angling!"

At Slapton Ley, in South Devonshire, such an angler will find a holiday resort after his own heart. Some might say it is too far from everywhere, but this—to me—is its chief attraction. You can sit in your fishing boat all day, and the while you puff the smoke of the fragrant leaf of the New World from the dusky briar of the old, only the ceaseless plash of the waves on the sea shore—the Ley runs parallel with the sea for about two and a-half miles, and only two hundred yards from it—the startled cry of the curlew, the plaintive call of the sandpiper, or the coot! coot! of the wild fowl, will interrupt the silence. Your day-dreams here are delightful—but short. The float that has been dancing upon the surface soon again disappears, and yet another fish is added to your catch.

The route to this angling resort is by Great Western Railway to Kingswear, across the Dart (by steam ferry) to Dartmouth, and then (by coach) to the Royal Sands Hotel, Slapton. It is an interesting railway journey, and the latter portion of it is wonderfully pretty—it is not grand, pretty is the word—the innumerable small bays, the warm-coloured Devonshire cliffs, the quiet and health-promoting sea-side resorts, and, as one lets down the carriage window, the invigorating whiff from the "briny" on one side, and the aroma from the heather on the other, all combine to refresh the traveller and make him forget the long railway journey he has accomplished. There is no fagged feeling when you alight at Kingswear; at any rate I only felt terrificly hungry. I also generally carry a pretty healthy thirst about with me, and I got caught at Dartmouth. A friend of mine had advised me to try the native drink—Plymouth Gin I think they call it—and I did so. Great Scott! I am not the man to refuse a drink, but I'd certainly rather continue thirsty than take another swig at P. G. I had to swallow a pint of milk before I could speak, and then my language was more forcible than polite, I am afraid.

I consider the view of the mouth of the Dart, as seen from the upper part of Dartmouth, with Kingswear so snugly ensconsed on the verdure-clad bank, Kingswear Castle on one side, and Dartmouth Castle on the other, the rich red rocks framing the broad river of glorious green, and the stolen peep at the sea beyond—one of the finest in the kingdom. Some folks call the Dart the English Rhine; the Rhine should be called the continental Dart, for it isn't in it with our lovely west country river.

The coach left Dartmouth for Slapton punctually. I shared the box-seat with an angler also bound for the Ley, and when we found we should probably spend a week at the same hotel, we got quite chummy—as anglers should. He pulled out an old number of the *Fishing Gazette*, dated July 26, 1890, and drew my attention to what Mr. Fountaine had to say of Slapton Ley. I ventured to inquire if he was a constant reader of the *F. G.*

"Oh! yes," he said; "I've taken it for years now. I've got several old numbers with me containing articles that I have read more than once. Do you read it?"

"Well," I returned, "sometimes."

"Ah! then I suppose you have seen some articles by a Mr. Shrubsole?"

I told him I had occasionally noticed them.

"What an awful liar that man is," he continued, "and yet there is something about him interesting. Do you remember his 'Bob Webb's Big Day' in the Christmas number for '89, and 'An Angling Incident Foretold' last Christmas?" I nodded. "Well, would you think the same man wrote them that produces all those stupid lying tales, like that of catching a pike with a slipper, a pike chasing a man for miles up a river, another with 7lb. of pebbles in it, &c., &c.?" I told him I couldn't see why he shouldn't.

"Well, I should like to meet him," he continued, "because he's undoubtedly an enthusiastic angler. Look at that 'Up with the Yellow,' he wrote a short time back. And then he goes and spoils it all by writing up a lot of tackle makers, and we *all* know what *they* are!"

I thought it was getting pretty warm for yours truly, and reminded my companion that Mr. Shrubsole was not the only angling writer who wrote lying tales.

"Certainly not," he said, "but I cannot see the sense of filling a paper devoted to sport with such absurdities. Look at that tale of a perch that followed its master about, begged for worms, and ultimately got drowned—now, what sense is there in that?"

"Well, so far as that goes," I replied, "there might be some truth in it. I know an angler who caught a perch and took it home alive, got a shallow tin dish filled with water, and put it inside a bird-cage with the perch in it. The cage was hung alongside one containing a canary, and in a short time the fish was taught to hop out of the water on to the wood twig, and in course of time it learnt to sing—not quite so melodiously as the canary—but very passable for a perch. It got so used to imitating the bird that when the canary moulted its feathers, the perch moulted its scales. The end of that fish was lamentable—when the canary moulted its tail, the fish tried hard but couldn't do the same, and it died of a broken heart!"

A long-drawn "Ah—h—h!" proceeded from my companion, and when I capped the perch tale by giving him my card, his face was a perfect study. But we got on capitally together, and yet another friendship was shortly after cemented in the angling world.

The coach drive from Dartmouth to Slapton is very enjoyable. On the top of the cliffs a magnificent view of the bay and the surrounding scenery can be had; the latter part of the journey is along by the sands, and we bowled over the level ground, sounded the horn, and pulled up at the hotel in orthodox style.

Why they call it an hotel I am at a loss to understand. I always associate the word hotel with a number and a limited amount of "at home" feeling. Now the Royal Sands is a regular good old-fashioned country inn. You are Mr. Shrubsole there, and not No. 123. You soon become friendly with the inmates, principally fishermen; the host and hostess inspire confidence and a certainty of good things to come directly you look at them; and altogether you feel quite at home. I should take down "Hotel" and put up "Inn."

Of the delightful strolls, with my pipe as my companion in the evenings, of the perfect peace and content that filled my soul during my short stay here, I must say little, but must hasten to describe the fish and fishing at Slapton.

In the first place, then, you can only obtain permission to fish from Mr. Dowse, the landlord of the Sands Hotel. If you stay at the hotel you have your fishing free; if you don't, you have to pay two shillings and sixpence per day for it. The charge for a man and a boat is four shillings per day, and it is impossible to fish the water without. The Ley is about four hundred acres in extent, and provides excellent sport with its big stock of pike, perch, and rudd. Anglers who have fished here for many years say there are not so many big pike caught as there used to be. Of this more anon; all I can say is, there are plenty now. One day while I was there two anglers had twenty runs and nineteen fish, but none above 8lb. Another day an angler had a big-headed fish of 11lb., and yet another one of 8½lb. When the water and weather are right you can make sure of from three to four brace of pike; probably more. When there are not you have to fish hard to get a brace. The local fishermen use clothes-lines and anchors to catch them with. I should advise anyone going down to take a fairly stout line (because of the weeds) and hooks mounted on fairly strong gimp—salmon gut-traces are not needed. The principal style in vogue there for catching them—and certainly the best—is spinning. An ordinary Thames flight is just the thing. You must not use any lead, or your bait will be down among the weeds in a twink. The bottom of the Ley is covered with weed. Spin about a foot, from that to 20in., below the surface, and when a fish strikes your bait, hit him and hold him! By way of change you can resort to a live-bait; gorge-bait fishing is not allowed. The native rudd are the baits used; but wouldn't those pike go for a live Thames dace! The trouble would be to get them down alive; in fact, it would almost be an impossibility. The route is such an out-of-the-way one, the coach drive alone would do for them. But I strongly advise anyone to take some nice fresh dead dace packed in sawdust, and get a fresh supply by post daily. They, of course, are all right for spinning, and form a much more attractive lure than a rudd.

Many fish have been taken here over 20lb. weight. There was a list of them given in our columns on July 26, 1890, page 45. In the bar is hung one of 27½lb., that an angler caught while fishing with Eli, the "boss" boatman here.

For years he had tried to catch a big pike
In the right way.
He'd spin, he'd troll—or trail if you like,
On a bright day;

On a dull day he'd pater.
Try a live bait in deep water,
But his luck he couldn't alter
In any way!

He'd engage the services of fishermen rare
By the week.
He'd go to good water—he got leave there
By his cheek.

He'd try single gut and twisted,
All his efforts were resisted
By the fish, his friends insisted,
For a freak.

As years rolled on he continued to fish
When he was free,
And succeeded at last in gaining his wish
At Slapton Ley;

He was spinning with old Eli
When he uttered quite a wild cry,
Followed by a very deep sigh,
And a "d——!"

He thought he'd hooked and lost that fish,
But he'd not.
It was six p.m. when he struck—with a swish;
A good shot.

All through the night his heart was gay
Thirteen hours he had it in play,
And Eli gaffed it at seven next day;
Great Scott!

If you doubt this, go to Slapton, and see the fish and the inscription at the back of the case for yourself.

When the pike are on the feed at Slapton they will occupy all your time, when they are not, you can fish for perch or rudd. The Ley literally swarms with them. I have taken two hundred and seventy perch in four hours and a-half, none of them any size (the large perch in the Ley, although there are plenty, are not often caught: I suppose it is because they are not *really* fished for); they average rather under than over ½lb. It's rare fine fun, and that's all. Perhaps over-stocking has something to do with it; at any rate, out of the two hundred and seventy I caught, not one would weigh 1lb. In this connection I would like to remark that very few fish are kept. What can you do with them? You are miles away from everywhere, and it's only when you are about to leave that you keep a day's catch to take back with you; or perhaps during your stay you may send a hamper or two to your friends.

What would we give for a few thousands of these perch for our Thames? Is there not some way in which they could be transferred? A small steam-boat could be run on Slapton Sands, some big fish-carriers utilised, and the fish taken to one of the many sea-side stations on the Great Western Railway between Exeter and Kingswear; from thence their transport to some Thames station would be a simple thing. I am sure the Ley could well spare twenty or thirty thousand; those left—and their name would be legion—would fatten, and such a thing as to catch a hundred without getting hold of a few really fine fish would be impossible. In return for their perch the proprietors of Slapton Ley could receive a consignment of pike; fresh blood is wanted. I believe that one great reason of the falling-off in the size of the Ley pike is the continual interbreeding. Mind, I do not say anything against the Slapton Fishery, I think it an excellent one, but I do say that a little fresh blood would soon produce a marked result, and twenty-pounders would be as common as of yore.

There are plenty of fine rudd in the Ley. The most artistic way of catching them during the hot months is to use a 12ft. fly rod and put any attractive large dace fly or small chub fly over them; grand sport can be had, the fish running up to 2lb. each, with plenty of pounders. 20lb. or 30lb. of rudd in a day is not at all an uncommon occurrence. I firmly believe that if a few of the deeper parts of the Ley were cleared of the weeds on the bottom, and properly baited about now, a marvellous catch of rudd would result. I mean, of course, the cleared spots to be fished in the well-known Lea tight-line style. If you run short of baits when pike fishing here, the boatman runs you to some of the reeds, and in a quarter of an hour, fishing about a foot or 18in. deep, you have plenty to go on with.

Can I say more to recommend this fishery to my readers? If so, please suppose it said. As many know, my experiences of English fisheries are pretty decently extended, and without hesitation I say this is one of the best public fisheries we have. It is quiet, healthy, and provides excellent sport. Good accommodation and a very liberal table will be found at the hotel, and charges are moderate throughout. Those who are fond of shooting will find plenty of use for their cartridges here. Ten guns in one day, last winter, had seventeen hundred head of wild fowl of varied sorts. Mr. Dowse has about two thousand five hundred acres of ground to shoot over, and the enormous number of pheasants, partridges, &c., in addition to the wild fowl provide grand sport.

Within five miles is one of the finest sea fishing grounds on the west coast—I allude to that part of Start Bay close to Start Point.

Innumerable pleasure trips by coach and sailing-boat are available, and grand sea bathing—without those abominable bathing machines—is close at hand. Artists will find here many subjects for their pencil and brush; the geologist will not long remain unoccupied; some of the best Devonshire ferns are obtainable in Slapton Woods, and in many other directions the botanist will find much to occupy his time.

Altogether, it is *the* spot for such an angler as I pictured in the opening part of this article; if he goes there he will thank me for the information conveyed through the medium of these columns.

FISHING IN HOLLAND.

By Rux.

Anyone examining a map of Holland will probably be surprised that a country of so singular a formation can exist upon the face of the earth. It will almost seem as if a territory so much cut up by waterways is more suitable for fish and amphibious animals than for the homes of human beings, the inhabitants of which must be in continual fear lest during their slumbers their Vaterland should melt away and suddenly disappear. It has been variously described by different writers: one calling it a kind of transition between land and water; another, a huge crust of earth floating upon the waters; whilst a few speak of it as the boundary line where land ends and the ocean begins. Holland, however, has not only repulsed the assaults of the waters, but has actually mastered them to such a degree that the enemy, which once threatened annihilation to the country, has finally become a source, not of wealth alone, but also a means of defence in the event of war; and the network of canals are now the principal highways and bye-ways in general use.

Although many English tourists pass through a portion of Holland on their way to the German Rhine, it cannot be said that the land of dykes and windmills is a country that is universally patronised by those in search of either sport or scenery.

Close as Holland is to Albion's shores, the tourist, on making his first visit to this portion of the Netherlands, more especially the part known as Zeeland, will be surprised to find the manners, dress, and customs of such near neighbours as different to those that he has been used to meet with in his own dear Isle as those even of the distant lands of China or Japan.

Zeeland is a land of romance and mystery, and in no other country, certainly on the continent of Europe, does anything take place such as happens in Zeeland.

It is here the fishermen catch the mermaid in their nets, whose husband, after having tearfully and vainly begged for his wife to be restored to him, revenges himself by throwing a handful of sand at his tormentors, prophesying that it will block up their harbours. On the shores of the Island of Walcheren the souls of the dead lost at sea come and awake the fishermen from their sleep. Ancient temples and statues of unknown gods and goddesses have been fished up at low tide near Domburg on this island; the gale has brought dead bodies from the pole to the Island of Schowen; carcases, half men, half vessel, floating mummies, swaddled up in trunks of trees, specimens of which can be seen in the Town Hall of Zierkze.

With so many canals and inland lakes, to say nothing of such splendid rivers as the Scheldt, Rhine, and Maas, it is natural to suppose fish is plentiful. In days of old the Dutch possessed the largest fishing fleet in the world, and it is asserted by some writers that the piles on which the city of Amsterdam is built are driven into a strata, mainly composed of the bones of herring.

There is no mistake about a purchaser obtaining fresh fish in Holland, as the methodical Dutchman disposes of his herring and mackerel alive and kicking. It is rather amusing to watch a crowd of customers, assembled on the banks of one of the canals, where is moored a "smack." A board is nailed to the mast, bearing the announcement, "Vish to Koop" (Fish to sell). In the boat stands the proprietor, having before him, fastened to an upright piece of wood, a weighing apparatus, consisting of a beam, with a scale to hold the weights on one end, and an open bag or net on the other. In the centre of the boat is a large tank, in which fish of all sorts and sizes swim. The boatman holds a rod, with a net at the end, and with this instrument doles out the fish to customers according to requirements.

Although the natives of Holland are exceptionally good sea fishermen they cannot claim to be true disciples of Izaak Walton. Their rods, lines, and hooks are of a very primitive description, and their mode of angling peculiar and somewhat different to the artistic styles practised by the British sportsman. The Dutch fisherman can be seen lazily seated on the bank of a canal, anxiously watching his float in hopes of a bite, and every now and then he will violently strike the surface of the water with the top of his rod, thus making a great splash; the theory being that the disturbance in the water attracts the fish, which, strange to relate, the fisherman generally manages to catch. The Dutchman has also another method of taking fish, which may not exactly meet with the approbation of a true lover of the gentle art. The fisherman is provided with a long pole, forked at the end, so as to keep open a bag-net which is fastened to it. With this instrument in his hands he creeps along the canal bank facing the sun, so that his shadow may not be cast on the water, and looks out for fish, which his experienced eye generally soon detects. He then cautiously puts his net under the fish, which he sees stationary before him, and quickly lifts it out of the water.

There are plenty of salmon in the rivers of Holland, especially in the Maas; but unfortunately they afford no sport, as the fish will neither take fly nor bait. The *modus operandi* of net-fishing is, however, interesting, although, perhaps, to lovers of the rod a rather tantalising sight. A small steamer tows the line attached to one end of the net, while on the bank men haul on another one. The steamer having proceeded, say quarter of a mile, returns and joins the men. As soon as both ends are united the two lines are fastened together, and the net with the spoil is drawn out on the bank with the aid of a horse.

Although the several waters of Holland afford little or no fly-fishing, the canals are well stocked with pike, perch, roach, carp, and eels; and excellent sport can be had bait-fishing.

Should a small pleasure party visit Holland, the most comfortable way to traverse these water highways is in a flat-bottomed smack, which can be obtained at reasonable rates at such seaport towns as Flushing or Ternewzen. The main cabins of these craft are large and roomy but will no doubt require a little fitting up for the sportsman's comfort. Hammocks with cork mattresses will be found convenient for sleeping berths, which, together with blankets, should be purchased in England. A small cooking-stove, with necessary utensils, a mess kit, and provisions to complete the outfit, can be bought in Holland.

For the privilege of using rod or gun in this country the visitor requires a licence, which costs about eight guilders (£1), and can be procured through the *Ontvanger* (tax collector) of any town the traveller determines to use as his headquarters during his visit to the country.

In the principal cities some of the hotels are very good; but in the smaller towns and villages it is difficult, and almost impossible to obtain accommodation. This, however, makes but little difference to the fisherman who has procured a fifteen-ton schuyt, and had it fitted out as a small floating palace to suit his requirements. Provisions are cheap, and excellent tea, wine, and spirits can be purchased in Holland.

The traveller will find the Dutch a thrifty people; and although to some they may appear somewhat tardy in their movements, are obliging and honest in their dealings.

Should the sportsman determine to remain in the province of Zeeland for some time he will find Ternewzen a convenient rendezvous. The most direct route to reach this point is by the boats which leave either Harwich or Queensboro' for Flushing, from whence small steamers cross the Western Scheldt three times a day.

For several seasons the writer made Ternewzen his headquarters, and on the canal and also on the lagoons at Axel, through which the former passes, on its way to Ghent, had some capital sport with both rod and gun. The angling in the canal is free; but to either fish or shoot on the lagoons it will be necessary to ask permission from the Boer's, who live in the neighbourhood, and hold the controlling interest. A silver key, costing a few shillings, will be almost certain to open the door to intending fishermen.

Although the angler or gunner in these parts will be in the wilds of Holland, a short trip by the spoor (train) will take him to Ghent, and a few hours to the Belgian capital (Brussels)—both cities too well known to the travelling community to require any further comment.

Unfortunately the fishing in Dutch waters will in no way compare with that to be obtained in the streams of many other countries; yet to the sportsman who is willing for a time to dispense with scientific angling with the fly the canals of Holland are to be commended.

To the lovers of wild-fowl shooting the chance, both on the coast and inland, of making big bags is excellent.

The skating is renowned; and although the canals, both in summer and winter, are the principal highways of the inhabitants, yet in no country in Europe is there better opportunity for a "wheelman" to test his capabilities than on some of the splendidly-kept roads of the Netherlands.

To add to the above inducements, there is something so quaint in this country, so different in every respect to all its neighbours, that the visitor will be doubtlessly much interested in a land so ably described by Oliver Goldsmith in the "Traveller":—

> "To men of other minds my fancy flies,
> Embosomed in the deep where Holland lies."

Notes

An angling friend, who has been at Newtown Stewart, Ireland, writes: "By the way, Newtown Stewart is a capital place, and fully bears out all Professor Brown said in his letter in the *Gazette* in spring. I killed five salmon one day on the fly, and had I not been flooded away during the following week, I think there would have been no difficulty in repeating the performance. Trouting is also first-rate in spring. I made excellent baskets in very bad weather in April last."

A fine specimen of the black otter, measuring three feet nine inches, was caught at Burnhervie, near Kemnay, Aberdeenshire, the other day.

Mr. Alfred Nuthall, J.P., of Kingston-on-Thames, and chairman of the T.A.P.S., in writing from Scarborough, where he is now visiting says: "I have had some excellent sport here. During the last three days I have taken, with rod and line, some good baskets of codling, silver whiting, gurnets, and dabs. Sea fishing here is now in perfection; but anglers must be fairly good sailors, as at this time of the year there are occasional nasty ground-swells on. If the weather permits, I intend to see what can be done with the rod and line—Nottingham reel and single salmon gut trace and hooks. I am using one of Slater's new rods and reel, which carries two hundred yards of dressed line well."

Mr. C. W. Gedney, writing from his old quarters on the Bann, says that, thanks to the wet autumn, all the flax water has long since disappeared, and there is now a good stock of clean fish in the river. A succession of gales have somewhat interfered with sport during the past fortnight, and the water is still very high; but his record of only two blank days out of eight (up to date of writing) is not a bad score on a semi-public river. As yet the big autumn fish have not put in an appearance there, and 17lb. has been the largest taken within the past fortnight, the average being from 10lb. to 12lb. The strong southerly gales now prevailing will, however, bring the laggards up, he says, and as there are only two rods on the long stretch of water available to persons taking weekly tickets (price one guinea), persons on the look-out for autumn salmon fishing might do worse than take a trip to the Bann, making Kilrea their headquarters. The killing flies have been Dan O'Fee's Blue and Claret and his dressing of the Judge. The gold spoon has also killed in the high water.

The death is announced of Mr. Robert Fraser Hall, which took place at his residence, 31, Prospect-vale, Fairfield, Liverpool, on Saturday week. Mr. Hall, who was at one time connected with the Post-office at Carlisle, was well known in this district because of his amiable and kindly disposition. He was a noted angler, and his feats in this particular sport will be long remembered by those who knew him. Deceased was forty-six years of ago.

A friend who is salmon fishing in Scotland, who recently killed five fish in one day, including a thirty-two pounder, describes a bit of extraordinary bad luck. He says he "lost fourteen fish in succession without one taking a proper hold." He is a first-rate fisherman, which makes the affair all the more extraordinary. In the spring we lost five or six fish in succession (not on the same day), and then killed six in succession, all on the same day.

So far this is the best back-end angling season that has been experienced on the river Ythan for a number of years. Some of the parties having permits from Lord Aberdeen have been getting two and three fine large fish in a day's fishing.

As a statement made by "Mac" in his article last week may cause some to wonder, and be misleading to others, he desires to take the earliest opportunity of correcting it. For "rivers north of the Ness" substitute "*not* north of the Ness." The omission of the word *not* escaped "Mac's" notice when correcting proof. Not one river north of the Ness, the Brora excepted, has a run, in good strength, in September and early in October, of the class of fish found at the same time in great abundance in such rivers as Spey, Deveron, Don, Dee, North Esk, Tay, Forth and Tweed.

Eight hundred fish—salmon and grilse—have already been killed on one of the hotel fisheries in Scotland this year. For April one of the rods had close upon a hundred. Should the water pretty continuously during this month be in good ply, it is not unlikely that the take for the whole year will reach the four figures. We do not give the name of the fishery. You know——, following a big fish "rise" to the anglers might be a big rent "rise" upon the lessee! It is often so.

Although the netting season is over, and the sale of salmon in England is illegal, enormous quantities of back-end fish continue to be received for sale by Scotch fishmongers. This sort of thing in the "extended time"—surely meant by the framers of the Act to be a time *solely* for sport, not profit—is getting worse every year; and so long as there is nothing in Scotch fishery law to prevent it, poachers may kill and consign with impunity. There is urgent need, in view of the prodigious development of a traffic so contrary to the spirit of the Act, that the Scotch Fishery Board should promptly take steps for dealing effectively with the matter. It has several times been brought under their notice by their inspector, Mr. Young.

The Scotch Fishery Board has recently issued their Report for the year 1890. As was the Report for the previous year, it is divided into three parts: Statistics; salmon fisheries; scientific investigations. Probably some of the things in Part II. will prove of interest to salmon anglers.

Last week the Duke of Richmond and Gordon presided at a meeting of the Spey Board. His Grace, it is understood, heartily approves of everything being done that looks likely to increase the stock of Spey fish, and better the angling all along the river, without at the same time depreciating the value of any individual fishery.

Once more, as has been the case for several years back, the talk is revived of the Deveron proprietors being about to buy up the Duke of Fife's Rackdyke and net fishings *in the river*, which would be stopped in order to convert the Deveron from a purely netting into a first-rate spring and summer angling river. But will this ever be done? No more praiseworthy fishery enterprise could the proprietors show.

The Duchess of Roxburghe is amongst the successful salmon anglers on the Tweed this autumn. A remarkably lucky rod has been the Attorney-General for Ireland, who in four days caught twenty-three fish, his best day being nine.

Some first-rate large fish are being caught on the Panmure Arms Hotel Waters of the North Esk at Edzell, Forfarshire. The fishing is *free*.

The Fiddich grilse and sea trout fishing, to which we recently directed the attention of anglers, has not for years been so good at any time, as it was last week. The water was in perfect order, and fish were coming up in great numbers from the Spey.

A very large burn trout (from the Bervic Burn), but in wretched condition—a regular "cock-kipper"—was shown in the window of James Brown, fishmonger, Aberdeen, last week.

Not for long have Shin, Oykel, and Cassley, fished nearly so well as this year. The benefit to the angling on these rivers, which it was anticipated would result from the Duke of Sutherland abandoning his netting, has been—and speedily too—even more than fully realised. The Shin fished well up to the very last day.

With the beginning of the tailing away of the late great flood, an immense number of "brown and black toads," of little (migratory), back-lying fishes, cleared the falls of Feugh at Banchory.

Sir John Gladstone, Bart., of Fasque, caught four large salmon on the North Esk within an hour on Friday evening last week. His uncle (the ex-Premier) was his guest at the time.

As a result of the alterations made on the Muggiemoss Mill dam-dyke last year, fish can now pretty readily get up the Don to the waters farther inland than the several mill obstructions. There can be no doubt of this, for last week, during the pretty heavy waters, most suitable for ascent, great shoals of fish were noticed clearing the uppermost dyke. Fishing the Manar Water, twelve miles farther inland, Colonel Martin had eight fish on Monday of this week. This is only one proof of the possibilities of Don, were it used as it ought to be.

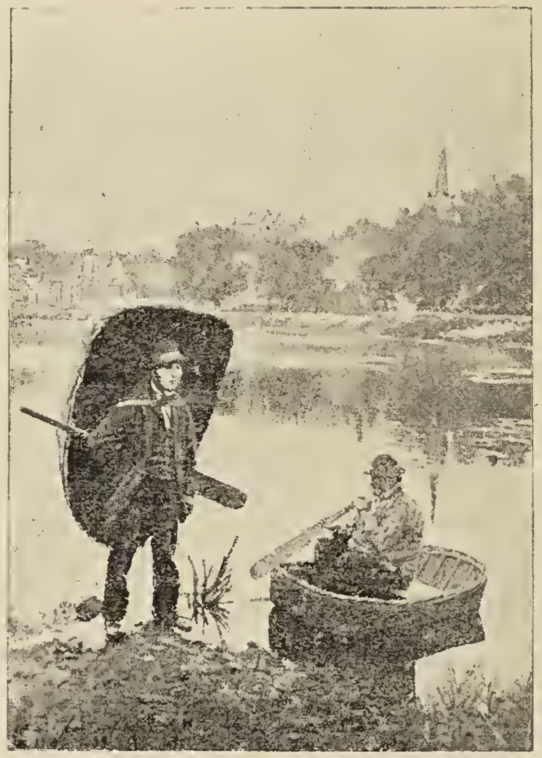
The *free* water of the Tay, Perth, has been fishing remarkably well; indeed licking hollow nearly all other *free* waters in yielding sport with good back-end salmon.

Since the heavy spate of last week, a considerable number of salmon have been observed leaping in the sea at the entrance to the river Deveron in their endeavour to ascend. At the junction with the sea the beach is composed of an immense quantity of small pebbles, and when there is a continuation of drought, combined with the action of the sea, the estuary, which is so narrow that it could be almost leapt, gets obstructed, so that an occasional spate is required for washing away the *débris*. At the Raik cottages, where the dykes are situated, the fish were very numerous, their passage over the dykes and through the cruives being eagerly watched. Many of them got right up to the Cabrach, the uppermost section of the river. Of late the volume of water has become rather low for the best of sport being had.

Notes and Queries

When Sale of Salmon is Prohibited.—No fresh salmon may be sold between 3rd September and 1st February, except such as can be proved to come from parts beyond the seas, or to have been taken, if in the United Kingdom, in legal netting season and in legal manner. Salmon, dried, pickled, or cured abroad, or, if within the United Kingdom, between 1st February and 3rd November, may be sold after that date. The onus of proof that the fish were caught out of the United Kingdom, or, if within the Kingdom, that they were caught during the legal netting season by legal means, or that, if pickled, they were pickled between 1st February and 3rd November, lies with the person selling or exposing for sale. The exportation of salmon is prohibited between 3rd September and 30th April, unless it can be proved that the salmon exported or entered for exportation was caught during the time at which its sale would be legal in the United Kingdom: the *onus probandi* lies with the person exporting. The capture and sale of "unclean" salmon—*i.e.*, salmon recently spawned or full of spawn, are prohibited under heavy penalties. Roe may not be used as a bait in salmon angling.

Coracles.—This very ancient form of boat is probably well known to many of our west country readers. It is the lightest boat in use in this country, and also probably the most difficult to manage, and we should not advise anyone who cannot swim to make one and try it on deep water. Fishermen on the Wye and Severn are wonderfully at home in these big waterproofed, flat-bottomed, clothes-basket-like affairs, which are propelled with one paddle. The ancient Britons made them of skins stretched over a wicker frame. We believe well-tarred canvas is used now.



CORACLE MEN.
(Showing Coracles as used and carried by Fishermen on the Wye, at Ross, &c.)

A Threatened Drought.—One day, a good many years ago, a friend and I had had a great day's trout fishing from Overscaig on Loch Shin, Griam, and Merkland, having killed nearly 80lb. of trout and *ferox*. On returning to our lonely little hostelry we were naturally triumphant, and sat down to a somewhat late dinner at peace with all mankind, to say nothing of the inhabitants of the lochs. The day had been a thoroughly enjoyable one, not too hot, and just the right amount of breeze to render fly-fishing delightful; little did we know the trial that was in store for us! On getting up from the loch-side to our inn, we gradually became aware that something had gone wrong in the establishment; there was a certain air of sadness about everybody, our jolly hostess—was not herself, our boatmen speedily became similarly affected, and even the stalwart wench who waited upon and generally did for us was evidently depressed by the prevailing epidemic. What could it mean? Both Willie and I began to imagine all sorts of disasters. Was anyone dead in the house? Had we arrived at the last of the tough old hens, upon which we had latterly been so freely feasted? Had the herd of swine from which we derived our matutinal bacon betaken themselves to the moors to escape their impending fate? Had Annie, the other maid, eloped with an exciseman? And so on. But all these dreadful suppositions were as nothing to the terrible reality which our hostess communicated to us with tears in her eyes. The whisky had given out! There was no getting over the awful fact. There had been, it would seem, a funeral in the neighbourhood on the previous day, and the consumption of the national beverage (it was supplied from Overscaig) in connection with the ceremony, had been so tremendous, that only about a gallon was left on the premises for home consumption, and even this pitiful quantity had been consumed that morning by some of the thirsty mourners making their way home. The cause of the general melancholy was now clear, and Willie and I, after discovering that there was not a drop left in our somewhat roomy flasks, began to feel dreadfully down in the mouth too. However Annie had been dispatched post-haste on foot to Lairg—a distance of fifteen miles—at noon with instructions to bring a supply of the much-required beverage, by hook or crook, and her advent was momentarily expected. As the time wore on to eleven o'clock and there was no sign of that young lady, things began to assume a serious aspect, and a greatly-increased anxiety manifested itself. In fact, each individual of our little household, though not caring to put such a thing in words, was beginning to realise that it was quite possible that he or she might really have to retire to rest without whisky. Dreadful thought! A melancholy silence prevailed throughout the establishment, no one caring for conversation. Soon after eleven o'clock, however, when the tension was becoming too great, and hope was almost dead, a frantic yell came from the hillside, and one of our gillies, who had ascended to a point which commanded an extensive view of the road to Lairg, rushed in with the joyful intelligence that a cart was coming up the loch side! The effect of this information was nothing short of magical. The lugubrious countenances of the gillies bore once more a solemn grin. Friend Willie, who had given up hope and partially undressed, once more descended from above stairs, and in an extremely airy attire executed a *pas seul* on an old chair, which did not prove equal to the occasion, and the dancer came to the ground in somewhat undignified fashion. Our hostess and her remaining handmaiden piled more peat on to the fire, and an immense black kettle on the top; while an old shepherd, one of the mourners at the previous day's ceremony, whose morning pick-me-up had proved too much for him, and who had been asleep by the fireside for many hours, woke up looking quite spry and began taking snuff with energy. Sundry collies appeared from different corners and exchanged friendly remarks; the confounded old cocks awakened to a sense of duty by the unwonted commotion, began to crow, and amidst a general chorus of delight, the fair Annie drove her cart up to the door, pointing triumphantly to the barrel of whisky which it contained, and informing her jubilant audience that "the rest were comin'" (meaning, of course, the other barrels)! Quickly was that cask conveyed indoors, and quickly was it tapped, a liberal portion of its contents being run into a large brown jug; and within ten minutes of its arrival, everybody was enjoying his or her "tumbler." Somebody produced a fiddle, and it was well into the small hours before the members of the household were wrapt in slumber and the unhappy cocks got a chance of going to roost.—R. P.

Dumfriesshire Otter Hounds.—In consequence of the sudden change in the temperature of the Border rivers, the above hounds will cease hunting for the season. The pack, which is a recently-formed one, has been most successful during the past few months.—G.

DAPPING WITH THE GREEN DRAKE IN IRELAND.

BY QUILL GNAT.

(Continued from page 186.)

THE next day we commenced operations in good time. The captain had been making the most tremendous fuss about starting at four o'clock. This determination he expressed in the smoking room overnight, but when the morning came, and the faithful James made row enough at the door to awaken the Seven Sleepers, I heard a voice issuing from the bedclothes: "Shan't get up till eight o'clock; there is too much wind for dapping." Really it was a good fishing morning, but eventually we did not get to our boat until nine o'clock. The spot we intended to try first was about twelve miles up the lough; we determined, therefore, to take the little yacht and sail up, as there was a fair wind.

Merrily we danced over the waves, the breeze freshening every minute, until we had quite as much as we wanted; still our little craft behaved beautifully, and soon we were in sight of the bay, wherein the big 'uns are supposed to dwell. All at once the captain's henchman and first mate, who was pacing the deck with bare feet, shouted out, "Sail ahead! and bedad, your honour, I'm thinking it must be the *Ocean Swift*." As we drew on, the graceful outlines of another yacht, somewhat larger than ours, appeared in view, and in two minutes James's conjecture proved correct, and we knew that the vessel in question had on board a crew of fishing friends who had agreed to join us some time before. We soon made out for a certainty that there was somebody on board, for a deep voice, with the richest of brogues, called out, "Halloa! ye poachin' divils, ye're too late entirely; is it whisky ye're lookin' for?" We all scrambled on board, and there was a great talking and shaking of hands, mingled with a mysterious noise as of clinking glasses, and an occasional short, sharp explosion, followed by a rushing, gurgling sound, most significant to the well-trained ear. Meanwhile, the owner of the voice, who was introduced to me as "The Murragh," slyly lifted a hatchway in the floor of the little cabin, and showed me a well full of magnificent trout, many of them 5lb. and 6lb. weight, and all in the pink of condition; this sight filled me with inexpressible yearnings. The captain, too, was equally moved to action, and we soon "ceased firing" and took to our respective boats. There was no trouble in getting flies, they were "up" in countless myriads, and every bush and rock was covered with them. We picked our baskets full in ten minutes, and then rowed quietly to the head of the bay and the three boats commenced to dap in earnest. We drifted in line, a very little distance between each boat, so that we were all well within hail of each other. The "Murragh" was mighty at anecdote and chaff, and kept us in a roar of laughter until somebody "*sthuck in a fish.*" Instantly a calm succeeded the storm, and all eyes were intently watching the lucky James as he adroitly handed his rod to the captain. The fish was about 3lb., and was soon guided into the net, the usual scream being the signal of the successful application of the "*Praste.*"

The day was cloudy, and there was a good deal of wind, which made the water rather lumpy. I mounted three flies, and they floated beautifully on the black-looking waves; we were nearing some shallows, and I fancied I saw a slight rise near the point of a rock. I looked again and suddenly I saw a very large trout roll like a porpoise lazily at a May-fly, and take him down. I guided my bunch of flies as well as I could in the wind, and put them over the exact spot—one moment of breathless suspense, and with a rush the big fish made sure of his morsel. I waited the customary four seconds, and then the line suddenly tightened and I was fast. This fish went down directly, and kept up a sullen tugging in deep water for quite ten minutes, then all at once he slowly came towards the surface, and James was ready with the net. I saw his golden body become more distinct as I shortened line; but just as he was in the jaws of the net, he seemed to become suddenly aware of his danger, for with a tremendous rush he was off like lightning, and my good little reel screamed as the scared fish ran off at least 50yd. of line. I managed at last to turn him, and then he showed himself twice clean out of the water. "A ten-pounder," I shouted in my excitement, and at the time I fully believed he would weigh all that. Slowly but surely the rushes became shorter and less frequent, but still the fish played very strong, and I must confess my hand shook a little as he made his last dive into the peaty-looking depths. Gradually I drew him (still reluctant) to the surface, and as I saw him encircled by the deadly mesh, I could not restrain a shout of triumph, to which the other boats responded in real sympathetic style, for they had all seen my rod curved like a half-hoop for fully twenty minutes, and were as much pleased with my success as I was myself.

Tight lines once more, and the spring balance was brought into requisition. Seven pounds and a-half was the weight, and though I quite thought the fish was heavier, I was satisfied with him as he lay on the seat of the boat, and showed us his noble proportions and lovely colouring. During the day I landed ten more fish, but none larger than my first beauty, and the smallest weighed 3lb. Now to moralise on the extraordinary flukiness of luck: on this day the captain did not land *one fish*, although we were all fishing the same water, and the old Murragh beat the best of us two to one; this no doubt, as far as he was concerned, owing to his wonderful skill, for it is admitted that he has no superior in the art of dapping, and he is the keenest fisherman I ever knew. One of our party was so struck with the "Murragh's" adroitness and success, that he wrote a little poem on him, with which I will finish my paper, and will only add that I hope many readers of the *F. G.* will have as much enjoyment out of a month's dapping as the writer.

"THE COMING OF THE MURRAGH."

(After Tennyso

What means this awful stillness in the air?
This subtle expectation, dimly felt,
As if some dread event shall come to pass,
As if some presence strange and undefined
Is haunting this fair landscape; e'en the birds
Have hushed their warbling, dumb with dread, and as
We gaze into the waters deep below,
We see the threatened trout with flashing speed,
Retire into the cavernous recess
Of overhanging rock or green-hued weed.
The May-fly wings his devious flight to shore,
Nor stays to light on bush or waving branch,
But hides in secret cracks and holes, as though
To escape from something not yet known; the lake
Is calm and placid, but anon we see
A tiny ruffling billow sweep across,
As if some troublous warning did foretell
The deeds of death and slaughter yet to come.
What means this? Do we ask? Look yonder, now,
Far off a cloud of Murraghs fills the sky;
They flee before the presence of a man,
"Bearded like pard" and of ferocious mien;
In his cruel hand he wields the dreadful wand,
His fingers toy with hook and crafty bait;
His eyes shoot fire, and every hiding fish
Is withered by the terror of his glance.
Fly! fly! while yet there's time, ye spotted trout,
And all ye comely May-flies, whose desire
Is to escape the deadly pointed steel,
Creep in your nooks, for lo! 'tis he! 'tis he!
The Mossy Pussed[*] Murragh, full equipped—
And, see already some are all too late,
For signs of gore are on his hands, and there
Upon the advancing vessel lie the spoils.
Oh! men of "Annagh," lesser stars than this,
Look to your laurels, for in very truth,
This Anak among fishermen is here,
And 'ere he leaves the shores of "Derg," the bays
And waters will unfold a tale of woe,
And many a gallant fish will rue the hour
When first they saw the face of Mossy Puss.

THE WINTER GARDEN & AQUARIUM AT SOUTHPORT, AND SOME NOTES OF THE SEA FISHING.

BY T. R. SACHS.

THIS extensive and beautiful aquarium and winter garden is the most popular resort in Southport, being open all the year round, affording amusement and recreation in a variety of forms, and in quick succession. The conservatory is one of the finest in the kingdom. The aquarium is one of the most complete in this country, and contains a good collection of fishes and zoophytes. The theatre and circus attached to the building are open throughout the year, and the best talent from London and elsewhere is engaged. The hall is fitted with a proscenium and stage for miscellaneous entertainments, and a spring floor for dancing. This magnificent establishment was opened on September 16, 1874, by the late mayor, Mr. Walter Smith, J.P., Mr. John Long being manager and secretary.

The late Frank Buckland, M.A., H.M. Inspector of Fisheries, having accepted the invitation to deliver the opening address, he brought some of his pisciculture friends, as assistants, with him, consisting of Mr. A. D. Bartlett, of the Zoological Gardens, London; Mr. T. R. Sachs, representing the Thames Angling, Piscatorial, and other London angling societies; the late Mr. H. L. Rolfe, the well-known fish artist; Mr. Parnaby, fish culturist. Mr. Sproat, of Lancaster; Mr. Parry Evans, of Wales, both contributing live shell fish and salmon for the tanks. Mr. Lloyd, of the Hamburgh and Crystal Palace Aquariums; Mr. Searle, secretary to Mr. Buckland; and Mr. Edon, of the Buckland Museum, South Kensington, our railway and hotel expenses being paid by the chairman and directors of the Aquarium and Winter Gardens.

The opening address was full of practical facts, Mr. Buckland describing the contents of each tank in an instructive and interesting manner. He said: "I believe that this magnificent institution will do more in the way of educating the people and bringing an increased supply than any institution in this neighbourhood." He remarked that the salmon was the king of fishes; that the value of the Scotch fisheries was over £300,000 a year, and the English £100,000 a year. What they had to do with the salmon was to leave it alone, and to give it free access to the breeding-grounds. The prevention of the pollution of rivers was really most important. If they would give him clean water for the fish, they would have it cheaper, and very few (if any) doctor's bills to pay.

After a long address, which was frequently applauded, Mr. Buckland concluded by stating that the Southport Aquarium promised to be of the highest national importance, because it would teach people to observe living objects, to be kind to all animals, and, above all, to read the unwritten but most striking works of the Creator, as demonstrated even in the humblest of fishes, and culminating in man himself, to whom was given dominion not only over the beasts of the field and the fowls of the air, but also the fishes of the sea. The large tanks are well supplied with sea fish and shell fish. The fresh-water tanks were also full of fish. Several fine golden tench, presented by the late Mr. Higford Burr, of Aldermaston, near Reading, were safely conveyed by Mr. Edon. I noticed there were no barbel, bream, dace, or gudgeon—species not known thereabouts—so on my return I enlisted the assistance of Mr. W. H. Brougham, the secretary of the Thames Angling Preservation Society, who got some of our Thames river-keepers to catch some large barbel, dace, and gudgeon. The bream supply I took charge of, and caught some large specimens at Walton, and, by arrangement, Mr. Brougham and self brought them all alive to the Aquarium at Southport, the directors of the N.W. Railway kindly granting us a separate compartment and free transit to our destination, our hotel expenses being defrayed by the chairman and directors of Winter Garden and Aquarium. Mr. Brougham, as a member of the Press, duly reported our proceedings in several London and country newspapers, and sent copies to the chairman and directors, who, in return, sent Mr. Brougham a handsome cheque for five guineas (perseverance rewarded). Southport is known as the Brighton of Lancashire. Many well-to-do business men of Liverpool, Manchester, Preston, &c., reside the best part of the year here, going to their several occupations in the morning, returning to this salubrious place in the evening. The pier is somewhat similar to the one at Southend in the Thames as regards length. The total length is 1,450yds. (4,350ft.); Margate Pier is 600ft.; Deal Pier, 1,000ft. in length, thus showing the difference in length. The extreme length of the pier need be no drawback to bad walkers, as a steam-tram frequently runs down for 1,200yds. The cars are comfortable, and the charge is twopence a single journey and threepence a return ticket. The end of the pier is T shaped, containing a broad platform at the end, on which is a large pavilion for musical performances and shelters for the promenaders. This extreme end of the pier is one of the most popular resorts in Southport. It is there the girls get the bloom on their cheeks again, and the pale town faces become ruddy from the sea breezes and the sun.

The fishing from the pier is now very good. A paragraph in the *Southport Guardian*, May 3, 1891, describes the fishing as extraordinary, one hand-line taking 148lb. in ten and a-half hours, and that the Ribble navigation scheme is making

---

[*] Mossy Puss (another name for the Murragh).

Southport Channel the best fishing ground on the Lancashire Coast, by driving the fish out of the filthy channel towards the sandy shores of Southport. The hand-liners throw from thirty to forty yards of line with a 3lb. sinker, but complain that the baits are soon eaten off by hermit crabs.

A fishing rod prevents this annoyance, as the line is then kept in a slanting position, leaving only the bottom hook, intended for a dab or codling, for an occasional crab to feast upon; sand-worms are the usual baits; mussels when procurable; cockles are plentiful, close at hand. A friend recently visiting Southport adopted my plan of fishing with rod and paternoster line, made up with three hooks; he had excellent sport and astonished the visitors with the science and skill he displayed in catching so many more fish than the hand-liners with their many hooks, the latter being a dirty and dangerous style of fishing compared to the more artistic and gentlemanly angling with rod and line, and the comparatively clean tail of a hermit crab for bait on each hook, as they are the most tempting for all kinds of sea fish, and stay on the hooks.

On the South Land end of the pier is a large tract of land which was practically waste, and has now been converted into an ornamental recreation ground with a central lake, the area of which is sixteen acres, on which many pleasure boats ply for hire, and can be engaged for sailing, rowing, or fishing, netting and trawling being strictly prohibited.

On the North Land side of pier are very extensive sands. Some sailors have sailing clippers on four wheels; when all a-board, one of the men hoists the sails, and away she goes over miles of hard sand. There are numbers of bathing machines and capital donkeys, and I was glad to see that the boys were kind to their animals. Altogether I think Southport the most charming sea-side resort I ever visited. Suitable fishing-tackle can be had of Mr. William Bolton, The Armoury, 35, Tulketh-street, to whom I am indebted for an account of the recent improvements as regards the fishing and the new lake. It is not generally known that another mode of occupation at Southport (which is quite out of the ordinary line) and which affords abundant employment, is the training of greyhounds for coursing at the Waterloo meeting and elsewhere.

CHUB AND DACE: AND ANGLING FOR THEM.

BY ALFRED JARDINE.

(Continued from page 197.)

HAVING subscribed to the *Fishing Gazette* from the earliest period that its popular Editor became proprietor of the Journal—which I am glad to say is in largely increasing request among the anglers of England, Scotland and Ireland, as well as those of Greater Britain and the continent—in going through some back numbers of 1886, I found two recipes for chub-baits, which are described as "of surpassing excellence." One is a paste compounded of old ripe cheese and bacon fat, pounded together in a mortar. I feel positive this is a good bait. Cheese of itself when old, grows hard in the water; and though butter is often mixed with it to keep it soft, bacon fat answers the purpose better, because it not only imparts an enticing flavour, but it makes a much tougher bait, which holds together better on the hook or triangle.

About the beginning of this century, shrimps or prawns skinned and beaten up with a little honey in a mortar, into a stiff paste, was recommended as a very killing bait for large chub in the Thames, and I have no doubt, if used by any of my readers who are inclined to try it, that it would compass the death of many a lusty fish; indeed, there are few better baits for chub and barbel than a large boiled prawn skinned, or the tail of a boiled cray-fish, and these can now be obtained at Sweeting's and most fishmongers. When chub are in the weir-pools—and for some weeks yet, a goodly few big ones will keep in the deep "weir eddies"—a sporting and successful way to capture them is to fish with a large minnow, or three-inch gudgeon, on a single hook, placed either through their top lip or their back fin; the tackle being four feet of sound trout gut, a cork roach-float, and three or four B shots, to keep the live-bait down. Fishing weir eddies this way, many large chub and good-sized pike, too, are captured. This used to be a favourite method of mine some years since, when fishing the Colne below Rickmansworth, Harefield, and especially Denham, thence to Uxbridge, on to West Drayton; but I am told the fishing of to-day in those portions of that stream, is not nearly so good as the time I am alluding to—viz., ten or twelve years ago. Before Colonel Lambert's decease I frequently fished Denham Park, where were weirs, not large but lovely, from an angler's point of view; and with a minnow or small gudgeon, on tackle such as already described, I have taken as many as thirty chub a day, from 2½lb. down to 1lb., with an occasional four-pounder. I once got a trout of 5lb., which I returned to the river, it being the "fence season," and pike of 14lb. and 10lb.; but smaller pike of 3lb., 4lb., and 5lb., in quantities, which, on light float-tackle, give really splendid sport.

As the Colne is not considered to hold large pike, I may, perhaps, here mention that my old friend, Mr. W. H. Brougham, the highly-respected secretary of the Thames Angling Preservation Society, was my companion on a portion of the Colne when I caught (and he gaffed for me) a pike weighing 18lb.

But the glories of the Colne have departed! Tapping the "watersheds" by artesian wells has robbed the river of its natural volume of water; and the filth from sewers, pig-styes, slaughter-houses, &c., poured into it and its tributaries, the Chess, the Gade, the Mimram, &c., has resulted in much destruction of all kinds of fish—*but worst of all the trout.*

The Thames is, unfortunately, not an exception as regards this decadence of sport. Steam launches hurrying hither and thither, the wash of their screws, the enormous flotillas of rowing-boats and towing-boats have so harassed and frightened fish away from their usual and natural spawning beds—that where there was once good chub fishing in the old times when Thames was quiet and sedate—the days of Mrs. Bond, of Kingston; Mrs. Harris, of Lincoln Arms, Weybridge; Mrs. Parslow, of the Anglers, Marlow; or Wm. Hull, of the Old French Horn, Sonning; where anglers could obtain good fare and civility, without being charged exorbitantly *for the reverse*, and they could depend on a well-aired bed, with sheets "smelling of lavender"—*those* were the days when chub could be caught in such quantities, in favourable weather, rowing down-stream from Oxford to Sunbury, that all anglers could do was to give away their captures to the villagers residing near the river, the usual catch per rod being fifty or sixty pounds weight per day.

In the Loddon, or some of the quiet back-waters where steam-launches do not venture because there are no exits, good sport can yet be had. I have in my mind's eye such "old-world" bits of the river as "the Fleet" at Datchet; also that splendid bend of the Thames at Cookham, where, I believe, *might* has assumed a *right* to shut out anglers; Sonning, the backwaters of Mapledurham, and Cleve. But, over all the above, for quietude, where fishing is yet excellent—because "pot-boilers" never venture into these sylvan retreats—the backwaters of Long Wittenham and Sutton Courtney, each nearly a mile in length, abound with chub and fish of all kinds, and the winter fishing in these two beautiful parts of the *old Thames* (before the river was straightened and "canalised" here and there for barge traffic) yet remain to gladden the persistent angler who doesn't mind "roughing it" in a clean little country inn. The difficulty is to get to these last-named backwaters. I think Abingdon is the most convenient railway station for either, involving cab drives of from three miles to Sutton Courtney, and six miles to Long Wittenham.

About a mile below the last-named village are the woods of Clifton Hampden, overhanging the river, numberless boughs projecting many feet athwart the stream, under which is splendid chub fishing, either with fly or "floating"—Nottingham style. Much of this part of the water can be "waded," and the river bed appears to be a hard sandstone.

Three miles (or a little less) down-stream is Day's Lock and Weir, an excellent water for chub, perch and barbel. As a rule (by previously writing) a comfortable bedroom, fair attendance, and decent cooking, can be obtained at the lock-keeper's cottage; but the angler must either take with him his "commissariat," or arrange to have it sent from Abingdon (six miles away), or from the village of Clifton Hampden, which is closely adjacent.

About the group of islands just above the Great Western Railway bridge, which crosses the Thames at Moulsford, good chubbing is to be had by a *quiet* and painstaking angler; also at Cleve (two miles below), and from Streatley down to "the Grotto" are numerous fine "chubby places," all well known to Mr. R. E. Mills, landlord of the Swan Hotel, Streatley, than whom a more skilful and reliable professional angler does not exist on any part of the Thames. His inn, the Swan, is so well managed, and the comforts of anglers so studied, the tariff of charges being very moderate, that it is *the* inn of all others there, or in the village of Goring opposite, for anglers going to that part of the Thames to stay at.

Pangbourne Reach, on to Mapledurham and Tilehurst, is a section of the river noted for chub. Mr. Wm. Hull, late of the French Horn at Sonning, who now keeps the Elephant Hotel at Pangbourne, is an excellent angler, and knows all the likeliest swims, eddies, banks, and bushes in that part of the river; and then Wm. Hull is such a capital fellow himself, that I advise anyone going for a few days to Pangbourne to make the Elephant his headquarters, for nothing delights Hull so much as to do his utmost to secure his patrons good sport.

For autumn and winter fishing, the eighteen or twenty miles of water between Abingdon and Pangbourne are about the best of the Thames; and after the tourist season this part of the river is very little disturbed by steam-launches or pleasure boats; thus chub and other fish lose somewhat of their "fearfulness," and heavy captures often fill the baskets of anglers.

At Shiplake, Wargrave, from thence to Marsh Lock, the "chubbing" is fairly good. In the time of *old* Marsh Lock, before the present structure was erected, and spoiled the barbel and chub swims, large captures were of frequent occurrence here. A tree, bearing luscious black-heart cherries, overhung the old lock pool; and the dead ripe fruit dropping into the river was eagerly swallowed by the chub, of which there were many large ones about this place; and a source of amusement to boating parties going through the lock, while they waited the transit of their boats, was to pitch cherries in and see the fish swallow them, as the fruit floated along the stream by the old campsheating.

Legering is at times a successful way to angle for chub. Worms, cheese paste, a bunch of gentles, or wasp grubs, are all killing baits; and the tackle previously described for barbel and bream will do excellently well.

Approaching frosty nights (there have already been some frosts) will induce chub to seek their winter retreats; and of all methods the "Nottingham style" (using pith and brains for bait) is the most successful for winter fishing. I shall describe the "how, the where, and the when" probably next week, but, at any rate, in an early issue of the *Fishing Gazette*.

(To be continued.)

SOME NOTES ON THE BEDFORDSHIRE OUSE.

BY AN OLD HAND.

(Continued from page 199.)

FLY FISHING.—The fly-fisherman requires a good strong rod and tackle for chub fishing, a rod that will stand a heavy strain—a good shaking—and prevent large chub from rushing into the weeds and rushes, &c., and ten to one end in breaking the tackle. A large assortment of flies is not necessary, for experience proves that the Black and Red Palmer in two or three sizes are sufficient. A few good rudd are taken with the fly when the river is in flood. I think I hear some of you exclaim:—"Rudd taken with the fly when the river is in flood?" My answer is this: when the river is in flood or the lochs below St. Ives are opened for any purpose, the fishing at Holywell down to Swavesey is much better, because the water often comes on the banks, and even the meadows in parts, then the fish affect the quiet places near the sides in search of food, and the fly comes in useful; but the difficulty is for those living at a distance to know this. I have no doubt that the water would be coloured after heavy rain, but not too much for a fly in the places mentioned above, for the river, comparatively speaking, soon clears.

And what does my old favourite, "The Scientific Angler" say with reference to using a fly in a discoloured water? Another useful "child of fancy" is the flat gold-bodied whistler fly; this is hackled with red-brown pigeon's breast, or that of the whistling plover, from which it takes its name; and this fly is really valuable for discoloured and even thick rising water; and upon the Wharfe we, upon a late occasion, took trout sufficient to fill our creel five times, had they been all retained, whilst several anglers who had repaired to the same length returned to the hotel under the impression that the water was too thick for the worm. "Too thick for the worm?" I just wonder what the Old Rooster would say to that party! How these remarks will gladden his soul, to be sure.

Period.—July and August: Flies for dace, roach and rudd, the Black and Grey Gnat are most reliable. For chub, in August and September, the Black and Red Palmer, both of large size, and the larger the fly the larger the chub; in short, avoid using small flies in the Ouse, because there is such a number of bleak and other small fry causing great annoyance to the angler, and my advice to fly-fishermen generally is, *Always* use large flies. There is a fly called the "White Zulu," which is freely taken by perch, chub, roach, and rudd; and fine sport is often had in the shallows with perch by using two flies. They will take the tail fly, and a half pounder gives very good sport; and if *anglers* could be induced to return all perch say under six ounces, what a grand perch river this would soon be.

To resume. Instead of being on a length of gut, have gut-eyed hooks—for this reason, when a chub is struck, he goes off with such a rocket-like rush for the nearest weeds, rushes, sedges, or round a stick, &c., that it is the dome of St. Paul's to a cocoa-nut that the gut breaks at the head of the fly. Then follows a "D" of unusually large dimensions, and a most intense feeling of disgust takes full possession of one; therefore I say use gut eyed hooks, and so prevent most of this annoyance. "You prefer to use small flies tied on in the ordinary manner. Very good. Then the next best thing is to go and enjoy yourself in your own fashion; then you will be able to sing the following refrain—and use gut-eyed hooks:

"Never meet troubles half way,
Nor sigh o'er the things that are past;
And if bad luck comes in your way,
You are happy because it can't last"—

last—with gut eyed hooks. One evening I saw a fellow fishing near Over Ferry lose three chub in the space of about twenty minutes, simply because he did not use gut-eyed hooks, and you should have seen his face, dear friends.

Some Swims, &c.—From St. Ives locks for about a quarter of a mile, to "Friend's Corner," the water is from 8ft. to 9ft. in depth, and at the "corner" the river opens out into a splendid sheet of water, and contains roach, perch, jack, and on certain occasions bream. By Jove! the pike that *have been* taken in this glorious sheet of water. From here to the railway bridge is but a short distance, and several good roach and bream swims may be fished from a boat in that seclusion, quiet, and peace, so beloved of the angler, where the water "dimples in the dark of rushy coves;" and the most taking and lovely swims are sometimes to be found. Just below the railway bridge are the well-known Drayton shallows, and next we come to the celebrated "Church Hole," nearly opposite Holywell Church (which can be seen in the distance), and good roach are often taken in this swim; then the water is shallow again until within about one hundred yards of Holywell Ferry. At this point there is 8ft. or 9ft. of water, and good perch are sometimes taken with the minnow and small gudgeon, and large chub have also been taken here with similar lures.

Crossing over to Holywell side of the river, excellent fly-fishing may be had for about a mile down to Swavesey Gravel, the water on this side being shallow all the way, and chub, roach, and rudd affect this reach in fair numbers. But near Holywell Ferry, on the opposite side to the above shallow, and magnificent high thorn-hedge (*i.e.*, on the Swavesey side of the river), it is deep water nearly all the way down from Holywell Ferry to Swavesey, the shallow on the Holywell side of the river reaching the same distance.

"Ducker's Hole," a splendid place for bottom fishing, and a good haunt for pike, is opposite the high thorn-hedge previously mentioned, and is some 20yds. in length, and about 9ft. or 10ft. in depth.

Good perch are sometimes taken about here, with live-bait, small gudgeon being a favourite lure. On the Swavesey side of the river there are several splendid swims for bottom-fishing that may be fished mainly with a float, either from the bank or a boat; the latter for preference, because one has more command over the swims, and there is not half the difficulty in landing the fish; for instance, at the time of my last visit this side was very greasy, sloppy, and muddy, and good thick waterproof boots are very necessary to one's comfort. When fishing many of the swims from this river's bank, a net with a good long handle is very essential, the sedge and rushes in places being very thick.

I met in the most unexpected manner a Londoner, a man well known to me, who proved a rattling good companion during my stay, and who lost a very good fish from this cause. There are often four things to contend against when about to net a fish: the pasty slippery banks, bullrushes, water-flags, and weeds, which often run in a regular line for some distance, from four to six feet or more from the side. To some this may seem so much twaddle; but those who are strangers to the river should not forget that nine-tenths of this annoyance may be avoided by fishing from a boat, which may be obtained at Holywell Ferry. Walter Metcalfe is the boatman—a very decent fellow, and his charges are reasonable for live-baits, boat, and attendance; and good accommodation can be obtained at the inn close to the river, kept by Mrs. Jackson, and in the height of the season two or three days' notice should always be given to prevent disappointment.

As some of your readers may not know the size chub attain in this river, here are a few specimens: Last year Mr. J. Miller, of Cambridge, took six chub near St. Ives, with large Black Palmer, that weighed 30lb. On another occasion he took six chub with small gudgeon, and the largest fish weighed 7¼lb., and measured 22in. in length. This fish is preserved. Last year the same gentleman caught at Over Staunch one Loch Leven trout, 7¼lb. in weight, with a small gudgeon on a fine roach tackle. A carp was also taken with white paste that weighed 4½lb.; and Mr. W. O. Hattersley, of Cambridge, took three chub near St. Ives that weighed 15lb. with the Zulu-fly. These fish are preserved. It fairly takes one's breath away to mention such takes; and yet there are persons who say, "There are no fish worth catching in this water." But let an angler get fairly hold of a chub similar to the above, and he will see the necessity of being thoroughly prepared for any emergency, for one never knows what may happen. Had the chub weighing 7¼lb. been caught four or five years ago, instead of last year, I should have come to the conclusion that it was the "historical chub," which so many of us heard about, but none ever saw.

(To be continued.)

Grayling in the Eden at Appleby.—"Speaking of this fish reminds me of a letter which I received last week from a gentleman at Appleby, informing me that he had caught two grayling weighing ¾lb. each on the Eden. These will no doubt be a portion of the batch turned into the river about four years ago by Mr. C. D. Thompson, of Seaton Carew, near Hartlepool. They were put in as fry, and for some time not a trace could be seen of them. Last autumn, however, I heard of several having been caught with fly, and now this is the latest instance. Whether the Eden will ever become a good river for them remains to be seen. I am inclined to think that it will, especially on the upper lengths."—Halcyon, in *Leeds Mercury*.

A TREATYSE OF FYSSHYNGE WYTH AN ANGLE.

By Dame Juliana Berners.

Written Four Hundred Years Ago.

(Continued from page 21.)

If ye woll be crafty in anglynge: ye must fyrst lerne to make your harnays. That is to wyte your rodde: your lynes of dyuers colours. After that ye must know how ye shall angle: in what place of the water: how deep: and what time of day. For what manere of fysshe: in what wedyr. How many impedymentes there ben in fysshynge y^t is callyd anglynge. And in specyall wyth what baytys to every dyvers fysshe in eche moneth of the yere. How ye shall make your baytes brede, where ye shall fynde theym: and how ye shall kepe theym. And for the moost crafty thynge: how ye shall make youre hokes of stele and of osmonde: some for the dubbe, and some for the flote: and the grounde, as ye shall here after al theyse fynde expressed openly vnto your knowledge. And how ye shall make your rodde craftly here I shall teche you. Ye shall kytte betwene Myghelmas and Candylmas a fayr staffe of a fadom and a halfe longe: and arme grete of hasyll: wylowe: or aspe. And bethe hym in an hote own: and sette hym luyn. Thenne let him cole and drye a moneth. Take thenne and frette hym faste wyth a cockeshotecorde, and bynde hym to a fourme or an euyn square grete tree. Take thenne a plummer's wire that is euyn and streyte and sharpe at the one ende. And hete the sharpe ende in a charcole fyre tyll it be whyte: and brenne the staffe therwyth thorugh: euer streyte in the pythe at bothe endes tyll they mete. And after that brenne hym in the nether ende with a byrde broche, and wyth other broches eche gretter than other. And ever the greetest the laste: so that ye make your hole aye tapre were. Thenne lete hym lye still, and kele two dayes. Vnfrette hym thenne and lete hym drye in an hous roof in the smoke tyll he be thrugh drye. In the same season take a fayr yerde of grene hasyll and beth hym euyn end streyghte, and lete it drye with the staff. And whan they ben drye, make the yerde mete vnto the hole in the staffe: vnto halfe the length of the staffe. And to perfourme that other halfe of the croppe. Take a fair shote of blacke thornn crabbe tree, medeler, or of tenypre kytte in the same season: and well bethyd and streyghte. And frette theym togyder fetely: soo that the croppe maye iustly entre all in to the sayd hole. Thenne shaue your staffe wexe. Thenne vyrell the staffe at bothe endes wyth longe hopis of yren or laton in the clennest wyse wyth a pike in the nether ende fastnyd wyth a rennynge vyce: to take in and out your croppe. Thenne set your croppe an hondfull within the ouer ende of your staffe in souche wise that it be as bigge there as in ony other place aboue. Thenne arme your croppe at thouer ende downe to y^e frette wyth a lyne of vj. heeres. And dubbe the lyne and frette it fast in y^e toppe wyth a bowe to fasten on your lyne. And thus shall ye make you a rodde soo preuy that ye maye walke therwyth: and there shall noo man wyte where abowte yee goo. It woll be lyghte and full nymbyll to fysshe wyth at your luste.

After that ye haue made thus your rodde: ye must lerne to coloure your lynes of heer in this wise. Firste ye must take of a whyte horse taylle the lengest heere and fayrest that ye can finde. And euer the rounder it be the better it is. Departe it into vj. partes: and euery parte ye shall colour by hymselfe in dyuers colours, as yelowe, grene: browne: tawney: russet: and duske colours. And for to make a good grene colour on your heer ye shall doo thus. Take small ale a quarte and put it in a lytyll panne: and put therto halfe a pounde of alym. And put therto your heer: and lete it boylle softly half-an-houre. And whan it is yelow on the scume put therin your heer wyth halfe a pounde of coporose betyn in powdre, and lete it boylle halfe a myle waye: and thenne sette it downe, and let it kele fyue or fyxe houres. Thenne take out the heer and drye it. And it is thenne the fynest grene that is for the water. And euer the more ye put thereto of coporose the better it is, or elles in stede of it vertgrees.

A nother wyse ye maye make more bryghter grene, as thus sete woode your heer in an woodefatte a lyght plunket colour. And thenne sethe hym in olde or wyxin lyke. As I have sayd sauynge ye shall not put therto neyther coporosenne vertgrees. For to make your heer yelow, dyght it with alym, as I have sayd before; and after that wyth oldys or wyxin, without coporose or vertgrees. A nother yelow ye shall make thus: Take smalle ale a potell: and stampe thre handful of walnot leues, and put togider: and put in your heer tyll that it be as depe as ye woll haue it. For to make russet heer: Take stronge lye a pynt, and halfe-a-pounde of sote, and a lytyl iuce of walnot leuys, and a quarte of alym, and put theym alle togydder in a panne and boylle theym well. And whan it is colde, put in youre heer tyll it be as derke as ye woll haue it. For to make a browne colour: Take a pounde of sote and a quarte of ale, and seth it wyth as many walnot leuys as ye maye. And whan they wexe blacke, sette it from the fire. And put therin your heer, and lete it lye styll tyll it be as browne as yo woll haue it. For to make a nother browne: Take strong ale and sote, and tempre them togyder, and put therin your heer two dayes and two nyghtes, and it shall be ryght a good colour.

For to make a tawney coloure: Take lyme and water, and put theym togyder, and also put your heer therin foure or fyue houres. Thenne take it out and put it in a Tanner's ose a day, and it shall be also fyne a tawney colour as nedyth to you purpoos. The sprte parte of youre heer ye shall kepe styll whyte for lynes for the dubbyd hoke to fysshe for the trought and graylynge, and for smalle lynes for to trye for the roche and the darse. Whan your heer is thus colourid: ye must knowe for whiche waters and for whyche seasons they shall serue.

The grene colour in all clere water from Apryll tyll Septembre. The yelowe coloure in euery clere water from Septembre tyll Nouembre: For it is lyke y^e wedys and other manere grasse which growyth in the waters and ryuers whan they ben broken. The russet colour servyth all the wynter vnto the ende of Apryll, as well in ryvers as in poles or lakys. The browne colour seruyth for that water that is blacke dedisshe in ryuers or in other waters. The tawney colour for those waters that ben hethy or morysshe.

Now must ye make youre lynes in this wyse. Fyrste, loke that ye haue an Instrument lyke vnto this fygure portrayed folowynge. Thenne take your heer and kytte of the smalle ende an hondfull large or more. For it is neyther stronge nor yet sure. Thenne torne the toppe to the taylle eueryche ylyke moche. And departe it into thre partyes. Thenne knytte euery part at the one ende by hymself. And at the other ende knytte till thre togyder; and put y^e same ende in that other ende of your Instrument that hath but one clyft. And sett that other ende faste wyth the wegge foure fyngers in alle shorter than your heer. Thenne twyne euery warpe one way and ylyke moche: and fasten theym in thre clystes ylyke streyghte. Take thenne out that other ende and twyne it that waye that it woll desyre ynough. Thenne streyne it a lytyll: and knytte it for ondoynge and that is good. And for to knowe to make your Instrument: loo here it is in fygure. And it shall be made of tree sauynge the bolte vndernethe which: shall be of yren.[*]

Whan ye haue as many of the lynkys as ye suppose wol suffyce for the length of a lyne: then must ye knytte theym togyder wyth a water knotte, or elles a duchys knotte. And whan your knotte is knytte, kytte of y^e voyde shorte endes a strawe brede from tho knotte. Thus shal ye make youre lynes fayr and fyne: and also ryght sure for ony manere fysshe. And by cause that ye sholde knowe bothe the water knotte and also the duchys knotte: loo theym here in fygure caste vnto the lyknesse of the draughte.

Ye shall vnderstonde that the most subtyll and hardyste crafte in makynge of your harnays is for to make your hokis. For whoos makyng ye must haue fete fyles, thynn and sharpe, and smallo beten. A semy clamm of yren, a bender, a payr of longe and smalle tongys: an harde knyfo somdeale thycke: an anuelde: and a lytyll hamour. And for smalle fysshe ye shall make your hokes of the smallest quarell nedlys that ye can fynde of stele, and in this wyse. Ye shall put the quaroll in a redde charkcole fyre tyll that it be of the same colour that the fyre is. Thenne take hym out and lete hym kele: and ye shal fynde hym well alayd for to fyle. Thenne reyse the berde wyth your knyfe, and make the poynt sharpe. Thenne alaye hym agayn: for elles he woll breke in the bendyng. Thenne bende hym lyke to the bende fyguryd herafter in example. And gretter hokes ye small make in the same wyse of gretter nedles: as broderer's nedlis: or tayler's: or shomaker's nedlis spere poyntes, and of shomaker's nalles in especyall the beste for grete fyssho. And that they bonde atte the poynt whan thoy ben assayed, for clles they ben not good. Whan the hoke is bendyd bete the hynder ende abrode, and fyle it smothe for fretynge of thy lyne. Thenne sodaynly quenche it in water: and it woll be harde and strong. And for to hauc knowlege of your Instruments: lo theym here in figure portrayd.[*] Whan ye haue made thus your hokis: thenne must ye set theym on your lynes acordynge in gretnesse and strength in this wyse. Ye shal take smalle redde silke, and yf it be for a grete hoke thenne double it: not twynyd. And elles for small hokys lete it be syngle: and therwyth frette thycke the lyne there, as the one ende of your hoke shal sytte a strawe brede. Thenne sette there your hoke: and frette hym wyth the same threde y^e two partes of the lengthe that shall be frette in all.

And whan ye come to the thyrde parte, thenne torne the end of your lyne agayn vpon the frette double, and frette it so double that other thyrd part. Thenne put your threde in at the hose twys or thries, and let it goo at eche tyme rounde abowte the yerde of your hoke; thenne wete the hose and drawe it tyll that it be faste, and loke that your lyne lye euermore wythin your hokys, and not without; thenne kytte of the lyngs ende and the threde as nyghe as ye maye: sauynge the frette.

Now ye knowe wyth how grete hokys ye shall angle to euery fysshe. Now I woll tell you wyth how many heeres ye shall to euery manere of fisshe. For the menow, wyth a lyne of one heere. For the waxyng roche, the blecke, and the gogyn and the ruffe, wyth a lyne of two heeris. For the darse and the grete roche, with a lyne of thre heeres. For the perche, the flounder, and bremet, with foure heeres. For the cheuen chubbe, the breme, the tenche, and the ele, wyth vj. heeres. For the troughte: graylynge: barbyll, and the grete chewyn, wyth ix. heeres. For the grete troughte, wyth xii. heeres. For the samon, wyth xv. heeres. And for the pyke, wyth a chalke lyne made browne with your browne colour aforsayd: arrayd with a wyre. As ye shall here herafter whan I speke of the pyke.

Your lynes must be plumbid wyth lede. And ye shall wyte y^t the nexte plumbe vnto the hoke shall be therefro a large fote and more. And euery plumbe of a quantyte to the gretnes of the lyne. There be thre manere of plumbis for a grounde lyne rennynge. And for the flote set upon the grounde lyne lyenge x. plumbes joynge all togider to the grounde lyne rennynge ix. or x. smalle. The flote plumbe shall be so heuy y^t the leest plucke of ony fysshe maye pull it downe in to y^e water. And make your plumbis rounde and smothe y^t they stycke not on stonys or on wedys. And for the more vnderstondynge to theym here in fygure [†] (No. 1).

Thenne shall ye make your flotys in this wyse. Take a fayr corke that is clene, without many holes. And bore it thrugh wyth a smalle hote yren: and putt therein a penne luste and streyghte. Euer the more flote the gretter penne and greter hole. Then shape it grete in the myddis and small at bothe endys. And specyally sharpe in the nether ende; and lyke vnto the fygures folowynge. And make theym smothe on a gryndyng stone: or on a tyle stone. And loke that the flote for one heer be no more than a pese. For two heeres: as a beene: for twelue heeres: as a walnot. And soo euery lyne after the proporcion. All manere lynes that be not for the grounde must have flotes. And the rennynge grounde lyne must haue a flote [‡] (No. 2).

A CORRESPONDENT writes: "The Tees is full of salmon. Have been out four times; each time I have got one from 5lb. to 10½lb. each. The Wear is swarming with bull trout, and a large number have been killed, some up to 10lb. in weight."

Waltoniana

THE Thames remains in excellent condition. There is a good head of water, which is, however, rather bright, so fine tackle should be used. There has been no considerable growth of weeds this year, and the "aquatic verdure," to quote a river reporter, already shows signs of decay. I always look upon October as the best month of the year for Thames fishing. The weather is generally sufficiently genial, and pleasure boats are few. Never is the river more beautiful.

I HEAR that nothing is settled at present concerning the Hungerford water. It is just possible that the commoners will keep the water in their own hands, and sell tickets to visitors. There is not too much trout fishing of the kind to be got, and the arrangement would be a very satisfactory one for anglers generally, for the commoners, and for the people of Hungerford.

A LADY named Mrs. Herbert Keily has had the good fortune to catch a chub over five pounds in weight on Nottingham tackle at Great Marlow. Her husband, who is a devoted fisherman, and has fished for chub hundreds of times, had never the luck to land a chub over 4lb. 2oz. It seems that fortune favours the fair as well as the brave.

THE capture of a graining was reported from the Welland last week. The weight was put at three pounds. As the graining is a variety of dace, it is almost impossible that the fish taken should be of that species, for whoever heard of—I mean, whoever *saw*—a dace of anything approaching the weight mentioned? It seems just possible, by the way, that graining is only a local name for dace.

IT is sometimes a very serious thing to write "yards" when "inches" are intended. I sincerely hope no one has been endeavouring to imitate the method of roach fishing described in an article of mine, headed "Some Kennet Roach," which was published recently. Having mentioned that the fish were swimming over some weeds, and not far beneath the surface, I went on to say that I placed my float eighteen yards from the bait, so that the latter might clear the weeds. Of course I should have written "inches," and the only marvel is that the Editor has not been deluged with letters from that curious class of people who see in a slip of that kind, or a printer's error, an opportunity of pointing out what an ignorant fool the writer was, and how very much better informed they are themselves.

SEA anglers are sometimes sea-bathers, and sea-bathers occasionally encounter jelly-fish, to their sorrow. It may, therefore, be useful to state that, according to the *Lancet*, a generally refrigerant and laxative course of treatment, combined with warm bathing, will usually relieve the pain produced by contact with this nettle of the sea. Poor Captain Webb was badly stung by a jelly-fish during his swim across the Channel. It is the brownish red jelly-fish which sting. The blueish white ones are supposed to be harmless. I was once stung myself in a curious manner. I was playing a large lythe in a Scotch sea loch, when the line cut a huge jelly-fish almost in two. My reel had stuck, and I was drawing in the line with my fingers, when suddenly I found my hand smarting as if it had come in contact with a quantity of nettles. There were small portions of the jelly-fish on the line, and these seemed to have the same power of inflicting pain as the complete fish.

ABOUT the one living thing which a pike will not swallow is a toad. Valuable as this creature is in a garden, it is a most venomous beast, but its poison is in its skin. Dr. Leonard Gutherie, who has been experimenting with toads, found that the venom is a thick milky fluid, in appearance and taste like the juice of the dandelion. A sub-cutaneous injection killed small birds in six minutes, and dogs and guinea-pigs in half an hour to an hour and a-half. A common lizard which bit a toad, immediately afterwards rushed wildly about, and burrowing its head in the sand, died in less than two minutes. After carrying a ad in his hand the doctor noticed a numbness and tingling of his skin. Altogether it is evident that the pike exercises a wise discretion in rejecting toads.

JACK have been feeding well in the Thames recently, affording sport to those who know how to catch them. Thames pike are exceedingly artful. In fact, it may be said, that the education of most Thames fish has not been entirely neglected. The one fish which does not seem to profit by the educational advantages which are afforded it by anglers is the gudgeon. He bites as freely as ever, and almost if not quite as large takes of these toothsome little fish are made as in former years. Where there is no local fishery society to keep illegal cast-netting in check, the gudgeon will be found very small, in fact, little larger than can pass comfortably through the meshes of a cast-net. Cast-netting for gudgeon is quite a profitable employment to the less scrupulous of professional Thames fishermen. About sixpence a dozen is given for the fish by the hotel-keepers and others who want them (the gudgeon—not the hotel-keeper) for breakfast, and six dozen or more may be easily netted in a morning by a skilful netsman. Moreover, all's gudgeon that come to the net, and the river suffers considerably where the practice is not prevented.

TEMPLAR.

ANSWERS TO CORRESPONDENTS.

A. B.: We regret very much that the sentence you very properly object to appeared during our absence, and through oversight in not sending us proof.

W. R.: We have replied direct about the fish you sent. It looked like a dace infested with some parasite, but was in far too "high" a condition to examine.

Correspondence

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. PRITT.

LOUGH MASK.

DEAR SIR,—In the Irish angling reports appearing in the *Fishing Gazette* of Saturday last I see that a friend and myself are credited with having taken in three days, on Lough Mask, in addition to two pike of 33lb. and 18lb. weight, 60lb. of brown trout, besides smaller pike and perch. So far as the pike are concerned the report is correct, but as for the trout—well! I have not actual figures by me, but I have no hesitation in saying that the weight named as the result of three days' fishing (60lbs.) much more accurately represents the total amount taken by our party of four rods during a stay of two weeks. Our best day's take consisted of fifteen trout, weighing 22lb. Frequently we had only four or five fish to our four rods. Had the weather been more favourable, I have no doubt we would have done better, as on more than one occasion we were blown off the lochs. Almost all the fish were taken trolling, fly being practically useless. Earlier in the season it might do some execution, and if so, the sport would be good, as the fish run large; but judging from the takes chronicled in the visitors' book kept at the inn, it is seldom tried, Phantom and Angel minnows being invariably mentioned as the baits used.

Pike are far too numerous for the welfare of the trout, and I regret to say that the cross-line and otter are still in common use by the natives on Lough Mask. The Connemara Angling Association has, I believe, succeeded in checking if not in doing away entirely with these evils on Lough Corrib; but on Lough Mask (to my mind the better trouting lough of the two) the otter is openly worked, and must be very prejudicial to the fishing.

We found the pike very destructive to tackle when trolling for trout, as they took the Phantom minnow readily, and often succeeded in cutting the gut-trace and going off with the bait. When, however, as sometimes happened, they were hooked in the corner of the month, and could not get at the trace, they usually paid the penalty, and we accounted for a considerable number running from about 1lb. up to 18lb. during our stay, the larger ones making a good fight on a trout-rod and tackle. The thirty-three-pounder fell a victim to a large Brown Phantom, and gave splendid sport. On the day I took him a Mr. Gallaher, who was staying at the inn, trolling a large spoon mounted on gimp, took in Lough Mask two very handsome trout of 4lb. and 2lb., and finally lost his bait through the trace breaking when playing a large fish, which he believed to be a trout. I mention this as I would not have believed that trout would have taken a bait so coarsely mounted. The day was very dark and stormy, which may partly account for it.—Yours faithfully,

W. F. LAURIE.

Flyfishers' Club.

LARGE ROACH.

DEAR SIR,—Knowing the great interest taken by anglers in large fish, I thought you would like this account.

One of our members (Mr. H. Coleman) weighed in, on the 27th ult., at our club-room, the George Hotel, Fonthill-road, Finsbury Park, nine roach, weighing 15lb. 1oz., two of which weighed 4lb. 7½oz. The weights of each fish will be found in our club report. The nine fish have been placed in the hands of Mr. Gibson for preservation, and when this, as we think, grand case adorns our club-room walls, shall be happy to show them to any friend that may pay us a visit.—Yours faithfully,

A. PAYNE,
Sec. Globe Angling Society.

AN EXTRAORDINARY SPECTACLE.

SIR,—I am suffering from a congested liver, and take rowing exercise of a morning on the Serpentine with beneficial results. Being also an angler, and a subscriber to the *Fishing Gazette*, I have read your correspondent "Rus's" letter in last week's number, and do not think he knows much about the piscatory art, or has ever seen the elderly gentleman fishing, or he would not have written that the angler in question was fishing from a punt. There are no fishing punts on the Serpentine, and never likely to be, so I am told. There are over seventy pleasure boats, and on a fine Saturday or Sunday afternoon they are mostly engaged. I think the gentleman alluded to shows good "generalship" in enjoying his pastime in the morning, as I do mine, as then there are but few boats about, and I am told by the boatmen that the titled elderly gentleman seldom comes, and when he does he catches many fish.—Yours truly,

TRUTH AND JUSTICE.

THE THURSO RIVER.

SIR,—I am quite prepared to undertake a journey far north as the Thurso river this present month (October) to see *real autumn migrating* fish, such as ascend in abundance the *naturally* late and long-seasoned rivers. I make this offer in reply to "Volta," who writes to you last week, characterising as "a bold assertion, *which* shows that the writer is not acquainted with the river," a statement in "Notes" of previous week, a statement which, as everyone with a fair knowledge of the "far North" rivers knows, is substantially true as concerns every river north of the Brora. Guarantee given that I shall have the facility for seeing—caught by net or rod as experiment—such fish as your correspondent mentions, not late ascending back-lying fish off colour and very soft, but true autumn migrating fish, gravid it is true, yet bright as a new shilling and of large size, I am prepared to undertake the journey, along with a naturalist and fish culturist, any time up to 16th instant.

I beg pardon for saying that it seems to me that "Volta" does not know what a real autumn salmon is. It must be some of the small head of winter salmon, which are known to affect the Thurso, that he refers to, since he says *clean* fish in October. I should infer that he means by *clean*, fish that are unencumbered with ova or milt.

We want to get at the truth by careful actual experiment and demonstration; and I make the above offer, but only on condition of seeing what I have hitherto believed does not exist, and what the competent fish culturists of the north tell me could not be made to exist, reasoning from the failures of previous attempts on the Thurso with the ova of the late-ascending fish of long seasoned rivers. A straggling bright fish may be found in any river in autumn, but that does not constitute a "run" or migration, or prove anything as to the possibilities of a great or any further increase of the kind[*] of fish in the season.

Not only does "Volta's" letter show him to be rather mixed, but it indicates that he is wholly without personal knowledge of autumn rivers or real undelayed natural autumn running fish. Let him sign his real name to show who he is, otherwise I must decline to continue the correspondence, or accept his invitation to the Thurso (on the conditions stated) should he give it.—Yours, &c.,

W. MURDOCH.

Crown-street, Aberdeen.

KNEE-CAP FOR ANGLERS.

DEAR SIR,—I noticed some little time ago in the *Fishing Gazette* a query (letter) as to the best kind of knee-cap for fishing—*i.e.*, for kneeling on the damp grass. I have since invented one (waterproof), and have to arrange straps so as to prevent undue pressure on tendons. Cost—india-rubber, 10½d.; straps, 1s.; total, 1s. 10½d. I forward it by this post for your inspection.—Faithfully yours,

H. S. HARLAND.

8, Arundel-terrace, Brighton.

[It seems to us that this very strong, simple, and cheap affair would answer very well indeed as a protection to waders when kneeling in dry-fly fishing. Here is Mr. Harland's description of it: "A piece of highly-elastic vulcanised india-rubber sheeting, about ⅛in. thick, cut to size of 10in. broad (to cross over knee) and 8in. deep (to cover trousers above and below knee); corners rounded off. Two ½in. leather straps, to be sewn on to rubber sheeting (about an inch from top and bottom edge of rubber); each strap to be sewn on with a tab of leather on converse side, to prevent stitching from tearing through rubber. Although the buckle portion of straps are sewn close up to one side, the knee-cap can be worn on either leg by reversion of application."—ED.]

PRODUCTIVE SEA TROUT LOCHS.

DEAR SIR,—I have been reading up my *Fishing Gazettes* since I returned to town, and in your issue of September 5, I find in your "Notes" that you call Loch Stack "the most productive sea trout loch in Scotland." While I admit quite readily that Loch Stack is a splendid loch, you will pardon me, I am sure, for saying that there are many lochs quite as good in Scotland, and some—one at least—even better. There is a loch in South Uist in which I have occasionally had the pleasure and privilege of fishing, and I append my results in that loch during four seasons. I have had to run the chance of good and bad days from season to season, hence could I have chosen my days, the result would probably have been proportionately better.

1887.—August 10, fifty-two sea trout, 104½lb.; best fish, 5½lb., 5½lb., 5lb., 5lb., 5lb., 5lb., 4¾lb., 4½lb., 4½lb., 4¼lb., 3½lb., 3¼lb., 3lb., 3lb., 2¾lb., 2½lb., 2½lb., 2¼lb., 2lb., 2lb., 2lb., and 2lb. (fishing from the shore). August 15, eleven sea trout, 13½lb.; best fish, 3½lb. and 3lb. (fishing from the shore). August 20, twenty-eight sea trout, 35lb.; best fish, 7¼lb., 3lb., and 2lb. (one and a-half hours' fishing from boat).

1888.—August 21, twenty-five sea trout, 28½lb.; best fish, 4½lb., 2½lb., 2¼lb., and 2lb. (two and a-half hours from boat). August 22, thirty-three sea trout, 38lb.; best fish, 3½lb., 2¼lb., 2lb., 2lb. and 1¾lb. (three and a-half hours from boat).

1889.—August 20, forty-six trout, 50lb.; best fish, 3¼lb., 2½lb., 2lb., and 2lb. August 22, twenty-five sea trout, 24lb.; best fish, 3½lb., 2½lb., and 2lb. (from shore—gale of wind). August 26, fifty-seven sea trout, 51½lb.; best fish, 4½lb., 3lb., 3lb., 2½lb., 2½lb., 2lb., 2lb., &c.

1890.—Did not fish the loch.

1891.—April 6, five sea trout, 21¼lb.; the best fish, 8¼lb ,5lb., 3½lb., 3lb. (one and a-half hours—calm), and 1¾lb. April 7, sixteen sea trout, 28lb.; best fish, 7¼lb., 2¾lb., 2¼lb., 2lb., 2lb., 2lb., and 2lb. April 8, two sea trout, 2lb. (too cold and stormy for fishing). April 9, eighteen sea trout, 24lb.; best fish, 5lb., 2¾lb., 2½lb. April 11, nineteen sea trout, 25¼lb.; best fish, 5¼lb., 4¼lb., 3½lb., 3lb., and 1¾lb. April 13, thirteen sea trout, 18lb.; best fish, 4lb., 3lb., 1¾lb., 1¾lb., 1¾lb., and 1½lb. Sept. 7, seventeen sea trout, 25lb.; best fish, 4¼lb., 4lb., 2lb., and 1¾lb. (almost calm).

Total days fished, fifteen; total sea trout, three hundred and sixty-seven; weighing 491¾lb.; average, twenty-four fish, 32¾lb. (nearly) per day.

The average weight of the fish is of no moment, as the average weight is no guide to the *ordinary* weight, which is a very different matter. The ordinary sea trout—*i.e.*, the size of sea trout of which one catches the greatest number, runs from ¾lb. to 1lb., but their gameness is proverbial. It should be noted that I had to take my chance of bad days, and had to work very hard and persistently on some occasions to get fish at all. All the fish were killed with a single-handed rod and ordinary loch trout flies, of which I lost only one. This happened this spring on a small fish. I should like to see a Loch Stack record of all days—good and bad—to beat this over the same or an equal number of seasons. The best autumn fly this year in the Hebrides has been the Black and Silver, but more of this in the future.—Yours truly, Duine Môr.

---

[*] The same bright, but rather gravid, large fish.

P.S.—You will observe that there are some seventy-four fish 2lb. and over in the above record. These seventy-four trout weighed 243¾lb., leaving two hundred and ninety-three trout, weighing 248lb. The latter are the *ordinary* sea trout, running, as their aggregate weight indicates, from ¾lb. to 1lb. People are apt to forget that if one hundred fish of ¾lb. weigh only 75lb., three hundred fish of that weight would weigh 225lb. Some are slightly under ¾lb., others again a little over it, but 14oz. may be taken as the true average of these game little fish, *big ones being excluded*. No account is taken of brown trout. D. M.

KENNET ROACH.

Sir,—The Kennet roach are handsome in their compactness, and in quality too, under normal circumstances, excellent. "Templar" stated the other day that the Kennet in the Newbury free borough water was a place to try for "specimen" fish, but he doubted if the fish were hardly fit to be eaten. Now, by a curious coincidence, samples of the water two miles above the borough and two miles below the town have been analysed, and no difference, it is said, could be detected in either sample. It is only natural that the inhabitants of the prosperous county town of Berkshire (Reading) should have become uneasy, because its water supply comes from the Kennet, fifteen or sixteen miles lower down. It remains, however, for some very clever sanitary "doctor" to determine once and for all why the water of an inland canalled stream, in a fair test, taken some distance below the sewage outfall, is of fairish quality. What becomes of the *noxious* portion of the excrement? There's the rub! "Templar" must have caught his show of Kennet roach a bit within two miles of Newbury Bridge; and as there is possibly another and nearer outfall-drain supplying into the Kennet, the question as to the fatness of the nine roach, and their quality for the table, comes uppermost. Perhaps the gases are absorbed by the rushes, and weeds, and trees. There are, in short, a hundred secrets about the pure—if the term be permissible—sewage from a small country town, where no chemical or metallic waste mixes with it. Again, the query might be put, "Did he eat any of those roach?" Nay, did "Redspinner" try the flavour of his Kennet-caught dace? Where even the night-cart had shot its contents into this beautiful stream, the writer, some years ago, caught roach on the morrow, and the taste of these fish was normal. And this was half-a-mile or more above Ham swing-bridge. If only "Templar" could trust himself to angle for roach, say about twenty yards below the southern drain outfall at Newbury Bridge, and have the contents of the roach's stomach scientifically examined, and then wrap each roach in fresh-buttered paper, and bake the fish, doubtless some qualified persons would taste the flesh and flavour minus condiments, and give an unbiassed opinion. We know only too well the effect of very "mixed" sewage in a tidal stream like the Thames, and the Lea, near London. What we want to be as certain as may be is, the *effect* on coarse or other fish taken not far from a simple sewage-laden drain; and also if fish are at all affected thereby a couple of miles below the contamination.—Yours truly, W. F.

A REPUDIATION.

Sir,—On perusing the Supplement of your excellent Journal of September 26, under Reports from Clubs column, I was not a little astonished to find that according to the report sent you for insertion by the secretary of the East London Piscatorial Society, my name and that of my friend, Mr. Stammers, was held up to the ridicule of the public in a most contemptible manner, without the slightest cause or offence on either his or my own part. I beg to state, in justification of my friend's character as also of my own, to the many friends I have who regularly read your Journal, that the whole of the wording of the secretary's report is misleading, and in a great part entirely false. It is true that Mr. Stammers fell into the water on essaying to land, and in order to help him out of his disagreeable position, I got one of my own legs partly immersed, but this was no "reward for unsportsmanlike behaviour" on our part, the mishap being simply one of the many accidents that may happen in like circumstances, and was not at all due to the fact of our not taking part in the competition.

The secretary stated in the paragraph complained of that we "did not feel inclined to fish," whereas the truth is we were only too eager to share in the competition ourselves, and would have done so had we not found on our arrival at Hampton Court that there were only two punt fishermen there, they being already engaged by the secretary and others. It was impossible for us even to get a man to punt us to a swim, and we thereupon travelled to Hampton, but to meet with precisely the same disappointment. Under these circumstances we hired a boat and went to visit those who by strategy had anticipated us in securing the punts, but we had no intention whatever to interfere.

The secretary, therefore, has misrepresented me and my friends quite gratuitously, and as I am not disposed to put myself to the trouble again of refuting his falsehoods, or teaching him elementary lessons in politeness to fellow member fishermen, I have resigned my connection with the society, and enrolled myself under gentlemanly officials in another.

I trust that, as I have been so freely maligned in your Journal—although you, Sir, of course are in no way responsible for it—you will do me the justice of inserting this.—Your obedient servant,

W. E. Dyne.

A COMPLAINT FROM KINGSTON.

Sir,—I wish to draw the special attention of the Thames Angling Preservation Society to the exceedingly shabby conduct of a prominent Kingston tradesman's assistant, which occurred last week. I went out with some friends in a punt for a few hours' fishing, taking up our position near the bridge, having three days previously baited the swim. We fished the first day unmolested and realised some good sport. The second day, however, this man, much to our surprise, not to say disgust, thought proper to steer his master's punt right across our tackle, at the stern of which hung a chain, which dragged the bed of the river, and which was evidently planned to annoy us, and destroy our sport and pleasure. Comment is needless. On the third day we again went out and occupied the same position. I succeeded in hooking a large fish, which took refuge beneath the buttress of the bridge, and while in the act of "raking," for the purpose of getting the fish away, a quantity of tar and paraffin, which had been deposited in the bed of the river by some person or persons unknown, came bubbling to the surface. You can imagine our feelings at the discovery of such a dastardly cowardly act, which we could only attribute to the sheer jealousy of some individual, be he whom he may, and for whom we could not help expressing our most profound pity. I merely state these facts with a view to warn anglers what to expect if these acts are permitted to continue, and with the hope that the matter will receive the attention of the proper authorities.

Thanking you in anticipation, I enclose my card, and beg to subscribe myself, yours obediently,

Barble.

[We should imagine the Thames Conservators would be the people to prevent tar being thrown into the river, and hope they will take the matter up.—Ed.]

LARGE CHUB.

Sir,—In an article on "Chub Fishing," by Mr. A. Jardine, which has just made its welcome appearance in the *Fishing Gazette* that gentleman says: "To capture a six-pounder is an event, in fact, a triumph which has not fallen to the lot of many anglers." Perhaps the following instances, where this exceptional weight is said to have been exceeded, may be worth discussing.

In the *Field* of the 9th January, 1886, Mr. Sydney R. Osborne (Brighton) refers to a chub taken by his brother in the Ouse, which weighed 7lb. 6oz.

Five years since a lively correspondence was carried on in the *Fishing Gazette*, arising from the assertion of one of your river reporters that in the Ouse, Brandon, Norfolk, chub of 7lb. weight were not uncommon, and you, Mr. Editor, offered five shillings a pound for every chub over 7lb. your correspondent could send; and I am not sure that you did not go the length of saying you would *eat them*. However, in the result, on the 4th September, 1886, Mr. J. Ralph, of the Ram Hotel, Brandon, vouched for the accuracy of the report of the recent capture, by one of the railway employees, of a chub of 7lb. 2oz.

The following is an extract from the report of the United Brothers Angling Society (Kidderminster), in *Fishing Gazette* of the 6th November, 1886; after noting the capture of a 5lb. chub, the writer continues, "This is the best fish of its class I have heard of being taken for some years out of the Severn. Some few years ago two of our anglers, in a catch of 70lb., had a brace of chub which weighed 6¼lb. and 7¼lb. respectively, while another fish was taken with the net that weighed 9lb. This fish had been hooked three times previously, there being the gut bottoms attached to its mouth when taken in the net."

Mr. Jardine, after enumerating some of the finest specimen chub shown in the International Fisheries Exhibition, 1883, which varied from 5lb. 4oz. to 6lb. 2oz., refers to a heavier specimen which was also exhibited, the name of the captor of which he had forgotten. On reference to the official catalogue, I find exhibit No. 927 thus described:—

"*Exhibitor*—Mr. G. G. Taylor, chub, weight 7lb., caught in the Thames, 14th August, 1881, said by the papers at the time to be the largest preserved in the United Kingdom."

The *Referee* of the 21st August, 1881 (probably referring to the same fish), states that a chub of 6lb. was caught at Hampton, by Mr. Taylor, of the First Surrey Piscatorials; but *Bell's Life* of the same date gave the weight as 6½lb.

As these weights are contradictory, it would be interesting to know what Mr. Taylor's fish actually did weigh, for curiously enough the special prize of £2 10s. for best (which I assume means largest), specimen chub was awarded to the Friendly Angling Society for their 5lb. 12oz. fish.—Yours, &c., Giant.

FISHING IN THE ITALIAN LAKES.

Sir,—Can any of your readers give information as to whether any fishing can be obtained in the Italian lakes? If so, of what sort?—Yours, &c.,

F. A. M.

REPORTS OF LARGE BREAM.

Dear Sir,—In your issue of the 26th of September, page 203 of the Supplement, your Norfolk correspondent reports the capture on the 13th, at Drayton on the Wensum, of two bream, "one weighing *7lb. 2oz.*, the other exactly *8lb.*

On page 208, Robert Moll, your correspondent from the Yare, says: "On the Wensum, above Hellsden Bridge, two very large bream—viz., *8lb. 10oz.*, and *6lb. 8oz.*, were caught last Monday week (angling)."

I think both these writers must be referring to the same fish, as the dates are 13th and 14th, a discrepancy which might easily occur, and the weight of the brace is in each case exactly *15lb. 2oz.;* it is also practically impossible that four fish of any such size should be caught on consecutive days, and from the same river. So, assuming the reports to refer to the same fish, which, if either, is correct? The first states that the fish are being set up by a local taxidermist; the second that they were offered for sale and *weighed* in Norwich.

I do not mean to cast the slightest imputation on your correspondents, but one must be incorrect; and personally, I should think, both are, as I do not believe in two bream of such a size being taken, and I think it would be worth while to sift the matter a little. Perhaps your courteous correspondent, "Giant," would favour me with an account of the largest authentic weights of bream taken during recent years.—Yours, &c., Blatherwycke.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, OCTOBER 3, 1891.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE final business in connection with the late Birmingham and District Annual Contest was brought to a satisfactory termination on Friday evening, September 25, upon which occasion, the members and friends were called together to witness the important ceremony of the distribution of prizes to the successful competitors in the late Pershore contest. Shortly after eight o'clock, nearly every seat in the large assembly room was filled, and the harmony was commenced. Mr. T. Coles distributed the prizes. The first winner, Mr. G. Douglas, upon being called upon to step forward, was received with quite an ovation, so were the other thirty-five prize winners, especially those who had upon former occasions been fortunate enough to secure prizes. After the disposal of the prizes two of the members of the Oak Society played some excellent selections on the English concertinas. A very pleasant evening was brought to a close by singing the National Anthem.

THE committee of the Birmingham Association met on Thursday evening to make arrangements for their forthcoming contest, which takes place this day (Saturday, Oct. 3). The chairman, in opening the meeting, pointed out that he had been in communication with Mr. D. Arkell, the hon. sec. of the Midland Piscatorial Society, with a view of obtaining permission for the committee to fish their contest in the water rented by this society in the Trent, at Alrewas, and that he had received a reply from Mr. Arkell to the effect that he would place their water at the disposal of the committee, and also assist as much as possible in any way that he could, in order to make the contest a success. It is needless to say that this offer was unanimously accepted, and that a vote of thanks be forwarded to Mr. Arkell for his kindness. A prize purchasing committee, which consisted of Messrs. Coles, Dance, and White, were appointed; several gentlemen also promised prizes. After the contest the committee will be the guests of the Midland Piscatorials, and a substantial dinner will be served up at one of the fishing pubs at Alrewas.

SOME two months ago a challenge was thrown out by one or two members of the St. George's Society, for a certain member to fish any other member of any club connected with the Birmingham Association. Several members visited the St. George's club-house with a view of arranging a match, but owing to the would-be contestants not coming to terms, nothing came of the challenge until last week, when Mr. G. Jarrett, of the Deritend Society, put in an appearance, and expressed his willingness to try conclusions with Mr. C. Wainwright, the St. George's champion, who, as a prize winner, holds the record of the Midlands, he having competed in six club contests, and carried off the first prizes from four clubs, and two second prizes from the others, independent of a few special prizes for the best fish taken. Jarrott also has a good reputation, having taken first honours on more than one occasion from the Deritend Society, to which he belongs. The arrangements for the match were soon ratified and the choice of the water fell to the lot of the knight of St. George, and he decided to take his foe to the St. George's Water at Tamworth, and the match was fished there on Saturday last, the conditions of which were that two swims were to be marked out, and the spinning of the coin should decide as to the choice, which fell to Jarrett. The match was of two hours' duration, and only roach to count. In the first hour Wainwright took three roach and several other fish, whilst Jarrett never had a bite, but he stuck to his task, and finally won by five fish to four. Mr. J. Bourne acted as referee and master of the ceremonies.

FISHING in the Avon is now at its prime as the water has been reported to me by several of the Birmingham anglers to be in good condition, especially for the roach fishermen. These fish are taking white stewed wheat freely, and some decent catches have been had with this bait. Perch have been running well at the minnow, and some very decent fish have fell a prey to this seductive bait. Some few chub have been taken; but the bream seem to have gone very quiet in the Pershore district; the water has been drawn off for some purpose or other, and I should advise my readers to give this part of the Avon a rest for awhile. On the Trent and Severn matters have been very quiet, owing to the bad state of the water through the recent rains, but as these Notes leave me I hear that the water is getting into nice order again.

THE contest mentioned by me last week as promoted by Mr. C. Littlehales, is unavoidably postponed.

THE Birmingham Anglers' Benevolent contest will take place on October 4, at Tunhill Heath. Members only will be allowed to compete. Entrance fee sixpence each. Tickets may be obtained on the morning of the contest at New-street Station, or on the ground previous to the contest. The train will leave the Midland platform at 8.20, which I hope to see crowded, as the whole of the proceeds from the contest are handed over to the general funds of the society.

A SPECIAL general meeting of the Birmingham Association will be held on Thursday evening next, October 8, at the Birmingham Arms Hotel, Smithfield, for the purpose of discussing the important question of the association acquiring water for the whole of the members, and also to take into consideration the depleted state of the public rivers in the Midlands. The chair will be taken at 8.15 prompt, when I hope to see all the delegates in their places.

EXCITING ANGLING ACCIDENT.—Last week while Miss Heaven and Miss Kennedy, from Menaltrie House, Ballater, were perch fishing on the Loch of Aboyne, a rather exciting incident occurred. Miss Heaven hooked a large pike, which on feeling the hook leaped out of the water, and, on falling back, foul-hooked on Miss Kennedy's tackle also. A very exciting scene followed. Both ladies held on to the fish, which afforded them lively sport for some time, till at length Miss Kennedy's tackle gave way, after which Miss Heaven eventually landed the pike, which scaled 5lb. Miss Heaven also landed another on the same occasion which weighed 8lb.—G. M.

NOTES FROM LANCASHIRE.

THOSE who confine their attentions to trout fishing are lamenting the close of the season, disappointing as it has proved to be. It is quite a month since one well-known stream was closed to all, and with the termination of September trout fishing generally in this district may be considered at an end. Ichabod is written in many a diary, if not in one word, yet the prevailing entries proclaim the same verdict. For the past week or ten days the fish taken have plainly indicated the approaching close season: many were far advanced in spawn, and the colour of many others showed evident signs of being out of that condition so much admired by all true anglers.

COARSE fish, judging from reports to hand, are feeding freely, and consequently better catches are effected. Club contests especially point to this improved state of things, as nothing like the amount of prizes remain unawarded as in the case of the contests of July and August. Still, however, the prizes remaining on hand would stock a moderate-sized general store.

AMONGST the individual reports nothing of a startling character is before us. Fair all-round sport has been obtained by many. Mr. Gibson had a good day in the Dane; Messrs. Sam Brooks, Wolstencroft, and others have done well in private waters. Another good lot of gudgeon has been taken from the Dane; fourteen of these weighed 1lb. 7oz., the largest 2½oz. Perhaps one of the youngest anglers in Manchester is J. M. S., a boy of eleven years. This precocious juvenile on the 19th of September took unaided twelve nice fish in a local stream.

GOOD reliable reports of the various rivers and streams are things not to be met with every day, and at present we are entirely at the mercy of weather reporters, and such is the conflicting tone of many of them, that we are utterly bewildered. A local visited one brook last Saturday, which on Thursday was reported in good order, and had the pleasure of finding it almost dry. An association providing reliable reports of the various streams visited by Lancashire anglers would be liberally supported.

THE most interesting and enjoyable event of the season in connection with the Hulme Crown was satisfactorily contested on September 26. The club visited the Lostock Canal, and were favoured with grand weather and, for a change, plenty of fish. The following is a complete list in the order of merit: Messrs. Geo. Thompson (special), Geo. Yates, Wm. Maxwell, John Hampson, J. Buckley, James Fitton, Henry Eaton, Fred Hartley, A. Atherton, Geo. Lloyd.

THE Neptunes seem to be remarkably unfortunate in their matches, as only Messrs. Earnshaw and Harvey succeeded in taking fish, and consequently prizes. The Ellesmere Club were more fortunate, and managed to award all their prizes thus: Messrs. J. Coates, T. Hampson, T. Pilling, J. Buckley, A. Tomlinson, F. Bibby, W. Brown, W. Taylor, H. Brooks. The Bridgewater Club have succeeded in disposing of several more prizes, but have yet five on hand. The following obtained a position on the list of winners: Messrs. J. Dixon, G. Bardesley, A. Bowers, sen., T. Horrocks, J. Mellor, A. Bowers, jun., J. Cartwright, W. English, J. Hudson, F. Fleet.

NOTES FROM NORFOLK.

THE fishing in this district during the past week has been very fair, considering the time of year, and the few anglers who have been out have all caught fish. The weather has been delightful, and wind and temperature all that could be desired. Just now bream are not biting well on the usual fishing grounds for these fish, though they are present in good numbers, sporting about on the surface. The best way to get good baskets is to go to some place out of the way of the wherry traffic (such as our free broads), and by ground-baiting in the first place very sparingly, draw the fish round the angler, putting in more from time to time as sport slackens; instead of, as usual in this district, putting in an immense quantity at first, and then putting in no more.

ON the Yare, at Cantley and Langley, at the end of last and beginning of this week, a few catches of bream and roach were made, but a more than ordinarily strong salt tide on Monday has driven the fish higher up the river.

ON Sept. 24, a friend and myself had thirty-two bream and roach at Brundall, largest bream 1½lb.; all the others were fair fish. On Saturday, at Brundall, a few small baskets were made; and at Buckenham one gentleman had eleven good bream of from 2lb. to 3¾lb. each. On the 27th ult., one boat fishing at Langley had about a stone of bream, and a few of the same fish were also taken at Rockland. On Monday there were three boats fishing in Buckenham Reach, each securing some fair roach. To-day (Wednesday) seven or eight good bream were taken by one rod near Langley Dyke.

ON the Bure there has not been much fishing, though this river is full of fish and the water is in good condition. On Thursday, at Ranworth, one boat had three-score very good bream. On Friday, near Horning Church, about one and a-half stone of roach and bream were taken by two rods. The same day some fair pike were taken on this river, amongst others one of 11lb., on Heigham Sounds, was taken with a spinning dead-bait. On Monday, a fair catch of bream and roach was made at Salhouse.

ON Sept. 21 a fine trout of 6lb. 1oz. was caught on the Wensum, near Whitwell. This fish, a male, is a cross between *fario* and *ferox*, and measures 25in. in total length. On Friday, from the same river, another trout of 3lb. was taken.

GREAT RUN OF SALMON IN THE SALWAY RIVERS.—On Saturday afternoon, an immense run of salmon took place to the Salway rivers. The salmon swarmed up the Annan in hundreds over the salmon pass at Annan Bridge, their ascent being watched by a large number of people. Such a large run of salmon in the month of September has never been known before. Many of the salmon were over 30lb. each.—HEATHERBELL.

NOTES FROM NOTTINGHAM.

THERE has not been much sport enjoyed since the writing of my last Notes. At King's Mills, Mr. Walter Marshall and Mr. J. Greaves, members of the Nottingham Wellington Society, bagged some respectable roach with maggot and creed wheat; and at Weston, Mr. J. Riddier, of the same association, killed amongst other perch a fine specimen of nearly 1½lb. At Fiskerton, three or four members of the Nottingham Bowling Green Inn Society have done well amongst the roach and dace with the maggot, and one of them (Mr. Roper) landed a very peculiar species of fish for the Trent. Its head was like that of a bleak, with scales resembling those of a dace. I was shown the fish, and formed an opinion it was a graining. Mr. Roper was extremely anxious to know its origin, and forwarded it, I believe, to the Editor of the *Fishing Gazette*. At Holme Pierrepont, Mr. Stevenson, one of the subscribers, has been busy amongst dace and chub with the maggot; and on Tuesday the same description of bait accounted for eleven handsome chub to the rods of Mr. S. Pogson, Mr. J. Theaker, and Mr. W. White, of the Bowling Green Inn Society. On the same day I fished a section of the lower Dove and returned with a mixed bag of roach, dace, chub, barbel, and perch. One of the perch weighed a fraction over a pound, and the whole were caught with a bunch of cockspur worm, threaded on a No. 7 hook. Pike are running, and several of good size have been taken in private waters. The heaviest weighed 15lb., and fell to the rod of Mr. Hoe, late of the Wellington Society. The fish measured 3ft. 2in. in length, and ought, in condition, to have weighed 20lb.

WHAT hundreds of fish are killed over the "churchwarden" and the friendly glass to be sure! Many anglers of my acquaintance when making merry, transport, as it were, themselves into dreamland, and so magnify their takes as to make them positively ridiculous. An old saying runs—

"Whisky hot, whisky cold,
Whisky tepid, how oft were sold."

And sold have been three of our local fishermen—and all over the flowing bowl. At Host Sam Pogson's, the Bowling Green, his snug bar as frequently contains farmers and gamekeepers as it does followers of good Old Izaak. The other night the farming division was very ably represented by a gentleman out of Lincolnshire. The conversation turned on angling, and more particularly on the growth and edible qualities of trout. He, or rather his fishery, contained no end of trout. He cared nothing for Loch Leven fish, or for that matter, none but those caught in his own dear river, the Witham.

"Trent eels and Witham Pike,
No one ever saw the like."

Trout, however, were his special fancy, and he claimed to possess not a few of them. But he was not avaricious, for if his old friend Mr. Pogson and his good friends liked to have a day amongst them they were at perfect liberty to do so. His two boys were devoted anglers, and at times they had brought home some stones of trout. He could not say how they caught them; they might or might not have "tickled" them, but he would swear that the last they got was that on the shallows and weighed over 1lb.! Needless, after this, to say that the invitation was readily accepted, and in order to be in time for the journey Mr. Samiwell and his good friends—Mr. "Pepperum" Smith, and Mr. "Rabbit Pie" Theaker—actually sat up to get up, for the train to Great Ponton started as early as five a.m. Most elaborate arrangements were made for the outing, for the intended terrific onslaught on the great family of *Salmo fario*. Maggots galore, wasp-grubs by the hundred, and worms by the thousand were put up, and as a parting reminder to Mrs. P. the kind loving husband—(they are always most affectionate when an outing is in store)—he doubly impressed upon her the necessity of getting in a stone of the best dripping and purchasing an extra half-dozen of frying pans. The train started, the party landed and eager were the friends, to get among 'em. "Rabbit Pie" was content to skirmish, and the result of his skirmishing only too plainly demonstrated the fact that Farmer Take-em-in's preserves were something like old Uncle Prisillica's in the same county. Water there was, but no fish, excepting one closely bred family of five—Bob, Sarah, a son, and two daughters. Take-em-in appeared on the scene, was on good terms with his guests, and sincerely hoped they would fill their baskets. "But how fell'em?" said "Rabbit." "Why," replied he, "out of their habitation; out of their holes!" "Rabbit," who had surveyed three miles of the stream without discovering so much as three inches of water, declared there were no holes. Take-em-in (emphatically): "No holes! There will be if you *dig 'em!*" "Rabbit:" "But what about your stories of trout the other night?" Take-em-in: "Why you are sure it was the *whisky* that was talking, not me." At this time Samiwell and his friend of the wine trade were wet through, and heartily wished themselves back at Nottingham. "Rabbit" further questioned Mr. Take-em-in as to how his sons had enjoyed the wonderful sport he had described in Samiwell's cosy bar. Rising to the occasion, Take-em-in blurted out: "Do you ever take any notice of what ye'r sons tell you? The fish were at home, I saw 'em and that's enough for me!" *Perhaps* they sneaked 'em out of the Squire's water. "Enough!" cried "Rabbit," "Samiwell, I am off. We have been 'squired' afore. This is another Priscillica's adventure—to his own dear low drink—although to complete the party we ought to have with us Mr. 'Marvellous' Trivett, of Mansfield." Cooling down somewhat, Mr. Samiwell confessed they had been sold; but as the day was still young he had yet hopes of returning home with some kind of spoil. He, therefore, very quickly engaged a horse and trap, and drove Mr. "Rabbit" and Mr. "Pepperum" to a neighbouring private canal, in which Mr. "Rabbit" set to work to secure a supply of pike bait. These, fortunately, were soon forthcoming; and in addition to becoming the happy possessor of seven rattling good pike, Mr. "Samiwell" further launched out in the purchase of a couple of live sucking-pigs—which he intended as a present to the honorary astronomer (Mr. Joseph Minion) of the angling society held at his hostelry. The fish were kept alive, and were placed, with the pigs, in a convenient jack. The pigs were of a silvery-grey colour, and were only parted with on account of the purchaser being an intimate friend of the seller. After a long journey back to Nottingham the familiar platform was sighted, and on it, in full astronomical garb, stood the veritable Joseph himself. "Pleased to see you," exclaimed Mr. P. "You can give us a helping hand by carrying home the bag." The astronomer: "Delighted, sir! delighted!" Seizing it, he threw it across his massive shoulder, and hoped whatever was inside would not *bite* him. He liked *eels* but not *pikes*. Just before reaching the Bowling Green, the astronomer was suddenly observed to turn deadly pale; and placing his hand to his side, he swore something in the sack had made a hole in it. He felt he had been crippled for life, and asked to be relieved of his burden. In the club-room all was bustle and excitement, and as soon as the contents of the sack was toppled out and Joseph caught sight of the quadrupeds he darted frantically for the door, exclaiming, "Oh, horror! badgers! badgers! For Tarter! (Mr. Pogson's favourite, rough coated terrier). In vain his friends tried to explain they were pigs. "No pigs for me!" cried Joseph. "Astronomers, you fools, neither study 'grunters' nor badgers. Good night!" Thus ended a memorable "splodging" day. Sturdy John Theaker retired soon after Joseph, and on calling upon him the next morning, his good wife assured me that he had been dreaming during the night of nothing but pigs and pike, badgers and Tarter. He, however, quickly asked for the remnants of Mr. George Bate's historical Bleak Hills rabbit pie.

NOTES FROM SHROPSHIRE.

The trouting season ends but indifferently well, and little or nothing has been done during the week. Taking the season as a whole, it has not been a successful one, though at times we have had short periods of good angling weather and successful fishing. The summer, however, has been an exceptionally unfavourable one, and it is hoped that the comparative smallness of the takes are due to the unpropitious elements, and the constant discolouration of the river by flood-water rather than to a decrease in the supply of fish. The minnow anglers have been far, the most successful under these circumstances; and fly-fishers have had but few favourable days throughout the season. Of the former Mr. Dixon has been about the most successful of local anglers, while the professionals have had fair takes. While trout fishing has thus been exceptionally bad, the rough fishing, on the other hand, has been as satisfactory as could be desired, in fact there are by far too many rough fish in the river. Many good roach have been taken of late with the wasp, maggot, and paste. Pike fishing has been good during the past week or two, and there seems to have been a large increase in the numbers of these fish since the bye-law prohibiting all netting except for salmon within the limits of the Borough of Shrewsbury was passed.

I have often referred in my Notes to the excellent pike fishing which may be had in the many fine lakes in the locality of Shrewsbury, in which permission to fish is not very difficult to obtain from the generous landowners, especially if sought through the medium of an angling society. Shrewsbury anglers, however, seem somewhat slow to appreciate the fine sport that may thus be obtained, and it is but seldom one hears of any of them making such a fine capture as that which two members of the Ironbridge Severn Angling and Protection Society made last week in Bomere Pool, a splendid sheet of water some three miles from Shrewsbury. The pool contains numbers of roach and other rough fish, as well as many fine pike, but the two anglers confined their attentions to the latter, capturing in the course of the day nine handsome fish, the whole weighing 27lb.

NOTES FROM YORK AND DISTRICT.

Grayling fishing in this district is now in full swing, and with weather and water in good condition, some halcyon days should yet be in store for the ardent handler of the rod and line. By the beginning of the week, the rivers, which had been flooded by recent rains, had run down to something like a fishable state, and from nearly all the Yorkshire streams came the welcome words, "prospects good." Many anglers have journeyed to the Wensleydale district, where, in the neighbourhood of Middleham, some grand dishes of from six to twelve brace of grayling have often been made. The fish are reported to be in good condition, and rise fairly well to Fog Black, Red Tag, Honey Dun, and the more generally used Bradshaw's Fancy. Both the Yore and Swale have been in excellent order for angling. The Wharfe and the Nidd have also afforded capital sport for their many frequenters, while the Codbeck at Thirsk has attracted a goodly few.

Pike angling has also found a respectable number of followers here, and some fine specimens have been captured. A farm servant in the employ of Mr. Geoffrey Nicholson, at Home Bridge, near Malton, while out in the river Derwent the other day hooked and successfully landed a splendid pike, weighing over 16lb. Two similar fish of about the same weight were captured in the river Foss at York, about a week ago, and several gentlemen have since been trying their luck in that stream, but, as far as my knowledge extends, without any special result.

With reference to the trouting season in this district, a local newspaper, under the heading of "A Successful Fly-Fisher," says: "Mr. Reginald Swalwell, of the Vicarage, Sinnington, near Pickering, has again this year caught a great quantity of trout, numbering in all over 1,300.

The members of the York Waltonian Angling Society, met together and fished their last match of the season, at Kirkham Abbey, on the 23rd of September last. Leaving York shortly before nine, they arrived at Kirkham in time to commence "operations" at ten o'clock, and fishing continued up to half-past six at night, an interval of about an hour's duration only being allowed for refreshments. In consequence of the prevalence of a strong current the take was not heavy, and "weighing in" was soon over. After tea had been partaken of, the party, highly satisfied with what was the best outing the club had had since its formation returned home. The prize-takers were as follows: First, given by the president, Mr. T. Horsley, Mr. E. Walker; second, given by the vice-president, Mr. J. Masterman, Mr. E. Staines; third, Secretary's prize, Mr. Watson; fourth, Mr. C. Slater; fifth, Mr. A. Simpson; sixth, Mr. Masterman; seventh, Mr. A. Butler; and eighth, Mr. Hewson.

Although the prices of fishing licences cannot be said to be very heavy, there are always a few rod-holders who will endeavour to engage in their favourite sport without paying the necessary shillings and pence. But the last persons in the world one would expect to do such a thing are the clergy. Of such offenders the Yorkshire Fishery Board have this week made one or two examples. At the Wath (North Riding), Petty Sessions, on Saturday, before Sir Reginald Graham, Bart., and other magistrates, the Rev. H. T. Hutchinson, of Melmerley, clerk in holy orders, and curate in charge of the parish, was summoned at the instance of Ralph Colbeck, water bailiff, for fishing in the river Ure with a rod and line without a proper licence, on the 11th of Sept. last. Mr. Edmundson, (Edmundson and Gowland), prosecuted on behalf of the Fishery Board. It seemed defendant had been angling in the Ure, and when asked if he had a licence said, "it was at home." Nevertheless he neither appeared in court nor produced the licence. The chairman said he had received a letter from the defendant in which he stated that the matter of a licence had "entirely escaped his memory," for which negligence he expressed regret. A fine of five shillings and costs, amounting in all to nineteen shillings, was imposed.

At the Howden Petty Sessions, on Saturday, William Smith, fisherman, of Goole, appeared in answer to a charge of unlawfully taking salmon, other than with the rod and line, during the close season, from the river Ouse. Mr. G. Wintringham Cutts, solicitor, Goole, prosecuted on behalf of the Yorkshire Fishery Board, and Mr. Everatt Hind defended. Evidence was adduced by George Cook, water bailiff, and another bailiff, to show that on the 19th of September last defendant was observed to cross from the Dutch river at Goole in a boat to a sandbank on the East Riding side of the river, and take a salmon from a shallow and kill it. He was afterwards observed conveying it to his home. The defence was that the fish was dead when taken by the defendant, having been killed by the impure state of the water. This the Bench, however, failed to see, and imposed a penalty of fifty shillings and costs.

NOTES FROM TYRONE.

Contrary to general expectations, this week was not a good one on the Tyrone rivers. This was probably due to the nightly frosts, and low, clear water, with just sufficient rain to make things uncomfortable for the bank angler, without raising the water, or putting it on colour.

The Ballinderry, Torrent, Blackwater, and other streams in the eastern section have not been fished heavily, and any trout taken were small. Last week, only one salmon, a nineteen-pounder, was killed on the Ballinderry.

Reports from the northern waters show that salmon and trout fishing is not very brilliant on the Strule, Mourne, Castledorf, &c., and, again, the very changeable weather must account for the falling-off. On the Holm reaches of the Strule (the stretches I am best acquainted with) trouting ought to be good just now. This water is a favourite resort of the officers and men of the Depot Royal Inniskilling Fusiliers.

At the last Ballymena petty sessions (Co. Antrim) four farmers were fined from 1s. to 10s. each for allowing flux water to enter the Devenagh river; and at the Monaghan petty sessions another farmer was fined for letting the same infernal liquid into the Drumveruttеn reaches of the Blackwater, in the nominal sum of 1s. How can we expect but that salmon and trout will decrease in our rivers when such ridiculously small fines are imposed for the wholesale destruction of these fish? The imposition of a shilling fine is a mere farcical administration of the Irish Fisheries Law. The maximum fine for the offence is £2, and this should be the minimum fine.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* Fishing Gazette, *St. Dunstan's House, Fetter Lane, London," and marked* Club Report *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly meeting of the General Committee will take place on Monday evening next, October 5, at 8.30.—R. Ghurney, sec.

Anglers' Association.—Eastern District No. 1.—The next return visit on the above will be to the Odds and Evens, King of Prussia, Bevenden-street, East-road, on Wednesday next, when I hope to have the pleasure of meeting many of our angling friends, so that we may have the usual good attendance that we have always had at this club.—G. Manning.

Anglers' Association.—Eastern District No. 2.—The next return visit on this list will take place at the Islington Brothers Angling Society on Monday next, Oct. 5, at their new home, the Myddelton Arms, Canonbury-road, Essex-road (at the side of the New River). Mr. Levett, the genial host, who is a well-known angler, says he knows the requirements of an angling society, and I think we know the wants of a good host, so all angling friends in this district are requested to lay aside their roach poles and bring their briar roots and cane and give him a bumper. Mr. Stretch will be at the head of the swim with a collection of new songs for this night only.—F. Thorling.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The next meeting of the committee will take place on Friday evening, Oct. 9, at 8.30.—R. Ghurney, sec.

The London United Anglers' Societies Fourth Annual Angling Competition, in aid of the funds of the Anglers' Benevolent Society.—On Friday, the 25th ult., the usual fortnightly meeting took place, when Messrs. Spenceley, C. Lake, E. Lake, Farnee, and E. Wood were added to the committee. The following is the list of prizes up to date: Mr. Teale, Rye House, a prize; Mr. Sowerbutt, jun., a tackle book (filled); Mr. Sowerbutt, senr., a roach rod (these were left over from the Gresham competition); Mr. Wood, of the Hoxton Brothers, a prize, value £1 1s.; Mr. Slade, Dalston, a Pitt's helmet; Mr. Webber, Dalston, fishing box; Mr. Cuthbert, Odds and Evens, a prize, value 5s.; Globe Angling Society, 10s. 6d.; Sociable Brothers, 10s. 6d.; Prince Arthur, 10s. 6d.; Mr. Hewett, of the Good Intent, a tobacco stand, value 10s. 6d.; Mr. Medcalf, Amicable Brothers, a roach box; Mr. Farebrother, Amicable Brothers, a prize, value 5s.; Mr. Abrahams, Allason United, a gold ring; ditto, an ebony walking-stick; Mr. Patman, Bermondsey Brothers, a telescope, stick, and net; Mr, Page Wood, of Huntingdon, patent hook book (fitted),. Presented by the Langley Committee: a cardigan jacket, ink stand, tobacco stand, album, electro biscuit box, electro butter dish, twelve tea spoons, and carving knife and fork. The next meeting will be held on Friday, October 9.—S. Malby, sec.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—On the 27th ult., Mr. Moir weighed in roach and bream, but was unable to take one of the remaining three prizes, which still stands over, as he went out on Saturday night; so they will be fished for on October 4. All members to go where they please; but must go on the morning of the competition only. The next return visit on the Central Association will take place at the above on Monday, October 19, when Mr. F. Crumplen has kindly consented to read an interesting paper. We have still a few vacancies for some good working members.—W. H. Potter, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our return visit of Tuesday last was a great success, although only ten clubs were represented, some turned up in strong force—namely. the Battersea Friendly, the Clapham Junction, and the Waggoners. The chair was occupied by Mr. D. Cooper, faced by Mr. H. Lovett, and we had a very pleasant evening. Mr. W. Cooper presented the club with a handsome silver cup to be fished for. We return our sincere thanks to those clubs who answered to the roll-call. Several of ours were out on the 27th ult., and the following weighed in: Mr. James, 5½lb. of roach and dace; Mr. B. Acland, 3¾lb. of roach; Mr. A. Bond, 3lb. 7oz. of roach and dace; Mr. King, roach; Mr. Lovett, dace; Mr. Blyth, dace; Mr. G. Rich, Mr. Knowler, roach and dace, and we made two new members last week, and two more to be proposed members are requested to attend next meeting night to arrange our next outing.—J. Rich, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On Sept. 27th we had a very fine show of fish on the trays contributed by the following members: Mr. W. Embleton, jun., having a fine show of roach, dace, and jack; Mr. G. Merry, a nice show of roach and perch; Mr. George, dace; Mr. W. Hake, roach; Mr. Lattimore, bream; Mr. Whitehead, bream and dace; Mr. Reeks, roach; Mr. Lambarth, Mr. Roach, and Mr. Munday, a very fine show of dace. On Monday next, Oct 5, the visit on the Clerkenwell and District takes place at the above house, when we hope to have a good muster of brother anglers and friends.—E. R. Embleton, sec.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The quarterly meeting of the above society was held at the club-house on Wednesday, with a good attendance. After the usual business, we had the distribution of prizes which had been won during the quarter amounting to about eight guineas, the prize-winners being Messrs. T. Simpkins, Scott, Bowling, Wade, Watkins, Martin, F. Davis, Palmer, Bodell, and myself. I take this opportunity of thanking our patrons and friends who so kindly gave us their support, notably our worthy host and treasurer, Mr. A. Bolland, who is always to the front; also Mr. John Lee Cole, Mr. Quodling, Mr. Mead, and other gentlemen. Members are reminded that on the 4th inst. Mr. Eldridge will hold another competition, so I hope they will turn up and support him in his efforts to provide a good prize list and a pleasant day's outing.—A. G. Smith.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—A good muster of members fished for our monthly prizes on September 27, at Caversham. The result being: J. Savage, first, roach; H. Scott, second, roach; J, Tucker, third, roach and perch; and W. Gibbs, fourth, roach. After the match we paid a visit to the Reading Waltonians, held at the Moderation, Caversham Bridge.—J. Tucker, hon. sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—The usual weekly meeting was held on Tuesday last, Mr. Charles Wastell in the chair. The prize list was extended, and the secretary announced they had now over £40 worth of prizes. Notwithstanding the increase in the standard of fish weighable at this club, big shows have been the rule so far this season, and as a matter of fact, the members are now convinced of the wisdom of the step inaugurated in this club by Mr. E. S. Shrubsole. There will be a match fished at Amberley on October 4 for two prizes. A punt competition is fixed for October 11, at Staines. Entries should be made not later than Saturday, October 10, and should be made on Tuesday next. Prizes value £5 will be fished for. On Tuesday, October 6, a special meeting will be held to consider and pass the half-yearly balance-sheet. Other important matters have also to be dealt with and the secretary sincerely hopes the members will show up in large numbers. This society is now in a prosperous condition and offers a good opportunity for anglers in the district who wish to join a club. The meetings are well attended. The winter programme of readings and concerts, &c., will be ready shortly. The result of the match at Staines on September 27 was as follows: W. Chettle, first; J. Antliff, second.—George Mumford, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road.—Several members were out on the 27th ult., but only one turned up to weigh in, Mr. James Smith saving the club from a blank with 7lb. of roach from Amberley.—A. Conn, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—On September 27 the clerk of the scales was not kept busy, only two gentlemen weighing in—Mr. Wheelhouse, roach and chub; Mr. F. Barker, roach and dace. I beg to remind members that the half-yearly meeting takes place on October 14, when I hope to see a good muster of members.—F. Roberts, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 27th inst. the following weighed in: Mr. Rich, jack and roach, heaviest jack 3lb. 15½oz.; Mr. C. Davis, roach.—D. Warren.

Bostonian Angling Society.—The following have had fair takes: Mr. Rundall, roach, heaviest 1lb. 4oz. and 1lb. 2oz.; Mr. Hoare, roach; Mr. Lawson, roach, heaviest over 1lb.; Mr. Clark, jack and roach; Mr. Brown, perch; Mr. Chapman, jack; Mr. Halsell, chub; Mr. West, dace. Our next outing will take place at Pangbourne on Oct. 14; there are seven valuable prizes to be competed for. Members will oblige by attending next meeting night (Wednesday), as there will be something of an interesting nature brought forward.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On the 27th inst., seventeen members turned up for the competition at Edenbridge. The takes were not extraordinary. Mr. Brown came in first as usual, and Mr. Aitchison, second; the other fifteen members tied. A competition for the five prizes which were not won on the 27th ult. will take place on the river Chelmer on the 11th inst.—H. Roach,

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—We fished for three prizes at Dagenham on the 27th ult., with the following result: Mr. G. Meaning, first; J. Watkins, second; G. Meaning, third. The half-guinea jack prize will remain open until October 6. Since my last report the following have weighed in: Messrs. Tucker, G. Meaning, J. Watkins, G. Meaning, Howell, Foster and Wilson, bream; Messrs. G. Meaning, Howell, Tucker, Foster, Wilson, and Hawkes, roach; and Mr. Tucker, jack. Members who were absent on Tuesday last please note that our half-yearly smoking concert and prize distribution takes place on Tuesday next. Chair to be taken at 8.30 prompt. We can assure all a good evening, both vocal and instrumental. Secretaries and members of clubs please accept this invitation.—T. Hawkes, sec.

Buxton Brothers' Angling Society, Walthamstow.—On the 27th ult. some of our members were out at Enfield Lock, with the following results: J. Stevens, roach: W. Davis, roach; J. Howell, roach. On the 28th ult, R. Quartermas, roach; J. Stevens, two jack. On the 30th ult. our adjourned meeting was largely attended, members showing up in full force. It was arranged to have a friendly gathering at the Rye House on Oct. 4, when it is hoped that there will be a good muster. Members are reminded that specimen fish prizes count on that day.—A. Shuker, sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On Sept. 27 the following members had good shows of fish: Mr. King, roach; Mr. Langton, jack; Mr. A. Chapman, jack; Mr. Boxall, jack; Mr. C. Chapman, jack.—E. T. White, sec.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—Several members took part in the match on September 20, no one having sufficient weight to take a prize. It will be fished again at Staines, on October 11, roving between Staines Bridge and Penton Hook; bank only; two rods; jack barred. All members to meet at Brondesbury Station (N.L.R.) at eight o'clock on the morning. Those coming down later must report themselves to the first member they come to in the usual way. The only members to weigh in on the 27th ult., were Mr. J. Tanner, jack; and Mr. Hiseock, roach.—E. W. Ward, hon. sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—The announcement that Mr. Harry Dunn would read a paper on "Barbel Fishing," and that Mr. H. W. Sharp would sing Izaak Walton's "Angler's Song," with additional verses to Lawes' original music, drew a large and appreciative audience on Monday last. Mr. T. Crumplen took the chair. If the Causton A.S., was frequently able to submit so attractive a programme, the prudent host, Mr. Tom Keeble, might conveniently consider the desirability of structural alterations within the walls of the Coffee Pot Tavern. In the language of the playbill there was a crowded house and standing-room only. With regard to Mr. Dunn's paper and the discussion that ensued it would be *infra dig.* on my part to make any comment here, especially when there were so many gentlemen of great authority on the subject taking notes. It is sufficient for me to say that Mr. Harry Dunn thoroughly deserved the hearty vote of thanks of which he was the recipient. The fitness and charm of Izaak Walton's song, as rendered by Mr. Sharp, made an impression upon all, and was encored again and again. Mr. Edgar S. Shrubsole, Mr. G. E. Simms, Mr. John Kelly, Silver Trout, and Mr. G. Evans, Westbourne Park Piscatorial, were unanimously elected hon. life members, and in returning thanks for their election each one presented the society with a prize. During the evening Mr. F. North exhibited a fine show of roach. After a vote of thanks to Mr. Crumplen for presiding, the meeting was closed with the Angler's Song. Mr. G. E. Simms will read the next paper before this society, and others are promised by Mr. Shrubsole and Mr. Crumplen.—John Smith, hon. sec.

Caxtonian Angling Society.—This flourishing society, whose headquarters are at the Falcon Hotel, Gough-square, Fleet-street, held their second annual roach competition (specimen fish only), on Thursday, Sept. 24, at Richmond. There was a very good attendance, and tickets were examined at 10.20, and returned at 6.15 p.m. A capital take all round rewarded the efforts of the competitors. The first prize, was won by Mr. A. J. Parker whose largest fish scaled 13lb. ¾oz.; Mr. W. H. Cate, jun., took second prize 9½oz.; Mr. A. J. Parker's gross catch weighed 22¾lb., comprising 18lb. 10oz. of dace, above 8in., and the rest good-sized roach. He fished with Brain, jun., who was most assiduous in his attentions.

Central Association.—The next monthly delegate meeting will take place at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday, the 5th inst., at 8.30 p.m.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—On September 27, twenty-one members went to Staines to compete in punts for five prizes, but sport kept very dull. only four prizes being won as follows: Mr. Chapman, first; Mr. Wilson, second; Mr. May, third; and Mr. F. T. Tringham, fourth; the following also had fish, Mr. Trowbridge jack; and Mr. Markworth, bream, 7lb. 3oz., one fish, 3lb.—A. Trowbridge, secretary.

Clapton Angling Society, Wayland Hotel, Dalston-lane.—The ordinary weekly meeting of this society was held on Monday, 28th September, Mr. J. P. Wheeldon in the chair. During the evening applications were made for rules of the society by intending members. As there was no particular catches to report, a very pleasant evening was spent in discussing angling matters generally, and the meeting terminated with a hearty vote of thanks to the chairman.—A. W. Oliver, assistant sec.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey.—A roving match will take place on October 4, for two prizes. Members can obtain full particulars at the club-house. Those members wishing to assist in arranging a smoking concert for the benefit of the club funds will oblige by giving in their names at once.—P. Gardner, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—We had a very fair show of fish on the 27th ult., by Messrs. E. George, with dace; E. Baker, dace; T. Youngman, roach; A. Duncan, roach; E. Baxter, chub; A. Smith, tench. Tuesday next is quarterly night, and I hope all members will attend, as we have some important business to settle. I also remind members that the annual concert takes place on October 26, the tickets are now ready.—A. Smith, sec.

Corinthian Angling Club, Prince of Wales Hotel, Eastbourne-terrace, W.—On Sept. 30 the following gentlemen were duly elected active members: Messrs. Rubenstein, Nicholson, and Nash. I have great pleasure in recording the capture of an exceptionally handsome perch, weight 3lb. 4oz., taken by Mr. J. C. Arthur, from Norfolk Broads. Mr. Arthur has been good enough to send the fish for preservation, and when completed will adorn the walls of our club-house. Several other of our members have been out.

Crewe No. 1 Angling Society.—The last club match of the season took place on September 19, some sixty members taking part in the contest. The match was fished in the Canal, at Nantwich. £5 in prizes was voted from the funds of the club. Messrs. J. Whitfield, R. Cole, J. Singleton, W. Callis, W. Butt, and H. Thomas, were amongst the chief prize winners. The catches were very small, as is usually the case in canal matches, but it would of course be injudicious to take so many members to any particular club water. Since I wrote last I may mention a grand catch of roach by C. Condliffe, at Buttington, also roach and chub by J. Bate and J. Thomas. Four and a-half brace of nice trout by F. A. Williams, and on another occasion a trout of 1lb. 2oz. The fishing and weighing in for specimen fish extends to December 31 for the current season—except for trout, which is now closed. I give you the weights of first, second, and third, in each class up to the present date, viz., Roach, J. Thomas, 1lb. 9½oz., 1lb. 7½oz.; J. Bate, 1lb. 6oz., 1lb. 5oz.; R. Cole, 1lb. 4¼oz. Dace, G. Kelshaw, 9oz.; J. Collins, 8½oz., 8oz. Gudgeon, J. Wilson, 1½oz.; F. Talbot, 1¼oz. Ruff, W. Mayhanks, 1½oz., 1¾oz.; J. Pagan, 1½oz. Pike, F. Warham, 6lb. 14¼oz.; F. Talbot, 3lb. 2oz., 3lb. 1oz. Champion prize fish for the season—Chub, J. Thomas, 3lb. 12½oz.; T. Fotherby, 3lb. 13½oz. It will be seen that Mr. Thomas's splendid chub which he had "set up" by Cooper and Sons, of London, has been beaten by Mr. T. Fotherby, by 1oz., a grand specimen of chub taken with worm in the River Severn. Perch, J. Thomas, 13¾oz.; G. Capel, 1lb. 10¼oz. Bream, F. Talbot, 2lb. ¾oz.; J. Whitfield, 1lb. 9oz.; D. Emerton, 1lb. 8oz. Trout, D. Emerton, 1lb. 3½oz.; F. A. Williams, 1lb. 1oz.; J. Bate, 1lb. ¼oz. Tench, carp, and rudd, remain without a single fish being weighed in at present. Some important business was done at the last club meeting respecting the annual club dinner, and a revision of the rules. Note.—Our kindred club, the Izaak Walton Angling Society, have sustained a severe loss by the death of their esteemed chairman, Mr. J. Astley, whose place has been filled by Mr. W. Eardley. This society is progressing very favourably.—F. A. Williams.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On September 27, a few members were out, but owing to the bright water met with very little sport: Messrs. Parram, Killick, and Wild, having a few nice roach, dace, and perch; Mr. Thornton had two fine carp, scaling 5lb. the two. Members please note that Tuesday next is general meeting night, when we have to elect a chairman.—S. Malby, sec.

Earlsfield Angling Society, Half-way House, Earls-street, Bayswater.—There will be a special general meeting on October 7 to elect officers for the ensuing quarter, and to arrange for an outing on October 11. There is also another matter of great importance to the club to be discussed. We have had several decent shows of fish lately by Mr. Biederman and other members, but the takes have not so far come up to general expectations.—R. W. Birn, hon. secretary.

General Post Office Angling Society.—The meetings of this society are now held at the Falcon Hotel, Falcon-square, every Thursday, at eight p.m. The progress of this society, notwithstanding our quietness, has been favourable, having made several new members since my last report. We have also made a few alterations in the rules, which give greater facilities to the members, one of the alterations being that, in future, all prizes will be taken with specimen fish only. At a meeting on the 17th of September, the books were audited, a good balance being found in the treasurer's hands. The following gentlemen were also elected to act as committee-men in their respective branches: Mr. Boone, Parcel Post; Mr. George Foreighnana, Register Branch; Mr. Whitmore, Inland Branch; and Mr. Sholter, Newspaper Branch. Officers in either of these branches can obtain all information from any of these gentlemen respecting enrolment, &c. On Thursday, Oct. 1, we compete at Rye House for four prizes of £1 each. Competitions will also be held every Thursday during this month. The number of members in this society being unlimited, we shall be pleased to make any brother officer a member. I will gladly send, free of charge, full particulars as to membership, &c., upon receipt of request for same addressed to me at the E.C.D.O.—L. W. Donne, secretary.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We fished for three prizes in the Lea on the 27th ult., but none of them were won on account of the water being so bright, but we were amply rewarded for our bad luck by a splendid show of roach, taken by Mr. Coleman, and shown in the club-room, nine fish weighing 15lb. 1oz., the five largest fish weighing 2lb. 4oz., 2lb. 3½oz., 1lb. 15¼oz., 1lb. 13oz., and 1lb. 10¾oz., the four smallest weighing a trifle over 1lb. 1oz. each. They are at Mr. Gibson's to be mounted in one case and will be on show at the above society when finished. Mr. Slade also showed a few fish. These weights are authentic.—A. Payne, sec.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—There was a good show of roach and dace brought in on September 27 by Messrs. F. Grey, Lyte, Taylor, Hugget, and Whitmore. The members will fish for prizes on October 11th at Pangbourne; roam of water.—R. Murphy.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—At our meeting on Sept. 29, Mr. A. Wheeler in the chair, it was decided that we fish a pegged-down match at Taplow, on October 18. On the 27th ult., Mr. W. Savage weighed perch, and Mr. F. Bates, roach.—G. F. Weaver, sec.

Gresham Angling Society.—At the usual weekly meeting on Tuesday, Mr. John Hearn was in the chair. Several members had fished in the roach competition in the society's water at Kelvedon that day, with the result that Mr. E. C. Clements had taken the first prize of tackle, with three roach, weighing 2lb. 10¼oz. The other prizes were not taken, it being necessary under the rules that nothing less than three fish of ½lb. each would weigh in. Mr. Parker reported having taken thirty good flat fish at Leigh, and Dr. Davidson twenty-one. Dr. Brunton had been grayling fishing in Wiltshire, and taken eight fish, weighing 13½lb.

Hertford Angling Preservation Society, (G. E. R.) Station Hotel, Hertford.—On Monday evening, Mr. Herbert Johnson, a member of this club, weighed in a trout, in capital condition. It was 18in. in length, 13½in. in girth, and weighed just 3½lb. The fish were taken on a tight line while roach fishing with paste, a No. 8 hook, and 2 yards. of fine drawn gut, the fortunate captor was without a landing net, and had to send a boy some distance for one, he had the fish on nearly three-quarters of an hour before bringing it to bank. After being weighed in, the fish was sent to Cooper and Son, Radnor-street, for preservation, and will be added to the collection now in possession of the society.—W. Waller, vice-president.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sister's-road, Finsbury Park.—The twenty-third annual supper of the above was held on Thursday evening, the 24th ult., at the Hornsey Wood Tavern, Finsbury Park, N., the headquarters. A large number of members and friends did ample justice to an excellent repast, provided by the host, Mr. H. F. Foale. The president, Mr. James E. Wheatley, occupied the chair, with the worthy host in the vice. The cloth being cleared, and the usual loyal toasts drunk, the toast of the evening "Prosperity to the Highbury Angling Society" was proposed by the vice-chairman, coupled with the name of the popular president, Mr. J. E. Wheatley, who on rising to respond, was received with great cheering. In a very happy speech he gave a *resumé* of the flourishing condition of the club, which he was instrumental in founding twenty-three years ago, and which he stated was never in a better position than at the present time, and trusted that the members would continue to combine to make their club even a greater success than it was at present. The health of the vice-chairman was proposed by Mr. J. K. Devonshire, and responded to by Mr. Foale. The remainder of the evening (an extension of time having been obtained) was then devoted to harmony, and several very excellent songs were rendered in first-class style by the members and friends. Mr. Heath, at the conclusion of the harmony, proposed the health of Mr. J. T. Griffiths, the energetic secretary, which was drank with great enthusiam, this bringing to a close one of the most enjoyable evenings ever passed by these disciples of "Old Isaac."—J. T. Griffiths, sec.

Hoxton Brothers Angling Society.—The members fished for prizes on September 27, at Cheshunt, three only being won: First, S. Cole, roach; second, H. Da Costa, perch; third, T. Haycox, perch.—R. Ghurney, sec.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—We met, as usual, on the 24th ult., when two new members were proposed. Several of our members were out on the 27th ult., when the following weighed in: Mr. Croker, roach; Mr. Willsher, roach and gudgeon; Mr. Key, roach and gudgeon; Mr. Stretch, roach and gudgeon; Mr. H. Herbert, gudgeon. Our return visit on No. 2 Eastern District takes place next Monday, October 5, when we hope to have an enjoyable evening. We have room for a few more members.—J. H. Herbert, secretary.

Izaak Walton Angling Society.—The members will compete for four special prizes on the 4th instant, and for three on Wednesday next, the 7th instant. Competitors may choose their own fishing waters for these prizes, but must not leave London before five a.m. on the days of the competitions. Mr. A. Furlong weighed in roach and perch on September 27.—H. B.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—During the past week the following members have weighed in: Messrs. J. Hollyman (9lb. 3¼oz. roach and dace), Prole (9lb. 0¼oz. roach and dace), T. Salter (4lb. 11oz. barbel and roach), Master (3lb. 11oz. roach and dace), Wilmot (2lb. 6oz. roach), Mason (1lb. 10oz. roach). Next week the winners of the September competitions will be given.—T. Salter, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 27th ult. the following weighed in some fish: Mr. Belton, roach and dace; Messrs. Porter, Nelson, Ellingham, Watling, and Webster, perch and roach. Messrs. Moore and Findley showed some nice roach on the 23rd ult., from the Thames. I hope members in arrears will show up and clear the books.—W. Watling, sec.

Liverpool Angling Association.—At our last week's meeting there were twenty members—or about as many as there ought to be—and the following resolutions were passed: "That one guinea be given to the keeper of the Ruabon Reservoir, as a gratuity expressive of our gratification at the efficient way in which he has looked after the water." "That there be an outing to the Ruabon Reservoir on 8th of October, for which the vice-president, Mr. R. Whittington, gives a mackintosh, of not less value than two guineas, for the heaviest take of fish; and that there be another outing to the Vyrnwy." Mr. R. Roberts, when away on his holidays, had some rare old sport, taking large numbers of perch, roach, &c., nearly every day; but generally speaking sport for many miles round Liverpool has been very indifferent. I hope to have two or three days on the Dove, at Rocester, next week, and am looking confidently forward for some grand grayling, as they are there.—Richard Woolfall.

Liverpool East End Friendly Angling Association 150, West Derby-road, Liverpool.—We had a fair muster on Sept. 29, when it was proposed that we have a match on Oct. 11, to take place on the river Dee, Chester. Conditions: no competitor to use more than one rod; also, no fish to be weighed in under 3oz.; all competitors to go by the train from Woodside on morning of match. Any member not abiding by these rules will be disqualified from weighing in for prizes. We have a special meeting on the 6th to decide about the prizes that are for specimen fish, which will be presented at the close of the year. Members who have been out have had fair sport with roach and perch, &c., taking into consideration the inclement weather they have had to contend with. Hoping all members will attend next meeting.—T. C. Segar, sec.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 27th ult., our members were at various waters, but the shows of fish were small, Messrs. W. Pearce, Sansom, Milburn, A. Clark, and Penfold weighing in roach, dace, perch, and tench.—W. F. Pearce.

Mitre Brothers Angling Society, Mitre Tavern, Kingsgate-street, Holborn.—Members of the above society were all out on September 27, but only two weighed in fish—Mr. Irish, with chub; Mr. Timmis, with a nice show of perch and dace from the Thames.—J. Jolliffe, sec.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—Concerning our grand outing next Thursday the following resolution was carried at our meeting on Oct. 1: "All to go by the 7.35 a.m. to Richmond and Twickenham." Punts to be at White Cross and Queen's Head at 8.30. Start fishing at nine, and cease at five. Captain: Messrs. Grimmett and Baldwin, to arrange partners and draw for punts on the 8th. Sweepstakes one shilling each, to be divided into three prizes, for puntsmen. One rod to each member. Fish were weighed in on Thursday by Messrs. Bailey, barbel, roach and dace, 4lb. 12oz.; Marks, barbel, roach, and dace, 2lb. 12oz.; and Matthews, chub, roach, and barbel, 10lb. 7½oz.—A. E. Baldwin, sec.

North Lambeth Angling Society, 108, Westminster Bridge-road.—The following prizes are to be fished for during October and November: October only, best show of gudgeon (not less than five inches); chub (not less than 2½lb.) October and November, pike (not less than 5lb), roach (not less than 1lb.). T. Daws is the winner of the dace prize for September. Other prizes will be announced on a future date.—F. WALLIS, sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland Park, N.W.—Our brake outing took place, on the 27th ult., to Boxmoor, and it turned out a grand success, and great credit is due to our worthy secretary for the excellent manner in which everything was arranged, but sport was very indifferent; Mr. Billings coming to the front with roach and dace winning the first prize, given by Mr. Weaver, the secretary; and Mr. Marsh, dace, winning a rod, presented for the occasion by several friends.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—On the 27th ult., Mr. Bygrave brought in a nice show of rudd, and F. Harrison saved himself from a blank by bringing in a perch. Secretaries of clubs are reminded of our visit next Wednesday, October 7, on the No. 1 Eastern list.—J. CUTHBERT, sec.

Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham.—Mr. Holt and Mr. Daniels were out on the 27th ult., and had a nice show of perch and bream. The next series of prizes will be fished for on October 11, open match; members can leave town on Saturday night. Mr. Bellehambers was duly elected a fishing member of this society, and Mr. Fautley was elected secretary.—A. TOZER, sec.

Phœnix Angling Society, the Crown, Old St. Pancras-road, N.W.—On the 27th ult., thirty members competed for three valuable prizes, the first being won by our old member, Mr. W. Andree, with a nice tray of roach; the second by our worthy chairman, Mr. Heelas; the third by Mr. Marcs. Messrs. Carr, Brown, Reed, Keen, Homan, Raymond, C. Dove, Foster, Elbourn, and Morgan having a few fish each. Last Tuesday being quarterly night, we had a good muster, making two more new members. There is to be a fishing and shooting contest on the 4th inst. between the secretary and Mr. Forster, the host. Betting odds on Forster.—W. ELBOURN, sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—On September 27th, Mr. Cook weighed in a nice show of roach from Hayes. A match has been arranged to take place at Langley, for five prizes, on October 18; meet at Westbourne Park Station, at 8.15; two rods; all fish to weigh according to club rules, no live-bait to be taken down. Members coming down by later trains must register themselves to the secretary or chairman before fishing, which will commence at 9.45 a.m., and cease at six o'clock. For further particulars apply at club-house.

Prince of Wales Angling Society, the Globe, Lisson-grove.—The following members weighed in on September 27, Mr. Davis, a fine show of tench, 6lb. 8oz.; Robbins, roach; Hayden, roach; Twomey, jack and roach; and Ivermees, tench. Members wishing to take part in the match on Oct. 4, at Bourne End, are reminded that they must all go by the first train same morning.—W. B.

Rising Sun Angling Society, The George, Brook-street, Holborn.—Mr. Skinner's prize of 10s. 6d., for the heaviest weight of fish in one day, during the month of September, was won by Mr. Cromley, with 1lb. 10¼oz. of roach; Mr. Sharpless being second, with 1lb. 9¼oz. of roach and dace. I hope to see all members attend on the 5th inst., as something of great importance to the club will be brought before them.—F. BRADLEY, hon. sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The result of our punt match at Twickenham on Sept. 27 was a success. Fifteen members competed, they all getting fish, as follows: Messrs. T. Lines, roach, dace, and gudgeon, first; E. Pyne, roach, dace, gudgeon, and barbel, second; F. T. Lamberton, roach, dace, and gudgeon, third; H. Mitchell, roach, dace, and gudgeon, fourth; Searle, dace and gudgeon; J. Wigley, roach and dace; Tidmarsh, dace and gudgeon; W. Lamberton, dace and gudgeon; J. Clarke, jack; Naylor, dace; Stonold, roach and dace; P. Martin, dace; F. Lamberton, roach and dace. Best and Utting did not weigh. Mr. J. Davis weighed in dace on Wednesday.—F. T. LAMBERTON, sec.

Royal George Angling Society, the Hope Tavern, Tottenham-street, Tottenham Court-road.—On the 21st we fished Mr. Wood's prize of £1 1s., which was won by Mr. Chant, with 2lb. 9oz. of roach from Upper Thames. Messrs. Webber, Gibbons, Harris, Bacon, Wood, Jaquet likewise weighed in roach and dace, &c. We had a special meeting on the 30th to consider the removal of the club to a more suitable house, and after being discussed by members present, it was proposed and carried unanimously that we remove to the Queen's Arms Hotel, Bateman-street, Soho. Wednesday, October 7, will be our first meeting night at the new house. On the 11th inst. we have an outing for several prizes.—F. C. LONGLAND.

Royal Oak Angling Society, Royal Oak, Roman-road, North Bow, E.—Several of our members were out on Sept. 27, but the only members who met with any success were Messrs. J. Holden, A. Barclay, F. Barclay, J. Stanley, with roach, dace, and chub.—A. BARCLAY, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—We did not have a very grand show of fish on Sept. 27. Messrs. Forrester and Stone were the only members who weighed in, and they had dace only. Other members had fish, but did not weigh in. Mr. Wink presented to the club a frame for the club-card, written by Mr. Stone; a hearty vote of thanks was accorded him. Several members intend to compete for the prizes in the tournament on Oct. 1. No business of importance took place on Wednesday.—J. WRIGHT, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road. — On the 20th ult., the following members weighed in a few fish: Messrs. G. Sanders, dace; E. W. North, roach and dace, 4lb. 15oz.; J. Petrie, roach and dace, 3lb. 5¼oz. On September 27th only two members weighed in: Messrs. W. North, a fine tray of roach, 15lb. 10¼oz.; J. Petrie, roach and gudgeon (one gudgeon 1¼oz.) Mr. J. R. Wallage was duly elected a working member of this society. The following members have been successful during September: Messrs. C. Smith, jun., winning 10s. 6d. for heaviest chub; W. North, gross weight of roach, 10s. 6d. On Monday last a smoking concert took place on behalf of S. E. Cane, who wishes to thank those gentlemen who so kindly assisted him. Members will greatly oblige by attending on our meeting nights in full force in future.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—Messrs. Warsap and Benwell, sen., on Saturday last were busy among the roach and dace, weighing in over 6lb. Our standard is one inch longer than the Thames size. The vice-president and Mr. Benwell, jun., have been away four days, but did not get much sport, owing to the state of the water. The president has gone for his holidays, and we are expecting to hear of continual tight lines. Mr. Snell, our newly-elected member has opened his account with 6lb. ¾oz. Members who have entered for the match on Oct. 25, "President v. Vice-President," will have full details sent them later on.—C. B.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden. On the 27th ult. our outing took place at Goring, and all the prizes were taken in the following order: Messrs. Smales, jun., first; Pettit, second; and Williams, third. On Tuesday last we had a very good meeting, and although two of our members had gone to special good private waters, they had no luck, and it was left to our worthy president (Mr. Frank Gritlin) to save the society from a blank, which he did with a show of roach, dace, and gudgeon from the tidal waters.—PELICAN.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—We fish the Forty Guinea for the remaining prizes on the 4th inst. Train leaves at 9.13 a.m. from Bethnal Green for Rye House. Members weighing in fish on the 27th ult. were Mr. Polykett, some very nice dace; Mr. A. Myers, roach and dace; Mr. H. Spenceley, dace.—R. S., secretary.

South London Angling Society, George and Dragon, 235, Camberwell-road, S.E.—At the outing on Sept 27 all the prizes were taken. Our next outing for prizes takes place on Wednesday week next. I am happy to say that our old and prominent member (Mr. Goody) is somewhat better after the serious operation he has undergone.—J. J. F., sec.

South London United Anglers' Visiting List.—A visit of the clubs enrolled on the above list was paid to the Amicable Excelsior A.S. on September 29, when a most enjoyable evening was spent. Although the number of clubs represented were not so large as usual, most of those that were turned up in strong force, fairly filling the room. On the roll being called at eleven o'clock, the following clubs responded: Bermondsey Brothers, Rodney, Anglers' Pride, St. George's, Waggoners, St. Alban's and Excelsior, Battersea Friendly, Clapham Junction, South Belgravia, and Amicable Excelsior. Unfortunately the three following societies on the list—the Cliftonville, Earlsfield, and Original North Lambeth were not represented, consequently the next visit will go to the Bermondsey Brothers A.S., Pitt's Head, Grange-road. Due notice of date next week.—A. CONN, hon. sec.

Stepney Angling Society, Beehive, Rhodeswell-road, Stepney.—On Sept. 27, Mr. Jolly saved us from a blank by bringing to the scale two jack; heaviest fish, 7lb. 9oz.—E. N. P., hon. sec.

St. Thomas's Angling Society, Waterman's Arms, Paris-street, Lambeth, S.E.—The members of the above club have decided to fish at Chelmsford on the 4th inst. for the remaining prizes of the club. The members are kindly requested to take notice that next Wednesday, Oct. 7, is quarterly night, when it is hoped that they will attend.—G. MORTON, sec.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Several of our members were out on September 27, when Messrs. Harwood, Hare, and Lewis, weighed in. We had a full meeting on Tuesday last, being quarterly night. Messrs. Carpenter and Mackenzie were elected on committee, in place of two members resigned. The half-yearly supper is arranged to take place on October 21.—H. R.

United Brothers, Deptford.—Several members of the above were out on the 27th ult., with the following result: Mr. W. Tyler, bream; W. Windred, weighed in a jack. Other members were out but returned with blanks. Members of the above will fish a peg-down match on the 4th inst., in the Lea for several very handsome prizes.—H. TYLER, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—We had a fair attendance on the 29th ult., Mr. Philips in the chair, faced by Mr. Petty. After our financial business was disposed of, nothing of importance was done, owing to some of them wanting to get away to the Amicable Excelsior Visit. Several of ours were out on the 27th, the following weighed in: Mr. Clegg, roach: Mr. Russ, perch and dace, one perch 1lb. 5½oz.: Mr. Bird, sen., roach and jack. Others had fish, but did not arrive. Members will oblige by attending a little earlier on Tuesday evenings. I shall be extremely obliged.—H. C., hon. sec.

Walham Green and Fulham Angling Society, Albany-street, Regent's Park.—On September 27th, the members were out fishing a roving match from the bank only for two prizes presented by Mr. A. Glass and T. Allder, jun., with the following result: Mr. W. Achong a show of perch, taking first; Mr. Maslin, a show of gudgeon, second.—E. SUTEHALL, sec.

Waltonian Angling Society, the Cape of Good Hope, Albany-street, Regent's-park.—Most of our members were out on September 27, and had a most enjoyable day. The takes of fish were quite equal to any we have had this season. Messrs. Leaver, roach, &c., 8lb. 7¼oz.; Sexton, jun., roach, 7lb. 2¼oz.; Sexton, roach, &c., 6lb. 12½oz.; J. Dodge, roach, 3lb. 4oz.; R. Dodge, roach, 2lb. 4oz.; Miller, roach, 1lb. 14oz. H. Putman, Dodge, sen., and Dodge, jun., also weighed in.—J. PACKMAN, sec.

Walworth Waltonians, St. Paul's Tavern, Walworth-S.E.—On September 23, at our pegged-down match at Pangbourne, only two prizes were taken—Mr. W. J. Crisp, first; Mr. E. Lees, second. The other prizes will go on to the October outing. If the fish would not feed in the day, the members were on feed at night at the club-house. On their return there was a leg-of-mutton supper, provided by Messrs. W. J. Crisp and H. Lees, and a very enjoyable day and evening was spent. On the 30th ult., Mr. J. Crisp weighed in 13lb. 14½oz., jack; 1lb. 12oz., perch; roach, perch, and jack, gross, 18lb. 13¼oz.; Mr. Piolaini, jack, 7lb. 8oz.; roach, 3lb. 0¼oz., one roach, 1lb. 10oz. Both takes from the river Lea. The river Lea is "looking up" to get two such fine takes.—CHARLES HIBBLE, sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 27th ult., Mr. S. Cooper weighed in 4lb. 7oz. bream; Mr. R. J. Dartnall, 3lb. 13oz. roach; and Mr. W. Gordon, 3lb. 5oz. roach. The September competition will take place on Oct. 4 at Amberley; roving; all members to go down by the first or second train; meet outside Amberley Station; show fish at 5.30 at the Cricketers. Mr. Ephraim Alfred Holbrow was proposed as a member. Ballot on Wednesday next.—R. J. DARTNALL, secretary.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 27th ult., but sport was very poor, as only the following weighed in fish: Mr. Stevens, bream; Mr. Hobbs, bream; Mr. Robathan, perch. Hoping to have a better report next time.—R. LOWTHER, sec.

Woolwich Brothers Angling Society, Green Man, High-street, Plumstead.—The members held a competition at Kingston on the 26th ult. for three prizes. Only two were taken, by Messrs. H. Cresswell and P. Smith. The members generously decided to present W. Stevenson with the third prize, for the energy he displayed in his endeavour to obtain it.—J. R. HOWCROFT, sec.

Holloway's Pills.—In the complaints peculiar to females these Pills are unrivalled. Their use by the fair sex has become so constant for the removal of their ailments that barely a toilet is without them. Amongst all classes, from the domestic servant to the peeress, universal favour is accorded to these renovating Pills; their invigorating and purifying properties render them safe and invaluable in all cases; they may be taken by females of all ages for any disorganisation or irregularity of the system, speedily removing the cause and restoring the sufferer to robust health. As a family medicine they are invaluable for subduing the maladies of young and old.

AFTER A DAY'S FISHING,
Call on TIBBATTS,
AT "THE CITIZEN," 70, HOUNDSDITCH
(OPPOSITE BISHOPSGATE CHURCH),
Two minutes walk from Liverpool-street and Broad-street Stations.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min. for Chelsea.		Add	55 min. for Kew.	
	40 ,, ,, Putney.			75 ,, ,, Richmond.	
	45 ,, ,, Hammersmith.			80 ,, ,, Twickenham.	
	50 ,, ,, Barnes.			85 ,, ,, Teddington.	

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

English and Welsh Reports.

The Lower Thames.—GENERAL REMARKS.—The present time is one of the important periods in the work of Thames preservation, and the river requires almost constant watching to prevent its being netted to meet the demands for white coarse fish, which at certain dates are very great. At one time it was a most serious business to protect the river from a daring gang of poachers, but which is now thoroughly broken up. Of late years a regularly organised system has been adopted for watching the river by the combined action of the keepers employed by the Thames Conservators and those of the Thames Angling Preservation Society, with some of the fishermen whose services are paid by the committee of the T.A.P.S.; and so complete have been the arrangements, that the work has been carried out with perfectly satisfactory results. I need scarcely add, the same system has been adopted for the present season, and it is hoped with the same success. The activity and energy of the head river-keeper, William Douglas, of the T.A.P.S., in another examination of the takes of both classes of anglers has led to the detection of another offender on the banks with a considerable number of unsizeable fish, and the worst feature in the case is, that he has been previously cautioned against the offence, and in his guilt he cannot possibly plead ignorance. It has always been my motto to temper justice with mercy. I have never been anxious to make the law oppressive, and on more than one occasion, when I considered the fine too heavy, I have appealed to the bench for a reduction, and, in so doing, I believe I have made a friend rather than an enemy to the river. This has practically been the case where I have been satisfied the offender had really been ignorant of the law; but in those instances where offenders have been previously cautioned, I should leave the law to take its course. If the weather and water continues right, I am of opinion there will be some good jack fishing in the Thames. Directly after receiving the report in last week's *Fishing Gazette* of the capture of two good fish at Teddington, I received another account of a similar fish being caught at the same place.—B

RICHMOND.—H. Wheeler, in one day, twenty-five barbel; H. Howard, in five days, 40lb. of roach and dace; Job Brain, during the week, 70lb. and six barbel; Henry Mansell, 80lb. of roach and dace during the week.

TWICKENHAM.—Richard Coxen, in three days with Mr Tarrant, 30lb. of roach and dace, and a barbel of 4lb. George Coxen, in three days, 46lb.; John Coxen, in two days, 20lb.; John Frost, in two and a-half days, 20lb.; J. Dunn, in two days, 16lb.; John Coxen, sen., in the week, thirty dozen; Pert Hammerton, in four days, 38lb., four barbel, and one bream; John Spong, in six days, 80lb. and eleven barbel.

TEDDINGTON.—Joseph Baldwin, in three days, twelve dozen of roach and dace; W. McBride, in four days, sixteen dozen, and a barbel of 4lb. One of the bank anglers got a barbel of 6lb.

KINGSTON.—John Johnson, during the week, nineteen barbel, two brace of jack, two chub, and twelve dozen of roach and dace; N. Bolton, in the same time, ten dozen of roach and dace, eighteen barbel and one chub; J. Wilkes, in three half-days, five barbel, and one dozen of very fine roach; J. Knight, in four days, thirty barbel, five chub, and twelve dozen of roach and dace; Mr. Matthews, during the week, ten barbel and seven jack.

HAMPTON COURT.—William Milbourne writes: "The water is very low and bright, and we are not doing much in the fishing."

SUNBURY.—Messrs. T. and A. Stroud, during the week, eighteen dozen of roach and dace, fourteen barbel, and a trout of 9lb., which was returned to the river again.

CHERTSEY.—John Poulter, in one day, with Mr. C. Wastell, ten dozen of roach and dace, the greater portion being returned; H. Purss, with a gentleman, has been making some good shows of roach.

Staines.—John Keene, jun., has been out all the week, and has done well, his best days were one with Mr. Newbury, who got 28lb. of chub, barbel, and dace, and another with Mr. Waters and brother, 50lb. of barbel and four dozen of roach and dace, all taken on the finest tackle, and returned to the river again.

Upper Thames.—As I write (Thursday evening) it is raining very heavily, and this will have the effect of improving the river for all-round fishing. Roach, chub, and perch work has been of late very dreary work in consequence of the brightness of the water, but jack fishing at nearly every station on the Upper Thames has been excellent, as evidenced by one angler, Mr. Troup, in the Harleyford Waters, getting thirty-seven fish in the past fortnight, best 7lb.; Wood, the Temple lock-keeper, had a jack of 9lb., on Friday; and a patron of W. Coster, two nice fish of 7lb. and 5lb., the same day. The river is in nice height and current, but very bright; roach, chub, and perch seem shy, but jack just the reverse.—Marlow Buzz.

Thames (Windsor).—As usual at this time of year the water is getting very bright, and only the finest tackle will be of use. Baskets have been poor during the past week though a brace of handsome chub was had by Lumsden, of Dachet going 5lb. and 3lb. Cheese and greaves appear to be best bait for them now, very few rising to the fly. Roach are shy but a few baskets have been taken though can hear of nothing worthy of special mention. Weeds are still dense, and till a few frosty nights have passed will be a great hindrance to those who spin for them. Gudgeon feed fairly well mid-day which in the early part of the week was very pleasant on the river.—B. R. B.

Ancholme District.—It has been too windy for successful angling during the whole of the past week. Trout-fishing, so far as this district is concerned, ended yesterday (Wednesday). It has been a pretty fair season; but the number of anglers increases from year to year, and as not one angler in a hundred thinks anything about re-stocking, the streams, which are generally small, get depleted. One beck which held a nice store of fish, has been nearly cleared out by one persistent angler. It is no wonder riparian owners begin to be chary of giving permits. I had a day at Croxby Lake on Tuesday with a friend, but the waves were so huge, we only got five perch and one eel. Huge carp of 15lb. to 20lb. kept jumping out of the water in a very tantalising way.—Thomas Ford.

Arun (Pulborough).—The fishing in this favourite river of the London club angler continues good, but since I wrote the water has become rather bright, and anglers will now have to exercise extra caution when at a swim. With the avent of October, jack should be on the prowl and I hear that one or two fish, including a ten-pounder, have already been gaffed. This week a nice carp of 3lb. has been caught in the Amberley reach of the river by Mr. Malcolm, London club-fisherman. On the 27th ult., the "special" leaving London Bridge at 6.55 a.m., for Pulborough and Amberley was crowded with anglers and excursionists. Many of the anglers experienced satisfactory sport, and I hear that Mr. C. Walters, of the Crown and Buckland Angler's Society made a basket of 8lb. of bream and roach. The Great Northern Brothers Club had several representatives out, including Messrs. C. Watling, C. Large, and W. Parkin; they each took about 5lb. of bream and roach. Mr. J. Smith (of the Bermondsey Brothers) had another good take of 7lb. of bream and roach, and Mr. F. Vanhegan weighed in 4lb. of bream and roach to the Funny Folks' Club. Good takes of bream were made by Messrs. Macdonald (City of London), Malcolm, Fletcher, and J. Cartwright, whilst Mr. S. Smith dropped in amongst a few decent roach. Fine weather prevailing, the competition on the 4th inst., at Amberley should be a most successful one. Two "specials" are to be run, and a large gathering of Metropolitan anglers is expected on the banks of the river.—Goosequill.

Barle (Dulverton).—To-day (Sept. 30) closes the trout fishing. The season has proved a good one, and larger and better fish have been killed than for very many seasons past; local and visiting anglers have alike done well. Salmon fishing closes on Oct 31., but we shall require higher water to do any good. Fine and warmer, with high winds.—Iron Blue.

Brighton.—Sea Angling.—Boat angling has been quite in abeyance this week, owing to the rough sea. The wind is in the S.W., and judging from appearances, boat anglers will have to wait until Saturday or Monday next ere they can again go in for sport.—H.

Chichester and Sussex Rivers.—For some days we have experienced grand weather, with frosts in the early morning; but to-day (Thursday) rain is falling heavily. Anglers have been numerous at Chichester Canal, and good takes of bream, roach, and eels have been made. There is a heavy pike located at the basin, evidently a fellow fish to the one found dead last week, after breaking away. The water is too weedy for spinning, and live-baiting, both for eels and pike, is the only available method. Good takes of bream and roach have been made from the Arun, some good fish among them. The Adur has afforded good sport among dace, roach, and flat fish; and from the Ouse I hear of a pike close upon 8lb., and several roach up to 1lb. The Rother is in good order. Roach have been feeding well at Selham, and several heavy bream obtained near Fittleworth. Sea fishing is remunerative among the whiting, plaice, and conger. Some good fish have been taken from the piers on the coast.—George F. Salter.

Derwent (Ambergate).—The trout season, which closed on Wednesday, has not been up to the average, owing to the continual wet weather. Throughout the summer months the streams in this locality have been rendered totally unfit for fly-fishing, except at brief intervals. The grayling season is promising better, and fair sport is being had on the Derwent. Mr. J. Musgrave took eight brace on Saturday last between the post-office and the Wire Mills, with the Blue Dun and Throstle-winged Dun, his best fish scaling 1lb. Prospects are good for next week with fine weather.—Amber Dun.

Douglas (Isle of Man).—With a rainfall of something like half an inch an hour, more or less kept up during the early part of the week, the rivers have been useless, except for that dirty but seductive sport, "bobbing" for eels. Still, although too early to damage the spawning beds, the heavy floods have materially assisted the fish to surmount the weirs. Mr. George Drinkwater has kindly presented a large number of trout towards stocking the large reservoir, an act of kindness duly appreciated by all our local anglers. Sea Fishing.—Seldom or ever do I recollect a better season, and the cry is "Still they come." Afloat or ashore, with proper gear and bait, it is hard to go wrong. A comparative novice ought to catch his own weight of fish in a week. A local paper mentions that a mackerel was taken by Mr. Callow, the length of which was two feet. If the foot rule with which it was measured numbered twelve full inches to the foot, I would like to have seen that fish. No weight or other dimensions are given.—Stormy Petrel.

Dove and Tributaries.—Sport has not been good on the Birdsgrove Water these last few days, though on the Okeover length near some good sport has been had, the Rev. T. Barrington Mills bagging seven brace one day and several other fair bags with the fly, the Red Spinner proving useful. This last week the Little Pale Blue is on strong, and the Whirling Blue is about pretty plentifully.

Eden (Carlisle).—Stormy, unsettled weather, accompanied by frequent floods, is disturbing the plans and calculations of salmon anglers. Last week it looked as if they were in for a real good time, fish being very plentiful, and the river in good order. Since then we have had two heavy spates, and the river will not be in order again this week. Archdeacon Prescott and his son have each killed a good fish; Mr. John MacInnes, two; Mr. H. Clutterbuck, one; Mr. Sayers, Mr. Jos. Fox, T. Bone, R. Bone, and R. McAllister, each one; and R. Ellwood, two in the Association waters. Mr. J. Austin, three at Langwathby; Mr. E. Raine, two at Edenhall; Mr. T. Robinson, one at Cargo, weights from 10lb. to 22lb. On Monday, Colonel Sharp killed two at Crosby, 17lb. and 18lb.; and the same day, Tom Bone had four, in the Association water, 22lb., 20lb., 18lb., 10lb. I hear that Mr. Slater killed three fish in the Esk on Wednesday, 18lb., 15lb., 10lb. The fifteen-pounder was a fresh run spring fish. I have known them to be taken in October, but never before in September.—Silver Grey.

Leicester.—A falling off has been noticeable in the turn-out of anglers at the fishing resorts at Leicester and neighbourhood, a walk along the side of the river and canal showing only the professional element at work. Owing to the changeable weather, roach fishing could not be so generally pursued. Anglers have had to fall back upon pike, perch and chub fishing, and as there are some fine pike in the long stretch of water from Leicester to Aylestone, and a good many anglers are skilled in this branch of the art, invariably a goodly show is made. The more successful of those who sought for jack were Messrs. E. Bott, H. Prime, and A. Tompkins; Messrs. Prime and Bacchus also showed fair takes of roach early in the week. The indefatigable Mr. R. Rylott, of cricketing and angling fame, did well chub fishing in the brook at Aylestone. Away from Leicester pike fishing has again been the chief sport, and although no large-sized specimens were captured anglers did well with fish from 3lb. to 5lb. The heavy rains on Thursday put a stop to fishing on that day, the downpour lasting nearly the whole time. Waters in good condition.

Loddon (Earley).—The last few days the weather here has cleared up, and I trust we may look forward for a fine October. The river here is in capital condition, and some good sport has been had with roach, chub, and jack. Several chub have been taken up to 3½lb.—J. R. Gould.

Lugg and Arrow (Leominster).—Both these streams are running in order for fishing, and the cold weather has brought the grayling well on the feed, and some good sport has been had with them. Grayling fishing may now be said to have begun in earnest. Trout fishing is now at an end. The Pinsley is now clear and in good order for fishing. —Gwynne.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers in capital order and some good sport has been obtained during the week. Rain fell for a time this (Thursday) morning, after which grayling were rising very freely, and good baskets have been made, but the results of several rods not yet known—one basket I saw of eight and a-half brace of beautiful fish, taken with Late Brown, Red Tag, and Green Insect. Flies named in my last week's report all good. Prospects of sport the coming week are very good.—R. T. Williams.

Medway (Maidstone).—Water in splendid condition; some good roach taken at Farleigh. The anglers who were trying other swims did not meet with much success. Conditions are favourable for the angler, but the swims must be well baited to ensure success. Pike ought to feed well now, and the weeds are getting rotten. Fine tackle and a lively bait should ensure sport, there are plenty waiting the skilful angler's wiles, but they want working for.—W. Shrubsole.

Nene (Northamptonshire).—A heavy rain to-day (Thursday), which will spoil the pleasures of the half-holiday anglers. The best sport of late has been obtained by club anglers. Mr. Geo. Brandford has had four bream, the largest weighing 3½lb., and Mr. Tom Milford some capital roach. It is a noteworthy fact that nearly all the fish taken at the recent competition were bleak. How can the members expect good sport when they fix upon a spot in such a noisy neighbourhood. I am confident that the angling tournaments held annually would be much more successful, if the place selected was further from the noise and turmoil of a city's din.—Nenebank.

Norfolk, Suffolk, and Cambridgeshire Waters.—I am very pleased to be able to report better doings all through our three counties in the way of angling since my last week's report. I do not say the improvement is great; still, it is much better. I had a try myself at the West Row Staunch on Friday, and took a nice lot of 18lb., some good roach amongst them, but the greater part were dace. Fishing back to Barton Mills, I saw two gentlemen with a splendid lot of roach over 20lb., several of them 1¾lb. and in prime condition. Several of our anglers were at Brandon on Monday (29th), and took some nice lots of roach and dace. The pike are beginning to feed well there now. Mr. Rolph, the landlord of the Ram Inn, on the river, has trimmed up several of the swims, so that they are now fishable. He has also a new punt or two. You cannot fish this water well without a boat. There are some very excellent fish all along the swims at Lakenheath Bridge, near the railway-station. I hear of a net being seen in the possession of a certain person frequenting this stream. He had better not be caught with it. The Littleport fish are not well on yet, though better. Two gentlemen wired me from Norwich: "Fishing in the Yare on Tuesday, 30th; excellent sport; roach and bream feeding well at Cantley, Buckenham, and Brundall, also at Hellsdon. Wasp Grub and creed wheat are the baits most used, and there is an abundant supply of both now." The bream are only just coming on in the Nene, Northamptonshire. They are very late indeed there this year. Weather at time of writing bright and warm, but rather like rain.—William Howlett.

Ouse (Offord)—I sent you a report on 27th of August of a large take of bream, taken by Mr. and Mrs. Abbott, from a swim in Mr. Priestley's meadow. I now have to report of another large take from the same swim, which I must say beats Mr. Abbott's record, taken by Mr. and Mrs. McKenzie, on Saturday last—thirty bream, some weighing over 3lb. I did not weigh them all, as I was busy harvesting. I never saw a better lot of fish taken from these waters. I mixed some grains with clay, put them in the boat, and Mr. McKenzie threw some in between eight and nine o'clock in the morning. A shower of rain came on about half-past ten, and at two o'clock they had not had a touch, but a few minutes after the sport begun, and kept on until they were obliged to leave off to catch train for London.—H. Collins.

Penzance (Cornwall).—Sea Fishing.—Excellent sport has been had, both off the piers and in the bay, during the past week. Mackerel and plaice continue plentiful. Dory and other small fish are being caught, and good sport is being had with whiting pollack, some of large size having been taken. A fine turbot, close upon 20lb. in weight, was caught by a fortunate angler a few days ago, within about fifty yards of the pier end.—H.

Plymouth.—Sea-Fishing.—Fish of all kinds have been very plentiful during the week. Some good baskets of pollock have been landed. Mr. Henson, who is here at the Grand Theatre this week, had some good sport—whiting, pollock, and mackerel. He told me that he was literally tired of the sport with the former. The mackerel seem inclined to break up their shoals and go to the bottom, when they can be caught from anchored boats in about five fathoms of water in the Sound.—William Hearder.

Scarborough.—(Sea Fishing).—After a remarkable mackerel season, remarkable for their great abundance and lengthened stay in the immediate bay, they appear to have now left us, but there are yet plenty of silver whiting, gurnard and dabs to catch by boat anglers. Pier anglers are also having good sport with billet, about 1lb. in weight, a few heavier fish being also taken. Rock cod may be looked for now over the "scars" and in Cayton Bay, for which mussel is by far the best bait.—H.

Severn and Lower Teme (Worcester).—Both rivers are in splendid order for fishing, and many is the good basket that has been taken the last few days. One gentleman on Tuesday last had over 10lb., mostly large dace, but including two brace of good grayling; another fishing same day had nearly as many; in fact, light baskets have been more the exception than the rule lately. Roach are feeding well in the Severn.—R. Wingfield.

Severn (Shrewsbury).—The advent of October 1, brings to an end the trout fishing season on the Severn—a season which to Shrewsbury anglers has been one of continuous ill success. Not a single trout of any weight has been captured for weeks, and some further far more practical steps will have to be taken, if Shrewsbury anglers are to have good trout fishing in the future, to restrict the river. Coarse fishing on the other hand has been good, and some good roach have been taken, Mr. A. Ellis and many other local anglers having had good takes. Pike fishing has not been so successful of late, as the river has not been in good condition for the live-bait.—Piscator.

Taw (North Devon).—Rivers were in pink of perfection, but the rain has been sufficient to discolour it again. Trout fishing is now over. Salmon with the rod goes on until Nov. 15. A few salmon were taken last week with the fly. There is a growing desire to suspend the minnow on the rivers. This has been an extraordinary bad season. Peal and salmon have not been so plentiful, notwithstanding the high water, as years ago.—Rusty Game.

Tees (Barnard Castle).—This river, since I last wrote you, has been in good order for fishing. On Thursday last, Mr. R. Wandless was very successful, killing five salmon, weighing 14lb., 10lb., 9lb., 7lb., and 5lb. respectively. On Friday, Mr. G. Bainbridge, got one weighing 9lb.; Mr. T. Parkinson one, weighing 12lb.; and the writer one, 8¾lb. Mr. Ramsey, of Gainford, has killed eight fish this season so far, the average weight being 9lb. 6oz. per fish. The water is in capital order and doubtless more will be accounted for by Saturday night. On Saturday I had the last day at trout this season, in the Summit pond, and had good sport, the best five trout weighing 4lb. 1oz.—J. H. R.

Teme (Ludlow).—The Teme is now running in capital order for angling, being clear and a nice level. The weather has been changeable, and slight showers of rain have fallen, but have not altered the colour. The nights have been cold and frosty, with foggy mornings, and the grayling have been more on the feed, and have been rising well. Wasp grub fishing has been tried in the evening, and some fine trout have been landed. The trout season is now ended, and generally the past season has been a good one, the fish caught having been larger than usual. Some good fish have been taken in the Corve.—S. Ludlow.

Teme (Tenbury).—In this part the water is in capital order for angling, being a nice colour. The weather has been good for angling, and with the cold nights and foggy mornings, the grayling have been more on the move and have been rising well.—Worcester.

Trent (Newark).—An unsatisfactory barbel season is rapidly drawing to a close in the Newark district of the Trent, and anglers have all but given up attempting their capture, atmospheric disturbances and fluctuating waters during the past three weeks, completely throwing them off, and neither worms nor greaves have proved seductive, save an occasional odd fish. Chub fishing is a dead failure, and although the Trent is running in magnificent condition for roach and dace taking gentles, but few have been secured, Mr. J. C. Smith's take of forty good specimens of the latter in about a couple of hours on Friday last, standing far in advance of any other take of the week. Messrs. Dale and Houlton brought a successful season to a close in the Ponton length of the Witham, on Tuesday, by the capture of six and a-half brace of trout, and the former's total for the season from this excellent length in the hands of a Newark gentleman, registers seventy-seven trout, several weighing from 1½lb. to 2lb. each. A flush of water would prove beneficial in removing the decayed flannel weed, and a tinge of frost would possibly sharpen the appetites of *Cyprinus cephalus*, of which there are immense quantities in the upper portion of the Rolleston Waters.—Trentsider.

Wharfe, Yore, Swale, Nidd, &c.—Last Saturday a very heavy flood came down these rivers, especially the Yore; since then sport has been good, especially with the maggot. Mr. Charles Bradford killed about 20lb. of trout, grayling, chub and dace on the Yore last Monday and Tuesday. Mr. J. Wilkinson and Mr. Musgrave also had good baskets. Poult Bloa (with rusty body); Brown Owl; Blue Hawk and Red Tag are the best flies at present.—F. M. Walbran.

Wye and Derwent (Derbyshire).—Angling has not been very good on either river this, last week of the season for trout fishing, in consequence of the high wind and the discoloured state of the water. Some very large fish have been taken on the lower lengths of the Wye with the Red Ant, and Stone Midge flies. Both trout and grayling have been killed upwards of 3lb. weight, but baskets have been small in quantity. The Derwent about Darley, Matlock, and Cromford, has been fairly well patronised, but anglers have not met with much sport. Fly fishing, although a few brace have been killed by the bottom fishermen. The season for trout fishing is now at an end, and has been the worst one I remember.—Dotterel.

Tenby (South Wales). — Sea Fishing. — Mackerel continue plentiful, and bass are also numerous, and some good takes have also been made of whiting, gurnard, and flat fish.—H.

Towy (Llandilo, Carmarthenshire).—We have had changeable weather, and two or three days of flood water during the past week, which has much interfered with sport. There are now plenty of salmon up, and a few heavy fish have been' hooked during the past week, but lost by breakage of tackle. Several sewin have been landed on minnow and worm, but they are now hardly worth catching, being too late in the season. We have now said good bye to trout until next year, but are looking forward to a good catch or two of salmon ere the season closes.—H.

Scotch Reports.

Auchintaple Loch (Forfarshire).—On Wednesday last Mr. Hammersley, Glenisla House, landed a fine trout, weighing 3lb.; on Saturday Mr. Hammersley and Mr. Sydney Campbell, caught six, weighing 7lb.—G. G.

Breadalbane Arms (Aberfeldy).—Mr. Mackay fished Loch-na-Craig on Friday, and got fifteen trout, which weighed 5½lb.—A. N.

Border Esk.—During the past week this river has risen considerably, and some bait-fishing was indulged in for two or three days. The number of salmon in the Esk is unprecedentedly large this season, particularly in the middle reaches, and one of the best pools is said to contain five hundred salmon; but as yet they are not taking well. In the water above Langholm, at Blackstones, Mr. Andrew Bell, Westerhall, had a salmon weighing 8lb., and a sea trout about 2lb. In Langholm water a number of anglers have had good baskets of sea trout and yellow trout. On Saturday Mr. Wm. Storey had five sea trout; and Mr. Urquhart had four sea trout; Mr. Thomas Hounam had two sea trout and a number of yellow trout; Mr. Thomas Irving and Thomas McLellan have also had good hauls of sea trout and herling. On Monday, Mr. George Maxwell, the "laird" of Broomholm, had a capital basket of sea trout, herling, and yellow trout; at a night's fishing Mr. J. Irving had four sea trout, two of them weighing 5lb.; at Skipper's Bridge, Mr. H. W. Dodds had three herling and a basket of yellow trout; and Mr. Jos. Anderson had some sea trout. There's a tremendous assembly of fish in the Canonbie Water, principally in the Cauldron and Willow Pools, and the takes have been heavy. Mr. Thos. Jameson, Westerhall, had three salmon, 8lb., 12lb., and 15lb., in the Willow Pool, with the fly; Mr. Munro, Edinburgh, had a salmon, 13½lb., in the Cauldon Pool, and at another fishing a salmon of 16lb. in the same water; Mr. D. Edgar, Rowanburn, caught two salmon, one in the Moat Pool and one in the Willow Pool; Mr. Walter Scott, Holmfoot, had a salmon, 9lb., and a large number of sea trout and herling in the Willow and Cauldron Pools; Mr. G. Irving had a small salmon of 6lb. in Trimble's Pool, and a nice grilse, 6½lb.; Mr. R. Steele, Rowanburn, landed two salmon over 20lb. each; and on Saturday, Mr. D. Edgar had a salmon of 14lb. in the double water; Mr. R. Snodgrass, Canonbie Manse, one, 15lb., in the Prior Pool; F. Little, Byreburnfoot, in Byreburn Water, two grilse, 6lb. and 7lb.; Mr. D. Little, Byreburn, in same water a grilse, 7lb.; Dr. Roper, staying at Cross Keys Hotel, a salmon of 18lb., in the Willow Pool, and one of 20lb. in the Cauldron Pool; Mr. T. Jameson, Westerhall, one, 24lb., in the Willow Pool; Major Irwin, Woodhouse, one, 15lb., in the Bridge Pool; and Mr. May, Liverpoool, one of 18½lb. in the Willow Pool. Lower waters: Between the Metal Bridge and Longtown, Mr. Wrightson had a fine salmon, 21½lb.: Mr. Mason, Rockliffe, had one, 8lb.; and Mr. Lamonby, Lesmahagow, had a salmon in the same water; Mr. Brown, of Scambank, had one, 20lb.; and Miss Graham, of Netherby Hall, had a nice salmon in the water above Longtown. The fishing is fairly good all down the water, but as will be seen from the above records, it is best in the middle reaches, and will doubtless improve during the forthcoming week, as the weather at present is particularly suitable for keeping both the Esk and Liddle in good fishing fettle.—Gilnockie.

Carron (Easter Ross, Ardgay, N.B.).—Very little angling has been done for some time back owing to the unsettled nature of the weather. Most of the sportsmen have now left for the South. Mr. Godman and party had fair sport on the Amat Lodge waters; on Monday week, they landed three fish. Mr. Hartley and party had several on the Braelangwell Lodge waters, and Mr. Hendorson, Invercharron House, and party had a good few on the Craig's water. Mr. W. Allis Smith, of Glencalvie, gets an occasional salmon on the upper waters. On Monday, this week, Mr. John Macleod fished the waters connected with the Balnagown Arms Hotel, and landed a splendid salmon weighing 18lb.—McB.

Dee (Aberdeenshire).—The autumn fishing on the Dee is now in full swing and is proving to the full the success anticipated of it. On the lower and middle reaches this is especially the case where fish are abundant of excellent quality and heavy weights. The migration is moving gradually into the upper reaches, and all over the closing month of the season promises a rich return indeed. On the Invercauld Private Waters Miss Borthwick landed three, Mr. E. Villers, four; and Lord Garioch two fish on Tuesday last; and several have been got since. These are mostly red fish, but on the lower sections the fish are almost entirely fresh run with sea lice adhering. Similar successes have been met with on the Balmoral, Invercauld, Ballater, and other higher sections. On the Upper Dess Water, Mr. Milne, has landed a good few, and on Tuesday had a beauty of over 20lb. On the Lower Dess, Mr. Walter Davidson, landed one of 9lb., two of 17lb. and 24lb., three of 7lb., 9lb., and 17lb., and one of 19lb. During the week on the Kincardine Lodge Water, Mr. Lamond had two of 9lb. and 19lb., two of 14½lb. and 15lb., one of 9lb., and one of 12lb.; while Mr. William Blacklaws had one of 9lb. on same water. On the Borrowstone Water, Admiral Sir Michael Seymour had one of 9lb. and another of 15lb., while Admiral Charles G. Fane, had one of 9lb., two of 17lb. and 6lb., a beauty of 22lb. and another of 16lb. on the same water. On the Carlogie Water Mr. A. Campbell, had one of 20lb., one of 9lb., three of 14lb., 15½lb. and 21lb., and a sea trout of 2lb.; while Captain George Campbell, landed one of 18½lb., and two of 12lb. and 14lb. on Tuesday, and Captain Charles Campbell, one of 16lb. and two of 19½lb. and 8½lb. on the same water. On the Ballogie section, Mr. W. Nicol and keepers landed one of 30lb, three of 14lb., 18lb., and 23lb., one of 19lb., and several others, weights, not to hand. On the Sluie Water, Mr. G. F. Chalmers had one of 15lb., one of 13lb., and two of other weights; while Mr. Henry Champisn had two on the Borrowstone Water on Tuesday, of 17lb. and 17lb. On the Woodend Water, Mr. F. Watson landed ten fish during the week of 6lb., 7lb., 19lb., 9lb., 6lb., 19lb., 19lb., 19lb., and 21lb., respectively; while Mrs. Watson had a beauty on Friday of 21lb. to her own rod. On the Commonty Water, Duncan, keeper, had fair success, having one or two heavy weights. On the Blackhall Castle Water, Mr. G. T. Hay and party landed four of 9lb., 15lb., 16lb., and 23lb. on Tuesday; four of 7lb. 19lb., 19lb. and 20lb., on Wednesday; one on Thursday of 20lb., seven on Friday, scaling 24lb., 21lb., 7lb., 16lb., 15lb., 19lb., and 17lb., and two on Saturday of 8lb. and 16lb. Mr. Hay had also seven fish the week previous, varying from 7lb. to 20lb. On the Lower Crathes Mr. J. C. Wardie and party are having very good sport, while the Carnton Inchmarlo and other reaches are also fishing well. On the Drum Water, on Friday, Mr. F. H. Irvine, Mr. Fletcher, and Mr. Buckley landed fourteen beautiful salmon, ranging from 14½lb. to 27lb.; while on Saturday Mr. Irvine had three fish to his own rod, of 8lb., 9lb., and 21lb.; and Mr. Fletcher one of 8lb. On the Lower Inchmarlo Water a good many fish have been got. Mr. Duncan Davidson had five on Monday, yielding a total of 95lb., and four on Tuesday giving a total of 74lb. On the Park Water splendid sport is being got daily, nine fish of the average weights having been got on Friday last. The fly is the chief lure and two-inch Gordons and fancies like Jock. Scott and Silver Doctor are most in evidence.

Deveron (Banffshire).—The river Deveron was in capital fishing condition during the past week, and anglers have had good sport. On the Netherdale section, Mr. R. Maitland had eight salmon, ranging in weight from 7lb. to 29lb.; Mr. Hunt had three salmon of 6½lb., 7½lb., and 9lb.; Mr. Maitland, another of 11lb.; Mr. J. Bain, one of 10lb.; and Mr. Fraser, three of 7lb., 9lb., and 19lb. On the Mayno Section, Mr. Thurburnt, the keeper had a few of fair size. On the Carnonsie Section, Col. Napier, had six in the end of last week, the heaviest weighing 24lb. On the Dunlugees Water, three fish were landed last week, and two on Tuesday. On the Muiresk Section, on Monday, Mr. A. Forbes had two, weighing 8½lb. and 16lb. On the Forglen Water, Viscount Carps and Captain Abercromby had nearly a score of fish weighing from 9lb. to 17lb. each. On the Laither's Water, Mr. Stuart had four fish, one of 18lb. On the Marnoch Section, Mr. Porter had six fish, of 5lb. to 19lb. each; and on the Cormehaugh Water, two of 10lb. and 20lb. Several fish were also caught on the Duff House Water, and on the free water at Huntly. The pools are well-stocked, and good sport may be looked for during the remainder of the season. This week little rain fell on the river, and during the morning and evening the frosts are setting in pretty keen.—H. W.

Don (Aberdeenshire).—The floods of last week have done immense good to this river. When the water had somewhat fallen, the number of fish observed clearing the dam dykes was extraordinary. A good few salmon have already been got on the stretches from Inverurie and Kintore to Grandholm and the cruives, while the sea trout and finnock fishing on the Nether reaches have been more prolific of sport than has been the case for many years back. As specimens of the baskets got, it may be mentioned that one day last week, Mr. Robert Gibb had thirty-one trout, many of them 1½lb. and over, while on the same occasion, Mr. J. Baird had thirty fish, and Mr. Andrew Murray twenty. These are perhaps exceptional compared with what the Don has yielded of recent years, and savour more of former days.—Don.

Dunbeath.—Sir William Montague Call, Bart., Balcraggie Lodge, fished the upper waters on Monday last, and landed one salmon of 6lb. Lady Call and party were out during the week, and made good baskets. The South Dunbeath party had fair sport on Monday. A local angler killed over a dozen nice trout. Mr. Black, Elgin, and Mr. Adam Mackay, Inver House, fishing the tidal waters on Friday, made an excellent basket of sea trout and brown trout.—J. Y.

Inveran Hotel Waters (Invershin, N.B.) — Pretty fair sport is still being obtained. In the course of the past week by Mr. Blanco White, Mr. Dickenson and others from the Sutherland Arms Hotel, some of the fish landed exceeded 20lb. in weight.—McB.

Lairg (N.B.).—Angling at this centre is all but over for the season. A few good baskets were made last week. Mr. Hennekman, fishing Loch Cracail, killed thirteen trout, weighing 1½lb.; Mr. Castle made a basket of nine trout, 3¾lb., on Loch Shin, on Saturday. On the same loch on Monday, Mr. Lord had good sport. Local anglers have been very successful. Weather boisterous.—J. Y.

Liddle.—The heavy rains of the past week have flooded the Liddle, which is now in capital order for salmon fishing, and a large number have been landed both in the upper and lower reaches. Mr. W. Irving, Prior Hill, caught a salmon of 20lb.; Mr. D. Edgar, Rowanburn, one of 15lb.; Mr. W. Crozier had two, 13lb. and 6lb.; Mr. R. Crozier, four sea trout and several herling. Saturday being a half-holiday at Hawick, a large number of anglers deserted the Teviot, and fairly lived on the Liddle, in the vicinity of the "Copshaw"; but the heavy rain on Friday night had flooded the river to an inconvenient height for good sport, which was a great disappointment for the Hawick callants.—G.

Loch Craggie (Lairg, N.B.).—Recently Mr. Richardson and party (four rods), Achany Lodge, made a basket of forty-nine trout, weighing 18lb.—J. Y.

Loch Doula (Lairg, N.B.).—Some excellent baskets were made on this loch of late. The Messrs. Hall killed thirty-two fair trout, aggregating 22lb. On another day Lord Fitzhardinge and party (two rods), Lairg Lodge, caught eighteen trout, 8lb.—J. Y.

Loch Migdale (Bonarbridge, N.B.).—This excellent loch has been yielding capital sport in trout angling. Fish invariably in good condition, and weigh all over close on ½lb. on the average. Messrs. Gedge, London, were out from the Balnagown Arms Hotel, Ardgay, on Thursday last, and landed thirty-six beautiful trout, averaging close on ½lb. Miss Stobart, Pepper Arden, Northallerton, was out from the Bridge Hotel, Bonarbridge, on Friday, and landed sixteen trout, which weighed 7lb. in all. Although Saturday was an exceptionally stormy day, Messrs. Gedge succeeded in making a basket of twenty-six trout, averaging about ½lb. each.—McB.

Naver (via Thurso, N.B.) — The weather has been most unfavourable, and sport with the rod fell off accordingly. Rod fishing closed on Wednesday, and almost all the sportsmen have betaken themselves southwards. Since last reported Mr. P. H. Wormald, Skelpick Lodge, grassed three salmon and one grilse; Mr. Stubbard, Lyre Lodge, also succeeded in landing three fish, the heaviest of which weighed 10lb.—McB.

Rhiconich Hotel Waters (via Lairg, N.B).—Notwithstanding the boisterous nature of the weather, fairly good sport is still being got by anglers at this remote locality. Since last reported the record has been as follows: On Tuesday, 22nd inst., Mr. Clark, Bedford, fished Loch Inchard, and caught sixteen coal fish, which aggregated 365lb.; Mr. Heinemann, London, on Loch Sgeir-a-Chath, had five sea trout, 6lb. in all; Rev. W. Mackenzie, Sunderland, on Loch Garbetbeg, six sea trout, 5lb.; and Dr. Martin, London, on Loch-na-Caillich, five sea trout, 3lb. On Wednesday, Loch Inchard was fished by Miss Heinemann and Mrs. Matthey, London, who landed ten coal fish, aggregating 141lb.; and by Mr. Clark, Bedford, who got twelve coal fish, 147lb.; Rev. W. Mackenzie fished Loch Garbet, and caught two salmon, 6lb. and 8lb., and half-dozen sea trout, 3lb.; Dr. Martin, London, on Loch Sgeir-a-Chath, had five sea trout, 6lb. On Thursday, Loch Inchard was fished by Mr. Matthey London, who landed two coal fish, 29lb.; by Dr. Martin, three coal fish, 34lb.; and by Mr. Clark, seven, 70lb. On Friday, Mr. Heinemann tried Loch Sandwood, and got three sea trout, averaging 2lb. each, and a grilse of 6lb. On Saturday, Rev. W. Mackenzie, Sunderland, was out on river Dionard, and grassed a salmon, 9½lb.; Mr. Heinemann landed a salmon of 8lb. on Loch Garbet; and Mr. Matthey, a 5lb. grilse on same loch.—McB.

Shin.—On Monday of last week, Mr. Richardson's party, Achamy Lodge, landed five salmon. On Friday, three fish, weighing respectively 15lb., 16lb., and 18lb., were taken off the upper reaches by Mr. Watney's party, Tressaday Lodge, Rogart.

South of Scotland.—Heavy rains and frequent floods have very much interfered with the salmon angling in the South of Scotland rivers since my last report. The nature of the weather too has been extremely stormy, strong gales of wind prevailing every alternate day. Nevertheless a good number of salmon have fallen to the rods on the different rivers, and sea trout and herling fishing has also been good.

Annan.—On Saturday afternoon the Annan was in flood, and so were all the other district rivers. Salmon literally swarmed up this river over the salmon pass at Annan Bridge. The run commenced between three and four o'clock, and long after dark the fish were still running as hard as ever. A few anglers went out worm-fishing, and were rewarded with good catches of sea trout and herling. Dr. McNaughton, Blackpool, killed a basketful of sea trout and herling. Mr. Peter, London, killed a salmon of 7½lb., and a fine lot of herling, and a sea trout in the Northfield Water. Mr. Thomas Faulder, Dumfries Railway Station, caught a fine basket, and others had various catches, from six to ten herling each. On the previous day Mr. Johnston had a small salmon, and on Thursday evening Mr. Thomas Hoare, Kinmount House, killed a salmon in Hoddom Castle Water with minnow. Will Robinson, fisherman to Mr. Gardiner, The Distillery, landed a salmon of 15lb. in the Blackpool Water. Mr. John Bell-Irving, keeper to James Riley, killed with fly a small salmon of 8lb., in Mount Annan Water. Mr. Bell-Irving landed two beautiful fish of 20lb. and 17½lb., out of the Salmon Pool of Mount Annan; and Mr. Dirim's fisherman killed a grilse. On Monday the water was in good order, but a strong gale of wind rendered casting a difficult matter. Mr. Andrew Bell killed in the Tower Pool a good fish of 16lb., with Grey Turkey Fly, and several fish were hooked and lost in this water. In Hoddom Castle section Mr. D. Tweedie, Ecclefechan, landed one of 10lb., and got broken with a large salmon. Mr. David Johnston landed one salmon of 18lb. in Castle Milk Water, belonging to Sir Robert Jardine, Bart., M.P. This fish was taken with spoon-bait. Mr. Rae, Ecclefechan, ran a big fish for some time, which eventually broke the cast as it was being gaffed. The Rev. George Kennedy killed a very fine basket of sea trout and herling, in all a basket of thirty-nine. Mr. McGiverin, Postmaster, Annan, killed a dozen herling with silver minnow (Devon), and another outing he had eight herling. Mr. Harry Hudson, Oldham, caught eight herling with worm. Others had six and eight each. On Wednesday Mr. James Dixon, baker, killed with a large Grey Turkey Fly a pretty little salmon of 10lb., out of the Howes Pool of the lower water, and he lost a big fish on the same fly.

Nith.—The Nith has been in frequent flood, and the unsettled state of the water has kept salmon running to the higher waters. I hear of several good salmon being caught in the higher reaches, and with a good show of salmon in the pools, some sport should be had whenever the water settles down.

Kirkcudbright, Dee.—In this river there is an excellent show of salmon in the favourite pools. On odd days a few fish have fallen to the rods, chiefly with fly. A very fine run of salmon came on at the end of the week, and capital angling is anticipated shortly.

Fleet.—Like the other district streams, both water and weather have been against the angler in salmon fishing. Still a few nice fish are reported as having been landed. Herling are showing well, and several good baskets have been had with worm bait in the floods. Another deluge of rain has fallen, and all the district rivers are in very heavy flood to-day (Thursday), there is little prospect of fly fishing before Saturday morning. The weather is very unsettled, and with a low reading of the barometer there will likely be more rain.—Heatherbell.

Spey (Elgin).—Splendid sport was got on the Spey last week. The river is well stocked with salmon and in excellent condition. On the Wester Elchies water, on Tuesday, Mr. Nacks had a fish of 17lb., and on Wednesday Sir Archibald Smith, had three fish, 4lb., 9lb. and 7lb.; on Thursday, two fish of 8lb. and 7lb. On Saturday, Mr. J. F. Smith had a salmon of 14lb.; and on the same day Mr. Nicks had a beauty of 18lb. On the Aberlour House Waters, on Thursday, Mr. Nicholson had a salmon of 9lb., Mr. Teacher, Glasgow, who rents part of the Easter Elchies Water, on Tuesday, had a salmon of 12lb.; and Major Grant, Clengraut, on the same day had also one of 12lb. On Wednesday, Mr. Teacher had three grilse, averaging 6½lb. each. On Thursday, Mr. Teacher had two fish weighing 17lb. and 7½lb., respectively; Major Grant of Glengrant, one of 16lb., and Mr. Edwards, Craigellachie, one of 16½lh. On the Arkinneay Water, Mr. Frank O. Methered, Great Marlow, had a fish of 10lb. The Fiddich was in good fishing trim last week; Mr. Reid of Hazelwood had a basket of 8lb. of trout, one of which weighed 2lb., while another weighed 1½lb. On Wednesday, Mr. Reid had four trout, weighing 2lb. each. The fish were got in the pool between Balvenie.—H. Logie.

Tay (Perth).—The river has been running high and rather out of ply, owing to the heavy rain we have had. Some good sport, however, has been got. Fish are still plentiful. On the Stanley Water, Messrs. A. O. Worthington and Son, Killin, on Thursday, killed three fish and a grilse, weighing 15lb., 14lb., 12lb., and 8lb.; on the same water, Mr. E. Foreman, London, had two, 20lb. and 9lb. Messrs. Field and party killed thirty-three on the Stobhali beats. On the Delvine Lower Water, Mr. Hornsby Drake had a fish of 17lb.; and Major Douglas one of 16lb. Mr. R. Wyman, London, had two on the Bertha Water, on Friday, 22lb. and 18lb. On Stanley Water, Mr. E. F. Foreman had four, 18lb., 17lb., 16lb., and 9lb.; and on the same water Mr. A. O. Worthington had a grilse. On the Benehill Water, Sir J. E. Millais killed four, 21lb., 20lb., 20lb., and 9lb. Mr. W. Malloch fished the Stanley Water on Monday, and killed two, 19lb. and 9lb. On the Delvine Upper Water, Dr. Wyman killed two, 17lb. and 16lb.; and Mr. R. Wyman, two, 9lb. and 8lb. On the Ridgorton Water, on Tuesday, Mr. M'Lean killed eleven; and Mr. M. Graham five. A fish of 20lb. was got on the Scone Palace Water. Lord Garrioch fished the Delvine Lower Water, and killed a fish of 13lb. On Almondmouth Water, Captain Livingstone killed four, largest 20lb. On the Benshill Water, on Wednesday, September 30, Sir J. E. Millais killed three, and on same, last week, he killed four, 23lb., 21lb., 18lb., and 14lb.; Mr. Marples and party, on Burnmouth, killed ten fish on Monday; an on the same water on Wednesday, Rev. Mr. Cameron and Mr. Archibald Tillicoulty. killed eight fish and a grilse, total weight 170lb.

FREE WATER.—On Thursday Mr. Gordon Cotton had a grilse; Mr. J. Cosgrove, four; Mr. D. Malloch, one, 18lb.; Mr. Cook, one, 16lb.; Dr. Orton, two, 28lb. and 16lb.; Mr. Wardrope, one; On Friday Mr. Ireland had one; Mr. Wardrope, one; Mr. E. P. Landon, London, three, 17lb. 16lb., and 9lb.; Mr. T. Pierrie, fish and a grilse; Mr. Wilkinson, London, one. On Monday Mr. Bruce, had a fish of 18lb.; Mr. Cosgrove, one grilse. On Tuesday Mr. Lon had a grilse; Mr. Nicoll, Dundee, one. On Wednesday Mr. Brady had one; Mr. Wardrope, two; another gentlemen, two; Mr. Dunsmore, three; Mr. Forbes, one salmon and a grilse; Mr. Murdoch, one salmon and a grilse.

EARN.—The recent rains have brought the river into capital ply, and good sport is being got. The upper reaches are said to be full of fish. On the Drummond Castle Water, Mr. Rae, Edinburgh, had a fish 15½lb.; Mr. P. Cresar, one, 18½lb.; Mr. J. B. Aitken, Glasgow, one, 18lb. On the Club Water, Mr. D. Forbes, had one, 13lb.; Mr P. Galloway, Edinburgh, one, 22lb., and Mr. Jack, one, 18lb. On Monday, Mr. P. White had one, 20lb.; Dr. Forbes, two, 19lb. and 14lb.; Mr. Ferguson, one, 15lb.; Mr. Jack, five, 22lb., 20lb., 18lb., 7lb., and 6lb.; Mr. Wilkinson, London, one, 7lb.; Mr. East, London, one, 16lb.; Major Gibson, Crieff, two. On the Trinity Gash Water, Mr. E. P. Landor, London, had a fish on Tuesday. On the Club Water at Crieff, Mr. G. J. Comrie killed one, 10lb.; Mr. C. M'Cowan, three, 20lb., 10lb., and 9lb.; Mr. Jack, four, 18lb., 16½lb., 16lb., and 10lb.; Mr. D. Forbes, one, 17lb. Two fish were also got on the Ochterlyre Water.

Whitadder (Ellemford).—It is forty-six years since the river was in such flood as it was on the 22nd and 23rd. From all directions are reports of loss of corn, turnips, hay, and trees; also of sheep and fencing. The shepherds here were up all night removing sheep and cattle. In some cases this was attended with great danger, as the water rose so rapidly. In the beginning of the season we had scarcely any rain, and the river had not been so small for many a year. Dr. Ruck, of Rochdale, has been fishing here for the last few days. His takes have been from 3lb. to 5lb. Three gentlemen arrived on Saturday for Monday's fishing. They never threw a line for wind and rain. Tuesday was no better. It proved in their case that the anticipation was a great deal better than the reality.—R. J. FENTON.

Tweed.—The past week has been an in-and-out one for the Waltonian, and since my last notes we have again had a couple of swell floods in both the Tweed and Teviot. The rivers during the latter part of last week had run in pretty much up to Saturday, and although the colour of the water was very bad, yet they were of a fishable size on that day in the neighbourhood of Kelso, while farther up the river angling was practicable on the previous day. Although the conditions have militated much against the disciple of the gentle art, still, strange to say, a good many salmon have been killed, anglers having gone on whenever there was a chance, trying to make the most of it, and making up for lost time. On Saturday afternoon a most unexpected flood of 3½ft. occurred, and it was just as well that it happened, as it put the rivers into a much better colour, and made successful angling practicable on Monday. As showing the variable nature of our climate, however, heavy rains from the westward and upper districts once more brought down both rivers on Tuesday, the gauge at Kelso Bridge again registering 3½ft. of water above the normal level. The salmon angler has thus had again to lay past his gear, and rest on his oars contented for a short while. Fishing will be practicable on some of the more favoured and shallower casts to-day (Thursday), and should no more rain interfere with the disciples of Old Izaak, good sport is anticipated on Friday and Saturday amongst the salmon species. Both last week and during the present one, many capital baskets of trout have been killed with bait on both Tweed and Teviot. On the former river Mr. A. Steel, jun., had two nice dishes of 10lb each; Joseph Watson, 8lb.; Jas. Oliver, four baskets of 10lb., 4lb., 6lb., and 8lb.; David Brown, several baskets of from 5lb. up to 9lb.; Jas. Mabon, 8lb. and 10lb.; George Watson, 8lb. and 7lb.; and many other baskets have been killed, varying from 3lb. upwards. The following salmon takes have also been recorded, in addition to those given in my last list: On Monday, on the famous Makerstown casts, the Right Hon. D. H. Madden, M.P., had five fish—15lb., 16½lb., 18lb., 19½lb., and 22½lb. Colonel Chaplin, on the Hendersyde Water, had two fish, and Sir Richard Waldie Griffith, Bart., on the same water, had one grilse. On his water at Mertoun, Lord Brougham and Vaux, had four fish. On the Ednam House Water, Mr. Drummond had one salmon of 13lb., and a grilse. Mr. Dryton, on the Rutherford Water, had two salmon. The same gentleman, and a party of friends, on this water recently had very good sport. On the 13th, Mr. Dryton killed one salmon of 11lb.; on the 16th, he had half-a-dozen—11lb., 18lb., 12lb., 17lb., 17lb., and 22lb.; on the 18th, a grilse of 6lb.; on the 19th, one salmon of 13lb.; while Mr. Hamilton, killed four fish of 5lb. each, one of 13lb., and one of 14lb. On the Lees Water, Colonel Biden killed nine fish on Monday; and on the same day, Mr. Barclay, on the Learmouth Water had four. On the Tweed, near Thornilee, Sheriff Orphoot had a 14lb. salmon. The Hon. Henry Scott, on the Mertoun Water, the same day had one grilse.—MAXWHEEL.

Irish Reports.

Ballinderry (East Tyrone).—Trouting is not as good as it has been in the past fortnight, from the unfavourable weather. On the Claggan and Finway reaches sport has been limited to the taking of a few brace of pike and an odd trout. The Desu Creght, Tullyleggan, Loughrea, and Kellymoon preserves have not been heavily fished, while the free Tullyleggan waters have been tried by your correspondent and others with poor results. The Ardtrea reaches, and also the Lough waters have done better, and a good many anglers have been out. Salmon have run up as far as Lough Corrie, but as the river is low, few have got over since the last flood. Best taking flies: Olive, Claret, and Hares Lug.—J. W. B.

Lough Neagh.—The stormy weather has interfered with the several fisheries of the South. Trammel netting has ceased; and indeed the netting of salmon and trout may be said to be almost over, as the takes latterly are small, but may improve a little yet. Pollen fishing is declining, and the only paying industry at present is the eel-fishing. Multitudes of these are running to the South from the small lakes, and night lines have taken great hauls, the best baits being a small pollen and large earth worm. In the feeders of the Lough, brown trout are taking the worms, but are not rising to any fly.—J. A. B.

SALMON AND FRESHWATER FISHERIES ACTS, 1861 to 1886, AND FISHERIES ACT, 1891.

[We have received the following from the Fisheries Department Board of Trade.—ED.]

CERTIFICATE OF THE FORMATION OF THE STOUR (SUFFOLK AND ESSEX) FISHERY DISTRICT.

The Board of Trade, by virtue of the powers conferred upon them by the Fisheries Act, 1891, and otherwise, do hereby form a fishery district for the river Stour (dividing the counties of Suffolk and Essex), its estuary, and its tributaries, and the under-mentioned waters and coasts, which are hereby declared to belong thereto—namely, all such waters and coasts as lie within the area comprised within the following lines:—(1) A straight line drawn from Landguard Point in the county of Suffolk to the beacon at the seaward extremity of the breakwater at Blackman's Head, near Harwich, in the county of Essex; (2) a line drawn from the said beacon along the said breakwater, and continued along the watershed of all the rivers and streams flowing into the said estuary, or into any estuary connected therewith, until it reaches the said Landguard Point; such lines being more particularly laid down in the map marked S. 1324—1891, and deposited herewith with the clerk of the County Council of the Eastern Division of Suffolk.

And the Board of Trade do hereby fix the number of Conservators to be appointed as a Board for the said fishery district, and the number of the members of the Board of Conservators to be appointed by each county in the district as follows—namely, the number of such Conservators shall be twenty-seven, whereof six members shall be appointed by the County Council of the Eastern Division of Suffolk, six members shall be appointed by the County Council of the Western Division of Suffolk, twelve members shall be appointed by the County Council of Essex, one member shall be appointed by the County Council of Cambridgeshire, and two members shall be appointed by the Council of the County Borough of Ipswich.

The members shall be appointed annually at the meeting of the appointing bodies respectively held next after the 31st day of October in each year.

Provided that the first members, other than the members representing the county of Essex, shall be appointed at the meeting of the respective councils held next after the date hereof, and shall, together with the existing members of the Board of Conservators of the Stour (Essex) Fishery District, hold office until the appointment of their successors as hereinbefore prescribed.

The first meeting of the Board shall be held at the Town Hall, Colchester, on the 21st day of November next, at 11.30 o'clock a.m.

Signed and sealed by order of the Board of Trade, this 23rd day of September, 1891.

A. D. BERRINGTON,
An Assistant Secretary to the said Board.

NEW PATENTS.

THE following is a weekly list of New Piscatorial Patents, specially complied for the *F. G.* by Messrs. Hughes, Eli, and Hughes, Patent Agents and Engineers, 76, Chancery-lane, London, W.C., authorised Attorneys for the procuration of English and Foreign Patents, Designs, and Trade Marks:—

15,950.—Samuel Allcock, of Standard Works, Redditch, for "Improved fishing gimp-lines."

15,930.—T. McCammon Irwin, of Glasgow, for "Improvements in fishing reels."

COMPETITION IN AID OF T.A.P.S.—Up to date the best catches in this competition have been: Mr. Grimmett, from punt, at Goring, 14lb. 12oz., roach and dace; Mr. Nowbury, from punt, at Staines, 20lb. 3¾oz., barbel, chub, roach and dace, including specimen chub, 2lb. 9¾oz.; and Mr. Matthews, 10lb. 7½oz., of chub, roach, and barbel (punt) from Staines.—A. E. BALDWIN.

THE OPEN ROVING FISHING CONTEST AT AMBERLEY.—The principal prizes to be awarded to the successful competitors in Mr. A. A. Eldridge's second open contest on the 4th inst. are: First, £2 2s.; second, £1 10s.; third, £1; fourth, 15s.; fifth, 11s. 11¾d.; sixth, 10s.; seventh, 10s.; and eighth, 10s. The other minor prizes are 7s. and 5s.; a prize of 5s. being given for the largest roach. The river Arun at Pulborough, on the 27th ult., was in splendid condition, the weather was fine and warm, with a nice gentle breeze, and there were some extraordinary large takes of bream and roach.

SALMON POACHERS CONVICTED.—A whole batch of Solway salmon fishers were brought up before the sheriff in the Dumfries Sheriff Court on Tuesday, and heavily fined for salmon poaching in the Firth. An Annan fisherman was fined £5 17s. 4d. this week for salmon poaching in the Solway on a Sunday.

SEIZURE OF UNSEASONABLE SALMON.—The Dumfries police, armed with a search warrant, seized a large hamper of salmon in possession of an Annan fish merchant the other day. It is alleged by the police that the salmon were poached in the Solway.

IMPORTANT FISHERY CASE AT BARNARD CASTLE.

At the Barnard Castle Petty Sessions, on Wednesday last, John Grieves, Henry Buckle, and Jacob Walton, gamekeepers on the Raby Park estate, were charged with taking six trout by other means than by a properly licensed fishing weir, fishing mill dam, fixed engine, instrument, net, or other device for catching trout. Mr. M. B. Dodds (Stockton) appeared on behalf of the Tees Salmon Fishery Board, and Mr. R. Luck, barrister (Darlington), instructed by Messrs. W. and W. J. Watson, solicitors, Barnard Castle, defended. Mr. Dodds said the proceedings were taken under the 22nd section of the Fisheries Act 1876, and of the 7th section of the Act of 1878. On Sept. 22, Inspector Mabon, the Fishery Board's chief water-bailiff, having heard that becks in the vicinity of Raby were frequently netted for trout, proceeded with another bailiff, named Wall, to Staindrop. At that place they met the head gamekeeper of the estate—George Buckley, who, in answer to the inspector's queries, said they would find the men, now charged, fishing in the Grand Beck, a stream which flowed through Raby Park, and a tributary of the Tees. They then went to find the men and met Grieves and Buckle returning from the beck, the third defendant, Walton, having gone home by another way. The men's clothes were wet, and Buckle carried a fishing creel containing six trout, which all bore the marks of a net. The inspector charged them with netting the beck, and they admitted having done so, not only on that occasion but for a considerable time previously. The inspector inquired where the net was, and was told that it was near George Buckle's house. He there found it drying on some railings. Mr. Dodds concluded by saying that nets not being included in the Board's bye-laws were unauthorised instruments for taking trout, and the Board were resolved to support their bye-laws to the utmost, whether they were contravened by rich men or poor men.

Inspector Mabon was called and corroborated counsel's evidence. In answer to Mr. Dodds, witness said Grand Beck was in the Tees Salmon Fishery Board's district. The net he found was one of the most dangerous kind and was known as an "armoured" net. The two defendants had admitted that they knew that in fishing with the net they were following an illegal course, but said they must carry out their orders. Mr. Luck, to witness: Have you a certificate of your appointment? Yes (produced). On whose authority did you institute these proceedings? I submitted the case to the Fishery Board, and they instructed me what to do. Mr. Dodds read a notification from the minute book of the Finance and Watch Committee ordering proceedings to be taken against the three defendants.

Mr. Luck submitted on the case of Anderson and Hamlin, that no proof was afforded that the inspector was authorised by the Board to take proceedings, and that fact was conclusive of the whole case. Again, he maintained that in such a case as the one before them, sanction to prosecute must be given by the whole Board, and the Board had no authority to relegate its power to the Finance and Watch Committee.—Mr. Dodds contended that such cases did come within the province of the committee named, and the Bench must decide what the powers of the committee were. He submitted that they had followed their present mode of procedure for ten years.—After retiring for consideration, the Chairman said the Bench had decided to let the case go forward and try it on its merits. Mr. Luck stated that with regard to the defendant Walton he was only there from what had been told to Inspector Mabon, and under those circumstances he applied for his immediate dismissal.—The Bench consented.—Inspector Mabon, replying to Mr. Luck, said he was cognisant the defendants had been in the habit of netting for fish on the estate for a long period, and on the occasion of their being charged they gave him all information voluntarily and kept nothing back.—The Bench inquired why, if the alleged offence had been systematically pursued for a long period, proceedings had not been taken sooner?—Inspector Mabon said he had reported a similar case three years ago to the Board, when fifty-two trout were taken, but the case had never come before the magistrates. He had written to Mr. Scarth on the subject, but had not mentioned the matter to Mr. Buckle, the head gamekeeper—that was before the present case.

Mr. Luck said there was a meeting of the Fishery Board on July 28, 1890, at which a resolution was passed to the effect that for each and every net other than landing-nets used for taking trout by any person other than a riparian owner or his duly authorised agent, fishing within his own waters, a sum of £1 13s. 4d. should be charged. The resolution was submitted to the Board of Trade for confirmation, but that authority replied that it was not in their power to confirm a provision which put one class of persons, such as riparian owners, on a different footing from the rest of the public. Although the resolution had not been confirmed, it had not been rescinded by the Fishery Board. —Police-constable Wall was then called, and corroborated the inspector's evidence, adding that in the conversation with the head gamekeeper, the latter had admitted the illegality of the practice complained of.—Mr. Luck called Inspector Mabon as to whether Mr. George Buckle had admitted that fact, to which the inspector said he had.

Mr. Luck for the defence, said his contention was that the Fishery Laws were passed for two great purposes, (1) to improve the fish supply and therefore increase the food for the people of this country, and (2) subsidiary thereto, for the purpose of improving the sport provided for those who fished with rod and line. He submitted that two modes of fishing were perfectly legal—the one by net and the other by rod and line. Mr. Luck then reviewed the powers and province of Fishing Boards, and said that if fishing by net were legal it would be *ultra vires* on the part of the Board to pass bye-laws prohibiting the use of the net. It was clear that the Board had the power to grant licences for taking trout with a net, but they did not do so, and then they prosecuted the defendants because they did not take out licences. Upon the merits of the case he submitted that the prosecution was a very harsh one indeed. The practice of taking the fish had gone on for many years, and he thought a warning might have been given before taking extreme measures, as a matter of courtesy.

Mr. George Buckle was then called, and said he was head gamekeeper on Raby Park estate, and he had known trout to be taken by net ever since 1875, and the practice had been carried on openly. He emphatically denied having admitted to Inspector Mabon that he knew such the practice to be illegal. In fact a former water bailiff, named Hankey had sometimes assisted the keepers to get the fish.

The Bench retired to consider the case, and in giving their decision said that after looking into the case from every point they had resolved to dismiss the defendants.

Night Poaching.—At the Ware Bench, on Tuesday, three men were convicted of night poaching in the river Lea, near Ware Bridge, on August 12, and fined ten shillings each, and the net ordered to be destroyed. G. Corble, Esq., Clerk to the Lea Conservancy Board, prosecuted. The case was proved by Inspector Cannon and P. C. Wheakley, who acted with great ability in detecting the defendants, which will be duly recognised by the Anglers' Association. R. Ghurney attended to watch the case on behalf of the anglers, and had the pleasure of assisting in the destruction of the net, which was a large east net.

Capture of an Enormous Seal at Plymouth.—On Sept. 24, whilst the *Electric*, a trawler belonging to this port, was fishing six miles south-west of the Eddystone, it was found when the trawl was got on board that there was an enormous seal, about 7ft. or 8ft. long, in the cod end. It was nearly dead, and expired about half-an-hour after being placed upon deck. It weighed some 7cwt. or 8cwt., and had a skin like an old horse, an iron grey, with white spots, and teeth in the jaw just like a mastiff. It is being exhibited on the Promenade Pier. The men think that the seal must have been caught just as the trawl was shot, as they had a very poor catch.

Seizure of Poached Salmon.—On Saturday, Sergeant Pool and Inspector Mackintosh, of the Dumfriesshire Police armed with a search warrant, visited an Annan fishmonger who was suspected as dealing in poached salmon, and succeeded in seizing a number of salmon alleged to have been poached in the Solway. The bailiffs also took possession of several salmon nets belonging to some fishermen. The salmon and nets were taken to Dumfries County Police Offices by the evening express from Annan.—Heatherbell.

***** Club and River Reporters will oblige by sending in their Reports early in the week.**

THE "STANDARD" MEAT BISCUIT COMPANY.

"STANDARD" MEAT BISCUIT FOR PETS AND PUPPIES

TESTIMONIALS.

St. Bernard Kennels, Gorgie, Edinburgh.

Sirs,

I have pleasure in testifying to the excellence of your Puppy Dog Biscuits. They seem to be made of the best materials. Puppies, soon as weaned, eat them with avidity, improve rapidly in size and strength, and are maintained in perfect health.

I think the "Standard" Puppy Biscuits supplies a want, and only requires a trial to be appreciated by breeders.

W. R. REID.

Scotland's Premier Kennel of Pugs.

I have pleasure in certifying that the Puppy Biscuits manufactured by the "Standard" Meat Biscuit Company are of a very superior quality, and are far the best and cheapest I have ever used; they are eaten readily by puppies as soon as they leave the dam.

I think the "Standard" Meat Biscuit Company have no equal as to their Puppy Biscuits. They seem as near perfect as need be. R. TAIT LINTON,
Pharmaceutical Chemist, Edinburgh

The above Biscuits are specially adapted for House Dogs and Pets, and may also be given to Puppies immediately after weaning.

PRICES—24s. per cwt., 13s. per ½ cwt., 3s. 6d. per 14 lbs., not carriage paid. Or, paid to any part of the United Kingdom, 26s. per cwt., 14s. 6d. per ½ cwt., 4s. 6d. per 14 lbs.

THE "STANDARD" MEAT BISCUIT COMPANY, EDINBURGH.

Books for Anglers

ANY OF THESE WORKS CAN BE HAD, CARRIAGE PAID, *BY SENDING POSTAL ORDER FOR THE PRICE TO SAMPSON LOW, MARSTON & CO., LIMITED, ST. DUNSTAN'S HOUSE, FETTER LANE, LONDON.*

Dry-Fly Fishing in Theory and in Practice. By FREDERIC M. HALFORD. Second Edition. Royal 8vo. Price in cloth extra, 25s. Fully Illustrated by Woodcuts, Chromo-Lithographs, and Coloured Steel Plates Prospectus on application

Floating Flies and How to Dress Them. By FREDERIC M. HALFORD. With full Illustrated Directions, and containing Ninety Hand-Coloured Engravings of the most Killing Patterns, together with a few Hints to Dry Fly Fishermen. Second Edition. Demy 8vo, cloth, 15s.

A Book on Angling. Being a complete treatise on the art of Angling in every branch. By FRANCIS FRANCIS. late Angling Editor of *The Field.* Sixth Edition. Revised and Improved, to which is added (1887) a memoir of the Author. With Portrait of the Author and 16 Plates, Crown 8vo, 15s.

List of Illustrations.—*Frontispiece*, The Author and his Gillie; Plate I. Pike Disgorgers, Wood's Spinner, etc. (8 figs.); I. The Slider and other Floats, etc. (10 figs.); III. Knots, Hitches, etc. (7 figs.); IV. Spinning Flights, Leads, etc. (8 figs.); V. Spinning Tackles Baited (9 figs.); VI. Live-bait Tackles, etc. (12 figs.): VII. Natural Trout Flies (22 coloured figs.) VIII. Tackle for Minnow-Spinning, etc. (8 figs.); IX. Imitations of Grubs and Beetles (6 coloured figs.); X. Salmon-Flies: The Jock Scott, Butcher, and Wasp Flies (3 coloured figs.); XI. The Bittern, Parson, and Snow Fly (3 coloured figs.); XII. The Tartan, Bewly, and Spey Dog Flies (3 coloured figs.); XIII. The Popham, Shannon, and Owenmore Flies (3 coloured figs.); XIV. Trout-Fly Dressing, etc. (43 figs.); XV. Salmon-Fly Dressing (9 figs.); XVI. Scale of Limerick Hooks (12 figs.).

"The best angling book ever published."—*Fishing Gazette.*

THE BADMINTON LIBRARY.

Vol. I. Salmon and Trout. By H. CHOLMONDELEY-PENNELL. With Contributions by HENRY R. FRANCIS, Major JOHN P. TRAHERNE, FREDERIC M. HALFORD, H. S. HALL, and THOMAS ANDREWS. With Frontispiece, 8 Full-page Illustrations of Fishing Subjects by C. H. WHYMPER and CONWAY LLOYD-JONES, and 150 Illustrations of Tackle, &c. Fifth Edition, Revised. Crown 8vo, 10s. 6d.

Vol. II. Pike and other Coarse Fish. By H. CHOLMONDELEY-PENNELL. With Contributions by the MARQUIS OF EXETER, WILLIAM SENIOR, G. CHRISTOPHER DAVIS, H. R. FRANCIS, and R. B. MARSTON. With Frontispiece, 6 Full-page Illustrations of Fishing Subjects by C. H. WHYMPER and CONWAY LLOYD-JONES, and 126 Illustrations of Tackle, &c. Fourth Edition, Revised. Crown 8vo, 10s. 6d

The Sporting Fish of Great Britain. By H. CHOLMONDELEY-PENNELL. Illustrated by Sixteen Lithographs of Fish in Gold, Silver, and Colours. First Edition. Demy 8vo, 15s.

Modern Improvements in Fishing Tackle and Fish Hooks. By H. CHOLMONDELEY-PENNELL. With Two Hundred Illustrations. Crown 8vo, cloth 2s.

Fourth Edition, much enlarged, and almost entirely Re-written. Crown 8vo. Price 6s.

The Sea-Fisherman. By J. C. WILCOCKS. Comprising the Chief Methods of Hook and Line Fishing in the British and other Seas, and Remarks on Nets, Boats, and Boating. Profusely Illustrated with Woodcuts of Leads, Baited Hooks, Knots, Nets, Boats, &c., and Detailed Descriptions of the same.

Ninth Edition. Crown 8vo, cloth, price 14s.

Ronalds' Fly-Fisher's Entomology. With Coloured Representations of the Natural and Artificial Insect, and a Few Observations and Instructions on Trout and Grayling Fishing. By ALFRED RONALDS. With 20 Coloured Plates.

"The fly-fisher who does not possess this book lacks one of the most enchanting works ever produced on the subject."—*Fishing Gazette.*

Near and Far: an Angler's Sketches of Home Sport and Colonial Life. By WM. SENIOR ("Red Spinner"), Angling Editor of *The Field,* Author of "Waterside Sketches," &c. New and cheaper Edition. Crown 8vo, boards, 2s.

Waterside Sketches. By "Red Spinner" (WM. SENIOR). Imp. 32mo, boards, 1s.

North Country Trout Flies. By T. E. PRITT. With Coloured Plates of all the best Flies. Second Edition. Demy 8vo, cloth, 10s. 6d.

A Handy Guide to Dry-Fly Fishing. By COTSWOLD ISYS, M.A. Illustrated Crown 8vo, boards, 1s.

"A pretty discourse on various forms of dry-fly fishing . . . a series of clearly defined exercises."—*The Field.*

The American Salmon Fisherman. By HENRY P. WELLS. Illustrated. 116 pages Small post 8vo, cloth, 6s.

Fly Rods and Fly Tackle. Suggestions for Amateurs as to their Manufacture and Use. By HENRY P. WELLS. Illustrated Small 4to, 364 pages, cloth extra, 10s. 6d.

Recollections of Fly-Fishing for Salmon, Trout and Grayling. By EDWARD HAMILTON, M.D., F.L.S., &c. Illustrated. New Edition, Small post 8vo, cloth extra, 6s.

Salmon Problems. By J. W. WILLIS BUND. Boards, 2s. 6d.; cloth, 3s. 6d

An Amateur Angler's Days in Dovedale. Being an Account of my Three Weeks' Holiday in July and August, 1884. Imp. 32mo, fancy boards, 1s.; limp leather-cloth, gilt edges, 1s. 6d.

Fresh Woods and Pastures New. By the Author of "An Amateur Angler's Days in Dovedale," "Frank's Ranche," &c. Large fcap. 8vo, cloth, 1s. 6d.

A Quaint Treatise on Flies and Fly Making. Edited by W. H. ALDAM. 4to, cloth extra, with cardboard panels, in which are placed actual specimens of the flies, and the materials from which they are made. The flies will kill in any Trout or Grayling Stream in the world. Also two fine Coloured Plates. Only a few copies left; these are authenticated by Mr. Aldam's Cabinet Photo. Price £3 3s. net, carriage free.

An Angler's Strange Experiences. By COTSWOLD ISYS, M.A. Profusely Illustrated. Small 4to, cloth extra. Second and Cheaper Edition, 3s. 6d.

How and Where to Fish in Ireland. By HI REGAN. With Map and numerous Text Illustrations. Fourth Edition. Crown 8vo, 3s. 6d.

Notes on Fish and Fishing. By J. J. MANLEY, M.A. With Illustrations. Crown 8vo cloth extra, 363 pages, leatherette binding, reduced from 10s. 6d. to 6s.

The Art of Trout Fishing on Rapid Streams. By H. C. CUTCLIFFE, F.R.C.S. Small post 8vo, cloth, 3s. 6d.

Float Fishing and Spinning in the Nottingham Style. By J. W. MARTIN, the "Trent Otter." Coloured boards, Illustrated, Crown 8vo, 2s. 6d. New Revised, and Enlarged Edition.

British Angling Flies. By MICHAEL THEAKSTON. Revised and Annotated by FRANCIS M. WALBRAN. With Woodcut Illustrations, and Plates of Natural Flies drawn from Life. Crown 8vo, cloth, 5s.

Fishing with the Fly. Sketches by Lovers of the Art. With Coloured Illustrations of Standard Flies, collected by C. F. ORVIS and A. NELSON CHENEY. Square 8vo, cloth extra, 12s. 6d.

Fly Tying. By JAMES OGDEN. Illustrated. 2s. 6d.

John Bickerdyke's "Book of the All Round Angler." Illustrated. Crown 8vo, cloth, price 5s. 6d.

John Bickerdyke's "Angling for Coarse Fish." 1s. in paper covers, 2s. in cloth.

John Bickerdyke's "Angling for Pike." 1s. paper covers, 2s. in cloth.

John Bickerdyke's "Angling for Game Fish." 1s. 6d paper covers, 2s. 6d. in cloth.

John Bickerdyke's "Angling in Salt Water." 1s. in paper covers, 2s. in cloth.

Aflalo's "Sea Fishing on the English Coast." Cloth 2s. 6d.
"A most useful book."—*Fishing Gazette.*

SATURDAY, OCTOBER 10TH, 1891.

LMON AND SEA TROUT FISHING IN SMALL RIVERS.

BY DUINE MÔR.

HERE are certain salmon and sea trout rivers Scotland which, though aspiring to the dignity river in the proper acceptation of the term, en in flood, are yet more truly described large burns. These streams are capable of sion into three classes. First, we have the y stream, usually flowing through moorland a wide rock-strewn bed, which is only rely covered when a big brown spate is roaring vard. To this class belong such streams as Laggan, in Islay, the Glendale, in Skye, the chrie, in Arran, the Array, the Barr, and to e extent the Carradale, in Argyleshire, and r rivers too numerous to mention. Of these Laggan and the Barr—both admirable little non and sea trout streams—"come down" with mpetuous rapidity quite equal to that of the y or the Findhorn. Indeed I question if there any two rivers in Scotland which rise faster, yet do not expend their force too quickly; I have very vivid memories of more than one ting from the eager embrace of their advancing ds. The second class of small river is all over e gentle; this class usually flows through dow-land, and combines sharp stream with pool. The stream is confined, as a rule, veen high grassy banks, and is, in fact, lowland, ost English in its character. The Sorn, in y, the Dean, in Forfarshire (though more of out than a salmon stream, and an excellent very early trout stream it is), the erstwhile famous Chisken Water, in Kintyre, the Conyglen, in the same district, the Endrick, in Stirlingshire (in some of its reaches at least), and the Blackwater or Feorline, in Arran, are examples of this kind of river. The third class of river is peculiar to a particular kind of country, and is only found on flat plains like the Machar land of South Uist and the Lewes, and in Caithness-shire. These streams are better described as "ditches." When in their best order they are, as often as not, divided up into a series of pools, without any current, and require a strong breeze either up or down—up for choice, as the fish lie with their heads towards the direction of the imaginary current. The Roag (or Howmore, if you will) in South Uist, the Lacisdale, in Harris, and the Wester, in Caithness-shire, are typical examples.

In the rude brawling rivers, I have found both fly and bait deadly; in the smoother and gentler streams fly as a rule is most deadly, though occasionally the fish will take the worm while in the "ditches," though I have *experimenti gratia* tried the bait when there was no wind, I have never succeeded in taking anything with it, but eels and an occasional flounder.

In the first-class of rivers, if the spate be big and heavy, it is usually also very dirty, and the fish seem not to be on the outlook for the fly, at least I have never done any great execution with it. The fish in such floods are not settled, but are either running up or are driven by the force of the main current out of the pools, if resting in them. In either case they are to be caught in the small side currents quite close to the shore, or in back waters, never in the main stream. The best fish, apart from those running, are naturally to be found in the best feeding places. Suppose, for example, there be a big pool in which under ordinary conditions the fish rest, but which under the extraordinary condition of a big spate is simply a sea of dirty roaring troubled water, the fish will leave it and lie in some little rippling side current or run, which is not there at all save in heavy floods. It is beside some such spate-created little pool that the angler should take his stand so long as the spate is on. He need not leave it, provided he has chosen it with judgment; all running fish will pass through it, or at least many of them will, while resting fish, becoming restless or hungry, are sure in this class of stream to move more or less into it. To speak of larger rivers, there is just such a little hole as this, in heavy spates, in the Hoddam Bridge pool of the Annan, where I once (August, 1883), killed without moving, two grilse of some 5lb. or 6lb. each, some thirty sea trout and herling, and a goodly number of yellow trout. Some of the sea trout ran as heavy as 3½lb., but I am writing from memory, so will not dogmatise as to the weight. There are several other places in my mind's eye, but I need not detail them here, though I cannot help recalling "a slaughter grim and great," at the mouth of Glen Barr river, in August, 1882, when in such little sidepools, five rods—no, I will "draw the veil of reticence over the effulgence of consummate achievement" if such fishing as that was deserves any such high-sounding praise. The best kind of rod for this sort of fishing is a good strong fourteen "footer." I have found an ordinary bait hook better than Stewart's tackle, because it is more easily dislodged, and in this kind of fishing, where many of the fish are small, the quicker they are "yanked out" the better, and the sooner your bait is back again the greater your chance, for the fish move in small shoals, and rest for some time in the side current. The bait should be dropped close by the shore, and be allowed to travel slowly downstream just on the bottom, and just off it. The smaller fish require but little striking, salmon, grilse, or large sea trout, none at all—for they must have some time to properly take the bait and their own weight, as in fishing with the prawn when they begin to *move* with the bait, is usually sufficient to hook them. On this point the angler has, however, to use his own discretion, and a little practice will soon enable him to judge as to the proper time to strike, should he deem it necessary in any case to strike at all. A strain put on gently and slowly is my usual method. Large earth worms I have found best, and my method of securing them was to put a lantern out in a garden, and then to pick them up. Of course they may be secured by digging, but there is no necessity for such a laborious method being adopted. Worms come to the surface at night, and the light serves a double purpose; it attracts the worms and enables the gatherer to see them.* It is not a very sporting method of hooking fish (though not by any manner of means so easy as one might imagine), but once hooked, if the fish be a good one and rush into the main current, the playing of the fish is just the same as if he had been hooked casting with the fly. Of course he is either speedily lost or quickly landed, for no fish could live long in such a heavy water as necessitates the adoption of this method.

In these small rivers, when dead low after a long drought, it is almost impossible to take fish by any method, as the water is usually far too clear and shallow. Towards evening a fish may be persuaded to rise to a small fly, but, as a rule, unless there be a strong up-stream breeze, the prospect of sport is quite hopeless. After a protracted period of dry weather in the Highlands, the approaching greater deluge is often harbingered by a strong N.W. wind, with heavy showers. When one of these is *rattling* on the surface of the water I have frequently taken large sea trout by gently dropping a worm into some hole where they were congregated, taking care, however, only to make the attempt during the downpour. It is, however, when those streams are fining off after the main body of the spate is over, or when the spate has only been moderate, that the best sport is to be obtained. The water should be the colour of strong tea, and the breeze across and downstream to make the conditions ideal. If the weather has been cloudy, and the fish have been rising when it was so, they generally go "off" when the sun comes out, and *vice versa* if not rising; that is to say, when it is cloudy, a burst of sunshine often brings them up. This is especially true in my experience towards the afternoon, for, though at all times of the day any climatic change will, in the majority of cases, alter the mood of fish, in the afternoon and evening any such change is even more efficacious than in the morning. I am strongly of opinion on this ground that the *Salmonidæ* (fresh-run fish being disregarded) are rather night than day feeders. I have killed both salmon and sea trout with all kinds of flies in these little rivers, with every kind of fly, in fact, from a Jock Scott to an ordinary teal and red, so that any fly will kill. My choice (from fancy, perhaps) is an old-fashioned Scotch salmon fly—a turkey wing, plain cock hackle, and a rough yellow pig's wool body. The taste of salmon for flies may have altered in the ample Tay and silver Tweed, but in these smaller rivers they are still the unsophisticated fish of the early angling days of Stoddart, and simple in their dietary longings. The fish in these kind of rivers rarely exceed 10lb. in weight, and may be said to average about 7lb. With a 12ft. or 13ft. rod they give grand sport, however, on these impetuous streams.

In the second class of river, bait is, as I have said, not very deadly, and, curiously enough, the salmon and sea trout will rise to the fly in them even when they are coming down very "dirty." In their stiller reaches, a heavy spate and a good breeze are essential to sport, though I have picked up an odd fish by careful casting even in very low water; this has, however, only been where the stream, being confined between high banks, has narrowed down, and so made a strong current into the pool below in all conditions of water. In a spate these places are, of course, unfishable, and should be passed over, with, perhaps, in some cases, a cast or two at the tail; but the fish during spates, if they do rise in such places, are apt to come wildly, miss the fly, and so take fright. The angler must, therefore, fish very carefully and cautiously.

The third class of river, the "ditch," I have seen only in the Hebrides and in Caithness-shire. They are peculiar streams, and could only be found in a very level country. The Roag, or Upper Howmore, in South Uist, is a typical example. It is an ordinary burn, rocky and impetuous until it reaches the public road within a mile of the sea; then it enters a grassy flat and completely changes its mood, and flows quietly and placidly between green banks fringed with rushes until it loses itself in Loch Roag. When low, the upper portion is nearly dry, while the lower—the fishable portion—is broken up into a series of long, dark, peat-coloured pools of, at places, considerable depth and width. This is its best fishing condition. This applies equally to all rivers of this nature. A strong breeze is an essential to good sport, and fly is the only lure. The biggest basket of sea trout I have ever killed (fifty-two trout, 104½lb.) was secured in a river of this kind when dead-low, in half-a-gale of wind, blowing straight up-stream.* There are peculiar difficulties attached to fishing in these kind of streams. In the first place, owing to the uniform nature of the pool and the dark colour of the water, one cannot tell, if a stranger, where a fish may rise. It is, in fact, quite impossible to determine on places where fish may be expected, and hence the rise, when it comes, is apt to flurry the angler and make him strike too quickly. Even to one who knows the stream, this kind of angling is by no means easy, for the following reasons: A short line should be used, and the near side, almost at the angler's feet, first fished. The fish come at one time with a boiling rush, which startles the angler into too early striking against his will, while, at another, the fish rises slowly and majestically from the bottom, and unless one is possessed of great self-control the consequence too often is an impatient strike, and the fish refuses to move again.

---

* Worms are said to be blind, but they are most certainly sensitive to light, and are commonly described as being afraid of any bright light. In spite of this alleged fear, I found the above method very efficacious in securing a good supply of bait.

The same may be said of any rise in these kind of waters. The easiest rise to take is one made the moment the fly touches the water, and is at its farthest distance from the angler. Plenty of time must, therefore, be given in the case of a wild or a slow rise; in any case, if the fish comes boldly and yet deliberately, he will hook himself in "the turn" of his rise. The rod should be double-handed, and about 14ft. in length, the flies ordinary sea trout flies for loch fishing, and the gut as strong as possible—*i.e.*, as strong as is consistent with delicacy. The playing of the fish is not difficult. Determination in gently, or rather gradually, giving the butt should be the angler's watchword, if the fish goes for the weeds, but it is wonderful how seldom they do so. They prefer wild rushing and jumping in the middle, scorn any sanctuary, and prefer to die in fair fight. It is best to endeavour to take them back over water already fished; but this is not absolutely necessary, for sea trout are not so easily disturbed as their yellow cousins. In any case, the fish should be followed. This is very easily done, owing to the level bank. If they are allowed a long rush they are almost certain to be lost; if kept in check, they are equally certain to be landed, provided they are fairly well hooked: The great charm of some of these streams (?) is that the fish will rise in almost any kind of weather, provided there be a good breeze. They are very useful adjuncts to any loch, and I have frequently done great execution in them when the connecting loch was hopelessly "dour."

These three classes of small salmon and sea trout river, though not affording the fierce excitement which a struggle with some giant of his race in the more celebrated and larger rivers sends thrilling through the frame, yield, nevertheless, sport which no angler could afford to despise, and one might, to use a homely phrase, "go farther and fare a great deal worse" in his search for "glorious hours" of crowded angling life.

THE DECLINE OF THE TWEED AS A SALMON RIVER.

By R. P.

From many a fine river in Great Britain where formerly these noble fish used to swarm, the salmon have been expatriated, never, in our day at any rate, to return. In many others, their numbers have been reduced to a mere tenth of those which used to frequent the formerly pure and healthy—now filthy and polluted waters.

An example of what pollution and the modern system of drainage combined can do to a magnificent salmon river may with advantage be observed in the extremely interesting statistics of the yield of the great border stream, for no less a period than seventy-eight years, furnished by the courtesy of Mr. Tait, clerk to the Tweed Commissioners, to the Inspector of Salmon Fisheries for Scotland.

By the kindness of the Editor, an article upon the Tweed appeared in October, 1889, from my pen; and more recently, also, under the heading of "British and Norwegian Salmon Fisheries," I endeavoured to draw attention amongst other matters to the enormous extent to which the rivers of the United Kingdom have suffered from the pollution caused by manufactories of various kinds, mining industries, &c. I trust, therefore, I shall be forgiven for being somewhat statistical in the first place.

The returns given below do not pretend to be absolutely accurate, but they are generally believed in the district to be very nearly so. Much labour and research have been devoted to their compilation, and I venture to think that such reliable and interesting figures as these are obtainable in regard to extremely few great salmon streams.

The return of salmon, grilse, and trout, taken in the river Tweed from 1805 to 1885, both years inclusive (prior to 1857 the net fishing closed on the 14th October; from 1857 to 1859 on 30th September; and since 1859 on 14th September), is as follows:—

Year.	Salmon.	Grilse.	Migratory Trout.	Total.
1808	37,333	25,324	21,033	83,690
1809	30,949	32,679	21,402	85,030
1810	40,782	49,332	23,963	114,077
1811	38,566	24,852	12,439	75,857
1812	27,711	82,538	33,604	143,853
1813	35,273	61,643	36,319	133,235
1814	58,890	73,521	34,161	166,572

1885	10,545	18,779	27,113	56,437

From the above figures it is abundantly evident that a very great falling-off in the yearly takes of salmon, grilse, and trout, on this important river, occurred during the latter years of the period referred to.

During the first half of the said period—thirty-nine years—ending in 1846, the Tweed produced upwards of five millions of salmon, grilse, and trout, or an average of nearly 140,000 fish a year.

On four occasions the river produced, it will be observed, 200,000 fish in the course of a single year, and on three occasions upwards of 100,000 grilse in the same time. The largest number of salmon in any one year, was in 1814, when 58,890 were taken; of grilse in 1816, when 120,594 were captured; and of migratory trout in 1844, wh nearly 100,000 were taken. The most producti year on the Tweed, of which any record exis was 1816. That year there were taken on t river, 54,041 salmon, 120,594 grilse, and 62,0 trout; in all, no less than 236,709 fish.

In 1820 upwards of 208,000 fish were taken, a a total of 150,000 was not infrequently reach In 1814 upwards of 58,000 salmon alone we taken, and this number *exceeds that for any* *consecutive years since 1846*. The take of grilse in 18 exceeded that for the eight years from 1867 1874. According to a letter in the *Edinbu* *Magazine*, of April, 1888, the rental of the lowerm fourteen miles of the Tweed, was upwards £5,400, and the expenses of fishing £5,000; a the writer calculated that in order to pay th sums, a minimum of 208,000 salmon, in additi to grilse and trout, must have been produced. T rental of the Tweed fisheries reached th maximum in the great year 1816, when th amounted to over £13,700. I should doubt wheth the average of 140,000 fish obtained from the ri during those thirty-nine years in question, is on any other stream in the kingdom nowadays

For the second period of similar length—fr 1847 to 1885, both years inclusive—the avera was considerably less than half, being only ab 64,000 fish, or two and a-half millions in all.

The largest number of salmon were taken 1882, when 17,575 were got; of grilse, in 18 when 97,102 were got; and of trout, in 1847, wh 67,796 were captured.

"Some curious results," writes the Fish Inspector in his 1890 report, "with regard to t increase in the proportion of bull trout to salm and grilse in the last period of thirty-nine yea as contrasted with the first, are afforded by t above table. From 1808 to 1816, with the exc tion of three years, the number of trout was l than that of either salmon or grilse; and fr 1808 up to 1829 the number of salmon and gri combined always exceeded that of trout. 1 was the first year when the trout exceeded number the salmon and grilse combin Between 1839 and 1885 this has happened eighteen years; and in one of those years—1 —the number of trout was considerably more th double that of salmon and grilse united—certai not a healthy sign of a salmon river. Yet it be found on reference to the table that althou the take of salmon and grilse has so grea fallen off in the last half of the period tabula as to be often surpassed by the take of trout, t even the number of trout during the last perio not nearly equal to what it was in the first peri as up to 1848 the take of trout varied from 12, to 99,250, and averaged 50,000 annually; where since 1848 the largest take has been 49,701, a the smallest, 14,222.

"As was pointed out by Mr. Walpole and my in our report of 1875 on the operation of the Tw Fishery Acts of 1857 and 1859, there is a rema able coincidence between the general drainage the Tweed Valley that followed upon the adva of money on easy terms by Parliament in 1846 the landlords of the United Kingdom and the f ing-off in the productiveness of the Tweed fisher The character of the floods was changed. T land, instead of being like a sponge which gradually squeezed out, became intersected b network of drains, which discharged the act rainfall into the river in a few hours. The ri now rises suddenly and falls suddenly, instead being in flood more or less for a week, so t migratory fish, like salmon, which run in flo or rather when the water is beginning to sub and clear after a flood, have far less opportu than formerly of entering the river. This ca joined to the wholesale pollution of the Tw and its tributaries, and the extensive poach which prevails, seem to render it improbable the Tweed will ever again produce two hund thousand fish in a year, as it occasionally di the earlier years of the present century."

The statistics above given seem to show high cultivation and other results of adva civilisation, which cannot be interfered with, decidedly inimical to the productiveness of salmon rivers; and that "probably the only to restore that productiveness and to maintain to follow the example of the United States Canada, and establish Government hatcheries the artificial breeding of the *Salmonidæ*."

Disease, arising no doubt from the s

---

* This basket was practically killed in the loch, as the so-called river is just a continuation of the loch narrowed down, and is, in fact, a very narrow loch.

causes, has been more or less prevalent of late years in the river. During the ten years, from 1880 to 1889, the total number of dead and dying fish removed from the river and buried amounted to 75,065, but in 1890 the number so dealt with did not reach this average, only 5,087 being thus treated. The great majority of these were fish that had spawned, few unspawned fish being affected by the disease.

In addition to the other evils from which the Tweed suffers there may be reckoned extensive and organised poaching. In spite of a well-organised force of water-bailiffs in the service of the Tweed Commissioners, this is carried on on the river itself in the close months to a great extent; but the coast at the mouth of the river is the scene where these lawless operations are carried on most vigorously, numbers of boats and fishermen being year after year employed in the work in open defiance of the law.

So unable to cope with this army or rather fleet of poachers with the resources at their disposal did the Commissioners find themselves, that they applied to Government for a gun-boat to be stationed at the river's mouth to assist the bailiffs in enforcing the law; but so far it would appear the Government have not thought fit to grant this request. According to the Commissioners' report for last year, however, it would seem that the previous winter they succeeded in reading the poachers a somewhat severe lesson. A tug-boat was employed for the protection of the bailiffs, and after sundry encounters the poachers were beaten off with a loss of two hundred and twenty-seven nets.

Such are the evils and such the difficulties with which the legal guardians of the famous Border river have to contend, and which have brought about the tremendous decline in its salmon fisheries.

LONDON CLUBS.

THE CAMBRIDGE FRIENDLY.

By Edgar S. Shrubsole.

During the past twelve months a decided move has been made by many London clubs in the direction of an advance in the size of fish weighable for competition and a reduction of the number of prizes given for gross weight. No one has watched the improvement in the tone of the London clubs with more satisfaction than myself, although I am delighted to know that many supporters of the idea of popularising angling as a sport and a means of healthful recreation are continually cropping up. Those gentlemen who for years have fought the fight against an adverse and "okkard" opposition may well tell those who have now to continue the good work that it is no easy task they have put their hand to; but a *bona fide* sportsman is ever ready to advance the interests of sport, for sport's sake; and the very encouraging results of the efforts of those gentlemen who were prominently connected with the movement last winter will I hope give them heart to continue their exertions through the winter to come. Not the least important factor in this connection is the exhaustive and continual discussion of the matter among anglers at their club-house; advocates of the increase in the standard and the reduction of the number of gross weight prizes have everything to gain by these free discussions, and they should be encouraged.

I am led to make these few introductory remarks by the fact that when I lately paid a visit to the Cambridge Friendly Angling Society, the principal item in the evening's programme was the discussion of the advisability of calling a meeting in connection with that society, to determine whether or no the Cambridge Friendlyites should join the rapidly-increasing ranks of those who are determined to do their level best to show by their example, and endeavour to convince by their action, that really the interests of London anglers lie in proving beyond doubt they have the love of sport at heart, and they are determined to do each and everyone what they can to promote the encouragement of preservation and honest angling in place of the "don't-care-what-becomes-of-the-river-as-long-as-we-can-win-prizes" sort of feeling that unfortunately has prevailed only too much in the past. On the evening I allude to it was decided unanimously that the meeting should be called, and the matter discussed. I hope it will be well attended, and that not only the Cambridge Friendlyites will be induced to increase their standard and encourage their specimen-fish advocates, but that other clubs will also be induced to favourably consider the matter, and that this meeting of the Cambridge may be the forerunner of many such during the ensuing autumn, winter, and spring.

The genial secretary tells me that this club, like many others, suffers from a dearth of attendance of members, notwithstanding what has been done to improve it. Probably the important matter they now propose to take in hand will alter this—it should do. The society was founded in 1878, by Messrs. Townsend, Hart, Gould, and Osmond, who were originally members of the Norfolk Angling Society. These gentlemen took offices and piloted the Cambridge through its earliest stages. On March 5, 1879, Mr. W. Sutton was elected secretary, and still retains that office; in his hands the interests of the club have been safe, and he certainly deserves the united support of the members in the measures he proposes for the benefit of all those concerned.

The society—which is limited to fifty members—was for many years held at the Rent Day Tavern, Cambridge-street, Hyde Park-square, but in consequence of the house so frequently changing hands, was removed to its present quarters, the Masons' Arms, Tichborne-street, Edgware-road, W., where a very cosy room is at the disposal of the members, and where some very decent specimen fish are hung upon the walls, including a pike of 18lb. 12oz., caught by Mr. J. Lawler at Amberley, *whilst carp fishing with paste;* a carp weighing 12lb. 12oz., taken by Mr. Warsop in the Lea; another weighing 8lb. 4oz., taken by Mr. J. Welch, from the Welsh Harp; and a third, weighing 6lb. 7½oz., caught by Mr. C. Wright, at Richmond Park; a bream, 6lb. 12½oz., taken by Mr. J. Welch, from the Ouse; another, 4lb. 8½oz., taken by Mr. Buttery; and a third, 3lb. 9oz., taken by Mr. J. Welch, at Amberley, while roach fishing. A tench, 4lb. 9½oz., takon by Mr. Warsop from the Lea; another, 2lb. 13oz., taken by Mr. W. Buttery, at Marlow; and a brace weighing 6lb. 8¾oz., taken by Mr. Townsend. A chub, 4lb. 7½oz., taken by Mr. J. Gower from the Ouse. A brace of perch, weighing 4lb. 8oz., taken by Mr. T. Wilson from the Thames; and a second brace, 4lb. 4½oz., taken by Messrs. Lawler and Gould. A case of four rudd, combined weight 7lb. 1½oz., taken by Messrs. Warsop and Edwards from the Lea; a single rudd, 2lb. 4oz., taken by Mr. Warsop from the Lea. Two dace, 1lb. 8¼oz., taken by Mr. Warsop from the Lea. A roach, 1lb. 13¼oz., taken by Mr. Carrill from the Thames; another by Mr. Satch, from the Colne, weight 1lb. 12oz. A barbel, 6lb. 8½oz., taken by Mr. Vinceut from the Thames at Pangbourne; and last, but not least, a fine grayling, taken by Mr. Warsop.

The society includes many able exponents of the gentle art, and several good shows of fish have been made, including Mr. Welch's catch of bream from the Ouse, nearly 100lb. Mr. Welch has also shown several takes of roach averaging 30lb. Mr. J. Lawler's take of 33lb. of roach from the bank at Pangbourne is very creditable, as is also Mr. Townsend's catch of tench, 24lb., among which were six specimens. Messrs. Warsop, Edwards, and Turner have also had large catches.

At the annual dinner, somo fifty members and friends usually sit down, and on this occasion the prizes won during the season are distributed, consisting of four gross weight prizes and ten specimen fish prizes, beside numerous gifts in specie and kind from the members and friends.

The society is enrolled with the Anglers' Association, and most of the members belong to the Anglers' Benevolent Society. The financial position is satisfactory. Many good anglers have been members in the past, including Messrs. Townsend, Hart, Gould, Satch, and Porter, now deceased; and Messrs. Cornell, Carter, Smith, Sutton, Carrill, Warsop, Wilson, Welch, Weldhon, Dobel, and others, who still remain members. Altogether, the club is a very good little one, and any anglers passing that way should give the members a call. I can vouch for the fact that there are many good fellows there, who will give any brother angler a hearty welcome.

The Gordon Castle party have been enjoying magnificent sport on the Duke's miles of the Spey.

Notes

Mr. A. Mackrill, one of the best and most enthusiastic anglers we have the pleasure of knowing, writes: "I had a day's fishing at Walton, with my old fisherman George Hone (yesterday). Have not fished the Thames for nearly three years; caught one fish only, but it was one of the most perfect Thames trout I ever saw, weighing 6lb, in splendid condition. After showing it to some "locals," we returned it to the water. I caught it on the very finest tackle and had grand sport."

We learn that one of the sons of Mr. P. Geen, of Richmond, has just been elected to an Open Classical Exhibition of £40 a year at St. John's College, Cambridge. We congratulate the worthy president of the Anglers' Association on the honour gained by his son, who is, we believe, a pupil at the Godolphin School, Hammersmith.

Last week, on the Nether Don fishings, several of the rods had twenty and thirty-pound baskets of sea trout in a few hours' fishing.

Bait fishing on the Border Esk closed for the season on Wednesday, the 30th ult., but fly-fishing, having a mouth's longer grace, continues up to the 31st inst.

Last Saturday, no fewer than sixteen salmon were landed on the cheap ticket water of the Don at Kintore. The daily take for about a fortnight past has been six to seven fish. Only one solitary "beastie" has yet been got with fly. The bunch of big lob-worms is the great nailer.

Never has the North Esk's early back-end fishing been known to be so good as this year. Not quite a fortnight ago, one gentleman killed with fly (?) nine fish in little over half a day.

Mr. Donald Watson, tackle maker, 19, Ingles-street, Inverness, writes: "On Friday last, above the wooden bridge which spans the Ness, a large seal was seen by a few local anglers to be busily swimming about, and to now and again make a furious charge as if after some fish unseen by them. By-and-by its motions took it near the bank, when all of a sudden a large conger eel, 4ft. 9in. in length and 9lb. in weight, which it had been pursuing, ran itself high and dry upon the beach. I think this an interesting item for 'Notes' column of *F. G.*"

The greatest takes to one rod in a day on Scotch rivers for the fortnight—up to the middle of the present week—have been three nines, an eight, and two sevens.

Lord Aberdeen's complimentary ticket water of the Ythan, many miles in extent, has been yielding ten to twenty salmon daily during the past fortnight.

The other week a splendid sea trout, weighing 14½lb., was killed on the river Ugie, Aberdeenshire, by an English angler. A fish like this is something to be proud of.

Our correspondent "Mac" commenced his back-end salmon angling on Wednesday, last week, by hooking a 28lb. fresh-run salmon at the *second* cast.

Mr. James Wright, Sprouston, Kelso, writes: "The fishing on the Tweed has been very good up to now. We have plenty of fish and ouly need settled weather to bring about good sport. All the week before was blank owing to floods. Last week, Monday was the only fishing day, when Colonel Biden killed nine fish at Leos. Mr. Madden got five at Makerston. This gentleman has had the fishing for the month of September, and out of the month he has only had ten days' fishing, when he killed forty-fivo fish, mostly salmon. The Blue Doctor has been the killing fly up to now, but the weather has been warm and mild, which may have had something to do with it.

The river Garry and Loch Oich salmon rod fishing has been let to Mr. John Balfour, of Balbirnie, Fifeshire. In spring the sport with large fish is second to none obtained in Scotland.

NOTED THAMES PROFESSIONAL FISHERMEN.

No. VIII.—ROBERT PLUMMER, OF MONKEY ISLAND.

By "The Judicious Hooker."

Reader mine, what shall I say to you of that truly notable Thames angler whose portrait adorns this page, and a few particulars as to whose career I am about to furnish you with—Robert (to his friends and patrons always "Old Bob") Plummer! Can I not appeal to the thousands of Thames anglers and boating men who have stayed their stay at the quaintly-named "Monkey Island," which makes such a comfortable halting-place for a cool drink in summer and something—but no! Mr. Editor, no "peaching"—in winter, midway between Maidenhead and Windsor. Space, however, forbids that I should dilate on the manifold attractions of the island and its inn, which both derive their name from a summer-house built by the third Duke of Marlborough, "the ceiling of which," to quote Taunt's excellent guide to the Thames—"is adorned with paintings of monkeys engaged at all sorts of sport . . . . the 'monkey room' being still in good preservation, and the fishing all round thoroughly good. The stream from Bray Lock past here to the turn is the swiftest on the Thames." So wrote Henry W. Taunt in 1873, and the surrounding circumstances have not altered one iota from that day to this, nor are they likely to change while Plummer lives, unless, indeed, the Conservancy dredgers should pitch upon the shallows as a scene for their operations in the general attempt of that body to canalise the river.

MR. R. PLUMMER.

The famous ceiling of the "Monkey Room" is not now in such "good preservation" as it was in 1873, in fact, it is about to be restored; but the real old-fashioned hostelry has lost none of its repute, and I do not know a more comfortable place to stay at on the whole river, or one where the angler meets with a more hearty welcome, and on parting with his host, "parts" with a better will, than the Monkey Island Hotel.

Robert Plummer, the subject of the present sketch, was born at the "Ray Mead" Hotel, some sixty-six years ago, but I am glad to say he neither looks nor feels his age, having never abused his constitution, but always followed the golden rule of temperance and plenty of hard work in the open air. His father was "boss" of the wharves at Ray Mead, and first opened the hotel there: so that my hero did not become an angler *per saltum*, but was gently initiated into the noble art, first passing his "mods." (as all really "gallant fishers" have) through the "bent pin, cotton, and minnow" stage (not plucked), thence graduating through the good old twisted horse-hair hook ("greats") as being cheaper than gut of the novitiate of we middle-aged anglers, and never losing, but ever increasing his love for the sport, until now you will find him a "don" indeed, for no man on the river is possessed of better tackle, or is more expert in its use under all varying conditions, and as applied to the slaughter of all sorts of our fish quarries.

But, reader, an you be yourself a skilful angler, you will agree with your humble servant that, as Mr. Punch's old lady had it, "*Experientia does it.*" Experience was, indeed, the teacher of friend Plummer, for he learned his book under the guidance of those grand old worthies, the original Ned Andrews (the grandfather of the present ex-Thames punting champion) and old "Si." Wilder (father of the present "King Fisher," Harry Wilder). As soon as he could toddle about, little Bob Plummer was to be seen—no matter how much the "schoolmaster abroad" might be looking after him, and no matter what the weather—in the company of these heroes of a bygone age, and many a wrinkle he picked up in his juvenile peregrinations and stored in his memory, and many a rattling good tale he can tell of those "good old times."

I know that our Editor approves of such articles as I have already written, mainly on the ground that I have already chronicled many a fact as to sport on the Thames in days gone by that was worthy of record, and might have escaped notice but for my interviewing of the older hands: and so I make no apology for placing on record some of "old Bob" Plummer's reminiscences, and giving them the place of honour in this article. I may say that I gathered them from his own lips, and that I, as all who know him, have absolute faith in his veracity. He told me, during our chat: "At that time the fishing was altogether different from what it is now. As a boy, I used to help in the netting, and in old Lord Orkney's time I have seen a ton of fish taken in one netting out of Boulter's Lock Pool. In those days, we boys at Ray Mead used to angle with an ash-pole as a rod, a line of water-cord with a bit of lead tied on, and a gimp hook, and literally threw out the barbel 'neck and crop,' thinking nothing of getting many barbel of 3lb. to 4lb. of a morning before we went to school. In the netting days, the then Lord Orkney, of Taplow Court, used to take the trout and the best of the other fish and put them in his stews, and all the rest used to be 'chucked around' equally by Si. Wilder among the crowd assembled." This Lord Orkney, of whom I have heard other old Thames-side men besides Plummer discourse, seems to have been a thoroughly typical "fine old English gentleman," and one of the best all-round sportsmen that ever lived, ever kind to all who lived on his estate, loving the poor, and a true friend to all who deserved his friendship.

This is digressing; but I cannot help thinking what a National Gallery picture we should have had (never mind the price) if Mr. Dendy Sadler had lived in those days, and reproduced on canvas the noble lord superintending old Si. Wilder's distribution of a hundredweight of fish among the thirty or forty expectants gathered around.

To resume Bob Plummer's relation of his experiences as a youth. He says: I have seen old Si. Wilder and old Ned Andrews go to the Bell's mill-tail, and using the fly, fill the well of their punt with chub, 1½cwt. to 2cwt. at a time. In those days, old Dicky Lovegrove used to rent the rod eyots, and the fishing from the Ray Mead up to Cliveden; and he used to net two or three times a week, having old Bob Emery, of Bray, and another—whose name I forget—to buy the fish of him and hawk them for sale for four or five miles around, generally selling the fish in sixpenny or fourpenny "strings." (What a chance for some of the "gross-weight" men!) At that time angling was so good that you could go out and catch twenty times the quantity of fish with rod and line that you can at the present day, but few anglers then frequented the river. There used to be some "rows" over the trimmers for jack, but otherwise everybody seemed to do as he liked.

Plummer could never divest himself of his keen interest in "the contemplative man's recreation," and used occasionally, besides "fishing on his own hook" to take gentlemen out angling long before he took the lease of the Monkey Island Hotel—and that is now twenty-nine years ago. From that date to this he has been known as one of the best "professional fishermen" on the Thames, and in saying this, I do not at all fear being accused of using the *argumentum ad hominem*.

Having brought the dear old boy up to this stage of affairs, an adjournment was necessary for needed refreshment, after which I put to him a good old string of questions, and append a summary of his answers—which, premising that he has never kept a diary (alack and alas!) may yet be taken as accurate, barring minute details.

Trout.—The first question naturally was, as to the trout in the district. On this point Mr. Plummer assured me that there were now more trout in his immediate neighbourhood than he had seen for the last twenty years, great numbers of them, from 1lb. to 1½lb., having been seen by visitors, as well as himself, standing on the steps of his hotel on fine evenings last summer, feeding on the beautiful gravel shallows which lie at the tail of Monkey Island. With justifiable pride, Mr. Plummer states that in his opinion all, or most of these troutlets (Thames size being remembered, but which will certainly be catchable in a season or two) are what are left of the 15,000 and the 7,000 good strong fry which he "turned in" four and three years ago, respectively. I have seen many abortive attempts to stock the Thames with "fry," and have for the last ten or twelve years "sworn by" yearlings or two-year-olds, of the best breeds, as the only fish worth introducing to the Metropolitan river; but certainly if fry are to have a chance at all, the splendid gravel shallows in the Monkey Island district would give that chance; and the facts I have quoted bear out this view. Plummer's biggest trout was one of 10lb., caught by Mr. Chapman, but he has landed for patrons a good many scaling between 6lb. and 8lb., and there are still some good ones in the neighbourhood. One "curious incident *re* trout" he related to me which is worth reproduction—viz., that when, as a little boy, he was whipping for dace with a shred of bacon stolen from the larder (pence wherewith to buy gentles being short—who does not remember this same experience) he hooked and landed, unaided, a trout of about 3lb. So endeth the chapter as to trout.

Perch.—Now as to that splendid sporting fish, when I and Plummer were young, *Perca fluviatilis*. Alas! that this the most game fish next to the salmon and the trout, that ever swam in Thames water, should make so poor a show of late years—why nobody can tell. But still there is hope, if anglers will do, as most of the up-river fishermen are doing, return all they take of this toothsome and gallant fish. If this rule were observed for two or three years more, I have no doubt but that the stock of "pounders," aye, and even of larger fish, would then become restored. Well, Plummer tells me that years ago, the water being fit and the supply of minnows plentiful, they used to think nothing of getting 20lb. weight of perch in an afternoon. He once saw a patron of Harry Wilder's (Mr. Norris, of Sion House, Isleworth), take well over 1 cwt. of perch in one day. He has never seen a heavier perch killed in this district than one of 2½lb., but numbers used to be taken every favourable day, ranging from 1½lb. up to that weight. It is not the same by any means now, but there is hope for the future, as Plummer and his men seldom cast the bait net without taking in it half-a-dozen or more perch of 2in. to 3in. in length, which at any rate is a hopeful sign.

Barbel.—Of barbel, friend Plummer told me that he has seen old "Nottingham George," and his patrons, casting off the bank on the Berks side, just below the island, make immense bags, pretty well, sometimes, 2 cwt. of barbel and chub mixed in one day, always fishing with a float in the Nottingham style, which, as all my readers should remember, was introduced to Thames anglers by old "Nottingham George." The prospects as to barbel are again hopeful in this district, as Plummer has lately seen large shoals of this excellent sporting fish of a good size, besides hundreds of smaller ones, in their old haunts; and, like other people at other stations, his patrons have succeeded in making pretty good baskets of late. As it is my purpose in these articles to record all large takes that come under my notice, I may here mention that the largest individual barbel Plummer ever landed was one of about 12lb.; and that the best day he remembers was some sixteen or seventeen years ago, when Capt. Conway, under his tutelage, brought to the well 105lb. of barbel.

Roach.—As to roach fishing, it seems from Plummer's account, as to the accuracy of which no one can have any doubt, that from twenty-five to fifteen or twelve years ago, these fish simply were bent upon their own destruction in quantities that would indeed puzzle the modern angler for the "river sheep." *Par exemple*, he tells me of a bit of sport enjoyed one October afternoon in 1876, by those well-known City anglers, Mr. Harry Hughes and his brother John, who did not "get on" until about one p.m., but then, being introduced by my hero to "the Queen's Deep" (still a splendid place for the roach fisher) had such grand sport that when they knocked off at 4 30, the roach caught—not one of them being under six inches, and the largest not more than 1½lb.—weighed together 145lb. Oh, for the good old days! ye roachers—never to return, I fear, although the sport in the Monkey Island district is still by no means to be despised by banker or punter. Captain Orton used to distinguish himself, also, in those days, while fishing from Plummer's punt; but the biggest roach he ever caught was one scaling 2lb. 5oz.

With Chub, a fish which seems to more and more commend itself to the average winter as well as summer angler, I can say of my own personal knowledge that the waters around Monkey Island are almost over-populated. Still there are first-rate "boughs" here spared by the conservancy men, and eke overhanging shelves; and when the water is right no chub fisher need go away, if he knows at all how to set to work, without several three and four-pounders in his creel. Friend Plummer, however, has a most righteous grievance against the fellows who come around in the summer, "whipping" for chub, and killing everything they hook, even retaining "skewers" of a ¼lb. in weight, which, when interrogated from the bank, they swear are dace. On one occasion Mr. Jones, with one of Plummer's men, took 45lb. of chub from the boughs at the Queen's Eyot (a famous spot) besides being more than once smashed by "whoppers."

Pike Fishing in this district, which used to be grand some twenty years ago, has greatly fallen off during the last few years, although the section between Bray and Windsor will still bear favourable comparison with most other reaches on the Thames. As friend Plummer sagely remarked to me, "We should soon have plenty of nice jack again if people would not be such fools, in their own interest, as to kill everything they hook, but would only put the little ones back. No jack ought to be taken under 3lb., and I should like to chuck any man into the river whom I caught doing such a mean trick!" Bravo, Plummer!

In the coffee-room at the Monkey Island Hotel there is the skin, very fairly well set up, of a pike of 30lb., caught by Mr. P. himself at the tail of the island some ten years ago; but the champion pike of this neighbourhood was one of 31lb. some ounces, landed by Mr. A. K. Dyer, while stopping at the hotel, and being attended by friend Bob, which was an exceedingly well-made fish, measuring 42in. in length. This fine specimen of *Esox lucius* was caught in "the deep," and was, I believe, set up. Plummer has witnessed and assisted at the capture of many a pike from 10lb. to 20lb., but "not thinking much of them," has kept no record. That pike are not extinct in the neighbourhood, I can vouch, for it was only last winter that two novices, attended by Plummer's man, Chapman (who, by the way, is an excellent and civil attendant on anglers, and knows all the water), took six, five of which, all pretty much of a size, were retained, and averaged 4lb., while they broke away with two rare good fish.

There are very few bream or tench in this reach of the Thames—only a short number of the latter—and only one of the former (caught by Lady de Grey Winton, and scaling over 6lb.) being recorded.

Speaking of Lady Winton reminds me that "young Bob Plummer"—the eldest son of the subject of this sketch, and of whom I may have more to say another day—is "retained" by her ladyship for the summer months, and has piloted her—especially in the Marlow district—to the slaughter of vast quantities of barbel and other fish. Having been thoroughly well trained by his paternal progenitor, young Bob is almost as good a fisherman (if not quite) as his father.

Anyone wanting a day's or a week's real angling on the Thames cannot do better than give the genial, thorough, and most civil host of the "Monkey Island" inn a call. He will find, if he takes my tip, the best of cookery, the most moderate of charges, and the most cordial of welcomes. If, to quote Artemus Ward, "you don't hanker arter bacon" (and friend Plummer fattens scores of piggies purchased from the Royal farm at adjacent Windsor), "you can help yourself to cabbage," or any other vegetable you like, for he has a garden of some two acres; and not only that, but his milch cows and his ducks and hens are always in the best of order, and warranted to render the choicest of country produce. *Experientia docet.* As to his old whisky, why—*verb. sap.*—it is not to be beaten anywhere in "the three counties," or else I would not have risked an outbreak of our Editor's ire by mentioning a fluid which has been so often and so sternly tabooed in these columns. But there it is! Before parting company with friend Plummer, I naturally asked his opinion on some few of the points which are, in my opinion, of prime importance to Thames anglers and others who frequent the river in the winter as well as the summer months.

In closing my history of Ned Sheppard, of Purley (*Fishing Gazette*, Nov. 29, 1890), I gave brief expression to the views of that experienced angler and shot on the two almost vital matters, of the right to shoot wild fowl on the Thames, and on the much-vexed question of the close season for fish.

As to the former, Mr. Plummer assures me that quantities of wild fowl frequent his district; and that, before steam-tugs came into vogue, he had no trouble in knocking over a few nice duck, and any quantity of snipe. He says, however, that the night travelling of the tugs greatly frightens away the wild fowl from the river, and this any practical man can thoroughly understand. He entirely agrees with Sheppard and other good men and true, that shooting should be allowed on the Thames from December 1 to the last day of February.

On the subject of the alteration of the fence seasons for fish he also practically agrees, holding that the revised bye-laws (if ever they are brought about) should permit angling for roach, chub, tench, and other soft-mouthed fish, at any rate, up to the last day of March or the middle of April. While the first of May would be, perhaps, the most proper time to begin fishing for Thames trout, Plummer feels that such a limitation would make the trout season very short, as these fish cannot very well be angled for after the reeds have grown; and, as a compromise—thoroughly agreeing that the present opening day is too early on account of the condition of the fish—he suggests that the fence season for them should be extended to the middle of April. Personally, I have always advocated most strongly that Thames trout should not be fished for before May 1, but "half a loaf is better than no bread;" and, at any rate, I am in thorough accord with him and the bulk of Thames fishermen, in the hope that ere long the bye-laws as to seasons may be again revised.

Last week the Don—on which the fishing has been remarkably good—yielded more really large fish than any other Scotch back-end river. Over half-a-dozen, exceeding 30lb. in weight, were landed.

CHUB AND DACE: AND ANGLING FOR THEM.

By Alfred Jardine.

(*Continued from page 216.*)

Although I referred to the official catalogue of the International Fisheries Exhibition, I quite overlooked Mr. G. G. Taylor's exhibit of a chub (No. 927), said to weigh 7lb., "and to be the largest preserved in the United Kingdom." My mistake was unintentional, but had the effect of eliciting an interesting letter from your correspondent "Giant," who records the captures of chub, weighing respectively 6lb., 7lb. 2oz., 7lb. 4oz., 7lb. 6oz., and 9lb; the latter, however, was caught in a net.

In fishing with "bullock's pith" (which is the marrow from the spine of an ox or a cow, and can be got from a butcher's, and should be quite fresh); to toughen it, boil it for three minutes, with a dessertspoonful of salt in the water; then, after it is removed and got cold, cut it into one-inch lengths, and keep them clean in damp linen or calico. When used, the outside covering, or integument, must be taken off, which leaves the pith white and tempting. A No. 4 hook is the best size; and when baiting it, one should first slit up the piece of pith with sharp-pointed scissors, and removing the skin, insert the hook, and put its point through several times, until all the hook and the barb are entirely covered. Pith is a capital bait for clear water on frosty days (if rivers are free from snow-broth), and is invariably used with the brains of either a sheep or bullock, for ground-bait.

In angling for chub by this method, Nottingham tackle should be employed, which enables the angler to fish a river for fifteen or even twenty yards down-stream; the likeliest swims being those close to, or under, boughs, and by steep water-washed banks that are undermined by the current. Such places the largest fish frequent, especially where the water is four or five feet in depth.

If fishing from the bank, extreme quiet is necessary, for heavy footfalls are transmitted to the water, and vibrations alarm the fish, which most probably will vacate the swim. If from a punt or boat, the same caution should be observed as was described in a former article when fly-fishing, or "whipping" the boughs with a frog, the tail of a lob-worm, or a bunch of gentles, &c. A long boat-hook should be used, to hang on with to sedges or bushes growing on the margin, and the boat or punt silently dropped, yard by yard, along the river, while the chubby places are carefully fished. Or a companion may hold on to a twig here and there, and materially assist the angler, while he tries a favourite bough or swim. A ryepeck should seldom be put overboard, when chubbing, for the least scraping against the punt, or on a hard gravel bottom, will frighten every fish from the vicinity.

The *brains* (from animals freshly slaughtered) *should be boiled*, if they are *chewed* and spat into the stream for ground-bait; or they may be held just under water and crushed by the fingers, and a little cast in *sparingly*, the bait (pith) allowed to float a few inches off the bottom—or, may be, at *mid-water*—according to how the fish are feeding. The bait follows a *little behind*, or after the brains, which attract the chub, and put them on the *qui vive* for the more tempting morsel of pith. When a fish is hooked it must be kept away from submerged roots, &c., and reeled up as quickly to the landing-net as is consistent, avoiding a smash of the tackle. It is not necessary to ground-bait a swim beforehand when fishing with pith, as seldom more than two or three chub can be caught from the same swim, or bough, without scaring the rest; hence it is best to quietly move down-stream from place to place. When pith has been scarce I have found an excellent substitute in maccaroni, stewed in milk, which, when cold, is out into suitable lengths; the gut can be then pushed through the hollow tube or pipe, till the bait rests on the hook. A good plan is to use a small buckle swivel, placing the gut loop in the buckle; thus a fresh bait is easily put on.

Leuciscus-cephalus, as a fish which fights well for liberty, is not by any means to be despised; and the first desperate efforts made by a three-pounder to gain its stronghold among submerged roots or water-logged boughs is well worth experiencing; yet, foiled in this attempt, he passively gives in, and is easily secured, for, being "leather-lipped," the hook seldom breaks away from its hold. For this kind of fishing, the line should be a fine plaited silk one, on a Nottingham reel that runs perfectly "sweet" and true, for the "chubbing-float" should travel according to the strength of stream; in fact, the current takes the float, with the line, *off from the reel* in a natural way, the revolution of the reel being checked by a slight pressure of a finger, so that the pith-bait follows just behind the chewed brains, of which a very small quantity is sufficient to attract the fish. After guiding the bait under boughs, or among eddies and other likely places, on reaching the end of a swim, there may be thirty yards or more of line out, and should a chub be hooked this distance off (which is not infrequent), the angler will have to show skill and care, for the tackle is somewhat fragile; but delicate manipulation will achieve the capture.

On completing a "swim," hold the float a second or two, for it is *then* a chub often takes the bait; but if not, then lift the whole length of line from the water, smartly tap the butt-end of the rod, which will shake most of the wet from the line, and wind up quickly. This dodge of shaking the wet off prevents the line sticking in the rod-rings, and gives facility to the following swim.

The next part of my subject naturally is, "*where to go* chubbing."

It is not the case that what *were* chub-holes, or chub-boughs, are *always so.* Currents alter in their "set," or flow; banks break away, and clay or gravel is deposited by floods; so that "deeps" become partly filled up, and (in a measure) shallow; trees are felled and boughs lopped, thus altering, as time passes, the character of the fishing; and under such altered conditions fish migrate to other parts of the water.

Alders and pollard willows, growing on the river's banks, get undermined by winter floods and fall into the water, thus forming strongholds for chub. Many of the old weirs and moss-grown camp-sheatings have disappeared, being replaced by iron or concrete structures, to the detriment of the fishing, where (a few years ago) to have good sport was the rule rather than the exception. Many first-rate places celebrated for fine chub a comparatively short while since, are now ruined, much of which is to be attributed to the "wash" of the ever-increasing numbers of steam launches.

However, good fishing is still to be had high up above Oxford, to nearly the source of the Thames; also from Abingdon to Sutton Mill, thence along the backwaters from Sutton Pool to Culham Lock. The three miles of quiet, undisturbed water at Long Wittenham, and under Clifden Hampden woods, is very fine winter chubbing. The river at Day's Lock, Shillingford, Bensington Pool, and Wallingford, on, past Moulsford G.W. Railway Bridge to Cleeve, and from Streatley, Pangbourne to Mapledurham, is fringed every here and there with bushes and pollards, the usual haunts of chub; to fish for which, with greater chances of success, a punt and an attendant is necessary.

The Thames from Mapledurham to Sonning is heavily fished by the anglers of Reading; but below Sonning, thence to Shiplake, and on to Marsh Lock, will be found numerous boughs overhanging deep streams, many hollow clay-banks and quiet eddies, where chub congregate during the autumn and winter months.

At Reading the Kennet adds her waters to the Thames, and grows chub of large size. Close to Wargrave the Loddon drops in, and for some distance up that stream to Twyford Mill, the "chubbing" is excellent; but is fished by the Reading and Henley Angling Society—unless the angler is a member he cannot; and if not, I advise him to take a conveyance from Twyford or Reading to Loddon Bridge, or to go from Waterloo Station to Earley, and from thence walk to Loddon Bridge (one mile), where the landlord of the inn (Mr. J. R. Gould, who is himself a disciple of Izaak Walton) makes visitors comfortable, and introduces them to some right good "chubby swims." It was here that my friend, the late H. L. Rolfe, "inducted" me into the mysteries of "swimming" a frog under and among the boughs—for chub, a very killing method, which I have previously described.

Other fish inhabit this part of the Loddon; and pike, perch, carp, roach, &c., are often caught of handsome dimensions.

About three meadows above Loddon Bridge, on the right-hand side, a mill-stream falls in, just where the river makes a considerable bend. The water here is moderately deep, with the bottom cleanly scoured, and holds some grand chub. At this place, one winter day, my old friend, J. W. Gant, fishing with greaves on Nottingham tackle, captured (during three hours' fishing) a fine lot of chub, including one of 5¼lb., three of 4lb. each, and two of 3lb. each.

The waters about Henley, Hambledon, Temple Weir, Great Marlow, Cookham, and Cleveden, seldom disappoint a "winter chubbist"; while the annals of big catches and large specimens, secured at Maidenhead, Bray, and Monkey Island by such past masters of "the gentle art" as Mr. F. H. Lemann, and many others I could mention, are enough to fill a volume.

Nearer London, at Datchet, is the "Fleet," a part of the old Thames not used now for navigation, and it is a capital length of water. The same can be said of the willow-fringed banks below Staines (on the Surrey side), and Penton Hook for winter chubbing.

Then, nearer still, and easier of access, is the "Chalk Hole" at Shepperton; and half-a-mile lower down is a nice bit of deep, streamy water, alongside the residence of the late Mr. Lindsay, where the lawn abuts on the river, that, when the Thames is not "in flood," should account for the capture of some fine "chevins."

As an edible fish, chub are scarcely worth cooking: it is watery, coarse, and tasteless. Small half-pound fish, crimped and fried dry, are eatable, but not nearly so nice as dace, which are delicate fare. Perhaps the best way is to cook chub as roach often are—viz., baked in a pie-dish, with a modicum of vinegar, some mixed spices, and two or three bay leaves: done thus, and left to grow cold, they will "set" into a stiffish jelly, and prove to be a not indifferent breakfast relish.

The following Table of the "Comparative Weights and Lengths of Chub"* may be interesting and useful to our readers:—

Length	Weight.		Length	Weight.		Length	Weight.	
Inches.	lbs.	oz.	Inches.	lbs.	oz.	Inches.	lbs.	oz.
9	0	12	14	1	9¼	19	3	15¼
10	0	13¾	15	1	14½	20	4	9½
11	0	14¾	16	2	5½	21	5	5¼
12	1	0	17	2	13¼	22	6	2½
13	1	4¼	18	3	5½	23	7	0½

(*To be continued.*)

* From "The Badminton Library."

Waltoniana

Looking through the last number of the Journal of the Marine Biological Society, I came upon a note written by the director concerning an attempt which was made to acclimatise grayling in salt-water. Some grayling and Loch Leven trout were sent to the laboratory by Mr. Greig, the Devonshire fish culturist. The fish averaged four and a-half inches in length, so were presumably large yearlings or small two-year-olds. They arrived in good condition, and as an experiment one fish of each kind was placed in sea water. In about two hours the grayling died, and the trout only survived double that time. The rest of the fish were put into water which was only slightly salt, and sea water was added gradually. When the hydrometer registered only fifteen degs., the fish sickened and four died. Unfortunately at this time the fresh-water supply was accidentally cut off for four days, and all the grayling died and many of the trout. Three of the latter survived, and eventually were placed in pure salt water, in which, when the report was written, they appeared healthy and were feeding well. Mr. Calderwood adds, "If they continue to thrive it will be instructive to watch their development, though we can scarcely hope that they will propagate their species."

If by "propagating their species" Mr. Calderwood referred to the deposition, fertilization, and incubation of ova in sea water, he might have said at once that the thing was impossible, but if he only doubted whether ova will be developed by these trout in the tanks of the laboratory, he might have gone so far as to say that there was some probability of the thing happening. Both salmon and sea trout develop ova while in salt water, and sometimes make their redds at the mouth of rivers. But eggs deposited in such places surely die. That has been proved, both by careful experiment and observation. If there is anyone at the laboratory who understands stripping trout it will be very interesting to see if eggs can be obtained from these fish and fertilised. The accident which led to the death of the grayling was most unfortunate, as it would be very interesting to know with some degree of certainty whether or no these delicate fish can be made to live in sea water. By the way, as good a fish story as any I ever heard is to be found in Mackenzio's "Salmon Fisheries of Scotland": "One of the luminaries of the Scottish bar, distinguished by his grave eloquence, declared that if all the rivers in the kingdom were blocked up, salmon would become more plentiful than ever, as they would then be forced to spawn in the sea." So much for Scottish legal luminaries!

A few days back an Irish friend wrote me that, the doctor having ordered his mother to eat fish,* he went to a certain tributary of the Shannon, and in an hour caught nine large trout, varying in weight from 2lb. downwards: "Knowing that the fish were up for spawning, I refrained from killing any more, though I think I might have filled my creel twice over." I have fished that river myself, but never has it fell to my lot to catch a two-pounder in it. The stream flows into the tideway of the Shannon, where the water is brackish, and usually only small fish—yearlings, I think—are to be found in it. Immediately the fish grow to any size they go down into the brackish water, where they doubtless find much more food than is forthcoming in the rocky bed of the tributary. Should there come a flood, some of them run up for a time to feed, but on the water subsiding they drop back again into the salt water. In the autumn they ascend the river for a mile or so to deposit their eggs. The tideway of the Shannon is to them very much what the sea is to the salmon, and a lake to a lake trout. In the autumn of the year these estuary trout ascend the tributary, the salmon leaves the sea for the great rivers and in some cases the small ones, and the lake trout leaves his streamless home for the burns and rivulets in which he can breed.

"W. F.'s" letter in reference to some remarks of mine on Kennet roach greatly amused me last week. I hasten, in reply, to say that I did not eat any of those roach taken within two miles of Newbury, and that all the analysts in the kingdom will not make me believe that water taken from the Kennet, so near the town, is pure and fit to drink. It is quite possible that by the time the water has flowed from Newbury to the point in question, all the solid matter in the noxious fluid has settled at the bottom of the river, but there may be, and probably are, harmful and horrible somethings left in the water which the analysts have at present no means of discovering. In any case, at the first flood a certain portion of the matter which has settled is washed farther down-stream, and so on until, in the course of years, the whole of the river between Newbury and Reading is paved in its more slowly-flowing reaches with sewage mud. This savoury mixture, on being disturbed by floods, woodcutters, or dredgers, absolutely must seriously pollute the water. I am really sorry not to be able to comply with "W. F.'s" suggestion as to catching roach close to a sewage outfall, analysing their stomachs, and then eating the remainder of their bodies. No, emphatically I will not do it. I did once taste a trout from a sewage-laden tributary of the Kennet, close to Newbury, and never wish to repeat the experiment. I think, also, I may answer for "Redspinner" that he did not eat any of the dace mentioned by "W. F.," nor do I think "W. F." will find him more obliging than the writer. Doubtless "W. F." does not consider my opinion unbiassed. If so, he is right, for I have a bias as strong as the strongest of strong men in favour of keeping our rivers free from pollution of every sort or kind, and, if I had my way, would make every river polluter drink nothing but water taken from the stream he pollutes until he saw the error of his ways—and no whisky with that water, either. Templar.

* A good old chestnut.—Ed.

ANSWERS TO CORRESPONDENTS.

F. H. F.: We do not think you can do better than get John Bickerdyke's books on the subject, advertised in our columns. We prefer hooks tied on gut in the ordinary way for all kinds of bottom fishing.

J. E. S.: Will bear your suggestion in mind.

Correspondence

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. Pritt.

REPORTS OF LARGE BREAM.

Dear Sir,—I noticed last week that one of you correspondents, calling himself "Blatherwycke," was induced by a difference in the figures, as given by Mr. R. Moll and myself, of the sizes of two large bream, caught in the Wensum, on Sept. 13, to altogether disbelieve both of us. This is rather bad form on the part of "Blatherwycke," especially after his saying that he did not wish "to cast any imputation on your correspondents." Perhaps he has never seen big bream, and this made him inclined to doubt the truth of the figures I gave. I did not give *my* weights of the two fish and size of the largest without having first seen them and receiving the weights from the taxidermist who is now setting them up.

Perhaps the following account of the fish will dispel any doubts "Blatherwycke" may have of the veracity of my statements: The two bream were caught on the 13th September, at Drayton, on the Wensum, above Hellesden Bridge, by a working man, who next day offered them for sale in Norwich, and finally disposed of them to a gentleman, who placed them in the hands of Mr. Cole, of this city, for preservation. It was at his house I saw them, and took the following dimensions—viz.: One bream, 8lb.; length (nose to tip of tail, when spread out naturally), 25½in.; girth, 21in. One bream, 7lb 2oz.; length, 24in.; girth, 19in.

I do not see why it is "practically impossible" for four such fish to be taken from the same water on consecutive days, though I do not think there were more than two fish caught; and what Mr. Moll referred to were the same as those I wrote of. But if the fish are there (and they are), why should it not be possible (I do not say likely) that four fish should be taken in two days?

The weights of fish given below will prove that, though bream of this size are unusual, they are not unknown in the waters of Norfolk. I have one in my possession of 9¼lb., taken from the same stream; and Mr. T. E. Gunn, of St. Giles's-street, Norwich, has about a dozen, of from 7½lb. to 8½lb. each, in his shop at the present time. These were all taken from our local waters, some of them from the very spot as the two under discussion.

I trust "Blatherwycke" will be convinced by what I have said, and that he will be assured that whatever I may contribute to your pages will bear any "sifting into." I might add that some years ago a bream of 11½lb., was taken in a pond at Beeston Regis, and I believe that there are five fish of very good size in the South Kensington collection of fish.—I am, &c.,

Your Norfolk Correspondent.

THE READING OF PAPERS AT ANGLING CLUBS.

Dear Sir,—Will you be good enough to allow me to announce, through the medium of your columns, that a meeting of the Society for Promoting the Reading of Papers at Clubs will be held at the Citizen, 70, Houndsditch (Host Tibbatt's house), on Friday next, October 16, at 8.30 p.m., to arrange the programme for the ensuing winter season, deliberate upon the advisability of printing and publishing the papers read by the members, considerably extending the efforts of the society, receiving applications from clubs and deciding thereupon, and several other important matters.

I sincerely hope that all those who so staunchly supported me during last winter will attend this meeting. I also hope we shall be assisted by many who, from various causes, could not lend us their powerful aid and counsel before, but who have kindly offered me, during the summer, to do what they could when we made another start.

Any of those secretaries of clubs who would like one of our members to read a paper before their society, should attend this meeting, so that dates, &c., may be arranged. Application by post, addressed to me at the Citizen, will also be entertained.

Among the many papers promised so far are the following: Mr. Francis M. Walbran, of Leeds, Yorkshire, a lecture upon "Two Yorkshire Rivers," illustrated by several beautiful dissolving views; Mr. W. J. Cummins, of Bishop Auckland, a paper on "Fishing in Canada," with an exhibition of suitable tackle, and many very amusing anecdotes; Mr. E. S. Shrubsole, a paper upon "Fishing Baskets, Bags, and Creels," with an exhibition of upward of one hundred different appliances for carrying an angler's impedimenta and fish. Papers by our president, Mr. R. B. Marston, Mr. T. Crumplin, Mr. L. S. Fountaine, Mr. G. H. Howard, Mr. J. B. Orr, Mr. J. Tayler, Mr. J. P. Wheeldon, &c., the titles, &c., of which will be shortly determined and duly announced in these columns.

Any and every angler feeling an interest in these matters will please attend the meeting. I have been asked lately, "What has become of the Society for Promoting the Reading of Papers in Clubs?" and have answered "It's very much alive, and will soon be at work again." That the gentlemen associated together for such a good purpose will receive hearty support is the earnest wish of the Hon. Sec.—Yours truly,

Edgar S. Shrubsole.

WORLD'S COLUMBIAN EXPOSITION, CHICAGO, U.S.A., 1893.

Dear Sir,—I have been asked by Mr. J. H. Collins, the Chief of the Department of Fish and Fisheries of the World's Columbian Exposition of Chicago, 1893, for the addresses of Government officials, firms, or individuals having connection with fisheries or fish culture. If not trespassing on your courtesy, would you kindly mention in your valuable paper the fact that the above gentleman would be glad to hear from any persons desiring to exhibit or seeking for any information on this subject.—Yours faithfully,

Edward Fox,
Acting Resident Commissioner.
London Offices: 72, Victoria-street, S.W.

CLOSING TIME FOR TROUT.

Sir,—In the waters of Anglesey and Carnarvonshire, placed under Boards of Conservators, trout fishing ceases on the last day of September. There is, I presume, a law enacted to that effect, but, irrespective of that, the natural instinct of an angler ought to be a sufficient guide when to cease fishing. The sickly condition of trout at the end of September appeals more effectively to the instinct of the *true* angler than all local and parliamentary enactments put together. But there are anglers and anglers. In Lake Coron, Bodorgan, which is not under the management of a Board of Conservators, trout fishing in October is an annual indulgence by some bottom fishermen, who shall be nameless in this letter. It is then the savage slaughter of the innocents comes in, and they know it. This year has been no exception, for in the early days of this month one caught thirty-eight in a short time. How many thousands of future fish were sacrificed to the greed of that one angler alone! I have seen as many as six boats engaged for days bottom-fishing in October, and the sight of the fish caught was simply repelling.

I well remember, about twelve years ago, a party of these depredators had been out for the last two days of October and the morning of the first of November, and the then landlord of the neighbouring hotel taking me with pride to his cellar to see the famous catch. I don't swear, but the Recording Angel must have shrugged his shoulders at the approaching profanity that escaped my lips.

Reader, art thou a *fair* fisherman, and especially a fly-fisher? Lovest thou fishing for the sport, and not for the spoil? Regardest thou the massacre of fish with burning abhorrence? Thou doest. Then canst thou sympathise with the shock to my sensibilities in seeing over two hundred trout in an advanced spawning state, most of them over a pound, lying on the floor, ready to be packed by train to distant friends? I believe I possess the average good-will to my fellow-creatures; but I sincerely wished those fish thoroughly disagreed with the recipients, and even if a long doctor's bill followed their consumption, it would have been but feeble unction to my feeling.

Is it a wonder the lake is deteriorating year after year? About thirty years ago it was reckoned one of the best in the kingdom for fly-fishing; now, except in the spring, it is useless fly-fishing till the rise comes on in the evening.

And what suicidal policy hotel landlords adopt in giving quarters to such anglers. The visitors are decreasing year after year as a natural consequence; and, if this poaching is carried on, it will be useless for strangers in the near future to visit the lake. Steps ought to be taken at once to put it under the Board of Conservators at Carnarvon, like the Cefn river, but two miles off. Then bottom-fishing and unseasonable fishing could be done away with, and subscription opened to put in ten thousand Loch Leven trout.

I appeal to some of the most influential anglers in the island—viz., Mr. Edwards, Mr. Langtry, Drs. Hughes and Williams (from Holyhead), Mr. Humphreys, &c., to take the initiative in the matter. There is every reason to believe that the agent of the estate (Mr. Prichard) will fall in with the wishes of the large majority of the anglers interested in the lake.—Yours truly, W. H.

LOCH STACK AND ITS SEA TROUT.

Sir,—I should like to know by what process "Duine Môr" obtained the information which enables him to say, without the least hesitation, "that there are many lochs quite as good in Scotland, and some—one at least—even better for sea trout than Loch Stack." I may remind this correspondent that several questions put by me to him some months ago in the *F. G.*, relative to sea trout and their migration in the Uist and Islay, have not as yet been replied to.

This "big man" is a ready critic; but when he challenges a statement, he should, as a good reason for his action, adduce facts to conclusively disprove it.—Yours, &c., H. Munro-Mac.

LARGE CHUB.

Sir,—In "Giant's letter on "Large Chub," in your last issue, he refers to Mr. Jardine enumerating some of the finest specimen chub shown in the International Fisheries Exhibition of 1883, which varied from 5lb. 4oz., to 6lb. 2oz., and refers to a heavier specimen which was also exhibited—the name of the captor he had forgotten. I beg to say that we—the Royal George Angling Society—exhibited one of 7lb. 4oz., caught in the Thames at Kingston by one of our members, and which I think was the heaviest shown there; but as our fish was not set up by Cooper, we failed to get the £2 10s., which went to the Friendly Angling Society for their 5lb. 12oz. fish.

The fish can be seen at the Queen's Arms Hotel, Bateman-street, Soho-square.—Yours obediently,

F. C. Longland,
Secretary Royal George Angling Society.

BARBEL FISHING AT RICHMOND.

Sir,—It may interest your readers to know that fishing at Richmond with C. Brown on the dates mentioned I caught as follows: on Sept. 20, twenty-five barbel; Sept. 27, twenty-three barbel; Oct. 4, twenty barbel.—Yours faithfully,

Hy. Myers.

A STRANGE FISH.

Sir,—From the description contained in a recent issue of the *F. G.* of the strange fish caught off Ardglass and purchased by Mr. Pinkerton, I think it must have been a very fair-sized specimen of the "Rainbow Wrasse," very well described and illustrated in Mr. Aflalo's work on sea fishing, where there he calls it the ancient wrasse. The formation of head and colouring are identical with what here is locally known as the "venus bollen," a quite different variety from the ordinary wrasse, and much rarer.—Yours truly, Stormy Petrel.

LARGE BREAM.

SIR,—In *Fishing Gazette* of the 3rd instant, "Blatherwycke" asks for particulars of large bream. I have much pleasure in placing the following extracts from my memoranda on the subject at his disposal.

The late Mr. Greville Fennell, in an article on the "Natural History of Norfolk," wrote: "On June 11, 1860, two bream were taken in an eel trap, at Hellesden Mills, on the Wensum, about two miles above Norwich, one of which, now in the possession of Mr. C. J. Green, the secretary of the Yare Preservation Society, weighed 9¼lb., and measured 25½in. in length; the other weighed 8¾lb." The former fish was shown by Mr. Green at the Norwich Fisheries Exhibition of 1881.

On the 1st of July, 1879, Mr. T. H. Creemer, of Norwich, from a pond at Beeston Regis, caught a bream of 11½lb., measuring 26in. from the tip of the snout to the fork of the tail, and girthing 23in. This grand specimen, or another of the same weight, was exhibited at the International Fisheries Exhibition of 1883, by Mr. T. E. Gunn, of Norwich, and was described in the catalogue as the largest individual in England.

In the *Field* of 11th of November, 1876, the capture of a bream weighing 8lb. 14oz., from the Ouse, by Mr. Peter Addinton, of Tempsford, is recorded, and in the same journal of the following week Mr. T. Taylor refers to a bream weighing 10lb., which (with several more of 7lb. or 8lb.) was taken in a drag-net from the river Ivel, the nets being used in the Ivel and Ouse every seven years to maintain the right of fishing.

In the *Fishing Gazette* of 24th August, 1889, your correspondent may read of the capture, from the Lea, of three bream weighing together 21lb., and another of 8lb., which was exceeded by a nine-pounder, all presumably from Carthagena Weir.—Yours, &c., GIANT.

P.S.—May I ask whether there are more than one species of otter in the British Isles? This inquiry is prompted by a reference in this week's Notes, to the recent capture at Burnhervie, Aberdeenshire, of a fine specimen of the *black otter!*

[We only know of one otter.—ED.]

A FLY-DRESSING QUERY.

DEAR SIR,—Can you inform me whether any fishing-tackle makers dress their flies on the reverse side of the hook? The advantages of this method are obvious—I mean for dry-fly fishing. Firstly, the hook is practically invisible, as can be proved by floating such a fly in a vessel of water, and looking at it from beneath. Secondly, there is no necessity to multiply the leg hackles to hide the bend of the hook, but they can be put on as sparingly as accords with the fact of insects having only six legs, and then the body of the fly is much more conspicuous. Moreover, the body can be dressed slightly round the bend of the hook, and therefore is somewhat raised towards the apex—a most natural appearance—duns and spinners, in common with many other insects, having a habit of thus raising it. The hooks used should have barb and shank in the same place, to prevent the fly heeling over; and the wings should be put on carefully and evenly for the same reason. If fished wet, such a fly will still keep its right side up, in spite of the bend being upwards.—Yours truly, R. C. L. PERKINS.

[Some years ago we suggested this style of dressing in the *Fishing Gazette*, and illustrated it, and the cuts were used in Mr. Pennell's "Improvements in Fishing Tackle." We found in practice that flies so dressed killed quite as well as the ordinary style; flat-winged flies like the alder and sedges perhaps better, but on the whole cannot say there is much in it.—ED.]

LARGE BREAM ON THE WENSUM.

DEAR SIR,—Your correspondent on the above subject in your last issue will be pleased to learn that I have received confirmation of the report of the weights which I forwarded. The fish were weighed in the presence of several personal friends of mine, and they were also offered for sale at the Champion Inn for ten shillings. With regard to the day they were caught it is immaterial. I have no doubt the other report referred to the same two fish. Mr. T. E. Gunn, of this city, showed one at "The Fisheries," London, weighing over 11lb.—Yours truly,

Norwich. ROBERT MOLL.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Assocation.—The members of the General Committee met at Foresters' Hall at 8.30 p.m. on Monday last, the 5th inst., Mr. R. Murphey in the chair. The secretary read an important communication from the Great Western Railway, granting the concession we had applied for, for anglers' privilege tickets to be made available at Staines and Colnbrook. The fares from Paddington or Westbourne Park to Staines has been fixed at two shillings, and to Colnbrook from Paddington 1s. 9d., and from Westbourne Park 1s. 7d. Finance was then dealt with. Mr. R. Ghurney reported that the last number of railway privilege ticket issued was 3,594, which was considered very satisfactory. The Serapis Angling Society, meeting at the Neville Arms, Neville-road, Stoke Newington, brought up a copy of its rules, which, being approved, the society was duly enrolled; the secretary is Mr. J. Peck. Mr. Laws, our representative at the Thames Angling Preservation Society, gave a very satisfactory account of this society, from which it appears that they are doing considerable service, a large quantity of fish having been netted from a private lake and turned into the Thames. Several summons cases for the retention of undersized fish are coming on shortly. Fortunately and satisfactorily to relate, no club angler is implicated. A vote of thanks to the chairman brought the meeting to a close at 9.50 p.m.

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly meeting of the Renting and Preservation Committee will take place on Monday evening next, October 12, at 8.30.—R. GHURNEY, secretary.

Anglers' Association.—EASTERN DISTRICT NO. 2.—The return visit paid to the Islington Brothers Angling Society at their new home, on Monday last, was a success. Nineteen societies were well represented, and amongst them were three societies from Woolwich—namely, the Woolwich Brothers, Woolwich Invicta, and the Howick Brothers. Mr. Stretch made a most obliging chairman; the talent was good and plenty of it. The next visit on this list will take place at the Lord Palmerston Angling Society, held at the Earl Russell, Iseldon-road, N.; the date I will give next week.—F. THORLING, visiting officer.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—A return visit took place on Wednesday, the 23rd ult., at the St. Albans and Excelsior, Royal George, New-street, Kennington Park-road, when a most enjoyable evening was spent. On the roll being called, the following nine clubs answered: Anglers' Pride, Amicable Excelsior, Battersea Friendly, Bermondsey Brothers, Blackfriars, Clapham Junction, Rodney, St. Albans and Excelsior, Waggoners. The next visit will take place at the Battersea Friendly A. S., Queen's Head, Queen's-road, Battersea; the date I will give next week.—G. W. ARMSTRONG, district officer.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting-hill Gate, W.—Many of our brethren were at various waters on the 4th inst., but the only one who weighed in was Mr. E. Gibbs, who saved us from a blank with a jack, from the association water, 4lb. 14oz., in splendid condition. I hope members will notify that there are two prizes for the 11th inst. to be fished for; all fish to weigh bar eels. Members must not forget the Rye House Competition, for which I shall be happy to supply the usual ticket; the cost is one shilling.—B. ABRAHAMS, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Several of our members were out on the 4th inst., and the following weighed in: Mr. Jones had a very nice show of roach, dace, and bream, and a nice little jack of 3lb.; Mr. Bond, roach, dace, and barbel; Mr. B. Acland, roach and dace; Mr. J. Bell, roach and dace; Mr. King, roach and dace, and several others.—J. RICH, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 4th inst. the majority of our members took part in the competition at Amberley, with the result that Mr. W. Hake was the only successful member in winning a prize, with roach and dace. Mr. Lattimore weighed in roach; Mr. W. Embleton, jun., roach; Mr. J. Hake, dace; Mr. Munday, Mr. Whitebread, and Mr. Lambarth, jun., roach; Mr. Reeks, dace; and Mr. Merry, some nice roach and dace, the largest dace weighing 8½oz. The return visit on the Clerkenwell and District United, took place at the above house on Monday last, and was a good success, the following clubs being represented: The Great Northern Bros., Convivial, St. Andrews, Crown and Buckland, City of London, Seymour Bros., Eustonians, Funny Folks, Islington Bros., Bermondsey Bros., the Alma, Burton Piscatorials, the Camden, Anchor and Hope, Hoxton Bros., Bloomsbury Bros., Good Intent, Dalston Bros., Original Piscatorials, Hearts of Oak, Patriotic, Sundial, Sociable Bros., Walton and Cotton, and the Eastern Piscatorials. We return our best thanks for the manner in which they supported us on this occasion.—E. R. EMBLETON, sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—A special meeting was held on Tuesday last, when the balance-sheet, which showed the club to be in a sound financial position, was passed. The Punt Competition, at Staines, will take place on the 11th inst. Members must go by the train leaving Clapham Junction at 8.30. Seven prizes, value £31 5s. On the 4th, Mr. Hopkins weighed in a nice show of roach, and Mr. Degonge, roach from Amberley, winning the untaken prize in last competition. Members are requested to attend on Tuesday next, to arrange next outing. The next visit of the Anglers' Association will be at this club, on Tuesday, Oct. 20, when we shall be pleased to meet all brother anglers.—GEO. MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road.—Several of our members took part in Mr. A. Eldridge's Competition at Amberley, one of them (Mr. James Smith) being successful, taking the eighth prize. Messrs. Patman, Allum, and Dodson also weighed in. The next visit on the South London United Visiting List will be paid to this society on Tuesday, the 20th, when the company of brother anglers will be esteemed a favour.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—We had a nice show of fish on the 4th inst., the following members weighing in: Mr. Hacker, four bream, two weighing 3lb. 2½oz. each, and some very nice roach; Mr. Wheelhouse, roach and dace; Mr. J. Barker, ditto; and Mr. Rouzilier some fine perch. On Wednesday night it was proposed that our next prize outing take place on the 18th inst., at Egham; train leaves Waterloo for Staines at 8.20 a.m.; leave off fishing at six o'clock; all recognised fish to weigh; no live bait to be taken down. The half-yearly meeting takes place next Wednesday; any member who does not attend, unless sending a written apology by nine o'clock, will be fined.—F. ROBERTS, hon. sec.

Bostonian Angling Society.—We shall have a day's outing on the 11th instant, at Pangbourne; train will leave Paddington at 9 a.m. There will be seven good prizes for competition, weighing in to take place at the Cross Keys Inn, the same evening at 7.30. The following members have had fish during the past week: Mr. Chapman a nice take of jack, the heaviest 7lb.; Mr. Jennings, roach; Mr. Rundle, roach. Our worthy and esteemed member, Mr. Revett, was presented with a dinner service, on the occasion of his marriage, by his brother members. Members will oblige by attending next meeting night.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On the 4th inst. several of our members were out, but met with little success. On Wednesday evening Mr. Brown brought up a splendid lot of perch, weighing nearly 20lb. Those members who intend entering for the competition on the 11th inst., can catch a train from South Kensington at 7.35 to Mansion House; leaving Liverpool-street at 8.25. I have much pleasure in informing the members that our brewers have presented us with a handsome prize to be fished for.—H. ROACH, sec.

Brothers Well Met Angling Society, Berkeley Castle, Rahere-street, Clerkenwell.—On Sept. 20, at Pangbourne, we fished for our annual subscription medal and five other prizes, the medal being won by Mr. Maynard; second prize, Mr. Harris; third, Mr. Gunston; fourth, Mr. Tame; fifth, Mr. Field; sixth, Mr. Elderton. On the 27th ult. we had our annual dinner at the Swan Hotel (Mrs. Hawkins's, Fiddleworth), where we had a splendid spread. A very jolly day was spent at Amberley on the 4th inst. Mr. Harris won our daily prize with 6lb. 8oz. of bream and roach; Messrs. Gunston and Elderton also weighed in roach. The latter won a prize in the competition.—HENRY TAME, sec.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—Notwithstanding the inclement weather of Tuesday last, our smoking concert and distribution of prizes was quite a success. Among the prize-winners should be mentioned—Messrs. C. Wilson, copper kettle and silver guard; G. Mearring, winches and tackle, and brooch and earrings; Howell, jack rod and tackle-book and fittings; J. Watkins, roach rod for greatest number of roach during the season over ½lb. each, also table lamp; J. Mearring, winch and jack tackle; J. Watkins being the holder for the year of the club challenge cup. Our worthy host and treasurer most ably presided and presented the prizes with his usual genial humour. I take this opportunity of thanking those members of other clubs and friends who favoured us with a visit, and at the same time fully excuse those who did not turn up owing to the bad weather. We had during the evening the promise from several gentlemen present to become members.—T. HAWKES, sec.

Burdett Angling Society, 118, Hackney-road.—A few of our members went out on the 4th inst., to fish for prizes; the takes were very small. Four of the prizes were won by the following members: Messrs. D. Flint, Burton, Eaton, and Green. There are still a few more prizes to be fished for.—J. PETHER, sec.

Burton Piscatorials, Globe, Derby-street, King's-cross.—Our sweepstake at Bourne End, on the 4th instant, resulted in a very pleasant outing. All the prizes were won, and considering the bright state of the water some very nice roach were taken. The following are the winners in the order named: W. Hill, first; C. Roberts, second; C. Sturman, third; C. Jones, fourth. Messrs. Ashton, Brierly, and Biggs, jun., also weighed in. I am very pleased to state that six of our members are enrolled with the Anglers' Benevolent Society, and I hope to see this good example followed by the entire club.—C. ROBERTS, hon. sec.

Buxton Brothers' Angling Society, Walthamstow.—On the 4th inst. a good muster of our members went out, but were not very successful on account of the rough weather, and with the exception of Mr. C. James and Mr. W. Davis, who both had some very nice roach, we should have had to put up with a blank day, which is not very gratifying. I hope all members will try and be present at the next meeting, on Wednesday, Oct. 14.—A. SHUKER, secretary.

Cambridge Friendly Angling Society, Masons' Arms, Titchborne-street, Edgware-road, W.—Only four prizes were taken at Goring on the 4th inst., by the following: Fitzgibbon, Carter, J. Lawler, and Hutchins. A pegged-down match will be decided on the 18th inst., at Pangbourne; usual conditions.—W. SUTTON, sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—The meeting on Monday last was a representative one, and Mr. Harry Dunn was unanimously elected chairman for October. Mr. G. E. Simms, of the Gresham Angling Society, will read a paper on "Coarse Fish Hatching," on Monday, October 25. Other transactions are promised for the same date by Mr. J. Husk and C. Spanswick, &c. To avoid disappointment members are advised to consult their time tables, as there are several alterations in the trains this month.—JOHN SMITH, hon. secretary.

Caxtonian Angling Society.—In our last issue, in the account of the roach competition of this society, an error was inserted—Mr. A. J. Parker's best fish was "13¾oz.," not "13lb. ¾oz."; and the report should have read, "punts" were examined, not "tickets."

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—On Sept. 27, Mr. Macdonnell weighed in 3lb. 6oz. of roach from Amberley; Messrs. Chambers, Castell and Macdonnell fished in the Amberley Competition on the 4th, each getting a few fish. Mr. H. Gates had a jack, 3lb., from Wimbledon Lake.—CAS.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—On the 4th inst. our members had very poor sport, only three weighing in—viz., Messrs. Chapman, dace; Scott, perch; and S. Jameson, jack.—A. TROWBRIDGE, sec.

Clapton Angling Society, Wayland Hotel, Dalston-lane.—Several members of this society took advantage of the late fine weather to indulge in the gentle art at the society's water at Rammey Marsh, when several young jack were taken and returned to the water, same being under size. One or two members bagged some good roach and perch.—A. W. OLIVER, assistant sec.

Clerkenwell and District United.—A successful visit on the above was paid to the Amicable Waltonians on

Monday evening, Mr. Embleton in the chair, faced by Mr. Hake, the following twenty-six societies being represented—viz.: Great Northern Brothers, Convivial, St. Andrew's, Crown and Buckland, City of London, Seymour Brothers, Eustonian, Amicable Waltonians, Funny Folks, Islington Brothers, Bloomsbury Brothers, Alma, Burton Piscatorials, Camden, Anchor and Hope, Sundial, Hoxton Brothers, Good Intent, Izaak Walton, Patriotic, Original Alexandra, Bermondsey Brothers, Hearts of Oak, Dalston, Sociable Brothers, and Eastern Piscatorials. The next visit will be to the Funny Folks, held at the Rose and Crown, Goswell-street.—F. Castell, hon. sec.

Clerkenwell Piscatorial Society.—The members of this club were out in full force on the 4th inst., and brought in a fair show of fish, Mr. Jelliman having 6lb. of jack and 1¼lb. of perch; Mr. T. Dennis, a nice specimen perch, 1¾lb.; Mr. Langhorn, roach, 1lb.; dace, 5lb.; Mr. Irwin had a fair lot of fish, mostly roach and bream.—J. W. Power, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—Several members were out on the 4th inst., but only three weighed in—namely, Messrs. E. George, dace and gudgeon; E. Baxter, roach and gudgeon; T. Twyman, roach. On Tuesday, the 6th inst., B. Coleman, roach.—A. Smith, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 4th inst., a few of our members were out, but sport was very indifferent, Messrs. Parram, Flowers, Wild, and Thornton, having a few nice roach and perch. Members please attend on Tuesday next, as there is some very important business to be brought forward.—S. Malby, sec.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—There will be an outing of this society in the Basingstoke Canal, from the last lock to the river Wey; two rods; all fish to weigh. All to go down by the 8.40 train from Clapham Junction, returning from Byfleet at 5.40. The election of officers took place on Wednesday. Mr. Burkett was re-elected chairman; Mr. Waterman, vice-chairman; Mr. Bird, secretary. The committee are—Messrs. Nazer, Rowsell, Gane, Biederman, and Bruce; auditors—Messrs. Clarke and Padbury. There will be a special general meeting next Wednesday to discuss important business.—R. W. Bird.

Eustonian Angling Society, King's Head. Swinton-street, King's Cross.—On the 4th inst. we had a very good show of fish, and I am very pleased to report that Messrs. Laban and Abbott took a prize each in the Amberley Competition.—R. Neale.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On the 4th inst., several of our members took part in the Competition at Amberley, Mr. G. Watling winning first prize; Messrs. Vanhegan and Biggs also had roach. Mr. G. Watling's benefit will take place at the above on Monday, October 12, when I hope all brother anglers will support him —J. W. Biggs, sec.

General Post Office Angling Society, the Falcon, Falcon-square, E.C.—Thirteen members of this society competed for prizes at the Rye House, on Thursday, Oct. 1, the result being very unsatisfactory, only one member taking fish up to the standard size. Several small jack were brought to the bank, and immediately returned to the water. Could any brother of the rod suggest where the jack of any size go to in the Rye House waters, was as they seem to be all undersized? Our next competition at Cookham, on the 8th October, and a general meeting at the club house, on the same date, at 8p.m.—L. W. Donne, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had a fair show of fish on the 4th inst., nearly 15lb. of roach, dace, and bream, taken by Messrs. Evans, Slade, Ellis, and Hall. In my report last week, *re* the large roach, there was a slight error, it should read—the four smallest averaged 1lb. 4oz. each—as the largest one of the four was 1lb. 7oz., and the smallest just under 1lb.—A. Payne, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road.—The result of our sweepstake at Goring, on the 27th September, was as follows: First, Mr. A. Porter; second, Mr. Winter; third, Mr. Monk; fourth, Mr. J. Jones; fifth, Mr. Fowler; sixth, Mr. Chapman; seventh, Mr. Bryant; eighth, Mr. De Perrion; ninth, Mr. Barnett; tenth, Mr. Guynan; eleventh, Mr. Clark; twelfth, Mr. Pask. Mr. Winter had the largest roach, 1lb. 10½oz. On October 4 we were saved a blank by Mr. Bailey, with roach, and Mr. Green with roach and dace. The next sweepstake will take place at Langley, on October 18.—J. Roach, sec.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville, N.—On 27th Sept. the following members weighed in bream and roach, from Pulborough: W. Parkin, 2lb. 7oz.; C. Watling, 7lb. 3oz.; C. Large, 7lb. 10oz.; J. Hewitt, roach. On the 28th the following sums were voted from our funds: S. Cave's benefit, 5s.; Mr. Watling's benefit, 5s.; Pulborough Flower Show prizes, 10s. 6d.; the grants to Messrs. Cave and Watling will be considerably increased by members' contributions. On the 4th inst. a number of our members entered for Mr. Eldridge's Competition at Amberley, with very satisfactory results, your humble servant taking second honours, and the following seven members taking prizes: Messrs. C. Large, J. Watling, H. Watling, C. Watling, W. Parkin, H. Proehl, and G. Snell. The following members weighed in on the above date from Amberley: J. A. Fitch, 5lb. 1oz.; W. Parkins, 2lb. 2oz.; J. Snell, 15oz.; H. Proehl, 2lb. 6oz.; F. Watling, 2lb. 15oz.; C. Watling, 1lb. 13lb.; C. Large, 1lb. 5oz.; and H. Watling, 1lb. 7lb.—T. A. Fitch, sec.

Gresham Angling Society.—At the weekly meeting last Tuesday, Mr. F. Fletcher was in the chair. A committee meeting was first held, and a letter from Mr. J. B. Close, one of the members, was read, asking the committee to take some action on a paper, "The Humane Angler," lately read before the society by Mr. J. Tayler, the secretary, on the subject of live and dead gorge-bait fishing. It is already prohibited in the society's own waters, and Mr. Close asked that it should also be prohibited to members of the society wherever fishing. After considerable discussion, it was agreed that the committee should recommend members not to use the live-gorge, and that no fish so caught should be eligible in any competition of the society. One new member was elected, and another proposed. Some arrangements were made for the exhibition of mounted fish, aquatic birds, tackle, &c., on the Oct. 20, and any members and friends willing to exhibit, will oblige by informing the secretary, and by sending their exhibits to the society's rooms, between three and five on the afternoon of the exhibition. The next sea-fishing competition for prizes will take place on Saturday, the 24th inst., and will be a contest of rods *versus* hand-lines. A question was recently asked Mr. Bramley, when reading his paper, "Babble About London," if the Fleet Ditch was ever fishable. Mr. Bramley now stated that he had looked the matter up, and found that in the thirteenth century the Fleet was a salmon river.—James Tayler, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On the 4th inst. very few members weighed in, these being A. Fish, roach and bream; Rider, perch; and Callcutt, perch. On Monday next a smoking concert will take place at the above in aid of the Anglers' Benevolent Fund, when we hope to see a good muster of anglers and friends to support so noble a cause.—W. Fenner, sec.

Hoxton Brothers Angling Society.—Mr. G. H. Wood saved us from a blank on the 4th instant, with jack and perch. On the 18th instant, the members will fish for special prizes in the river Lea, from Ratty's Lock to Cathagena Lock.—R. Ghurney, sec.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—Several of our members were out on the 4th inst., and the following weighed in: Mr. Croker, roach; Mr. Willsher, roach and gudgeon. Several went to Pulborough, but returned with a blank; others were out, but got up too late to weigh in. Our return visit on the Anglers No. 2 District, took place on Monday last, which was a great success. On the roll being called, nineteen clubs responded. The next visit will be to the Lord Palmerston A.S.—J. H. Herbert, sec.

Izaak Walton Angling Society.—The members competed for four special prizes on the 4th instant. Only three were taken: Mr. W. H. Mecham was first; Mr. G. Rogers, second; Mr. T. W. Garrard, third. Three special prizes were competed for on Wednesday, the 7th instant, but only one was taken, Mr. H. Butt being the winner.—H. B.

Jubilee Angling Society, Portobello, Kensal-road.—We had a very fair show of fish on the 4th inst., consisting of jack, roach, and perch, contributed by Messrs. Stringer, Wheeler brothers, and the brothers Challen. Tuesday last being quarter night, the officers were elected for the ensuing quarter, and Mr. Child enrolled as a member of our society. A match was arranged for the 18th inst. for four money prizes, particulars of which will be announced next week.—A. Ide, sec.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—The half-yearly meeting was held on Friday evening, Oct. 2. The vice-president in the chair, supported by the treasurer. There were about forty members present. The auditor's report was adopted, showing the balance of £32 4s. 2d. (*i.e.*, £25 in Post-Office Savings Bank, and in treasurer's hands £7 4s. 2d.), or an increase of £23 16s. 1d. over the corresponding period of last year. The number of members have increased from seventy-six to one hundred and fourteen. The prize list amounts to some £50, as against £32 10s. last season, which it is satisfactory to know the members are doing full justice to. The amount of fish weighed in has this season increased, considerably beating last year's record by some 150lb., and remembering our standard has been considerably raised—*i.e.*, barbel, 16in.; bream, 12in.; carp, 10in.; chub, 12in.; dace, 7in.; gudgeon, 5in.; perch, 9in.; pike, 24in.; roach, 8in.; rudd, 8in.; tench, 10in.; trout, 16in.—shows that the members have put their shoulder to the wheel. The auditors, Messrs. Coates and Turner, were re-elected, and a vote of thanks was passed to the president, vice-president, treasurer, secretary, and auditors, which were duly replied to. For October the committee have arranged five special prizes to be fished for: For the heaviest barbel, roach, dace, chub, and jack weighed in from the Thames only, prizes of 10s. 6d. for each. Messrs. T. Salter and J. Hollyman were the successful winners of the September Punt Competition with 15lb. 8oz., and 12lb. 7oz. respectively. Mr. F. Coates was the successful winner of the Bank Fishing Competition, with 3lb. 8oz. During the past week the following members have weighed in: Mr. J. Hollyman, 16lb. 7oz., roach and dace; Master, 12lb. 9oz., roach and dace; Carter, 5lb. 6oz., roach and dace; and several others of minor importance.—T. Salter, hon. sec.

Liverpool Angling Association.—A quarterly meeting was held last week, and the following resolutions were passed: "That we have our Knowsley water thoroughly examined and reported upon, with a view to increasing the sport therein, and Mr. Ford written to, and awaiting reply, no more fish be placed in this water"; "That one hundred two-year-old Loch Leven trout be ordered for the Ruabon-reservoir;" and "That there be an outing on the 15th." The date of the excursion to the Vyrnwy was not settled upon, but deferred until next week's meeting. Several accounts having been ordered for payment, and sundry prizes presented, the proceedings, which lasted until 10.30, were duly brought to a close.—R. Woolfall.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 4th inst., our members were at various waters, C. Nye weighing in roach, the heaviest roach, 1lb. 5¼oz.; Messrs. Milburn, A. Clark, W. Pearce, and Penfold, weighing in roach, dace, and perch.—W. F. Pearce.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—At our usual weekly meeting, on Tuesday, it was decided by the members present to fish off the prizes, left from the Welsh Harp Competition, on the 11th inst.; members to fish where they choose, and all fish to weigh; all members competing to be at the club-house by ten p.m.—J. Comber, sec.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—The principal outing of this club took place at Richmond and Twickenham on Thursday last, when, thanks to the excellent arrangements made by Messrs. Grimmett and Baldwin, everything passed off satisfactorily. The party, who numbered about thirty, travelled by the 7.35 a.m. from Waterloo. Fishing commenced at nine o'clock, and ceased at five o'clock. Owing to the heavy rain, the river was several feet above its normal level, and was in a highly-coloured condition. As may be imagined, the day's "takes" were not large, therefore; but some fine dace were caught, and also a few good gudgeon, two of which weighed over 2oz., apiece. Subsequently, on returning to town, supper was served at the club-house, under the chairmanship of Mr. Grimmett, the weighing in following. Subjoined are the prize-winners: First, Mr. Fowler, £5 5s.; second, Mr. Mudd, £3 3s.; third, Mr. Marcus, £2 2s.; fourth, Mr. Elliott, £1 1s.; and fifth, Mr. Baldwin, 10s. 6d. Amongst the hon. members, Mr. Gilbert was first, taking £1 1s., and Mr. Marsland second. The visitors' prize was secured by Mr. Judge. The puntsmen's sweepstake resulted as follows: First, Job Brain, jun.; second, "Kit" Brown; and third, Mansell. Mr. Newbury sent up a nice show of barbel, roach, and dace from the Upper Thames; total weight, 17lb. 13oz.—Arthur R. Matthews.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland-park, N.W.—On the 1st inst., Mr. Schultz, senr., weighed in jack, and on the same evening we had the pleasure of seeing a number of the Camden Angling Club members, who came to witness the presentation of the prize (a rod), won by Mr. Marsh, in the Boxmoor Competition. The prize was presented by Mr. Weaver. We thank the C. A. C. gentlemen for their company that evening. On the 4th inst. fish (jack) was weighed in by Messrs. Plumpton and Lambert.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—On the 4th inst., the following members weighed in: James Bygrave, roach and dace; Harrison, roach and perch; and Myers, gudgeon. Others who were out were unsuccessful.—J. Cuthbert, sec.

Peckham Brothers Angling Society, Prince Arthur, East Surrey-grove, Peckham.—Our outing for the next series of prizes will take place on the 11th inst.; members may leave town on the previous evening. Our anniversary supper will take place on Nov. 9, when we hope to see a good muster.—E. A. Fautley, sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Several of our members were out on the 4th instant, but did not get anything worth mentioning. I beg to remind members that our next meeting, on October 14, will be a special meeting to clear the books for the outing on October 18. Members not attending will be fined according to the rules. The election of officers will also take place.—J. W. Harris, sec.

Richmond Piscatorial Society.—A competition in connection with this society was held on the Thames, on Friday last, for the greatest weight of specimen fish. Overnight there had been a continual downpour, which somewhat coloured the water, thereby upsetting the intentions of those who had arranged to depend on the fly for sport. Mr. J. Poupart won the first prize with a nice barbel of 5lb., and some roach and dace. Fishing at Penton Hook, with light roach tackle, Mr. Poupart had eight other barbel, that only just failed to reach the 20in., the limit fixed for barbel in this competition. Mr. Wright secured second prize with roach and dace from the tideway; and Mr. Hallam the third prize, with roach and dace from Richmond. In the absence of Mr. Montague Davenport, Mr. H. Davis made a most efficient chairman. The visitors and members present expressed themselves highly gratified at the excellent show of fish placed on the table.

Rising Sun Angling Society, The George, Brook-street, Holborn.—Monday next being quarterly night, I hope to see all members present. We have several prizes to be fished for next month.—F. Bradley, hon. sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The following members weighed in on the 4th instant: Messrs. F. T. Lamberton, roach, dace, and gudgeon; F. Lamberton, roach and gudgeon; H. Mitchell, barbel, roach, and dace; P. Martin, roach and dace. Several other members were out, but met with bad sport. Mr. Tidmarsh was elected chairman for the month.—F. T. Lamberton, sec.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—On the 4th inst. we had a poor show of fish on our trays; only Messrs. Webber, Harris, and Cavers weighed in. Our outing takes place on the 11th inst. at Cookham, from Cookham Bridge to Bourne End Bridge; one rod only; jack barred. We should like to see some of the old and honorary members at our new house; and we have a vacancy for a few more gentlemen to join a good and old-established society.—T. C. Longland.

Royal Oak Angling Society, Royal Oak, Roman-road, North Bow, E.—Several of our members were out on the 4th inst., but the only gentlemen who had sport were Messrs. F. Barclay, with some nice roach and dace, heaviest roach, 1lb. 5¼oz.; G. Yeo, jack; J. Yeo, dace; A. Barclay, dace; J. Holden, perch. On Tuesday, 6th inst., we had a special general meeting, when it was resolved to change our club-house to more convenient premises, a committee being formed for the purpose of finding a suitable house. Mr. F. Barclay had a fair show of roach and dace on the 6th inst.—A. Barclay, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 4th inst., eight members of this society took part in the Amberley Competition, but only one member succeeded in taking a prize, Mr. G. Sanders. The following members weighed in perch and roach, saving us from a blank: G. Giles and E. Wright. Tuesday's meeting was very poorly attended, but I hope members will endeavour to attend on Tuesday next without fail. Mr. J. White is requested to attend at the club-house as soon as possible. We are still open to enrol new members, on Tuesdays, between nine and eleven.—S. E. Cane, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—Our sea angler has returned from Deal and gives a glowing report of the sport he had. One day's catch was over ½cwt. The president (Mr. L. S. Fountaine) has been having "tight lines" with the chub, the result being that during the week 43lb. of them (one a specimen) put in an appearance at the club-house and made a very handsome show. Several members have been out jacking, but did not catch any up to our standard of 24in. A meeting of the Norfolk Broads Protection Society will be held here on the 21st inst., at eight o'clock p.m., under the presidency of Major-General Goldsworthy, M.P. We hope to see a strong muster on that occasion.—C. B.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—On the 4th inst., Mr. Smales brought up a nice show of roach, about 3½lb. from the bank of the Upper Thames. On Tuesday last, two new members were proposed. A good muster is requested next Tuesday, to welcome Mr. Collins back amongst us.—Pelican.

South London United Anglers' Visiting List.—The next visit on the above list will be to the Bermondsey Brothers Angling Society, held at the Pitt's Head, Grange-road, Bermondsey, on Tuesday, the 20th, when I hope to see as good a muster of anglers present as on the last occasion of the visit to this society, there being thirty-two clubs then represented.—A. Conn, hon. sec.

St. Andrew's Piscatorial Society, Turk's Head, East-street, W.C.—One of our members, Mr. A. Long, won the third prize in the Amberley Competition on the 4th inst. with 1lb. 5½oz. of roach; Mr. Harris showed 2½lb. of roach from the Upper Thames.—B. Chevalier, sec.

Stepney Angling Society, Beehive, Rhodeswell-road, Stepney.—On Sept. 30, Mr. Chamberlain showed a jack of 8lb.; and on the 4th instant Mr. Jolly again distinguished himself by weighing in a jack, 10lb. 12oz. Both these came from the same water.—E. N. P., hon. sec.

St. John's Angling Society.—On the 11th inst. we fish for three prizes at Woking, first, second and third gross weight of all fish; club standard only. Hon. members are eligible to fish for these prizes; and on the 25th we fish for four prizes, under the same conditions, at Great Marlow. Members are reminded that all fish caught before the arrival of the first train down on the morning of the match will not weigh for these prizes.—F. Thorling, sec.

St. Thomas's Angling Society, Waterman's Arms, Paris-street, Lambeth, S.E.—Messrs. G. Reeves, J. Andrews, and T. Dumbledon, of the above club, went to Chelmsford on the 4th instant, but had poor sport, only weighing in perch. Mr. J. White visited Harlow, but had no luck. Mr. J. Booth fished in the competition at Amberley, and had roach, but not sufficient to get a prize. There was no place fixed to fish at on the 11th instant, so members can please themselves.—G. Morton, sec.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—We were saved from a blank on the 4th inst. by Mr. Hill, with a show of jack. The half-yearly supper will take place on Wednesday, Oct. 21. Members intending to participate must give their names in not later than Tuesday, the 13th. All supper moneys must be paid on or before Tuesday, the 20th.—H. R.

United Brothers, Deptford.—On Thursday week, Mr. Champion weighed in a fine take of dace. On the 4th inst., several members of the above fished a pegged-down match at Ware; Mr. R. Lawes and G. Marshall were the only two who took fish, but not of weight enough to take a prize. Members of the above will kindly oblige by being present at the club this (Saturday) evening, to arrange some other water to fish for the prizes that were left over on the 4th.—H. Tyler, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—Several of our members were out on the 4th instant, and the following weighed in: Mr. Clegg, roach and bream; Mr. Bird, sen., roach; Mr. Bird, jun., roach. Others had fish, but did not arrive in time to weigh in. Three of our members fished in the Amberley match on the 4th instant, and two of them got prizes—Mr. Bird, jun., took fourth prize, and Mr. Bird, sen., took seventh prize. If the gentleman who found the overcoat outside the Houghton Inn at Amberley, after the fish were weighed, would forward the same to the George and Dragon, I should be extremely obliged. We will pay expenses.—H. C., hon. sec.

Waltonian Angling Society, the Cape of Good Hope, Albany-street, Regent's-park.—On the 4th inst., most of our members who were out fished for three prizes from the Thames, given by Mr. A. Every. The first, one guinea, was won by Mr. Roland, with 5lb. 1oz. of roach; second, 10s. 6d., Mr. R. Dodge, 4lb. 7oz. of roach; third, 5s. 3d. (supernumerary), Mr. W. Dodge, 4lb. 5oz., roach; Messrs. Good, roach, 3lb. 11oz.; H. Putnam, roach, 2lb. 15oz.; G. Dodge, roach, 1lb. 10oz. Also from other waters, Messrs. Miller, roach 14lb. 5oz., and chub 1lb. 10oz.; Sexton, roach, &c., 10lb. 10½oz.; Brooks, dace 9¾oz., one fish. Our musical evening on Wednesday, September 30, was a great success, but I was sorry to see so few of our members present.—F. Packman.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—On Wednesday, the 7th, it was carried that we fish our match on the Thames, bank only, from Caversham Bridge to Tilehurst, on the 11th inst., all to go by the first train to Reading by South-Western Railway, Waterloo Station, at 8.30; six prizes: 1st, £1 11s. 6d., given by Mr. Piolaine; 2nd, £1 1s., given by Mr. Griggs; 3rd, £1 1s., given by W. J. Crisp; 4th, 10s. 6d., given by Mr. Buck; 5th, 10s. 6d., given by Mr. Risdon; 6th, copper kettle, given by Mr. Fairclough. Mr. Brunker was duly elected a fishing member.—C. Hibble, sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 4th inst., the October Competition was fished at Amberley with very poor result, Mr. A. Corras winning first prize with one roach, 1lb. 8¼oz., and one perch, 10½oz.—2lb. 2¾oz.; and R. J. Dartnall, three roach, 1lb. 11oz., taking the second prize; Mr. Corras, and Mr. Dartnall also taking prizes in the Open Competition promoted by Mr. A. Eldridge. The remaining prizes will be fished for on the 11th inst.; open members must leave London same morning; all fish to weigh.—R. J. Dartnall, secretary.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—We had a few fish on the 4th inst., by the following members: Messrs. Fullbrock, Parslow, Casey, and Dessert, other members too late to weigh in. I hope all members will attend on next meeting night, as there is a considerable number of daily outings to arrange. On the 11th inst. we fish at Witham for four prizes; first train.—W. M., sec.

Western Piscatorials, Bear and Rummer Tavern, Mortimer-street, Cavendish-square.—On Wednesday last arrangements were made for a general outing on the 11th inst. to Marlow, and we expect a good muster on that occasion. An hon. member (Mr. Cappellen) brought in a fine take of jack, weighing 14lb. 12oz., and it was considered that such a splendid show duly qualified him to become a full fishing member, and he was thereupon unanimously elected. Mr. Parry also weighed in over 4lb. of roach.—D. W. Evans, sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 4th inst., but only one weighed in, Mr. R. Lowther, 7lb. of roach; Mr. Goodrich had roach, but was too late to weigh in. I wish to remind members that it is the monthly meeting on Wednesday next, October 14, when the half-year's balance-sheet will be ready.—R. Lowther, sec.

West London Angling Club, Dartmouth Castle, Hammersmith.—The third club match of the season is arranged to take place on Thursday, October 29, and Nov. 1, on the same conditions as the last match. Mr. Elsmore's presentation prize of one guinea not being taken is still eligible for this match. We have a new member to elect at our next meeting.—J. J. Hunter, hon. sec.

AFTER A DAY'S FISHING,
Call on TIBBATTS,
AT "THE CITIZEN," 70, HOUNDSDITCH
(OPPOSITE BISHOPSGATE CHURCH),
Two minutes walk from Liverpool-street and Broad-street Stations.

Bolton Anglers' Challenge Cup.—The first competition for the above-named cup took place on Saturday last in the Bridgewater Canal at Bedford Leigh. The arrangements worked without a hitch, and the weather was all that could be desired. Punctually at two o'clock the special train steamed out of Great Moor-street Station, conveying ninety-six competitors, representing fourteen clubs, along with about one hundred and fifty other brethren of the angle interested in the contest, and rushing along at express speed the train was quickly at its destination. An immediate move was then made for Butt's Bridge, where each competitor received a sealed envelope containing the number of his peg. To save time the draw had been conducted beforehand by the committee in such a way that though perfect secrecy was maintained, the competitors from the respective clubs were equally divided along the full length of about 800yds. Time was called at half-past three o'clock, and for two hours every man sat, or kneeled, almost without winking, intent on detecting the most minute oscillation of his tiny float, for the fish were small, shy, and scarce, and success could only be attained by absolute simultaneity of hand and eye. At half-past five the weighing commenced, and was concluded just before dark, and the committee retired to tabulate the weights and ascertain the winning club. The result was declared at ten o'clock, and the award fell to the Walpole Club, with an average weight per man fishing of 8½oz. 2 1-7dwts., the total catch of its seven representatives amounting to 3lb. 12½oz. The King's Club came second with an average of 3¾oz. 3½dwts., and from this the weights tapered down to the lowest with an average of ½oz. per man. The only species of fish taken were roach and gudgeon.

⁂ **Club and River Reporters will oblige by sending in their Reports early in the week.**

Holloway's Pills.—In general debility, nervous tremour, and mental depression, these unrivalled Pills have a marvellous effect. They have won the confidence of millions in all parts of the civilised world. Constitutions shaken by sensual excesses, or by long residence in unwholesome climates, or by sedentary habits, are wonderfully renovated by a course of this extraordinary medicine, which, powerful as is its action on the whole system, is perfectly harmless to the tenderest frame. The Pills are composed of rare balsams, without the admixture of a grain of any mineral whatever, or of any other deleterious substance. They operate directly, powerfully and beneficially upon the whole mass of blood, nor can we question the fact when we see indigestion cured, liver complaints arrested, the oppressed lungs brought into healthful play, and every physical function renewed and strengthened by their agency.

LONDON ANGLERS' COMPETITION ON THE ARUN.

List of the Prize-Winners.

Amberley on the Arun was all excitement on the 4th inst., when several hundred London anglers paid a visit to this picturesque little Sussex village, with its fine old bridge spanning the river. The occasion was the second of the series of angling competitions, got up by Mr. A. A. Eldridge, of the Rose and Crown, Goswell-road, London, and two special trains ran the excursionists down from London Bridge. The conditions for the match were that only one rod was to be carried, and that no gudgeon, jack, pope, bleak, eel, or dab, would count at the weighing in. Shortly after nine o'clock the signal to start was given from the Houghton Bridge Inn, and an amusing spectacle was afforded, as the three hundred competitors, each with a rod and box on his shoulder, started off running in order to secure the best "shops" and "swims," unfortunately, however, the river was found to be too bright, and to make matters worse, a high tide prevailed during the afternoon, and prevented many of the anglers from fishing at all. The weather and the scenery, on the other hand, were charming, and as one of the disciples of Old Izaak was heard to remark, "it was worth the money to have such a h'outing, if no fishes was caught."

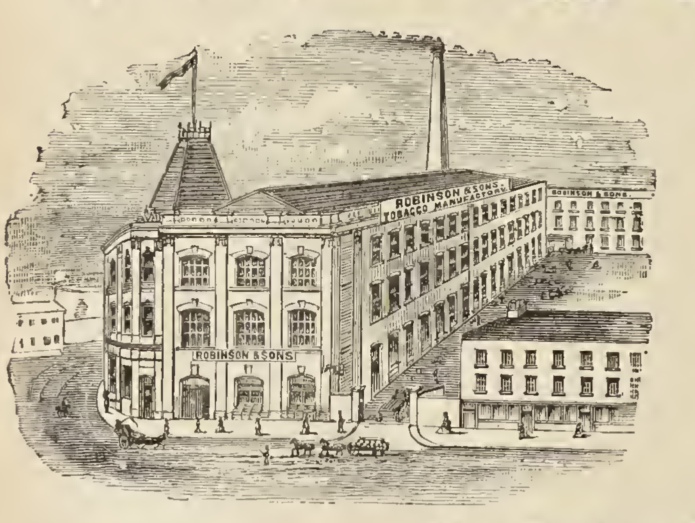
Fishing ceased about four o'clock, and the weighing-in commenced, amid much excitement, half-an-hour later, at the Houghton Bridge Inn, where a large company of anglers were assembled. The special prize for the largest roach was taken by Mr. G. Watling. The prizes were thirty-four in number, ranging from £2 2s. to 2s. 6d.

The following is a list of the prize-winners: First, Mr. G. Watling, Funny Folks Club, 7lb. 9oz.; second, Mr. J. A. Fitch, Great Northern Brothers, 5lb. 2oz.: third, Mr. A. Long, Great Northern Brothers, 4lb. 5½oz.; fourth, Mr. W. Bird, jun. (unattached) 4lb. 2oz.; fifth, Mr. G. Rogers, Izaak Walton, 3lb. 10¼oz.; sixth, Mr. F. Watling, Great Northern Brothers, 3lb. 0½oz.; seventh, Mr. W. Bird, sen., Bermondsey Brothers, 2lb. 15¼oz.; eighth, Mr. J. Smith, Bermondsey Brothers, 2lb. 13oz.; ninth, Mr. W. Hake (unattached), 2lb. 12½oz.; tenth, Mr. J. Howard, Blackfriars, 2lb. 9¾oz.; eleventh, Mr. T. Gerard, 2lb. 9¼oz.; twelfth, Mr. G. Franklin, Crown and Buckland, 2lb. 8¼oz.; thirteenth, Mr. H. Proehl, Great Northern, 2lb. 7oz.; fourteenth, Mr. W. Parkin, Great Northern, 2lb. 3¼oz.; fifteenth, Mr. A. Corras, Wellington, 2lb. 2¾oz.; sixteenth, C. Watling, Great Northern, 1lb. 14¾oz.; seventh, Mr. Dartnall, Wellington, 1lb. 11oz.; eighteenth, Mr. G. Labun, Eustonians, 1lb. 9¾oz.; nineteenth, Mr. W. Elkerton, Brothers Well Met, 1lb. 9oz.; twentieth, Mr. H. Watling, Great Northern Brothers, 1lb. 7¾oz.; twenty-first, Mr. C. Large, Great Northern Brothers, 1lb. 6oz.; twenty-second, Mr. C. Abbot (unattached), 1lb. 5½oz.; twenty-third, Mr. G. Morris, Crown and Buckland, 1lb. 3¾oz.; twenty-fourth, Mr. W. Watling, Lincoln, 1lb. 2¼oz.; twenty-fifth, Mr. C. Watters, Crown and Buckland, 1lb. 1¾oz.; twenty-sixth, Mr. J. Atchinson, Reform, 1lb. 1¼oz.; twenty-seventh, Mr. T. Wright (unattached), 1lb. ½oz.; twenty-eighth, Mr. G. Sanders, Seymour, 1lb. 0¼oz.: twenty-ninth, Mr. G. Snell (unattached), 1lb. 0¼oz.; thirtieth, Mr. G. Johnson, Lincoln, 15¾oz.; thirty-first, R. Carr, Phœnix, 15¾oz.; thirty-second, Mr. C. Abbott (2s. 6d.), Eustonians, 15¼oz.; thirty-three, H. Greenaway (2s. 6d.), (unattached), 15¼oz.

Solway Fishery Question.—A Government inquiry will be commenced in the County Buildings, Dumfries, on Oct. 12, anent the white fishing in the Solway, with the view of promoting a better regulation of the fishery. The Commissioners are Sir Herbert Maxwell, M.P., chairman: Mr. J. H. C. Hozier, M.P. for South Lanarkshire; Mr. Donald Crawford, M.P. for North-East Lanarkshire; Major Colvin Stewart, of Cairnsmore; Mr. John Rankin, advocate; Mr. Johnstone-Douglas, Cumlongon Castle, secretary. Those desirous of giving evidence must lodge a memorandum with the secretary of the points he wishes to be examined upon. The Commission is granted in the interests of the "paidle net" fishermen, and is the outcome of a request made to the Secretary of Scotland (Lord Lothian) at Edinburgh on January 9.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear. Best quality only —East London Rubber Co., 8, Shoreditch, E

SMOKE "ORIEL" NAVY CUT.
THE HIGH CLASS TOBACCO,
MADE FROM PICKED LEAVES OF THE FINEST QUALITY



Extract from the "FISHING GAZETTE" of February 21st, 1891:—

A GOOD SMOKE.

Dear Sir,—Knowing how much you enjoy your pipe when out a-fishing, may I ask if you, or any of your friends, have ever tried "The Oriel" navy cut, manufactured by Robinson's, of Stockport? If you have not, do so at once, and I venture to say that you will be well pleased with it, being very cool and lasting, with an exquisite flavour. I have no interest in the matter whatever, but simply recommend it as my *beau ideal* of what a fisherman's tobacco should be.—Yours truly, Smoker.

Sold at 5d. per ounce, in 1 and 2 oz. Packets, and 4oz. Tins. Any Smoker having difficulty in obtaining it from his usual Tobacconist can obtain it direct from the Manufactory
POST FREE. 2oz., 10d.; ¼lb., 1s. 8d.; ½lb, 3s. 4d.; 1lb., 6s. 8d. POST FREE.

Sole MANUFACTURERS: ROBINSON & SONS, TOBACCO & SNUFF MILLS, STOCKPORT

MAZAWATTEE TEA

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, OCTOBER 10, 1891.

REPORTS FROM RIVERS, LOCHS, &c.

English and Welsh Reports.

The Lower Thames.—GENERAL REMARKS.—I would again refer to an important question, which has for some time voluntarily cropped up amongst some of the Thames anglers, and that is, after a day's fishing, to feel satisfied with the sport and amusement of angling they have had and return back to the river all surplus fish, and in some instances, the whole catch. There was a notable instance the other week of an angler putting back again some fine perch, one weighing 1lb. 10oz., and my attention was directed to it by the fisherman who accompanied him. I could not help remarking, if I had taken a perch of that size, I should certainly have retained it, although I approve of the principle of returning fish back to the river. He replied, the gentleman who caught the fish, said he had plenty of fine perch elsewhere, and he did not care to take it away. In the recent examination of takes the number of anglers there were out between Kingston and Isleworth, affords strong evidence how largely the river is used by anglers, and the outcome of such information proves the necessity of devising some means to keep up a good head of fish. The consideration of this question, is, to a great extent, in the hands of the anglers in this particular at least, and in not taking away fish they do not absolutely need, let them see them returned to the river before they leave the punt. My attention has, of late, been so frequently called to this matter, I have ventured to refer to it again, although I have been described as exultant in the movement, whilst the writer who made the remark fully agreed with me in putting a stop to any reckless waste of fish, by the laudable system of returning a take, or a portion of a take to the river. It may be I am rejoicing over a few instances, but every movement must have a commencement, and there is nothing like an example and urging it forward as an emulation to others to do likewise. The simple idea is to retain only good specimen fish and to return the smaller ones to grow larger for future enjoyment. No one surely, in these days, wants to deplete a river by the greedy sacrifice of large parcels of fish life, or filling the tables of a club room for the selfish purpose of making a great show of fish, which, when made, become a worthless waste. The increase made last week to the stock of fish in the river at Chertsey, is a most valuable addition.—B.

RICHMOND.—Henry Howard, in three days, fifteen dozen of roach and dace; H. Mansell, in six days, 80lb. of fine roach and dace, and five bream; Job Brain, in the week, 50lb. of fine barbel and three bream; H. Wheeler, in two days, 16lb. of fine barbel and a chub of 2lb.; C. Brown in one and a-half days, 16lb.

TWICKENHAM.—C. Brown, in the week, fifteen dozen of roach and dace and two barbel; S. Cole, in two and a-half days, ten dozen, two barbel, and four bream; George Coxen, in one and a-half days, six dozen and five dozen of gudgeon; John Coxen, 22lb. and five barbel; R. Coxen, in three days with Mr. Tarrant, 40lb.; John Coxen, jun., in two days, eighteen dozen of fine gudgeon, and another day, four dozen of fine roach; John Frost, in one and a-half days, 20lb.; Port Hammerton, in three days, 40lb.; John Spong, in four days, 50lb. and five barbel; F. Wiggins, in three days, 40lb., two barbel, and two bream.

TEDDINGTON.—Joseph Baldwin, in two days, twelve dozen of roach and dace, and another day, five bream and seven barbel; B. Stevens, in one day, five dozen and four jack, the largest, 6lb.; and W. McBride, in three days, sixteen dozen, and a jack of 4½lb.

KINGSTON.—John Johnson, in the week, fourteen dozen of roach and dace, a jack of 3lb., and ten barbel, the largest 10lb.; N. Bolton, in four days, thirteen dozen of fine jack, four barbel and two perch; Mr. Matthews, in two days, two barbel, three jack, and two perch; J. Wilkes, in three days, fifteen dozen of gudgeon, four jack, and three perch.

SUNBURY.—Messrs. T. and A. Stroud, have been getting an average of five dozen of roach and dace, each day, and a few jack; Edward Clarke has been doing well with roach and dace.

CHERTSEY.—John Poulter, one day, with Mr. Watts, five dozen of roach, and another day with Mr. Wastell, two brace of jack, which were put back again.

STAINES.—John Keene, jun., one day, with Messrs. Hayes and Mills, of Kilburn, thirty-six barbel and five dozen of roach and dace, weighing altogether, over 70lb., another day with Mr. and Mrs. Bank, seventeen barbel and four dozen of roach and dace; another day, with Mr. Proud, thirteen barbel and six dozen of roach and dace; weighing altogether 40lb.; another day, with Mr. Waters, twenty-seven barbel and six dozen of roach and dace; and another day, with Messrs. Poupart and Jones, ten barbel and six dozen of roach and dace, the largest barbel, 7lb. About half the fish were put back again.

Upper Thames.—In consequence of the exceptionally heavy rains of Tuesday and Wednesday, all up the Thames Valley the river is rising rapidly. This, however, will not interfere with successful angling, but, on the contrary, rather improve jack, perch, and roach work, as for weeks the water has been too bright for any class of Thames fishing. At Marlow, on Tuesday, a gentleman caught in Weir Pool a beautifully-conditioned fish - a jack of 11lb. In the Medmenham and Hurley Waters, jack galore are daily being had, and "the cry is still they come," 11lb., 9lb., and 7½lb. being the best scales. Weather to-day (Thursday) delightfully fine and drying. This will steady the push of water and improve all-round angling.—MARLOW BUZZ.

Thames (Chertsey).—On Thursday, the 28th ult., Mr. A. Hebburn caught a chub of 2lb. 11oz., and Mr. F. Nichols fished with E. A. Little, caught in three days eighteen dozen of roach and dace and a perch of 0¾lb.

Thames (Datchet).—At the time of writing the river is bank high. Was out yesterday; caught a few good roach. A few fine days; I anticipate some fair sport.—G. LUMSDEN.

Thames (Goring).—Not much has been done the last week. The recent rain has put the river in splendid roach condition.—G. BARTHOLOMEW.

Chichester Canal and Sussex Rivers.—Sunshine and showers remind us more of April than October weather; yet those who have ventured out have met with a fair amount of success. Bream up to 2lb., and roach to ¾lb., with a few small pike, have been taken from Chichester Canal; but the water is low and weedy, with the exception of the reach near Hemston, where spinning for perch may be indulged in. Good baskets of roach have been taken from the Ouse, several fish weighing over 1lb. Dace and roach have given sport on the Adur near Steyning, and gentles have proved the best lure. Pier and sea fishing have been remunerative on the coast.—GEORGE F. SALTER.

Douglas (Isle of Man).—The rivers during the past week have been in heavy flood, and many fish have gone up. Mr. Johnson took a nice one of 6¼lb. out of the Sulby river. Sea fishing has been very good, but a great storm on Monday and Tuesday has put an end to it for a time.—STORMY PETREL.

Dove and Tributaries.—Weather has been nearly all wet this week, and the river has been too thick for anything to be done since Tuesday. Mr. W. Bullock took from the Birdsgrove Water six brace and two other dishes of three and four brace of trout and grayling the last days of the trout season with the fly; one trout, scaling over 1½lb., being taken from the same spot; Mr. B. took the four and a-half-pounder a month or so back. Trout continue to rise well, and are in good condition, though now by statute ruled out of season. Water will be in good order by Friday or Saturday should no more rain fall. The Needle and Little Sky Blue have been most killing.—D. AND W. H. FOSTER, Ashbourne.

Eden (Carlisle).—The river was in fine order on Monday, but rose again on Tuesday, and to-day (Wednesday), is again in high flood. This is most aggravating, as this looked like being a "red letter" week. On Monday Archdeacon Prescott landed a fish of 36lb., and his son one of 20lb. in the Wetheral Water. Mr. J. Fox, Mr. R. McAlister, Mr. T. Bone, and Mr. G. H. Dixon, each had one about 20lb. Mr. Thos. Robinson killed four in the Cargo Water, 13lb., 14lb., 19lb., and 30lb.; and Mr. John Robinson, one 24lb. Mr. Barlow had two 18lb. and 26lb., near Carlisle; and Mr. Walter Hough two at Crosby. The water will scarcely be in order before Friday.—SILVER GREY.

Esk (Whitby, Yorkshire).—The river is full of salmon and salmon trout. At no time was it more plentifully stocked with fish, at no time was there better chances of good sport than there is now. The recent individual catches have been almost phenomenal. So have they been, that a number of anglers rather selfishly decline to give up their records, in the hope, presumably, that by such publicity, fellows of the craft elsewhere may not be induced to visit the waters of the Esk. The very persons, or some of them, who are desirous of concealing how good the fishing is now, were those who were most to the front in their desire to have their exploits recorded. Several anglers, by the way, have honestly sent in their records, but as the list is incomplete generally, I, for the time being, hold them over, merely because a complete list and authoritative account cannot be given, as has heretofore been given. Facts and the truth are always the best to the front, and it is a silly notion on the part of a few anglers to presume to attempt to hide the results of their exploits, in the hope that the river will be less known as one of the best in the North of England for sport, and that it is the least expensive. If this stupid arrangement, arrived at by a few local anglers continues, it shall be my endeavour to indicate some means whereby an arrangement may be achieved, to the greater enjoyment of a much larger number of those who love sport on the streams, than exist at present. I shall be glad to answer any queries.—J. J. JACKSON.

Fen Waters (South Lincolnshire).—The showery weather keeps up the flow of water in the drains and does a great deal of good in the way of removing decaying vegetables growth and the objectionable flannel weed, and prospects for the bottom fisher are fairly good. Colder nights are wanted, however, for those who go in for pike trolling. Only the smaller specimens are coming to hand, and though fish up to 7lb. and a trifle over are somewhat common the best so far from the Wellend, Fortyfort, Vernutts, and other leading drains, among the captures made known was one of 9lb. A sharp night or two would bring on fish of 12lb. or 14lb. each. Besides the drains named the Parsons Drove contains some excellent pike. Some good perch have lately been landed in this district, several of 2lb. each, and one the other day was mentioned, weighing it was said, nearly 3lb.—LIMPET.

Idle (North Notts).—For some time now the water has been in fairly good condition for angling, the leaves and other rubbish being largely cleared away by the rains. The fish are also feeding better generally, and anglers are concluding that this is the result of the fish being so late over spawning. Odd trout are being caught in the river, and one of 2lb., a beautiful fish, was caught as low down as Bollam, two other anglers mentioned taking a brace each. Anglers in the upper waters are turning their attention to grayling, some nice baskets of which have been got from Gamston, and the reaches above that place. Chub are also being got from the waters above Retford, along with other fish; and very good flounders are being banked about Mattersey. Pike are occasionally pursued and landed from the lower lengths and dykes. A match was fished on the canal on Monday, competitors some 360 strong, but the takes were not very large. They varied from 2lb. 1½oz. to nothing.—L.

Ilfracombe.—SEA FISHING.—Boat angling parties fishing off the Bull and Bird in Hole have had some fine catches of whiting-pout, while those fishing a short distance from the harbour have hooked some prime codling. Anglers fishing from the pier and jetty have secured good baskets of codling, pout, and pollack. One gentleman hooked a ling weighing 16lb.; Mr. Kelly, eight large pollack; Mr. Penhill, good catches of pout and pollack. Anyone fond of rod or hand-line fishing can obtain good sport from the pier and jetty. Weather at present squally.—E. COMER.

Lake District.—For the last six weeks of the season—which closed for trout fishing on the 2nd instant, angling for salmon continuing throughout the present month—the rivers and becks of the Lake District have been in flood, and consequently have afforded little sport to the fly-fisher. Some good fish have, however, been taken with the worm. Mr. C. Postlethwaite, fishing in the Lune on Tuesday week, caught two splendidly-fed trout, 4lb. and 1½lb. respectively. This angler has been remarkably successful throughout the season. Good fish have been taken at nights in Mealbank Dam on the Mint, with winged flies, running up to 2lb. In the Kent good takes have been the rule, especially in the neighbourhood of Bowston and Cowanhead, the evening takes averaging 10lb. The Troutbeck still keeps up its reputation for large fish, one angler having a trout of 5lb. on one day, and another of 4lb. the next. A few years ago a char was reported as having been taken from the Mint, and last week a local man while fishing with the fly hooked and landed a fish which was afterwards identified as a char by Mr. R. B. Lee, of the *Field*, who chanced to be in the neighbourhood, and who contributed to the last number of that journal an article on the subject, in which he described the char as a handsome specimen, &c. The present writer happened to be a hundred miles away from the district at the time; but others who have seen the fish declare it to be no char at all, but a specimen of the *Salmo fontinalis* recently introduced by the Kent Angling Association. This latter fact seems to have been forgotten by Mr. Lee, an undoubted authority on matters piscatorial, or he would not have fallen into so fishy a blunder. Char fishing in Lake Windermere is now closed for the season, and the professional fishermen assert that the season has been only moderately good. Fishing in the Sprint on Monday, September 28, Mr. John Wilson had fifteen nice trout, the last basket from that stream of which I have heard.—WESTMERIA.

Lea and Stort.—Some few nice jack and perch have been taken from the Broxbourne and Rye House waters lately. At Waltham Abbey I heard of a few jack and roach having been captured, also a few eels; one of the latter I cast an envious eye on, but in hastening for a train forgot to bring it away with me, for I must confess to a great fondness for these so-called water serpents when properly cooked. Little has been done at Cook's Ferry, although fishermen have been plentiful enough. At Games's Fishery, Higham Hill, some very good jack were taken here on the 3rd inst. Some good specimen roach have been captured, when bottom fishing, at the Ferrie Boat, Tottenham, and Mr. Alf. Williams, a thoroughly competent authority, tells me to-day (Thursday) that roach that have been lately surface-feeding, have settled down, and are now well worthy the roach fisherman's attention; a few jack up to 4lb. have been taken, and Mr. Bennett, with the dry fly has accounted for numbers of good dace. Mr. Bradley, of the Antwerp Angling Society, Tottenham, has had fair sport lately amongst the chub and jack, one of the former scaling 3lb. 5oz.. By the way, I consider scaling, as applied to the weight of fish, somewhat happy, as most of the fish rejoice in the possession of this outward covering. In last week's *Fishing Gazette* there was a notice of a conviction against poachers at Ware. I certainly was pleased to see it, but cannot refrain from expressing my opinion that the Anglers' Association should not have neglected their duty by utterly ignoring the capture of a drag-net by Mr. Games; an instrument of warfare, compared with which any cast-net sinks into utter insignificance. It seems strange that arter the heavy rains of the last two days and nights, there is hardly an appreciable rise in the water; it is coloured, and fishing will improve.—SPLICED JOINT.

Leicester.—Angling has been far from brisk this week. The extremely heavy rains several days put a stop to the sport and coloured the waters to a great degree. At the Leicester preserves, during the intervals of pleasant weather, a few anglers were out, but the takes extended only to roach, perch, and one or two pike of small size. A few anglers have been down the Wreake way, but met with poor success, a brace or two of pike being the extent of the catches. The other resorts in this district have been but scantily patronised.

Loddon (Earley).—Some very fair fishing has been done since I last wrote. Mr. Higgins with his fisherman Gard, three brace of jack; and Mr. Reed a good basket of roach, with a very good chub or two. The heavy rain of Wednesday will no doubt clear the river, and I should think after a day or two there will be some very good sport.—J. R. GOULD, sec.

Lugg and Arrow (Leominster).—Heavy rain has been had in the district, and has caused both these streams to change colour and to rise, and has stopped fishing for a time until the water goes down again.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Heavy rain fell throughout Monday night and greater part of Tuesday, causing these rivers to rise half bank full of very muddy water. To-day (Thursday) the waters are sinking slowly, yet clearing fast. With favourable weather, fly fishing will not be practicable before Tuesday, at present the outlook is not encouraging—wind S.E., threatening rain. The closing days of last week good sport was attained, nice baskets of fine grayling (some fish 1½lb. each) being made, principally with Late Brown, Whirling, Mid Blue, Red Tag, and Green Insect.—R. T. WILLIAMS.

Medway (Maidstone).—River in good condition; if anything too bright; but the weeds are very foul, and fast rotting. Some anglers have been again successful at Farleigh. Some very good bream and roach have been taken with the worm. I do not hear of any good perch being taken; carp, I think, are seldom fished for. There are plenty of good ones. I know some few small pike have been caught: one angler lost two good ones, after some play. They ought now to feed well. I cannot hear of any chub coming to bank. It has not been a good season for chub fishing.—W. SHRUBSOLE.

Medway (Tonbridge).—The river is in the pink of perfection for autumn angling. During the week at times roach have been well on the feed, and good bags were being made, many of the fish scaling over a pound. This has been notably the case above the town in the more strictly preserved waters. Pike, too, have been on the feed, but more have been lost than have been captured. Given a well-baited swim for bottom angling, and a lively Thames dace for pike, sure execution should be done.—YE MEDWAY WATER-RAT.

Nene (Northamptonshire).—We have had much rain this week, and the condition of the river will probably be improved thereby. The elements generally have a much sharper aspect than usual at this time of year. The river contains some fine pike, and anglers are giving much attention to them at present; but although several decent specimens have resulted, especially in the Oundle and Wellingboro' districts, the fish taken generally have not over weighty. Some fine rudd are to be seen in the river at Orton, and I should think they will claim attention shortly. Chub can be met with here and there; and on Saturday several fine ones were taken at Waternewton by Mr. Tom Burdett, of Peterborough. He also obtained a few roach, his total catch for a few hours being nearly thirty. Roach have shown themselves to be rather fickle this week. Maggots are the best baits, but creed wheat and paste will occasionally tempt their appetites. With the former bait Mr. C. Irvine basketed a dace, which closely approached ¾lb., from the neighbourhood of the "Bank," on Saturday. A few bream approaching 3lb. have been secured at Peterborough, and towards the end of last week a city angler obtained half-a-dozen takeable perch. At the present moment the rain is descending in showers, and I expect it will be a stormy week-end.—NENEBANK.

Norfolk, Suffolk, and Cambridgeshire Waters.—Weed cutting has been carried on in many of our rivers and streams during the last week, the result will be I hope good takes of fish. I had a try on the 6th inst., at Mildenhall, no luck, the gentleman fishing with me took a few amongst them two dace 1¾lb. the two, these I am preserving, anglers visiting this stream will find very good and reasonable diggings at the Mlidenhall Inns. I think the best fishing will be found from the Lock to West Bow, in the Ouse at Littleport and Hilgay, roach are nicely on, pike also are beginning to feed, the weed cutting have no doubt disturbed them, some very fine perch were taken on Saturday. A lot of eighteen I saw were beauties several of them weighed 2lb., the best part of the Ouse to try is the filly beds, right up to the branch, on to the Cross Keys, and the Queen Adelaide, good swims all the way and plenty of fish. There is a good train service and if the angler feels inclined to stay there are plenty of comfortable inns at Littleport, while paste and wheat are now the best baits. Mr. Jay, of Peterburgh, took a very fine roach 1lb. 0½oz. one day last week. Brandon fishing is now good and if the rain continue the water will be a good colour, the swims are cut out, and anglers will now have a chance to capture some of the big bouncers. The Yare is better now at most all the fishing stations good fish are being taken. I hope to have a try myself on Saturday at Cantley. The weeds are going down well and with a continuance of fine weather, anglers should get amongst the shoals of big roach, perch, and pike. The glass has gone down very much and it looks now at the time of writing very much like a long rain.—WILLIAM HOWLETT.

North Lincolnshire.—The water is in capital condition for pike-fishing, but all through the week the sport has been very indifferent. The recent rains should make a little difference during the current week. There is a falling off in the number of visitors now, and angling is mainly confined to local anglers.—THOMAS FORD.

North Tyne (Bellingham).—Salmon are most plentiful here now, last week whilst fishing near the hut at Reedsmouth, Lord Warkworth, his Grace the Duke of Northumberland's grandson, had grand sport, killing nine fine fish; and Mr. Black, of the Birks, killed eight in the same day. There have been very heavy floods, and it is many years since flood followed flood so continuously.—J. H. R.

Ouse (Brandon, Norfolk).—Since my last report several anglers; both visitors and the natives have done well amongst the roach. The river as a rule is rather weedy in places, but there are several cut and prepared baited swims full of good roach. If anglers wish to save trouble and time information can be obtained at the head quarters of the Angling Ram Hotel, to the best places for each class of fish, viz.—chub, perch, roach, dace, or pike. After the rain this week, I am certain to have to report good catches. Time waiting, bright and warm; railway service excellent. —JOHN D. GEORGE.

Ouse (Huntingdon).—The water has been too bright for much sport, but the recent rains have greatly improved the condition and jack have been feeding very fair. Several small runs have been taken with live bait and spinning, and as the water is improving, sport will be good, for time is on for good fish to feed. Prospects very fair.—H. ROUT.

Ouse (Offord)—Water is in good condition for bottom fishing. Mr. McKenzie has had a good take to-day (Thursday) in the favourite swim in Mr. Priestley's meadow—one bream, weighing 4lb., and eleven varying from 1½lb. to 2½lb., and two chub. Fish were well on the feed when I left him to be in time for post.—H. COLLINS.

Ouse, &c. (York).—The river Ouse has afforded some fair sport during the past week or ten days, especially to the bottom fishermen, who have resorted to the drain swims in and near the city, where some splendid catches of roach and dace have been made. Several fine bream, one or two turning the scale at 4lb., have been caught at that part of the river Ouse known locally as the "Bream Field," below Bishopthorpe Palace. Some good catches are reported from the Foss, notably some good jack pike. The recent improvements at Castle Mill Lock are said to have greatly benefited this river in the matter of allowing fish a much easier passage; so we must look forward to the old angling days on the Foss being revived. Several grayling anglers have resorted to the Derwent lately, and some splendid fish have been taken in the neighbourhood of Old Malton and Kirkham Abbey, chiefly with maggot, the water being too thick for use of fly. So far as the North and East Ridings streams are concerned, the trout season just closed is said to compare favourably with many of the so-called good ones. But the grumbler is to be found even amongst anglers as well as farmers. There are complaints of the smallness of the fish in the Upper Rye district. Well, compared with the East Riding streams, and even with the Pickering Beck, they are so. But the reason is not far to seek, and as the seasons come and go something in the way of remedy will force itself upon those who have most to do with these trout streams, either by turning in new fry at intervals, and abolishing the use of the minnow, or limiting the number of tickets for a season or two. My humble opinion is that the Upper Rye and tributaries—the Riccoll, the Hodge, and the Dove—are much over-fished, especially in the earlier months of the season, and one or two seasons' rest would do most good, were such a course possible.—RONALD.

Penzance (Cornwall).—SEA FISHING.—We are being visited by shoals of sea bream ("chad," as they are here called), and boat anglers are having good sport. We still have a few mackerel about, and whiting-pollack and dory, but with the exception of "chad," the fishing in the bay has fallen off, and the weather, too, is unsettled.—H.

Plymouth.—SEA FISHING.—Fine summer weather has favoured us this week, and it has been made good use of. Scores of boats being out on the various spats every day. The mackerel are still with us, and are taken by towing a line furnished with a silver spinner or immitation brit at the end. A line of about fifteen fathoms, and a six ounce sinker is suitable for this work; but if you go in a sailing boat, you require a stouter and longer line and a lead about a pound or more. Thirty or forty dozen mackerel can be taken in a few hours in this way. The fish this year have been very fine, and we have not had many of those with joseys that we used to catch last year. Pollack are caught in large numbers in the tideway, at Devil's Point and the Winter Shoal.—WILLIAM HEARDER.

Rother (Fittleworth, Sussex).—A splendid jack was taken on the 4th near the bridge at Fittleworth, its length was 40in., weight, 18lb. It was caught by Mr. J. Adams, Good Intent Angling Society, Shoreditch. Several other jack were also taken.—H. J. HARLAND.

Severn (Shrewsbury).—The river has been in good condition for pike-fishing, and one or two good fish have been taken. Bottom-fishing has been fairly successful.—PISCATOR.

Tees (Barnard Castle).—Fishing has been rather upset here this week by the unsettled weather, the river rising and falling in a way that has puzzled anglers, whatever it may have done the salmon. On Monday it was just getting into perfect condition for fly fishing, and to-night (Tuesday) it is a perfect torrent. Mr. Geo. Bainbridge had one fish, 9½lb.; Mr. Thos. Parkinson, one, 11½lb.; Mr. R. Wandless, one, 5½lb.; and Mr. Cooper, two.—J. H. R.

Teme (Tenbury).—The water in this part was in splendid order for grayling up to Monday evening, and the fish were moving well at the fly. A good few anglers were out, and some fine fish were taken. Heavy rain fell on Tuesday, and in a short time the water rose and coloured, and quite put a stop to angling for a few days.—WORCESTER.

Trent (Newark).—Fourteen hours successive rain on Tuesday brought about an altered condition of the Trent, and by Wednesday evening a 4ft. flush was coursing merrily along, which should have a beneficial effect on future angling. Up to Monday the water remained in grand order, on which day Mr. A. T. Alcock succeeded in bagging fourteen nice barbel from the fish house swim of the Muskham Water, and also a pike and a perch. And fishing the same swim on the Saturday this gentleman landed a magnificent chub, weighing 4¼lb., showing that his ground-baiting of worms had been judiciously applied. Roach and dace have not taken the lure freely, but with gentles, Mr. W. Morley basketed nineteen of the former from the Pencroft field at Farndon, four of over 1lb. each; and from the lower portion, near the bottom locks, small takes of dace are mentioned. At time of writing (Thursday evening) the Trent is only available in the slacks and levies, but the water is just on the turn for receding, and I anticipate good sport with either gentles or worms during the coming week. —TRENTSIDER.

Wimbledon Park Fishery—The following takes have been recorded: Mr. Brooker, Notting Hill, five jack, largest 4½lb.; Mr. Chandler, King's Cross, one jack, 4¼lb.; Mr. Harsent, Lavender Hill, four jack, average 5lb. to 3lb.; Mr. C. Smith, barbel 4lb., and some fine bream; Mr. Bird, Wimbledon, some roach, one 1lb. The fishing is in good order, plenty of fresh water, good colour especially for jack.

Witham, &c. (Mid Lincoln).—Sport continues to be good in the neighbourhood of Boston, and at several places not much affected by the trippers and pot-hunters, and I learn that some decent pike are beginning to be moved. No notable take is yet recorded, but four or five small fish are not uncommon. One gentleman the other day got 14lb. in about two hours' trolling. Roach are feeding very well, but it is said bream are a bit off. There are beginning to be complaints about the supply of fish in the Fossdyke and in the Witham. The allegation is that Sheffield anglers come here in their hundreds, and often thousands, and they are running away with the fish so fast, and doing nothing to re-stock the water, until the district is not worth visiting. Things are scarcely as bad as that, but it is to be said a lot of clever Gainsborough anglers, some fifty strong, recently fished for a challenge cup the other day, and 6oz. only was recorded in a tie for it. The day, however, was a shockingly bad one at Torksey, where the match took place.—LUCI.

Teifi (Lampeter, Cardiganshire).—Some of our local anglers have had excellent sport with salmon during the past week, accounting for several good fish, ranging from about 10lb. to close upon 20lb. in weight each. There are plenty of salmon up now, and the river is in excellent condition for a continuance of sport.—H.

Towy (Llandilo, Carmarthenshire).—Some splendid sport has been had with the salmon during the past week, both here and on our chief tributary, the Cothy. Mr. Tressler landed a nice fish of 12lb.; Mr. Lewis, one of 10lb.; Mr. J. L. Thomas, one; and Mr. Tressler, one of 8lb. on the Dynever Water, losing another over 20lb. Mr. J. Savil has taken several sewin, on the minnow, but they are now in very poor condition. Sir James Drummond and Mr. Dudley Drummond, have taken some fine fish on the Cothy, and Sir John Llewellyn likewise. The last-named gentleman landed six in the course of one day's fishing.—H. S. HARLAND.

Usk (Abergavenny).—Oct. 7. The river is coloured and bank high, but beginning to fall. Although we have had a little more rain to-day. The barometer rising, and should the weather clear up some good sport may be expected in a day or two, the river being well stocked with salmon. Several nice dace by Messrs. R. W. Biggs, H. Parker Jervill, and J. Lamont.—JOSEPH CLARE.

Usk (at Usk).—The heavy downpour of rain on Monday night caused a rise in the river of six feet, and since then angling operations have been suspended. Some capital sport has been enjoyed, in fact several anglers have taken over a hundred salmon this season, while on private waters near Crickhowell, Mr. Crawshay is reported to have caught two hundred and twenty salmon. Should the weather be fine, angling will commence again on Monday, and no doubt there will be plenty of water until the close of the season on November 1st next.—T.

Scotch Reports.

Border Esk.—Although the Esk is well stocked with fish, and the number of salmon especially almost unprecedently large, the takes are scarcely up to the average, probably owing to the river being somewhat over fished, and the numerous floods that have taken place lately. In the upper waters Mr. John Reid, Langholm, landed a 10lb. salmon in the Martingale Pool; Mr. William Keir, Commercial Hotel Langholm, had ten herling, a dozen and a-half yellow trout, also a fine grilse; Mr. James Morrison, Mr. Matthew Laidlow, and Mr. Thomas McLellan, have had fairly good baskets of sea trout and herling, but sea trout fishing is now past its best. Bait fishing, too, closed last week. Angling, however, with fly continues for another month, and good sport is anticipated all down the water. In the middle reaches Dr. Roper, London, continues to do well, and landed a salmon of 20lb., in addition to several smaller fry in the Cauldron and Willow Pools. Beyond Liddlefoot, Mr. J. M. Little, Carlesgill, had a salmon of 18lb.; Mr. Munro, Edinburgh, caught a salmon of 13lb. in the Cauldron Pool; Mr. R. Snodgrass had one of 15lb. in the Prioy Pool; Mr. F. Little, Byreburnfoot, caught two grilse, 6lb. and 7lb. respectively; Dr. Burrel, London, had a nice salmon of 17lb. in the Red Lynn Pool; Major Irwin Woodhouse, a salmon 15lb., in the Bridgo Pool: Mr. May, Liverpool, a salmon 18½lb. in the Willow Pool; Mr. R. Calvert, Rowarburn, a native angler and an expert, had three salmon in the Double Water; Mr. Walter Scott, Holmfoot, had a basket of sea trout in the Double Water; and Mr. D. Edgar, Rowanburn, had two salmon in the Cauldron Pool. In the lower waters between Longtown and the Metal Bridge several good hauls have been made. In one day Mr. John Scott, Longtown, had four salmon; and Mr. J. Bell had one of the nicest salmon of the season, weight 27lb., and another one of 9lb.; Mr. Borwick, one of 16lb.; Mr. Buller, one, 16½lb.; Mr. Johnson, keeper, four, 18lb., 19lb., 15lb., and 18lb.; Dr, McLaren and Dr. Graham, a salmon each; and Mr. J. B. Slater was successful in capturing three salmon, 16lb. 10lb., and 17lb. I hope to review the river next week, as the close-time is fast approaching.—GILNOCKIE.

Dee (Aberdeenshire).—The past week has been most prolific of sport, but on Tuesday angling was entirely suspended, owing to the river being again in great flood. This will have good results, however, afterwards. Such a show of autumn fish has not been known within the memory of the most experienced fisherman, and as regards quality and weight, there is nothing to be desired. On the higher reaches the autumn migration has not yet been felt. On the Aboyne section, Mr. Rice landed a fine fish, 19½lb., on the Huntly Arms Water; Mr. Milne, on the Upper Dess Water, had two of 8½lb. and 10½lb.; while Mr. Albert Farquhar had three heavy weights on the Huntly Lodge Water; and Mrs. Pickering a beauty of 21½lb. on the same water on Saturday. On the Lower Dess, Mr. Walter Davidson landed three, 7lb., 19lb. and 17lb., on Tuesday, and another of 17lb. on Thursday. On the Kincardine Lodge Water, Mr. Wm. Lamond had one of 9lb., two of 18lb. and 19lb., and one of 14lb.; while Nicol, keeper, had one of 9lb. On the Carlogie section, Captain G. Campbell had one of 18½lb., two of 18lb. and 16lb., two of 12lb. and 14lb., one of 18lb., one of 16lb, and one of 16lb.; while Capt. Chas. Campbell grassed two of 19½lb. and 8½lb.; and Mr. Archd. Campbell, one of 11lb., two of 10lb. and 11lb., one of 9lb., and one of 25lb.; while Mr. J. Campbell had one of 9lb. On the Borrowstone Water, Admiral Fane landed a beauty of 22lb., another of 16lb., one of 17½lb., two of 18lb. and 17lb., and one of 17½lb.; while Mr. Henry Champion had two of 17lb. each, and two of 17½lb. and 12lb. on the same water. On the Ballogie section, Mr. W. E. Nicol and party landed eleven fish, scaling from 9lb. to 23lb. On the Sluie Water, Mr. G. F. Chalmers landed two of 9lb. and 22lb., one of 14lb., and one of 26lb.; while Duncan, keeper, had several on the Commonty Water. On the Woodend, Mr. Farnall Watson made the following record: Sept. 28, four fish, 23lb., 18lb., 16lb. and 14lb.; 29th, four, 17lb., 16lb., 10lb. and 8lb.; 30th, nine, 24lb., 15lb., 10lb., 7lb., 8lb., 8lb., 26lb., 23lb. and 18lb.; Oct. 1, four, 12lb., 13lb., 16lb. and 20lb.; 2nd, three, 18lb., 16lb. and 8lb.; and on the 3rd, five, 14lb., 14lb., 16lb., 18lb. and 22lb. Mrs. Watson had also two fish for the week, scaling 14lb. and 17lb., being her third success for the autumn; Mr. Watson had twenty-eight fish for the week; while Mr. Turner Farley had a similar score on the Cairnton Water. On the Blackhall Castle Water, Mr. G. T. Hay and party landed thirty-one for the week, eight on Monday, six on Tuesday, five on Wednesday, five on Thursday, four on Friday, and three on Saturday, ranging from 8lb. to 30lb., and averaging about 16½lb. On the Crathes Water, Mr. J. C. Wordie and party grassed several beauties of the average weights. On the Durris Water, Mr. Baird and party have had about one hundred fish for the autumn season up to date. On the Drum Water, Mr. Francis Irvine, Mr. Buckley, and Mr. Fletcher, from Friday, the 28th Sept. to Friday the 2nd inst., both days inclusive, landed fifty-five salmon of an average of 16½lb. a-piece; while Mr. Scarlett Campbell, Sir Charles Turner, and Mr. Davidson, of Wellwood, have landed over eighty fish from the park water since the 1st ult. The fly, Phantom, live minnow and kindred lures are all being employed with very much the same success.—DEESIDER.

Deveron (Banffshire).—This river continues in fair fishing order, notwithstanding the absence of rain for about a week. Fish were never so numerous as they have been on all the sections of the river. On the Carnonsie Water, in the end of last week, Mr. W. E. Hall, had two fish, of 9lb. and 20lb.; Mr. Rowland J. Beech, had six fish, of 7lb., 7½lb., 8lb., 12lb., 12lb., and 24lb. On the Mayne section, Mr. Thurburn, had two, of 9lb. and 26lb.; Mr. Stock, one, of 10½lb., and the keeper three, of 8½lb., 9lb, and 17½lb. On the Netherdale section, Mr. K. Maitland, had three, of 9lb., 15½lb., and 18lb.; Mr. Fraser, the keeper, had two, of 7½lb and 8½lb.; Mr. Hunt, two, of 17lb and 18½lb.; Mr. Colwell, two, of 7½lb. and 9lb. The heaviest fish caught by the rod this season, was got on the Mountblainy Water, on Friday of last week, weighing 32lb. Colonel J. Forbes, of Dunlugas, had a nice fish, of 20lb.; Mr. Stuart, of Laithers, killed one of 9lb. On the Foglen Water, Captain Abercromby and party, have captured a large number, the heaviest being 18lb.; Mr. Stuart, of Laithers, had several, 7lb. to 18lb. Several fine fish, both salmon and grilse, were landed from the Duff House section of the river, by the keeper, Mr. Mowat, and others. On the free water at Huntly, and the Huntly Lodge Water, capital sport was got. As also on the Eden Water, when for the week, one of the ladies at Eden House, had no less than nine fish to her rod. The weather changed on Tuesday, when during the day rain began to fall, which will add to the volume of water, which was beginning to get low.—H. W.

Don (Aberdeenshire).—On the lower reaches of the Don sport has been most prolific, especially on the Grandholm cruives and Nether reaches, where fish are being got freely of splendid quality and size. On the Grandholm Water, Mr. William Kinderness, of Wimbledon, has had good sport during the past week, having landed sixteen fish of an average of 17½lb., and giving a total yield of 281½lb. On the tidal waters, Messrs. Gibb, Walker, Murray, and others have had splendid baskets of sea trout.—DON.

Inchnadamph Hotel Waters (via Lairg, N.B.).—The weather has been so adverse for some time back that very little angling was attempted; and as most of the sportsmen have now left for the south, the season may be said to be practically at an end. One day last week Mr. D. Mackenzie fished the Loanan, and landed a grilse weighing 5½lb. Another fish weighing 5½lb. was caught on the same water by Mr. Edwards, Newcastle-on-Tyne. Dr. Martin, London, tried Loch Assynt, and got a grilse weighing 6lb.—McB.

Inveran Hotel Waters (Invershin, N.B.)—Rod fishing closed here on Wednesday last, after a very successful season; so far as salmon and grilse angling is concerned it has been its best for many years. Since last reported its sport has been as follows:—On Wednesday, the 23rd, Mr. Blanco White fished the lower reaches, and got a salmon weighing 8½lb. on Cromarty Pool. On Saturday week, Mr. Dickinson grassed a fine salmon weighing 22lb., on Meadow Pool. On Monday week, Mr. Blanco White landed two salmon, a 14-pounder, on Meadow Pool, and one of 15lb. on Rocky Pool; and on Wednesday, the last day of the season the same angler landed a salmon, weighing 14½lb., on Round Pool, and a 15-pounder on Meadow Pool.—McB.

Liddle.—The Liddle is almost in better order than the Esk, and some good fishing has taken place during the past week. Mr. W. Crozier, Newcastleton, had three salmon, 13lb., 6lb., and 7lb., in the Whithaugh Pool; Mr. George Elliot had a grilse, 7lb.; Mr. Arthur Little had a splendid salmon, 18lb.; Mr. Graham had a salmon in the Double Pot, and several takes in the Inch Pool; Mr. Johnson landed a good salmon in Cow Ugly Pool, after a good run; and Mr. Goodfellow had a nice salmon in the Moat Linn Pool.—G.

Loch Migdale (Bonarbridge, N.B.).—The splendid sport obtained on this loch about two weeks ago has now fallen off, owing to the unfavourable state of the weather.

On Friday last, Mr. Harris, Rosary Gardens, South Kensington, fishing from Bridge Hotel, Bonarbridge, landed six nice trout, which averaged ½lb. each; and on Saturday nine, 5lb. in all. On Monday, this week, Rev. R. Hutchinson, Tain, made a basket of one dozen trout.—McB.

Spey (Aberlour).—Another successful week, and with a renewal of the floods the back end promises a rich return. On the Elchies Water Sir A. L. Smith, landed a fine fish of 22lb., another of 18lb.; and Mr. Gurney, one of 19b., while Miss Eleanor Smith had a salmon sealing 16½lb. on Friday last; and Mr. Gunry another of 15lb. on Saturday (Rothes). On Saturday Mrs. William Stewart-Menzies, of Culdargs, had a heavy basket of five fish on the Aikenway Water, yielding a total of 102lb., while Mr. Stewart-Menzies on the same water had a fish of 8lb.; and Lord Saltoun, two of 20lb. and 6lb. respectively. On the Surden Water Colonel Edisgillie landed a fish of 15½lb. On the Ballindalloch Water Mr. John Allan, Rothes, had a beauty of a fish scailing 24lb., and another of 6lb. On the Craigellachie Water Mr. McDonald, Inverness, landed one 8lb., while Dallis, gillie, had one 18½lb. on the Sourden Water.—G. M.

South of Scotland.—The whole of the South of Scotland rivers have been in flood since Monday forenoon, and no angling has been had since that day. It is many years ago since a back-end salmon fishing was so much interrupted by floods. In every river in the district there are abundance of salmon in the pools.

ANNAN.—In the higher waters a good number of fine salmon were killed. On Friday, Mr. Hullett, St. Ninian's, Moffat, angling in the stretch between Moffat and Wamphray, caught a fine basket, including three salmon, weighing 17lb., 12lb., and 9lb. respectively. On the same day Mr. George Kerss, keeper, at Craigielands, killed two salmon of good weights on the same water. Among the more successful anglers on the same reaches, and also in the Four Towns Water, have been Mr. W. Banning, Lockerbie, who killed a capital salmon of 25lb.; Mr. T. S. Bell, Lockerbie, landed three salmon averaging 20lb. each; Mr. William Murchie a large one; Mr. Halliday, Capewood, two salmon of 17lb. and 19lb. each; Major Hall, of Denbie, killed a small one; Mr. William Varrie, Lockerbie, caught one of 9lb.; Mr. Thomas Jardine one of 20lb.; and Mr. Dixon, Liverpool, a nice fish of 12lb. In the Kirkwood portion, a guest of Mr. Murray's had a nice fish; and several other gentlemen had fairly good sport on this water, and also on the Murraythwaite portion. Castle Milk and Hoddom Castle Waters have given capital sport during the past week, especially the last named, where some heavy salmon have been landed. On Saturday, in the Hoddom Castle Water, Mr. James Bell killed a salmon of 16lb.; Mr. Mosscrop, gamekeeper, killed one of 22lb.; Mr. T. Reid (Mr. Brook's second keeper) a fish of 19lb.; Mr. Charles Inglis, Commercial Hotel, Ecclefechan, successfully landed a grand salmon of 28lb. with Grey Turkey Fly. On Monday morning, before the water flooded, Mr. George Wardrope, Ecclefechan, grassed one of 26lb.; Mr. R. Bell, Ecclefechan, had one of 17lb.; Mr. Mosscrop a bright fish of 21lb.; Mr. T. Reid a small one of 10lb.; and Mr. Johnstone a pretty salmon of 17½lb. A large number of big salmon were hooked and broke away in the Hoddom Water, on Monday. In Castle Milk portion, belonging to Sir Robert Jardine, Bart., M.P., Mr. David Tweedie, Ecclefechan, landed a very fine salmon of 16lb. with Grey Turkey and blue body. In the Mount Annan Water, Mr. John Bell-Irving landed a small fish of 7½lb., on Saturday; and his keeper (James Riley), killed one of 17½lb. on the previous day. On the same water, on Monday, Mr. Andrew Bell (fisherman for Mr. Dirom), landed a salmon of 13½lb., out of the Tower Pool, with Grey Turkey Fly; and on Tuesday, Mr. Bell-Irving's keeper, caught one of 17½lb., out of the Back of the Wood Pool. The lower waters have not been giving such good sport, but in the Blackpool, at Blacketlees, Dr. McNaughton, Blackpool, Lancashire, killed a very pretty little salmon on Saturday, weighing 10lb. The Rev. Mr. Philpott, Manchester, fishing for trout, caught six herling. In the tidal reaches a fish of 13lb. was caught on the same day, in the Fish House Pool. Mr. John Rae the Firs, had a salmon of 22½lb. in the Castle Water.

Spey (Elgin).—Anglers have been fairly successful on the Spey during last week, considering the unsettled state of the river. On the Delfur Water, on Tuesday, belonging to General Sir Reginald Gipps, Mr. Fred Boosey, Bickley, Kent, had a salmon of 8lb. On the Craigallachie Water, on Wednesday, Major Grant, of Glengrant, had a fish of 9lb., and a ten-pounder on Friday. On the Arndilly Water, Sir Ford North, on Thursday, had a fish of 12lb. On the Arkinway Water, on Thursday, Mr. Stewart Menzies had two fish, weighing 14lb. and 10lb. respectively. On the Sourden Water, on Friday, Mr. Dallas, fisherman to Col. Edis, of Fitzroy-square, London, had one of 15½lb. and 16½lb. on Saturday. On Friday, on the Elchies Water, Miss Eleanor Smith had a nice fish, weighing 16½lb.; and on Saturday Mr. Gunry landed a fish of 15lb. On the Arkenway Water, belonging to Mr. Stewart Menzies, of Culdares, on Thursday, Mrs. Stewart Menzies had a salmon of 7lb.; Mr. Stewart Menzies one of 15lb.; and Mrs. Paget one of 7lb. On the same water Lord Saltoun, on Friday, had two fish of 19lb. and 8lb. respectively; and Mr. Stewart Menzies one of 16lb.—H. LOGIE.

Tweed, &c.—More fish have been killed in this district (Kelso) and in many of the others since my last report than were got during the entire back-end season of last year. This speaks volumes for the amount of fish in the rivers, and makes things look rosy for the salmon angler for the period he has to ply his vocation till the close time sets in at the end of November. The weather to-day (Thursday) is splendid, and the rivers rapidly fining down.—MAXWHEEL.

Ugie (Aberdeenshire.)—Good sport is now being got daily on this water. Mr. Finch, English Mills, Inverugie, landed a splendid fish of 27½lb.; Mr. Lumsden, of Ceylon, had one of 22lb., and two grilse of 8lb. a-piece; Mr. James Forbes, dentist, Peterhead, secured a couple of grilse sealing 7½lb. and 5lb.; while Mr. Benn, Mintlaw, and Mr. Spence, watchmaker, Longside, had a salmon each of about 15lb. weight on the same day. The river is in good trim, with a capital appearance of fish. Various lures have been called into requisition, but the fly has been the favourite of various patterns, and dressed to irons, varying from one and a-half to two and a-half inches.—M. M.

Irish Reports.

Ballinderry (East Tyrone).—Trouting is dull on the upper reaches of this stream, and until a heavy flood comes to raise and colour the water, it will remain dull. The middle reaches have not been fished much. On Monday evening your correspondent fished the Coagh sections, and got a basket of five ¾lb. trout and one pike, the latter taken on a Devon bait. The lower Barmouth reaches are well stocked with salmon, but they are not rising freely.

Lough Conn.—Mr. J. S. Pybus Sellon, out with me on the 2nd inst.—his first day pike fishing—killed a 26lb. pike, and on the 3rd inst. he killed an 18lb. pike, beside several small fish from 12lb. downwards.—FRANK HEARNS.

Lough Neagh.—There is a slight improvement on all the fisheries of this lake. Salmon and trout netting is fair around the Tyrone shores. Since the recent cold spell trout have ceased to rise. In any case they seem not to rise freely, except in warm but rough weather. Trammel netting for pollen ceased on the 29th ult., but the takes by the other nets supply the demand. Bream, perch, and pike netting is prime. Some of the pike run as high as 20lb. Rod fishing is poor, except at the mouths of rivers or feeders.—J. A. B.

Waterville (County Kerry).—Sport on the whole has been dull. On the Inny, however, salmon anglers have done fairly well. Messrs. James Leary, M. Brennan, and J. Sullivan, got three salmon each, on Tuesday. The netting is closed, and salmon have now a free pass on the river. Sport on the mountain lakes continues good.—THOMAS J. DENNEHY.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE second annual contest in aid of the funds of the Birmingham Anglers' Benevolent Society, took place at Fernhill Heath. On the 4th inst., that important factor, the weather, which helps to tend to the success or failure of all outdoor sports, was upon this auspicious occasion upon its best behaviour, which not only put the contestants on good terms with themselves; but made the contest one of the most agreeable of the year. The train left New-street Midland Station at 8.20, and conveyed about three hundred members and friends to Fernhill Heath, which was reached at 9.10, when after refreshing the inner man, at the Bull's Head Inn, a move was made towards the water, which lies about a mile and a-half from the village. The ground was staked out by Messrs. Coles and White, the referees, during which time the contestants had an opportunity of enjoying the splendid scenery of this neighbourhood, which is of a lovely and picturesque description. The draw for places was left on the hands of Mr. Miller, the hon. sec., and Mr. T. Wright, of Kidderminster. The two hundred and twenty-five competitors, after drawing their numbers, lost no time in getting to their places, and at 12.20 the whistle gave the signal for the start. The contest was of the usual duration, and at 2.20 the signal was given to cease fishing, when the referees assisted by the secretary collected the bags which they conveyed in a small hand-cart back to the Bull, where the weighing took place, the result being as follows: 1, W. Kimberley, Brothers Well Met; 2, W. Gorman, Bellbarn; 3, W. Kingerlee, jun., Highgate; 4, Mr. Sydenham, Rose and Crown; 5, Mr. Osborne, Highgate Park; 6-7, Mr. Foley, Old Green Man, and Mr. Jukes, Denrind (tie); 8, Mr. Loveridge, St. Paul's; 9, Mr. T. Kimberley, Brothers Well Met; 10, Mr. Rason, Highgate; 11, Mr. Bowler, Bellbarn; 12, Mr. Cattell, Brothers Well Met; 13, Mr. Monk, Highgate Park; 14, Mr. Denton, Bellbarn; 15, Mr. Craven, Highgate; 16, Mr. Bowyer, Rose and Crown; 17-18, Mr. Leaton, Ladywood, and Mr. W. Turner, Fruitful Vine (tie); 19, Mr. J. Beeston, West End; 20, Mr. W. Wilcox, Brookfield; 21, Mr. F. Eaton, Highgate Park; 22-23, Mr. Jarret, Prospect, and Mr. J. Beer, Brothers Well Met (tie); 24, Mr. Blackshaw, Queen's Arms; 25, Mr. Davies, Old Green Man; 26-27-28, Mr. Wheeler, Hearts of Oak; Mr. Bellington, Highgate Park; and Mr. Perry, Brookfields (tie).

THERE are twenty-eight prizes which consist of clocks, writing desks, tea service, ladies' work table, oil painting, chromo picture, cruet frame, lamps, pencil case, opera glasses, gold centred medal, Birmingham Association £1 1s., &c. The prizes will be distributed on Friday evening next, Oct. 16, at the Birmingham Arms Hotel, Smithfield, upon which occasion a smoking concert will be held, which will be free to the members and friends of the society.

A MEETING of the committee of the Birmingham Angling Association was held on Thursday evening, the 1st inst., at the headquarters, the chief item on the agenda being to take into consideration the removal of the Old Green Man Society from the Old Green Man Inn, Lancaster-street, to the White Horse Cellars, Constitution-hill. The removal was opposed personally by the representatives of the Brothers Well Met, Anglers' Pride, and St. Paul's Societies, who in making their opposition stated that the club would be within the half-mile radius of the clubs mentioned, and that if the committee allowed the removal, it would interfere with the already existing clubs in the neighbourhood. This brought about a discussion, which lasted nearly the whole of the evening; but, upon the vote being taken upon the question, it was decided by a small majority to allow the club to remain at their present quarters. Mr. Dance asked the committee to make a grant to the prize fund of the Anglers' Benevolent Society, when it was unanimously decided to grant one guinea to the prize-purchasing fund. Mr. R. Wingfield, of Worcester, was present at the meeting, and presented a valuable picture to the prizes of the Benevolent Society. Notices of motion from Messrs. Griffith and Hughes brought the business to a close.

THE committee of the Birmingham Angling Association fished their contest on Saturday afternoon last in the Trent at Alrewas, through the kind permission of the Midland Piscatorials, who rent this portion of the Trent. The whole of the committee took part, with the exception of Messrs. White and Keeling, who were detained through business. The contest was of two hours' duration, at the end of which time the following gentlemen were returned the winners in the order named: Messrs. J. Jones, J. Dance, Simkiss, Hughes, Coles, Hiley, Hall, Cottrell, H. Atwood, C. Allender, Griffith, Goode, Currie, and Gumbley. The party returned to Birmingham in the evening and met at the headquarters, where the distribution of prizes took place.

THE Severn Fishery Board held their quarterly meeting on Thursday, the 1st inst., at Birmingham, when the chief business transacted was respecting the salmon fishing and the weirs, &c. I am pleased to see that our representatives from the Provincial Association are at all times on the watch to try and benefit their brother anglers, and on Thursday last Mr. T. Coles brought forward the following motion, which was backed by Mr. R. Wingfield, of Worcester: "That the Severn Fishery Board memoralise the Board of Trade with the view of taking under its control the navigable portion of the river Avon between Stratford and Tewkesbury." This question is of the most importance to the Midland anglers, and the outcome will be watched with interest, and, if adopted, this much-neglected river will in a short time prove a happy hunting-ground to the Midland followers of angling.

IN my Notes last week I made mention of a special general meeting of the Birmingham Angling Association for the purpose of acquiring water for stocking purposes and also the renting of water for the members to fish in. The date of the meeting mentioned by me last week was the 8th of October, but since the printing of my Notes the date has been altered to the 15th of October, in order to give the clubs more time to consider this important matter.

NOTES FROM LANCASHIRE.

THE close of the trout fishing season was notable for more successful results than was at one time expected. The latter end of August and the month of September fully atoned for many disappointing days experienced in the earlier part of the season. In looking over the records of several well-known and expert anglers, in more than one instance the last six weeks show the number of fish killed as far in excess of all the rest of the season put together. Bottom fishers have had a great advantage during the season, and, since wasp bait came in, their baskets have been very good.

THE Northern Anglers' Association are very busy in Lancashire just at present. On Tuesday last a private meeting of one of the sub-committees was held in Manchester, but of their doings we cannot speak just now, but from information in our possession our interests are carefully looked after, and most desirable reforms and other items are receiving vigorous attention.

THE new rules of the Manchester District, which came into operation a few months since, have so far worked well. Several clubs have been enabled to deal firmly with cases which under the old rules would have caused considerable trouble. Progress in reforms is reported in many of the clubs affected.

IN reviewing the doings on the various rivers and streams visited by Lancashire rods, the sport reported is rather above the average. The Ribble, Dee, Dane, Weaver, and Bollin, have all had considerable attention, and with the exception of the last have repaid those who have visited them. Pike fishing is affording considerable sport, and although the fish captured are not large, the quantity taken in some way atones for the weight. One of the Cheshire meres is said to contain some very fine specimens, but if things do not alter the fish are likely to remain, for no permits are granted. The fortunate owner may perhaps change his mind if the wild fowl continue to disappear in the manner of the last two months.

IT is a matter for congratulation that Lancashire anglers have not responded to the invitation for entrance to the Great Sweepstake. Club and other contests have been a marked failure of late, and perhaps this may account to some extent for the collapse of the movement.

THE Merry Anglers have brought their season to a close with a extra match at Marston, particulars are not to hand but a most enjoyable day was spent. The Wellington Club are plodding away in their endeavour to find winners for the prizes offered, and as a sign of their efforts being rewarded it may be mentioned that only two remain now on hand. The Bridgewater are still worse off, having five prizes still unawarded, and destination of these is yet undecided. The club having their headquarters at Openshaw are concluding their season with a list of consolation prizes for a valuable kind, but why this contest should be dubbed a "Scramble" is a little hard to understand.

NOTES FROM NORFOLK.

ON Monday another fine bream was taken by a local angler. This fish, which weighed 6½lb., was caught on the Wensum above Hellesden Mills, near where the 8lb. bream was taken on September 13. I have this on the authority of Mr. T. E. Gunn, to whom it was taken for preservation.

ON the lower reaches of the Yare, little has been done during the past week. At Langley one boat took a few roach on the 4th inst. Several pike have been taken with spoon and natural bait, one gentleman taking four fish on Monday, in Langley Reach, and another rod had three in the same reach on Tuesday.

HIGHER up the river the roach have been well on the feed since the steamboats left off running (on October 1), and several good catches have been made, one boat taking about sixty fish in Coldham Hall Reach, on the 4th inst., and several other lots, of which I have not been able to ascertain numbers or weights, have been secured just above and below the Yare Hotel, at Brundall, the fish being much larger than at any other time this year. Several pike have been taken here; on Saturday, one gentleman had five good fish, from 5lb. to 9lb.

ON the Bure a few boats have been out, one party taking about two stone of bream, at Ranworth, on Friday. On the 4th inst. a catch of two stone of fair perch was made at Salhouse, near the little broad; and on Tuesday, about two stone of bream were taken at Horning.

WATER is still in good condition, and if the weather clears shortly, the fishing will still continue fair.

NOTES FROM NOTTINGHAM.

ON Wednesday morning, the Trent began to rise rapidly through heavy rain on the previous day, and when my report was written in the evening the river was nearly bank full. But the rise will assuredly be welcomed by the great and ever-increasing army of anglers. One was much needed, if only to scour the bottom and wash away the vast accumulations of weed. Saturday last witnessed the close of the Nottingham Goose Fair holidays, and it need hardly be said that the popular carnival attracted hosts of fishermen to the banks of the river. Several well-known barbel swims were substantially baited, but I have not ascertained of many fish having been killed off them. The season for barbelling is now practically over, and I cannot say that it has been a particularly successful one. Without baiting the fish have been most difficult to catch, especially in the Shardlow length, which is generally looked upon as the best on the whole length of the Trent. Some few days ago Mr. R. Fish, of Nottingham, returned with a substantial basket of chub and barbel from Catton, a village a short distance above Burton-on-Trent. The barbel numbered eleven, and amongst the chub I hear there were several weighing 5lb. a piece. At Clifton, Mr. F. Gibson, of Hyson Green, has taken with the maggot, above a hundred reach, weighing in the aggregate 42lb., and on the following day he supplemented the take with a catch of 18lb. The heaviest fish turned the beam at 1lb. 2oz. Mr. Geo. Bee, of the Nottingham Bowling Green Inn Society, has had a mixed bag of chub, roach, and dace from Fiskerton—the lot weighing 25lb.—and a barbel of 5½lb. has been landed in Newark Dyke, with horsehair tackle. Mr. W. Parr, of the Colwick Fishery, has been busy amongst the chub with the wasp grub, and on Monday, Mr. S. Pogson bagged three respectable pike with the trolling bait in the Weston subscription water. I have no doubt that the present rise will stir up the big bream, and in my next Notes I hope to be able to announce the capture of some fine specimens.

Mr. T. Wood, the well-known lessee of the King's Mills, Weston, and Shardlow Fisheries, had quite a battle royal with a splendid salmon in the first-named length, on Monday afternoon. Dropping down leisurely in his boat from the weirs to the head of Wenham Hole, Mr. Wood tackled up, with a view to kill a few small fish. He was unattended, and had neither gaff nor landing-net in the punt. His small rod only measured 9ft. in length, and the tackle he brought into requisition was entirely composed of fine-drawn stained gut, to the end of which was attached a No. 8 hook. Having got the depth, the float glided gently down-stream, and the very first turn witnessed it suddenly "bob! bob!" The bobbing was repeated, and although the angler believed it was due to the bait dragging the bottom slightly, he struck, and found himself fast in what at first he anticipated was a bream or a barbel. Suddenly, however, the fish dashed away, and the battle began in right down earnest. Coming up and springing forwards about five yards, his true nature was revealed. What to do under the circumstances was a puzzler. The boat was securely anchored, and no one was at hand to render assistance. Playing the fish skilfully before him, Mr. Wood contrived to regain possession of one of the punt oars, and as (fortunately) a long rope was attached to the anchor-chain, he managed, as best he could, to pay the rope out by degrees. Presently the fish darted up-stream, and again showed itself in most frantic fashion. The struggle went on nearly half-an-hour, before the angler—first working the oar for the bank, and next resting for a "breather,"—could reach the side. But in this respect he never actually succeeded, so far as the boat itself is concerned; there was not sufficient rope, and at some personal risk the gallant fisherman sprang from his craft on to an embankment of ugly stonework a distance of a couple of yards, and close underneath which there is a barbel run of fully 10ft. of water. Once on *terra firma*, Mr. Wood was able to bring more power to bear on his quarry. Gradually the fish gave way, and at length was drawn between a kind of streamlet on the stonework. Here it plunged again, but Mr. Wood stuck at it, and finally succeeded in planting the thumb and finger of his left hand between the gills. Lift it, however, he could not for some time. Like the fish, the angler was thoroughly exhausted, and it was only by an extra or supernatural effort that he managed, in a scrambling sort of way, to deposit it on the bank above his head. On examining the mouth it was found the hook was firmly embedded in the gullet of the fish, but the wonder is that with such fine tackle the gut—in the long struggle which ensued—had not been frayed in two. It measured 22in. in length, 18½in. round the girth, and weighed—when placed on the club scales of the Nottingham Wellington Angling Society, of which Mr. Wood is a prominent member and an active supporter—15lb. The tackle was not disturbed; and several gentlemen who with myself saw both it and the fish were loud in their praises of its condition, considering we are now drawing to the eve of the close season.

A communication has been received by Mr. Chas. Heald, the secretary of the Nottingham Shoulder of Mutton Angling Association (Mr. R. Higginson's, Smithy-row), from the Derby Protection Angling Society, on the subject of the proposed imposition of a rod tax on all rods, by the Trent Fishery Board, within their jurisdiction. The anglers of the Derby Society are anxious to know what the friends at Nottingham intend to do in the matter, and it is their intention shortly to send over a deputation to confer with them on the subject. Personally, I am of opinion that the Trent Fishery Board will experience considerable difficulty over their proposed "new fad." They do nothing whatever for Nottingham coarse fish anglers, and whereas the board can afford to station a paid water-bailiff at Derby, and a second at Newark, they seem to regard our local wielders of the rod as so many nonenities. The fact is Nottingham possesses considerably more anglers than Derby and Newark combined, and yet their claims to protection are entirely overlooked. The Trent flows to the immediate south of the town, and there are times when a paid officer could render most valuable service in the suppression, or at all events, mitigation, of illegal practices. To impose a tax on rods in the district will require a big army of tax collectors. I annually take out a salmon licence, and I suppose the holders of these and trout licences will be exempt from the proposed new order of things. If the Board would do something for coarse fish anglers, I don't suppose many would grumble at paying a small tax. But they must do something before they begin to extort something.

With the close of Nottingham Goose Fair holidays, last Saturday, the summer angling season is always regarded as at an end. The various clubs enter upon the winter term, in which the classification of fish for weighing-in purposes differs from that of the summer. The leading local society (the Wellington) still continues to make satisfactory headway under the able guidance of its officers. For the ensuing campaign no fewer than a hundred and twenty railway travelling tickets have been applied for, and already the "mystery-box" in the society's room could, if opened, unfold a thrilling tale of the "whoppers" already weighed in by a large number of the members. Strangers devoted to angling should give the Wellingtonians a look in on their weekly meeting night—Thursday—I am sure they would be heartily welcomed. Rumour hath it that amongst the chub weighed in is a leviathan of 6lb. A prize valued at five guineas is given for the best specimen chub killed with the bottom-bait, and a similar prize for the best specimen taken with the fly. Special prizes are also given for such special fish as salmon, trout, and grayling.

NOTES FROM SHROPSHIRE.

A knot in the roll of red tape which entangles the question of improving the salmon fishing of the Severn has brought the progress of the Severn Board of Conservators to an unlooked-for block. At their meeting on Thursday in last week, a bye-law was to be proposed for adoption consequent upon the resolution passed at a previous meeting, "That the termination of the annual close season, as to the whole of the Severn Fishery district shall be altered, and that such close season shall commence on the first day of September and terminate on the first day of March following both dates inclusive for all modes of salmon fishing." The bye-law, it appeared, had been framed upon an erroneous minute as to the motion at the previous meeting, and the chairman explained that, having taken the opinion of qualified people, he felt it his duty to say at once to the Board that the proposed bye-law could not in its present form be put, for the reason that it was illegal, as it provided that all salmon fishing, both by rod and net should terminate at the same time, whereas the Act of Parliament laid down that the rod and line fishermen should have more time to follow the sport than the nets. It is probable that another few months will have to pass, bringing with them more discontent and bickering before the much-needed extension of the close time is brought about; and moreover it is likely that the technical difficulty which has thus arisen will be seized upon as an opportunity of fighting the whole question again—a prospect which the upper water representatives at least will hardly regard with pleasure, for it will necessitate their full attendance at future meetings. However, they are thoroughly determined to leave no stone unturned to improve the salmon fishing in their localities, and will doubtless in the end secure the victory. A lengthy discussion took place at the meeting as to the better course to be pursued, and it resulted in the chairman offering to consult the authorities in London, to learn whether if a special meeting to consider a substitutory bye-law were held it would be possible for that to become law before the 2nd February next. A resolution to this effect was moved, and also an amendment that the matter be left over to the next ordinary meeting in January, those who took the latter view arguing that the close time had better be left unchanged for next season. The amendment was lost by twenty-four votes to fifteen, and as a result, a special meeting will be held, if the Board of Trade think the necessary inspection and subsequent legislation can be carried out in time.

It was reported at the Board meeting that the salmon fishing licences for the past year realised £220, but of this sum a very small amount only is contributed from the upper waters, for the reason that it is not worth anyone's while to take out a licence either for rod or net above Shrewsbury, except, perhaps where the owner could command one or two good reaches. Around Shrewsbury I believe there is now not a single licence held—truly a state of things that is very forcible evidence of the need of radical reformation in regard to the facilities allowed for salmon to ascend the river and spawn.

The Chairman of the Board made some very pertinent remarks relative to the undesirability of Government giving powers to local bodies to take water from the Severn Watershed until all the schemes relating thereto were before them. Various schemes, he said, were now being mooted—one from the Borough of Birmingham, by which it was proposed to take water from the Wye, and possibly from the Severn; and another, promoted by the London County Council, which might also affect their watershed. Many schemes, in fact, continued the chairman, existed for the object of taking pure water from the Severn district, and the Board should endeavour to prevent any being taken that could not be spared, believing that if the various schemes were allowed to pass through Parliament piece-meal, their interests would be seriously affected. He did not, he said, desire to say anything of what had been done in this respect in the past, but he thought that what had been done had reached its utmost limits, and the committee thought it well to be wise in time, and that the time had come when they ought to press upon the Government the importance of seeing all the schemes at the same time, both with regard to considering questions of compensation and other matters. He moved, in conclusion, that this recommendation of the committee be adopted. Mr. Airey, of Worcester, questioned the wisdom of the resolution, remarking that he did not hold the doctrine that a river was the sole property of persons who happened to live in the valley through which it passed. Neither did he think it a very patriotic course for the Board to take to say that because they happened to live in the particular district that they would have a plentiful supply of good water, and that the districts, five or ten times the population, who could not get good water without going to such a district as theirs, should be opposed in getting water at every turn. The chairman explained that they did not want to prevent those bodies from improving their water-supply by taking the surplus water from their watershed, but to prevent their taking water which was necessary for the wants of the district. This statement was received with applause—applause which people who reside in and above Shrewsbury at any rate will heartily re-echo, for as it is we have now by no means sufficient water in the summer months in the Severn, to ensure the well-being of the fish it contains; nor, what is perhaps even more important to ensure the health of the inhabitants by carrying off pollution, and keeping the bed of the river in a clear state. In the heat of summer the river becomes so low that it may be easily waded across, and then the vile sewage-pipes are laid almost bare. The bed of the river adjacent, which has become covered with poisonous matter, is laid bare, and the result can hardly be conducive to the health of the town. If more water is to be taken away, one knows not what the end may be, and it behoves all local authorities in the Upper Severn, as well as its representatives on the Board, to keep a watchful eye upon the doings of Parliament in this respect.

The all-important report of Mr. Berrington, Chief Inspector of Fisheries, was presented to the Board, respecting the condition of the fish passes in the weirs of the Severn. The Chairman, remarking that the first question to be dealt with was the state of the navigation weirs, moved that a copy of so much of the Chief Inspector's report as referred to these weirs and desirable alterations therein, should be sent to the Severn Commissioners, and he would endeavour to arrange with the Commissioners that such alterations as would expedite the passage of the salmon to the upper waters be carried out. Two years ago, said the chairman, they had made an agreement with the Severn Commissioners with regard to the fish passes, and that agreement had been sanctioned by Government, and therefore he did not see how they could go to the Commissioners and ask as of right for anything to be done, but they could point out recommendations in the report and ask for them to be carried out. Mr. J. Williams very properly suggested that the report of the inspector should be placed in the hands of the members, so that they might give it their mature consideration. In the upper waters, he remarked, they had a very strong opinion that the deficiency of salmon arose from the action of the navigation weirs, and if that was the case they ought not to act in a hasty manner. He advised that they should deal with the matter at the next meeting. It was decided that Milford Weir should be improved, at an estimated cost of £25; that plans, specifications, and estimates, be obtained for improvements to the weirs at Llansaintffraid and Aberrhaiadr, and that various other improvements should be undertaken or estimated for. Thus the visit of inspection seems to have borne good fruit, and as a result the weirs will be considerably improved.

NOTES FROM IRELAND.

[From Our Dublin Correspondent.]

The closing days of the rod-fishing season in the Dublin district have not been marked with any special degree of success, nor indeed has the weather been over-inviting to anglers, yet several rods plied the northern trout streams. The Tolka and Nanny waters, where fair baskets were effected. Sea angling around the bay is, however, giving sport, especially at Greystones, where several club members have had nice catches of conger, cod, &c. Kingston Harbour continues a favourite resort of sea anglers, and it is indeed a sight (on Sunday afternoons especially) to watch the number of lines cast on all sides, and their various takes. I saw one line take two fine whiting in about ten minutes the other evening, right at the end of Carlisle Pier, where the Royal Mail boats start.

Sir Thomas Brady is, it is announced, about to retire from his official position of premier Inspector of Irish Fisheries, a position which for many years he has held with dignity and marked ability. The announcement is read with regret by all classes in Ireland, but amongst none will he be more missed than amongst the poor fishermen of our entire coast, in whose welfare he took a special interest. Year after year he has pleaded their cause, particularly in cases of distress, and never has he pleaded in vain. He has lived to see most of his best efforts on behalf of the Irish fisheries crowned with success, but still hopes to see a National Fishing Department established, which will be representative of the people and devoted to the further development of our fisheries generally.

I have had many good communications sent me from various districts concerning fishing, but this one "takes the cake." Of course I do not vouch for its correctness: "Lough and river are swarming with fish, enormous catches of which are being made by the workmen of the Foyle and Bann Fishery Company. One of 7lb. jumped into a ferry-boat on Saturday, much to the astonishment of a passenger, whom the fish hit on the head. Six salmon leapt into pleasure-boats on the day of regatta. Of course, the owners of the boats claimed the fish." There now, you needn't trouble, with rod and line on the Foyle or Bann. The fish, instead of waiting to be caught, are so delighted you've come, that they actually jump out at your feet. Wonderful!

"Just throw me those half-dozen big trout," said an angler to a city fishmonger. "Throw them?" queried the dealer. "Yes; I want to tell my wife I caught them."

NOTES FROM TYRONE.

Reports from all parts of Tyrone show that on the principal streams sport is dull, generally from the low clear state of the water. A few slight freshes have been experienced, but not heavy enough to raise or colour the water. The season closes to-day on the northern rivers—Strule, Mourne, Castlederg, &c.—and altogether it has been but a middling one. Already salmon are running up to the spawning beds, and for a few weeks the keepers will have a busy time watching the poachers. However, these rivers are well preserved. We wish we could record the same state of affairs on the remaining streams.

The Ballinderry, Blackwater, Newmills, Kildress, and other rivers in the eastern section are all low, and not much has been done on them except coarse fishing, and that has been fairly good. The lower reaches of the Ballinderry are well stocked with salmon, but they are not rising well. Poaching is scarcely as prevalent as it was. The Blackwater has not done well this season.

A curious case came before County Court Judge Kisbey, Q.C., at the East Ballybat Quarter Sessions, which interested particularly those who are engaged in supplying the English markets with eels from fresh-water lakes all over the North of Ireland—but especially Lough Neagh. At the June court day of the Crossmaglen Bench of Magistrates, Mr. James O'Neil, Inspector of Fisheries, Dundalk, charged David Wallace "for that the defendant in Loughross Freshwater Lake on the 6th May last, during the annual close time for eels did make use of a *fixed engine* for taking eels, and did take and had in his possession a large quantity of eels contrary to the statute in such cases." A further charge of also having eel fry in his possession, same date, was preferred. The magistrates dismissed both cases, and Mr. O'Neil appealed to the higher court to quash this decision. Mr. O'Neil deposed that on the day in question he saw Wallace taking eels by a stationary line fixed in Loughross Lake. The engine consisted of a main line to which at intervals were attached smaller baited lines. The line was set at dusk in the evening and lifted the following day at noon. After hearing the evidence, His Honour said that in the general question of whether this was a river, he was against the respondent. He was of the opinion that although it was called a fresh-water lake, no offence had been committed against the Act of Parliament, and he was prepared to decide that the instrument employed in taking the eels was a fixed engine within the meaning of the Act; however, as the point was a new and important one, he would "state a case" for the superior courts. In the other appeal case the dismissal by the court below was confirmed by His Honour.

— NOTICE. —

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to R. B. MARSTON, the Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter Lane, London, E.C.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston, and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free, to any part of Great Britain and Ireland ... 10s. 6d.

SATURDAY, OCTOBER 17TH, 1891.

IN THE WAKE OF ST. PETER; OR, FLY-FISHING IN PALESTINE.

By SARACEN.

IN the fall of the year 1887, myself with two other Englishmen, and four representatives of the land of Uncle Sam and wooden nutmegs, made up a party for the combined purpose of exploration and pleasure in Egypt and Syria. Embarking at Marseilles by a Messageries Maritimes steamer, we arrived, after a delightful voyage of about six days on the blue Mediterranean, at Alexandria.

I will pass over our sojourn in the land of the Caliphs with the remark that, like unto the Israelites of old, none of us were sorry to quit a country teeming with wonders, but positively unique for fever, dirt, and disease, the latter both moral and physical. It is said that Moses on leaving Egypt recommended his followers to spoil the Egyptians—in other words, lay in a good large stock of dry goods on tick without the slightest intention of repayment, though by what means he contrived to weather the Custom House authorities is not stated. Unlike Moses, however, we took away only that which honestly belonged to us—recollections.

After a good shaking on the Ismalia Zagazig Railway, we arrived at Ismalia on Lake Timsah, passing the site of Tel-el-Kebir *en route*, and from thence steamed up the Suez Canal to Port Said, and at the latter embarked for Jaffa, which was reached on the third morning from our leaving Cairo.

What made me, previous to leaving London, think of putting up a small collection of flies, drawn gut, &c., in an air-tight tin-box, I cannot exactly say, probably being a Devonian, it was what Pat would call "the nature of the baste"; however that may be, I had no reason to repent my forethought.

At Jaffa we procured tents, horses, mules, servants, and, more important than all, an excellent dragoman, named Raphael, a man unsurpassed for courage and skill as a leader in that land of desolation, stones, and mountains.

On leaving Bethlehem the Sheik of one of the large Bedouin tribes appeared to guide us into the interior at a heavy blackmail. He and I soon got on intimate terms; perhaps my tobacco had something to do with this, at any rate he took a liberal allowance, and called me his brother. How nice it is to meet with one's relations in a far away country. We passed several days with his tribe.

From Raphael I got the information that there were few fish in Jordan, but farther up there existed many rivers, lakes, and pools, crammed full, notably Tiberias, and around the Hooleh Morass. Jordan was indeed a failure; fancy that beautiful stream we have been taught to revere from our infancy and so often mentioned in Sunday-school books, and which if the daily papers of those times are to be believed, was the fashionable watering-place of the Metropolis of Jerusalem, being the colour of the Thames at London Bridge, surrounded by palms and creepers white with dust.

I did not bathe in Jordan; the Americans of course insisted on it as being the proper thing. W. fell into a hole at once, and D. slipped in the clay. Altogether the incident was of an impressive character.

After leaving Nazareth and crossing the Horns of Hattin (famous in history as the site of a great battle between the Infidel and Christian, in which the latter seems to have had out-and-out the worst of it) a magnificent view is presented of the northern side of the Lake of Galilee, lying in repose at our feet, surrounded on all sides by mountains, while in the far distance can be seen the snow-capped summit of mighty Hermon rising like a deity over all.

Arrived on the shore of the lake, our goal is at length reached, the baggage having been sent on to our camping-ground at Ain-et-Tin, we embarked on a lateen shoulder-of-mutton sail contrivance, called a boat, to visit Capernaum. My American friends were exceedingly glad, but this state of things did not last, for, about half-way across, one of those storms for which this water is famous came upon us, the boatmen lost their heads, added to which having but little knowledge of tacking, the sail got taken aback several times. The Rais, or captain, declared it was God's will that we should not go unto Capernaum; accordingly the sail was stowed, and the vessel rowed into Magdala. Whilst walking on to our camp from that place, W. asked me what I thought of the voyage. I replied that to my mind we had acted the Apostle too much.

We arrived at Ain-et-Tin (fount of the fig-tree), so-named from the fact that a pure perennial fountain, shaded by an old fig-tree, flows from the rock into a small pond connected by a stream with the lake itself) at about 5 p.m. By this time the water was without a ripple, the winter sun setting in a bed of pale crimson, blended with azure, the surrounding mountains being shown in all their glorious colours reflected on the water as in a mirror. Now and again could be heard the splash of fish evidently engaged in taking a good square meal preparatory to retiring for the night. This set me thinking. "W.," said I to my friend, "just come to our tent and assist in the manufacture of some gut collars, for if I don't mistake, those fish will take an artificial fly like steam; this was soon accomplished, but the question then arose, what on earth are we to do for rods? As we could see no canes, W. cut two capital switches from an oleander (Rose of Sharon), which being moderately springy answered the purpose well enough. In the meanwhile I endeavoured (without success, for it was almost dark) to ascertain at what insect the fish were rising. "It's no good, old man," exclaimed I, as W. came up with the rods; "we must trust to luck entirely as regards the fly. I shall therefore point with a small Cock-y-bondu and place a Coachman for lob. You use the same, only reverse the order." Another minute and we were prepared for action, the lines, about eight yards long, made tight to the end of the rod, with an extra piece carried down to the butt in case of accidents.

At the first cast I felt a touch, but missed; in a moment more, another. This time the quick turn of the wrist proved too much for his fishship, who, after performing several amusing aquatic exercises, was prevailed upon to come to shore. Bravo, Coch-y-bondu!

In the delight and pride occasioned by capture number one, it was distressing to hear sounds from the other side of the pool indicative of anything but flattery toward the piscine race. Poor W. it seemed had hooked a beauty, which, favoured by the darkness, contrived out of pure cussedness to break him over some stones. On the strength of this sad occurrence we agreed to give it up for the night, and drown our sorrows in the fumes of cavendish and rum punch.

Eight o'clock next morning found us hard at work, the sun in our faces and a slight wind at our backs, and better still a lovely ripple. The fish rose snappishly, in a manner suggestive of business. Quantities of small gnats being about, we put on two of the smallest-sized Yellow Duns (winged), which had often rendered me good service on the Derbyshire Wye and Devonshire streams. In about an hour we had twenty nice fish, though many of the larger ones were lost, owing to the tight-line. At eleven a.m. the sun's heat proved too much for the fish in the pool; accordingly they ceased to rise.

W. then hinted at trying the lake itself. For about five yards from the shore the weeds were very thick, so we were compelled to wade. Once through them, and commanding open water, the sport came fast and furious, much to the surprise of several Arabs (busily engaged doing nothing, as usual), who failed to understand how the "Ingleez" contrived to catch fish with a feather. An explanation ensued; whereupon they declared that never, to their knowledge, had the fish been so captured before; adding, "The Ingleez can do everything." I felt satisfied.

After an excellent morning's work we returned to lunch, and received many congratulations from our dragoman and the rest of our friends. The fish proved to be what I think are termed "binni" (or Bænni), and belong to the carp tribe—a trifle longer, perhaps, which gives them a very grayling-like look. On being struck they at once make for the bottom, and possessed as they are of a tender mouth require careful handling. A slight strain, well kept up, will invariably bring them to creel. The usual size varies from 10oz. to 1½lb., but I have seen them quite 3lb. This species exist more or less throughout Syria, in both lakes and rivers, which they hold jointly with the mud-loving coracinus, or cat-fish—sometimes called "sly silurus"—easily known by the six tentacular appendages to its lips. The local fishermen call it "harboot." The creature affords no sport with the fly, and is usually netted or hooked; and being nothing to speak of in the way of eating, may be dismissed with the remark that it was held sacred by the Egyptians, probably because it was fit for nothing else.

Since recording my experiences, it has been reported that the streams which flow into Galilee, and also the lake, swarm with trout. All I can say is (without giving an emphatic denial to this statement) that though my friend and myself spent some days, not only at Tiberias, but also on many other rivers, pools and streams throughout Palestine, rod in hand, trying many sorts of flies, we neither saw nor could hear anything about trout. Moreover, I am of opinion that the waters generally are unsuited to that kingly fish, though in all fairness I am bound to say the lively binui proved a very fair substitute so far as sport is concerned.

Some good catches may be made at Melahah, also Ain Belata—both camping-places near the Hooleh Morass. There is likewise another very pretty pool close to the hill of Dan. Any small gnat-like artificial fly, hackle or wing, will capture binui. Personally I found the small Yellow Dun aforesaid and Black Gnat ribbed with silver the most destructive. When darkness comes on, a medium-sized Coachman or Coch-y-bondu answers capitally; the fly should then be allowed to sink a few inches, as the fish take under water after sunset.

In conclusion it is perhaps unnecessary for me to add—use fine tackle. Of course with a tight line there will be some breakages now and then; but, after all, an expletive in D major, and the soothing influence of a genuine Turkish cigarette, or a few pulls from a narghilleh, soon puts the annoyance out of one's head, whereas coarse tackle soon causes a general stampede among the fish. To all lovers of adventure, mountain climbing, riding, and fine scenery, interspersed with a little fishing, I say, Do not hesitate to follow in the wake of St. Peter.

A GEM IN THE COTSWOLDS.

By Enthusiast.

Anglers, I believe, are generally unselfish; but it is a matter for observation that in the graphic and charming accounts of fishing expeditions that from time to time appear in the sporting papers, the writers are prone to say too much of their experiences, and disclose too little of the localities where they have been obtained. My object in writing the present article is, not so much to detail events that must occur to every angler, as to give those that are in search of it the opportunity of procuring an unusually good piece of trout fishing within moderate reach of London, and in a county where, I believe, the trout fishing is almost exclusively in private hands.

It is desirable that I should preface what I have to say with the clear announcement that I am but a duffer, and such experience as I possess has been acquired only by my own observation and tutoring. With what I can learn in another ten years, I may be able to classify the various duns that frequent our waters, and to throw a true line. At the present I can do neither the one, nor the other. Your readers must, accordingly, give such weight as they may think proper to my observations, but they should also know that I have, since my boyhood, been intimately acquainted with the streams in the district of which I am writing, and I may ask for confidence on that account, as well as on the ground that, although a duffer, I am what my *nom de plume* suggests, and would wilfully lead no brother of the craft astray. I may also add that I am acquainted with the public waters of the Lambourn, Kennet, Darenth, Avon and Itchen, and am consequently in a position to form a judgment which can claim to be founded on experience, if not to be reliable.

With these preliminaries, will your readers follow me to the little village of Bibury, in the heart of the Cotswolds. There will be found one of the neatest and best-ordered communities it has been my lot to come across. We all know that order arises from good government, and Bibury is no exception to this rule; and if the powers that be are somewhat autocratic, should the result be good, let us not complain. The village is situated on the river Coln, which rises some ten miles above. It is augmented at Bibury by a large volume of water from a spring in the garden of the Swan Inn, to which the fishing of which I am writing belongs. The spring water flows from the Swan garden, by the side of the village street, for about a quarter of a mile, forming a stream of the clearest water, about twelve yards in width, and some two feet or so in depth, and is then joined by the Coln. Thence it continues with a somewhat deeper and swifter water, past some cottage gardens and two meadows. The fishing for the whole of this distance belongs exclusively to the Swan, and is carefully looked after. Its entire extent is about half-a-mile. The pathway along the village street is asphalted, and protected from the stream by a wall. To anglers of indolent habits, if any such there be, this part affords an opportunity for fishing in luxury and at ease. In the wettest weather a man could comfortably angle there in his slippers. The constant passage of folk prevents the fish from being shy. You can consequently show yourself without fear, but your rod must not be so disclosed, because the fish at present have not been educated to heed it as little as the passers-by. Should this precaution be neglected, the fish are deep in the weeds in a second. By standing well back in the road, the middle and far side of the stream can be well fished, while the near side must be approached from below. In the meadows of course the case is different, and waders there are better than slippers. They are, however, by no means necessary, although an assistance in reaching some spots. Practically, the whole of the water can be well fished from the bank. At the end of the cottage gardens I have referred to, I have for days watched a fine fellow rising close under the bank, and whenever I saw him, a cast was attempted, and as often as it was so often was a fly left in some of the overhanging intermediate bushes. A fine collection of flies was subsequently made from these bushes. The hand of the bungler is here shown by the attempt to make an impossible cast, when by the lopping of a few branches, the desired spot could be reached with comparative ease, or at any rate by a fluke. This brilliant idea only occurred to me towards the end of my stay, and I made the necessary preparations by trimming the bushes, for that, I thought, would be the end of all things so far as this fish was concerned. Unfortunately, in so doing I scared my friend, but I intended to wait on him another day. That, alas! never came, and he or his counterpart will no doubt be there next season, possibly to fall a victim to a reader of this article. If such an one thinks of following my footsteps, let him not forget to take his pruning-knife with him.

I can vouch for the water being well-stocked with fish. Indeed, I believe many people would say that there are too many, but there is abundance of food, and the fish are bright, well-favoured, and run to a good size. An average of about one pound may be looked for.

I confess to prefer fishing with the dry-fly, and this is possibly because I do not rightly understand how to properly work a fly under water. I believe the generally-accepted local opinion is that a hackle fly fished wet is the deadly lure. A large Red Palmer, or March Brown, was sure to fetch them, so I was informed. It fell to me, however, to go my own way, as with no hackle fly could I bring a fish to the creel. The invaluable Red Quill, and on hot days the Black Gnat fished dry, answered better than any of the local prescriptions. The fish I found were generally full of the little black fly, and also of the yellow larvæ of a fly nearly as big as a May-fly. What it was I knew not, nor could I produce from my case anything approaching similarity to it. The water being so clear, and the necessity of keeping out of sight paramount, I tried fishing straight up-stream, and although I have found this successful on the Test and other waters, it was no use here. In hardly a case, except at dusk or with a slightly coloured water, did I in the shallow parts rise a fish, otherwise than from a cross cast. A couple of feet of gut over a fish almost always scared it, however gently placed, and I accordingly abandoned, as a general practice, the up-stream cast as a bad job. Although the usual condition of the water is as I have described, a good storm, and sometimes the mill above, will colour it a little, and then with a rise is the time, for those that wish it, to fill their baskets.

The water will carry two rods comfortably, and, I believe, the landlord of the Swan can make arrangements for another stretch of water, sufficient for another rod or two, on application. If the angler should require a change, he can get a day on the Fairford Water, six miles off, for two shillings and sixpence. The Swan water is, however, free of charge. The pick of the fishing is in the May-fly time. The rods fishing the water during that period this year, obtained, I was informed, a daily average of ten brace of fish, and the season here was no better than in other places. The earlier fishing is also good, and July and August are fair months; September rather late.

Personally I am never keen on making a big basket. I would sooner kill a brace of fish artistically, under difficult conditions, than five times that number when all things happened to be against the fish and in the angler's favour. One of the charms of fishing is not so much the filling of the creel, as obtaining the mastery over one that refuses to submit, and overcoming what appear to be almost insurmountable difficulties. Here is the nature of our countrymen, and what makes so many of them love the craft, and the best fishermen in the world. For those who like to flog a water from beginning to end, the Bibury stream can have no charm—it will soon be covered; but to those who are content to watch for and endeavour to circumvent feeding fish (and in one quarter or another there are some of these always to be found), let me commend the place as likely to afford infinite pleasure and good sport. As a practice ground for dry-fly fishing I could wish for no better place.

For my part, the stream and the old garden, with its rushing spring waters, would afford me all the recreation I require. I wish for nothing better than a warm day, a rug on the lawn, a book and a cigar, and, should the temperature be too high, sufficient energy to turn my body to the brookside and dip my head in its clear and cooling stream. The white ducks (for I should add that the autocracy I have referred to will allow nothing but Aylesbury's to be seen on the water) can be viewed from the lawn, and many a half-hour's enjoyment have they given me. It is impossible to imagine how much there is in a duck's toilet until one has watched it gone through. These white ducks, too, are responsible for a mystery which threatened to trouble my mind, but which happily I solved without much difficulty. On several occasions, when fishing, I noticed a white fly on my line. I thought a magician's hand had changed my dear Red Quill to a Coachman—a flick, and it was the Red Quill again. This happened so often that an examination was necessary, and it showed a tiny bit of duck's down on the fly, the result, no doubt, of the toilets higher up the stream.

It is now frequently claimed by writers in the public press that the Cotswold country deserves to be better known, and as a Gloucestershire man I can confirm this, and confidently assert that from the anglers' or artist's point of view there is no brighter gem in it than Bibury. To those, unlike myself, who will not be content with the simple delights of the village, the surrounding country will be found to possess charms peculiar to itself, and there are many places in the neighbourhood well worthy of a visit, especially by those of an antiquarian turn of mind. In particular may be mentioned Cirencester, with its church, park, and Roman curiosities, the Fairford Church windows, and the Chedworth Roman Villa. A visitor to these places must pass along the entire valley of the Coln, which to my mind can safely claim its right to the description of beautiful. Objection may be taken to that by some, but, be that as it may, no fault can be found with the assertion that a healthier district could not be wished for.

The nearest railway station to Bibury is Fairford, about six miles off, and Cirencester comes next, at a distance of seven miles. The landlord of the Swan will always meet trains at either of these stations, and the angler will find in him a genial host, and his quarters comfortable though homely. The visitors to the place are very few, and since July there has practically been no rod on the water except my own. It is well to bear in mind that the accommodation in the house as well as on the water is limited, and that it is desirable to write and make inquiries in the first instance.

May I add one word more as to flies? It is that an intending visitor to Bibury need not be anxious to take too large a stock or variety with him. He will with a little search find both the one and the other in the trees bordering the stream. These once belonged to me; but now, I presume, I can no longer lay claim to the ownership of them, and I freely bequeath them to my brethren. May they be useful to the finder, if in no other way than by teaching him to be chary in essaying to attack an impregnable position.

A FORTNIGHT'S HOLIDAY.

By Francis M. Walbran.

Autumn has always been a favourite season of the year with me, and it is seldom that I entertain serious thoughts of a protracted absence from town life until September has arrived, and "the golden hazy sun" of the poets sheds its mellow light over well-gleaned stubble fields and the russet-tinted woodlands. Emerald spring-time has its charms, and so also has the summer, with its leafy shade, floral wealth, and soothing, slumbrous influence of bird and insect life; but give me the autumn, a congenial spirit as companion, the river in a settled condition, with trout and grayling in an accommodating humour, and I would not change places with the greatest magnate in the land.

I have just returned from such an expedition, one of the most delightful I ever spent, and as my experiences of sport have been varied, I sit down, with the various incidents fresh in my mind, to endeavour to relate them to the readers of this Journal.

The stream upon which my friend and self commenced operations on Monday, September 14, is a peculiar one—it does not partake of the rocky, streamy character of the majority of our North Country streams, but flows through flat meadowland, alternating between fine gravelly reaches, partly covered with waving masses of weed, and gently-eddying lengths of deeper water, shallowing gradually towards the edges.

Contrary to the general rule, rough wet weather is conducive to the best sport; but there are times when the use of a dry fly, cast by a master hand, is productive of grand results. On our arrival at the comfortable inn frequented by the club members, our spirits were somewhat damped by the intelligence that one of the oldest and most experienced of them had laboured for three whole days with the grand total of a brace of pound trout as a result; but the anglers hopefulness is proverbial, and we sallied forth resolving to do our level best. Strolling down the little country lane leading to the stream, we encountered the old keeper, who has been in the service of the club for forty years, and may almost be said to have an affection for the fish under his care; he was afraid that we had come at a bad time, but urged us to make haste, as there were a few fish rising, and there might be a chance to have hold of some of them. By this time we had reached a little bridge crossing the road, a wooden sluice holding the water back to form a small reed-fringed dam above; one or two tiny dimples dotted the unruffled surface of the pool, and one sockdollager was cruising round the edge of the reeds, waving his tail above the surface, with his nose rooting among the weeds below. My friend soon had his rod together, and affixing a tiny Little Marryat to the end of a tapered undrawn gut cast, he floated it carefully over the place where the dimples kept appearing. I meantime watched his proceedings with interest, smoking my pipe and chatting with the keeper.

"No use, my boy," exclaimed my friend, after about ten minutes' work, "these fellows are too near the road, and everyone will be tempted to go for them; let us proceed upwards. On we went, now kneeling low, trying to deceive a rising fish, now sitting down for a few minutes to chat and debate what fly to experiment with next, until we came upon the senior member before alluded to, and watched him fish a beautiful shallow without obtaining the faintest semblance of a rise.

"Good morning, gentlemen," he said, as he rose from his knees at the end of the cast, "not much use fishing to-day; I am afraid they are at their old tricks again." One fish graced the interior of his creel, a nicely-fed trout of a pound weight, which had fallen a victim to the allurement of a Pale Watery Dun fished dry. After ten minutes' conversation, during which he advised us to work down-stream, we parted company and walked about a mile below before commencing to fish again. The fly that we ultimately found the most attractive was the Little Marryat, which represented the Whirling Blue Dun, a few of which were on the water; but we got tired at last of flailing, and retired to the keeper's cottage to partake of a cup of tea, and pick out a few Red Quills and Silver Sedges to be ready for the evening rise. In front of the keeper's garden is a long deep cut, which contains some heavy fish, but as a rule these artful gentlemen do not rise freely until evening. In September seven o'clock is the time prescribed for reeling up, so we confined ourselves to this stretch; but the evening rise was as disappointing as the one during the day—my friend caught a good fish, and I lost a brace. Then we wended our way through the fading light and spent a pleasant evening in the cosy inn parlour. There was a party of four of us, all keen fishermen, and great was the interchange of past experiences amongst us. Our fly-books were brought out, and patterns which had accounted for heavy baskets on various streams, in almost every part of the kingdom, were shown and their merits discussed. Twelve o'clock struck before we were hardly aware of the fact, and then we departed to our respective bedrooms. The morrow broke with a cloudy sky and a nice rippling breeze on the water, so that when we were driving down to the lower end of the stream our hopes were in the ascendant. We commenced where a foot-bridge spans the water below an island, and where I generally contrive to basket a brace or two of fish with the wet fly; but to-day, with apparently everything in our favour, not an offer could be got either with wet or dry. About eleven o'clock a few Whirling Blues appeared, and I mounted a couple—one winged, and the other a favourite Yorkshire hackled pattern, consisting of a yellow body, dubbed with squirrel's fur, and the feather from under the wing of a *young* grouse. My friend mounted an Orange Partridge hackle, and very soon, during a smart shower, hooked and lost three fish—one a goodly specimen about 1½lb., which escaped when it was apparently ready for the net. The day ended with very similar results to the previous one, excepting that the senior member, having donned his waders, fished steadily up a by-stream for a mile or so, and returned with three and a-half brace of good fish, and when we gathered once more in the evening he acknowledged that he never worked harder for a day's sport; in fact, that the game was hardly worth the candle.

About twelve o'clock, as my friend and I sat at the head of a broad shallow, eating our lunch, we witnessed one of those phenomena which occur now and then in one's angling experiences; the surface of the stream had previously been undisturbed, when suddenly on every side there appeared a rising trout—not a steady rise such as is dear to the heart of a fly-fisher, but a mad carnival, the fish rushing from side to side, splashing, bulging, and chasing one another. A couple of fish, apparently a couple of pounds each, were very conspicuous, and made a wave like that of a steam propeller every time they moved. We tried every fly, small and large, that we could think of, but all to no avail, they never even glanced at them. My friend, than whom no more enthusiastic angler breathes, went cautiously into the meadow, crawling to the edge of the stream on his hands and knees, and although he was behind the cover of a stunted willow bush, the two large fish referred to immediately were quiet, but as soon as ever he rejoined me they were at it again. How they became aware of his presence was a perfect mystery to me. It was equally so to discover what the fish were feeding on, whether some kind of larvæ below the surface, or on some minute midge fly invisible to our eyes.

So ended the first two days of our campaign, disappointing as regards sport, but none the less enjoyable, for if a man cannot accept reverses occasionally he is not to be considered a sportsman in the true acceptance of the term; good company, comfortable quarters, and the freshest of country air, fully compensated for our ill luck, and the next morning saw us *en route* for the Costa, to make a change from trout to grayling.

(To be continued.)

KINKING IN SPINNING LINES.—A very simple yet efficient way of preventing kinking, is occasionally, during the day, to reel in the reverse way, say once every two hours. This will neutralise any superfluous torsion which escaped the swivels. In fact, a few casts after this manner gives a negative torsion, so to speak, which acts as a reserve against kinking. Apropos of spinning lines, the great secret of preserving them and getting the maximum of tear and wear out of them, lies in the practice of thoroughly drying them after use. Then, grease or no grease, they will serve their day. To test a spinning line, do so when it is wet; and the same with gut casts after they are well soaked. The present season is prolific of angling incidents. A week or so ago most of the angling papers gave prominence to the incident of a salmon leaping into a canoe, *but it was lost*, which was not to be wondered at, when all the circumstances are taken into account. This revives the incident which happened a few years back to John Harper, the Deeside fisherman, whose sketch appeared in the last Christmas number of the *Fishing Gazette*. He was guiding a "float" or raft, of hewn trees, through the "sautfat"—one of Dee's most dangerous rapids (for he is as famous a lumberer as fisherman although that occupation is now almost obsolete) when a salmon leaped right on to the raft, as it dipped into the rapid, and, in the twinkling of an eye, Harper had a beauty of 12lb. shivering at his feet. His presence of mind was equal to the occasion.

Notes

THE salmon fishings on the Tay and Earn, belonging to the Earl of Wemyss and March, were exposed for sale in the Royal George Hotel, Perth, last week, before a good attendance of tacksmen. There was an increase of £13 on last year's rental on the subjects let; but one lot, which fetched £130 last year, was withdrawn. The total rent realised was £1,266. The fishings on the Tay, belonging to Sir James T. Stewart Richardson, Bart., were then exposed in one lot, and fetched £575 over last year's price, being an increase of one hundred and sixty per cent. Last year the price was £1,100; this year £1,675 has been arranged for.

MR. R. B. BAMBRIDGE writes: "Sorry no report was sent from Windsor last week—was away in Scotland fishing—but will send for next. Am fortunate in being here and able to do so, as I was in that Scotch express which came to grief at Crewe (see to-day's *Telegraph*), but happily I was in the last compartment but one of the train, though Guard Owen, in next compartment (his van), got badly hurt, but pluckily came right through to London with us."

MR. E. CARNEGIE writes: "Mr. Harry How, in the *Strand Magazine*, for September, writing about Madame Albani, says, referring to her being fond of angling: 'And then with rod and line, she will sit on the banks of the Dee, and many a good trout and weighty salmon have responded to her silent invitation to take a bite.' Fancy sitting still for salmon and trout!—P.S.: Did you get the information for the 'Anglers' Diary' I sent you?"—Yes; thanks.

WE are glad to state that Mr. T. Andrews, of Guildford, one of the most successful trout breeders of the day, has undertaken to do some articles on "How to Breed and Rear Trout," for our columns. We have asked him to illustrate all that he thinks require illustration. The article will appear once a month, or oftener.

THERE will be an exhibition of mounted fish, birds, &c., in the club-room of the Gresham Angling Society, at Masons' Hall Tavern, Basinghall-street, on Tuesday, October 20.

MISS WATTS, of The Grove, Bomere Heath, near Shrewsbury, who makes excellent flies at 1s. 3d. per dozen, writes: "I have some very handsome Blue Dun Cockerils and Honey Dun Pullets to part with. Would you kindly bear me in mind if you hear of anyone wanting any? I have also some excellent Honey Dun hackles for sale."

THE Yorkshire Esk has been affording plenty of sport lately, as will be seen from our Whitby correspondent's report. We wired to him to know in what way these salmon and sea trout have been caught, and were not surprised to get this reply, "Mostly bait."

THAMES FISHERY CONVICTION.—F. Budd and C. Wright were convicted by the Chertsey Bench recently for having taken unsizeable fish in the Thames at Chertsey, and fined in the sum of five shillings each. Mr. Bunting, solicitor to the Thames Conservancy, prosecuted on behalf of the Thames Angling Preservation Society, on the evidence of Mr. A. E. Armstrong, honorary river-keeper of the last-named society.

THE early and continuous floods have been a rare "*picking*" to the upper proprietors this season, and now they are rubbing their hands with glee. It is unfortunately too often the case that they are left out in the cold as regards the autumn fishing, and very often too late in the spring before they share the early spoils of the year; and yet their waters breed the fish for the most part. This season, all through, has been an exception, and the *back-end* is emphasising it most gratefully. There never was a greater demand for water on the Dee, and the enormous rents asked for a really good bit of salmon water are sure to be still more enormously increased. The tendency is upward.

ORMESBY BROAD AND HEIGHAM SOUND.

A short time back, having about a fortnight's spare time, and being desirous of obtaining some good coarse fishing near some quiet, out-of-the-way spot, I determined to try one of the least frequented of the Norfolk Broads. Judging from accounts I had read in the *Fishing Gazette* and other angling papers, I thought I should be certain to find there the very sort of place to suit me. Having purchased a small guide-book, by Mr. Christopher Davies, entitled "The Hand-book to the Rivers and Broads of Norfolk and Suffolk," and carefully studied it, my choice was finally determined by a paragraph referring to Ormesby Broad:—

"Uncommonly good sport is to be had amongst pike, rudd, and bream, the number of a catch being counted by the hundred, and the weight by the stone." Again: "For fishing, pure and simple, Ormesby Broad is as good a place as any to visit." I at once made a few needful preparations, and set out upon the expedition, accompanied by a friend, armed with multitudinous sketching blocks, paint boxes, and other artistic impedimenta, as he was desirous of conveying to paper some of the beautiful scenery of the broads, of which he had heard so much.

And here let me add—inasmuch as this article is to deal with the above-mentioned broad, more from a piscatorial than an artistic point of view—that to an artist all the broads, of which I shall make mention later on, are distinctly disappointing. We arrived at Great Ormesby Station about six o'clock, and hearing that accommodation could most probably be obtained at the Eel's Foot or the Sportsman's Arms, we looked about for a vehicle to convey us thither.

"Brackenbury will drive you, if you go to the Hook," said the porter, as he returned to resume his duties inside the station.

"And how far are we from the Hook?" my friend asked a fisherman, who was walking lazily home, laden with fresh-caught codlings.

"Hoo far to t' Hook? Why aboot a mile, or p'raps a mile an' a arf," was the reply.

There was nothing for it but to trudge, so shouldering our luggage we set out for the Hook. There we engaged a shrewd charioteer, who persuaded us to allow him to convey us to the Sportsman's Arms, rather than to the Eel's Foot, not from any motives of self-interest, he explained, at the same time producing one from a bundle of cards, whereon was set forth an eulogy of the advantages enjoyed by those who stayed at the former hostelry. He informed us that we should be unable to obtain boats on the Sabbath Day at the Eel's Foot, an arrangement which would not suit the likes of us. I don't know that there was anything strikingly irreligious about our appearance, or whether our charioteer judged character by the physiognomy, but he had certainly hit the right nail on the head. However, we found on arrival that all the rooms at the Sportsman's Arms were already engaged, but the proprietor kindly found us satisfactory accommodation at a neighbouring cottage. We hired a good boat at the inn at the moderate figure of eighteen shillings per week, and having sculled over a portion of the broad and admired its extremely likely appearance from a fishing point of view, we resolved to test its capabilities early on the morrow. I made inquiries as to the best swims for bream, and arose in the early morn soon after the day dawn was heralded by a chorus of peculiarly discordant sounds from the various water-fowl which inhabit the rush beds which deeply fringe the broad. It was an undeniably unpleasant morning; but my hopes were high, my tackle fine, my brandlings and gentles superb. I was also provided with many huge lob worms to "keep 'em together," as the boatman said. As I fished noiselessly, hour after hour, the words of the poet came into my mind—

"No birds were flying overhead:
There were no birds to fly."

"Keep 'em together," indeed: there were no bream to keep. I returned, sad but hungry, and after breakfast I interviewed the boatman as to my ill success.

Having started him on a long cigar, and done likewise myself, "Let me," I said, "tell you beforehand that I am not a novice at angling. I am not a great authority on the subject, but I do claim the right of calling myself an angler, and of not being classed with the many who angle for bream at a depth of 5ft. in 15ft. of water, and marvel at their want of success. I have legered carefully for some two hours, and have "Nottinghamed" with a worm, that, to a respectable bream, would be a thing of beauty. I have not used No. 4 hooks and treble gut, as did an angler who was near me on the broad, and who was lamenting his failure in language more forcible than polite. I have used No. 7, and fished all I know, and never have I been so unsuccessful. What is the reason?"

"Well, sir, it has been a cruel bad season for bream, to begin with, and you are not the only one who has been disappointed. I think myself that the reason of the bream feeding so badly is the heavy rains which wash down so much silt and food for them into the broad. There's only one way to get them now: you must let me bait up a hole for you, and I'll guarantee that you get some then."

I, therefore, concluded an agreement for a hole to be baited that night; and in the hope of giving an additional incentive to the baiting being done well and thoroughly, I made an offer of a piece of gold if we caught 50lb. of fish on the morrow. I fished for the rest of the day rather more successfully, although the take of roach and bream did not amount to much over 10lb. for the whole day, which was distinctly bad.

And here let me add somewhat of creature comforts for the benefit of any who may read this, and visit Ormesby Broad.

We had some beer from the Sportsman's Arms at dinner, and excellent it was; but after dinner a change came o'er the spirit of my dream; as I was smoking, and picturing in my mind visions of Brobdingnagian bream, and endeavouring to think what it was I wanted. Suddenly a desire came upon us simultaneously—whisky. I rang the bell, and was horrified to hear that the nearest obtainable bottle of whisky was three miles away, and it was a rainy night. I telegraphed home for a supply, and in due course received it. But let this be a warning to all those who like a "drop of the crathur" after a hard day's fishing to take a bottle of their own special with them.

We were out by six the next morning, and soon endeavouring to "keep 'em together" with boiled wheat, trusting that the succulent worm would act as a choice tit-bit to some monstrous fishy Lucullus of the bream *gens*. In a short time I had the satisfaction of hooking and landing a fish of 1½lb., and then for about two hours we were busily engaged; and when we returned to breakfast we had thirteen fish, weighing 15lb., and a quantity of smaller fry. Indeed, the small fish are a perpetual nuisance to the angler; but I shall have something to say about them in dealing with the summer jack fishing. On resuming operations later on we were not nearly so successful, our catch being considerable in point of numbers, but inconsiderable in weight. The only catch of any importance was a fine perch of 2½lb., in magnificent condition, but not well marked. That evening, whilst smoking the calumet of peace, the sentence in the guide-book came to my mind: "The number of a catch is counted by the hundred and the weight by the stone." Had we been alone in our ill-success I should have at once attributed our failure to want of skill; but not a single person did I meet who had been more successful than ourselves. There was only one thing to put it down to, and that was the weather, which, to do it justice, was simply disgusting.

I had one more day's bream fishing with but moderate success, and then I determined to have a try at the jack.

"Not a bit of good here in August, sir; don't matter what you try—lively Thames dace, gold fish, even liggering ain't always successful," said a boatman, whom I knew to be a good fisherman.

However, I tried, notwithstanding the expert's opinion. Two mortal days I spent in spinning and live-baiting. I even descended to trailing and dead-gorging in the weeds "down where the water lilies grow," and my only capture was a jack of about 3lb., caught on a small spoon—which I returned to grow fat upon the numberless millions of small fry which swarm in Ormesby Broad. The boatman was right. There is too much food for the jack to give you a decent chance of successful fishing. I then felt that until we should get some real hot weather, or a week without perpetual rain, I would leave Ormesby Broad, and seek fresh broads and waters new. I may mention that there is one of the most symmetrically-shaped pike I ever saw, weight 20lb., in the parlour of the Sportman's Arms. I was informed that one of the landlord's sons was the fortunate captor, and that it was taken on live-bait snap-tackle, and landed by means of a landing-net rather more than a foot in diameter. The fish is not a plaster cast, and liggering is reputed to be unknown on Ormesby Broad. Anyway that fish is sufficient to cause the angler to go forth and attempt to do likewise.

To conclude with a summary opinion of this broad. I think that in good weather the fishing would be excellent, but I was most unfortunate in this respect during my visit, and to this I attribute my ill-success. Should any one wish to try this broad for pike, February is the best month; for bream, a hot July or August. Boats at the Sportsman's Arms are both cheap and good.

Having said farewell to Ormesby Broad, we drove over to Potter Heigham. Here we were more successful, and I can strongly recommend the Thurne between Potter Heigham bridge and the gut leading to Heigham Sounds, and the old meadow dyke between the Sound and Horsey Mere, for capital perch fishing, though the principal fishing attraction of the Sound is the rudd. Fishing in the Sound is private, but permission is granted if the angler hires his boat at G. Applegate's by the bridge. In fishing for rudd here the best plan is to commence by hunting them—that is to say, by casting in small pieces of bread, and if there be any rudd near they will assuredly rise at them. Fish about a foot below the surface with running roach tackle; and as they are game, free-feeding fish, excellent sport will, as a rule, be enjoyed. I found paste to be the most killing bait; but gentles are also good. The first day's rudd fishing I had was upon Horsey Mere, where permission must be obtained, as the fishing rights are private. I had been spinning for one of the famous Horsey Mere pike, and having lunched I chanced to drop a piece of bread overboard. Almost immediately a large rudd rose at it with a splash. I at once cut off my spinning trace, and put on a roach hook on fine gut, pressed a small piece of bread tightly on it, and cast. There was a rush and a splash, and I shortly brought a fine rudd of 1¼lb. to the landing-net. Thereupon I put up a light rod, fine eight-plait silk line, a gut bottom unshotted, and a roach-hook baited with paste, attaching a fragment of cork to the line, in lieu of float, about 9in. above the hook. Directly I cast, the cork moved swiftly away in a sidewards direction, and I struck and hooked another rudd. That day we got about fifty, and on the next one hundred and fifty, though we were not successful in catching any over 1½lb. These were by far the best days we had, although we did very well on Heigham Sounds. I very much regretted that I had no fly rod with me, as I am confident that grand sport would be obtained using gentle and a piece of wash-leather and fishing near the reeds. In rudd fishing fish as near the reeds as possible.

The last evening I had upon the Sound was warm, and the water was unruffled by wind. The thick ulster which I had worn daily for over a week was discarded, and a few last sad hopes arose in my mind that all chances of a little summery weather had not yet disappeared. The sun was sinking to rest, sadly and lingeringly it seemed, as though he felt sorrow at parting after smiling for so short a time upon the long sweep of water, dotted here and there with the boats of anglers. Our boat was anchored near a patch of reeds, and the very rudd seemed to revel in the glimpse of summer, and fed ravenously, and fought fiercely with many a leap and splash ere they were guided towards the fatal net. There was silence on the waters, broken only by the occasional discordant cry of some water-fowl, or the rush of the pike pursuing the small roach and rudd as they flashed gloriously in their mad endeavours to escape the tyrant. At length I had begun to appreciate the broads, and the knowledge came to me that in a real hot summer, with the fish on the feed, they would be the paradise of the coarse-fish angler. And then I swore a mighty oath that I would return there when next we get a sweltering summer, and inflict a slaughter "grim and great" upon the myriad monsters of Ormesby Broad and Potter Heigham.

F. G. B. Eves.

—— LONDON CLUBS. ——

By Edgar S. Shrubsole.

THE CAUSTON ANGLING SOCIETY.

At the Coffee Pot Tavern, Warwick-lane, City, a body of anglers meet weekly who have made a big bid for popularity. A large and varied programme for the long winter evenings has been arranged, and the reading of papers by the members, lectures, &c., should form an enlightened and instructive means of getting a good attendance of those who constitute the club, and attracting many who are undecided at present what club they will join. This alone should command success; but, in addition, the members of this society have appealed very strongly, and I hope successfully, to genuine anglers, and their appeal has taken the very best form it could, for they have decided to run the Causton upon lines that are calculated to command support and good wishes in the highest quarters; under *no* circumstances—private or otherwise—can the idea of a gross weight competition be entertained, the whole of their prizes—a numerous and handsome lot—being devoted to specimen fish only.

Although a new society, it is virtually the outcome of the Brunswick Piscatorial Society, which ran so merrily for many years at the Brunswick Arms, Brunswick-street, Stamford-street, S.E., under the *regime* of Mr. Tom Keeble (now host of the Coffee Pot and treasurer of the Causton). Founded in 1890 by Messrs. Harry Dunn and John Smith, with Mr. R. K. Causton, M.P., as president, the meetings were held for a short time in the vicinity of Blackfriars-road, but it was not until June this year that the Causton was boomed to the angling world. Having settled down in their present quarters, the founders once more became associated with their old colleague, Mr. Tom Keeble, and the services of Mr. J. Deplidge being also available, the membership of the society rapidly increased from nineteen to forty, and from what I hear is likely to be considerably extended beyond that respectable number before the end of the year. I have asked the secretary to give a detailed list of the prizes in our "Club Reports" column, and when it appears it will be conclusive proof—if any such were needed—that a club *can* go on and prosper without fishing for gross weight prizes, although it may be advisable not to do away with them entirely in certain quarters. Up to now Mr. Tom Keeble has the largest bream, chub, and barbel; Mr. J. Deplidge the largest roach and rudd, and Mr. Harry Dunn the largest dace. Very fair sport has been the rule, and the absence of catches measured by the Thames standard has in no way prevented the general body of members from "showing up" in hopes of seeing a specimen fish or two. So far perfect harmony has prevailed in the ranks of the Causton members, and may the day be far distant when "that little rift within the lute" appears, "that by and bye will make the music mute."

The papers that have been read at this society so far are "On the River Wey," by Mr. J. Deplidge; "Roach Fishing," by Professor Chris Green; and "Barbel Fishing," by Mr. Harry Dunn. I had the pleasure of listening to Mr. Dunn, and must say his was more than an amateur's effort. Mr. T. Crumplin and Mr. G. E. Simms have promised to read papers here at an early date.

During my rambles among the London clubs this winter I shall certainly drop in occasionally at the Coffee Pot, and I hope—and quite expect—each time to see the club has made giant strides.

> "Tis not in mortals to command success;
> But we'll do more, Sempronius—we'll deserve it!"

THE GLOBE ANGLING SOCIETY.

Last winter, in these columns, I very strongly supported the extension of fish-preserving funds among our London clubs. In addition to the attractive appearance a goodly show of stuffed fish has, nothing serves better to bind a body of members together than a big collection of trophies of the war-path, hung upon the walls of the meeting-room. Surrounded by fish that have at some time gladdened the heart and quickened the pulse of some member present, there is a never-failing source of genial conversation at hand, and a powerful incentive for younger anglers, and less successful ones to go and do likewise; the inevitable result being that a healthy and sportsman-like competition results from the friendly rivalry of the members, and in their honest endeavours to get a bigger and better fish than their brother anglers of the same club, they go in for what so many of us wish every London angler would—specimen fish. When I go into a club and only see a few very old cases of stuffed fish, and these the evidence of the skill and sportmanship of members long since departed from this world, I generally know what to think, and, as a rule, I am about right. On the other hand; when I see a goodly show of latter-day specimens, and learn that so-and-so's fish of last week has gone to the taxidermist's, I feel satisfied with the club I am in, and settle down for the evening to enjoy myself among *bonâ fide* anglers, and most probably to learn something more in the long lesson of the art of angling. Most decidedly the presence of a deeply-rooted pride in the fish one has taken so many pains to catch, the half-stolen looks so often cast in its direction, and the enthusiastic manner in which the tale of its capture is told by the happy captor, are outward and visible signs that cannot possibly be mistaken. How much longer some clubs are going to devote every available penny to the prize-list, and cut the secretary so short that there is hardly a penny left sometimes to pay for the postage of a letter, and never dream of devoting a proportion of their funds to developing the club, writing its history and proclaiming the skill of its members in an unmistakable manner upon the walls of the meeting room, I leave it to the inner conscience of those implicated to decide. I have a more pleasant task before me, for I have to draw the attention of my readers to the collection of stuffed fish hung upon the walls of the meeting-room of the Globe Angling Society, at the George Hotel, Fonthill-road, Finsbury-park, a collection that I assert without hesitation is a credit to the club, as the members are strictly speaking working-men, and the fish have been got and stuffed only by sheer perseverance, the expense of mounting being paid for out of a fund formed by the members subscribing a few pence a week.

I hope at an early date to give some account of the formation and development of this society, with extracts from their rules, &c. I have not sufficient space this week.

The fish taken by Mr. Coleman, and drawn attention to in our "Correspondence" columns last week, have gone to be put up, and, when hung with those already in the room, will make a very pretty lot, well worth the journey to Finsbury-park to see. It will be noticed that the collection does not include either a barbel or a pike; the restriction is 10lb. for the pike and 5lb. for the barbel. That *Esox lucius* and *Cyprinus barbus* will not be long absent from the walls, and that when there they will be well beyond the minimum weight, is my sincere wish.

Roach are *par excellence* the Globe Anglers' quarry, and so we will particularise them first. Mr. S. Howell has one, 2lb. 1½oz.; Mr. H. Evans, one, 1lb. 12oz, and there are two fish of 1lb. 10½oz., one taken by Mr. H. Lake and one by Mr. S. Howell. There are two of 1lb. 9½oz., Messrs. H. Lake and G. Caborn being the captors. Mr. J. Holmes has one of 1lb. 8oz.; Mr. C. Ellis, one of 1lb. 7oz.; Mr. S. Howell, one of 1lb. 5oz., and there are three of 1lb. 4½oz., the captors being Messrs. G. Brown (one) and Mr. H. Lake (two). Four of 1lb. 4oz. each; Mr. S. Howell (two), Mr. S. Snow (one), and Mr. J. Holmes (one). Mr. D. Thomas has one of 1lb. 3oz., and Mr. Coleman's fish weighed 2lb. 4oz., 2lb. 3½oz., 1lb. 15½oz., 1lb. 13½oz., 1lb. 11oz., and four 1lb. 4oz. each.

The perch are a fine lot: one of 3lb., Mr. C. Ellis, and another the same (reputed) weight, badly mounted. One each, 1lb. 15½oz., 1lb. 14oz., and 1lb. 8oz., all taken by Mr. C. Ellis; and another of about 1½lb., captor's name not shown.

The bream are three in number, and good ones; one, 4lb. 8oz., and another about same weight, Mr. J. W. Russell; and one, 3lb. 10oz., Mr. H. Jeffries.

A tench of 3lb. 3oz. (Mr. W. Lawrence), a gudgeon of 2¾oz. (Mr. G. Brown), a chub of 4lb. (Mr. D. Thomas), a carp of 4lb. (Mr. D. Thomas), and a dace of 11½oz. (Mr. C. Ellis), complete a collection of coarse fish that is well crowned by a handsome trout of 4½lb., *taken with a single horse-hair line while roach fishing*, by Mr. G. Caborn.

HOW TO FISH AND TIE A HACKLE FLY.

Although this form of fly is the easiest of any for the amateur to make, I consider it, if fished properly, as deadly, and on some streams more so, than the most elaborately dressed artificials. There is no doubt that the fish take it to be either a partially drowned insect, or, what is more probable, the larvæ of certain aquatic insects in a state of transition. The best method of fishing them in low, clear water is wading up-stream, and using a short line; fish the edges of the strong streams, the glides at the head of them, and any odd corner or eddy behind stones, &c., where you think a fish may be located. I am frequently asked why I advocate up-stream fishing. I have very many reasons, but I think that the three following are sufficiently conclusive to prove that it is the only way of successfully fishing for trout and grayling:—

(1) As all fish lie with their heads up-stream, if you wade cautiously behind them you can get almost close to them, and consequently can fish with a much shorter line than down-stream, and have far more command of the same, both in striking and playing your fish.

(2) Immediately you hook your fish, you pull him down-stream, and play him out in the water you have already waded through. I have frequently, in the lowest and clearest water, killed half-a-dozen good fish in one stream by adopting the above plan, whereas had I fished down-stream the hooked fish would have frightened the whole shoal by rushing down among them.

(3) You strike the hook directly into the fish's mouth, instead of pulling it away from him.

So much for fishing the hackle fly; now how to dress it. Take a snipe or water-hen's wing: inside the first-named you will find about eight bright grey feathers, tipped with white; inside the latter similar feathers of a darker hue; both these feathers should be selected about an inch and a quarter long; take one of these feathers, strip off part of the fibre towards the root, turn part of the remaining fibre the contrary way, rejecting the white in the case of the snipe, and draw it through your lips to make it lie close. Wax a quarter of a yard of yellow silk with colourless wax, this will both wrap your hook to the gut, and make the body of the fly. Take a hook, say No. 2 Kendal scale—this size being easier for an amateur to manipulate—hold it by the bend between the thumb and forefinger of your left hand, with the point towards your finger's end; place the gut along the top of the shank, having first flattened the former with your teeth to prevent drawing, and with the silk wrap them neatly together, beginning at the shank end, and wrapping to the bend; rib it carefully up to within a few wraps of the end, when fasten in the feather with the point towards your left hand; take three firm turns of the silk over it, and clip off the superfluous point with a sharp-pointed pair of scissors; take hold of the root of the feather with a pair of fly-tweezers, and wrap it neatly round until the fibre is all taken up; bring the silk twice round the root of the feather, and fasten off with two draw-knots; cut away all superfluous feather, &c, and pick out the fibres evenly at each side with a dubbing needle. This in the case of the snipe's feather forms the snipe bloa, which is a favourite fly on the northern rivers; in fact, I know several experienced anglers who use one on their cast during the whole of the season. In the case of the water hen bloa, before wrapping up the shank of the hook the second time, wax afresh, and spin on to the silk a little fur from a water-rat. The old-fashioned system was to finish off at the bend of the hook; but practice has shown that flies so tied come undone very quickly, whereas finishing at the head makes both a neater and more lasting fly.—"*Halcyon*," *in* "*Leeds Mercury.*"

"ON SURREY HILLS."*

By a Son of the Marshes.

It is long since we have met a volume containing such charmingly-drawn descriptions of animal, bird, and fish life in rural England as those depicted by "A Son of the Marshes" in "On Surrey Hills."

A close and intelligent study of these most interesting creatures, extending over a long lifetime, must necessarily entail exceptional knowledge, but it is given to few to communicate that knowledge to others so pleasingly and in such graceful language as does the author of "On Surrey Hills."

---

* William Blackwood and Sons, Edinburgh and London.

In reading these descriptions, the reader insensibly identifies himself with the author: with him he watches the mysteries of the careful and elaborate toilet of "poor Puss"; by day he studies with him the habits and customs of the innumerable birds, beasts, fish, and insects which go to make up the harmonious and beautiful whole of English rural Nature, and in hushed silence he listens at night in the woodlands or by the bank of reedy pond and stream to the mysterious noises in air and water.

Here is a realistic description of a night scene: "As the mist rose and fell again according to the temperature, strange forms floated over the surface of the water and round about the trees. The cries of birds and animals are different by night from what they are by day, and they come on the ear with startling distinctness. The moorhen as it flies overhead gives out a call like the clicketing 'kevit-kevit' of the barn-owl, which also comes flitting, now here, now there, on noiseless wings, uttering his harsh, hissing scream. As you stand close to the river-tangle, you hear the sough of wings overhead, and then a dusky form, looking like some shadow, drops close to you. It is the heron; he is near you, but his form is not visible. Night-jars hum in the trees, and the whirring noise made as they pursue their prey sounds in strange vibrations over woods and meadows. The cows can be heard as they nip the grass in feeding a long distance off. In the reeds and tangle the sedge-warblers keep up a continual chatter all through the night.

"Large fish feed by night more than by day: you may hear a splash and rush on the shallows, and see the glint of scales as the fish dart in all directions from one of their enemies—pike, perch, or eel. Perhaps you may see something which in passing leaves a wake behind it; you look for the lightest part of the narrow run that leads to the nearest pool, and see a dark, knob-like object moving swiftly out of sight. It is the head of an otter passing up-stream. Only the head is visible; but there is no mistaking him, for the next moment his strange, whistling cry is heard. In the air overhead is the sound of quickly-moving wings passing and re-passing, and strange notes fall on the ear—the cries of birds that are coming to those that have gone over before them. . . . I have spent many an hour about that lonely spot, listening to the voices of the night, and learning some of its secrets, but I confess to feeling some relief when I was on my way home. It is very, very quiet at midnight in such places, even though there be moonlight. The shadows move, so do many other things, although Nature is supposed to be sleeping. The water agitates the flags and the river-tangle; from time to time something moves the tree-tops on the stillest night, ever so gently, like a faint sigh. Then again all is silent. Even the run of the water changes in its sound as it flows over the shallower places; sometimes you hear the ripple-ripple plainly; at others, you hardly catch a sound at all. Soon again it comes—ripple-ripple."

Mingled, too, with these pleasant descriptions are tales and anecdotes of the human inhabitants of the country districts that the author loved so well, many of them full of character and humour; and the book is well worth purchasing if only for the sake of the description of the "Forest Fire." For the Londoner, too, the volume has additional interest by the fact (as the title implies) that it is all about the country within easy reach of town; and after reading it with infinite pleasure from beginning to end, we fully agree with the author when he writes: "Strange that in two hours one can pass from London, with all its vast population and busy hum of life, its aggregation of wealth and of human passions, noble and vicious, into a land of silence, and, in some parts, of desolation."

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear. Best quality only.—East London Rubber Co., 8, Shoreditch, E.

LINES FROM A SUBSCRIBER TO THE *F. G.*

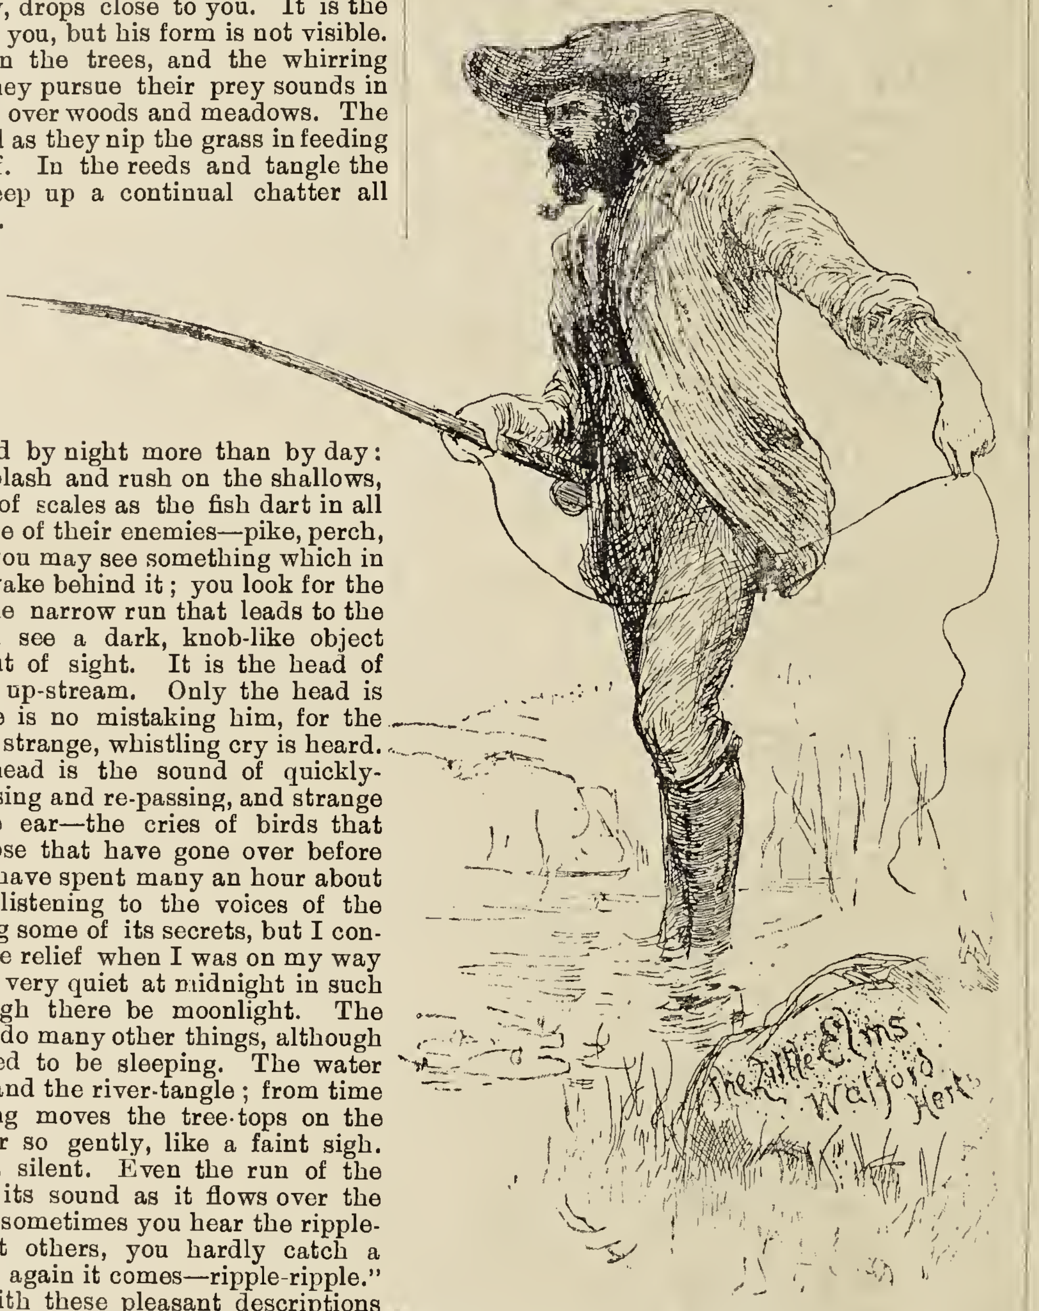
Our Publisher sent out some notices recently to subscribers whose subscriptions had expired, and we were much amused to receive in reply the following lines, in addition to the Postal Order:—

"Dear Sir,—
With this I gladly sent
The year's subscription due,
And also the acknowledgment
Of what I owe to you.

"You would not guess, so I must tell
How onerous the debt:
One of the things worth living for
I reckon the *Gazette*.

"Why should the Land Laws or Home Rule,
My whole attention fix?
Why should an angler vex his soul
By serious politics?

"I may not fathom State designs,
But I *can* cast a fly;
Therefore, with hearty thanks, I am,
Yours truly, C. E. Fry.
"Watford."



These kind words, from one of the best anglers living, remind us to ask our readers who care to do so to be good enough to send us the names and addresses of any anglers they know who do not take the *Gazette*. The accompanying sketch is a portrait of Mr. Fry, which we have had by us for some years.

Holloway's Ointment and Pills.—Shortness of Breath, Coughs, and Colds.—Thousands of testimonials can be produced to prove the power possessed by these corrective remedies in cases of asthma, incipient consumption, and all disorders of the chest and lungs. The Ointment, well rubbed upon the chest and back, penetrating the skin, is absorbed and carried directly to the lungs, where, in immediate contact with the whole mass of circulating blood, it neutralises or expels those impurities, which are the foundation of consumption, asthma, bronchitis, pneumonia, and similar complaints. On the appearance of the first consumptive symptoms the back and chest of the patient should be fomented with warm brine, dried with a coarse cloth, and Holloway's Ointment then well rubbed in. Its absorption will subdue advancing symptoms, and baffle this formidable foe.

Waltoniana

A kind friend sent me a salmon the other day from the far North of Scotland. I am wondering if the apples on my favourite tree will be pink-fleshed next year.

An early autumnal flood in the Thames or any other river is a good thing. For some time the weeds have been decaying slowly, and the present increase in the volume of water is exactly what was wanted to clear away the *débris* of this year's fluvial vegetation. A fine sounding word is "fluvial," derived from the Latin, but all the same "Greek" to many of the humbler readers of the *Gazette*. Nowadays it is by using such words as these that a reputation for learning is acquired, therefore I pray you let it pass, and remind me not that I have now and again gibed at the smart young gentlemen who call a fish a "marine," or "fluvial denizen," as the case may be, and term a sheet of water an "aquatic habitat," or "piscatorial location," as the fancy takes them. But I wander from my subject.

The Thames—call it "aquatic habitat" or "piscatorial location" if you will—has been, as I have said, in flood, and Thames anglers will do well to remember that for the remainder of the season, unless the water falls to summer level, the fish will be in new quarters. Why fish should seek the shallows in thick water is never likely to be known with scientific exactness, until someone obtains the ear of roach or perch; but the probability is that, as the mud has a tendency to settle, there is always less mud near the surface of water than at the bottom. In deep water, therefore, the fluid is considerably denser near the bottom than at the top. It cannot be very pleasant for the fish to send liquid mud through their gills, and so they seek the shallows.

Another reason which may bring fish in shore when a river is in flood is, that as the water rises a number of ærial (as opposed to fluvial) insects are drowned, and are no doubt tasty morsels. Of course fish also seek refuge in eddies and lay-bys to get out of the raging torrent which rushes down the centre of the river, but I am more concerned in explaining why fish are found in shallow water when a river is muddy, than in explaining why they are in eddies when it is high. There is shelter in eddies, and a good deal of food must be swept into them. When the water is high, the angler should make it a rule to try the deep eddies if the water is clear, but the shallow ones if it is thick. In fact, if the water is muddy, any gentle stream of about 3ft. in depth will yield roach. It need not be an eddy. I would also remind roach fishers that in winter and in high water roach may frequently be taken on a muddy bottom, but at that time of year I consider a sandy bottom best of all.

The present is a great opportunity for those who are ambitious to catch tench in the Thames. In winter it is not often that these dainty fish can be persuaded to feed, and there is nothing better than a summer flood to bring them on. A host of pleasant memories came to me the other day as I was bringing a boat up the river. There was the old stump, and below it the water lily, by the side of which I had rare good luck with the tench some twelve years ago. It was a wet summer with a vengeance, and the river was bank high all through July. I kept that one place baited with lobworms, and it produced some handsome tench and invariably a dozen or more fine roach. One tench, I remember, broke my rod; but we had him for dinner that evening. I made a careful study of tench fishing at the time, and remember coming to the conclusion that one of the secrets of success was to put the worm on in a particular manner, which shall be explained "in our next," as the magazines have it.

I began by threading the worm, but found that whether I gave the fish time, or struck them at once, I missed them; in fact, if I waited for the float to slide quietly under, I waited in vain, for the fish left the bait. I, therefore, came to the conclusion that the tench, which is a rare fish to mouth a bait, felt the hook, so did my best to put the iron in the middle of a ball of worm. This plan answered splendidly, and I do not think I missed another tench, and succeeded in killing seven good fish. It may be asked, How is the hook to be put in the middle of a ball of worm? I cannot explain that in writing. The worm is, of course, wound round the hook as much as possible, and caught on the point every now and again.

When worm-fishing for roach, dace, or perch, I think there is no form of hook better than Stewart tackle. Bottom-fishers rarely use it; but those who once give it a fair trial do not go back to the single hook. The hooks of the tackle have, of course, to be rather large to take a lob-worm. The whipping of the hooks should be painted worm colour, not the bright red which is affected by tackle-makers, and is only suitable for the small tackles on which red-worms are used. With this tackle the angler cannot strike too quickly, and if he is careful in this particular, will miss few fish. I have seen more than a dozen roach caught without one bite being missed. If the dace are feeding, the head of a lob-worm will often catch them better than the tail. A poacher told me that eels also preferred the head of a worm to the tail; but as to that I am not so certain.

Templar.

ANSWERS TO CORRESPONDENTS.

John Hale: The Coquet is a "salmon river," under the Act of Parliament, but we believe all the salmon caught in it are bull trout. The great success which has attended the stocking of the Yorkshire Esk with salmon (this river formerly producing little but bull trout), shows what *might* be done in the case of the Coquet.

Correspondence

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

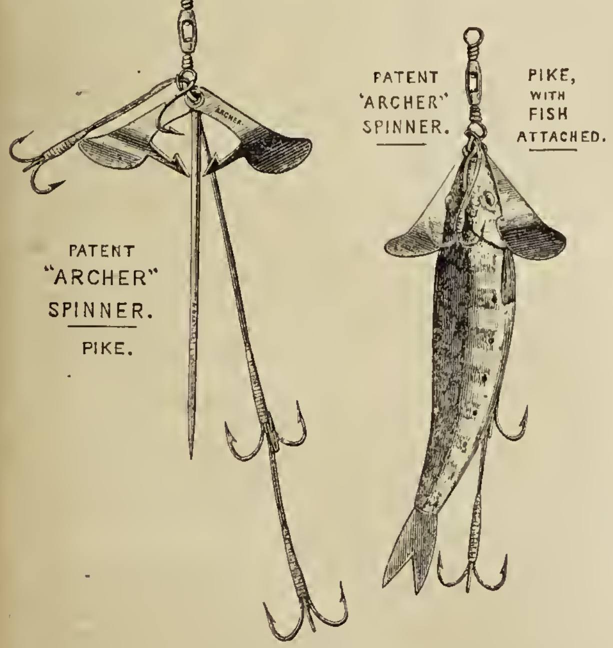
"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. Pritt.

THE ARCHER SPINNER.

Dear Sir,—We are this season introducing an attachment to the pike sizes of the Archer Spinner, which we consider a very great improvement, as it effectually takes off all the strain from the expanding fins, and prevents any tendency to their opening when using a heavy bait or fishing fast-running streams.

The attachment consists of a hook fastened on the ring in the eyelet-hole, and is made in such a shape that when it is driven well into the bait's head it is impossible to become loose.

We enclose drawings which will illustrate this improvement, showing the Archer Spinner unbaited with the new hook attachment; and also baited:—



PATENT "ARCHER" SPINNER.
PIKE.
PATENT 'ARCHER' SPINNER.
PIKE, WITH FISH ATTACHED.
ARCHER

We now supply (through the trade only) the Archer Spinner in large and small pike, salmon, small salmon, and trout sizes.

We have just received the following letter from Mr. Smith, of Pershore, in which we think your readers will be interested.—Yours truly,

Wm. Bartleet and Sons.

[copy.]

Dear Sirs,—You will doubtless be pleased to hear how delighted my brother and I are with your celebrated Archer Spinner. During the past week we have taken with it eleven pike (total weight, 56lb.), the largest fish being 12½lb., the others being about 5lb. each, except two, which were small ones, a little over 2lb. As we only use one rod (that is to say, we did not both fish at the same time), and did not lose a fish taken on your Spinner—but lost one about 5lb. taken on some other tackle—testifies how excellent and deadly the Archer Spinner is.—Yours faithfully,

Ernest Smith.

Messrs. Wm. Bartleet and Sons.

[The addition of the hook to secure head of the bait still more firmly takes away the only inconvenience we found when using this excellent Spinner for natural bait—viz., that a heavy bait worked loose occasionally.—Ed.]

LARGE MACKEREL.

Dear Sir,—In the *F. G.* of October 3 the capture of a mackerel 2ft. long is recorded. I should like to know the weight, as I have one, which I have made a cast of, that measured 2ft. 1in., and weighed 4lb. 1oz. This is the largest that I can find recorded. How about those pollack 30lb. and 40lb. weight that I asked for particulars of some time since? Has the fisherman vanished with the fish?—Yours, &c.,

Plymouth. William Hearder.

ANGLING IN RICHMOND PARK.

Sir,—At the weekly meeting of the Richmond Piscatorial Society, held on Friday, the 9th inst., it was resolved to approach the proper authorities with the view of inducing them to adopt a more stringent set of rules for the protection of the fishing in Penn Ponds. These splendid sheets of water are becoming depleted, in the opinion of the Richmond Piscatorial Society, by the indiscriminate slaughter of small fish, and for want of stricter supervision. The society's hon. sec. has been instructed to endeavour to obtain the co-operation of their president, the Duke of Teck, in the work. The following are the rules which it is suggested should be enforced:—

"1.—Fishing is not allowed between March 15 and June 15, both days inclusive.

"2.—No fish measuring less than the following sizes may be retained: Pike or jack, 20in.; perch, 9in.; roach, 8in.; carp, 13in.; tench, 10in.; bream, 13in.; and rudd, 8in.; all measurements to be extreme length. Fish under the above sizes must be returned to the water immediately after capture. N.B.—A few small fish may be retained for live bait, but may not be taken away from the water.

"3.—No person is allowed to fish with more than two rods at one time, and fixed lines, or means other than rod and line angling for the capture of fish are strictly prohibited.

"4.—Live or dead gorge fishing for pike is not permitted."

It is hoped that if these rules are adopted the fishing will much improve, especially for pike.—Yours, &c.,

Nottingham Reel.

SEA TROUT LOCHS.

Dear Sir,—Your correspondent H. Munro-Mac seems, in his letter of this date (Oct. 10), to have overlooked the exceedingly appropriate dictum of Mr. Pritt which heads your "Correspondence," and to have ignored the lesson which that dictum has to teach.

I feel assured that I wrote with all courtesy when I disputed the claim of Loch Stack to the proud position of being *absolutely* the most productive sea trout loch in Scotland; but, at the same time, in the interests of truth, I am compelled to reiterate my statement that there are many quite as good lochs in Scotland, and some, not merely one, even better. Loch Baa, in Mull, is as good as Loch Stack; Lochs Voshmid and Scurst, in Harris, and Lochs Roag and Fada, in South Uist, are better sea trout lochs on a majority of days. Mr. Young has declared the Howmore, in South Uist, with its connecting lochs (Loch Roag, Fada, &c.), to be by far the most wonderful *place* in Scotland, both as to number and size, for sea trout, while in the opinion of the same high authority the Grimersta river, &c., in the Lewes, occupies the same position with regard to salmon. It was in this river that, in 1889, one rod captured the extraordinary number of fifty-six salmon in one day, while eighty-five fell to a party of four rods a few days after. When it is understood that Mr. Young considers these two *places* (I use the word advisedly) as occupying a unique position with regard to productiveness—the Howmore, &c., for sea trout, the Grimersta, &c., for salmon—I think, apart from my own record of all kinds of days in Loch Roag, that my questioning of the proud position accorded to Loch Stack is, in a measure at least, justified. I refer your correspondent to Mr. Young. I have never fished Loch Stack, but I have not only read a great deal about it, but have also conversed with those who have fished it, and have formed a pretty accurate opinion of its average merits apart from very exceptional days. Sheriff Ivory, who in (I think) 1888 came from Loch Stack to Loch Roag, considered the latter by far the most wonderful loch, though he was, like every rational mortal, high in his praises of Loch Stack.

Anyone who has ever seen the Howmore river, especially when the tide is flowing into Loch Roag, is at once struck by the absolute perfection of the whole place as a—I might say *the*—chosen home of the sea trout. Ingenuity can certainly suggest no improvement upon nature. What I wish to submit is, that in awarding places of merit at all, the claims of Loch Roag, Loch Voshmid, and Loch Scurst to first place should not be overlooked. I gave my own results, and facts are "stubborn chiels." I repeat that I would like to see a better Loch Stack record of all days, good and bad, over the same seasons by one rod; and if H. Munro-Mac can produce it, I shall envy its lucky possessor, and, like a sensible man, big or little, admit that I spoke—or rather wrote—unadvisedly. I am sure that H. Munro-Mac will pardon me for not answering his queries with regard to spring sea trout in the Uists and Islay when I tell him that I was very seriously ill at the time, and was not, therefore, in a position to do so. I am quite ready now to give him any information he may desire, or to answer any questions which he may have to put; under this proviso, however, that I am not to be held responsible for the error on the part of nature—from the point of view of H. Munro-Mac, at least—in departing from her usual rule in so far as she has permitted a strong run of fresh and good sea trout to ascend into the Uist lochs (North and South) in spring, and, to some extent, up the rivers of Islay and Mull.—Yours truly,

London, Oct. 10. H. Hay Stuart.

THAMES FISHING REPORTS.

Dear Sir,—I think some of your reporters are good at a "long shot" as to takes of fish. In your Supplement I find: "B. Stevens, in one day, five dozen and four jack, largest 6lb." What must the smallest have been? No wonder a good jack cannot be got in the Teddington water. Again, in the Kingston report: "N. Bolton, in four days, thirteen dozen of fine jack." If those reports are true, I for one shall put my jack rods on the shelf and fish no more.—Yours, &c.,

Liberia.

[It was probably our reporter's indistinct writing, and should have read "five dozen roach and dace, and four jack, largest 6lb., and thirteen dozen roach and dace, and five jack." These river reports have to be rushed into type at the last moment, and if the writing is not clear, mistakes will arise.—Ed.]

LARGE CHUB.

Dear Sir,—With your permission I should like to correct the statement made by Mr. T. C. Longland, secretary of the Royal George Angling Society, in your last issue, as he evidently thinks the prize for chub at the International Fisheries Exhibition of 1883 was given for the largest fish, instead of which it was for the best collection; that is why the prize was rightly awarded to the Friendly Anglers' Society.—Yours faithfully,

C. H. Woodall,
Hon. Sec. Committee Friendly Anglers' Society,
International Fisheries Exhibition, 1883.

MR. JARDINE ON CHUB FISHING.

Sir,—I was much interested in reading Mr. Jardine's article on chub fishing in last Saturday's *Gazette*. It is truly delightful to see some of our Trent fishermen use their fine silk lines and tackle during the winter months, when the river is low and bright. The difficulty which occurs to me is this, after making several very long swims, the line, in travelling, naturally gets very wet, and it is to turn off the wet, and I would be glad if Mr. Jardine would give me the benefit of a good waterproof dressing.—Yours, &c., A Learner.

NEW WEIRS ON THE THAMES: HAVE THEY IMPROVED OR HELPED TO SPOIL FISHING?

Sir,—An old angler recently remarked, "What with the stink and filth from house-boats, the washing away portions of the banks (Upper Thames) by steam launches, the army of pleasure boats all using tow-lines, fishing is indeed but sorry work now." I may add—rushing off flood water by the new weirs, and reducing the Upper Thames to a *pond-like state* in a few hours—it is either a swift stream, impossible to fish, or no stream to speak of. All this is against successful angling.—I am, yours truly, Mark.

REPORTS OF LARGE BREAM.

Dear Sir,—I was very much surprised at the tone of your Norfolk Correspondent's reply. I did *not* impugn his veracity, but the accuracy of his information. I am anxious to know the real facts about those two bream, and his letter and that of Mr. Moll, leave the matter as doubtful as it was before, for each maintains that *his* report was correct, although admitting that they referred to the same fish: that is to say, that the same two fish weighed once 8lb. and 7lb. 2oz., and another time 8lb. 10oz. and 6lb. 8oz. This is ridiculous, and as I said before, it is obvious that one, or both, of your correspondents is wrong. No one is infallible, although your Norfolk Correspondent seems to think he is, and I see no tittle or jot of evidence to lead me to accept his report as correct, and Mr. Moll's as incorrect, or *vice versa*. What I should like is corroborative evidence, and not merely the reiterated statement of the original reporter, even though he be one whose contributions will bear "sifting into" (sic).—Yours, &c.,

Blatherwycke.

P.S.—Many thanks to "Giant" for his statistics of heavy bream.

FANCY FLIES.

Dear Sir,—I have read the recent article on this subject with great interest. I sometimes wonder whether we all understand the same thing by the term "Fancy Flies." I think we are often apt to class as fancy flies a number of flies which are really more or less approximate representations of some real insect or class of insects.

Take, for instance, the Pink Wickham: wings, landrail; body, flat gold tinsel; hackle, red cock from head to tail. Most people call it a fancy fly. I doubt it. It seems to me to resemble a number of different sedges, more or less pinky in the wing, and yellow or greenish about the body. Looked at through water, from underneath, gold tinsel often gives an effect either of golden or greenish translucency, the hackle buzz all down the body gives the effect of flutter on the water, and there you have your sedge—something brighter and more alluring than life.

In the same way may not the ordinary starling-winged Wickham be taken for something special in the olive line?

Hofland's Fancy. What is this but own cousin to the Red Quill or Red Spinner? Greenwell's Glory with the blackbird wing. What is this but an Iron Blue Dun with the woodcock wing? It is a little freckled green rail or sedge. And so one might go on. Messrs. Hardy, in their new catalogue, p. 38, give the dressings of some seven flies which they call "odd trout flies." They are singular enough, but when examined they are old friends with new faces. Big Red Spinner, Olive Dun, Dark Spinner, Greenwell's Glory, Hare's Ear, legged Red Spinner, Whitchurch Dun, and Dark Olive.

They are none of them more singularly unlike the natural fly than, say, the Partridge and Yellow, or Woodcock and Orange, which are quite orthodox.

There are a few flies, however, that I fail to account for: the Francis is one of them, the Coachman another. The Governor may be a bee, but I doubt it. Mr. Pennell's series are fanciful enough in all conscience; so are the Derbyshire bumbles; also Cutcliffe's Devonshire series, with a few exceptions. The Harlequin seems to be a fancy fly; the Alexandra, on the other hand, is a minnow or small fish.

I think you must agree that the list of fancy flies is really much more limited than legion, and if we only knew it we should find them even more limited in number than we think.—Yours, &c.,

Val Conson.

THE "EXTRAORDINARY SPECTACLE."

Sir,—Any person who is suffering from a "congested liver" is entitled to our sympathy. Possibly it is owing to his affliction, that "Truth and Justice" failed to note that the account about the "elderly gentleman" having been seen "seated in a *punt*," and catching fish in the Serpentine, first appeared in *Truth* newspaper, and that the words in question were *quoted* from the account. The *Daily Telegraph* thought the incident of sufficient importance to devote a Leading Article to it, in which the words at the heading of my letter appeared. Quote No. 2. Several other London newspapers stated at the time that there was no reason why the public should not be allowed to angle in the Royal Park Waters under proper restrictions.

I first knew the Serpentine in 1845, when the wooded portion of Kensington Gardens was as private as when Benjamin Disraeli said it was the place in which to concert measures for winning a heiress or breaking up a Ministry. There were very few, if any, pleasure boats for hire on the banks of the Serpentine in those days. *I* did not say the gentleman was angling from a "punt"; I simply quoted the statement from the paper's account named; and the slight mistake possibly occurred from the incident really forming an "Extraordinary Spectacle." I first went angling when William the Fourth was King, and the good Adelaide was his Queen. And a couple of years or so after, when the fast stage-coach brought the news that "the King is dead!" I took my rod, and caught more roach and dace on that June afternoon, than many London anglers nowadays travel a long journey by rail in the hope of catching. I fished for years, as opportunity served, stretches of the Kennet; also of the Thames from Purley to Sonning; in the Evenlode; in the Isis, from Osney down to Sandford (omitting of course the Classic reach from Christ Church Meadow down to Iffley); angled in the Lea; and whipped for dace at Hornsey, in the New River; and fished the Thames above London. I was, indeed, never happier than when noting in turn bird and animal life in water-meadows and angling in the streams.

But this has nothing to do with the advocacy of opening the Royal Parks' Waters to the hard-working and sport-loving anglers of London. These parks are kept up by a vote from the Imperial taxation, towards which all contribute directly or indirectly; the People's Parks are kept in order by money from the Rates, towards which anglers also contribute directly or indirectly. "Truth and Justice" appears to dread the appearance of punts on the Serpentine. But if he had acted up to his high-flown *nom de plume*, he should certainly have seen that the (to him) objectionable words were merely quoted, but, save the original contributor's error about the "punt," were none the less applicable.—Your old scribe,

October 5. Rus.

NEW PATENTS.

The following is a list of Piscatorial Patents, which is supplied to us by Messrs. Hughes, Eli, and Hughes, Registered Patent Agents and Attorneys for Colonial and Foreign Patents, Designs, and Trade Marks, 76, Chancery-lane, Holborn, W.C. Correspondence and interviews free of charge to our readers:—

16,764.—William Garden, of London, for "Improvements in the Preservation of Fish and the Like."

⁎ Club and River Reporters will oblige by sending in their Reports early in the week.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* Fishing Gazette, *St. Dunstan's House, Fetter Lane, London," and marked* Club Report *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly delegate meeting will take place on Monday evening next, October 19, at 8.30.—R. Ghurney, sec.

Anglers' Association.—Eastern District No. 1.—The next return visit will be to the Original Alexandra, Green Man, Cambridge-road, Mile End, on Tuesday next, October 20, when I hope we shall have a good representation from all clubs on the above-named district.—G. Manning.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The next meeting of the committee will take place on Friday evening, Oct. 23, at 8.30.—R. Ghurney, sec.

The London United Anglers' Societies' Fourth Annual Angling Competition, in aid of the funds of the Anglers' Benevolent Society.—On Friday, the 9th, we had our usual weekly meeting, when Mr. Smyth, of the Tottenham and Edmonton, was added to the committee, who guaranteed on behalf of his society a prize of the value of 10s. 6d; the Bermondsey Brothers, a prize value 10s. 6d; Mr. J. Smith, of the same, a pair of fret-cut mahogany brackets; Campbell United, a prize value 7s. 6d.; Mr. Titford, Dalston-lane, a prize. Since our meeting I have received from the South London 10s. 6d., for a prize; also promises, from the Izaak Walton a prize, value 10s. 6d.; the Dalston, two prizes, value 10s. 6d. each. On Friday, the 23rd, I shall require the whole of the committee to be present to arrange for duties on Nov. 15. Will gentlemen and societies who promised prizes send the same to the Foresters' Hall, E.C., care of the hall-keeper, as soon as possible, as the committee have to arrange the same.—S. Malby, sec.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting-hill Gate, W.—A special meeting will take place on Wednesday next, at 9.30 sharp, to transact urgent business, and arrange an outing for several prizes, which I am glad to state we are in possession of. Hoping members will show up in good force. Several members are going to try their fortune on the 18th instant; but I hope the flood in Father Thames will not disappoint our worthy brothers of Old Izaak.—B. Abrahams, secretary.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—On the 4th inst., Messrs. Abel, Moir and Fisher, weighed in roach, bream, and jack; and on the 11th, Messrs. Abel and Elderton weighed in jack and Moir, roach and bream. The next return visit on the Central Association will take place at the above house on Monday next, October 19th, when I hope to see a good muster of anglers and friends. Mr. T. Crumplen has kindly consented to read a paper, entitled "An Angler's Visit in Olden Times." Secretaries of clubs not receiving a notice will kindly accept this invitation.—W. H. Potter, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our sixth match this season will take place at Cookham on the 18th inst., when three prizes will be fished for. Tow-path only; jack barred. Several of our members were out on the 11th inst., but did not meet with much success, and the following weighed in: Mr. B. Acland, roach and dace; Mr. Bond, roach, dace, and gudgeon; Mr. Jones, roach and bream.—J. Rich, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 11th inst. several of our members were out, but on account of boisterous weather very few fish were weighed in, with exception of Mr. W. Hake, who had a very fine show of bream and roach, the largest bream turning the scale of 3lb.; and also Mr. Wright had some very nice bream and roach. On the 18th inst., our members fish for a series of money prizes, at Chelmsford; all members to go by the first train on that morning. I have much pleasure to say that we enrolled four new members last week: two honorary and two working members, and are still open for a few more.—E. R. Embleton, sec.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—Several of our members were out on the 11th inst., but met with poor sport, except Messrs. Savage, Evans, sen., and Gibbs. I beg to inform members, we fish for our monthly prizes at Ware, on the 25th inst.; all to go by first train. I hope members will attend in force at the Bermondsey Brothers visit on Tuesday, the 20th inst.—J. Tucker, hon. sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—The members of this club fished a match at Staines on Oct. 11, but owing to the state of the river only one prize was taken, that by W. Chettle. We have postponed our visit from the Anglers' Association to Tuesday, Oct. 27, when we hope to have a good muster of anglers and friends.—G. Mumford, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—The members of the above society fished a competition for their October series of prizes on the 11th inst., conditions roving anywhere in the Thames bank only, with the following result: First, Mr. James Smith, 5lb. 14oz., roach; second, Mr. Warman; third, Mr. Moorby; Messrs. H. Patman, Taylor, Allum, Davis, and Conn also weighed in. The next visit on the South London United Anglers visiting list will be paid to this society on Tuesday, the 20th, when the favour of the company of brother anglers from any society that can make it convenient to attend will be esteemed.—A. Conn, secretary.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 11th inst., the only one to weigh in was Mr. C. Davis, roach and dace. Those members who were not present on Wednesday last, the 14th inst., must not forget it was quarter night and that the 21st is the limit night. On the 14th inst. Mr. J. Clark was elected a member of the above society.—D. Warren.

Bostonian Angling Society.—The second outing of the season was held at Pangbourne on the 11th inst., the members journeying thence by special saloon carriage reserved for their accommodation by the kindness of G. W. R. Company, and returned in a like manner. There were seven prizes for competition, five only being taken, doubtless owing to the inclement state of the weather, also the river being high and very much coloured. In the evening the members did justice to a substantial meat tea provided by Host Coombes, of the Cross Keys Inn. The winners of prizes were Messrs. Rundle, Lawson, Jennings, Hoare, and West. Important business next meeting night.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On Wednesday evening one of our members, Mr. F. Briggs, weighed in a dace, weighing 13¾oz. A number of our members were out on the 11th inst., but they all drew a blank. A competition has been arranged to take place at Bourne End on the 25th inst. for the five prizes which were not won at the last competition. —H. Roach, sec.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—Several of our members have weighed in—viz., Messrs. Wilson, Mearring, Bones, Watkins, jack, roach and bream. The club jack prize remains open until the end of November, the heaviest fish during that time to win. One rod only. One day's fishing each week (Sunday or week-day) allowed for this prize. All members clear on the books eligible to fish. We had a slack meeting last night, and should be glad to see a good muster of members next week.—T. Hawkes, sec.

Burdett Angling Society, 118, Hackney-road.—A few of our members were out on the 11th inst., and they brought up a nice show of roach, considering the rough day it was. Mr. D. Flint had 6lb. 6½oz. of roach, dace and perch; Mr. Green had 5lb. 12oz. of fine roach; Mr. J. Pether. 2lb. 14oz. of roach. I hope members will come up next Wednesday, as there is another batch of prizes to fish for, so I shall look for a good meeting to arrange where to go and when, and fish them off. There are five prizes to fish for.—J. Pether, sec.

Burton Piscatorials, Globe, Derby-street, King's-cross.—Several of our members were out on the 11th inst., and, although the takes were small, some good-class fish were displayed upon the trays, Messrs. Richards and Sturman showing roach, and Roberts, barbel. Anglers' Benevolent List still open.—C. Roberts, hon. sec.

Buxton Brothers' Angling Society, 4 and 6, Buxton-road, Walthamstow.—On the 9th inst., W. Davies caught some nice roach and dace. On the 11th some of our members were out, but were not very fortunate, owing to the rough weather. The following members weighed in: C. Goulbe, perch; J. King, dace. On the 13th, W. Davies caught some good specimens of roach and dace. On the 14th, J. Berry weighed in some roach, and W. Davies, roach and dace. In the evening our meeting was fairly attended, and some very profitable talk was indulged in, and private parties were formed for different places for matches.—A. Shuker, sec.

Caledonian Angling Society.—Last week Messrs. A. George and A. Knock had some very respectable shows of specimen fish, the former member having upon one occasion out of a catch of 11lb. 13oz., of roach, dace, and chub, five dace weighing 2lb. 14½oz.; one roach, 1lb. 4oz.; and one chub, 2lb. 4oz. The latter gentleman, out of a good take of fish, principally dace, had eight of the species, weighing 5lb. 4½oz., an average of 10½oz. each. We have a number of prizes in hand to be fished for, but I am very sorry to say the members of the society do not support the secretary in his endeavours as they should do, thus making it very disheartening.—A. George, sec.

Cambridge Friendly Angling Society, Masons' Arms, Titchborne-street, Edgware-road, W.—The outing to Pangbourne on the 18th inst., has been postponed until the 25th, in consequence of the unsettled state of the weather, &c. Mr. Allen was the only member who weighed in on the 11th inst., he having roach from the Thames.—W. Sutton, sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On October 4 we had a fine show of jack on our trays. Mr. Chapman had nine fish; Mr. Boxall, two; Mr. King, roach. On the 11th, Mr. King, roach; Mr. Langton, roach, jack, and a barbel of 5lb. On Wednesday evening we received a visit from the North-Western Angling Society, and after the conclusion of the business, the remainder of the evening was spent in harmony.—E. T. White, sec.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—Several members travelled to Staines on the 11th inst., to compete for this quarter's prizes, only two were successful—viz.: Mr. E. T. Lake, first; Mr. Hiscock, second; Mr. J. Tanner weighed dace. The four remaining prizes will be fished out at Langley (G. W. R.), same conditions.—E. W. Wood, hon. sec.

Canning Town Angling Society, Marquis of Salisbury Hermit-road, Canning Town, E.—Our members were out on the 11th inst., competing for three very valuable prizes. Our takes were not very large, but we succeeded in taking the prizes, which resulted as follows:—Mr. E. Dove, first prize, with a very nice show of bream; Mr. J. Hester, second prize; and Mr. E. Robertson, third prize. Members will please show up next meeting night, to arrange for four prize, to be fished for on the 25th inst.—O. Jones, sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—The meeting on Monday last was fairly good. Mr. C. E. Williams presided. Mr. J. Guest liberally contributed to the already lengthy prize-list. Mr. Tom Keeble in opening up a discussion on "The Pike's Chirurgeons," quoted from an old work: "For if the pike be once hurt of another fish, hee is healed with great difficulty. And when hee is hurt, hee goeth up to the pearch, the which seeing him hurt, toucheth and sucketh his wound, so the pyke is healed again." It is to the tench, however, says Mr. Keeble, that the pike chiefly resorts in his tribulation, for the tench is reckoned *medicum omnium piscium*. Mr. J. Deplidge told a story how a dealer cut open a pike for the purpose of showing its condition to his customers, and how a tench repaired the damage, which was received with loud laughter. The secretary announced that the members had had good sport during the past week, especially Messrs. Richmond, Thorn, and Keeble, with a splendid show of Thames roach.—John Smith, hon. sec.

Central Association.—The monthly delegate meeting was held as usual at the headquarters of the association, the Bedford Head Hotel, Maiden-lane, Covent-garden, Mr. C. A. Medcalf, president in the chair. The customray routine business having been transacted, members who had acted in the capacity of bailiffs at Pulborough, gave in their reports, and others volunteered for service during the month. Mr. Eldridge's last competition takes place at Pulborough, on the 25th inst., in which it was anticipated a large number of anglers would take part, but the Central Association Fishery is of course only open to members holding the association privilege cards. The Earlsfield delegates drew attention to the condition of the river Wandle, where a large quantity of fish have been apparently poisoned, possibly owing to contamination from mills and other sources; and Mr. G. E. Simms suggested that the Thames Conservancy might be able to take the matter in hand. Attention was also called to rumours that carp had been netted from Wimbledon Lake, and that trimmers had been in use there—rumours it was hoped which might prove to be erroneous, especially as this fine sheet of water, from its proximity to town, was patronised by so many anglers. Mr. Wade reminded the delegates of the complimentary benefit on behalf of Mr. George Watling, which he hoped, in the hands of the many friends who had joined the committee, would prove a very great success. The president announced that the next association visit would be to the Amicable Brothers at the Baldfaced Stag, Worship-square, Finsbury, E.C., on Monday next, 19th inst., at 8.30 p.m., when Mr. T. Crumplen ("Old Izaak") had promised to read them a paper entitled "An Angler's Visit in the Olden Time," which he was sure would bring a great many friends together. A hearty vote of thanks to Mr. Medcalf, the president, Mr. John Kelly, V.P., and also to Mr. Wade, brought the meeting to a close.

Clapton Angling Society, Wayland Hotel, Dalston-lane.—Our fishery at Rammey Marsh has been visited by several members. The waters have been out of condition, and only perch and jack have been taken. On Thursday week I had several of the former, and one of the latter, 4½lb.—Henry Howse, hon. sec.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey.—We have arranged to fish a match for prizes on the 18th inst. The conditions are—members to go where they please, providing two or more members go together. Private waters are barred, also jack and eels. Members not having paid subscriptions will not be eligible to fish in this match, but can weigh in for gross weight, which your humble servant would like to see abolished. I would take it as a personal favour if the members would show up more regularly on Wednesday meetings, as all the work of the society falls upon the same few members every week. We consider the cancelling of our visit on the S.L.U.V. List most unfair, as no notice was received from either Mr. A. Conn or Mr. Rich.—P. Gardner, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—I deeply regret having to report the sudden death of our respected member, Mr. H. Sharland, who has been a prominent member for many years. He leaves a wife and children quite destitute. Mr. B. Coleman saved us from a blank on the 11th inst., with a nice show of roach. At our last meeting it was proposed we fish a match for private prizes; conditions to be made on Tuesday next, Oct. 20.—A. Smith, sec.

Dalston Angling Society, Brownlow Arms, Brownlow street, Dalston.—On the 11th inst. in spite of the weather, several members ventured out, but the only gentlemen who had any sport were Messrs. Wild, Thornton, Newsome, Cogswell, and Killick, who had some nice carp, roach, and dace. On Tuesday, the 13th, Messrs. Flowers, Spong, F. Woods, Freeman, and Kitson were elected as committee men, and Mr. F. Legge chairman for the ensuing six months. The balance-sheet for the past quarter was read and accepted.—S. Malley, sec.

Eagle Angling Society, Chesnut-road, Tottenham.—Since my last report two prizes have been fished for by our members—viz., Dr. Hall's prize, of one guinea, and our host's (Mr. Barlow's) prize of a two-guinea oil-painting, by Rowland Knight. The first was fished for at St. Margarets on the 27th ult., and not taken; therefore it will be fished for again at some future date. The second was won by our indomitable fisherman, Mr. Dwyer, with 1¾lb. of chub and roach. Mr. Ashmore, another of our enthusiastic fishermen, coming in second with ¾lb. roach. This is a very poor result for so valuable a prize, as some of our members journeyed long distances. Mr. Graham Bennett, one of our vice-presidents, fishes Mr. J. P. Wheeldon, at Broxbourne, in a few days, for roach. I think the match is for a given number at supper. Mr. Graham Bennett also fishes Mr. J. Dwyer for a supper for six, on Friday, the 23rd inst., at Staines, for gross weight of any kind of fish. These two matches have caused some little excitement, and will doubtless be followed by others.—T. F. B., hon. sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On the 11th inst., the following members weighed in: Messrs. Biggs, roach; Shevill, roach and dace; and F. Vanhegan, bream, roach and dace. On Monday last, a smoking concert was held at the above on behalf of George Watling, and was a decided success; the result of the draw will be given next week. All gentlemen on the committee will greatly oblige by attending on Monday next, to settle up the benefit as soon as possible. The next return visit on the Clerkenwell and District, will take place at the above, on Monday, October 26th. I hope members and friends will not forget Mr. A. A. Eldridge's competition at Pulborough, on the 25th.—J. W. Biggs, sec.

General Post Office Angling Society, the Falcon, Falcon-square, E.C.—Mr. Groves brought home a nice jack from Cookham on Thursday, the 8th inst., which he took there while taking part in the competition; he also got broken up once, as did some of the other members. The next meeting will be at the club house on Thursday, October 22.—L. W. Donne.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had a couple of jack weighed in on the 11th inst., by Mr. Baildham, one 6lb. 12oz., and one 3lb. 3oz. Mr. Stebbings and Mr. Riggs weighed bream and dace. Other members were out, but not successful.—A. Payne, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road.—On the 11th inst., the following weighed in fish: Mr. Bailey, roach; Mr. Chapman, roach; Mr. Clark, roach; Mr. Monk, roach; Mr. Grun, roach and dace; Mr. Dodd, roach and dace. Our sweepstake takes place at Langley on the 18th; all to go by the 8.25 from Paddington.—T. Roach, sec.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—The members of this club fished at Pangbourne on the 11th inst. for ten prizes, but the elements were against us, wind and rain, from the time we started until we finished, but we stuck to it like Britons, and took nine of them in the following order: Messrs. G. Hunt, F. Grey, Snook, J. Smith, Whitmore, Pulham, Shervill, Maddams, and R. Murphy. On Tuesday there was a fair attendance of members when it was resolved to fish for prizes at Cheshunt, on the 25th inst.; all start by the 9.8 train, Liverpool-street Station. It was also resolved to fish for our Christmas prizes on November 1, as we have so many prizes. Leaving it so late in the year, as a rule, we cannot get them all off, then we have to draw for them; that we want to prevent in future.—R. Murphy.

Grange Angling Society.—During the last week the Messrs. J. H. Rich, T. Sandilands, G. Wood, E. Rifder and C. Green, have weighed in several pounds of bream and roach.—W. K.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—The members of the above were out on the 11th inst., when Mr. W. Creeke weighed roach, and W. Carr one jack of 3lb.; Mr. H. Cuddon, also weighed roach and perch. The match that was to be fished on the 18th has been postponed till the 27th.—G. F. Weaver, sec.

Gresham Angling Society.—The usual weekly meeting was held on Tuesday, with Mr. F. R. Ohlson in the chair. It was arranged to have a competition at Windsor on Tuesday, Nov. 3, for prizes: 1st, some article worth a guinea; 2nd, some article worth half-a-guinea; to commence at 9.30; to fish from punts. Mr. T. Gilbert, of 38, Carter-street, Walworth, S.E., will receive entries and make the arrangements. The next sea fishing competition will take place at Southend, on Saturday, October 24, and will be a trial of hand-lines *v.* rods, an equal number of members to fish on each side. The best five fish on the winning side to take the first prize of an article worth a guinea, the next best five on the winning side half-a-guinea, or a cigar-holder; and the next best five the remaining prize. The train will leave Fenchurch-street at 9.5, and members to cease fishing at five o'clock. Not more than three hooks to be used. Some further progress was made in the arrangements for the exhibition of mounted fish and aquatic birds, and fishing tackle, which will be held at the society's rooms next Tuesday at eight. In addition to the large collection, the property of the society, some good cases have been promised by friends, and it is proposed that a description of the various exhibits be given by the hon. curator. It is also intended to add a little music afterwards, and in order to make the affair a success, members are invited to send exhibits and bring friends. The hon. librarian presented three new books to the library, and offered to fill up the book cases with a number of piscatorial works from his own private library, an offer which was gladly accepted, and a hearty vote of thanks given him.—James Tayler, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—The only members who weighed in on the 11th inst. were Mr. A. Fish, bream; Russell, roach; and Braham, jun., perch. On Monday the smoking concert, on behalf of the A.B.A. took place, and we were very pleased to see so many of the Eastern District turn up, but I should certainly have liked to have seen the A.B.A. represented by one of the officials. We hope to shortly have the pleasure of handing over a nice little sum to so noble an object.—W. H. Fenner, sec.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—We had a good show of barble, chub, and roach, on the 11th inst., from the Thames, by Mr. Monte.—J. T. Griffiths, secretary.

Hoxton Brothers Angling Society.—The members will fish for special prizes on the 18th inst. in the Lea; roving match, from Carthagena Lock to Ratty's Lock; to leave London by train that starts from Liverpool-street Station at 9.8 a.m.—R. Ghurney, sec.

Izaak Walton Angling Society.—The members will compete for three special prizes on Oct. 25. Competitors may choose their own fishing waters. Messrs. T. W. Garrard and G. Rogers weighed in bream on the 11th inst.; Mr. G. Washington had a tray of handsome perch and a jack on the same day.—H. B.

Jubilee Angling Society, Portobello, Kensal-road.—The only members weighing in fish on the 11th were Messrs. Onree and Ide, who had roach and dace from the Thames. On the 18th inst. we fish a match from Cookham Bridge to Bourne End Railway Bridge (roving) for four prizes: 15s., 12s., 8s., and 5s.; one rod only, jack barred. First train from Westbourne Park, or any subsequent train; leave fishing at 4.30 p.m., and return together, or be disqualified. No member to take a prize unless he weighs in half-pound of fish.—A. Ide, sec.

Lady of the Lake Angling Association, Queen of England Hotel, Goldhawk-road, Shepherd's Bush.—The committee have arranged prizes to the value of £6 6s., to be competed for between November 1 and January 31, 1892. Particulars will be given in due course. During the past week many of the members have been out, the most successful being Messrs. Master, Carter, and Mason.—T. Salter, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On Wednesday, the 7th inst., Messrs. More, Clark, and Findley, weighed in some good roach from the Thames. On the 11th inst., several members were out but very few fish were taken, owing to the thick state of the water. I must once more request members in arrears to clear the books.—W. Watling, sec.

Liverpool Angling Association.—There was rather a poor muster at the outing on the 8th instant, to Ruabon Water, the saloon carriage being only partly filled. But the day was fine and the party thoroughly enjoyed the excursion to this prettily situated reservoir. Mr. Tittarton won the two-guinea mackintosh, presented for this occasion by our vice-president, Mr. Whittington. One new member was elected at last week's meeting. Our first winter Social Evening will be Thursday, Nov. 5.—R. Woolfall.

Liverpool East End Friendly Angling Association, 150, West Derby-road, Liverpool.—At the competition for prizes at the river Dee, Chester, very little sport was obtained, owing to the river being quite out of condition. Quite a hurricane was blowing, with heavy rain, which continued the greater part of the day. Mr. Isaac Smith saved us from a blank by weighing in a bream, 1lb. 6¼oz. which took first prize, a handsome bird and cage. We also have a match to take place on the 25th of October, at Rufford Canal, for several prizes; one rod only; no fish to be weighed in under 2oz.; all competitors to go by the 7.40 train from the Exchange Station on morning of match; weighing in at five o'clock opposite Station Hotel. Any member not abiding with these rules will be disqualified. —T. C. Segar, sec.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 11th inst., our members were at various waters, but the only members that weighed-in were Messrs. Penfold, Pearce, and A. Clark, with roach and dace. I wish to remind members there is a special meeting for Wednesday next, Oct. 21, to consider an outing.—W. Pearce.

Northern Anglers' Association.—The first annual general meeting of the Warrington centre was held on the 13th inst., at the Golden Ball, Winwick-street, Warrington, when representatives attended from Chester, Northwich, and Warrington clubs. A balance-sheet was presented showing a surplus on the year's working, and from the report given to the meeting by Mr. Mawson (chairman and delegate), general satisfaction was expressed, especially in reference to the efforts of the central council to promote cheap travelling for anglers. A strong staff of officers were appointed for the ensuing year, by whom the various interests of the district will be advanced.—Peter Knight.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland-park, N.W.—On the 10th inst., Mr. Schultz, senior, weighed in jack, and Mr. Harris weighed in jack and a fine tench. I should like to see a bigger muster of members on meeting nights.—G. L.

Odds and Evens Angling Society, King of Prussia, Bevonden-street, Hoxton.—On the 11th inst., we were treated to a nice tray of fish at our headquarters. Mr.

Bygrave, senr., three nice jack; Mr. Bygrave, junr., dace; Mr. Harrison, perch, and Mr. Neville, roach. On Wednesday, the 7th inst., our return visit on the No. 1 Eastern List took place, when we had a fairly full room, and during the evening we were treated to some capital songs by some of the old members. When Mr. Manning called the roll, twelve clubs responded.—J. CUTHBERT, sec.

Original Alexandra Angling Society, Green Man. Cambridge-road, E.—The next return visit of No. 1, Eastern District, will take place as above, on Tuesday, the 20th instant.—E. BROCKETT.

Peckham Brothers Angling Society, Prince Arthur, East Surrey-grove, Peckham.—Most of our members were out on the 11th instant, competing for a series of prizes. The successful competitors were as follows: 1, Mr. Fairclough, barbel; 2, Mr. Gardham, dace; 3, Mr. Brancher, roach and gudgeon; 4, Mr. Holt, bream; 5, Mr. Parsons, perch. The following had fish, but were too late to weigh in: Messrs. Daniels, Fautley, and Bonsall.—E. A. FAUTLEY, secretary.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Our matchtakes place at Langley on the 18th instant, to meet at Westbourne Park Station at 8.15. No live bait allowed to be taken down. All fish to weigh according to club rules. Members must catch their own baits if they wish to fish for jack or perch. To commence fishing at 9.45; cease fishing at six o'clock in the evening. Members coming down by a later train must report themselves to the secretary or chairman before fishing.—J. W. HARRIS, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—Our second club outing took place on the 11th inst. from Bourne End Bridge to Marlow Point, for seven prizes, and forty members journeyed to try their skill. I am pleased to say that all the prizes were won by the following, in the order named: Robbins, W. Bartholomew, French, Scott, Ivermee, Clist, and Wheeler. The books of the society have been audited by Messrs. Neal and Twomey, who congratulated the society on their exceptionally strong financial position.—W. BOWYER.

Rising Sun Angling Society, The George, Brook-street, Holborn.—On the 11th inst. Mr. Comley had a nice show of roach, 3lb. 8oz. It was decided at our quarterly meeting to have a pegged-down match on the 1st November, time and place to be settled on the 19th inst., when I hope to see all members present.—F. BRADLEY, hon. sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—Our monthly outing takes place at Pangbourne on the 25th inst.; all members to go by first train, and all return by 5.15 p.m. The prize left over from the August outing to be fished for on the 25th inst. for the largest roach taken on that day; to go where they like; punt or bank. Only two members weighed in on the 11th inst., Messrs. F. T. Lamberton, roach and gudgeon; F. Lamberton, roach and gudgeon.—F. T. LAMBERTON, sec.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—On the 11th inst. we fished our outing for some prizes, but owing to the state of the weather and water, only Messrs. Chart, Hughes, Harris, Holder, and Gibbons, weighed in. On Wednesday last, at our usual meeting, it was proposed and seconded that five fishing members and one honorary member joins our society, who will be duly balloted for next week. I hope members will show up and give support. Our next outing will take place on the 25th inst., when some valuable prizes will be fished for.—T. C. LONGLAND, sec.

Royal Oak Angling Society, Royal Oak, Roman-road, North Bow, E.—But few of our members were out on the 11th inst., and our takes were exceptionally small, the only gentlemen weighing fish were Messrs. F. Barclay, F. Barrow, and J. Yeo, with roach, dace, and perch. On the 13th, F. Barclay weighed chub, roach, and dace; G. Barclay, jack and perch. It was decided to remove our quarters to the Coborn Arms, Coborn-road, Bow.—A. BARCLAY, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth. — On the 11th inst. several members were out, but Mr. J. Wright was the only member who weighed in; he had bream, roach, and dace, 5lb. 7oz. A special meeting night is called for Wednesday next, when business of importance will be brought forward for the benefit of the club, when I should like all members to be present. Mr. Whitson and Mr. Ovens have promised a prize each to be fished for at our next outing.—J. WRIGHT, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—Members are reminded that the public meeting of the Norfolk Broads Protection Society will be held here on Wednesday next, the 21st inst., at eight p.m., Major-Gen. Goldsworthy, M.P., presiding. The President has added another 9lb. of chub to his account. Messrs. Warsop and Benwell, senr., were out on Saturday at Richmond, but did very little, the water being thick and the weather rough. They weighed in a barbel, caught by Mr. Warsop, and some dace. Mr. Edwards reports having had good sport during his holidays.—C. B.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—On the 11th inst., Mr. Smales had another show of roach from the bank of the Upper Thames—about 4lb.; Mr. O'Callaghan had about the same weight of bream and roach; and Mr. Williams had roach and dace. On Tuesday last we had a very good muster to welcome back amongst us one of our most energetic members—viz., Mr. Collins, and Mr. Mason was elected a fishing member unanimously. Our next outing will take place at Moulsford on Nov. 1. Further particulars next week.—PELICAN.

South London United Anglers' Visiting List.—The next visit on the above list will be paid to the Bermondsey Brothers Angling Society, held at the Pitt's Head, Grange-road, Bermondsey, on Tuesday next, 20th instant, and as this society has been represented at every visit in the South of London for the past five years and also several visits in other parts of London, I trust the other societies will return the compliment and give them as good a visit as on the last occasion, when thirty-two clubs were represented.—A. CONN, hon. sec.

Stoke Newington Angling Society, the Dun Horse, Kingsland-road, E.—A competition for three prizes presented by Messrs. E. Machin, H. Towndrow, and W. Webb, will take place on October 25, in the river Medway, under the usual conditions. Members to alight at, or return from, either Yalding or Wateringbury Stations. On the 11th inst., Mr. S. Orrow weighed in 4lb. 10½oz., bream and roach.—T. GRETTON.

Sundial Angling Society, Plough and Harrow, King-street West, Hammersmith.—On the 11th inst. a number of the members of the above were out, the following of whom weighed in: Mr. Carpenter, specimen jack and other fish; Mr. Comley, jack and roach; Mr. C. Boreham, roach and dace; Mr. J. Harwood, roach; Mr. Taylor, jack. We had an excellent meeting on Tuesday night last. The balance-sheet was read and passed. It was pleasing to the members to hear that, despite several heavy outlays, there is still a balance to the good in the hands of the treasurer. Three new members were made; so that altogether we are progressing very satisfactorily. The half-yearly supper takes place on October 21.—H. REAVES, sec.

United Brothers, Deptford.—The members of the above will fish a pegged-down match, on the 18th inst., in the Medway for their given prizes. I hope this match will be more successful than the last.—H. TYLER, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—I wish to remind those members who are in arrears to clear the books as soon as possible, so as to be eligible for our next outing. I have the tickets on hand for the Rye House Competition, should any member require them. Members, don't forget there is a good prize on for this month.—H. C., hon. sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—The result of the competition on the 11th inst. was: Mr. Temple, first; Mr. Smith, second; Mr. H. Lees, third. For the competition on Wednesday, 21st, it was carried that we fish open bank only; five prizes.—C. HIBBLE, sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 11th inst, the outstanding prizes were by Mr. T. Jenkins, with roach and dace; Mr. W. Gordon, roach and dace; Mr. F. Barnes, dace; G. Boyd, dace; Mr. F. Field, roach; Mr. W. Turnbull, roach and dace; E. Enever, bream; and Mr. A. Corras, roach; Mr. E. A. Holbrow was duly elected a member on Wednesday last.—R. J. DARTNALL, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—Our outing on the 11th inst. was a grand success, considering the weather, the following nine members weighing in over 20lb. of fish: Mr. Kertland, first, 4lb. 2¼oz., roach and dace; Mr. Dessert, second, 3lb. 9½oz., roach; Mr. Harden, third, 3lb. 1¼oz., jack; Mr. Blyth, fourth, 3lb. ¼oz., roach and dace; Mr. Parslew, fifth, 1lb. 15½oz.; Mr. Harden, jun., sixth, 1lb. 14¼oz.; Mr. Casey, seventh, 1lb. 8¼oz.; Mr. Maples, eighth, 1lb. 7½oz.; Mr. Sullivan, ninth, 15½oz., perch. From other waters, Mr. Frances, 7lb. 11¼oz., bream and roach.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 11th inst., but the weather was so bad that the only member who weighed in was Mr. Goodrich, saving us from a blank. It was decided at our meeting to fish for Mr. Beresford's prize, on Oct. 25; to go where you please, and no roach to weigh under ½lb. for the prize.—R. LOWTHER, sec.

QUEEN'S HOTEL,
QUEEN'S ROAD, BATTERSEA PARK TOWN.
PROPRIETOR—C. SIMMONDS.
Under the auspices of The Society for Promoting the Reading of Papers among Angling Clubs,
MR. E. S. SHRUBSOLE
will read a Paper upon "FISHING BASKETS, BAGS, AND CREELS," at the above Hotel, on
TUESDAY, NOVEMBER 10.
There will be an exhibition of upwards of one hundred fishing baskets, bags, &c., to illustrate the lecture.
A GRAND SMOKING CONCERT, organised by Mr. Godfrey C. Cooper, will be held the same evening.
All anglers cordially invited.

AFTER A DAY'S FISHING,
Call on TIBBATTS,
AT "THE CITIZEN," 70, HOUNDSDITCH
(OPPOSITE BISHOPSGATE CHURCH),
Two minutes walk from Liverpool-street and Broad-street Stations.

A GAMEKEEPER'S RASHNESS.—Last week, in the Aberdeen Sheriff Court, a good case against poachers was lost through the aggressive having been initiated by the keeper. Two labourers were charged with assaulting Burnett, a gamekeeper, near Peterhead. It came out in evidence that Burnett had come upon the two men sitting by the roadside, and, guessing their business, he made at them, hitting one of them on the back of the car with his stick, as was borne out by independent testimony. A *mêlée* ensued, the keeper getting the worst of it, and having to be rescued by two farm servants, who were working near by. When all was over the poachers made off with a good bag of game which had been lying inside the dyke. The Sheriff found the case not proved, remarking that although he had a very distinct impression in his own mind as to the whole case, yet there was not satisfactory and clear evidence as to who commenced the assault.

THE *F. G.* COLLIGO PORTFOLIO. — Club secretaries would confer a great advantage upon their members if they obtained a Colligo Portfolio, holding fifty-two numbers of the *Fishing Gazette.* These portfolios have the title of the paper neatly printed in gold on the outside and on the back, and as they open flatter than a bound book, the numbers are kept in good condition and clean throughout the year, when the volume can be bound and added to the club library, and the portfolio is used again for the next year's numbers.

NOTES FROM TYRONE.

THE late rains have raised the Tyrone waters nicely, and all are in nice trim. On some rivers brown trout are still caught, but the season is now too far gone for any true angler to take those fish. Consequently there is a great falling-off in the numbers of anglers who have been out.

THE open season terminated on the Mourne, Strule, and other waters in North Tyrone last Saturday. Salmon are continuing to ascend to the spawning grounds in the mountain streams about Omagh.

THE Ballinderry is in nice ply. An odd salmon is yet caught, but they don't seem to rise well while on the run. Brown trout are not rising at all, the nightly frosts probably being the reason. Pike spinning is prime. On other streams, such as the Kildress, Littlebridge, Rock, Newmills, Blackwater, Broughderg, &c., very little, except coarse fishing, has been done. The Blackwater is high in flood, and a great number of salmon have been observed in the lower reaches.

THE eastern portion of Tyrone, although it has numerous small rivers—two of them, the Blackwater and the Ballinderry, are probably the best trout streams in Ulster—is more noted for the many lakes it contains. There are Roan, Camtell, Eskeragh, and Farlough (large lakes), and such small ones as Stewartstoun, Blacklough, Moy, Nerner, Ardpatrick, Cullion, some of them little better than ponds; yet these are all well stocked with perch and pike, and excellent sport has been enjoyed on them; but not much winter fishing is carried on.

OTTER FISHING ON THE WESTMEATH LAKES.

TWO cases of considerable importance in the interest of the Westmeath Lakes and Rivers Fish Preservation Society were decided on appeal at the County Court, Mullingar, before His Honour, T. Pakenham Law, Esq., Q.C., on Monday last, the 12th inst. Mr. W. J. Thomas, the appellant in both instances, was represented by Mr. John R. Patchell, B.L., instructed by Mr. Arthur Fetherstonhaugh, solicitor, and one of the respondents, James Farrell (who acted as winter water-bailiff to the society), was defended by Mr. G. Fetherstonhaugh, B.L., instructed by Mr. P. J. Nooney, solicitor. The other party, Richard McLoughlin, was not represented except in the Petty Sessions Court. The features of the case are shortly these: In July last the appellant received information that on a certain evening—29th of July—parties would be engaged otter fishing upon Lough Owel, and he accordingly took steps to capture the fish poachers. Having secured the services of a man named Jones, Mr. Thomas proceeded to the lake after six o'clock in the afternoon, and concealing himself from view in the bottom of his boat, Jones (whom the otter fishers had no suspicion of joining the enemy) rowed the boat up to where McLoughlin, a noted poacher, was plying the otter. Mr. Thomas then rose and promptly demanded the apparatus, which McLoughlin stoutly refused to surrender, the latter immediately rowing his smart boat away with great speed pursued closely by the other boat. McLoughlin next cut or broke the otter adrift so that could not be seen among the waves, the lake at the time being pretty rough. Mr. Thomas then went in search of the other boat, owned by Farrell, and after a short time succeeded in capturing the otter, in this case with line, tackle and flies complete. Both parties were summoned before Mr. J. F. McCormick, J.P., at Mullingar Petty Sessions, who dismissed the charge against McLoughlin, on the ground that the prosecutor might have been mistaken and have thought the rudder of McLoughlin's boat was an otter board; and against Farrell, because Mr. Thomas did not actually see him kill trout with the otter, which was produced in Court. The County Court Judge, on the hearing of the appeals reversed the decisions of the Court below, and in McLoughlin's case inflicted a penalty of £7 including costs, with the alternative of two months' imprisonment in Kilkenny Gaol, and fined Farrell £5 or one month s imprisonment.

THE Anglers' Club of Ireland have announced their autumn meeting to take place at the Central Hotel, Dublin, on Saturday, 24th inst., when the general report of the past season's angling in Ireland will be placed on the table. In this report it is stated the season has been the worst the club has recorded for years. The question of the suggested Bill to assimilate the law of this country with that of England as regards the poisoning of salmon rivers will also be discussed. In addition to the nice reach of trout fishing at the Anglers' preserves at Blessington, for a limited number of old members, it is hoped that new members desirous to enjoy the privileges the club was originally intended for may be allowed to join without the heavy entrance fee being imposed. Perch netting at the club's pond has given fair sport, and members' experiences of sea fishing has been encouraging. The club extends numerous inducements to many to join from a social point of view, and encourages the formation of large influential angling clubs throughout this country the same as in England.

LET OF FLOORS CASTLE SALMON FISHINGS.—We believe that the salmon fishings on the lower casts of these celebrated waters have been let for the month of November to Mr. Haddon, who has recently been fishing the famed Hendersyde casts.

AT the Middlesborough County Court, on Monday, an application by the Eston Local Board was down for hearing, in which it was sought to restrain, by an injunction, the Normanby Local Board from continuing to allow pollutions to enter the stream known as Cross Beck. As, however, the Normanby people are taking measures, by the erection of filtering tanks, to obviate the nuisance, the application has been adjourned for three months.

MAZAWATTEE TEA

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, OCTOBER 17, 1891.

REPORTS FROM RIVERS, LOCHS, &c.

☞ *River Reporters who want forms and envelopes should send a post card to the Manager of the* FISHING GAZETTE, *St. Dunstan's House, Fetter-lane, London.*

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add 30 min. for Chelsea.
Add 40 ,, ,, Putney.
Add 45 ,, ,, Hammersmith.
Add 50 ,, ,, Barnes.
Add 55 min. for Kew.
Add 75 ,, ,, Richmond.
Add 80 ,, ,, Twickenham.
Add 85 ,, ,, Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

Friday,	,,	23	5.24	5.47

English and Welsh Reports.

The Lower Thames.—GENERAL REMARKS.—As the trout fishing season of 1891 is now past and gone, it will be interesting to place upon record the doings of some of the principal fishermen who have been taking part in the catching of those fish between the first day of April and the tenth day of September, and some of the items of individual enterprise, if I may use the term. As is generally the case, George Rosewell, of Shepperton, comes out as the champion fisherman, although his total is not so great as in the previous year. This season it has been twenty-one fish, weighing 115lb. 1oz., compared with thirty fish in 1890, weighing 137lb. 3½oz. His principal client, Mr. G. Palmer, who last year got sixteen fish, weighing 65lb. 13½oz., has only this year caught seven fish, weighing 31lb. 9oz., and still maintains his position as the champion trout killer of 1891. His other patrons have done as follows: Mr. G. W. Ellis, three fish, weighing 19lb. 8oz.: Mr. R. H. Smith, three fish, weighing 17lb. 4oz.; Mr. R. Coles, two fish, weighing 12lb.; Mr. A. Williamson, one, weighing 7lb. 4oz.; Mr. James Clapp, one, weighing 7lb.; Mr. S. Sparkes, one, weighing 6½lb.; Mr. Young, one weighing 5lb. 4oz.; Mr. H. Jameson, one, weighing 4lb. 8oz.; Mr. R. Hains, one, weighing 4lb. 4oz. The largest fish was 9lb. 4oz., taken by Mr. Smith. I have the respective dates when each fish was taken, and by whom it was caught. At Staines, John Keene, jun., has taken nine trout, weighing 43lb. 10oz., the largest fish. 6½lb. At Sunbury, Messrs. T. and A. Stroud have caught thirteen trout. At Hampton Court, William Milbourne has his name associated with the capture of three trout, as follows: Mr. J. P. Wheeldon, one of 10½lb.; Mr. James Clapp, one of 6½lb.; and Mr. C. Maude, one of 5½lb. Amongst the individual captures Mr. Alfred Nuthall, J.P., at Penton Hook, a nice trout of 6lb.; at Chertsey Weir, Mr. T. R. Dyer and his brother caught five trout, the largest 9½lb.; five other trout were taken at the weir by other anglers, weighing respectively 9lb., 8lb., 5lb., 4lb., and 2lb. At Hampton Court Mr. George Woods, of East Moulsey, landed two trout, one of 4lb. and another of 3lb. Another gentleman in one day caught two trout, one of 5lb. and the other 3lb.; and another gentleman, with John Smith, one of 8lb. The season on the whole has not been a favourable one, owing to the condition of the water and the absence of anglers, several of whom whose names have been conspicuous in previous seasons are not even mentioned in the season of 1891.—B.

RICHMOND.—Christopher Brown, in two days, seven dozen of roach and dace, and four barbel; Henry Mansell, in four days, 49lb. weight of roach and dace; Henry Howard, in three days, 41lb.; and Job Brain, in two days, 20lb.

TWICKENHAM.—C. Brown, in one day, eight dozen of roach and dace, and another day three dozen, and a couple of bream; Samuel Cole, in three days, 28lb.; George Coxen, in one day, seven dozen; John Coxen, in two days, 20lb.; John Frost, in three and a-half days, 36lb., and one bream: A. Hammerton, in two days, ten dozen, and one bream; Richard Moffatt, in four and a-half days, thirty-eight dozen, and three bream; Pert Hammerton, in six days, 48lb., and ten bream; John Spong, in six days, 80lb., four bream, and a couple of barbel; and F. Wiggins, in four days, 40lb., and three bream.

TEDDINGTON.—B. Stevens, in one day, a fine pike of 15lb., and two bream, weighing 7lb.; Joseph Baldwin, in two days, twelve dozen of roach and dace, and one bream.

KINGSTON.—John Johnson, in three days, seven dozen of roach and dace, a jack of 4lb., and ten barbel; N. Bolton, at the same time, fourteen dozen of roach and dace, and four jack, the largest 6lb.; J. Knight, in four days, eighteen dozen, and four barbel.

THAMES DITTON.—A gentleman in a private boat, in one day, six barbel, the largest 5lb.

HAMPTON COURT.—William Milbourue writes: "The water is very high and thick, and fishing has been very bad for the last fortnight, but will be in good condition in a week."

SUNBURY.—Messrs. T. and A. Stroud have been getting some average takes of eight dozen of roach and dace; and Mr. Edward Clarke, during the week, twenty dozen of roach and dace, and fourteen brace of perch.

CHERTSEY.—Owing to the state of the weather and the condition of the water, only a few roach have been taken.

STAINES.—John Keene, jun., in four days, with Mr. Newbury, 60lb. weight of roach and chub and barbel; and one day, with Mr. Wilson, 18lb. of good roach.

Upper Thames.—The upper reaches of the Thames are flooded, and if rain continues to fall as it has and still does, my reiterated prognostications of "never of any more floods" will make me a false prophet. At present in many places the stream is bank high, and angling with any degree of comfort or success is difficult to attain. Quiet little nooks and eddies behind boughs should be sought after to contain roach, chub, and even jack, for fish cannot live in a stream which is tearing down at eight miles or more in the hour. The reports to hand of success are meagre in the extreme, and even the reports of non-success are in the same category, as evidently few anglers seem to have been on the war-path. The most fortunate anglers during the past week have been the eel-bucks, for I hear of hundredweights being had in a night only at Harleford, Temple, and Marlow, which weights would have been converted into half tons if it had not been for the moonlight nights, which it seems—on the authority of the buckmasters—are detrimental to the "running" of the succulent eel. Thursday evening.—River still mending, but out of all comfortable angling trim. The ground gates are up at all the weirs, and it takes a clever punter to stem the stream. Wind west, and every thermometrical indication of more juice—the juee take it!—MARLOW BUZZ.

Thames (Windsor).—The extremely rough weather and heavy rains have caused a considerable rising here, but though very muddy looking some good baskets of roach and barbel have been had. One bank angler, Mr. G. Dewley, of Windsor, fishing in the Surley Hall district, had on one occasion 16lb. of very handsome roach, eight of which weighed over 1lb. each: at the same spot the next day he took another fine lot, weighing 12lb. Mr. W. Atkins of Gatliff-road, Pimlico, also bank fishing has had some good sport; his best catch comprising twenty-nine fish. Barbel should be caught in such a water as at present; the best take has been eleven fish going 30lb. by that well-known enthusiast, Mr. T. Skelton, of Datchet; he also had at various times fish from 3lb. to 5lb. each; but above was the best catch for one day, though the actual time was but two and a-half hours. Many other baskets have been had, 6lb, being the largest in barbel, but one jack 3lb, which was caught by James Gray. The present "spate" as a high water is termed in the North, will move the rotted weed and debris and bring river into excellent trim for jack and chub.—B. R. BAMBRIDGE.

Ancholme District.—The early part of the week was fairly pleasant, and a few small pike were taken here and there. At present it is blowing a whole gale, and the water side is deserted.—THOMAS FORD.

Chichester Canal and Sussex Rivers.—There is but little to chronicle this week but a succession of storms and gales of unprecedented fury in the record of this season. At the latter end of last week fish were feeding well in all waters. Several good bream and roach were taken from the Arun; and from the Rother, bream, roach and pike, especially in the neighbourhood of Fittleworth. Anglers on the Adur had good baskets of roach, dace, and flat fish; and from the Ouse in the upper waters several good roach were taken. At Chichester Canal good sport was had among bream, roach, perch, and small pike. The canal is still low and weedy. It is not until the springs break that we get an influx of water here. The Amberley district is like a lake—acres of land under water. Storms are so sudden that anglers are chary of venturing far from home, and it will be some days with fine weather before many of our rivers are available.—GEORGE F. SALTER.

Derwent (Cumberland).—Although heavy rains and high floods have prevailed of late, there has been fairly good salmon fishing in the Derwent. There are plenty of salmon in the Keswick portion of the river, and some good hauls have been made by Messrs. Miles, John and Mark Stanley, of Threlkeld, Mr. W. Cowperthwaite, Mr. D. Melvin, and Mr. T. Musgrove. On Tuesday the water was considerably down, and several good fish were killed. One of the finest landed by Mr. John Kerr, Seaton weighed 23½lb.: Mr. J. Benson, Cockermouth, had a salmon 20lb.; Mr. W. Bell, Cockermouth, one, 19lb.; Mr. J. Wilkinson, Cockermouth, one, 18lb.; Mr. Joseph Pearson, Cockermouth, two salmon, 18lb. and 12lb.; Mr. G. Graham, Cockermouth, one, 7½lb.; Mr. J. Bell, Cockermouth, one, 12½lb.; and Mr. J. Graham, Pap Castle, one, 6½lb. In the Broughton district, Mr. H. Haig, Moresby Parks, landed three salmon, 19lb., 15lb., and 5½lb.; Mr. Joseph Lister, one, 16lb.; Mr. James Newman, two, 18lb. and 16lb.; Mr. Joseph Relph, two, 20lb. and 19½lb.; Mr. George Graham, Clifton, had four nice salmon; Mr. Atkinson, three, 22lb., 10lb., and 7lb.; Mr. J. Clark, two, 6lb. each.; Mr. J. W. Herbert, two, 20lb. and 9lb.; Mr. Lloyd Wilson, Pap Castle, one, 6lb.; Mr. T. Graham, one, 6lb.; and Mr. James O'Neil, one, 14lb. At the Workington end of the river, Captain Waite, Workington, killed two salmon, 25lb. and 13½lb.: Mr. Robinson, two, 16lb. and 18lb.; and Mr. J. E. Birkett, Workington, one, 12lb.

Douglas (Isle of Man).—Angling has been almost at a standstill during this wet and stormy weather. Still, on the occasional fine days during the week the locals have tried to make the most of the closing season. The veteran angler Mr. K. Whiteside did best. Amongst his captures was a nice run fish of 10lb., killed fairly on fly. This is the best I have heard of as yet. SEA FISHING.—The mackerel have entirely left us after affording a most abundant harvest. Haddock up to 12lb. are still plentiful in Laxey Bay, but the weather is so wild that it is hardly safe to cross the harbour. I expect when this blow is over pollack fishing will be very good, and those game but insipid coalfish ought to afford plenty of sport.—STORMY PETREL.

Dove and Tributaries.—Weather still wet, and water too high for grayling. Latter will be right in a couple of days' time if no more rain.—D. AND W. H. FOSTER, Ashbourne.

Eden (Carlisle).—So unsettled is the weather that it has become a case of catching the day between the floods, and in one or two instances lately it has been only a few hours. On the 8th inst., Mr. John Robinson had two, 16lb. and 8lb.; and R. Ellnord, one, 15lb., in the Cargs Water; Mr. Sweetapple, one; and Mr. Mackenzie, one, in the Warwick Hall Waters; Mr. John Hills, one, at Corby; and Mr. W. Hough, one, at Crosby. Then came a blank till Monday, the 12th, when the water was only fishable in a few places. Mr. E. L. Hough landed three beauties, weighing 66lb., in the Crosby Water; and Mr. Waters, one, 23lb., in the Association Water. On the 13th, Mr. Hough again got three good fish; Mr. Waters, one, 20lb.; Mr. Graham, one; and Mr. John MacInnes, one, at Rickerby. Nearly all the salmon landed lately are bright, fresh-run fish. The river is again in high flood, but will do on Friday if we have no more rain.—SILVER GREY.

Esk (Whitby, Yorkshire).—The river is in splendid fishing trim, and there are plenty of salmon and salmon trout. The individual takes this week have been phenominally good, the heaviest fish weighing 33lb. It was caught by Mr. Briggs, near Glaisdale.—J. J. JACKSON.

Fen Waters (South Lincolnshire).—The stormy weather is having an effect on the drains of the fen district, but it is scarcely so serious as might have been expected. The rush of water is clearing away the weeds rapidly, making trolling for pike not only possible, but pleasurable. Some very nice pike were caught last and early this week in different places. Mr. Dawson, a local angler, had some good luck with natural bait in the neighbourhood of Swineshead Bridge, his best capture being one of 7lb. Higher up the stream a Mr. Rice also did well in a similar way, getting fish up to 5lb. Another angler, on the Forty-foot, got a brace one afternoon, 3½lb, and 3lb. respectively; and another secured one of 4½lb. The heavier pike which this water contains will begin to move as soon as the nights grow sharp. A good season is expected on the Parson's Drove, I hear, and the Vernatts probably will yield well. Bottom fishing is not satisfactory, roaching this season all through not being up to the mark. Mr. Ball, of Billingborough, the other day landed a 2½lb. tench.—LIMPET.

Idle (North Notts).—Baskets have not been very satisfactory on this river of late, though the state of the water is all that anglers could desire, save the last day or two since the storms. Monday was a beautiful day and some of the best swims were fairly well patronised. Below Botham they were capturing flounders freely, and as far as the position of the river is concerned, they are best worth looking after. The canal is not much worth a visit, but anglers occasionally come away with odd specimens of roach scaling about 1lb. Fish of that weight, however, are not plentiful. Pike fishing is taking attention both in the upper and lower reaches of the river, and in the dykes of the low district. Several specimens have been got from the upper waters, but they all appeared badly fed, of this we may soon expect an improvement. One angler from Retford had a take of seven fish of 6lb. Grayling fishers have been doing moderately in the same locality, and they report the fish in good trim.—L.

Lea and Stort.—Such thoroughly unpleasant and dreadful weather puts all angling chances at a terrible discount, consequently there is nothing, or but little, to report. To-day (Thursday) I have made attempts to call at my usual fishing stations, but have been frustrated by the horrible weather. I only found my way as far as Waltham Abbey. News here were not grand—a jack of 4½lb. had been taken, and some roach and perch. Mr. Avis, of the King's Arms Fishery, tells me that jack and perch are showing well up. Mr. Creffield captured a very nice jack on Wednesday in the Ferry Boat Waters, at Tottenham; the fish went well over 4lb. Some few takes of roach have been made here lately. A match (roach fishing) between two well-known anglers has been made, one gentleman backing himself to beat his opponent to the extent of a supper, so far as I understand. I must say the result will be looked forward to with interest. The conditions are that one uses boiled shrimps, and the other bread-paste. Water somewhat thick, but clearing, and will soon be in good fishing condition.—SPLICED JOINT.

Leicester.—Leicestershire has been far from leniently treated by the terrible storm which has just passed over this country, the wind and rain being at times sufficient to put a total stop to angling operations. Not only had anglers the immense floods to contend with, but the wind was so boisterous as to make it impossible to keep a float in the water. When practicable, anglers were to be found in quiet places. Wherever shelter was afforded along the canal, these indefatigable piscators were coming in for a brace or two of pike. Along part of the Leicester preserved waters above the Twelve Bridges, the waters overflowed, and presented a vast flood. Fortunately the improved flood schemes was near completion at Leicester affords facilities for the waters to get away quickly. Fishing in the district has been quiet. One noteworthy catch was, however, effected by Mr. West, of this town, who from some private waters, landed a handsome pike of 17lb., which, after being placed on public view, was sent to a local taxidermist. Thursday evening the weather turned extremely cold.

Lugg and Arrow (Leominster).—Both these streams have a large quantity of water rushing down them, owing to the heavy rain. Fishing is stopped for the present.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Fishing in this neighbourhood is at a stand-still. For a week past rivers have been too high and discoloured. And to-day (Wednesday), as the result of deluging storms of rain, accompanied by gales of wind, and heavy tempest, rivers are quite bank full of very muddy water. At time of writing still rising. There can be no chance of angling for at least a week hence.—R. T. WILLIAMS.

Medway (Maidstone).—The heavy rains have made the rivers unfishable. No signs of alteration at present. It will be some time, under the most favourable circumstances, before it is again in condition for the angler.—WILLIAM SHRUBSOLE.

Medway (Tonbridge).—The weather during the past week has been most unpropitious owing to the heavy rains. To-night (Thursday), the river is in full flood and all over the meadows. All angling will be out of the question for some days.—YE MEDWAY WATER RAT.

Nene (Northamptonshire).—We have had torrents of rain this week, and the river has swollen very much; in fact it has overflowed its banks in several places, and many pastures are under water to the depth of several feet. Pike fishing has been fairly productive, Mr. George and Mrs. Saunders have had a very good pike between Elton and Nassington, heaviest 6lb; Mr. Welford has also had a few good ones from the Alwalton district. Spinning is the most profitable plan. Messrs. George and Saunders have also obtained a couple of perch, both good-sized fish. Roach are not quite so profitable, although some fair baskets have been had. At Wisbeck, some large bream have this week been grassed, but pike are rather scarce.—NENEBANK.

Norfolk, Suffolk, and Cambridgeshire Waters.—As I stated in my report of last week, now the weeds are cut anglers will have a chance to get at the big shoals of roach, &c. I saw several good lots of roach and bream taken on Saturday from the Ouse; white creed wheat and white paste the baits. This fine river, from Littleport to Ely, is full of good fish; but it is strictly a winter river—deep, sluggish, and quiet. I had a try in the Yare, at Norwich, on Saturday. I did very well the short time I was at it. This is a good winter river—very deep and well coloured. The Lark, at Mildenhall, is, too, full of floating weeds at present. I cannot recommend this river for winter fishing, though it will be better now it is deepened to 6ft. or more. I am sorry to report that several fine trout have been speared during the last week—a cruel and most unsportsmanlike thing to do.—WILLIAM J. COWLETT.

Ouse (Great Paxton).—Some good sport has been had here during the past week. The water is all that can be desired.—W. DUCKER.

Ouse (Huntingdon).—The recent rains have filled the river bank full, and is very thick, which has put a stop to all kinds of fishing, but it was what was wanted to move the jack about, which will bring them on the feed, and when the water gets in fishing order, it is expected that sport will be very good, especially with the jack, and no doubt bream and roach will feed well—H. Rout.

Plymouth.—Sea Fishing.—We are still having plenty of sport of all kinds. The mackerel are going to ground now, although some few are taken whiffing. Smelt and small pollack are taken off the pier and rocks, and flat fish in good numbers in Sutton Pool.—William Hearder.

Scarborough.—(Sea Fishing).—Both pier and boat anglers have been having excellent sport, but the south-easterly gale has put a temporary check to it. Billet have been very numerous in the harbour; one angler caught about three stone in weight the other day, in the course of three hours' fishing. Some good cod and silver whiting have been caught in the bay, and any amount of small flat-fish have been caught off the piers.—H.

Severn (Shrewsbury).—Anglers have had a very poor time with the pike and rough fish since the close of the trouting season. Mr. Goodman, a local excise officer, took a couple of good pike in Hennymere, Baxchurch, last week; Mr. H. Shaw had a very successful angling excursion a fortnight ago to the Irwell, in Hertfordshire, and brought back three very fine trout, weighing 7½lb., 5½lb., and 4½lb.—Piscator.

Tees (Barnard Castle).—Since writing last fair sport has been obtained here. Mr. Hutton, of Roheby, killed one salmon, weighing 18lb.; Mr. Tant, one, weighing 16lb.; Mr. Thomas Parkinson, six fish in one day, four of which weighed 20lb., and the remaining two 8lb.; Mr. Hood, of Bowes, one of 9¾lb.; and Mr. Putnams, of Gainford, four fish, weighing 15lb., 16lb., 12lb., and 10lb. respectively. Heavy storm on Tuesday, with much rain. Will spoil the rivers for the remainder of the week.—J. H. R.

Teme (Ludlow).—The Teme in this part is now running high and muddy, and quite out of order for angling. The Ony, Corve, Clun and Ledwyche are all high and muddy. The Corve has overflowed its banks and the fields are covered with water.—S. Ludlow.

Teme (Tenbury).—In this part the weather has been very stormy, and heavy rain has been had, and the water is now running high and muddy. Fishing is quite stopped for some days until the water goes down. The Rea, Kyre, and Ledwyche are all high and muddy; no fishing in them. —Worcester.

Wharfe, Yore, Swale, Nidd, &c.—All these rivers are again in heavy flood and there can be no prospects of grayling fishing for some days.—Francis M. Walbran.

Witham, &c. (Mid-Lincoln).—Angling was a good deal quieter this week, on both the Witham and Forsdyke, owing no doubt to the unfavourable weather of Saturday and Sunday. Monday, however, was a grand fishing day, and gave promise of a settlement. The return of the storm was disappointing, and should it continue much longer it put the water out of condition. Most of the visitors again went towards the lower waters, and they report better luck with pike, still they say the nights are not yet cold enough for the heavier fish. The best pike fishing is now about Kishstead, Dogdyke, and the lower water.—Luci.

Yarc (Norwich).—Reports are again bad from all stations with respect to both roach and bream, and the weather during the past few days has been bad enough to keep anglers at home. Sport has been very good indeed with the pike. One member of the Norwich Angling Club told me last evening that he had caught close upon one hundred pike lately, say, within the past three weeks. This success shows the advantage of being able to go out whenever the conditions are favourable, which is the case with the friend alluded to. The stormy, squally weather of this week will not conduce to bring luck, I am afraid. I hear of another large bream of 7lb. being caught on the Wensum by tho same individual as captured the two reported a fortnight since. I understand he was fishing from daybreak till four p.m. for this reward.—Robert Moll.

Teifi, Lampeter (Cardiganshire).—During the past week, in consequence of the heavy rains, the river has been overflowing its banks, but on Saturday last the water had so far gone down that two salmon were caught (9lb. and 12lb.); and on Monday, some very good fish were taken, averaging about 10lb. each. The river at time of writing is in splendid order, and good sport anticipated during this week, unless we have more flood water. The rod season closes on the Teifi, on Monday next.—H. S. Harland.

Towy (Llandilo, Carmarthenshire).—Salmon fishers have had to content themselves by looking on troubled waters and heavy floods for a week or more, relieved only by the sight of innumerable salmon and sewin making for the upper waters and tributary streams. Our rod season does not close here until the end of this month, so we may yet have some sport. It is to be hoped that the Towy Board of Conservators will keep a much stricter watch on the poachers next season than they have done during the present.—H.

Scotch Reports.

Border Esk.—The river ran very high both last week and this, but quickly subsided; indeed, as was truthfully remarked by "R. P." in his interesting article on the Tweed, in last week's issue, "that owing to the net-work of drains which now intersect the land, the Border rivers rise suddenly and fall suddenly instead of being in a flood more or less for a week," which was of frequent occurrence forty years ago. Although angling has occasionally been suspended during the last ten days, sport has been much above the average, and the hauls of salmon in the vicinity of Metal Bridge, and in the Netherby Waters, are astonishingly large. Last Friday I walked from Longtown to the Metal Bridge, in company with one of the most experienced anglers on the Border, and he told me, "it capt a' that ever was seen in the memory o' man, the way anglers were cleekin the muckle, twenty an' thirty punners oot." There was no fishing, however, at that particular time, as the Esk, as well as the Eden, was running a red heavy flood; at night, though, when most of tho surplus water had tumbled itself into the Solway the fun commenced, and several well-known anglers were seen sweeping the Roost, Wilkins Pool, Lynefoot Flat, and other famous points of the river. As the fly-fishing season closes on the 31st of this month, it may be mentioned that a day ticket costs five shillings, and if taken for the remainder of the season, two guineas covers the time. For the lower waters, tickets are issued by Miss Cartner, Metal Bridge Hotel, who has excellent accommodation for anglers and a fund of information anent the river to impart to those who stand in need of it. Miss Cartner's terms are very reasonable, and sbe keeps the best of everything. Taking the season all round, the upper and middle reaches have been most prolific in sea trout and whiting; but with the exception of the Willow and Cauldron Pools in the Canonbie Water, the Metal Bridge division of the river has supplied the best salmon angling, and I may safely inform readers now that the five hundred salmon I spoke of a fortnight or so ago were seen in the Thistle Pool, a portion of this Netherby Water, and within 300yds. of the famous Cauldron Pool. Of course, as the Thistle is reserved water, there is no existing reason for keeping the information back. The number of salmon seen in the pools still continues large. Mr. W. Johnstone caught a fine salmon in the water above Langholm; Mr. G. Maxwell had one of 12lb.; Mr. J. Reid, one, 10lb.; and Mr. C. Elliot caught two sea trout of 3lb. each in the same water. The Earl of Dalkeith, Lord George Scott, and other members of the Duke of Buccleuch's party staying at Langholm Lodge have had good fishing in the reserved water. Good sport has also been enjoyed in the Canonbie Water. Mr. J. Rae, Tarrasfoot, had a salmon, 20lb.; Mr. W. Riddle, Rowanburn, had one, 22½lb.; Mr. Frank Little had one, 18lb.; Mr. J. Graham, Hollowshellgate, landed two fine salmon, one, 19lb., and a second one, 22lb., during the same day; these were all caught in the Byreburn Water. Mr. Scott, Holmfoot, had a new-run fish of 19lb. from the Cauldron Pool, and Mr. James Park, March Bank, one of 9lb. from the same water. Mr. W. Davidson, Byreburnfoot, had two salmon at a fishing. Mr. D. Edgar was equally successful. Mr. James Davidson, Forgebrae Head, had three salmon at a fishing, one of the fish weighing 29lb. Mr. W. Irving, Prior Hill, had one of 12lb. in the Hush, and one, 6lb., in the Mill Pool; and Mr. Thomas Jamieson, Westerhall, caught a fine salmon, 23½lb., in the Double Water. Other anglers have also been successful in the Middle Reaches. It is difficult, however, to obtain a complete list, as several of those who had good sport seem anxious to conceal the result of their efforts for reasons which will be sufficiently obvious to those who are acquainted with the river. In the Canonbie Water, Mr. James Elliot, Byreburnfoot, landed two salmon, 17lb. and 18lb. Dr. Burrell, London, had two salmon at a fishing in the Double Water, and Mr. John Dalgliesh had a salmon weighing 18lb. In the Metal Bridge Water, Mr. Yates, of Liverpool, had four salmon last week, 24lb., 19lb., 28lb., and 9lb. During his stay of three weeks at the Metal Bridge Hotel, this gentleman has landed seventeen salmon, and says, although he has fished in numerous English and Scotch rivers, he considers the "Metal Brig" the cheapest and best angling resort he has visited. Mr. Butler had no less than seven salmon last week, 19½lb., 19lb., 10lb., 7lb., 6lb., 15lb., and 22lb.; Mr. Mason, Rockliffe, one, 5lb., and another, 24lb.; Mr. Graham, Longtown, two salmon, 22½lb. and 13lb.; Mr. Walton, sen., two salmon, 19lb. and 17lb.; Mr. Seth Walton, one, 6½lb.; "Professor" Scott, Longtown, the famous huik (fly) dresser, a splendid salmon, 28lb.; Rev. Mr. Phelps, Houghton, Carlisle, a salmon, 15lb; Mr. Johnstone, keeper, two salmon. In the Netherby Water, Sir Richard Graham, of Netherby Hall, tops the lot with five salmon, 23lb., 22lb., 19lb., 13lb., and 17lb., while Sir Richard's factor, Mr. Brown, Scaurbank, comes close up with four, 40lb., 19lb., 17lb., and 16lb. Mr. Ivy Graham, Arthuret Rectory, had four salmon, all over 20lb. Mr. R. B. Carruthers, of Dumfries, had one salmon. Mr. J. Johnstone, Longtown, caught two; and Miss Graham, of Arthuret Rectory, landed a fine salmon of 22lb. after a good run.—Gilnockie.

Dee (Aberdeenshire).—Seldom is it the case, and the more's the pity, that the upper proprietors participate to any extent, if even at all, in the run of the autumn migration. The present season is a rare exception to the regrettable general rule, for already fresh fish are being grassed on McGregor's Invercauld Arms Water, and even in the reaches above him. Mr. McGregor is to be congratulated on his rare run of luck this season all through. He had fish on the opening day, the cream of the season, and now he is again blessed with a splendid back-end. On the Birkhall reach of the Queen's Water, Captain Brook landed three fish, 9lb., 9lb., and 10lb., while he also had one of 9lb. on McGregor's Invercauld Water. On this same water, Mr. Maud landed two fish of 7lb. and 8lb. on Saturday, one of 16lb. on Monday—a fresh autumn beauty—and three of 8lb., 10lb., and 23lb., on Wednesday; while Donald Morgan landed a fresh-run fish of 20lb.; Dr. Mitchell, a grilse of 5lb., and two salmon of 9lb. and 8lb., on the same water. On the Monaltrie Water, Mr. Heaven had a fine fish of 13lb. On the Glentana Waters, Sir William C. Brooks, Bart., M.P., and friends, are enjoying good sport. On the Loch of Aboyne, Capt. R. E. Heaven, Mr. W. R. Heaven, and Lieut. McFarlane, caught fourteen pike with the spoon bait. On the Huntly Arms Hotel, Aboyne, Mr. Rice has had capital sport, having landed two of 6lb. and 13lb., four, 6lb., 9lb., 16lb., and 23lb., and one, 15½lb., on Wednesday, Thursday, and Friday last week. On the Upper Dess Water, Mr. J. A. Milne, who is staying at the Huntly Arms, landed one of 8lb., and one of 25lb.; while Mr. Getting bad two of 24lb. and 19lb., and one of 7½lb.; and Mr. D. R. Milne, one of 8lb., on varions days last week. On the Kincardine O'Neil Section, Mr. Munroe landed two on the Lower Dess of 15lb. and 13lb. On the Kincardine Lodge Water, Mr. Lamond had one of 14lh., one of 12lb., and a magnificent fish of 29lb.; while Major-General Macintyre, V.C., had one of 20lb., and another of 14lb. On the Carlogie Water, Captain George Campbell landed two of 22½lb. and 16½lb., one of 16lb., and two of 7½lb. and 26lb.; while Mr. Archd. Campbell had one of 8lb. On the Borrowstone Water, Captain Farquhar, R.N., landed two of 14½lb. and 27½lb.; while Admiral Fane, the lessee, had one of 7½lb., two, and three of average weights on different days. On the Ballogie Water, Mr. W. E. Nicol, one of 8lb., three of 14lb., 18lb. and 22lb., on Friday and Saturday last; while Duncan, keeper, had two of 14lb. and 16lb., and three of 15lb., 18lb. and 10lb. on the Commonty Water on two days last week. On the Woodend Water, which was considerably out of trim during the whole week, and especially so on two occasions, Mr. Farnell Watson landed three fish of 19lb., 17lb. and 15lb., two of 11lb. and 17½lb., one of 17lb., and two of 18lb. and 11lb.; while Mrs. Farnell Watson had a beauty of 15lb. to her own rod on Monday last. On the Blackhall Castle Water, Mr. G. T. Hay and party grassed two on Monday of 21lb. and 23lb.; nine on Wednesday, scaling from 9lb. to 24lb.; four on Thursday, from 16lb. to 23lb.; one on Friday of 21lb.; and seven on Saturday, scaling from 15lb. to 23lb., in all twenty-three fish for the week. On the Inchmarlo water, Mr. Duncan Davidson had one of 8lb.; and Mr. Vernon Maginac a fine fish of 25lb. On the Cairnton Water, Mr. T. Farley landed eleven heavy fish one day lately; while General Keene had a similar number on the Lower Crathes Water, scaling from 8lb. to 24lb. On the Knappach Water, Mr. F. Pickop's gillie landed three, scaling 10lb., 12lb. and 16lb. On the Drum Water, Mr. F. H. Irvine landed one of 18lb., two of 19½lb. and 20lb., two of 19lb. each; while Mr. K. R. Fletcher had one of 16½lb., and two of 11½lb. and 17lb.; while the Rev. E. R. Nicolls had two of 7lb. and 24lb., and three, 16lb., 19lb. and 23lb., on various days during tho week. On the Durris and Park Waters equally good sport has been got on every available occasion, while the Nether, Banchory, and tidal reaches are affording splendid baskets of finnock and sea trout, with an occasional salmon.—Deesider.

Deveron (Banffshire).—The water in the river Deveron continues in fair fishing order, and good sport is enjoyed by anglers. On the Duff House Water, Mr. George Duncan, Banff, had ten salmon, weighing from 8lb. to 27½lb.; Mr. Mowat, tbe keeper, had one of 19lb.; and Mr. Stevesnon, Blairshinnoch, for three days' fishing, had twenty, ranging in weight from 10lh. to 30lb. On the Dunlugas Water, Col. Forbes and Major Gordon, Balquholley, had half-a-dozen fish of 9lb. to 24lb. On the Eden Water, three fish of 9lb. to 15lb. were killed. On the Netherdale Water, Keith Maitbland, Esq., had six salmon, 6½lb. to 19lb.; Mr. Caldwell, two salmon, two grilse, and eleven sea trout of 3½lb. to 17½lb.; the Hon. C. H. Erskine had six salmon, 9½lb. to 19lb. each, and a grilse of 3½lb.; Mr. Findlay had two salman of 10lb. and 10½lb.; Capt. R. W. Cahoon, a salmon of 10lb.; and Mr. Hunt, a salmon of 27½lb. On the Mayne Water, Mr. Sandison, the keeper, had a salmon of 17lb. On the Forglen Water, Sir R. Abercromby had five fish. On the Mountblairy Water the number caught to date is over sixty; and on tbe Laithers Water (Mr. Stuart), fifty. On the Corniehaugh Water, Huntly, Mr. Porter and Mr. Sellar had two salmon each, the heaviest weighing 25lb. A few fish were also killed on the free water, at Huntly, on the upper reaches of Beldorney and the Cabrach.—H. W.

Don (Aberdeenshire).—During the past week the water has been in capital condition, and grand sport has been the order of the day, especially all over tho lower beats. On the Grandholm Water, Mr. R. H. Ellis, London, had sixteen salmon for the week, landing nine of these on Monday, including some grand fish, several of which weighed over 30lb. each. Mr. Rooper, London, had twelve fish for the week, and Mr. Jopp, Aberdeen, five—one day out. The total catch for the week was sixty salmon to seven rods. At present the pools are teeming with fresh-run fish, and the prospects of a splendid back-end are now well assured up to the close. On the cruives and Nether Don Sections equally good sport is being got, while splendid baskets of sea trout are being got on the tidal waters by Mr. Gibb and others, weighing from 20lb. to 30lb. occasionally.—Don.

Dunbeath.—What has proved to be a pretty successfu season closed on Thursday, the 15th instant. Usually the best times for this stream are March and April, the end of September and the first week of October. In March of this year it was covered with ice, and there was no angling. The first fish of the season was got by Mr. Ross, Berriedale, in the Strath Bridge Pool, early in April, and weighed 10lb. In May, Mr. Bruce, of Dunbeath Castle, had some extraordinary large takes of sea trout. For the week ending May 16 he had altogether no fewer than seven hundred and thirty-seven, his best day being the 11th, when he had two hundred and eleven, got in the tidal waters. They weighed about seven to the pound. During the month of June the stream was low, and there was no fishing. During the second half of July Mr. Bruce had excellent sport. On 23rd July he had five grilse, weighing from 3lb. to 5lb., in the Bridge Pool; and on 25th he killed an 11lb. salmon and a 6lb. grilse in the Mill Pool. The heaviest fish yet got in this river was caught by Mr. John H. Sinclair in the Strath Pool, and weighed 19½lb. Sir William Montague Call, Bart., Baleraggie Lodge, had collapsible boats put on Lochs Dhu and Breac, near the head waters of this stream, and for the first time in their history these rather remote lochs have this season been regularly fished, and both of them have yielded excellent baskets of brown trout. On the lower beats Sir William had several nice fish, his heaviest being 10lb. J. B. Whitelaw, Esq., fishing from Dunbeath Hotel, landed a few good fish. The stake net fishing at the river mouth has been more successful than usual this season. The heaviest fish of the season weighed 52lb., and was got just a day or two before the legal close of the net fishing. The herring fishing at this port has also been more successful than at any otber part of the east coast of Caithness. The flies which have been found most successful for sea trout have been blue body striped with silver, brown hackle and teal wing, or crimson body striped with gold, claret hackle and mallard wing. For salmon: black body striped with gold, mallard wing, blue jay hackle, and jungle cock wing.—A. P.

Liddle.—This river, which is well stocked with salmon, continues in fairly good fishing order, and anglers have had comparatively good sport during the past week. Mr. Wm. Murray, Newcastleton, landed a fine salmon, 18lb., in the upper reaches; Mr. Whitfield, Carlisle, had one, 6lb.; Mr. Dickie, Upper Burnmouth, one of 5lb.; Mr. J. Little, Newcastleton, caught two, 18lb. and 6lb. respectively; and Mr. Crozier, Newcastleton, caught a nice fish, 18lb.; Mr. Graham and others have made good hauls in the lower waters between Penton Linus and Liddle-foot; but there is the same difficulty in getting returns which exists in some divisions of the Esk. Now, ye verra clever local anglers, I ken maist o' ye. Just you wait a wee. I'll be on your track next spring.—Gilnockie.

Loch Ness, River Oich, and Loch Tarff (Fort Augustus N.B.).—Now that the close season is on, a word or two regarding last season's sport may not be amiss. The salmon angling on river Oich and Loch Ness was an improvement on last season, and the record might have been better but for a lot of bad luck, a large number of the fish getting away after being hooked. For a good part of the season the river was too high, and at other times too low, for successful angling. The loch gave some good sport, as many as six being got on it in one day. The trout angling was variable, but on the whole fairly good. Loch Tarff was not up to its usual, some very poor baskets being got off it at times; still, on favourable days, as much as 15lb. was got. The weather had a great deal to do with the bad luck this season. Mr. F. Mellor, staying at the Post Office Buildings, was the last gentleman to try these waters, and he was rather successful, his catch consisting of salmon, grilse, and some heavy black trout.—Hison.

Loch Tarff (Fort Angustus, N.B.)—On Saturday last, 10th inst., Messrs. MacCullie, T. and J. M. Aitchison had an excellent day's char fishing on this loch, landing fourteen dozen, and two fish weighing 25lb. This beat the record of any day's catch within the last number of years. Five dozen and a half were grassed off tho roadside beds in the space of an hour, and the remainder were taken off the Knockie March bed. The big island bed which used to add considerably to the angler's baskets proved useless this season. On Monday, Mr. Henry Douglas fished the same ground, but with worse luck landing only four fish; and on Tuesday, he and Mr. H. Munro visited the loch but had no better sport. The char seemed to have left the grounds to be seen no more for a twelvemonth. For some unaccountable reason the char were of a smaller size this year. The fishing of this loch goes along with the Glendoe shooting, and Mr. E. Ross, the tenant, deserves the best thanks of the piscator community of Fort Augustus; for not only in the char season, but all through the trout season, he grants permission to any who may apply to him.—HISON.

Ness (Inverness).—Angling has been almost at a standstill during the past fortnight, owing to the flooded state of the water. During the past week Mr. F. Walker, on the Ness Castle Water, landed ten grilse and four salmon. On the free day, 12th, the local anglers landed three grilse and three salmon, averaging 17lb. The fishing closed on this water on Thursday last.—D. WATSON.

North Esk.—Splendid sport is being had, both on the North and South Esk (Forfar). On the Ponnagh Water, Colonel Murray had four fish, scaling, 30lb., 22lb., 27lb., and 12lb.; and Miss Scot, one of 17lb. On Friday last, while Mr. Scott, on Bridge Pool, had two, of 16lb. and 17lb.; Mr. Porteous, two of 16lb. and 17lb.; and Dr. Johnstone, two on the same water in addition to five on the Nab Stream. On Saturday, Dr. Johnstone landed two, and Mr. James Johnstone six, scaling from 12lb. to 37lb. on the Nab Stream; Mr. Porteous, on Bridge Pool Water, had three, 16½lb., 15lb., and 14lb.; Mrs. St. Quentin had two fine fish on the Morphie and Ponnah Waters, of 15lb. and 18lb. respectively, and Mr. St. Quentin, one of 18lb. Excellent sport is being had on the Panmure Hotel Waters by Mr. W. Murdoch and others, heavy baskets of salmon being made daily, of splendid fresh-run fish, scaling from 7½lb. to 18lb. apiece.—G. M.

North Esk (Edzell).—Fishing from Panmure Arms Hotel, Edzell, Mr. Murdoch, in four days, had seven salmon, 8lb. to 28lb.; Dr. Hudson, two, 8lb. and 10lb.; Mr. Bacon Frank, five, from 12lb. to 20lb.; Mr. Bertram and Mr. McIntosh had two each; and several others had good fun. The North Esk has not fished nearly so well for many years. Of late the river has been several times higher than anglers could have wished.—BRECHIN.

South of Scotland.—Such a succession of floods has not occurred in the South of Scotland rivers for thirty years. For about three weeks past only two or three fly-fishing days have been had in the rivers of the district. Salmon in hundreds appear to be ascending the rivers daily, and passing on to the upper waters in the floods. On occasional days the sight of the salmon ascending the weirs and salmon passes has formed an interesting sight to others besides anglers. Many of the salmon seen in the rivers this week were computed to weigh over 40lb.

ANNAN.—In the Annan, on Saturday, at Mount Annan, Mr. Crawford's fisherman killed, with a Grey Turkey fly, a beautiful new-run salmon of 25lb., out of the Burnfoot Pool. On the same day, Mr. Thomas Hoare, Kinmount House, landed a small salmon of 10lb. out of the Kirkyard Pool of Hoddom Castle Water. In the lower waters, at Northfield, Mr. Peter Loudon, Bruce-street, Annan, landed a fine fish of 20lb. Dr. McNaughton, ex-mayor of Blackpool, hooked a large salmon above Millbie Caul, but it unfortunately escaped by the hook breaking. Dr. McNaughton has killed several nice new-run herling this week. Mr. John Iveson, Wigton, killed, the other day, twenty-five herling, and on the next day he had twenty-two, and yesterday he had nine, all fresh-run autumn fish. Mr. Ormerod, Oldham, caught six; Mr. William Wallas, Wigton, killed eight yesterday, and to-day he ran a large salmon for some time and then it broke away; the Rev. George Kennedy, Newington Lodge, killed to-day, in the Warmanbie portion of the Annan, two large sea trout and eight herling; Mr. Peter Loudon killed twelve herling in the lower waters, on Tuesday, with worm bait.

NITH AND FLEET.—Little has been done in the Nith, owing to the excessive floods, but in the Sanquhar district several good salmon have fallen to the rods. The Fleet has been running bank full all week, and no fly-fishing has been had.—HEATHERBELL.

Spey (Elgin).—The river was of considerable size this week, but not too large for fishing, and both salmon and trout fishers met with good sport. On the Sourden Water, on Monday, Mr. W. Edis, London, had a fine fish of 20lb.; on the same day, on the Aikenway Water, Mr. Stewart Menzies, of Culdares, killed a splendid salmon of 20½lb. On the Easter Elchies, Lord Elgin's keeper had a nice fish of 17½lb. On Saturday, Major Grant, of Glengrant's Water, at Craigellachie, Mr. McKessack, of Ardgay, had a fish of 16lb. On the Elchies Water, on Thursday, Mr. Stewart Dyce landed three fish, weighing 8lb., 9lb. and 17lb.; and on Friday, on Major Grant's water, the same gentleman had one of 9lb.; and on Saturday the same gentleman had one of 17½lb. from the Aikenway Water. On the same date, Mr. Stewart-Menzies had one of 23lb.; Col. Edis, on the Sourden Water, had two salmon of 14lb. and 19lb. respectively.

FIDDICH.—Excellent sport still continues to be got on this river. On Friday last, Mr. Thomson, Dufftown, had two grilse, 7lb. and 5lb.; Mr. John Grant, distiller, on the same date, had a grilse of 7lb., and a sea trout of 3½lb.; Mr. Jas. Beaton, two sea trout of 1½lb. each; and Mr. Watson had two sea trout of 2lb. each; while Captain Milne had a grilse of 4½lb. On Saturday, Mr. M'Pherson, teacher, had two grilse of 5½lb. and 4½lb. On Monday, Mr. Cruickshank, agent, had a grilse of 6lb. On Saturday, Mr. John Stuart had a grilse of 4lb.; and Mr. Jas. Watson a trout of 2lb.—

Tay (Birnam Hotel Water.)—Boisterous winds and heavy rains during the past week seriously interfered with angling pursuits; but notwithstanding the unfavourable weather, some splendid fish fell to the rod of Mr. G. Clark, Bedford. On Monday, Mr. Clark had a clean-run salmon of 20lb., and lost another of about the same weight. On Tuesday, Mr. Kenneth Milliken, of London, had one of 21lb. On Thursday, Mr. Clark had four salmon, and on Tuesday four. On Saturday, Mr. Clark fished for half-an-hour, in which time he got two, but did not manage to land them. Mr. Clark fished the Stanley Water three days, and had sixteen fish, averaging 16lb. each. The river is full of fish, and promises capital sport; and the weather is much more settled.—M. G.

Tweed, &c.—The month of October, which opened so auspiciously for the salmon angler, has already belied the high hopes that were entertained regarding it—in so far as the weather is concerned, as since my last notes, very few fishing days have been granted the disciple of Old Izaak, the rivers in the Kelso district rising and falling nearly every other day. That there is no paucity of salmon in both Tweed and Teviot, however, is evident from the numbers that have been killed by those anglers who have, nevertheless, made the most of their time and opportunities whenever a chance has occurred for them to have a cast. In truth, some of the more ardent votaries of the art have gone out when there seemed not the faintest hope of a rise, far less of a kill; but, strange as it may appear, luck has been with them, and these persevering and patient anglers have been rejoiced, on more than one occasion, to record kills in water seemingly so completely out of order, that none but the most enthusiastic sportsman would have ventured to try. Gales of wind and rain have been the order of the day for nearly a week, and on Wednesday and Friday last week, floods of from 2½ft. to 4ft. were the results of the unsettled elements, while the present week has shown no improvement, the rivers—Tweed and Teviot—having both been in flood since Tuesday, the Tweed ometer at Kelso Bridge, on Wednesday, marking a rise of about 4ft. With the present unsettled state of the elements, the rivers cannot be in anything like good angling order, until Friday at the soonest, if then. The wind and rains are from the south-west, and as the lands adjacent to the river are all now well saturated with the heavy pluvial descent we have recently had, it does not now take much of a further fall to bring away the streams in flood. Subjoined are the takes that have been got during the past week, together with a few of the previous weeks, which were not to hand when my last notes were sent off. At Lennel, on Oct. 3, Mr. Etty had one grilse, and Mr. Chorley, one salmon; on the 5th, Mr. Etty had one salmon and one grilse; on the 6th, Mr. G. H. Pierson, one grilse. On the Rutherford Water, on Sept. 28, Dr. Gibson Dyson had one grilse of 5½lb.; on the 30th he had one of 7lb., and Dr. S. Buckley, one of a similar weight; on Oct. 2, Miss Vickers killed a 1½lb. salmon, and Mr. W. H. Hamilton, one of 20lb.; on the 3rd, Mr. Hamilton had five salmon, 14lb., 14lb., 16lb., 16lb., and 23lb., and one grilse of 5lb., while Miss Vickers had one of 16lb.; on the 5th, the same lady had an 18½lb. salmon; Dr. Gibson Dyson, two salmon, of 16½lb. and 18lb., and Mr. W. H. Hamilton, one, 15lb.; 6th, Miss Vickers killed two salmon of 20lb. each; Dr. T. Dyson, one, a similar weight; and Mr. W. H. Hamilton, two, 15lb. and 19lb.; Miss Vickers and Dr. Gibson Dyson, fished one rod. The river was usually too full for good sport. On October 2, at Yair, Mr. Alex. F. Roberts had a couple of grilse, 4½lb. and 5lb., and one 18lb. salmon; while Mr. John Roberts had one 16lb. salmon; on Saturday, Mr. J. S. Stedman had three fish, 10lb., 12lb., and 16lb.; and Mr. J. Litsterow, two, of 19lb., and two grilse, of 5lb. and 4½lb.; on Monday, Mr. Alex. F. Roberts had three salmon, 10lb., 14lb., and 17lb., and one grilse of 6lb.; Mr. Thomas J. S. Roberts, one salmon of 9½lb.; and Mr. James Hogg, one salmon, 14lb. On the Teviot, on Monday, Mr. W. R. Plummer had two grilse of about 7lb. each. On the Hendersyde Water, on Tuesday, Major Boswell, Preston, killed three salmon, 16lb., 16½lb., and 19lb.; and Capt. Haddon, Hawick, one of 17½lb. on the Sprouston Water; Colonel Trotter had eight fish on the Ednam House Water; Capt. Middleton had one of 9lb. on the Mallerstoun Water. On October 5, Major Bourke had eleven salmon, and on Friday, the 6th, he had a similar number of fish; while on Saturday last he had one salmon, although the water was in very bad order. The best fishing during the present week, however, was got on the Duke of Roxburghe's upper water on Tuesday, when Colonel Murray was successful in killing eight salmon, the heaviest weighing 24lb. On the lower water we understand that five fish were also got since last week. A good many baskets of common trout have been taken on both Tweed and Teviot, but these fish are now well out of condition, and legitimate anglers have given up this sport some time ago, and none but the pot hunter and the "river hawk" (who as a general rule turns his take into cash), now follow out this sport, and it is a thousand pities that there is no legal enactment to prohibit this kind of angling after October sets in. We hear a good deal about the scarcity of large trout, but this is not to be wondered at when slaying goes on all the winter through.—MAXWELL.

Irish Reports.

Ballinderry (East Tyrone).—This river is in nice flood, but, as a rule, only pike fishing has been indulged in, for although the season extends to the 31st inst., no true angler has been fishing for brown trout, as they are too far advanced in the spawning stage. Some are already in the redds. On the Coagh Water, Mr. Anderson had a 9lb. salmon last week, and Mr. A. Dunne, on Monday, had a small salmon. Mr. Stevenson same day hooked a thumper, but lost it eventually. Pike fishing is simply grand, the best lures being the Devon and spoon baits.—J. A. B.

Lough Neagh.—Fishing all round is dull. Trout are almost out of condition. Pollen netting has fallen off, and only fourteen days of the open season remain. Pike fishing is fair, but perch and bream fishing has temporarily fallen off. Eel fishing remains steady and remunerative, as the eels are running the lough from the inland rivers, lakes, and swamps. The season all round has been very good, much better than was expected.—J. A. B.

Shannon and Lough Derg (Killaloe).—The autumn salmon fishing has, so far, been a most dismal failure. Of course the wild and constantly wet weather which has prevailed since the beginning of August has alone caused all the mischief. During the past fortnight the following anglers have killed a few fish at this station: Mr. W. Young, D.L., one salmon, 10lb.; Mr. J. W. Young, one grilse; Mr. Sidney Mitchell, one salmon, 9lb., and one grilse, 6lb.; Mr. G. H. Gillott, one salmon, 11lb., and two grilse, 6½lb. and 5lb.; Mr. F. C. Henry, one salmon, 10lb., and one grilse, 6lb.; Messrs. P. Ryan and W. Fogarty, three grilse, 9lb., 8lb., and 7lb.; Mr. F. Johnson, two grilse, 7lb. and 6½lb.; Mr. John Barry, on Mr. Young's preserves, one grilse, 6lb. We are in hopes that the remainder of the month will fish well, as the big salmon *must* come up the river in the present flood. Mr. H. W. Taylor (The Lawn, Melbourn, Cambridgeshire) has arrived here for the pike fishing on Lough Derg. Mr. J. W. Wright and Mr. Bond, Birmingham, have also arrived for the fishing and shooting. On Thursday last, Mr. William O'Toole, gamekeeper, killed on the lake two fine pike, 28lb. and 16lb. On Monday, Mr. H. W. Taylor, attended by Mr. O'Toole, killed eleven pike, largest 7½lb. Only for the wildness of the weather there would be great slaughter of pike this week.—S. J. HURLEY.

Waterville (County Kerry).—Only a few anglers have been out on Waterville lake. They have had baskets of white trout, varying from four to eight, with a few good brown ones. On the Inny, John Sullivan caught three salmon since last report, averaging 7lb. each. All waters are highly flooded in this district at present, and the fish are moving up to the spawning grounds. The season closes on the 15th inst.—THOS. J. DENNEHY.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE half-day excursions to the chief fishing resorts in the Midlands, ceased running on Saturday last. These excursions commence to run about the beginning of June, and are patronised chiefly by anglers, who only indulge in fishing during the summer months, and as soon as these excursions terminate the tackle is put away until the time comes round for the excursions to run again. We have a good number of this kind of angler in Birmingham, I am sorry to say, who seem to look upon their more legitimate brothers, who go out at all seasons, with a certain amount of suspicion as to their sanity. The butterfly fishermen, if I may be permitted to call them by this name, do not miss many Saturday or Monday afternoons from visiting their favourite spots, that is if the weather is nice, and they are very particular upon this point indeed, as the sun has to shine on both sides of the hedge to get them to leave home. One of the most popular resorts is Kingswood, this is within easy distance of Birmingham, and on the Great Western Railway Company. The next place which is patronised to perhaps a greater extent than the place just mentioned, is Salford Priors. The river Avon runs here, and a charge of sixpence per day is charged by the owner of the fishery for the privilege to fish, and a fine Saturday afternoon means about five hundred anglers paying for the right to fish; but should the weather be unsettled, or wet, not more than one hundred would be found on the river banks. There are also numerous places on the Midland, as well as the Great Western Railway, that are, during the summer months, well patronised, and in some instances, there has been, without a doubt, more anglers on the banks of some rivers and canals that I could mention than there has been fish in the water; this being caused by the constant fishing and no restrictions passed as to the size of fish to be retained. Owing to this cause it is not to be wondered at that complaints are loud from this class of anglers, who, in a majority of cases, are not connected with any club whatever, and it is through these causes that many of them give up the pastime, which, if followed up, would lead to better success. And I would advise anglers of the class I have mentioned, to join a club that rents some decent water that is fairly well stocked with fish, and have a turn at a bit of pike fishing during the winter months, and not wait for summer weather to return. They would then, perhaps, be rewarded by the capture of some leviathian specimen, which would make amends for past disappointments, which perseverance, which should be the motto of every follower of the gentle craft, could only overcome.

OWING to the heavy rains of the last week very little river fishing has been indulged in, on account of the high and coloured state of the water. On the Trent, fishing is out of the question, and will be for some days to come, especially in the Alrewas district, and the parts where the Birmingham clubs rent water—as it is reported that the water in these parts is all over the meadows—and the present outlook seems to indicate that there is a lot of rain still to fall, as the barometer is down below "much rain." On the Avon previous to the heavy rains, and also when the river began to rise, some decent roach were taken with the stewed malt, but at the present time of writing the river is bank high, and of a nasty thick, clayey colour, and is running at express speed. The flush will do a great amount of good, as it will clear the river of a lot of rubbish and half-rotten weeds, together with some of the feed the fish have been living on. There only requires a bit of fine, dry weather, when some good catches will be recorded from this river. On the Severn, sport up to Sunday was nothing to complain of, as some of the Birmingham anglers had some decent sport in the back-waters round and about Stourport and Lincombe Weir. And had the rain have kept off, one or two of the members would have had some decent catches, but as it was they had nothing to complain of with regard to the sport. At the present time, if any of my readers want a bit of Severn fishing, let me advise them to try Lincombe Weir, as there are more fish here now than there has been for a long time.

BY the time that these Notes will appear in print one of the most important questions in the annals of the Birmingham Angling Association will have been decided upon. I am referring to the all-important question of the association acquiring water for the use of the members, and also for re-stocking certain waters which at the present time contain little or no fish. This important matter will be decided too late for me to forward the result; but next week I shall be in a position to furnish a full account of the meeting.

A COMMITTEE meeting of the St. George's Society was held on Wednesday evening last for the purpose of making arrangements for the bye contest, when it was decided that the contest take place in the river Anker, at Tamworth, between Shuttington Bridge and the mill, on the 25th of October next. Mr. Miller was appointed referee, and it was also decided to distribute the prizes on the following club-night, which is October 26.

A MEETING of the committee of the Provincial Angling Association will be held this (Saturday) evening, Oct. 17, at the Globe Hotel, Castle-street, Cardiff; chair to be taken at seven o'clock, when important business will be transacted, a report of which will appear in these Notes next week.

NOTES FROM LANCASHIRE.

A MEETING of the Manchester Centre Council of the Northern Anglers' Association was held at the Crown Hotel, Booth-street, Manchester, on the 9th inst. Mr. R. Burn, the chairman of this Centre, presided, and amongst those present was the Rev. C. P. Roberts, vice-president of the N.A.A. A long and interesting discussion took place relating to the various items receiving the attention of the council. Judging from the work to be done in the next six months, the council are likely to have a busy time of it. Lectures are to be given at intervals, and the agitation for increased travelling facilities is to be continued, and if we add the acquisition of suitable local waters for fishing, a programme sufficiently comprehensive exists. The first lecture of the series is to be given by the Rev. C. P. Roberts, at the City Rooms, 16, Cannon-street, Manchester, the subject being, "Experiences in Pike, Perch, Trout, and Salmon Fishing in Loch Awe." Several fine specimens will be on view. Readers of the *F. G.* will do well to refer to the issue of March 7, 1891, for an engraving of the loch in question.

If the permits now so readily granted to fish the Dane are withdrawn, those who now persistently violate one of the specified conditions relating to Sunday fishing may have reason to regret their stupidity in risking the liberties and privileges of others in a gratification of their own perverse inclinations. More may shortly be heard of this, probably to the disadvantage of the offenders.

The rivers and streams have been, as a rule, in a state of flood, and really good fishing a thing of rare occurrence; still, however, some good catches are reported. Mr. Sam Brooks, fishing the Dane, took a nice chub of 3½lb. together with other fish. Local fishermen appear to have been going to more distant places than usual during the past week. The German Pool is at last reported as affording good sport with roach, perch, and tench. Coarse fish are feeding more freely at North Rode. The Witham is receiving more than its customary attention from Lancashire, and although rather late in the season the sport obtained is repaying those who visit this popular water. Poynton Pool is also contributing largely to the death-roll of pike. The canals at Chorley, Lancaster, Worsley, and Poynton, are yielding a fair amount of sport. Cheshire Meres also are well-patronised, but many are falling short of any previous year; the severe winter of 1890 and 1891 is much to blame for this—perhaps no waters suffered as these did.

A suggestion comes from a well-known Manchester angler that a fixed limit be adopted by all clubs as to the size of fish weighed in for any prize. This idea recommends itself, as it would foster a more sportsmanlike feeling generally, and add to the pleasure of winning a prize if the same had been won by a really good basket. Perhaps special prizes for specimen fish only may stimulate those who now take very small fish to aim higher.

Since writing the note relating to Mr. Brooks's catch of a 3½lb. chub in the Dane, a return is to hand in which Mr. Gibson, of Ardwick, whilst fishing the same river was fortunate enough in landing a similar fish, only 1oz. lighter. It is not often that two such fish are taken in this river in one season much less in one week. Mr. Gibson, in company with Mr. Kershaw, of Longsight, paid another visit to the Dane last Thursday; good sport again favoured them, some 16lb. of mixed fish falling to their share.

The Duke of Cambridge Club found winners of prizes in their contest as follows: First, H. Howard; second, J. Dixon; third, A. Latchford; fourth, A. Bowers. Moss Reach was the spot selected and good weather fortunately favoured the match. The Mersey Anglers were at Marston on the 8th. Two prizes were unawarded, but the following members were successful in winning prizes: J. Meecham, G. Yates, H. Kirk, G. Thompson, S. Eyres, H. Hamnett, and W. Downs.

The Manchester Bait Can was out again on the 12th, but judging from the sport obtained it will take more than two anglers to fill it to overflowing.

Judging from various statements made public lately, it may lead many to think that there is a great amount of heart-burning going on in the Manchester district, but such is not the case, in fact, good feeling is predominant; and the present executive are to be congratulated on having put into thorough working order the whole machinery. Since they assumed office the members have been increased by about three hundred, and it is a matter of regret that irresponsible persons authorise the circulation of statements likely to cause mischief.

NOTES FROM NORFOLK.

The rough weather of the past week has put quite a damper on bottom fishing. Every day since last Friday we have had more or less rain and wind, the latter sometimes blowing a gale, in which the most ardent angler would not care to venture out.

I should have mentioned last week that on Wednesday, September 30, a sea trout of 7½lb. was taken on the Bure, near Acle Bridge, with a spoon-bait, by Mr. Rose, of the Angel Hotel, Acle. These fish occasionally come up both Bure and Yare. I have heard of several having been seen on the Yare this season.

Two more big bream were taken on Monday, on the Wensum above Hellesdon Bridge, and are now being preserved by Mr. Cole, of this city, from whom I obtained the following weights: One bream, 8lb. 4oz.; one bream, 7lb. 4oz. These weights, it will be noticed, are in excess of those of two bream I recorded a fortnight ago, from the fact that they came into Mr. Cole's hands sooner after being caught. The following measurements I took: One, 25½in. long, 9½in. deep; one, 23½in. long, 9in. deep. As they were in process of stuffing when I saw them, I could not take girth measurements. Both the fish were in splendid condition, being very thick and the scales having a fine golden lustre. On the same stream, on Thursday last, a friend had a nice basket of dace, which he took with fly, seven of them measuring from 11¼in. to 11¾in.—nose to fork of tail.

On the Yare, on Friday last, spinning from Buckenham to Langley, one boat took seven pike; another boat four pike; and another five. On the 11th inst., in the same water, one boat had four pike; and near Rockland Dyke, one boat had a nice catch of about sixty roach; while another boat fishing near took fifty. On Monday, between Buckenham and Langley, one boat caught eight pike, another four, and another two. Most of these fish were taken spinning with spoon and natural baits. On Tuesday, on Rockland Broad, one rod had four pike, and another rod took one of 14lb. The weights of the other fish I have not been able to ascertain, but presume they were the usual run of fish on these waters—viz., 3lb. to 6lb. each.

On the Bure not much has been done. On Friday a good catch of rudd and perch was made at Ranworth, just above St. Benet's Abbey, weight about 28lb.

Referring to the catch of big bream under discussion last week, I can substantiate what your correspondent "Giant" stated with regard to the 9¼lb. bream which he mentioned as belonging to Mr. C. J. Green. This fish is now in my possession.

NOTES FROM NOTTINGHAM.

Anglers in our district have experienced the full force of the storms, which appear to have been general throughout the country. On Monday, the Trent was running into good condition for coarse fish angling, and as the previous heavy volume of water had thoroughly scoured the bed of the river, anglers were beginning to realise brighter expectations. But on Tuesday the rain came down again in torrents, and at the time of writing (on Wednesday night), the water was running at a great height, and with every prospect of developing into a flood. The wind howled fearfully, and generally the elements seemed thoroughly unsettled. On Monday, several gentlemen were out in the Weston Fishery, and some remarkably fine perch and bream were caught with the Cockspur worm. A subscriber from Derby also enjoyed capital sport amongst the roach with the maggot, and the same description of bait accounted for a quantity of big roach in the Barton length. These fell to the rod of Mr. H. Stafford, of Nottingham, who, on the previous Friday, fared fairly well in the same reach of the river. A few lots of roach and bream have been brought in from Clifton Grove, and the rise has set eels freely on the move, if one may judge from the returns of the eel baskets. A large number of Nottingham artizans subscribe to both the Clifton and Wilford sections, which are within easy reach of the town, and it is to be regretted that the proprietor does not look, through the watchfulness of his keepers, better after their interests. If he cares to accept subscriptions at all, surely the subscribers ought to be considered. Poaching, at times, is rampant, and the cry of the keepers is, "Oh, we have enough to do to look after the game. We are not paid to watch the river; and the squire must have plenty of shooting, or ——."

In the early part of the present season the lock-head on the west side of King's Mills Weirs gave way, through, I suppose, extra pressure of water, and the disaster materially altered the current below the weirs to the top of the channel swim. But when the river ran down to low summer level, the subscribers frequenting the fields below the ferry chain rather rejoiced at the mishap, for it assisted in providing them with better sport than, under ordinary circumstances, they could have hoped for. During the last few weeks the work of repair has been in progress; in fact, the work has been completed, and I hear it is likely to greatly benefit and improve the fishing on the western side of the river. Years ago a portion of the weirs themselves gave way, and the cost of repair was extremely heavy to Lord Donington, the present proprietor of the fishery. The rent washed up tons of gravel at the foot of the centre weir, and where at one period there was a capital roach and chub swim, out of which I killed many splendid fish, the subscribers have now the presence of a somewhat formidable island.

Salmon anglers are entitled to use the rod on the Trent until the end of the present month, and of late they have grown sanguine of still getting a fish or two ere the Act becomes operative. The recent high waters may have tended to bring up some autumn fish, which generally work up to the Dove, in which tributary they are known to spawn. High waters are all very well in their place, but unless they give place to low, the sport of the salmon fisherman is out of the question. On Tuesday morning the river was fast fining down, and there seemed every possibility of bringing the favourite Devon Spinner into play; but towards night heavy rain again set in, and, on the morrow, when my Notes were posted, the water was, as already stated, again increasing and thickening in volume. In the latter days of October and the commencement of November it is, to the true angler, a delightful sight to witness the lordly fish making the ascent of the weirs at King's Mills for their spawning grounds in the river so beloved by Izaak Walton. Singularly enough, last season, Mr. T. Wood, the lessee of the fishery, hooked and killed a very fine fish on the last day of the term, and he was, in like manner, fortunate three years previously. All the salmon taken with the rod in the Trent this year have attained considerable size, but I very much doubt whether we shall ever again have so brilliant a season and record as the one of 1885.

The Nottingham Corporation have in hand a most extensive, and at the same time costly scheme for remedying the pollution of the river Leen and the Nottingham canal, which find their outflow in the Trent immediately below the New Trent Bridge. Years ago the Leen was a flourishing little stream, running on the outskirts of Bulwell, Basford, Radford, and Lenton, and so on into the Trent. But with the erection of large manufacturing works, such as dye and bleach, the water soon became contaminated, and at the present time the river is a veritable sewer, or a counterpart of the Derwent below Derby. A few years ago the Leen was diverted by an open culvert into the Nottingham canal, mid-way between New and Old Lenton, and so serious have the evils of pollution become, that at length the Nottingham Corporation have been compelled to recognise them. If they devise an effectual remedy, the great army of anglers will indeed rejoice. A report of the borough engineer has just been printed and circulated amongst the learned Town Councillors. He has prepared three alternative schemes, but recommends for adoption one by which the waste water from the bleach and dye works would be converted with the Leen Valley sewer and its branches, for treatment in combination with the ordinary sewage by irrigation at the Stoke Sewage Farm. The scheme is a vast one, and the cost to carry it out is estimated at the choice little plum of £37,250. Nottingham is already heavily burdened with debt, and it remains to be seen whether the proposed new undertaking will be opened out. Writing on behalf of the angling community, I know they would heartily welcome any change by which their sport might be improved, and whether the scheme is delayed or not, I am certain the time cannot be far distant when the powers invested in the hands of the County Councils will have to be rigidly enforced. Health must be studied as well as fish and fishermen

Anglers in our district have heard nothing during the past year or so of the evil doings of the dynamite gang, but I am assured on very good authority that the work of destruction amongst coarse fish is continued occasionally in the Trent between the New Bridge and Colwick Weir. The name of one of the principal offenders has been supplied to me, and if we had a responsible officer of the Trent Fishery Board stationed amongst us, I should only be too glad to co-operate with him in the detection of the crime. As it is, I don't intend to interfere. Fish poachers are dangerous characters, and if ever a man is "spotted," he runs the risk of being dynamited himself. Perhaps when the Trent Fishery Board have imposed a tax upon rods, and thus have more funds at command, Nottingham will possess the services of a professional water-bailiff. Meanwhile, however, the mischief is being done.

During the week dinners in connection with the Nottingham Bowling Green Inn Angling Society and the Fisherman's Rest Inn Angling Society have been held under singularly pleasant surroundings. The prizes won during the summer season were presented to the successful competitors, and in my next batch of Notes I will give a list of the winners in both clubs.

NOTES FROM SHROPSHIRE.

We have been having some miserably wet weather here of late, and all sport is at an end for a time as far as the river is concerned, for the heavy rains have brought a good deal of flood water down from the hills. Anglers, one and all, complain of the unsuccessful season that we have experienced, and on every hand come woeful tales of blank days and unenjoyable excursions.

Shropshire anglers have been wondering at the mysterious disappearance of the Shropshire Severn Angling and Protection Society, an institution which was founded sometime ago with fair prospects of success for the purpose of protecting and propagating trout and grayling in the river. I presume the gentlemen who interested themselves in the matter found the task they had taken in hand too great, and have abandoned it. There were a great many difficulties in the way of forming such an association as that proposed, one of the main difficulties being to get the riparian owners to co-operate with the promoters; but to enthusiastic anglers these difficulties should not have proved insurmountable, more especially as some of the most prominent landowners in the county had interested themselves in the scheme. I fear, however, that as there has been nothing heard of the new institution for some months, it has silently died and been forgotten.

There was a curious application before the Shrewsbury Council on Monday. Mr. Simpson, a local gentleman, applied for permission to place a water-wheel at some part of the river near the town, for the purpose of illustrating the practical utility of the stream as a motive agent. The council had not very full information before them as to the scheme of Mr. Simpson, but referred the matter to a committee. If it is the desire of this worthy gentleman to place a small working model in the river at a place where it cannot obstruct the navigation or fish there will be little harm done; but if he has any intention of placing anything in the shape of a weir across the river for the purpose of impounding the water, he will doubtless encounter opposition from those interested in the passage of salmon as well as from oarsmen.

NOTES FROM YORK AND DISTRICT.

Neither water nor weather have been congruous with good grayling fishing, or indeed any angling whatever, during the past few days. Last week's heavy rains have been followed by even heavier showers this week, and all the Yorkshire rivers have of course been bank full; while a boisterous wind has prevailed on one or two days, notably Tuesday and Wednesday. This of course is entirely inconsistent with successful grayling angling, which requires sharp and more settled weather, before we can expect anything in the direction of good sport. One or two good baskets of roach were, however, got the other day in the lower waters of the Yore and Swale with the maggot, while the best flies for grayling are reported to be Red Tag, Bradshaw's Fancy, &c. In the Ribble at the close of last week, I heard of one or two fair catches of salmon, by local gentlemen. This river, which enters the sea in the Solway Firth at Preston, in Lancashire, is a fine trout stream in its course through Yorkshire, and both salmon and salmon trout are occasionally taken with the fly. Some local celebrity is indeed said to be attached to the waters. Its most highly-esteemed spots for comfortable trout angling are from Clitheroe to the town of Settle. It was, however, on the upper reaches by Guisburn that the catches mentioned by me were taken.

The members of the Fulford Friendly Angling Society held a fishing match in the Ouse on Wednesday afternoon. The competition was a short time ago suggested by a local gentleman (Mr. Long), who generously offered a prize, and being readily taken up and supported, the matter soon took definite shape, satisfactory arrangements being carried out by Mr. H. Watson (secretary). The place where the match took place is known in angling circles as Bream Fields, and is a little lower down the river than Bishopsthorpe Palace, and on the Fulford side of the Ouse. The weather was, however, very unpropitious. During the morning a torrential rain was accompanied by a high wind, and there was a considerable amount of fish in the river. Notwithstanding such a sombre outlook, the members decided that the match should come off, and fortunately the rain ceased, but the wind blew a boisterous gale, lashing the Ouse into a miniature sea. There were thirteen competitors for about as many prizes, of which the donors were: Messrs. Long, Thorpe, Bouttell, Maskew, Staines, Woolford, Bowman, Crow, Davison, Arminson, J. McGee, and E. Walker. Contrary to expectations, fair sport was obtained, every competitor having a kill, and the total weight amounted to 24lb. 14½oz. The first prize was secured by Mr. Simpson, with 4lb. 4¾oz. of roach; Mr. Davison getting second, with 4lb. 0½oz., which included a bream, weighing 3lb. 7½oz. The other prize-winners were Messrs. Staines, E. Walker, Arminson, Bouttell, Watson, Bowman, Clark, Taylor, White; Maskew and Oliver (tie).

Dee (Kirkcudbrightshire).—The Kirkcudbright Dee is still running in flood, and has been quite unfishable for some time past. A great many salmon are in the river, and whenever the pools come into ply for fly-fishing some capital sport is anticipated. Fishing on Friday with worm bait, Mr. W. Gillone captured a very fine new-run salmon of nearly 20lb., and the same angler lost a very big fish immediately after landing his salmon. Angling at Tarff, on Saturday, with fly, Sergeant Clark, Kirkcudbright, killed a very pretty little fish of 9lb.

SATURDAY, OCTOBER 24TH, 1891.

A TRIP TO NORWAY; OR, MY FIRST NORWAY SALMON.

By R. P.

It is some years since I made my first trip to Norway. But I had been driven from my favourite haunts in Sutherland and Ross, by the influx of Sassenachs; and, in self-defence, was obliged to seek other fields and pastures new—where I might be enabled to wield my rod in peace. So, one night in early June, my pal and I went down to Hull, having taken passage by the Wilson boat, sailing next day to Troudhjem. The ten a.m. express from King's Cross via Doncaster brought down most of the passengers, and a sporting lot they mostly were. The large central Hall at the Station Hotel was soon dotted over with piles of rod boxes, gun cases, huge salmon creels as big as clothes-baskets, and travel-worn bags of every shape and size; while various lots of excited dogs, mostly setters, contributed to the harmony of the scene.

In the matter of quantity of luggage there seemed to be considerable diversity of opinion. One member of a party of three sportsmen, who were going to a far northern stream, confided to me that they had between them ninety-five packages—mostly large. While on the other hand, the wardrobe and its contents of two young men of the undergraduate type—who marched on board the steamer attired in knickerbockers, and with guns over their shoulders, as if for all the world they were entering on a crusade against the gulls—seemed to consist of a box of cartridges and a packet or two of compressed tea. Our ship did not get out of the dock until nearly ten o'clock; then she lay in the river until close on midnight, when a couple of late gentlemen from London were chucked on board, amidst much strong language, from a wherry, and we started.

The *Tasso* was what you might describe as a corky craft. She certainly rode the waters like a thing of life, for although there was hardly any wind, next morning she was bounding about in the most surprising fashion, infinitely to the disgust of a good many of my fellow passengers, who after an extremely feeble attempt at breakfast retired from public gaze. Next day, however, we ran into a perfectly dead calm, and everyone appeared gay and peckish. Sparkling wines circulated freely at dinner and lunch, and soon everybody knew everybody else's destination. There was a well-known M.P. who had been to Norway for fifteen or twenty years in yachts or otherwise, bound for his river, accompanied by his wife, one or two friends, his English servant, an English maid, and a doctor in attendance. All this luxury on such an expedition opened my eyes considerably, and modified my notions as to the hardships attendant on a trip to Norway very decidedly. The medico was a most quaint individual, possessing the most curious selection of fishing gear I ever recollect seeing, and was the subject of continuous and unmerciful chaff to certain wags during his stay on board. I do not think he had ever handled a salmon-rod in his life; but he had rummaged out of some ancient depository some angling gear, with which it appeared his grandfather had disported himself in his giddy youth. The flies were numerous, and quite beyond description, but by the end of our little voyage of three or four days none of them had any wings left at all. Being completely permeated with moth, they fell to pieces immediately when touched. The rod of this sportsman was more like the mast of a man-of-war than anything else; but his reel was the thing. Sometimes it would wind up all right; but when it was so minded nothing would induce it to revolve the other way, and as a result of this curious conduct, the line of which it was full at the beginning of the voyage, was reduced to extremely small dimensions indeed by the end thereof, owing to the many irate efforts of its owner and other experimentalists to "take-out line," which efforts invariably ended in a yard or two being smashed off.

The reel, however, like all other important things in this world, had its exceptional moments—moments of relaxation, so to speak—which was emphatically proved on a certain occasion. It appeared that our friend the doctor had been privately employed one day in earnestly applying coercive measures to his refractory winch. By dint of much "warsling," and persuasion, and language, he had succeeded in getting off some 18in. of line, and this bit he fastened to the back of one of the fixed cabin-seats in such a way that it could not come undone. Determined to get off more line or "bust," he then proceeded to haul with all his might and main; whether "the reel" was annoyed at being so roughly used, I do not know. Anyway, all of a sudden it ceased to resist the efforts of its owner, with the result that that unhappy being was discharged with the momentum of a catapult into the lap (shall we call it?) of the steward, who unfortunately happened to be passing at that moment, bearing a tray, the contents of which were mostly aerated waters and sundry modicums of spirits intended for the sportsmen who were playing quoits on deck. Great was the commotion, and dire the destruction of glass; and for the rest of the passage the doctor smelt more like a public-house than anything else, the odours of Scotch whisky, English gin, and French brandy all contributing to form one harmonious though somewhat unsavoury whole.

The Church was not unrepresented in our little company, either, for one of the passengers was a highly-educated and most *debonnair* Roman Catholic priest; and another was a Methodist parson, who never by any chance parted from a gigantic umbrella with which he was armed. These two were always arguing together, and the rises that the priest got out of the parson were innumerable.

On the Sunday morning we awoke to find the vessel steaming along some ten miles or so from the Coast of Norway, at a point, the skipper informed us, a few miles to the south of the Molde Fjord. Rocky islets surrounded us on all sides, and the vessel's course seemed most intricate; but there was no fog on the crisp, sparkling waters, although the mist drifted in heavy masses across the bare and precipitous cliffs that out-lined the mainland. Now and then glimpses of glacier, mountain torrents, intensely white snow-drifts and patches of tender green might be discerned, and the general effect was grand and wild in the extreme.

When the vessel had succeeded in threading her way through the network of channels and islands to the pretty little village of Molde, the view was more especially grand, the mountains of the Romsdal heavily capped with snow, rising peak upon peak, and tier upon tier in the distance, the blue waters of the fjord rippling in the summer sun. Here we parted with a certain number of our fellow-passengers, some of whom were bound for the Rauma, others to fish the Eridsfjord rivers. Amongst the departures, alas! was our good friend the doctor, whom we had all hoped was destined to afford us amusement to the end of our little voyage. But such was not to be. The last we saw of him was on a large boat, seated on the uppermost pinnacle of a huge pile of luggage; in one hand he grasped the famous "Fiske-Stang," one end of the celebrated fly-book peeped out of one side-pocket, while the other bulged out with what appeared to be the equally celebrated reel. We gave him a parting cheer as the screw began again to revolve, but owing probably to the precariousness of his exalted position, this was but feebly responded to on his part.

After the departure of the doctor there was nothing left to do but to endeavour to comfort the two university youths, who it appeared were bound on a walking tour in Lapland. Tales of the size and number of the mosquitoes they would have to encounter were numerous, and all sorts of remedies (one and all utterly impossible of attainment except perhaps at Savory and Moore's) were suggested, while one gentleman described in pathetic language the untimely fate of some friends of his own, who had also ventured to these wilds attired in knickerbockers.

Everything has an end, however, and on the Monday morning we arrived off Troudhjem, the northern capital, and were shortly transferred to the various hostelries of that town.

While doing some little necessary shopping, it cropped up somehow that, by going through the formality of asking leave of the proprietor, whose comfortable farmhouse stood on the banks of the river, permission could be had to fish for salmon in a fine pool at the foot of the Leer Foss, some four miles out of the town. Within two hours of receiving this information, I was standing by the banks of the pool in question putting up a salmon rod, while a native was endeavouring to bail some of the water out of an extremely old and ricketty boat hauled up on the shore. For the first time I looked upon a Norwegian salmon pool, and a beauty it seemed, although far above fishing order. A fine fall, over which the whole body of the river rolled in single volume, was at its head, and the pool itself formed many tempting-looking runs and currents before its waters flowed away down a heavy rapid immediately below. Little use in trying the fly in this tremendous volume of anything but clear water, thought I. So, putting up the biggest Phantom I possessed, we got afloat. The current was very strong at times, and I thought we stood a very fair chance of being swept down the rapids; but my Norskman knew his way about among the conflicting eddies, and we didn't. First of all, I hooked a good fish, which gave me some five minutes' uncommonly lively sport; but he broke away, carrying two of the triangles with him. Then, putting up another big Phantom, we made another essay, this time nearer the tail of the pool, where the current was not quite so heavy, and shortly I hooked another fish. By dint of holding on all I knew, I managed to prevent his going down the rapid, as he had evidently made up his mind to do, and, after a stiff twenty minutes, my native attendant gaffed in fine style my first Norwegian salmon, a beautiful clean-run fish of 24lb. Great was his and my delight, and we drank "luck" in a joram of Scotch whisky, a fluid apparently new to my Norsk friend, but which evidently pleased him greatly, to judge from the sigh of satisfaction he gave after swallowing about half a tumbler thereof *neat.*

Once more we got afloat, but only, as it turned out, to court disaster. As the boat was on the swing from the far side of the river, and the Phantom only a yard or two above where the rapid broke, a fine fish came rising at the minnow as to a fly. I saw his great tail as he descended after making his effort. At first he came quietly up in deepish water towards the boat, and I had hopes he was going to be amenable to reason, and remain like a sensible *Salmo salar* in the pool where he was hooked. But there was to be no such luck. Suddenly he stopped in his upward progress, as if realising for the first time that there was something queer about things in general. Then he came to the surface and gave a savage shake of the head, and like an arrow made straight for the rapid. From the moment he reached that all was up. I had no option but to hold on, and the only result of the tremendous strain of the treble gut was to make him give a great leap in the air. It was the last straw, and the broken trace which I had thought was strong enough to take out a horse with, came back across my face like the thong of a whip, not at all tending to soothe my already ruffled temper. However, I had killed my first Norway salmon, and returned to Trondhjem fairly satisfied with my first essay on Scandinavian waters.

A certain number of our late fellow-passengers were bound to different rivers on the Trondhjem Fjord, the Stordal, Orkla and Gunl. These had already departed, but most of the others, including myself, sailed that night soon after midnight for the north, on board the steamer *Kong Karl*, bound to Hammerfest and Vadso.

A FOUR-STONE DAY AT BUCKENHAM ON THE YARE.

By HENRY BURTON.

"WHEN they're shooting patridges on one side of the river, and callin' 'Hold ye!' on the other, then's the time to go a fishing." Such used to be the frequently-expressed opinion of a keen old local fisherman, a sort of plebeian Izaak Walton, who will long be remembered by Norfolk rodsters as a "character" in every sense of the word.

A barber by trade, he was a fisherman by choice; and while operating externally upon the heads of his customers, he would bewilder those heads internally by the narration of the most "hair-raising" and side-splitting fishing stories, in the telling of which the wily old barber preserved so sweet and serious a countenance, and was so surprisingly pat with his facts and figures, that he seldom failed to produce an excellent impression of his powers as a *raconteur* upon the minds of his hearers.

He was withal a canny old fisherman, and I have no doubt that his opinion as to September being the best month of the year for coarse-fishing is one that is shared by most anglers.

Certainly our four-stone day (friend F.'s and mine), "came off" in the month of harvesting and partridge-shooting; and now, with apologies for a somewhat irrelevant preface, I will proceed with my story, which, unlike those of the worthy barber, is a plain unvarnished one.

During the summer months F. and myself had not piscatorially distinguished ourselves, neither, with a few exceptions, had other members of the craft; but when, after a blustering, rainy August, September came in fine and settled, a change came o'er the scene, and the anglers of the "ancient city" were blessed with many a grand day amongst the fish. My friend and I could not, of course, listen to oft-repeated tales of doughty deeds with rod and line by brother piscatorials without longing to be "up and at 'em" ourselves, and so towards the end of the month we arranged to have a day amongst the roach at Buckenham. There could scarcely have dawned a more likely-looking day for piscatorial slaughter than the one on which we started off to our fishing station. In the words of some angling poet—

> "The wind was south-west, and a lowering sky
> Proclaimed it a right anglers' morn."

In twenty minutes' time, or thereabouts, the G.E.R. took us up to Buckenham Station, where an equipage, in the shape of a large and substantially-constructed milk-cart, awaited us, wherein we deposited our rods and baskets, and then walked on to the Ferry House, preferring for ourselves a pleasant ten minutes' walk across the marshes to a jolting and somewhat precarious seat on the milk-cart.

A very charming type of the Norfolk river-side hostelry is the Ferry House, at Buckenham. Arboured round by lofty trees, and picturesquely situated on the margin of the broad reed-fringed river, its white walls, and old gabled and brown-tiled roof look out upon a very lovely prospect of winding river and emerald-hued marshes. It is a large old building, too, and, at first sight, the stranger might mistake it for some cosy old-fashioned farm-house, for at the back are out-buildings of a farm-like character, a barn, and a straw-yard tenanted by live-stock various; and it might only be on confronting the inscription over the front door, announcing that Robert Garrett was licensed to sell alcoholic beverages to be consumed on the premises, that the aforesaid stranger would discover the "public" nature of the Ferry House. But to return to our day. Having arrived at Host Garrett's, we found the tap-room in possession of a metropolitan visitor and a local waterman who had "got into an argument," and a lively one too, respecting the size of fish of Norfolk waters. As my friend and I, and several other fishermen from Norwich entered the room, the local man was stoutly declaring that roach of 3lb., and bream of 8lb., had been caught in the Yare with rod and line, and, in support of that statement, he informed the visitor from town and the company in general that two roach of the weight named were to be seen, stuffed, of course, at a certain house in a certain street in Westminster, and that three bream, weighing 8lb. a-piece, were in the possession of a certain gentleman residing in Great Yarmouth, who would be only too pleased to show them to any incredulous angler. Most of the local anglers present, accustomed to catching and seeing coarse fish in somewhat abnormal weights, looked upon the waterman's statement as a "true bill," but the metropolitan, smiling incredulously, observed that he had heard of such fish being caught—he had heard not infrequently of such captures—but he had never seen them; and until his eyes had been blessed with a sight of such remarkable fish, he should certainly decline to believe in their existence.

The discussion soon became general, some of our angling friends siding with the visitor, and some with the local man; but as things did not get much "foradder," and as time was slipping away, F. and myself quietly adjourned to the quay-side, and having chosen a comfortable boat, and deposited therein our angling implements and sundry refreshments, we paddled off up the river. There is, and I suppose always will be, a great diversity of opinion amongst anglers as to the best sort of swim for roach fishing: some preferring a sharp stream and a moderate depth of water; others, a deepish hole in some broad bend, where the stream runs at a slower pace. Certain it is, that sometimes the canny roach affects one class of swim, and sometimes the other, his choice being probably determined by the ever-varying conditions of tide and weather.

We decided upon a deep spot (about 10ft.) in a particularly broad bend of the river, and moored our boat close in-shore, and under the lee of a great clump of tall reeds. While fixing up our rods and lines we could not but notice the capital colour of the water, the delightful little ripple playing over its surface, the deep shadows thrown over river and marsh by the heavy clouds, and, most interesting of all, the frequent splashings of rising and feeding fish.

"I must tell you," said F., as he threw in some ground-bait (which, by the way, was a judicious mixture of bread, bran, and boiled wheat), "that I had a strange dream last night, in which I beheld two anglers by a river-side, who were staggering along under the weight of two heavily-laden frail baskets, and I firmly believe that those staggerers will be represented by ourselves this evening."

"That's rather a 'staggerer,'" thought I; but, not wishing to offend the dreamer, I only mildly cautioned him against putting his trust in visions, upon the "coming off" of which, I reminded him, it was impossible to place any reliance.

"Well, we shall see," replied F., whose faith in dreams (his own, of course) was not to be shaken, either by their non-realisation, or by the scepticism of his friends.

F. was the first to commence operations, and while engaged in putting some shot on the line I intended using, my eyes involuntarily followed his red-tipped float as it travelled down the stream, until with a sudden dip it disappeared, and simultaneously with its disappearance the point of F.'s rod went up, the gut-line tightened, and, after a few seconds' manœuvring, out came a half-pound roach, and a lovely specimen, too, with dark olive-green back, silvery sides just touched with gold, and fins of the brightest orange.

He must certainly be an unimaginative, not to say uninteresting, angler, who does not experience a joyful sensation on landing a fish the first swim. Upon the right sort of angler it has an exciting and inspiriting effect at the time, and in nine cases out of ten it is prophetical to him of good things to follow. But upon F. it had an altogether different effect. With rather a mournful look, and in a strangely-depressed tone of voice, he asked me if I possessed such a thing as a corkscrew; but after that article had been handed over, the delivery of which, I must mention, was almost immediately followed by a strange gurgling sound, friend F. quickly recovered tone, and recommenced fishing most energetically. He soon had another splendid roach in tow, and then, having got my line into working order, and ascertained the depth, I threw in for my first swim, which, as with F., resulted in the capture of a handsome and heavy fish. Then it was my turn for the corkscrew, which F. disgorged with evident reluctance, and with a request for its return at my earliest convenience.

Many and wonderful are the different kinds of baits used by the great and noble army of roach fishermen, and specious the arguments advanced by the members of that army in support of their particular fancies; but, for my own part, I have never troubled to experiment with the thousand and one baits I have been "advised to try," for the simple reason that I have always been perfectly satisfied with the results obtained from the use of two, those two being boiled wheat and white paste. "In the multitude of counsellors there is safety," remarked Solomon. That may be; but in a multitude of baits there is, to my mind, little but foolishness.

Well, to proceed.

F. (who, by the way, baited with boiled wheat) continued to bag magnificent roach almost every swim, and I did almost as well with white paste, though my fish were not quite so weighty as his.

"This *is* glorious, certainly!" exclaimed F., as he assisted yet another twelve-ouncer in the boat. "But will it last?"

"Not possessing the gift of prophecy, my dear boy," I replied, "it is impossible for me to say what *will* happen; but judging from what has happened, and from the very exceptional way in which these fish are rising all round us, and last, but not least, taking your dream into consideration, I shouldn't be surprised if it does last."

And it did. The great golden-hued roach kept rolling in with delightful regularity; and what with the really hard work, the warmth of the day, and the maturity of F.'s "liquid sunshine," as he called it, we were glad to lighten ourselves of our coats—a proceeding which certainly added to our comfort, if not to our appearance.

Shortly afterwards I noticed F.'s rod bending in a manner that betokened something good.

"It can't be a roach," said I.

"Not unless it's a clinker," replied F.

Slowly the mysterious one perambulated the swim, keeping F.'s slender roach-top bent at an alarming angle, and doggedly (or fishily) refusing to reveal his personality. But F. is an old hand; and after an anxious minute or so science prevailed, and out of the depths a large and silvery body slowly rose to the surface.

"Why, it's a bream!" I exclaimed; and F., too busy to talk, nodded; and soon that bream was towed into the landing-net, and lifted into the boat amidst jubilation. It was a pretty fish of about 2½lb., and, in the hope of securing some of its relations, F. abandoned roach fishing *pro tem*, and baited with the seductive brandling. But apparently the captured "flat" was the sole representative of its species in our neighbourhood—or, at any rate, the only hungry one—for the brandling was left severely alone, and F. soon gave it up, and returned to the roach fishing. That went swimmingly and (like the stream) without use. About every swim there would be a bite, ost of which resulted in captures, for they were ood, honest hungry bites, and our bags filled ith charming rapidity.

I have alluded to the day as being a breezy and oudy one, and, as a natural consequence, yachts nd sailing boats were very much in evidence, nd I remember that the company on one of the rmer were a decided improvement upon the ommon or garden yachtsmen. We had laid aside he rods, and had just commenced an onslaught pon a toothsome little lunch, when faintly down he breeze came the sound of music, and not bad usic either. The musicians we could not see, r an envious bend in the river concealed them om our view; but, as we still gazed, a white-ulled, white-sailed yacht slowly rounded the oint, and the mystery was solved.

On came the handsome craft, churning the ater into foam with her sharp white prow, and evealing the bright copper sheathing of her keel s she canted over to the breeze. She was soon p to us, and then we beheld on board a youngish entleman in white flannels, who, music in hand, as singing a nautical song to the accompaniment f flute, cornet, and violin, which were being igorously and not unskilfully played by three ther young gentlemen, also apparelled in white lannels. Having a waterman on board to do the avigating, the youthful minstrels were able to ndulge themselves in songs and symphonies to heir heart's content. The name of that yacht as *The Lily;* and looking at her white hull, white ails, and white young gentlemen, it certainly eemed an appropriate one.

After the passing of *The Lily* we went in for the oach again, and the afternoon's sport was every whit as fast and furious as it had been all through he morning. Rarely, indeed, is the angler blessed with a day on which fish do not stop feeding for a ime, even when they come on again; but on our eventful day there were no intervals of dulness—t was one ceaseless hauling out of splendid roach. And doubtless these roach would have gone on biting far into the evening; but we had decided upon returning in good time, and so, when the shadows began to lengthen, and the mist to whiten the meadows, we took in the good old ines, and in a few minutes' time the oars were at work, and our swim was left behind in peaceful possession of the fish.

We had but a short distance to row, and soon before us we saw the cheerful lights in the Ferry House windows, which sparkled and twinkled as if inviting all good anglers to rest and refreshment after their day's exertions. The welcome haven reached, we disembarked ourselves and spoil; and after duly parading the latter before the envious eyes of some brother anglers we weighed in, and found that we had caught just over four stone of grand roach, of which by far the greater number exceeded ½lb. in weight.

"Well," said F., as a few minutes later we trudged slowly along to the station, "what about my dream now?" I answered not; and for the future I, for one, shall not venture to make fun of my friend's dreams.

Notes

Mr. William Black recently found in some Scotch paper and sent us this extract: "Mr. Andrew Lang, the busy journalist, was staying in the Dunalastair Hotel this season, and entered his name in the visitors' book. At the end of the page, beside his name, he penned the following lines:—

"'Let Awe to Tummel yield the prize,
Or both divide the bun:
In Awe the trout are small of size,
Loch Tummel boasts of none.'"

We asked Mr. Lang if he was responsible for this libel, because, if he was, we would risk publishing it. He replied: "Dear Marston,—If you reprint the lines, please add this letter. Hotel keepers are respectfully informed that divine poetry has a right to the hyperbole. There *are* actually extant trout, huge ones too, in Loch Tummel, but they are hard indeed to catch, and in four days last April I never got a single rise. There are plenty of more free-rising trout in the river Tummel."

At a recent meeting of the Eden Conservancy Board, it was stated that twelve bailiffs were now employed in watching the rivers, and that the number of Scotch bailiffs had been increased in order to check the illegal killing of salmon in the close time. A large number of spawning salmon were now in the Eden, and some of its tributaries, and a further temporary increase of the staff would become necessary for their protection. The subject of the pollution of the Eden was then dealt with. It appears that the sewage of the City is allowed to pour into the river at the Bone Mill, to the injury of the fisheries. Mr. Slater believed the City authorities intended doing something, but he did not say what; and Mr. Dixon rather sarcastically observed that he was surprised the City authorities had taken any notice of the subject.

There has been some sensational angling feats this season (says the *Daily Graphic*); among the most recent is the capture of five salmon in one day by a lady. Mrs. Stuart Menzies is this champion among lady anglers, and the fish, which weighed collectively 102lb., were taken from the Spey in the Aikenway water, which belongs to Mr. W. Stuart Menzies.

The offices of the Thames Angling Preservation Society are removed to No. 12, Regent-street, Pall Mall, S.W., where all future communications are to be addressed.

The rod fishing on the Spey closed on Thursday after a very successful season. Notwithstanding frequent gales and repeated floodings, a large number of fish have been landed in capital condition. Nearly a dozen salmon, of from 30lb. to 35lb., have been killed by the Earl of March, Colonel Home, Colonel Vivian, Colonel Coke, Mr. A. Coventry, Mr. R. V. Grant, and Mr. G. Craven. As in former years, the Duke of Richmond and Gordon has been one of the most successful anglers. Among the ladies, Lady Evelyn Gordon Lennox takes the first place this year. In the Aberlour and Craigellachie Sections, the season has been the best for the past ten years. The spring fishings were good, but in summer and autumn the takes were much above the average. Owing to continued rains, the river never fell to its ordinary summer size, and this is thought to have allowed the fish better advantage for passing the nets, thus producing better sport all over the river. The fish have been of good quality and of large size, many scaling 20lb. to 34lb.

Mr. John Richardson, of 67, High-street, Kingston-on-Thames, writes: "I enclose copy of a letter that I received yesterday (Monday) from a customer of mine, who was fortunate enough to catch a fine carp, fishing from the towpath."

[COPY.]

"Silver Dale, Surbiton, October 20, 1891.—Dear Sir,—I am pleased to tell you that on the 18th inst. I landed a carp, in fine condition, of 11lb. weight, in the Thames, at Kingston, on one of your finest drawn gut No. 11 roach hooks. I was also using a fine silk line, purchased from you at the beginning of the season. The swollen state of the river, which was running about six or seven miles an hour, and the fact that the fish was on for thirty-five minutes, conclusively proves the excellence of your tackle. —Yours truly, H. Pincott Hill."

The *Boy's Own Paper* of this date (October 24), contains an exciting story, entitled "Brother Will to the Rescue." It is a true tale by our esteemed contributor, Mr. E. M. Tod, of the hairbreadth escapes of white settlers in the Australian bush, first from peril from a river in flood, then from a most determined attack made by blacks. We were under the impression that the Australian blacks were a pusillanimous lot who would never attack a station defended by whites; but Mr. Tod's graphic story shows we were mistaken.

The salmon fishings belonging to the Perth City were, let in Perth Town House, on Friday. The Lord Provost, who presided, said that the magistrates anticipated a rise of at least ten per cent. on account of the past favourable season. There was a large attendance of tacksmen, but they seemed to be holding their hand, for only three lots out of eight were disposed of, the rest being withdrawn—not coming up to the reserved price. The rents, however, for the lots disposed of were higher than last year. Millburst fetched £74, as against £70; Incherret, £207, being £47 over last year, and £32 over the rent of 1889; Balhepburn Inch went to the only offer for £42, being £12 more than last year's rent. The remaining fishings will in all likelihood be let during the week to private offerers at fully ten per cent. of an advance. Straws show how the wind blows. There is an upward tendency all over the North-East, both as regards net and rod fishings.

An Angling Society for Epsom.—A meeting, convened by circular, was held at the Wellington Hotel, Epsom, on Monday, the 19th inst., for the purpose of forming an angling society for Epsom. Several well-known anglers of the neighbourhood attended. T. T. Bucknill, Esq., Q.C., was unanimously elected president, the election of vice-president being left over until the next meeting. A committee of seven was appointed, also a treasurer and secretary. A capital code of rules was submitted, which, after a lengthy discussion, and a few slight alterations, was accepted and passed as the rules of the society. The society starts with about twenty members; several more have promised to join as soon as the society was formed. Meetings will be held on the first Monday in every month at the Wellington Hotel, when the members will welcome anyone interested in angling.

Twelve Flies for Grayling in October.—"A correspondent writes to ask what are the twelve best flies that I would select for grayling fishing, from the beginning of October to the end of the season. The question is one which involves a good deal of consideration, but I think that the following list would suffice upon any water, varying them in size according to circumstances: Bradshaw's Fancy, Walbran's Red Tag, Green Insect (without red tag), Blue Hawk, Dark Spanish Needle, Fog Black, Silver Dun, Walbran's Pale Autumn Dun, Sea Swallow and yellow quilt body, Water Hen and yellow quilt body, Dark Snipe and purple, and Dark October Dun. There are, of course, hundreds of other patterns, for almost every flyfisher has some pet fancy of his own that he swears by; but I should be quite content to stick to the above-named dozen wherever I was going to fish. The Silver Dun is an excellent fly even on a sharp winter's day, providing there is a glint of sunshine, however feeble. I remember very well, some twelve years ago, that I was fishing on such a day on the Clifton Castle Water above Masham. It was bitterly cold, and there was both snow and ice on the ground. About twelve o'clock in the forenoon the sun came out, and as the grayling did not appear particularly anxious about the worm, I put on a cast of flies, with a Silver Dun as point fly. I killed ten good fish before two o'clock, and every one on this fly. Since that day, I have proved its efficacy on several similar occasions. Bradshaw's Fancy is also an excellent fly to try when you are at all in doubt; and during September trout take it almost as well as grayling, although it certainly represents nothing that I ever saw in insect life. The Green Insect is an especial favourite of mine. I fancy that the grayling take it for the green aphis that is bred among decaying leaves. On well-wooded streams during the autumn months I never omit this useful fly from my cast, generally fishing it as first dropper. The Blue Hawk was first brought under my notice by that veteran angler, the Rev. J. Challoner, of Newton Kyme. It is that gentleman's favourite grayling fly, and I must admit that it is a first-rate killer. About the Pale Autumn Dun I have written before, but only last week I had another striking illustration of its efficacy when the natural fly is on the water. A gentleman wrote to me enclosing a little pill-box full of flies which he said the grayling were rising at madly, but that he could not induce them to look at anything that he had in his book. I at once recognised my old friend, and wrote telling the gentleman what it was. On the following day I received a letter saying that, with the imitation I had recommended, he killed three brace of those obdurate grayling in half-an-hour."—"*Halcyon*" *in* "*Leeds Mercury.*"

SOME NOTES ON THE BEDFORDSHIRE OUSE.

By an Old Hand.

Netting.—Since the St. Ives Angling Society has taken the preservation of the river in hand, there can be no question that the fishing has greatly improved, and if its members could see their way clear to get the riparian owners to put a stop to hoop-netting, &c., in the drains, it would be the means of saving much fish life. In course of time, I have no doubt that this society will do for the Ouse what a section of the good citizens of Canterbury (more especially with respect to trout) have done for the Stour in the neighbourhood of the city, for it is not so many years since the Stour was as badly poached as the former river; but I think netting at Earith and neighbourhood is a thing of the past, for the party who was last fined is now lessee of about three miles of water, and it is to his interest to watch over it very carefully and prevent netting as well as other illegal methods of taking fish; at any rate, a friend of mine says: "I have walked the banks well three times this summer, but could not find any trace indicating the presence of the netting fraternity." With respect to netting going on in a well-known river, I have heard a certain gentleman say: "Pray, whatever you do, do not say anything about the netting; it will get the river a bad name and do harm." So, according to the argument used by this individual (interested, of course), he would allow illegal netting to go on without let or hindrance; in short, allow a river to be depleted, anglers to be abominably deceived, and money to be spent in all directions in the hope of obtaining legitimate sport when there is no sport to be had. This would not last long, of course, but all the time it is going on the miserable humbug is busy reaping a golden harvest from the poor deluded anglers. If netting, &c., is going on, without any manner of doubt, let it be known far and wide, and so, by disseminating such knowledge, give every angler a chance of stamping it out. Understand, I am not alluding to netting, where a man (say, a native) in spite of anglers, innkeepers, railway companies, and even landowners, *can use a boat* in a tidal river, and net the fish at his own sweet will; and, as far as I can learn, nobody can stop him. Such an individual once said to me, "I arn't had un' out this yere, zur, cos it arn't wuth the trubble." Just so. If such a person is interested, and reaping a good benefit from anglers, "un" will probably not be brought out; but if anglers are few and far between, and beer and the weed run short, then woe betide that river. Allowing netting fresh-water fish in a tidal river miles from the sea, where—with the exception of a few flounders and eels—salt-water fish, for various reasons, seldom or never come, is a practice that ought to be stopped at once and for ever; for one persistent unscrupulous person has the power to spoil both the sport and pleasure of hundreds of harmless and unoffending anglers. This illegal netting cannot be done in the *preserved* portions of such rivers as the Thames, Trent, Avon, Severn, Ouse, and Kent Stour, &c., without great risk, the vagabonds who carry on this nefarious business knowing perfectly well what to expect if caught; but with respect to netting fresh-water fish in the tidal portion of certain rivers there is no such risk, and any loafing, lazy, unprincipled scamp may, by the aid of a boat, deplete a river at his pleasure, and simply laugh at those who would like to stop him. I cannot help thinking that the above remarks are well worth the serious consideration of the various bodies mentioned above; and not only those, but to all persons where the presence of anglers means so much more grist to the mill—grist always willingly brought if fairly good sport can be obtained in return; and yet many persons cannot or will not see it. They will see it some day, when it is too late.

Boating.—If any of your readers contemplate rowing, &c.—say from Bedford to Earith—a most interesting stretch of the river, including the towns of Huntingdon and St. Ives, I should advise them to think twice before engaging in such an undertaking, for a party of three anglers staying at Overcote Ferry, told me that out of nearly twenty lochs between Bedford and the ferry, there were only four or five that they could get through with their boat (rather a heavy one), owing to their dilapidated condition.

Notices.—The following rules amongst others are posted at Over Staunch: "Salmon and Fresh-water Fisheries' Acts, 1861—1886. In accordance with the bye-laws of the Ouse and Nene Fisheries' Board, fair rod and line fishing *only* is allowed, in the waters of the society, between Houghton (up-stream), and Brown's Hill or Over Staunch, about ten miles; and no fishing whatever is permitted between 15th March and 15th June inclusive. Any person caught infringing these rules will be prosecuted." The St. Ives Angling Society have also a notice posted at Over Ferry, about a mile from the Staunch, short but to the purpose.

Over Ferry, Over Staunch, P.F.C., and Master Bishop.—It is a capital piko water from the Ferry to the Staunch (down-stream), and a gentleman with a friend of mine in the first field, hooked a real good fish, that escaped with a considerable portion of line, and my friend had a good run, but struck too soon. He was using snap tacklo. This made the third fish missed. It is very strange, for, three or four summers ago, I was using the Jardine snap in a similar place, and took seven consecutive fish, and could not miss one. I repeat, P.F.C., you struck too soon, and told you so. "No?" What about the fish you missed in Hemingford Mill Pool, was it not a repetition of the Over Ferry incident? And may I ask what is the use of attempting to snap, strike, or tighten on a hard ridge, or rather outer edge, when, as far as sending the hooks into anything to make them hold is concerned chance there is none?—at least, so I take it? Do give Master Johnny time to turn and take his fish in. There is a good perch swim about one hundred yards from the ferry boat (up-stream), which must be fished from a boat, and situated near the opposite bank from the Inn, being a pretty run of deepish water; and a little higher up on the gravel good gudgeon and roach may be caught; whilst in the first field below the Pike and Eel Inn is a splendid place for pike; and round the bend of the river, nearly down to Over Staunch, chub are taken more or less on the shallows with the Red and Black Palmer, Zulu, or Sweep, according to the state of the water and weather; but great care is necessary, as the rushes and weeds are strong and rather thick about here in the summer. There are several excellent swims between the rushes for bream, and where the water is sufficiently clear from this drawback, light legering with a float is a good method to adopt. There is a splendid deep hole immediately below Over Staunch (formerly a small hill where parties used to picnic—hence Brown's Hill Staunch), with an average depth of about ten feet, where good chub and pike are sometimes taken, and where a high tide makes a difference of three feet, thirty-six miles from the sea, and at flood time the tide reaches as high or higher than Over Ferry. The Boat Inn, kept by Mr. Bishop, can accommodate four anglers, but previous notice of a visit should be given, as the house is in great request. Master Bishop is always on the prowl after eels with his numerous baskets, and he can skin them quicker than anyone I ever saw; and if anglers cannot catch anything, they can always make sure of a good stew, eel or lampern pie in season (the latter at a very cheap rate) for a mere trifle. From now to the middle of February is the best time for pike, but anglers should write in time and make sure that the water is all right before starting on the war-path, or they may find themselves flooded out. They probably would now.

P.S.—Friend "P. F. C." (I read in a contemporary recently, after writing above) *re* snapping: "Use the Marlow hook; and before you strike give the fish plenty of time to get the bait *well within its jaws*." Most excellent advice, and mind you follow it, "P. F. C."

(To be continued.)

GILNOCKIE'S RAID ON THE BORDER

—— By Gilnockie. ——

Last week, to my intense delight, I found myself in the "merrie" city of Carlisle. What reminiscences of the past does not the very name of the place, to me, conjure up!—melancholy ones, too, as many of the friends of my youth have passed over to the great majority, while others have distributed themselves far and wide over the face of the globe. Yet when I plant my foot on the platform of the citadel station I am "neither to hand nor to bin" until I have visited some of the haunts of bygone days. Firstly, I look in at the Hole in the Wa', a famous old snuggery where anglers and sportsmen of all denominations assemble o' nichts to recount the deeds of the day; then I stare at the grim old castle, the cathedral, and the viaduct—the vilest piece of architecture in this picturesque city; I then gaze on the beautiful Eden as it slowly wends its way to the sea (but the river is in flood, and possesses fewer charms than usual, as it is too big for fishing purposes). The "lang chimley" next claims my attention, as you cannot miss it on account of its height. Finally I wind my way to the kennels to see the finest pack of hounds probably in the British Isles. Again I find myself in the Hole in the Wa', looking intently at the portrait of Dickey Routledge, the famous angler, which hangs on the snuggery mantelpiece. Dickey is depicted standing on a huge rock at Armathwaite sweeping the Eden in his well-known style. Presently Mr. W. G. Stubbs and several other anglers land in, and I am in the full tide of a fishing "crack" in a jiffy; but I soon ascertain that, although most of those present pay flying visits to the Esk at the Metal Bridge, they are very chary about giving much information anent the hauls I was informed several of them had made in that now famous water. This reticence, I am told, arises from an absurd jealousy that exists between the anglers who hail from Carlisle and those who reside nearer the Border. The Esk, by the way, joins the Eden about five miles below the Metal Bridge, and this, I suppose, is the cause of much of the haggling, fratching, poaching, bailiffing, and police-courting that has taken place anent certain rights with regard to fishing at the mouth of the river.

After a few words with Messrs. Little and Parkin, two noted fly-dressers, I scented how the land lay—or, perhaps, the water; and I determined to hie me off to Longtown to see my jolly old friend, Mr. Hugh Amos, of the Wheatsheaf Hotel, and finally wind up at Miss Cartner's hostelry at the Metal Bridge.

On the following morning I was "up with the lark." This "up with the lark" business is all moonshine, and since the saying has become a proverb it is most unfair to several other birds who are early risers; indeed, the lark does not put in an appearance at all until after the chaffinch, linnet, and a number of other hedgerow folk have been merrily piping for a good while. However, I took an early train, and scudded into Longtown in a few minutes from Carlisle. The Esk was running red as blood, and there was no fishing. All the Longtown anglers were resting on their oars until the evening, when I was told the water would be in fettle; and it was so, too; as I noticed, after I had been at the Metal Bridge a matter of three hours, that the island below the bridge, which was covered when I arrived, had almost assumed its normal area, with such rapidity does the Esk decrease in volume during a flood, after the rain ceases and the hill-side drains have run themselves dry. I found Mr. Amos, o' the Wheatsheaf, Longtown, the same auld man he has continued to be for thirty-six years. He was just on the point of jumping into his gig to drive to his farm at Penton, on the Liddle.

"A' man, how is tu wull ye no gang wi' me?" was almost his first greeting.

I explained that I was due at the Metal Bridge about twelve, but wanted a "crack" with some of the anglers at Longtown before leaving.

"Weel! weel! that caps a'. Come in, then; come in. A' man, ah am glad to see you. Come an' wat ye're whustle."

Another hearty welcome from the worthy hostess followed, and out came the special "grey-beard."

"Oh, ye want a fishin' crack,' do you?" says Hugh. "Weel, then, Mr. Joseph Bell, who kens every clint and puil in the water, and Professor Scott, the noted fly-dresser, are just the men for ye—they're baith gey auld farrant yins. But keep ye're ee on the Professor—he is the biggest wag in a' Langtoon, an' micht lead ye on to white ice. Yin nivir can tell what he's drivin' at; yet he's a gran' huik busser for a' that, an' at catchin' a salmon not a man on the Border can 'thraw saut on his tail.' D'ye mind that time

"When lang Professor Scott and friend one day
In Lyne-foot Pool did thirteen salmon slay?"

"Oh, yes, I recollect it well; and it was duly recorded in the pages of the *Fishing Gazette*, consequently it must have been true."

"True? Yes, fac' as death; and the lads had tho fush to prove it," replied Mr. Amos.

"It was a wonderful feat."

"Not sa wonderfu' as ye micht think. 'Tween here and the Metal Brig's the best stretch o' a' the Esk, an' it isn't owre fished, for a' we hae the Carel deils aye comin' prowlin' roon at times and leavin' the Eden in the lurch. Look at the water we hae, far an' aboon what they've got tother side o' the Border. First there's the Liddle rins into it. O' course the Willow Pool an' the Cauldron hev the benefit o' that as weel, but that's a', as the Thistle Pool comes next, an' that's the Netherby Water ye ken. Carwinlay Burn comes efter; then Glenzier Burn, an' Gartle Burn; an' lastly the Lyne, a guid big water, rins into the Esk within sicht o' the Metal Brig itself. Sae ye may reckon on what kin' o' a puil Lynefoot Puil is for salmon."

Bidding adieu to Mr. Amos, I adjourned to the Bush Hotel, where I found Professor Scott and Mr. Bell awaiting my arrival. After ordering a beaker each for the two anglers, and an extempore luncheon for myself, the "crack" commenced.

"It's only three miles o' water," began the Professor, "but look how commattable it is on owther side—nae rocks or bushes, nor big trees to stop the fun. I grant the Cauldron and Willow Pools are good pitches, and sae is the Thistle—but that's preserved water, the Thistle is, where the five hundred salmon were seen the other day. Look at the accommodation, too, and the situation—halfway atween Langholm and Carlisle, and the railway station at the verra door, five or six guid hotels in the toon, not to mention the Empress of the Metal Brig doon the water. What mair could ye hae? Here we hae the Graham Arms, the Wheatsheaf, the Bush, and sundry others, and the tariff reduced to a mere flea-bite. What mair wad ye hae? am axin."

Certainly this was unanswerable; and in order to somewhat vary the subject, I inquired of the Professor which he considered the best casts below Longtown.

"Oh, the Roost, Wilkins' Pool, and Lynefoot Pool," replied the Professor. "Why it's no lang syne, Mr. Bell and I killed thirteen salmon in the Lynefoot Pool. I ca' him 'Mr. Bell' whiles, but I mean that grinin' auld image ayont the hud nuik there. I got seven and he got six. Josie's no a bad fisher, but ah taught him a' he kens."

"You taught me a' ah ken? Why, you canna haud a candle till me. Whae got the 27lb. salmon the other day, yin o' the finest ivver taen frae Esk?"

"Aye. An' whae caught the 28lb. yin? Why, I did," retorted the Professor. Evidently Mr. Bell had forgotten this feat, and appeared a trifle crestfallen for the moment, but recovered his spirits by saying that "his was a new-run yin, and was stickin' a' owre wi' sea lice."

"Come now, haud away; ye needna get cross. Here's a Jock Scott for you, also a Butcher; but the 'Professor Scott' is the fly that will be a' the rage next season," continued the Professor, holding up a specimen, which he immediately pouched, as he said "it was owre suin to startle the angling public wi' it afore the spring o' the year."

At this point two other worthies landed in, neither of whom were introduced. One of them, I was told afterwards, was a large farmer on the Border, whom I shall call Mr. Sanders McCuhhy o' the Hill. Mr. McCubby was a slightly florid individual, with a due sense of his own importance. He was a great angler, he told us, and knew the Esk better than any man living, and had caught more fish in the pools than had ever been got either before or since he commenced to perform.

Well, thinks I, the champion has arrived at last, and I began to feel like a bairn o' five years old.

"Teake nae notice," said the Professor to me, in a stage whisper, "he's the biggest leear in a' Cumberland, and that's sayin' a lot when a fishin' cracks on."

"What's that you're saying, you auld sheep's head in a pair o' tongs. You're only a huik dresser, and a bad un' at that." At this sally the company roared, as the farmer was evidently well known to those present. I have not yet described Mr. McCubby's companion, but, from what transpired afterwards, I "jaloused" him to be a river-watcher or bailiff, because when it was mentioned that the fishing ceased on the 31st of October, Mr. Joseph Bell quietly observed that every one knew that, and everyone knew too that the real genuine and proper fishing which produced the best sport commenced on the 1st of November.

"Yes, it does, and no flies!" said Mr. Bell, with a merry twinkle in his eye. Every ogle was turned on the new-comer, who joined heartily in the general laugh, which was evidently at his expense. The conversation then turned on the longevity of anglers.

Professor Scott knew one old angler of the age of seventy-nine who fished every day during the season, Sundays and all.

"Mr. Bell said he knew the same old man's father, and he was drowned at Lynefoot, when he was one hundred and two, while fishing during close time, or he might have been alive yet." Mr. Johnstouc—which, I think, was the supposed bailiff's name—did not believe anglers lived any longer than other folk, especially those who poached. But Mr. McCubby called him a "hoaf thick," and told him "to haud his gab"; what did the likes o' him ken aboot anglers and angling? Mr. McCuhby was certainly a most assertive party, and got as red in the face as a bubbly jock—a jolly three-bottle man I should say.

"He was a care-defying blade
As ever Bacchus listed:
He had nae thought but to be glad,
Nae want but when he thirsted."

The jovial farmer had apparently been enjoying himself, and capped his friends on the subject of longevity by the following:—

"You know," said he, "in my country, far away ayont the Tweed, when the callants get to about sixty years of age the parents breech them and apprentice them to a trade. One young man I knew—he was only eighty-one—a great angler; he had been out one day, and had caught ten salmon, all new-run fish, some of them over 20lb. in weight. Well, at night this youth of eighty-one summers was sitting on the front door-step, crying like mad—after such a capital day's sport, too; and when someone asked the *lad* what he was greeting sae sair for, he replied that he had been oot fishing a' day, and had landed ten fish, only; as he did not bring hame a dizzen, his grandfather had gi'en him a deevil o' a lickin', an' he was flait to gang to bed in case the auld man should start on him again."

Just then Sir Richard Graham, of Netherby, and party whisked past in a brake, when Mr. McCubby again grew eloquent upon the virtues of Sir Richard as an angler and hunter, a capital hand with the gun—equal to his grandfather, the great Sir James, who was a first-class shot, either on the moors or among the turnips. The present writer, by the way, has seen the great statesman both among the grouse and the partridges.

"Ah," continued the McCuhby, "Sir Richard's a good lad, and a good landlord too."

Who was it that sang?—

"Round glanced the proud chief of the Netherby clan,
As from a deep goblet he drank to each man;
Then, raising their flagons, the hunters stood up,
And to the young chieftain each quaffed off his cup.

"If ever again across Netherby's grounds
The same hunters run with the same noble hounds
In the clear morning air, let the trysting-place be
Where the bright waters meet on fair Canonbie lea."

Leaving Professor Scott, Mr. Sanders McCuhby o' the Hill, and Mr. Bell at the Bush, I started off on foot to the Metal Bridge, accompanied by a well-known angler, whose name I need not mention at present. The wind blew big guns, but the day was beautifully fine, as we walked along the banks of the historical river from Longtown to the Metal Bridge, and examined the favourite casts dear to anglers of all denominations—viz., the Ironfoot Flat, the Roost, the Boxes, the Sheep's Wash, Birrel's Weir, Lynefoot Flat, Burnfoot Flat, Wilkins' Pool, and pools of lesser note, which all came under review, until we arrive at the famous hostelry, and the Empress o' the Metal Brig, Miss Cartner, greets us with a genuine Cumberland welcome in the old-fashioned porch of the hotel.

"Well, you've had a grand season, Miss Cartner," I remarked.

"Yes, very good indeed; and all the gentlemen I have had during the summer are baith satisfied with the fishing and the accommodation I can afford them. Ours is no' a big place. I can do with eight or ten visitors; but, when a number of friends have been here, I have whiles had as far as fourteen. Now look how handy it is for baith Carlisle and Longtown—ten minutes' ride to Carlisle, and an hour's walk to Longtown by the water-side. As for the fishing, why, the fish frae the sea must a' gang past here afore they get to the upper reaches, or go scuttling into sich wee bits o' sykes as the Gartle Burn and the Lyne—which they do sometimes in a flood, by mistake, ye ken. Mr. Yates, ye'll have heard, has only been here three weeks, and he has caught seventeen salmon; Mr. Butler had seven in one week; and others have also done well, including Messrs. J. B. Slater and W. G. Stubbs, of Carlisle. You'll have a' particulars in the reports, nae doot."

"Well, yes, most of them. Only I have been longing for a good fishing 'crack' at headquarters for some time."

"Ye'll get that," quoth Miss Cartner, "as I expect Mr. Hough, frae Carlisle; Mr. Edgar, Longtown; Mr. Mason, Rockliffe; Mr. Morton, and several other gentlemen directly; and mebbe Mr. Yates will be here soon."

With that a couple of jolly-looking anglers came in, total strangers. They had come from the Tyne. One of them carried a copy of the *F. G.* in his hand, which contained some remarks anent the Border Esk.

"Was the fishing good?" they asked.

"Yes, it was gey guid," replied the hostess.

"All right, then, we'll go no farther; therefore kindly book us for a fortnight."

Then the gentlemen mentioned above appeared on the scene, and song and story went freely round.

"Now, lads," said Miss Cartner, "ye'll be gey yap after your walk frae Longtown; just step ben the hoose and take a dish o' tea."

Nothing loth, we placed our shins beneath Miss Cartner's mahogany, and did full justice to a substantial Cumberland tea.

"Make yourselves at home," said the worthy hostess. "This is Liberty Ha'. Ye're a' richt welcome."

It was a merry party; and when we returned to the company we had left for a short time, a gentleman had taken the violin from the rack, and some of the younger spirits were dancing "Leather-te-patch" and "Cross-the-Buckle" at a rare bat, and with a vim that would have astonished anyone but a born Cumbrian. The scene reminded me of the one at Broken Buru, described in "Red Gauntlet," when blind Wandering Willie and Darsie Latimer supplied the music; only we hadn't a sufficient number of ladies. "The heart aye warms to the old home!" and when I "took the fluir" I could have registered a particularly solemn "Davy" that I wasn't more than seventeen at the most; however, ten minutes took all the puff out of my anatomy, and I was three times seventeen in very quick sticks.

As I said before, the company was a merry one, and I was pleased to be among the brawny cheils, to hear their kindly and convincing voices, to admire their breadth of chest, their symmetrical and ample calves, and to listen to the sturdy tread of their substantial boots, that seemed to defy creation and the weather. Sons of Anak with a vengeance! They jumped about like india-rubber balls; and when the fun had subsided a little, one young giant, a rollicking merry Andrew, said to me, "Are you married, Mr. Gilnockie?"—giving me at the same time a huge wink from the side of his face concealed from Miss Cartner's view—"because," said he, "Gretna-green is only a mile off, and Willie Lang could adjust the knot as securely as the Archbishop of Canterbury—so securely that you could snap your fingers at the whole universe. The only condition is that you must be single, and reside three weeks on the Scottish side of the Border previous to the ceremony."

I hastened to assure my new friend that I was very much married, and that Mrs. G. was very much alive. I merely mention the circumstance for the benefit of anglers who may wish to change their condition while sojourning on the banks of the Esk at some future time; besides, this will solve all doubts on the subject that may exist in the minds of those to whom Gretna-green is a deep and complex mystery.

After taking leave of the kindly hostess, I strolled down to Floriston Station, about a five minutes' walk from the hotel, and was spellbound by the beauty of the scene. It is a snug spot, surrounded by a dense plantation of larch, spruce, and Scotch firs, with a charming patch of heather in the foreground of the picture, and the Solway, in full view, glistening in the distance. Then, as I steam into the station at Carlisle, I feel a sort of thankfulness that some of the ancient traditions of the Borderland are still preserved among the douce canny bodies of Cannie Auld Cumberland.

RE-PRODUCTION OF CONGER EELS.

Wonderful and amazing are some of the theories put forward by the old angling writers with reference to the generation of eels. Even now, much concerning the natural history of these peculiar fish is exceedingly obscure, but we no longer believe that chopped horse-hair, if thrown into a pond will people the water with eels, nor that a similar result may be obtained by laying in the sunshine two turves covered with may-dew, grassy-side inwards, and touching one another. Was it not Oppian who thought that eels embraced, and that a gluey exudation, coming from the surface of their bodies, fell to the bottom and vitalised in the mud? Aristotle had somewhat similar ideas; and Pliny thought that eels rubbed themselves against the rocks when tired of living and from the detritus came a new breed.

It is a very singular coincidence that the latest inquirer into the natural history of eels, Mr. Cunningham, the naturalist on the permanent staff of the Marine Biological Association, has, to a certain extent, come to the same conclusion as Pliny. Not that Mr. Cunningham, for a moment, pretends to disturb the now well-known fact that eels spawn much as other fish, but he is of opinion that, so far as the eels of the sea are concerned, they never spawn but once, and die shortly afterwards; or, as Pliny puts it, conduct the process of generation when tired of living. We venture to suggest, however, that because all the eels which have become gravid in the aquarium at Plymouth, have died previous to performing the operation of spawning, it does not necessarily follow that eels in the open sea would die shortly after spawning.

It has often been observed that female conger eels in aquaria have, after a time, passed into a swollen state and then died. On examination their ovaries have been found to be enormously developed, and the unfortunate eels have evidently not had the power to extrude their eggs. Conger eels ripe and ready to spawn are rarely, if ever, caught in the sea, the reason, doubtless, being that on the approach of that condition they cease to feed and do not take the baits of the fishermen. By keeping male congers in the aquarium at Plymouth, Mr. Cunningham succeeded in obtaining some with ripe spermatoza. One of these he milted; but, as we have said, the eels in the aquarium did not seem to have the power to extrude their eggs, and all those which attained sexual maturity died. The bones of the head in congers which died with ripening ovaries were in a remarkable condition, having become so soft that they could be cut with the finger-nail, and cutting them with a knife is described as being similar to cutting cheese. The heads of ripe males were found to be in much the same condition. This may possibly be explained by the fish having ceased to feed for about six months.

The conclusions which Mr. Cunningham draws from his observations and experiments are a trifle open to criticism. Because the largest male which came under his observation was only 2ft. 2in. long (being 3½in. less than one described by Dr. Otto Hermes), he concludes that 2ft. 6in. is the extreme limit of length of male specimens. The conclusion may be correct, but seems rather hastily drawn. His next conclusion, which we have already referred to, is that each conger only breeds once in its life-time, the congers which in the aquarium were not able to extrude their eggs having all died. He admits it might be argued that in the sea the female would extrude her eggs, and then might go on feeding and breed again; but he thinks his conclusion justified by the fact that the conger (which is a hardy and voracious fish) invariably dies in captivity after attaining sexual maturity. The argument is not a very strong one, the greater probability surely being that the lack of power to extrude the eggs causes the death of the eel rather than that death is occasioned by the eel arriving at sexual maturity. Mr. Cunningham admits the objection that there is great variation in size between adult congers, some weighing only a few pounds, and others more than a hundredweight; but he considers that fact does not invalidate his conclusion, as fishes of the same age frequently vary greatly in size. In captivity the congers as they become gravid lose their teeth, and this, Mr. Cunningham thinks, also proves that they die after once spawning, for without teeth they could not eat. But one is tempted to ask would they invariably lose their teeth in the sea, and supposing they did so, might not the lost teeth be replaced? Mr. Cunningham also refers to the curious fact that river eels in their adult stage have never been known to return from the sea, and he suggests they, too, die after spawning.

From his experiments and observations in the aquarium Mr. Cunningham attempts to decide the months during which congers breed, and deems it probable that they spawn at any and every season of the year, for he has found gravid eels in every month, except November; but it may very well be that the causes which prevented the eels extruding their ova may also have considerably disarranged their breeding season. No absolutely certain inferences on this point can be drawn from observations made in an aquarium.
